HAWAII

ACKNOWLEDGMENTS

Provision for the 1950 Census of Agriculture in Hawaii was made in the Act of Congress providing for the fifteenth and subsequent decennial censuses, approved June 18, 1929, as amended.

The collection of data was carried out under the direction of supervisors appointed by the Director of the Census working under the direction of Lowell T. Galt, Chief of the Field Division. The planning of the census and the compilation of the statistics were supervised by Ray Hurley, Chief of the Agriculture Division and Warder B. Jenkins, Assistant Chief of the Division. They were assisted by Lois Hutchison, Faie Silvers, and Henry A. Tucker. Acknowledgement is made of the technical assistance of the Agriculture Census Committee of the Chamber of Commerce of Honolulu and of the University of Hawaii in the planning for the 1950 Census of Agriculture for Hawaii.

HAWAII

INTRODUCTION

History of the census of agriculture.—The first United States Census of Agriculture was taken in 1900 in conjunction with the census of population. Since 1900, a census of agriculture has been taken in conjunction with the census of population in each decennial enumeration.

Legal basis for the 1950 Census of Agriculture.—Authorization for the 1950 Census of Agriculture was made in the act of Congress, approved June 18, 1929. This act also provided for the fifteenth and subsequent decennial censuses.

The enumeration.—Plans for the 1950 Census included three provisions designed to insure completeness of coverage of the census of agriculture. First, the questionnaire used for the census of population contained two possible inquiries for every family enumerated. One of these questions was, "Is this house on a farm?" In case the answer was "No," the second was: "Is this house on a place of 3 or more acres?" If the answer to either of these inquiries was "Yes," the Census enumerator was instructed to obtain an agriculture questionnaire from the person in charge of the place. This procedure was used in order to insure the enumeration of places, not locally considered farms, with sufficient agricultural production to qualify as farms according to Census criteria. While this method resulted in the securing of a considerable number of questionnaires which did not meet the criteria, it did insure the inclusion of many places that might not have been enumerated otherwise.

Second, as in several former censuses, enumerators in rural areas were instructed to indicate on their maps the location of every dwelling place and farm. This procedure was intended to help the supervisor to ascertain if his enumerators had visited all parts of the enumeration districts assigned them.

Third, prior to the census, lists of the very large farms were prepared from the records of the 1940 Census of Agriculture. These lists were given to the Census supervisors who were required to check them to see that each of the farms was enumerated. The questionnaires obtained were checked with the lists of large farms during the processing in the Washington office. (See Large farms, below.)

Questionnaire used for the 1950 Census of Agriculture.—The 1950 Agriculture Questionnaire contained 159 inquiries relating to farm operator characteristics; area in crops and quantity harvested; area in fruit orchards, coffee plantations, and planted nut trees with the number of trees and quantity harvested; land in farms according to use; number of all the important classes of livestock on farms; livestock products; specified equipment and facilities; sale of farm products and specified expenditures.

Large farms.—Plans for the 1950 Census of Agriculture included special provisions to insure the enumeration of all large farm operating units. For Census purposes any farm that met any of 5 criteria was considered a large farm. The criteria used are as follows:

Land in farms.....	1,000 acres or more
Cropland harvested.....	750 acres or more
Cattle of all ages.....	200 or more
Sheep of all ages.....	500 or more
Value of farm products sold or to be sold....	\$70,000 or more

PRESENTATION OF STATISTICS

This report presents data from the 1950 Census of Agriculture with comparable data from previous censuses, beginning with 1900. Data are presented for the Territory and for each county. For each of these areas, the tables present some information which is not shown in the tables for the other areas.

Territorial tables.—The Territorial tables present data for those items for which historical figures are available for censuses prior to 1940. They present data for some items which are not shown in the county tables; for example, mortgage debt and cash rent. They also show frequency distributions of farms reporting specified items, such as operators by age, cattle and calves by number on hand, etc. They present detailed data on farms and farm characteristics by several classifications, namely, size of farm, tenure of farm operator, economic class of farm, and type of farm. Farm counts are also shown for classifications within classifications; for example, size of farm by tenure of operator, size of farm by economic class of farm, and size of farm by type of farm.

County tables.—County tables contain some information for most of the items on the 1950 Questionnaire. However, they do not contain all the available information; for example, the data for farms by size of farm and by tenure of operator are given, in part, in the county tables, but in greater detail in the Territorial tables. The data by economic class of farm and by type of farm are not given in the county tables, but they are given in the Territorial tables. For most items the available comparable data from the 1940 Census are also shown in the county tables.

Comparability of data for various censuses.—Comparability of the data may be affected by such factors as the month in which the enumeration was made, the definition of a farm, the wording of the questions, etc. When the comparability is affected to an appreciable extent, mention is made of the differences under the specific item.

DEFINITIONS AND EXPLANATIONS

Definitions and explanations are presented only for those items for which the table descriptions are considered inadequate. The descriptive terms and explanations refer principally to the 1950 Census of Agriculture, although, in general, they are also applicable to earlier censuses. The definitions consist primarily of a résumé of the questionnaire wording, occasionally supplemented by the more essential parts of instructions given to the enumerators. For the exact phrasing of the inquiries and of the instructions included on the questionnaire, reference should be made to the facsimile of the 1950 Agriculture Questionnaire in the appendix.

GENERAL FARM INFORMATION

The census date.—The 1950 Census of Agriculture was taken as of April 1, 1950. Inventory items relate to approximately that date. Data on acreage and quantity of crops harvested are for the crop year of 1949. Data on sales of crops relate to crops produced in the crop year of 1949; data on sales of livestock relate to the calendar year of 1949; data on sales of livestock

products relate to the production in the calendar year of 1949. The questionnaire, as printed for use by enumerators, called for sugarcane harvested during the crop year, October 1948 to September 1949; however, prior to the enumeration, special instructions were given to enumerators to obtain the data on the production of sugarcane for the calendar year of 1949. This change was made upon the advice of local Census officials and sugar planters. Although the section heading on the questionnaire specified April 1 for all inventory items, the individual inquiries did not refer to any date. Therefore, the replies may represent conditions at the date the questionnaires were filled. The questionnaires were generally filled within a few days following April 1. The act providing for the census requires that no enumerator be assigned a larger area than he can enumerate completely within thirty days from the census date. This provision was made for the purpose of insuring promptness in the completion of the enumeration. However, because of weather, roads, or other conditions, a longer period may have been required by the enumerator in some cases. The date on which the enumerator obtained the information required may affect the statistics because of changes that occurred between the census date and the actual date of enumeration.

A farm.—For the 1950 Census of Agriculture, places of 3 or more acres were counted as farms if the value of agricultural products in 1949, exclusive of home gardens, amounted to \$150 or more. The agricultural products could have been either for home use or for sale. Places of less than 3 acres were counted as farms only if the value of sales of agricultural products in 1949 amounted to \$150 or more. Places operated in 1949 for which the value of agricultural products in 1949 was less than these minima because of crop failure or other unusual situation and places operated in 1950 for the first time were counted as farms if normally they could be expected to produce these minimum quantities of farm products.

All the land under the control of one person or partnership was included as one farm. Control may have been through ownership, or through lease or rental arrangement.

The Census enumerator was not given the definition of a farm. He was instructed to obtain an agriculture questionnaire for every place that the operator considered a farm, for every place of 3 or more acres whether or not it was considered a farm, and for places of less than 3 acres from which agricultural products (vegetables, flowers, orchids, eggs, poultry, hogs, etc.) valued at \$100 or more were sold in 1949. Thus, agriculture questionnaires were filled for more places than those that qualified as farms. The determination as to which reports were to be included in the tabulations as representing farms was made during the processing of the questionnaires in Washington. This procedure was followed in order that uniform criteria could be applied.

For the 1940 and earlier censuses of agriculture, the definition of a farm was somewhat more inclusive. Census enumerators were provided with the definition of a farm and were instructed to fill reports only for those places which met the criteria.

In the censuses of 1910 to 1940, farms for Census purposes included places of 3 or more acres on which there were agricultural operations. In 1940, places of less than 3 acres were also to be included if agricultural products were produced for home use or for sale with a value of \$150 or more. In the 1930, 1920, and 1910 censuses places of less than 3 acres were also to be included if they produced agricultural products for home use or for sale with a value of at least \$100 or required the continuous services of at least one person. For places of 3 or more acres, no minimum quantity of agricultural production was required for purposes of enumeration; for places of under 3 acres, all the agricultural products may have been for home use and not for sale. The only reports excluded from the tabulations were those taken in error and a few with very limited agricultural production such as only a small home garden, a few fruit trees, or a very small flock of chickens, etc. In the 1900 Census, there was no

acreage limit. In that census, market, truck, and fruit gardens, orchards, nurseries, greenhouses, and city dairies were to be included provided the entire time of at least one person was devoted to their care.

Because of changes in price levels, the \$100 or \$150 limit for value of products for farms under 3 acres may have resulted in the inclusion of varying numbers of farms at the several censuses.

Farm operators.—A "farm operator" is a person who operates a farm either performing the labor himself or directly supervising it. He may be an owner, a hired manager, or a tenant. If he rents land to others, he operates only that land which he retains. In case of a partnership, one member was included as the operator. The number of farm operators is considered the same as the number of farms.

Farms reporting or operators reporting.—The term "farms reporting" or "operators reporting," as used in the tables indicates the number of farms or farm operators for which the specified item was reported. For example, if there were 750 farms in a county and only 525 had chickens on hand over 4 months old, the number of farms reporting chickens would be 525. The difference in the total number of farms and the number of farms reporting an item represents the number of farms not having that item, provided the inquiry was answered completely for all farms when applicable.

For some of the items, such as the age of operator, for which reports should have been obtained for all farms, figures are given for the number not reporting. Those farms, or operators, not reporting indicate the extent of the incompleteness of the reports for the item.

Land owned, rented, and managed.—The land to be included in each farm was determined by obtaining from the person in charge the number of acres owned, the acres rented from or worked on shares for others, and the acres rented to or worked on shares by others. The acres in the farm were obtained by adding the acres owned and the acres rented from others and subtracting the acres rented to others. In the case of a managed farm, the person in charge was asked the total acreage managed for his employer. From the total managed acreage was subtracted any of the acreage which was rented to others. For 1950, the figures for land owned, land rented from others, and land managed by farm operators include land rented to others by farm operators. In earlier censuses the enumerator was instructed to include all land rented from others and to exclude all land rented to others. He recorded only that portion of the acreage owned and acreage rented from others which was retained by the farm operator. Thus, the land included in each farm was essentially the same as in the 1950 Census.

Land owned.—Land owned includes all land which the operator or his wife, or both, hold under title, purchase contract, homestead law, or as one of the heirs or as a trustee of an undivided estate.

Land rented from others.—Land rented from others includes land worked on shares for others and land used rent-free, as well as all land rented or leased under other arrangements.

Land rented to others.—Many farm operators rent land to others. For the most part, this land rented to others represents agricultural lands but it also includes tracts rented for residential or other purposes. When land is leased, rented, or cropped on shares, the tenant is considered the farm operator even though his landlord may exercise supervision over his operations. The landlord is considered as operating only that portion of the land not assigned tenants.

Land area.—The approximate land area reported for 1950 for the Territory and for the counties is the same as that reported for the 1940 Census.

Land in farms.—The acreage designated "land in farms" includes considerable areas of land not actually under cultivation and some land not used for pasture or grazing. All woodland

and wasteland owned by farm operators, or included in tracts rented from others, is included as land in farms unless such land was held for other than agricultural purposes.

Land in farms according to use.—Land in farms was classified according to the use made of it in 1949. These classes of land are mutually exclusive, i. e., each acre of land was included only once even though it may have had more than one use in 1949. The classes are as follows:

Cropland harvested.—This includes land from which crops were harvested, land on which forage was cut, and land in fruit orchards, coffee plantations, nurseries, and greenhouses. Land from which 2 or more crops were harvested was to be counted only once. The reported figure was checked for each farm by adding the acreages of the individual crops reported and subtracting the acres of land from which 2 crops were harvested.

Cropland for future harvest.—This includes land from which no crop was harvested in 1949 but which was in growing crops, such as sugarcane, pineapples, berry plants and bushes, nursery stock, etc., intended for harvest after the close of 1949. Land from which a crop was harvested in 1949, but which was later planted to a crop for harvest after the close of 1949, was not to be included. Land on which crops, intended for harvest in 1949, failed and on which crops were planted for future harvest was not to be included.

Crop failure.—This includes land from which no crop was harvested in 1949 because of destruction by storms, drought, floods, insects, disease, or from any cause, or failure to harvest because of labor shortage. If a crop was harvested, even though the yield was very low, the land from which the crop was harvested was included in the acreage for cropland harvested. The acreage designated as crop failure does not represent the entire acreage of crops that failed, but only that acreage in crops that failed which was not successfully replanted to a crop that was harvested in 1949.

Cropland used only for pasture.—This includes land used only for pasture in 1949 which could be used for crops without additional clearing, draining, or irrigating.

In the 1940 Census, only pasture land that had been plowed within the preceding 10 years was included.

Cropland idle or fallow.—This item includes idle cropland and land in soil-improvement crops only.

Woodland pastured.—This includes all woodland that was used for pasture or grazing in 1949. No definition of woodland was given to the Census enumerator in the 1950 Census. Some of the changes from one census to another may merely represent differences in interpretation of the meaning of woodland.

Woodland not pastured.—This includes all woodland which was not used for pasture or grazing in 1949. The enumerator was instructed to include official forest reserve area under this question.

Other pasture (not cropland and not woodland).—This includes rough and brush land pastured and any other land pastured which the respondent did not consider as either cropland or woodland. For the 1940 Census this item is more inclusive than for 1950 as all nonwoodland pasture not plowed within the preceding 10 years was included.

Other land (farmsteads, households, ditches, windbreaks, etc.).—This item includes all house lots, barn lots, roads, ditches, windbreaks, lava flows without vegetation, palis, gulches, and streambeds. It includes all land which does not belong under any of the other land-use classes.

In addition to the complete classification of land in farms according to use the tables also present data for three broader or summary classifications, as follows:

Cropland, total.—This includes cropland harvested, cropland for future harvest, crop failure, cropland idle, and cropland used only for pasture.

Pasture, total.—This includes cropland used only for pasture, woodland pastured, and other pasture (not cropland and not woodland).

Woodland, total.—This includes woodland pastured and woodland not pastured. For the censuses prior to 1940, the classifications were very different from those made in 1950 and

1940. Therefore, there are no comparable data for the various classes of land for censuses prior to 1940.

Value of land and buildings.—The value to be reported was the approximate amount for which the land and the buildings on it would sell.

Age of operator.—Farm operators were classified by age into six age groups. The average age of farm operators was calculated by dividing the total of the ages of all farm operators reporting age by the number of farm operators reporting.

Residence of farm operator.—Farm operators were classified by residence on the basis of whether or not they lived on the farm operated. Some of those not living on the farm operated lived on other farms. When a farm operator rented land from others and was permitted the use of a dwelling as part of the rental arrangement, the enumerator's instructions were to consider the dwelling a part of the farm operated. The dwelling assigned might be on a tract other than that assigned for crops. In a few cases the enumerator failed to indicate the residence of the farm operator. Differences in the figures for total farms and those for operators by residence represent underenumeration of this item.

Years on present farm (year began operation of present farm).—The data on years on present farm were secured on the basis of the inquiry, "When did you begin to operate this place? _____ (Month)

_____ (Year)" The tabulation of years on present farm at each census is based on the calendar year the operator began operating his farm.

Off-farm work and other income.—Many farm operators receive a part of their income from sources other than their farms. The 1950 Agriculture Questionnaire included several inquiries relating to work off the farm and nonfarm income. These inquiries called for work off the farm by the farm operator; work off the farm by other members of the operator's family; and income from other sources, such as sale of products from land rented out, cash rent, boarders, old age assistance, pensions, veterans' allowances, unemployment compensation, interest, and help from other members of the operator's family. Another inquiry asked whether the income from off-farm work and other sources was greater than the total value of all agricultural products sold from the farm in 1949. Off-farm work includes work at nonfarm jobs, businesses, or professions whether performed on the farm premises or elsewhere, also work on someone else's farm for pay or wages. Exchange work was not be included.

The purposes of these four inquiries were (1) to obtain information in regard to the extent that farm operators performed off-farm work and their dependence on other income, and (2) to provide a basis for the classification of farms by economic class (see Farms by economic class, p. XI). The intent of the inquiry in regard to whether or not a member of the family had a non-farm job and the inquiry regarding income of the farm operator from nonfarm sources was to obtain more accurate replies to the inquiry regarding the relationship of the income from off-farm work and other sources to the total value of all agricultural products sold.

Specified equipment.—Wheel tractors were to include home-made tractors but were not to include the power unit of a truck-trailer combination. In reporting motortrucks and automobiles, "pick-ups" and truck-trailer combinations were to be reported as trucks. School buses were not to be reported, and jeeps and station wagons were to be included as motortrucks or automobiles depending on whether they were used for hauling or as passenger vehicles.

For farms with motortrucks, tractors, and automobiles, data were also secured on the year of model of the newest motortruck, tractor, and automobile, respectively. For tractors, the figures for year of newest model are limited to wheel tractors (tractors other than garden and crawler). The inquiry for wheel tractors

called for reporting "HM" for home-made tractors in lieu of the year of model of the newest wheel tractor. For farms with two or more motortrucks, wheel tractors, and automobiles, respectively, it is not possible to classify by year of newest model the second, third, etc., motortruck, tractor, or automobile since the inquiry was limited to the year of model of the newest unit.

Classification of farms by class of work power.—Farms have been grouped by class of work power on the basis of whether horses, mules, or tractors were reported. This classification does not present an entirely accurate picture of the work power used on all farms. For some farms, all the work power may be furnished by the landlord and for some farms all the work power may be hired. Thus, farms hiring all of the work power from others and those having it furnished are shown as having no work power.

Farm labor.—The farm labor inquiries for 1950 called for the number of persons doing farm work or chores on the place during the calendar week preceding the enumeration. Inasmuch as the enumeration occurred over a period of several weeks, the calendar week preceding the enumeration is not the same for all farms.

Farm work was to include any work, chores, or planning necessary to the operation of the farm business. Housework, contract construction work, and work in sugar mills were not to be included.

Separate figures were obtained for operators working, unpaid members of the operator's family working, and hired persons working. Operators were considered as working if they worked 1 or more hours; unpaid members of the operator's family, if they worked 15 or more hours; and hired persons, if they worked any time during the week preceding the enumeration. Neither the inquiries nor the instructions contained any specifications regarding the age of the persons to be reported.

The data on farm labor for 1940 relate to the last week in March. Only persons 10 years old and over who worked the equivalent of 2 or more days during the last week in March were included.

Regular and seasonal workers.—Hired persons working on the farm during the week preceding the enumeration were classed as "regular" workers if the period of expected employment was 150 days or more during the year and as "seasonal" workers if the period of expected employment was less than 150 days. If the period of expected employment was not reported, it was estimated after taking into account the expenditures for labor in 1949, the type of farm, and other characteristics of the farm.

Specified farm expenditures.—Data on farm expenditures were obtained only for selected items. For tenant-operated farms the expenditures were to include those made by the landlord as well as those made by the tenant.

Expenditures for machine hire were to include any labor included in the cost of such machine hire. Machine hire refers to custom machine work such as harvesting sugarcane, spraying, etc. If part of the farm product was given as pay for machine hire, the value of the products traded for this service was to be included in the amount of expenditures reported. The cost of trucking and freight was not to be included.

In reporting the amount spent for hired labor, only cash payments were to be included. Expenditures for housework and contract construction work were not to be included.

Expenditures for feed were to include the expenditures for pasture, salt, condiments, concentrates, and mineral supplements, as well as for grain, hay, and millfeed. Expenditures for grinding and mixing feed were also to be included. Expenditures made by a tenant to his landlord for feed grown on the land rented by the tenant were not to be included.

Expenditures for purchase of livestock and poultry were to include amounts spent for purchase of baby chicks, poult, chickens, turkeys, domestic rabbits, and bees, as well as amounts spent for horses, mules, cattle, hogs, sheep, and goats.

Expenditures for gasoline and other petroleum fuel and oil were to include only those used for the farm business. Petroleum products used for pleasure or used exclusively in the farm home for heating, cooking, and lighting were not to be included.

Farm mortgages.—The farm mortgage inquiry on the 1950 Agriculture Questionnaire was to be answered by operating owners only. For both full owners and part owners, the mortgage information relates to all land owned, including that rented to others.

For previous censuses, the data on mortgages relate only to the owned land retained by the operator.

Cash rent.—The information on cash rent relates to tenants and to those owners who reported that they paid cash as rent for the portion of their farms rented and reported no other rental arrangement.

Irrigated land.—Irrigated land is that to which water is applied by artificial means for agricultural purposes.

LIVESTOCK

The questionnaire used for the 1950 Census of Agriculture provided for an inventory of all the important kinds of animals and poultry on farms. The questionnaire called for the number of the various kinds of animals and poultry on the farm as of April 1, 1950. Livestock were to be enumerated on the farm on which they were located on April 1, regardless of ownership. However, it is known that to some degree the number of livestock or poultry reported on a farm depends upon the date the questionnaire is filled rather than the number on the farm at the date specified by the questionnaire. This characteristic in the reporting of livestock and poultry numbers has no significant influence on the totals unless the enumeration extends over a considerable period of time.

Comparability of the data on the number of livestock and poultry has been affected by changes in age grouping and questionnaire inquiries from one census to another. Territorial Table 19 presents a description of the different age, sex, and other groups of livestock and poultry for each census from 1900 to 1950.

Milk cows; cows milked; milk production.—Data on number of milk cows, number of cows milked, and milk production relate to the day preceding the enumeration.

Bees and honey.—The 1950 Questionnaire called for the number of hives owned by the farm operator in 1949, pounds of honey produced in 1949 by these bees, and the value of the 1949 crop of honey and wax sold or to be sold, and bees sold. No restrictions were placed on the location of the bees owned in 1949.

Livestock products.—The inquiries regarding livestock production relate to the calendar year 1949, and those for sales of livestock products relate to the production in 1949.

CROPS

Crops harvested.—The agriculture questionnaire was so organized that it was possible to obtain information for every crop that was grown on the farm.

The acreage given for the several crops, in general, represents the area harvested for the crop year 1949 except that the acreage for land in fruit orchards, nuts, and coffee represents the land in bearing and nonbearing trees on the census date. The figures for quantity harvested represent the amount actually harvested during the 1949 crop year.

The unit of measure used for reporting quantity harvested for some crops has varied from census to census. In the tables the

figures on quantity harvested for each crop are shown in the unit of measure appearing on the 1950 Questionnaire. This sometimes required that the figures for earlier years be converted into different units from those published for those years. Conversions have been made by using the weights in current use.

Sugarcane.—For the 1950 Census, the area of sugarcane harvested relates to the calendar year 1949. The questionnaire also contained an inquiry on the number of acres in sugarcane on December 31, 1949.

Pineapples.—The 1950 Agriculture Questionnaire contained three inquiries on pineapples as follows:

How many acres were in pineapples on April 1, 1950?-----	Acres		10
How many acres of land used for pineapples were fallow or between cycles of crops on April 1, 1950?-----	Acres		10
How many pineapples were harvested in 1949?-----	Acres		10
Value of sales in 1949?-----			00
			(Dollars only)

Tree fruits, nuts, and coffee.—The following question was used for enumerating land occupied by fruit, coffee, and nuts:

How much land is in bearing and non-bearing fruit orchards, groves, coffee plantations, and planted nut trees?-----	} <input type="checkbox"/> Less than 1/2 acre OR	Acres		10
(Report both acres and tenths of an acre, such as 1/10, 2/10, 1 1/10, etc.)				

This question differs from that used in 1940 as the enumerator was given an opportunity to check the block for "Less than 1/2 acre" when there was only a small number of fruit or nut trees on the farm. This method was used to facilitate the enumeration by eliminating the problem of assigning fractions of an acre for small home orchards. In the 1940 Census, enumerators frequently did not report the acres for such orchards even though the questionnaire called for this information. The questionnaire also called for the acreage in each individual fruit and nut crop. The number of trees to be reported relates to the census date, while the quantity harvested is for the crop year 1949.

CLASSIFICATION OF FARMS

Farms by race.—Farm operators were classified by race, as follows:

- Caucasian
- Hawaiian or part-Hawaiian
- Japanese
- Chinese
- Filipino
- Korean
- Puerto Rican
- Other races

Farms by size.—Farms were classified by size according to the total land area of each farm. In analyzing size-of-farm statistics, consideration should be given to the definition of a farm for Census purposes. Census farms are essentially operating units, not ownership tracts. If a landowner has tenants, the land assigned to each tenant is a separate farm.

Farms by tenure of operator.—In the 1950 Census farm operators were classified according to the tenure under which they held their land. The classification was made on the basis of total land owned, total land rented from others, and the total land managed for others. In 1940 and earlier full owners, part owners, and tenants were classified on the basis of the land rented by the operator. Under this earlier classification a part owner who sublets to others all the land he rents from others

would have been classed a full owner; a part owner who rents to others all the land he owns would have been classed a tenant.

Full owners own land but do not rent land from others.

Part owners own land and rent land from others.

Managers operate farms for others and are paid a wage or salary for their services. Persons acting merely as caretakers or hired as laborers are not classified as managers. If a farm operator managed land for others and also operated land on his own account, the land operated on his own account was considered one farm and the land managed for others was considered a second farm. In the 1950 Census, if a farm operator managed land for two or more employers, all the land managed was considered one farm.

Tenants rent from others all the land they operate. In 1950, tenants were further classified on the basis of their rental agreement, as follows:

Cash tenants pay cash as rent, such as \$10 an acre or \$1,000 for the use of the farm.

Share-cash tenants pay a part of the rent in cash and a part as a share of the crops or of the livestock or livestock products.

Share tenants pay a share of either the crops or livestock or livestock products, or a share of both crops and livestock.

Crop-share tenants pay only a share of the crops.

Livestock-share tenants pay a share of the livestock or livestock products. They may or may not pay a share of the crops.

Other tenants include those who pay a fixed quantity of any product; those who pay taxes, keep up the land and buildings, or keep the landlord in exchange for the use of the land; those who have the use of the land rent-free; and others who could not be included in one of the other specified sub-classes.

Unspecified tenants include those tenants whose rental agreement was not reported.

Farms by economic class.—A classification of farms by economic class was made for the purpose of segregating groups of farms that are somewhat alike in their characteristics. This classification was made in order to present an accurate description of the farms in each class and in order to provide basic data for an analysis of the organization of Hawaiian agriculture. The classification of farms by economic class was made on the basis of three factors; namely, total value of all farm products sold, number of days the farm operator worked off the farm, and the relationship of the income received by the operator and members of his family from nonfarm sources to the value of all farm products sold. Institutions and experimental farms were classified as abnormal regardless of any of the above-mentioned factors.

In making the classification of farms by economic class, farms have been grouped into two major classes, namely, commercial farms and other farms. In general, all farms with a value of sales of farm products amounting to \$1,200 or more were classified as commercial. Farms with a value of \$250 to \$1,199 were classified as commercial only if the farm operator worked off the farm less than 100 days and the income of that farm operator and members of his family from nonfarm sources was less than the total value of all farm products sold. Farms with a value of sales of all farm products of less than \$250, as well as institutional and experimental farms, were classified as "other."

Commercial farms have been divided into six groups on the basis of the total value of farm products sold, as follows:

Class	Value of farm products sold (Dollars)
I-----	25,000 or more
II-----	10,000 to 24,999
III-----	5,000 to 9,999
IV-----	2,500 to 4,999
V-----	1,200 to 2,499
VI-----	*250 to 1,199

*Provided the farm operator worked off the farm less than 100 days and provided the income the farm operator and members of his family received from nonfarm sources was less than the value of all farm products sold.

Other farms have been grouped into three classes as follows:

Part-time farms.—Farms with a value of sales of farm products of \$250 to \$1,199 were classified as part-time provided the farm operator reported (1) 100 or more days of work off the farm in 1949, or (2) the nonfarm income received by him and members of his family was greater than the value of farm products sold.

Residential farms.—Residential farms include all farms, except abnormal farms, with a total value of sales of farm products of less than \$250. Some of these represent farms on which the operator worked off the farm more than 100 days in 1949. Some represent farms on which the income from nonfarm sources was greater than the value of sales of agricultural products. Others represent subsistence and marginal farms of various kinds. This group may include some farms which, under normal conditions, would have qualified as commercial farms.

Abnormal farms.—Insofar as it was possible to identify them, abnormal farms include public and private institutional farms and experiment station farms.

Farms by type.—The classification of farms by type was made on the basis of the relationship of the value of sales from a particular source, or sources, to the total value of all farm products sold from the farm. The type of farm was determined on the basis of the sale of an individual farm product, such as sugarcane, or on the basis of closely related products, such as dairy products. Part-time, residential, and abnormal farms were not classified by type. Only commercial farms were classified by type. In order to be classified as a particular type, sales or anticipated sales of a product or a group of products had to represent 50 percent or more of the total value of products of the farm.

The types of farms for which data are shown, together with the product or group of products, that had to represent 50 percent or more of the total sales in order that the farm may be so classified are as follows:

Type	Product or group of products amounting to 50 percent or more of the value of all farm products sold
Vegetable.....	Vegetables.
Fruit and nut.....	Tree fruits and nuts.
Coffee.....	Coffee.
Sugarcane.....	Sugarcane.
Pineapple.....	Pineapples.
Dairy.....	Milk and other dairy products.
	The criterion of 50 percent of the total sales was modified in the case of dairy farms. A farm for which the value of sales of dairy products represented less than 50 percent of the total value of farm products sold was classified as a dairy farm if—
	(1) Milk and other dairy products accounted for 30 percent or more of the total value of products, and
	(2) Milk cows represented 50 percent or more of all cows, and
	(3) Sales of dairy products, together with the sales of cattle, amounted to 50 percent or more of the total sales.
Poultry.....	Chickens, eggs, turkeys, and other poultry products.
Livestock farms other than dairy and poultry.	Cattle, calves, hogs, sheep, goats, wool, mohair, goat milk, and products from animals slaughtered on the farm provided the farm did not already classify as a dairy farm.

General.----- Farms were classified as general when the value of products from one source or group of sources did not represent as much as 50 percent of the total value of all farm products sold. Separate figures are given for three types of general farms: (a) primarily crop, (b) primarily livestock, and (c) crop and livestock. Primarily crop farms represent farms for which the sale of one of the following crops or groups of crops—vegetables, fruits and nuts, coffee, sugarcane, pineapples, or other field crops—did not amount to 50 percent or more of the value of all farm products sold but for which the value of sales for all these groups of crops represented 70 percent or more of the value of all farm products sold. Primarily livestock farms are those which could not be classified as dairy farms, poultry farms, or livestock farms other than dairy and poultry, but on which the sale of livestock and poultry and livestock and poultry products amounted to 70 percent or more of the value of all farm products sold. General crop and livestock farms are those which could not be classified as either crop farms or livestock farms but on which the sale of all crops amounted to at least 30 percent but less than 70 percent of the value of all farm products sold.

Miscellaneous and unclassified farms. This group represents farms that were not classified by type. It includes part-time, residential, and abnormal farms. It also includes miscellaneous types of commercial farms if 50 percent or more of the total value of products was accounted for by sale of flowers, ornamentals, or sale of horses, or sale of domestic rabbits, or sale of forest products, or sale of bees and honey.

Value of farm products sold.—The value of farm products sold, as obtained in the 1950 Census of Agriculture, represents the approximate total of the gross cash income of the farms of a particular county. Gross sales by farmers, however, are greater than the gross income to agriculture because of the inclusion of inter-farm sales.

Enumerators were instructed to include as sold any part of the crop that was yet to be sold. Trades, such as the trading of eggs, were considered the same as cash sales. Products such as fruit, vegetables, and eggs purchased for resale were not included because this was not considered farm production. Likewise, immediate resale of cattle was considered as dealer operations, whereas resale of fattened feeder cattle was considered as farm production and the sales were included, even though these cattle may have been reported as sold by the farmer who sold them as feeders.

For many farms the sales enumerated do not represent their total gross cash income because certain sales were excluded and there was no provision for enumerating unusual sources of income. For example, sales of baby chicks and income received by the farm operator for off-farm work and for custom work and from land rents and other investments are not included.

In general, the value of the sales of livestock, livestock products, and forest products is for the calendar year 1949. On the

other hand, the value of the various crops sold is for the crop year immediately preceding the census.

The value of the sales of each farm product was usually obtained in connection with the enumeration of the production of that particular product. In some cases, related farm products

were grouped for the purpose of obtaining the value of products sold; for example, vegetables were included as a group.

Enumerators were instructed to report gross sales without deduction of expenses of any kind.

* Not available.

** Available data not comparable.

¹ Data relate to crop year 1949. The questionnaire called for sugarcane harvested during the crop year, October 1948 to September 1949; however, prior to the enumeration special instructions were given to enumerators to obtain the data on the production of sugarcane for the calendar year 1949.

² Number.

³ Green weight.

⁴ Cane tops for forage.

⁵ Lima and soy beans included with green, string, yard-long, and wax beans.

⁶ Bulb onions.

⁷ Fruit and nut trees, shrubs, ornamentals, flowers, flowering plants, flower seeds, vegetable plants, vegetable seeds, and bulbs.

⁸ Boxes.

⁹ Limes and lemons.

¹⁰ Included with lemons for Census of 1930.

¹¹ Bunches.

¹² Bags.

*Not available. ¹Acres in crop December 31, 1949. ²Includes acres harvested, acres planted for future harvest, and acres on which the crop failed. ³Data relate to crop year 1949. The questionnaire called for sugarcane harvested during the crop year, October 1948 to September 1949; however, prior to the enumeration special instructions were given to enumerators to obtain the data on the production of sugarcane for the calendar year 1949. ⁴Green weight. ⁵Cane tops for forage. ⁶Includes string, lima, yard-long, wax, and soy beans. ⁷Lima and soy beans included with string, yard-long, and wax beans. ⁸Reported in small fractions. ⁹Bulb onions.
