## CHAPTER II.—AGE, RESIDENCE, YEARS ON FARM, WORK OFF FARM

---

**Introduction.**—This chapter presents statistics relating to operators of farms. The figures are shown for operators for classifications based upon the following characteristics: age; place of residence (whether on or off the farm operated); number of years on their present farms, and, for those who reported a recent date, the month they began to operate their present farms; number of days worked off their farms during the year preceding the census date; and whether other income of the operator and his family exceeded the total value of agricultural products sold. The usefulness of these data has been increased by a further classification by color and tenure of the operator.

**Sources of data.**—The data presented are from the 1950 Census of Agriculture with comparative data from earlier censuses. While inquiries relating to these subjects were asked of all farm operators in 1950, the greater part of the data was tabulated for only a sample consisting of approximately 20 percent of the farm operators. All 1950 data relating to age of operator and to year and month of occupancy (or years on farm) represent estimates based on tabulations for a sample. In some of the tables, the 1950 data for residence of operator, off-farm work, and income other than that from the farm operated are based on tabulations for all farms, while in other tables, they represent estimates based on tabulations for a sample of the farm operators. All the 1950 data presented by color and tenure of operator are estimates based on tabulations for a sample of farm operators. Estimates based on tabulations for a sample are subject to sampling errors. The estimates based on a sample are not in exact agreement with the totals secured from tabulations for all farm operators. Tables giving reliability of estimates, based on a tabulation for a sample of farm operators, are given in the Introduction to this volume. The Introduction also presents a description of the procedures used in the enumeration and processing of the statistics and of the sampling plan used in 1950.

The 1945 data by tenure of operator, presented herein, are also based on a tabulation for a sample consisting of approximately 5 percent of the farm operators for that year. Other 1945 data and all data for earlier years represent a tabulation of the reports for all farms. All tables which include estimates based on tabulations for a sample of the farm operators have a headnote indicating which of the figures are estimates based on the sample.

**Presentation of statistics.**—The statistics are presented as totals for the continental United States, for 3 major regions, for 9 geographic divisions, and for each of the 48 States and the District of Columbia. An outline map showing the States and the geographic divisions and regions for which totals are presented appears in the Introduction to this volume.

Comparable data from earlier censuses provide a measure of the changes that have occurred from census to census. Most of the available comparative data are shown for the United States. Historical data for regions, divisions, and States are

shown only for selected census years. In presenting statistics for earlier census years, headnotes, footnotes, and the wording of the stub or of the column headings are used to indicate any significant lack of comparability which may have resulted from changes in the wording of the inquiries, in the instructions or definitions, or in the procedures used in collecting and compiling the data. The text discussion for the various items gives further information as to comparability of the data.

Data are presented for all items by tenure of operator for the United States and the Northern and Western States, and by color and tenure of operator for the Southern States.

The tabular presentation is supplemented by maps and charts.

**Other published data.**—Data for counties, based on a complete tabulation for all farms, are presented for residence of operator, for off-farm work, and for other income in Volume I, Counties and State Economic Areas, of the 1950 Census of Agriculture reports.

Data for State economic areas (groups of counties within the State having similar agricultural, demographic, climatic, physiographic, and cultural characteristics) are also given in Volume I for age of operator, residence of operator, years on farm, off-farm work, and other income. These data are shown by size of farm, and for commercial farms, by tenure of operator, by economic class of farm, and by type of farm.

In Volume II, data for all of these items are shown for the United States by size of farm in chapter X, by tenure of operator for commercial farms in chapter XI, by economic class of farm in chapter XII, and by type of farm in chapter XIII. These four chapters also contain data for some of these items for regions, divisions, and States.

### DEFINITIONS AND EXPLANATIONS

Definitions having a general application, such as those for "a farm," "farms reporting," and "operators reporting," and factors influencing the reliability of the data are discussed in the Introduction to this volume and will not be considered in this chapter, unless of particular significance in regard to the subject under consideration.

**Comparability of data for 1950 and prior censuses affected by changes in definition of a farm.**—Some of the differences between the figures for 1950 and those for prior censuses may be the result of the change in the definition of a farm rather than actual changes. (See the Introduction to this volume for a discussion of the effect of the change in the definition of a farm upon the number of farms.) Some places with limited agricultural production which were counted as farms in censuses prior to 1950 were excluded in 1950. The reduction in the number of farms because of the change in the definition of a farm results in an overstatement of the changes from the 1945 or the 1940 Census, in the age of operator and an understatement for the percentage reporting days of work off the farm.

## GENERAL REPORT

**Farm operators.**—A "farm operator" is a person who operates a farm either performing the labor himself or directly supervising it. He may be an owner, a hired manager, or a tenant. If he rents land to others or has land cropped for him by others, he is listed as the operator of only the acreage which he retains. In the case of a partnership, the characteristics were tabulated for one member only. The number of farm operators is considered the same as the number of farms.

**Age of operator.**—Farm operators were classified by age into six groups. The average age of farm operators was calculated by dividing the total of the ages of all operators reporting age by the number of operators reporting.

A distribution of farm operators by age and by color and tenure has been made for each decennial census, beginning with 1910 and for the middecennial Census of 1945. No information on age of operator was obtained in the Censuses of 1925 and 1935. The Census of Population for 1890 and for 1900 included a classification of occupants of farm homes by age groups. Although these data for earlier censuses are on a slightly different basis, the relative age distribution in each tenure class is fairly comparable with those for other censuses.

In 1950, farm operators in the United States were, on the average, 48.3 years of age. This was 0.4 year less than the average age in 1945 when many of the younger men, who otherwise might have been engaged in agriculture, were in the armed services. The proportion of farm operators under 45 years of age increased from 40.1 percent of the total in 1945 to 42.4 percent in 1950. There was very little change in the proportion of farm operators 55 years old and over. Some of the changes in the age distribution of farm operators may be the result of decreases in the number of farms. Because of the change in the definition of a farm, a considerable number of farms on which agricultural production was limited were excluded from the count of farms in 1950. Operators of farms with limited agricultural production are slightly older than operators of farms with greater agricultural production.

**Residence of farm operator.**—Farm operators were classified by residence on the basis of whether or not they lived on the farm operated. The inquiry in 1950 was, "Do you live on this place? . . . . .  No  Yes." Some of those not living on the farm operated may have been living on other farms. When a farm operator rented land from others, or worked land on shares for others, and had the use of a dwelling as part of the rental arrangement, the enumerator's instructions were to consider the dwelling a part of the farm operated. The dwelling assigned might have been on a tract other than that assigned for crops. Since some operators live on their farms only a portion of the year, comparability of the figures for various censuses may be influenced to some extent by the date of the enumeration.

Operators often live nearby going to their farms day by day. Some operators live in nearby villages and operate their farms from the dwelling in the village. These operators were considered as living on their farms if there were also some agricultural operations carried on at the residence. In Utah, where many farm operators live in villages and operate farms outside the villages, nearly one-fifth (19.4 percent) of the operators of farms were reported as not residing on their farms. Farm activities in some areas are restricted to short, but rather definite periods, especially for such crops as wheat and other small grains. In such cases, the operator may live at a distance from his land, being on his farm only during the planting and harvesting periods.

Data as to residence of the farm operator have been obtained only for three censuses, namely, 1950, 1945, and 1940.

Table 1 presents data for the residence of farm operators for counties with 150 or more nonresident farm operators, provided these represented 20 percent or more of all operators in the county. These counties have been grouped according to the dominant type or types of farms operated by nonresident operators.

**Years on present farm (year began operation of present farm).**—The data for years on present farm reflect the stability of operators on particular farms. It should be noted that the number of years does not refer to the total years of farm experience. For a farm operator who moved from another farm, the years on his present farm represent only a part of his experience as a farmer. Likewise, a son who succeeds his father as operator of a particular farm may have had considerable previous farm experience.

Data relating to years on present farm were secured on the basis of the inquiry, "When did you begin to operate this place?"

(Month) (Year) are presented under two headings, as follows: (a) operators by years on present farm, and (b) operators by year began operation of present farm. When the data are presented in terms of the replies to the questionnaire inquiry, the term "year of occupancy" or "month of occupancy" is used. For comparison of the data with those for previous censuses, the data are expressed as "years on present farm." The time of year, or the month in which farmers move, is shown for those operators who began to operate their present farms after May 1949, or within a year of the census date.

Information on years on farm has been obtained for each census beginning with 1910. For 1945, 1940, and 1935, the inquiry called only for the year of occupancy. For 1930 and 1925, as for 1950, the inquiry called for the month as well as the year of occupancy. For the 1920 and 1910 Censuses, the schedule inquiry, instead of asking for the year of occupancy of the farm operator, asked for the number of years and months the operator had operated that particular farm.

According to the 1950 Census, 9.8 percent of the farm operators had occupied their present farms 1 year or less. This percentage ranged from 4.1 percent in Maine to 16.2 percent in Georgia. This group includes all farm operators reporting up to 1 year on present farms preceding the date of the census. Thus, for 1950, the operators reporting year and month of occupancy as April 1949 or later are included. The 1-year-or-less group includes somewhat more than a 1-year period because those operators who reported April 1950 or later as the date they began operating their present farms are also included. For the United States, the number of operators reporting an occupancy date of April 1950 or later was 15,025, or 3.2 percent of those reporting 1 year or less. The 1950 census date, April 1, is an important moving date in several areas. An additional 18,670 operators, who reported 1950 as the year of occupancy, did not specify the month. Enumerators were to be assigned areas that they could enumerate completely in 30 days from the census date. However, in some cases, because of adverse weather, bad roads, and other conditions, a longer period was required for the enumeration. Tending to offset the somewhat longer period than 1 year, caused by the inclusion, in the 1-year-or-less group, of those operators reporting April 1950 or later, were operators who moved sometime between April and December 1949 who reported the year but not the month of occupancy.

For 1945, 1935, and 1925, for which years the census date was January 1, the calendar year preceding the census date provides a 1-year-or-less group reasonably comparable with the 1950 1-year-or-less group. However, January 1 is a more prevalent moving date for farm operators than April 1. For the 1950 Census, 154,123 of the farm operators who began operating their

## GENERAL REPORT

Table 2.—YEARS ON FARM AS CLASSIFIED FOR EACH CENSUS, WITH THE NUMBER OF OPERATORS IN EACH CLASSIFICATION:  
1910 TO 1950

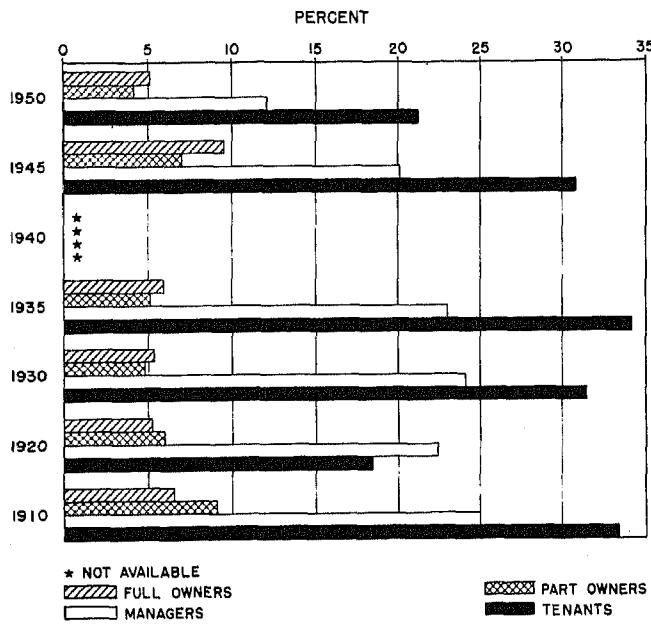

[Each period includes the entire time up to the next period following. Data for 1950 are based on reports for only a sample of farms. See text.]

<sup>1</sup> Includes some farm operators moving after the census date. The 1950 Census figure includes 15,025 operators reporting April 1950 or later; the 1945 Census figure includes 238,210 operators reporting 1945. See text.<sup>2</sup> Based on number of years and months on farm as operator.

farms within a year preceding the census date had moved in January, as compared with 31,126 who had moved in April. Comparability of the 1945 data with those of other years is somewhat affected by the delayed enumeration that year caused by wartime conditions. In 1945, the average date of enumeration was "March 16 to March 31," or 2½ to 3 months after the census date. In 1950, the average date of enumeration was "April 15 to April 28," or approximately 3 weeks after the census date. In 1945, the number of farm operators who reported that they began to operate their farms on the census date or later was 238,210 as compared with 15,025 in 1950. The 1930 figure for operators on present farms 1 year or less, like the 1950 figure, represented those operators reporting a date of occupancy of April 1929 or later.

#### PERCENT OF FARM OPERATORS ON PRESENT FARMS 1 YEAR OR LESS, BY TENURE: 1910 TO 1950

More than one-third (36.7 percent) of the operators in 1950 had occupied their present farms less than 5 years. In Georgia and Mississippi, where the proportion of tenancy is high (42.8 and 51.6 percent, respectively), nearly one-half (48.0 and 47.6 percent) of the farm operators had operated their present farms less than 5 years. The less-than-5-year group for 1950 includes all operators who reported 1946 or later as the year they began operation of their present farms. Thus, this group covers a period up to 51 months preceding the census date. To represent more accurately a complete 5-year period, it would have been necessary to include, in the 1950 figure, operators who reported any date from April to December 1945 as the date when they began to operate their present farms. However, since most farm operators move during the first 3 months of the year, the omission of those operators moving in the last 9 months of the calendar year is not as serious as it might appear. Of the operators who began operating their farms during the 12-month period preceding the census date in 1950, and who reported the month of occupancy, 54.3 percent moved during January, February, or March.

Farm operators in 1950 who had been on their present farms 5 to 9 years accounted for 20.0 percent of those reporting year of occupancy; those on their present farms 10 to 14 years accounted for 12.6 percent; and those on their present farms 15 years or more accounted for 30.7 percent. The 5-to-9-year group includes those who reported 1941 to 1945, or a period of occupancy of from

December 1949 to January 1950.....	201,107	46.0
February 1950, March 1950, April 1949, and May 1949.....	130,462	29.8

4 years and 3 months up to 9 years and 3 months. The 10-to-14-year group includes those who reported 1936 to 1940, or from 9 years and 3 months up to 14 years and 3 months. The 15-year-or-more group includes those who reported 1935 and earlier, or 14 years and 3 months or over.

For the less-than-5-year, 5-to-9-year, 10-to-14-year, and 15-year-or-more groups, the 1940 and 1930 Census figures are comparable with those for 1950, while those for 1945, 1935, and 1925 represent more accurately the descriptive terms used in the statistical tables to designate these groups.

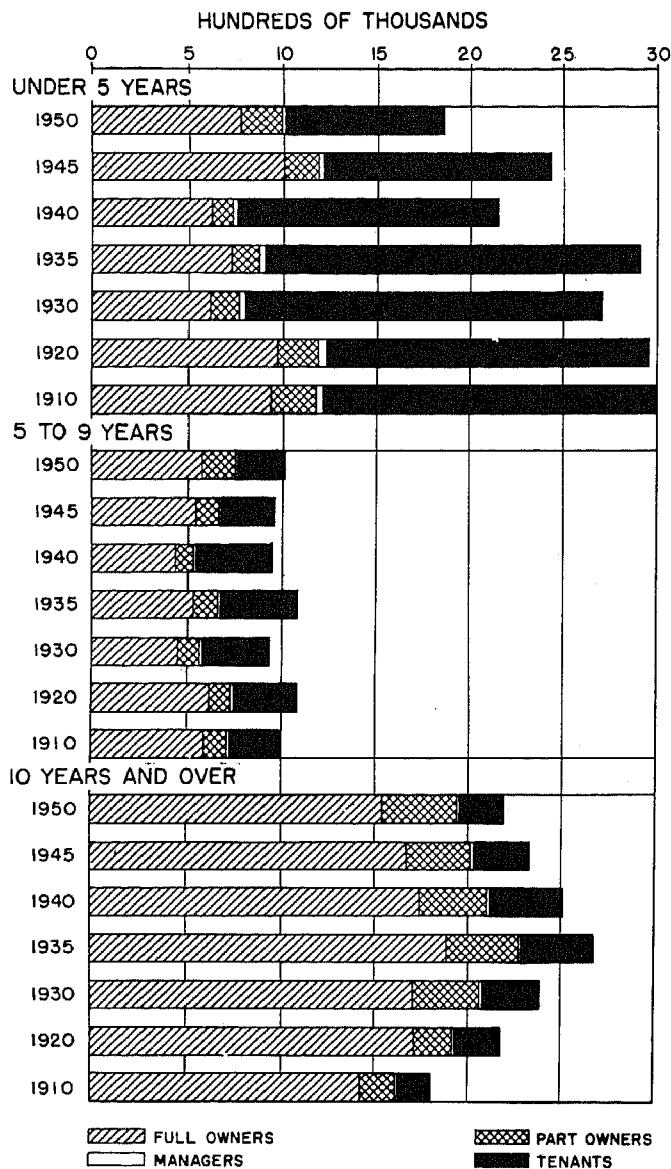

Differences in length of period or in elapsed time from the census date represented by the various year-on-present-farm groups are shown in table 2. In that table the columns indicate the number of calendar years from the census date. For each census year are shown: (a) the year of occupancy represented by each column; (b) the exact period included in the classification, expressed as years and months from the census date, as well as an indication of how these periods relate to the calendar years; (c) the United States total for each classification; and (d) the proportion of all farm operators represented in each classification. The particular column, in which each total is entered, indicates the year-on-farm group in which this particular classification is shown in the tables.

For 1950, the average year of occupancy was 1937 for the United States. This average was calculated by dividing the sum of the years of occupancy by the number of operators reporting. The resulting quotients are shown as whole numbers, all fractions being dropped. For example, if an average was in excess of 1937, but less than 1938, the average year of occupancy is shown as 1937. To obtain the average number of years on present farm, the average year of occupancy was subtracted from the census year. Thus, 1937, the average year of occupancy for farm operators in 1950, represents an average of 13 years on their present farms.

The average year of occupancy and average number of years on present farm were obtained only for the 1950, 1945, and 1940 Censuses. Because of the variation in the census dates, that is, April 1 for 1950 and 1940, and January 1 for 1945, the average number of years on present farm based on a calendar year, is not strictly comparable. For 1950 and 1940, a calculated average of 13 years actually means 12½ years to 13½ years on present farm prior to the census date. For 1945, an average of 13 years actually means 13 up to, but not including, 14 years.

**Off-farm work.**—Many farm operators supplement their farm incomes with odd or spare-time jobs. They may work on someone else's farm or they may work at nonfarm jobs. They may operate filling stations, tourist camps, or other businesses at the farm, or they may engage in businesses or professions away from their farms. Their nonfarm employment may be secondary or it may represent their principal employment. An increasing number of farmers are finding part- or full-time employment off their farms. Also, many persons employed in cities are living in rural areas and may have sufficient agricultural activities to qualify their places of residence as farms.

The questionnaire for the 1950 Census of Agriculture carried the following inquiry as to how many days each operator worked off his farm in 1949:

How many days did you work last year off your farm? Include work at a nonfarm job, business, profession, or on someone else's farm . . . (Check one)

(Do not include exchange work.)

<sup>1</sup> For 1949, data for operators not working off their farms available only from the sample (see table 14); for 1944 and 1929 data for operators not working off their farms not available.

NUMBER OF FARM OPERATORS REPORTING WORK OFF THEIR FARMS BY NUMBER OF DAYS, BY TENURE, FOR THE UNITED STATES: CENSUSES OF 1935 TO 1950

FULL OWNERS PART OWNERS  
MANAGERS TENANTS

- (1)  None  
 (2)  1 to 49 days  
 (3)  50 to 99 days  
 (4)  100 to 199 days  
 (5)  200 days or more

Information on work performed off the farm by farm operators has been obtained for each census beginning with 1930. The wording of the inquiry has varied somewhat for the different censuses. The 1940 schedule, in addition to including an inquiry for the total number of days the operator worked off the farm for pay or income, had two subquestions: (a) the number of days spent at farm work not connected with the farm operated, and (b) the number of days spent at nonfarm jobs, businesses, or professions. In the 1935 Census, the inquiry specified "work for pay or income not connected with the farm you operate." The 1930 inquiry specified "work for pay at jobs not connected with the farm you operated." In 1945, 1935, and 1930, as in 1950, exchange labor was to be omitted. No reference to exchange labor was made in 1940.

In the 1950, 1940, 1935, and 1930 Censuses, the enumerator was instructed to check the "none" square or write "none" in reply to the inquiry for the number of days worked, if the operator did not work off the farm during the year preceding the census date. In the 1945 Census, no provision was made for recording replies of "none." The replies of "none" were counted for the Censuses of 1950, 1940, and 1935, but not for 1930.

The proportion of farm operators who reported work off their farms was 38.4 percent in 1950, as compared with 26.8 percent in 1945, even though many of the places with limited agricultural production were excluded from the count of farms in 1950.

**Other income.**—The 1950 Agriculture Questionnaire included four inquiries to determine the extent to which farm operators are dependent upon income from sources other than the farm operated. The first of these called for work off the farm by

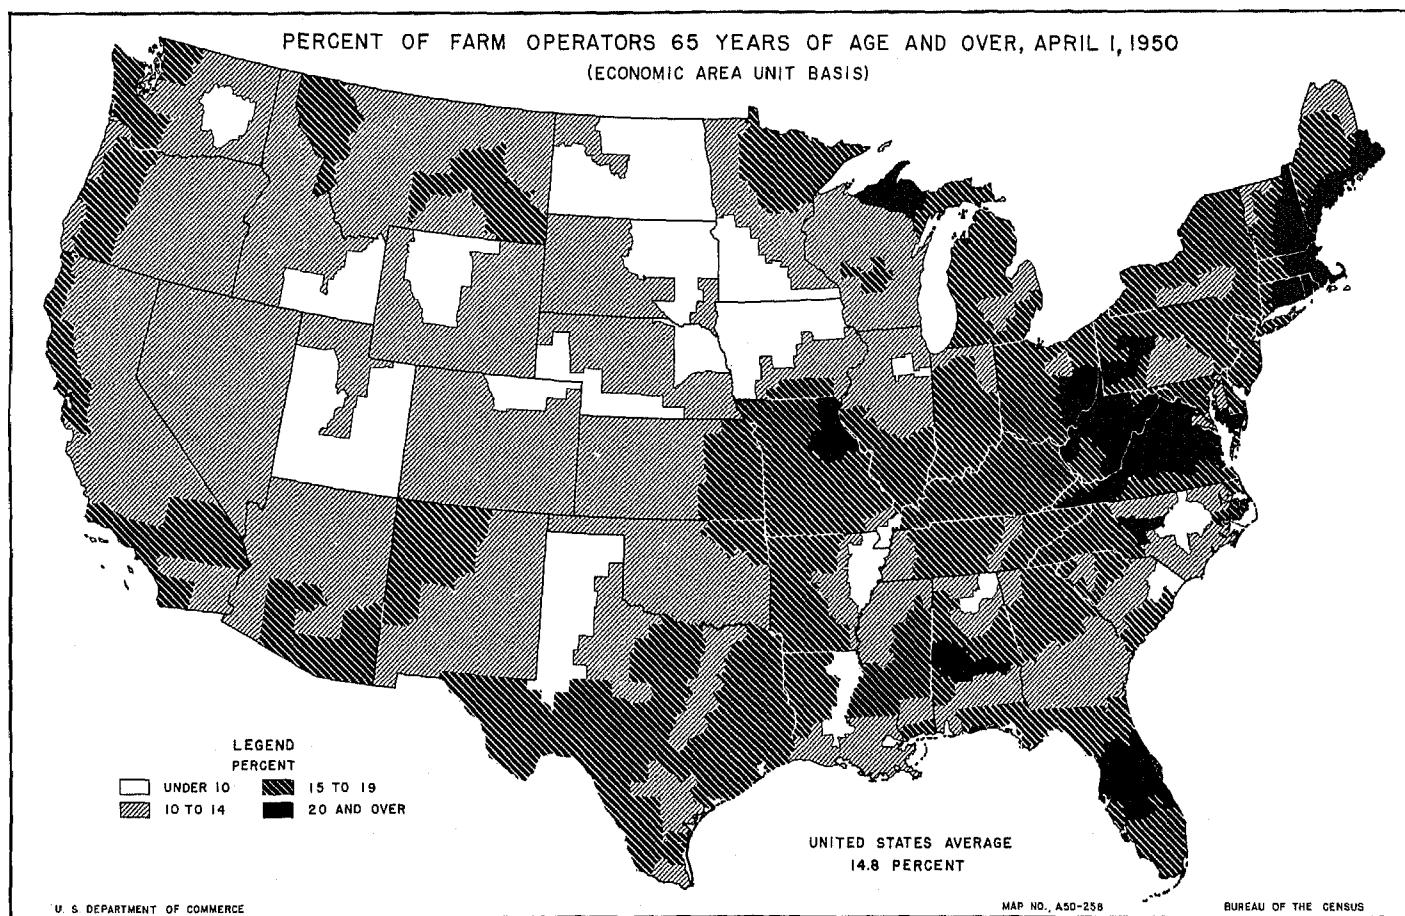

the operator. (See "Off-farm work," as discussed above.) The other inquiries were substantially as follows:

- (a) Did any other member of your family living with you have a nonfarm job, business, profession, or work on someone else's farm last year?  No  Yes
- (b) Did you have any income last year from any of the following sources—sale of products from land rented out, cash rent, boarders, old age assistance, pensions, veterans' allowances, unemployment compensation, interest, and help from members of your family?  No  Yes
- (c) Was the income which you and your family received from work off the farm and from other sources (listed in the questions above) greater than the total value of all agricultural products sold from your place last year?  No  Yes

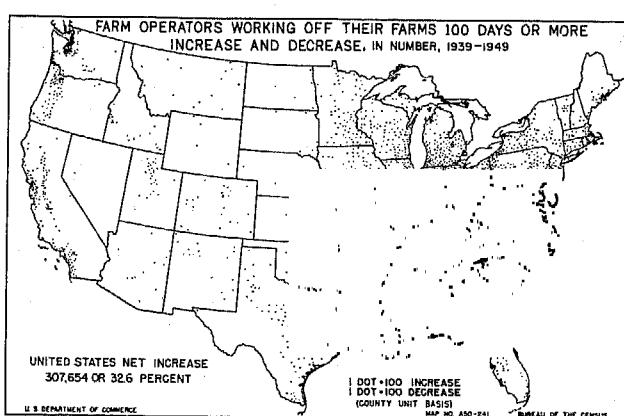

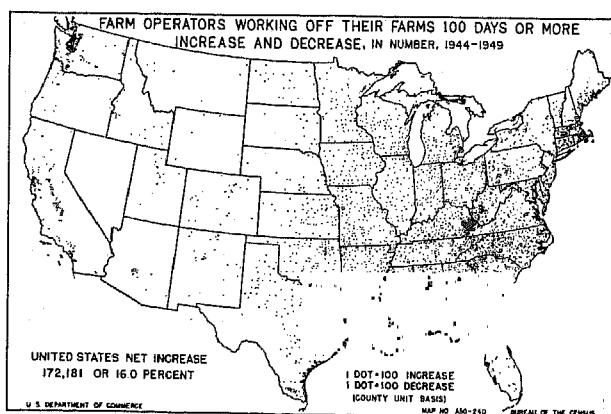

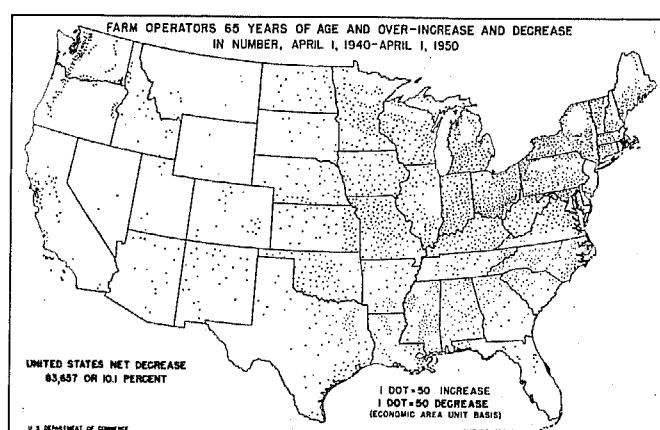

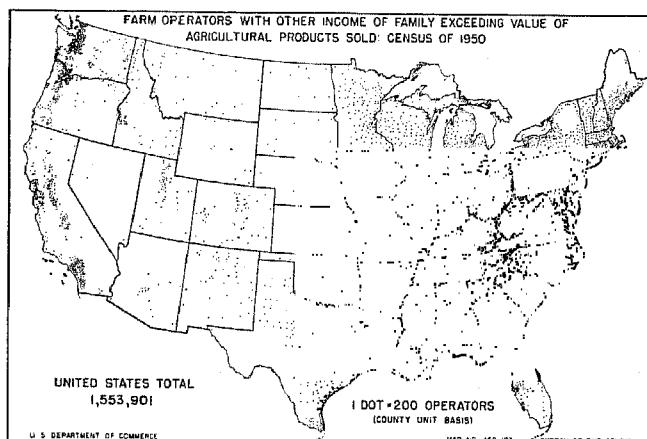

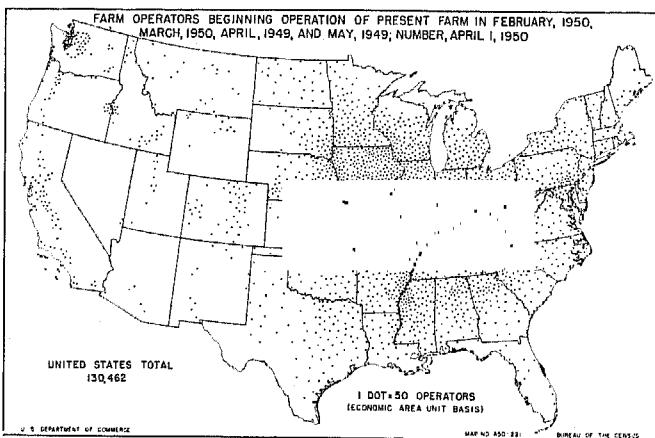

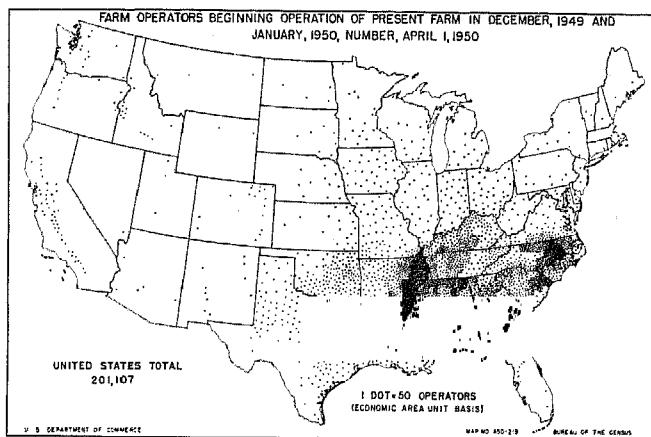

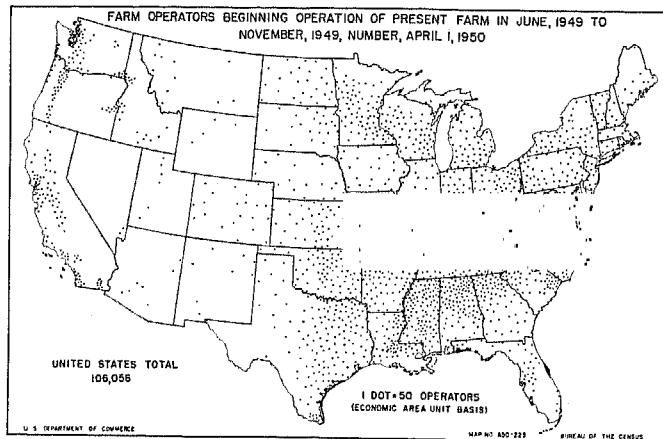

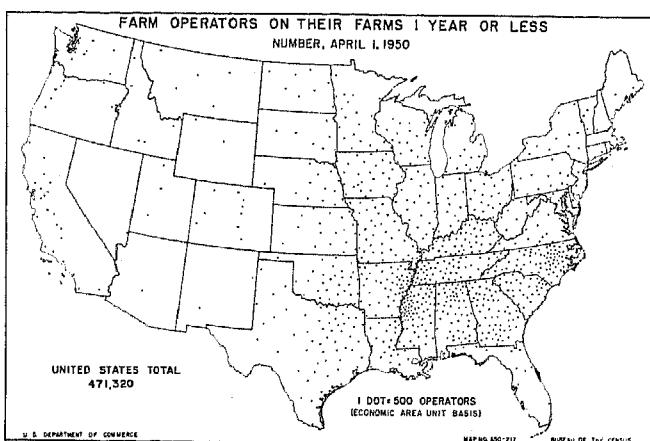

No information was tabulated for the two inquiries labeled (a) and (b). The intent of these inquiries was to obtain a more accurate reply to the inquiry labeled (c).

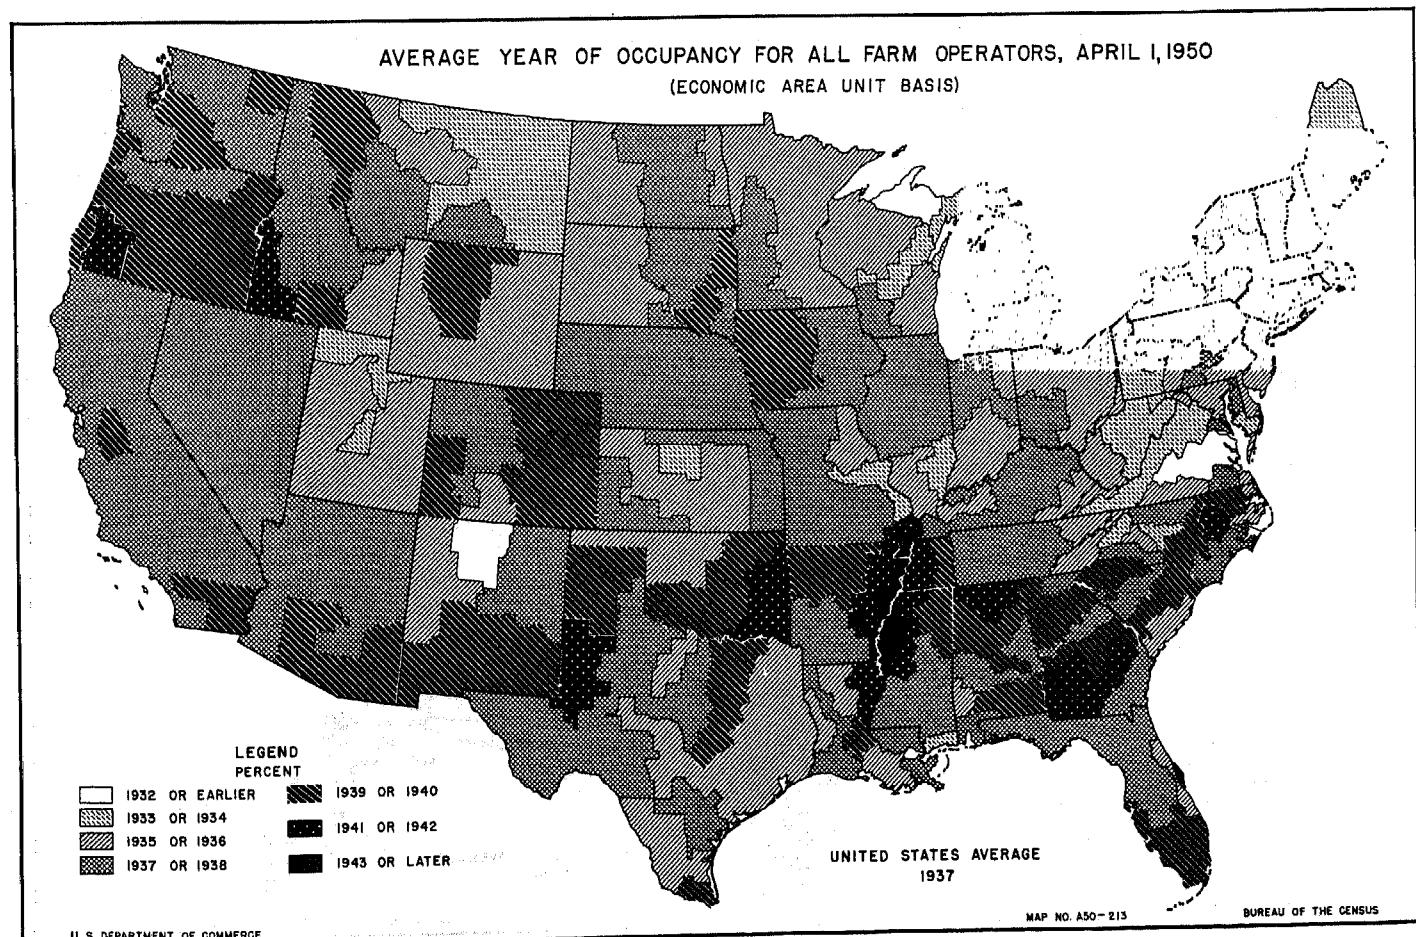

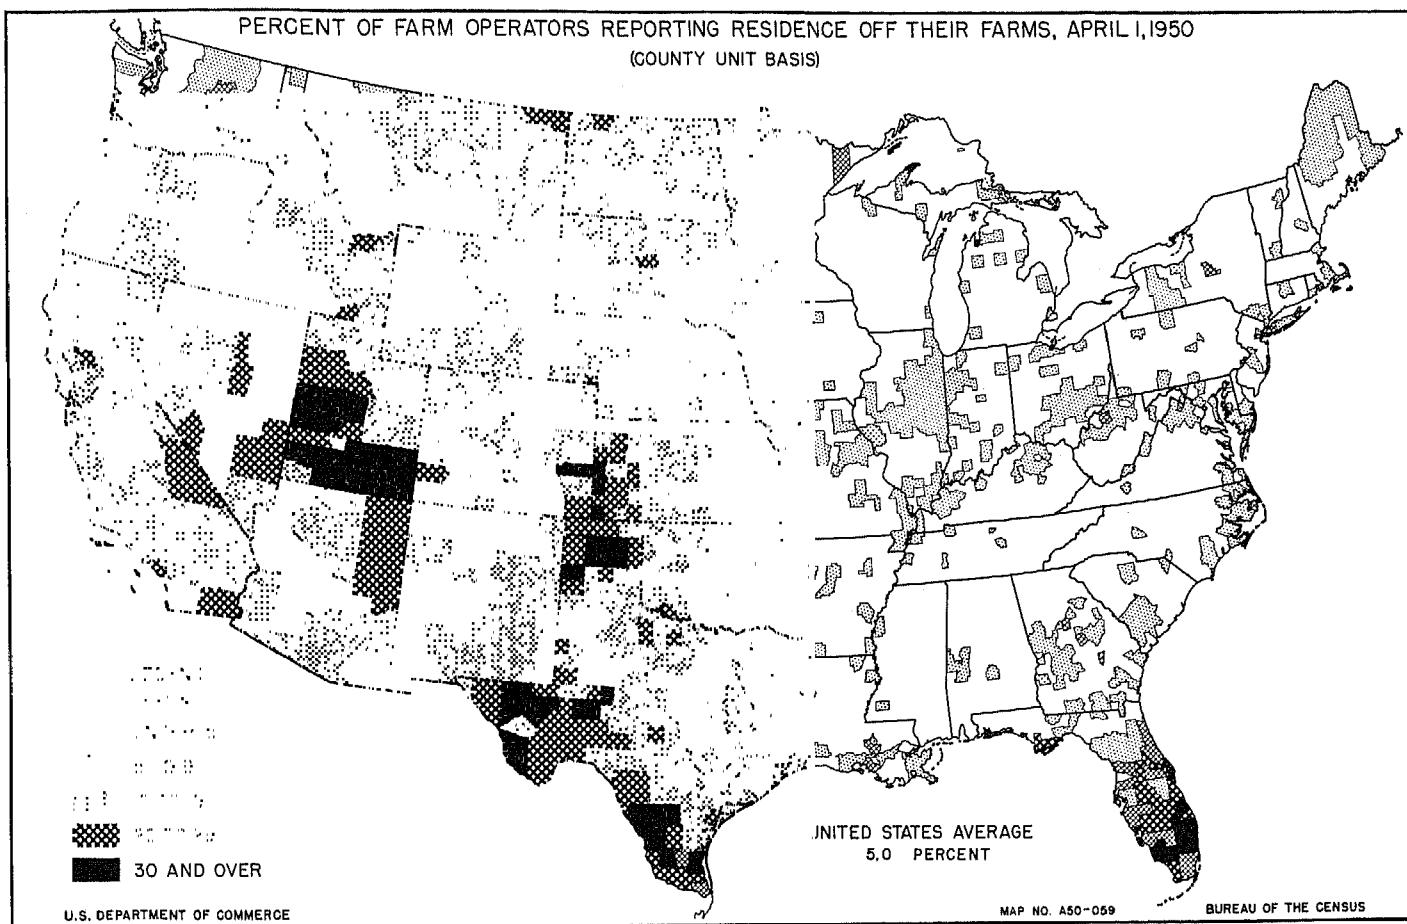

Information on other income of the farm operator's family was not obtained in prior censuses.

For the 1950 Census, 29.1 percent of the farm operators in the United States reported that the income received by the family from sources other than the farm operated exceeded the value of agricultural products sold in 1949. The percentages for the States ranged from 5.6 in North Dakota to 57.3 in West Virginia. For commercial farms, 9.1 percent of the operators reported other income in excess of the total value of farm products sold. For other farms (part-time, residential, and abnormal), the proportion was 73.6 percent.

\* Not available. <sup>1</sup>In 1900 the number of occupants of farm homes was 88,364 less than the number of farm operators, while in 1890 the number of occupants of farm homes exceeded the number of farm operators by 202,538. <sup>2</sup>Excludes 40,872 occupants of farm homes with form of tenure not reported. <sup>3</sup>Not shown in the reports of the Census of 1890, as the number not reporting age was distributed among the several age groups. <sup>4</sup>Includes managers. <sup>5</sup>See text.

## GENERAL REPORT

Table 6.—FARM OPERATORS IN EACH COLOR AND

[All 1950 data and all for 1945 except average age of operators are based on reports for

	Color, tenure, and year	All farm operators	Operators reporting age								Operators not reporting age
			Total	Under 25 years	25 to 34 years	35 to 44 years	45 to 54 years	55 to 64 years	65 years and over	Average age

## AGE, RESIDENCE, YEARS ON FARM, WORK OFF FARM

Table 11.—FARM OPERATORS IN EACH TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE UNITED STATES: 1910 TO 1950

[Years-on-farm groups not strictly comparable for the several censuses because of variation in census dates. See table 2 for explanation of the time intervals represented. All 1950 and 1945 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 23.]

Tenure and year	All farm operators	Operators reporting years on present farm					Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm			Percent distribution of operators in each years-on-farm group, by tenure			
		Total	Less than 5 years		10 years or more	Average number of years on present farm		Less than 5 years	5 to 9 years	10 years or more	Total	Less than 5 years	5 to 9 years	
			Total	1 year or less					Total	1 year or less			1 year or less	5 to 9 years

## GENERAL REPORT

Table 12.—FARM OPERATORS IN EACH COLOR AND TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE SOUTH: 1910 TO 1950

[Years-on-farm groups not strictly comparable for the several censuses because of variation in census dates. See table 2 for explanation of the time intervals represented. All 1950 and 1945 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 23.]

Color, tenure, and year	All farm operators	Operators reporting years on present farm					Operators not re- porting years on present farm	Percent distribution of opera- tors reporting in each tenure, by years on present farm					Percent distribution of opera- tors in each years-on-farm group, by tenure						
		Less than 5 years			Average number of years on present farm	Less than 5 years		Total	1 year or less	Less than 5 years	5 to 9 years	10 years or more	Total	1 year or less	Less than 5 years	5 to 9 years	10 years or more		
		Total	Less than 1 year or less	5 to 9 years

## GENERAL REPORT

Table 12.—FARM OPERATORS IN EACH COLOR AND TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE SOUTH: 1910 TO 1950—Continued

[Years-on-farm groups not strictly comparable for the several censuses because of variation in census dates. See table 2 for explanation of the time intervals represented. All 1950 and 1945 data are based on reports for only a sample of farms. See text. Figures for divisions and States in table 23.]

Color, tenure, and year	All farm operators	Operators reporting years on present farm					Oper- ators not re- porting years on present farm	Percent distribution of opera- tors reporting in each tenure, by years on present farm				Percent distribution of opera- tors in each year-on-farm group, by tenure			
		Total	Less than 5 years		10 years or more	Average number of years on present farm		Total	Less than 5 years		10 years or more	Total	Less than 5 years		
			Total	1 year or less				Total	1 year or less	5 to 9 years			Total	1 year or less	5 to 9 years

## GENERAL REPORT

Table 13.—OPERATORS OF COMMERCIAL AND OTHER FARMS IN EACH TENURE, BY YEARS ON PRESENT FARM, WITH PERCENT DISTRIBUTION, FOR THE UNITED STATES, THE NORTH, AND THE WEST, AND IN EACH COLOR AND TENURE FOR THE SOUTH: 1950—Continued

[Data are based on reports for only a sample of farms. See text.]

Region, tenure, and economic class	All farm operators	Operators reporting years on present farm					Operators not reporting years on present farm	Percent distribution of operators reporting in each tenure, by years on present farm			Percent distribution of operators in each years-on-farm group, by tenure					
		Less than 5 years		5 to 9 years	10 years or more	Average number of years on present farm		Less than 5 years		5 to 9 years	10 years or more	Less than 5 years				
		Total	1 year or less					Total	1 year or less			Total	1 year or less

\*Not available.

<sup>1</sup>All farm operators April 1 1950 and 1940; and Jan. 1, 1945 and 1935.<sup>2</sup>Number of operators not working off their farms not available; therefore, percentages are based on all farms and the figure shown for operators not working off their farms includes operators not reporting as to work off their farms.

## AGE, RESIDENCE, YEARS ON FARM, WORK OFF FARM

109

Table 17.—OFF-FARM WORK BY OPERATORS OF COMMERCIAL AND OTHER FARMS, AND OTHER INCOME, BY TENURE OF OPERATOR, FOR THE UNITED STATES, THE NORTH, AND THE WEST, AND BY COLOR AND TENURE OF OPERATOR FOR THE SOUTH: 1949

[Data are based on reports for only a sample of farms. See text]

Region, tenure, and economic class	All farm operators <sup>1</sup>	Operators working off their farms						Operators not working off their farms		Operators not reporting as to work off their farms		Operators reporting other income of family exceeding value of agricultural products sold	
		Total	1 to 99 days	100 days or more	Percent of operators reporting as to work off their farms			Number	Percent of operators reporting as to work off their farms	Number	Percent of all operators	Number	Percent of all operators
					Total	1 to 99 days	100 days or more

## GENERAL REPORT

Table 18.—FARM OPERATORS, BY AGE, BY DIVISIONS AND STATES: 1950, 1945, AND 1940—Continued

[All 1950 data are based on reports for only a sample of farms. See text.]

Region, division, State, and year	All farm operators	Operators reporting age							Operators not reporting age	Percent distribution of operators reporting by age							
		Total	Under 25 years	25 to 34 years	35 to 44 years	45 to 54 years	55 to 64 years	65 years and over		Under 25 years	25 to 34 years	35 to 44 years	45 to 54 years	55 to 64 years	65 years and over

## AGE, RESIDENCE, YEARS ON FARM, WORK OFF FARM

153

## FARM, BY DIVISIONS AND STATES: 1950, 1945, AND 1940

for explanation of the time intervals represented. All 1950 data are based on reports for only a sample of farms. See text]

Operators reporting years on present farm—Continued						Percent distribution of farm operators reporting, by years on present farm											
Average number of years on present farm			Not reporting years on present farm			Less than 5 years						5 to 9 years			10 years or more		
						Total		1 year or less									
1950	1945	1940	1950	1945	1940	1950	1945	1940	1950	1945	1940	1950	1945	1940	1950	1945	1940
