CHAPTER XIII.—TYPE OF FARM

Introduction.—In this chapter, the major items of information from the 1950 Census of Agriculture are presented by type of farm for those farms which were classified as "Commercial." Some data are given also for "Other farms," i. e., those which were not classified as "Commercial."

The purpose of a classification of farms by type is to show (a) the kinds of farms in various parts of the Nation; (b) the variation in resources, production, sales, and organization between farms of the various types; and (c) the characteristics of the operators on different types of farms. The classification of farms, by type, groups together farms having a high degree of uniformity in the kind, relative amount, and proportion of crops and livestock handled and in the methods and practices followed in production. The degree of agricultural specialization and the pattern of production can thus be shown. Information of this nature provides a basis for the study and analysis of agricultural problems, such as those relating to the development of land-use and soil-conservation programs as well as other programs dealing with the production or the marketing of agricultural commodities. It is also of value to those who provide products and services for farms and the farm population.

Sources of data.—All data presented in this chapter are for the 1950 Census of Agriculture. Comparable figures are not given for earlier census years because the classification of farms by type has been made on a different basis in each census.

The estimates are based upon reports for only a sample of farms. A description of the sampling plan and data regarding the reliability of estimates based on reports for only a sample of farms are given in the Introduction to this volume.

Presentation of statistics.—The statistics are presented as totals, averages, or percentages for the United States, for three major regions, for nine geographic divisions, and for each of the States. An outline map showing geographic areas appears in the Introduction to this volume. The data in this chapter are intended to serve as a general summary and to afford a broad appraisal of type-of-farm relationships and comparisons by areas.

The maps accompanying this text show the geographic distribution of each of the major types of farms. They serve the purpose of giving a quick visual picture of the distribution of each type of farm.

Table 1 gives, for the United States, totals for items for which data are available by type of farm. Each of tables 2 through 38 shows for one item the relationship of totals for each type of farm to the over-all totals for the item, for States, and larger areas. The remaining tables present statistics relating to selected characteristics for each type of farm. The latter group shows the principal characteristics for each type and the variations in these characteristics from State to State.

Most of the data in this chapter are averages and percentages which were derived from State totals published in Economic Area Tables 7 and 11 of Volume I, "Counties and State Economic Areas" of the 1950 Census of Agriculture reports. Totals are shown by type of farm for many of the items for the United States as a whole, while only a few of the totals are given for the individual States. For most of the items, totals are shown for States only

for all farms, for commercial farms as a group, and for other farms as a group.

A few of the data, in Volume I, have been adjusted to equal the total for all farms and will vary from the estimated totals in this chapter. For example, in County Table 7 in Volume I, the number of commercial farms and of other farms has been adjusted to equal the total number of farms, for each county, as well as for each State. Likewise, the number of farms by type, as presented in the same table, has been adjusted to equal the total for commercial farms.

The number of farms designated as "miscellaneous," in the type-of-farm classification, was not shown separately in Volume I because the number of such farms was too small to give statistical reliability for areas smaller than States. Data for the types grouped under "miscellaneous" were separated for presentation in this chapter by subtracting totals for the types listed in Economic Area Tables 7 and 11 from the totals for all commercial farms shown in Economic Area Tables 8 and 12 in Volume I. If State economic area totals for the miscellaneous types of commercial farms are desired, they may be secured by the same procedure.

Data for "large farms" classified by type are given in State Table 13 of Volume I. The numbers of large farms classified as "Commercial" and as "Other" farms are also given in that table. (See introduction to this volume for the definition of a large farm.)

DEFINITIONS AND EXPLANATIONS

Definitions having general application such as those for "a farm," "farms reporting," etc., are shown in the Introduction to this volume. Reference should also be made to the Introduction to this volume for a discussion of the effect that the change in definition of a farm has had on the number of farms, number of farms reporting, etc.

Farms classified by type.—For the 1950 Census, not all farms were classified by type. Only farms grouped as commercial and part-time farms were classified by type of farm. In making the classification by type of farm, farms were divided into two groups—commercial farms and other farms. In general, commercial farms are those with a total value of farm products sold of \$1,200 or more in 1949 plus those farms with a value of farm products sold of \$250 to \$1,199 provided the farm operator worked off his farm less than 100 days and the total value of farm products sold was greater than the income the farm operator and members of his family received from nonfarm sources. (See Chapter XII, "Economic Class of Farm," for a more complete discussion of the composition of commercial farms.)

Other farms comprise part-time, residential, and abnormal farms. Part-time farms are farms with a value of farm products sold of \$250 to \$1,199 provided that the farm operator reported 100 or more days of work off the farm in 1949, or that the nonfarm income received by him and members of his family was greater than the value of farm products sold. Residential farms include all farms, except abnormal farms, with a total value of products sold of less than \$250. Abnormal farms comprise public and private institutional farms, community enterprises, experiment

COMMERCIAL FARMS CLASSIFIED BY TYPE, AND OTHER FARMS, FOR THE UNITED STATES: CENSUS OF 1950

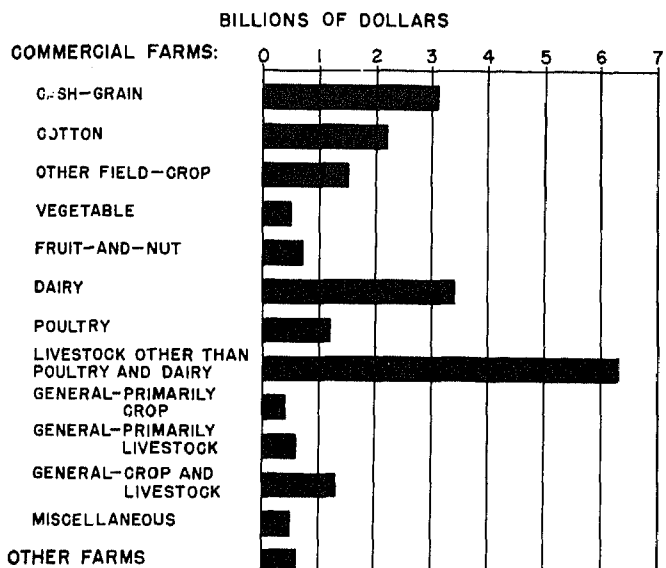

station farms, grazing associations, etc. Abnormal farms were classified on the basis of the name of the farm operator, the name of the owner, etc.

For 1950, the tabulations of farm characteristics by type-of-farm were limited to the commercial farms. The part-time farms, even though classified by type, were not included in the tabulations by type. Part-time farms were classified by type-of-farm primarily to obtain a count of each type and to see how the distribution differed from that for commercial farms. This count appears in table 51 of this chapter. Characteristics of part-time farms are shown for the group as a whole, since no tabulations, except a count, were made for part-time farms classified by type.

Separate data for part-time, residential, and abnormal farms are shown in chapter XII of this volume. In the tables given in this chapter these three groups have been combined and totals are shown only for the combined group.

Basis of classification by type.—The classification of commercial farms by type was made on the basis of the relationship of the value of sales from a particular source, or sources, to the total value of all farm products sold from the farm. In some cases, the type of farm was determined on the basis of the sale of an individual farm product, such as cotton, or on the basis of closely related inquiries, such as dairy products. In other cases, the type was determined on the basis of sales of a broader group of products such as corn, sorghums, all small grains, field peas, field beans, cowpeas, and soybeans. In order to be classified as a particular type, sales or anticipated sales of a product or a group of products had to represent 50 percent or more of total sales from the farm.

The value of farm products sold represents the sum of the values of all farm products sold from the farm. The number of products for which the value of sales was obtained varied from 31 to 39, depending on the content of the agriculture questionnaire for the various States. The various products for which the values of sales were obtained are shown in table A. The value of sales was usually obtained in connection with the quantity of the product produced and also the quantity sold or to be sold. In case data regarding the value of sales were not reported, the figures were estimated during the office processing, if it appeared that the production was sufficient for sales to have occurred. When the determination as to whether sales should be estimated and as to how much sales were to be estimated, was being made, liberal

VALUE OF FARM PRODUCTS SOLD IN 1949 FOR COMMERCIAL FARMS BY TYPE OF FARM, AND OTHER FARMS, FOR THE UNITED STATES: CENSUS OF 1950

allowances were made for requirements for use on the farms for production purposes as well as for use by the household of the farm operator and other households on the farm. These estimated data for the values of farm products sold represent only a very small percentage of the value of all farm products sold.

The types of commercial farms together with the product or group of products that had to represent 50 percent or more of the total sales for the farm to be so classified, are as follows:

Type of farm	Product or group of products amounting to 50 percent or more of the value of all farm products sold
Cash-grain	Corn, sorghums, small grains, field peas, field beans, cowpeas, and soybeans.
Cotton	Cotton.
Other field-crop	Peanuts, Irish potatoes, sweetpotatoes, tobacco, sugarcane, sugar beets for sugar, and other miscellaneous crops.
Vegetable	Vegetables.
Fruit-and-nut	Berries and other small fruits, and tree fruits and nuts.
Dairy	Milk and other dairy products. The criterion of 50 percent of the total sales was modified in the case of dairy farms. A farm for which the value of sales of dairy products represented less than 50 percent of the total value of farm products sold was classified as a dairy farm if: <ol style="list-style-type: none"> Milk and other dairy products accounted for 30 percent or more of the total value of products, and Milk cows represented 50 percent or more of all cows, and Sales of dairy products, together with the sales of cattle and calves, amounted to 50 percent or more of the total sales.
Poultry	Chickens, eggs, turkeys, and other poultry and poultry products.
Livestock other than dairy and poultry.	Cattle, calves, hogs, sheep, goats, wool, mohair, goat milk, and products from animals slaughtered on the farm, provided the farm did not already classify as a dairy farm.
General	Farms were classified as general when the value of products from one source or group of sources did not represent as much as 50 percent of the total of the

Type of farm

Product or group of products amounting to 50 percent or more of the value of all farm products sold

value of all farm products sold. Separate figures are given for three types of general farms:

- (a) Primarily crop.
- (b) Primarily livestock.
- (c) Crop and livestock.

Primarily crop farms are those for which the sale of one of the following crops or groups of crops—vegetables, fruits and nuts, cotton, cash grains, or other field crops—did not amount to 50 percent or more of the value of all farm products sold, but for which the value of sales for all these groups of crops represented 70 percent or more of the value of all farm products sold.

Primarily livestock farms are those which could not be classified as dairy farms, poultry farms, or livestock farms other than dairy and poultry, but on which the sale of livestock and poultry and livestock and poultry products amounted to 70 percent or more of the value of all farm products sold.

General crop and livestock farms are those which could not be classified as either crop farms or livestock farms, but on which the sale of all crops amounted to at least 30 percent but less than 70 percent of the value of all farm products sold.

Miscellaneous----- This group of farms includes those which had 50 percent or more of the total value of products accounted for by sale of horticultural products; or sale of horses; or sale of fur animals; or sale of forest products; or sale of bees, wax, and honey.

The above types were selected because they provided a classification meaningful to large areas of the United States both as to number of farms, and as to the kind of farming followed. Relatively unimportant types as to number, such as forest-product farms, horse farms, etc., were grouped as miscellaneous since the main purpose in classifying these was to exclude them from the other types.

Cotton farms were classified separately from "other field-crop farms" because they constitute such a large proportion of the total farms. A separation of cotton farms also makes the data more useful in areas where cotton competes with peanuts or tobacco as a cash crop. Usually it is possible to identify the crops accounting for the "other field-crop farms" because, in most areas, only one of the crops included in this group is grown.

General farms were separated into three groups to more adequately describe these farms.

The "home" farms of multiple-unit operations were classified on the same basis as all other farms. No attempt was made to consider value of sales of products from the land rented out. The "home" farm may have been classified as residential, even though it was the headquarters of a large productive plantation.

Limitations of the use of value of products sold for classifying farms by type.—The value of farm products sold is probably the best possible basis for making a classification of farms by type. It provides a common denominator in which the relative importance of all enterprises may be expressed. As a general rule, it reflects the physical resources and productivity of the farm. However, the use of income data has limitations for those farms where crop failure curtailed production during the year, and for farms where livestock or other inventories were expanding or contracting at greater than the usual yearly rate for the farm. Also, use of gross sales without adjustment for any of the costs of production may give too great an importance to certain products. For example, many farms purchasing feeder cattle may be classified as livestock farms even though the net income from crops

may exceed the net income from livestock and livestock products. Farms may be classified differently from one year to another if prices of the several groups of farm products rise or fall at different rates. This is particularly true for farms on which more than one product or groups of products provide important sources of income. However, farms on which the production of one product provides a large part of the total sales will classify the same as to type regardless of the change in price level or of changes in classification criteria.

Comparability of type-of-farm classification for the various censuses.—Comparative data by type of farm for earlier years are not presented in the reports of the 1950 Census of Agriculture. However, an analysis and explanation of the types, the criteria used, and the information upon which the classification was based, for each of the prior censuses, are presented to aid those who make reference to comparative data.

Type-of-farm classifications were made for the 1930, 1940, and 1945 Censuses. The type-of-farm classifications used for these three prior censuses were not comparable with each other or with that used for the 1950 Census. Data classified by type of farm for the four censuses are not comparable because of differences in (a) the number and grouping of products for which separate data on the value of sales were obtained, (b) the bases used for selecting farms to be classified by type, (c) the criteria used for relating sales of a product or groups of products to the total sales for the purpose of determining type, and (d) the definition of a farm used.

The products and grouping of products for which the values of sales were enumerated for each of the four censuses are shown in table A. The most significant difference in regard to the products for which value information was enumerated between the 1950 and prior censuses is the omission for 1950 of the inquiry regarding the value of farm products used by households on the farm. The omission of this inquiry for 1950 affected the total value of farm products to which the value of a product or groups of products was related. The use of a large number of inquiries for the sale of farm products for 1950 permitted the classification of farms directly into more type-of-farm groups than for prior censuses. While a considerable number of type-of-farm groups were determined for the 1930 Census, these determinations were made on the basis of calculations for production, acreage, or inventory items as well as the value of products sold. The combining of the several products into a group limited the kind of type-of-farm classification that could have been made for censuses prior to 1950.

Table B indicates the basis for the classification of farms by type for the four censuses and the kinds of farms not classified by type on the basis of source of income.

The groups of farms for the 1945, 1940, and 1930 Censuses, not classified by type of farm are not the same as the groups of "other farms" for 1950. Generally, the groups not classified by type for 1945, 1940, and 1930 include farms for which the value of farm products used by farm households exceeded the value of farm products sold and exclude farms for which the value of farm products sold or used by farm households was not reported or was incompletely reported.

The value of farm products used by farm households reported for the 1945, 1940, and 1930 Censuses varied from a very small amount to more than \$2,000 for individual farms. The average value of farm products used by farm households was \$341 for 1945, \$197 for 1940, and \$250 for 1930. Farms with a value of farm products used by farm households greater than total sales in 1945, or greater than each of the nine value-of-product groups for 1940, or 40 percent or more of combined value of farm products sold and value of products used by the operator's family in 1930, would have been eliminated from the groups classified by type of farm. In 1950, because of the difference in criteria, some of these same farms would be classified by type. Some would be commercial and some part-time or residential.

Classification criteria...	The sale of products from a particular source had to account for 50 percent or more of the total value of all farm products sold from the farm.	The sale of products from a particular source had to account for 50 percent or more of the total value of all farm products sold from the farm.	The source that was largest among the 10 value-of-products groups (the value of farm products used by farm households was also used. (See table A.)	The source that was largest among the 10 value-of-products groups (the value of farm products sold and value of products used by operator's family. In the case of some types of farms, it was necessary to determine type from the value of sales from a particular source on the basis of crop or pasture acreages or livestock inventories.
How classification was made.	Hand coding by visual inspection of each questionnaire during office processing.	Mechanical comparison of the value of sales for each of 9 value-of-products groups with the total value of farm products.	Mechanical comparison of the 10 value-of-farm products groups.	Hand coding by visual inspection of each questionnaire during office processing.
Information used for classification.	46 sales items representing sales of an individual product or group of similar products. Some were considered singly and others grouped.	Value of sales for 8 groups of farm products and value of farm products used by farm household.	Sales for 9 groups and value of products used by farm households.	5 sales groups and 1 group for value of products used by operator's family. For some of these groups, the information on crop or pasture acreages and livestock inventories was used for a sub-classification.
Kinds of farms not classified by type of farm on the basis of income from a particular source or sources.	(a) Part-time farms (\$250 to \$1,199 sales of farm products and the operator worked off the farm 100 or more days in 1949 or reported that other family income was greater than sales of farm products. A count of these part-time farms was made by type but a tabulation of their characteristics was not made. (b) Residential farms (less than \$250 sales of farm products in 1949). (c) Abnormal farms (primarily private and public institutional farms, experiment station farms, Indian reservations, and grazing associations).	(a) Farms with no farm products sold or used by farm households in 1944. (b) Farms where value of products used by farm households exceeded total sales.	(a) Farms with no farm products sold or used by farm households in 1939. (b) Farms with incomplete reports. (c) Farms where value of products used by farm households exceeded sales for each of the 9 value-of-sales groups.	(a) Farms with no farm products sold or used by operator's household in 1929. (b) Farms not operated in 1929. (c) Farms with incomplete reports. (d) Greenhouses, nurseries, apiaries. (e) Part-time farms (farms where operator worked 150 days or more at off-farm work and farm sales were less than \$750). (f) Places where receipts from boarders and lodgers represented 50 percent or more of total value of all sales and value of products used by operator's family. (g) Farms where value of products used by operator's household exceeded total sales.

Item	1950	1945	1940	1930
Cash-grain farms.....	Combined sales of corn, sorghums (except sirup), small grains and grain straw, soybeans, cowpeas, velvetbeans, and other dry field beans and peas accounting for 50 percent or more of total sales.	Not classified separately; included with "field-crop farms."	Not classified separately; included with "field-crop farms."	Combined value of corn, sorghums (except sirup), and small grains available for sale accounting for 40 percent or more of the total value of products sold and used by operator's family.
Cotton farms.....	Sales of cotton (lint and seed) accounting for 50 percent or more of total sales.	Not classified separately; included with "field-crop farms."	Not classified separately; included with "field-crop farms."	Value of cotton (lint and seed) accounting for 40 percent or more of the total value of products sold and used by operator's family.
Other field-crop farms (field-crop farms).	Combined sales of peanuts, Irish potatoes, sweetpotatoes, tobacco, sugarcane and sugar beets for sugar, and other miscellaneous crops accounting for 50 percent or more of total sales.	Combined sales of all crops except vegetables, berries, fruits, nuts, and horticultural specialties accounting for 50 percent or more of total sales.	Products of greater value than any one of the other sales groups or the value of products of the farm used by farm households.	Combined value of sweet sorghum for sirup, sugarcane, sugar beets, maple sirup and sugar, soybeans, cowpeas, velvetbeans, dry field beans and peas, tobacco, hay, peanuts, Irish potatoes, sweetpotatoes, mushrooms, hops, broomcorn, and other field crops available for sale accounting for 40 percent or more of the total value of products sold and used by operator's family.
Vegetable farms.....	Sales of vegetables accounting for 50 percent or more of total sales.	Sales of vegetables accounting for 50 percent or more of total sales.	Sales of vegetables greater than any one of the other sales groups or the value of products of the farm used by farm households.	Value of vegetables sold accounting for 40 percent or more of the total value of products sold and used by operator's family (called "truck farms").

TABLE D.—CRITERIA USED FOR CLASSIFICATION OF FARMS BY TYPE: CENSUSES OF 1950, 1945, 1940, AND 1930

Continued

Item	1950	1945	1940	1930
Fruit-and-nut farms....	Sales of berries, fruits, and nuts accounting for 50 percent or more of total sales.	Sales of berries, fruits, and nuts accounting for 50 percent or more of total sales.	Sales of berries, fruits, and nuts greater than any one of the other sales groups or the value of products of the farm used by farm households.	Value of berries, fruits, and nuts available for sale accounting for 40 percent or more of the total value of products sold and used by operator's family.
Dairy farms.....	Sales of milk and other dairy products accounting for 50 percent or more of total sales. Also, those farms where sales of dairy products accounted for 30 to 49 percent of total sales provided one-half of the cows were milk cows and the addition of cattle and calf sales together with sales of dairy products accounted for 50 percent of total sales.	Sales of dairy products accounting for 50 percent or more of total sales.	Sales of dairy products greater than any one of the other sales groups or the value of products of the farm used by farm households.	Value of dairy products available for sale together with sales of dairy cattle and calves accounting for 40 percent or more of the total value of products sold and used by operator's family.
Poultry farms.....	Sales of poultry and poultry products (excluding baby chicks) accounting for 50 percent or more of total sales.	Sales of poultry and poultry products (including baby chicks) accounting for 50 percent or more of total sales.	Sales of poultry and poultry products (including baby chicks) greater than any one of the other sales groups or the value of products of the farm used by farm households.	Value of poultry and poultry products available for sale accounting for 40 percent or more of the total value of products sold and used by operator's family.
Livestock farms other than dairy and poultry.	Sales of all livestock and livestock products (other than dairy products, poultry and poultry products, horses and mules sold alive, and bees and honey) accounting for 50 percent or more of total sales—provided the farm did not already classify as a dairy farm.	Sales of all livestock and livestock products other than dairy products and poultry and poultry products accounting for 50 percent or more of total sales. (Horses, mules, fur animals, and bees included.)	Sales of livestock other than poultry, bees, and fur animals greater than any one of the other sales groups or the value of products of the farm used by farm households. (Horses and mules included.)	Value of all classes of meat animals such as beef cattle, sheep, and hogs; also wool, mohair, and slaughtered animals; accounting for 40 percent or more of the total value of products sold and used by operator's family. These were divided into 2 groups: (a) Animal-specialty, and (b) Stock-ranch, depending upon the ratio of crop acreage to pasture acreage. Livestock dealers and feed-lot farms were separated. (See below.)
Other livestock-products farms.	Included with "livestock farms other than dairy and poultry." (See above.)	Included with "livestock farms other than dairy and poultry." (See above.)	Sales of wool, mohair, meat, hides, bees, honey, wax, and fur animals greater than any one of the other sales groups or the value of products of the farm used by farm households.	Included with "animal-specialty," "stock-ranch," or "unclassified farms." (See above.)
General farms:				
(a) Primarily crop..	Less than 50 percent of sales from any one sales group but 70 percent or more of sales from all crops. Also, farms where 50 percent or more of sales were from hay sold or from pasture receipts.			
(b) Primarily livestock.	Less than 50 percent of sales from any one sales group but 70 percent or more of sales from all livestock and poultry and their products.	No single sales group accounting for as much as 50 percent of total sales.	No "general farm" type. The use of the largest single source left no farms for such a type.	Value of products available for sale from each of the sales groups less than 40 percent of the total value of products sold and used by operator's family.
(c) Crop-and-livestock.	Less than 50 percent of sales from any one sales group and less than 70 percent from all crops or all livestock and poultry and their products.			
Miscellaneous farms (type not identified separately in 1950):				
(a) Forest-products farms.	Sales of forest products, including maple sirup and sugar, accounting for 50 percent or more of total sales.	Sales of forest products, including maple sirup and sugar, accounting for 50 percent or more of total sales.	Sales of forest products, including maple sirup and sugar, greater than any one of the other sales groups or the value of products of the farm used by farm households.	Sales of forest products, excluding maple sirup and sugar, accounting for 50 percent or more of the total value of products sold and used by operator's family.
(b) Horticultural-specialty farms (greenhouses and nurseries).	Sales of horticultural specialties accounting for 50 percent or more of total sales.	Sales of horticultural specialties accounting for 50 percent or more of total sales.	Sales of horticultural specialties greater than any one of the other sales groups or the value of products of the farm used by farm households.	Included with "unclassified farms."
(c) Apiaries.....	Sales of bees, honey, and wax accounting for 50 percent or more of total sales.	Included with "livestock farms other than dairy and poultry." (See above.)	Included with "other livestock products farms." (See above.)	Included with "unclassified farms."
(d) Fur-animal farms.	Sales of rabbits, fur animals, and pelts accounting for 50 percent or more of total sales.	Included with "livestock farms other than dairy and poultry." (See above.)	Included with "other livestock products farms." (See above.)	Fur animals not enumerated.
(e) Horse farms.....	Sales of horses and mules accounting for 50 percent or more of the total sales.	Included with "livestock farms other than dairy and poultry." (See above.)	Included with "livestock farms other than dairy and poultry." (See above.)	Value of horses and mules sold accounting for 50 percent or more of the total value of products sold and used by operator's family.
(f) Feed-lot farms..	Not classified separately; included with "livestock farms other than dairy and poultry."	Not classified separately; included with "livestock farms other than dairy and poultry." (See above.)	Not classified separately; included with "livestock farms other than dairy and poultry." Resales of animals purchased were included only when information on questionnaire indicated sufficient pasture and feed for the livestock.	Separated from "animal-specialty farms" when information indicated acreage in farm was small, with little or no crop production, and expenditures for feed were large.
(g) Livestock dealers.	Not classified separately. Dealer operations were not to be enumerated.	Not classified separately. Dealer operations were not to be enumerated.	Not classified separately. Dealer operations not included when information on questionnaire indicated that animals were purchased for immediate resale.	Separated from "animal-specialty farms" when large numbers of animals were reported on questionnaire as sold, grown or raised on the farm, and the operator reported an occupation other than farming.

Part-time farms were excluded from the classification by type in 1930. The criteria for designating part-time farms were different in the two censuses, 1950 and 1930. In 1945 and 1940, part-time farms were not separately classified, as off-farm work, etc., were not used as criteria for classification. For these two censuses, many of these same kind of farms were classified by type of farm when the value of products sold in 1945, or the values of any of the nine groups for farm products sold in 1940 exceeded the value of products used by farm households.

Table C indicates the number of farms classified by type on the basis of the income from a particular source. For some censuses, farms not classified by type were further classified into part-time, and subsistence, abnormal, etc.

The different criteria used as the bases for classifying farms by type are shown in table D.

Some of the significant differences in the criteria between 1950 and prior censuses are as follows:

For 1945 and 1950, the percentage criteria of sales from a specific source or sources to total sales were the same. However, the grouping of products by sources was somewhat different. The significant differences between data by type of farm for the 1950 and the 1945 Censuses arise from the differences in the kind of farms not classified by type. Farms with value of farm products used by farm households exceeding the value of farm products sold were not further classified by type in 1945; and part-time, residential, and abnormal farms were not so classified for 1950.

For 1940 and 1950, the percentage criteria as well as the basis for classification were significantly different. For 1950, 50 percent or more was the percentage of total sales from a particular source used as a basis for determining type for commercial farms. For 1940, the percentage could have been as low as 12 percent of the total value of all farm products sold, as the farm was classified by type by determining which of the nine value-of-product groups was largest. There was a significant difference in the kinds of farms classified by type for 1940 and 1950. In 1940, farms for which the value of farm products used by farm households exceeded the value of each of the nine value-of-product groups were not further classified by type; such farms were designated as subsistence farms. For 1950, part-time, residential, and abnormal farms were not included in the tabulations of farms by type.

For 1930 and 1950, there are two major differences in criteria used as a basis for the type-of-farm classification. First, the percentage used was 40 percent for most types in 1930, and 50 in 1950. Second, the percentage in 1930 was related to the sum of the total value of farm products sold plus the value of farm products used by the farm operator's family, while in 1950, the percentage was related only to the total value of farm products sold. Part-time farms and farms with the value of farm products used by the operator's family exceeding the value of farm products sold, were not further classified by type in 1930, while in 1950 residential and abnormal farms were excluded from the groups tabulated by type.

The effect of differences in the grouping of products, in the basis for selecting farms for classification by type, and in the criteria used for relating sales from a specific source to total sales or to the total value of farm products sold plus the value of prod-

ucts used by farm households, may be illustrated by the following two examples of the classification of the same farms for the four censuses.

Farm A

Source of sales:	
Poultry and poultry products.....	\$100
Vegetables.....	\$75
Value of farm products used by farm households.....	\$90
Total value of sales.....	\$175
Total value of sales and value of farm products used by farm households.....	\$265
Days worked off farm by farm operator.....	250
Classification of farm:	
1950—Residential farm	
1945—Poultry farm	
1940—Poultry farm	
1930—Part-time farm	

Farm B

Source of sales:	Grouping of income items as they would have appeared in each of the census years			
	1950	1945	1940	1930
Cash grains.....	2, 551	3, 451	3, 451	3, 451
(Wheat, \$2,000; corn, \$500; oats, \$51.)				
Other field crops.....	900			
(Potatoes, \$900.)				
Dairy and dairy products..	2, 800	2, 800	2, 800	3, 666
(Whole milk, \$2,800.)				
Poultry and poultry products.....	866	866	866	
(Chicken eggs, \$450; live chickens, \$416.)				
Hogs.....	1, 500	2, 417	2, 417	2, 417
Cattle and calves.....	917			
Total value of sales.....	9, 534	9, 534	9, 534	9, 534
Value of farm products used by farm households.....	(¹)	786	786	786
Total value of farm products sold and used by farm households.....		10, 320	10, 320	10, 320

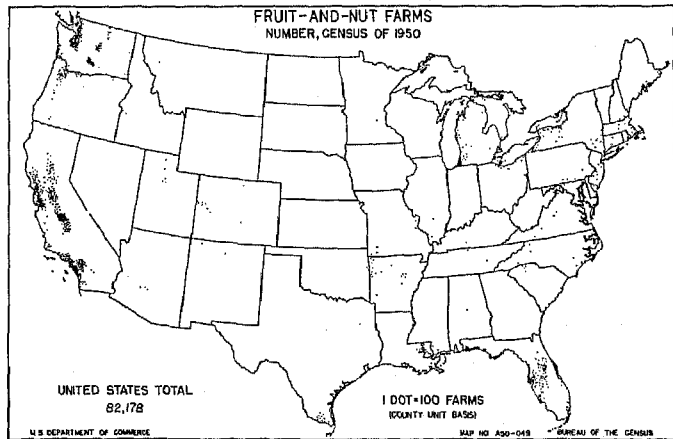

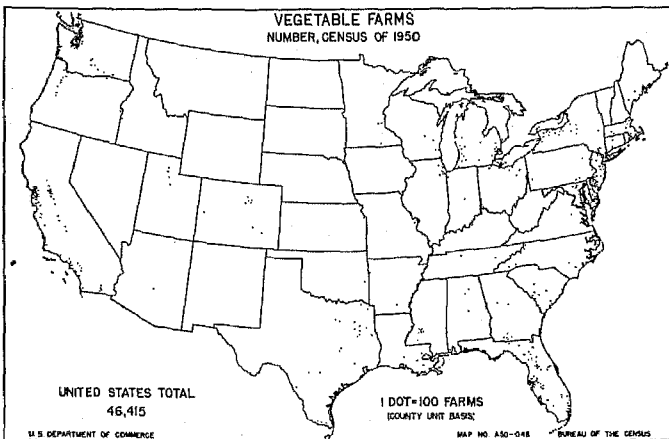

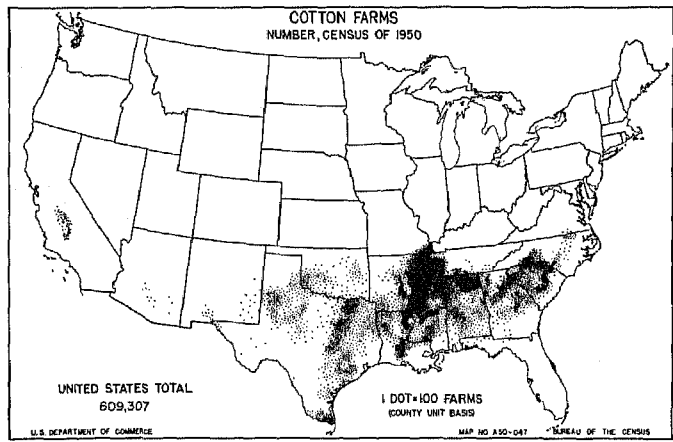

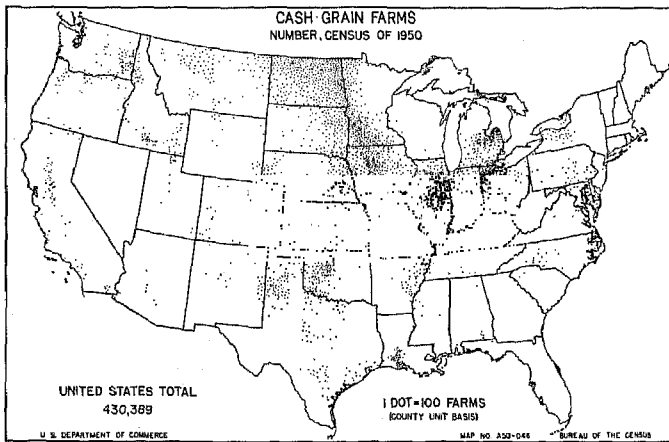

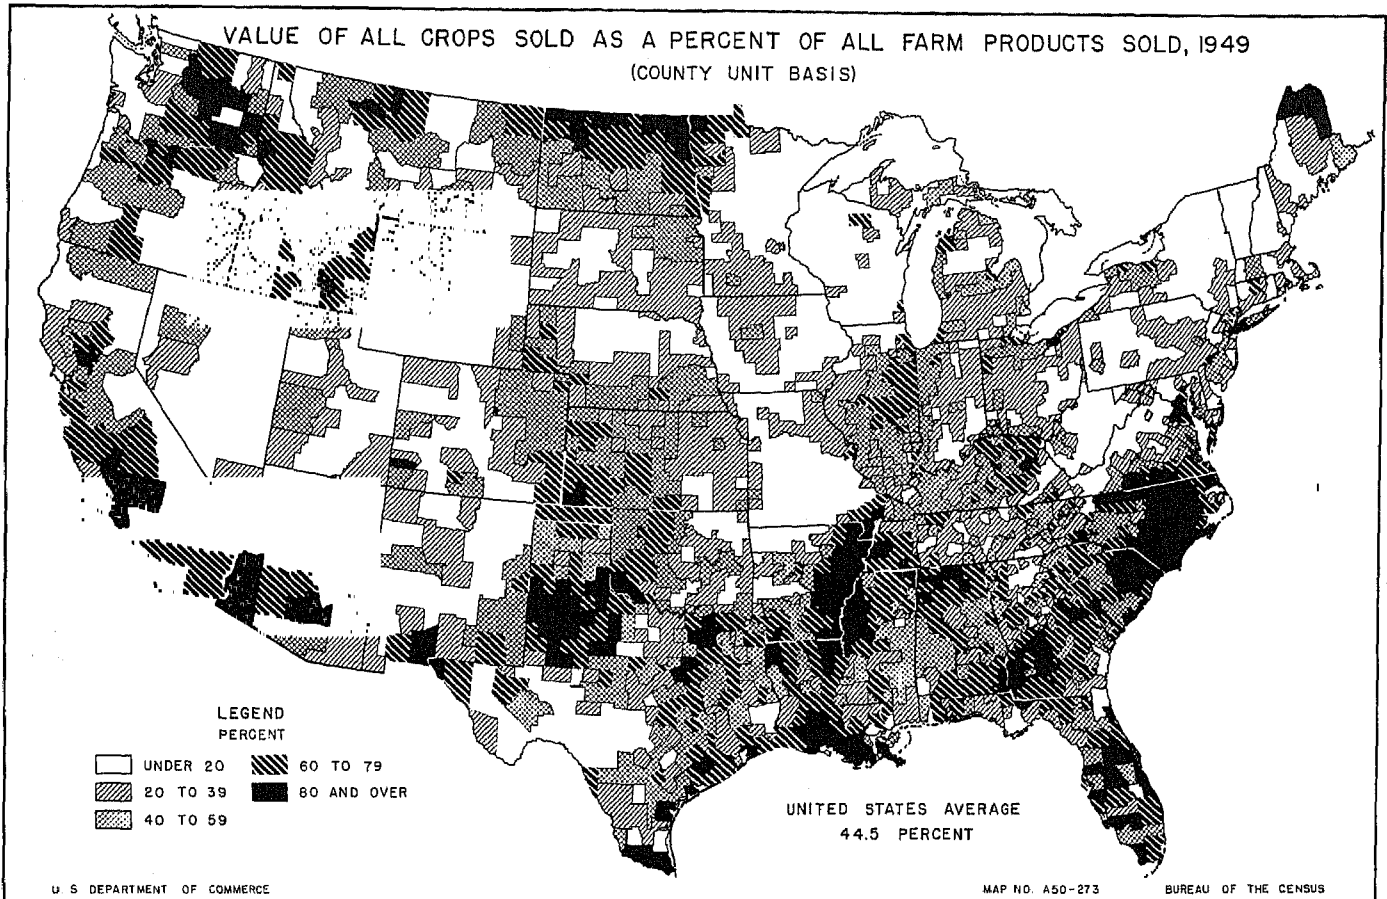

¹ Not enumerated.

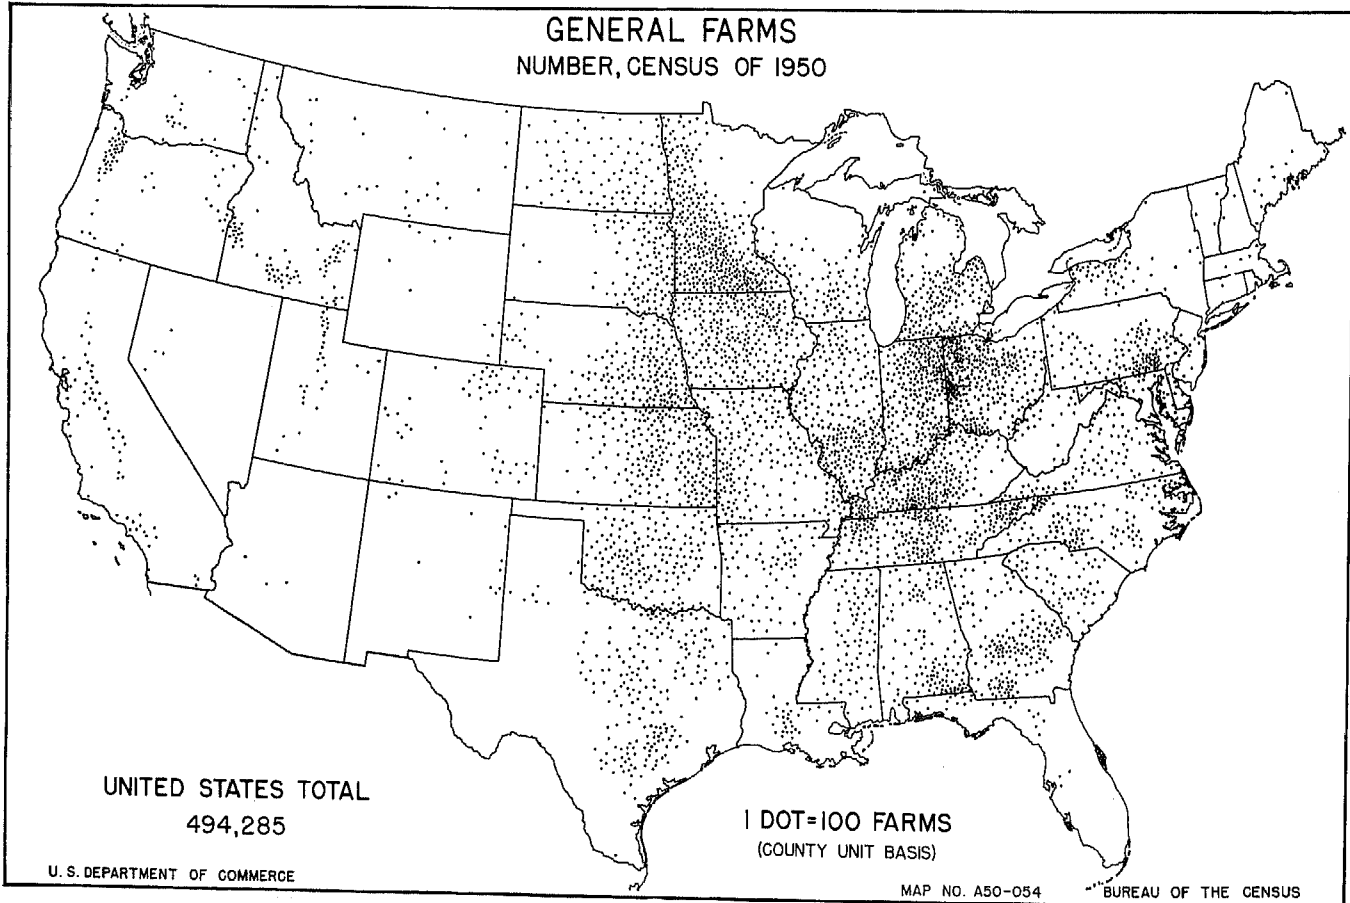

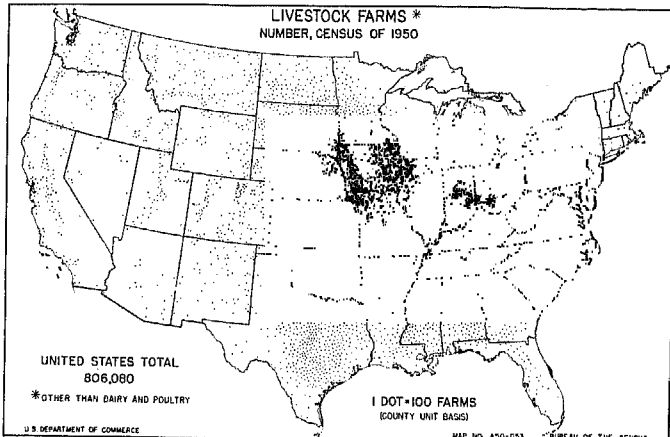

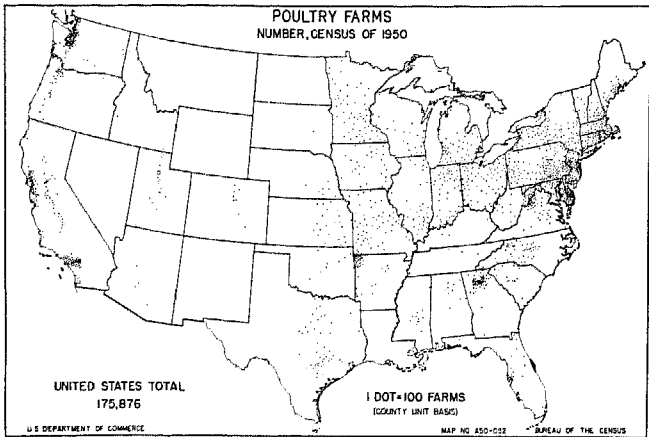

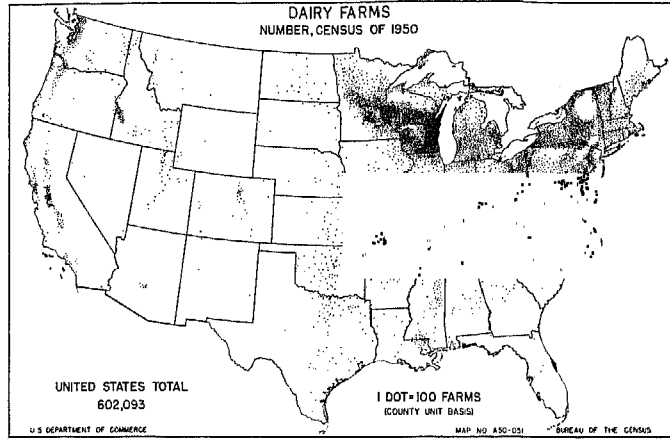

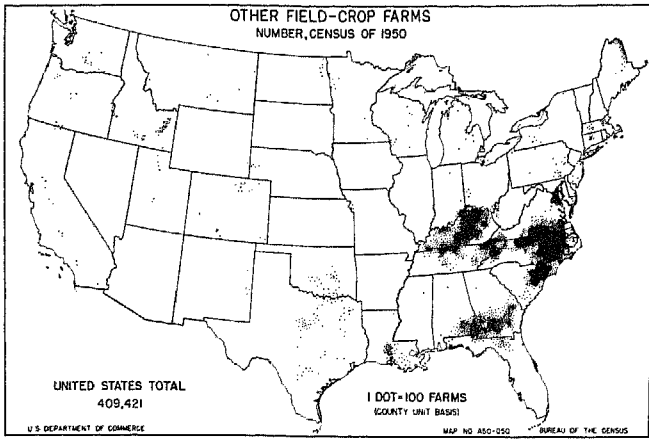

Type of farm:

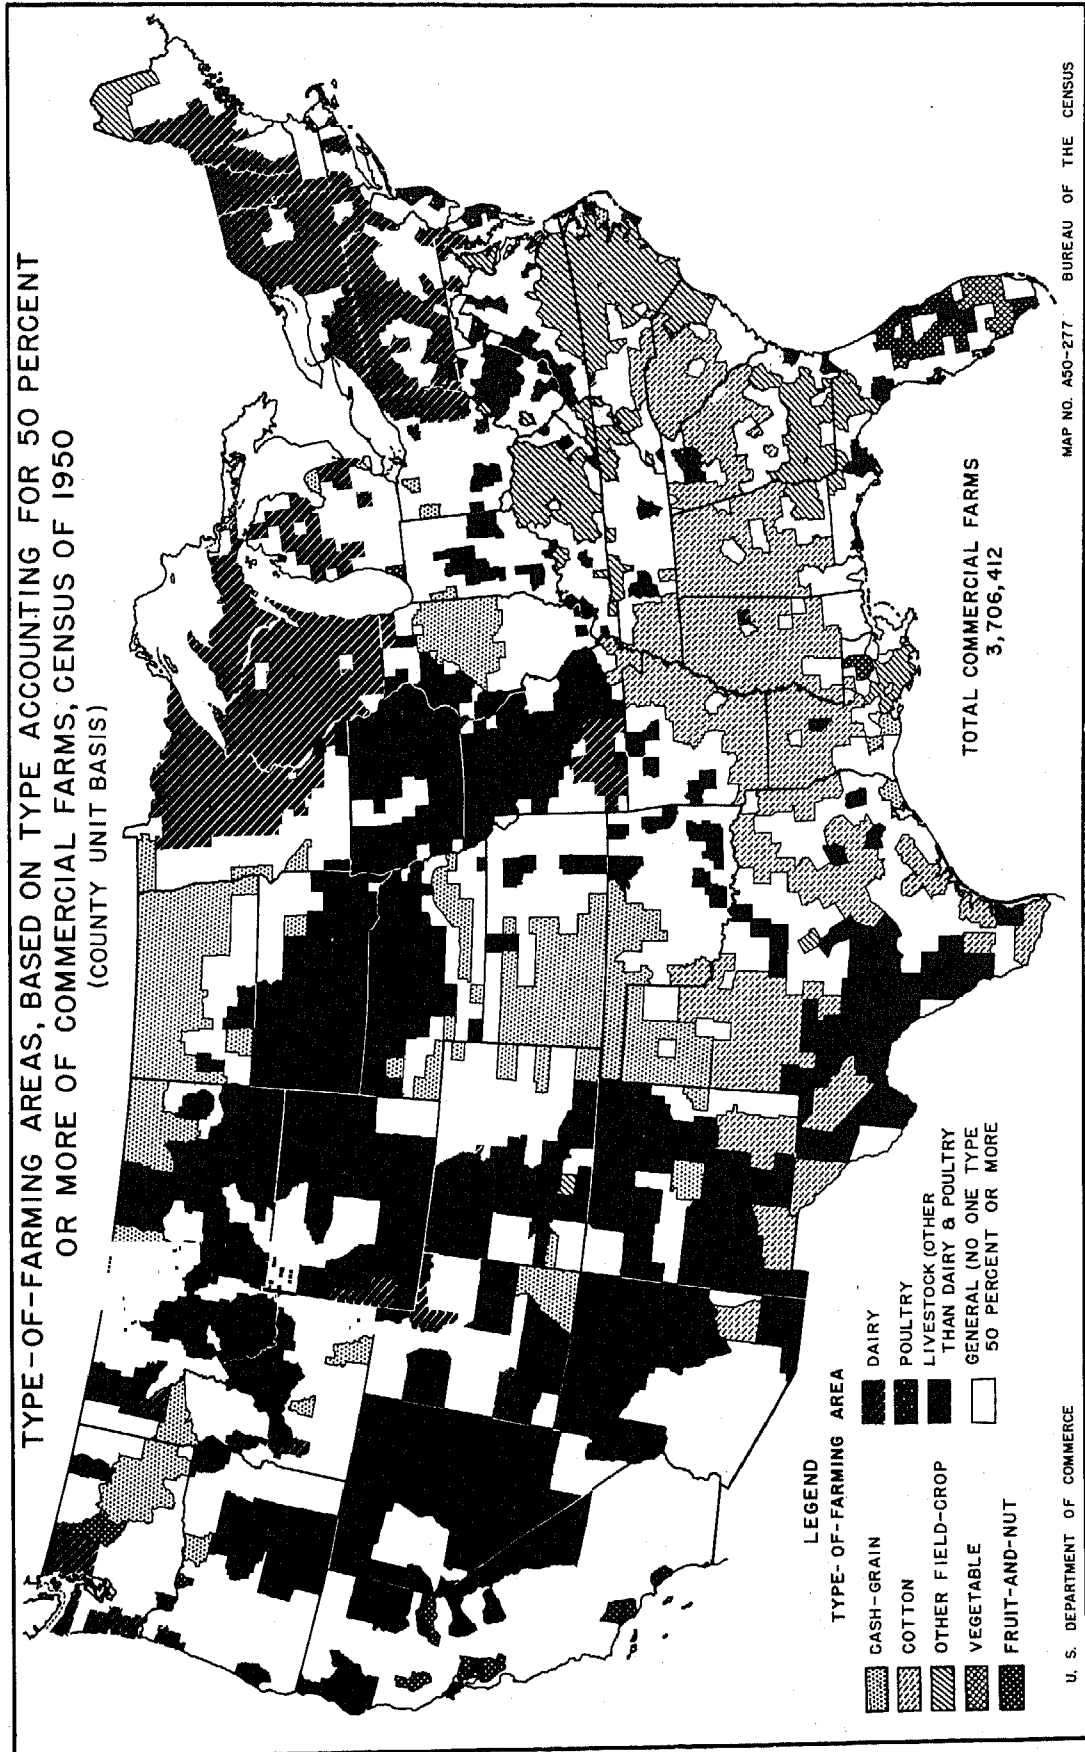

- 1950—General—crop and livestock farm
- 1945—General farm
- 1940—Field-crop farm
- 1930—Dairy farm

The definition of a farm used in 1950 excluded some places counted as farms in 1945 and prior censuses. (See Introduction to this volume.) The farms excluded in 1950 were generally farms with very limited production of farm products and would have been included usually in the groups of farms not classified by type of farm on the basis of source of income in all four censuses.

Comparability of average value of products sold per farm by type of farm.—In comparing average value of farm products sold per farm for the different types of farms, it should be noted that gross income for some types of farms is much nearer to net income than for other types. For example, "livestock farms other than dairy and poultry" usually will show the largest average gross income. Much of the income for such farms, however, is the result of the resale of fattened cattle which had been purchased for feeding.
