

Chapter B  
NURSERIES

(419)

# Chapter B

## NURSERIES

**Scope of census.**—The special census of nurseries includes establishments engaged in the production of trees, shrubs, vines, etc., for sale. While these establishments were included in the general Census of Agriculture, detailed data regarding these establishments and the production of nursery products were obtained only in the special census. Detailed data for these establishments have been obtained by special censuses only in connection with the 1890, 1930, and 1950 Censuses of Agriculture.

**Period covered by the census.**—This special census covers, in general, operations in the calendar year 1949. However, a small proportion of the establishments, which maintained their records on a fiscal-year basis and which were unable to report on a calendar-year basis, were permitted to report for the fiscal year that included at least one-half of the calendar year 1949. Regardless of the year used, the data on employment and on structures and equipment were to be reported for the period specified on the questionnaires.

**Questionnaire used for the 1950 census.**—A special questionnaire was used for nursery establishments. A facsimile of this questionnaire appears in the appendix to this chapter.

### THE ENUMERATION

**The enumeration.**—The enumeration for the special census of nurseries was conducted largely by mail. Reports from establishments from which reports could not be obtained by mail were obtained through the assistance of personnel of State agricultural colleges and State departments of agriculture. Lists of producers were obtained from trade associations, commercial mailing lists, directories, and State departments of agriculture. These lists were checked against the list of producers as reported by the 1950 Census of Agriculture.

### PRESENTATION OF STATISTICS

This report presents statistics for the United States for geographic divisions, States, and for counties. In order to avoid disclosure of information for individual establishments data for counties having less than 3 establishments have been combined in "All other counties."

**Comparability of data for prior censuses.**—Comparative data are not presented in this report for prior horticulture censuses for several reasons. First, in 1950, the data applied only to establishments with total sales of \$1,000 or more, whereas, in prior censuses, all establishments having any sales were included, provided these places qualified as farms under the Census definition. Second, the data on value of crops for the 1950 Census relate to the value of crops sold, calculated on the basis of the value at wholesale prices; whereas, the value of crops reported in prior censuses represents the value of the crops as they were sold, i.e., some at wholesale prices, others at retail prices.

**Comparability of data obtained in the 1950 Census of Agriculture.**—The data obtained in this special census are not comparable with those obtained in the 1950 Census of Agriculture for several reasons: First, the Census of Agriculture includes data for all

nurseries qualifying as Census farms, whereas this special census includes only those establishments having sales of \$1,000 or more. Second, the Census of Agriculture includes only totals for area and sales for all nursery crops while the special census provides detailed data regarding individual crops. Third, the values reported for the Census of Agriculture represent the amount received by the farm operator when he sold the crops. This amount may represent sales at retail prices or at wholesale prices.

### DEFINITIONS AND EXPLANATIONS

Definitions and explanations are presented only for those items for which the table descriptions are considered to be inadequate. The definitions consist primarily of a resumé of the questions in the questionnaire. For the exact phrasing of the inquiries and the instructions included in the questionnaire, reference should be made to the facsimile of the questionnaire shown in the appendix.

**Establishment** represents the operations of an ownership or proprietorship engaged in the production for sale of nursery products. Usually if the operations were carried on in more than one State, the operation in each State was considered an establishment.

**Type of organization** represents types of ownership. Establishments are classified as individual proprietorships, partnerships, and corporations.

**Total sales**, for the purpose of this report, represent gross sales excluding returns and allowances. Sales include all wholesale sales and all retail sales of a given establishment. Sales include also the value of products sold on a commission basis and sales taxes.

**Wholesale sales** represent the total of wholesale sales to wholesale establishments and wholesale sales to retail and other establishments.

**Wholesale sales to wholesale establishments** represent the wholesale sales to establishments recognized as commission merchants, wholesale merchants, and other wholesale selling establishments—brokers, agents, assemblers, or others primarily engaged in wholesale trade and not engaged in production or retail trade.

**Wholesale sales to retail and other establishments** represent sales made directly to those engaged in production or in retail trade.

**Retail sales** represents all sales other than wholesale sales. This item includes goods and services purchased and resold at retail as well as products grown and sold at retail.

**Value at wholesale prices of all crops sold** represent the total obtained by adding the wholesale value of all individual crops sold as reported by a respondent. Respondents were asked to report the value at wholesale prices of each crop sold.

**Proprietors of unincorporated establishments** include all those who, in the operation of individual proprietorships or partnerships, devoted in 1949, a major portion of their time to the business.

**Unpaid family workers** consist of the number of family members (wives, children, relatives, or others of the household of owners or managers) who worked at any time during the first two weeks of March 1949, but were not paid a wage or salary.

**Paid officers of corporations** consist of officers of incorporated establishments who were paid salaries.

All other **paid employees for the pay period ending nearest March 15, 1949**, include all hired persons except paid corporation officers who were on the payroll at that time.

**Paid employees in year-round positions** include all hired employees who are retained on the payroll throughout the year, with the exception of paid officers of corporations.

**Expenditures for wages and salaries** include all payments to employees and officers but do not include any allowance for work performed by proprietors of unincorporated establishments, or unpaid family members.

**Expenditures for manure and fertilizer** include expenditures for commercial fertilizer and manure but do not include expenditures for topsoil.

**Expenditures for insecticides and fungicides** include those expenditures for such materials used for the production of nursery products but do not include insecticides and fungicides purchased for resale.

**Expenditures for seeds, plants, and bulbs for planting** do not include expenditures for those items which were purchased for resale. The questionnaire provided for separation of the purchases for planting and those for resale.

**Expenditures for coal, fuel oil, and gas** include only coal, fuel oil, and gas purchased for heating of greenhouses and other production facilities. This item does not include fuel for use in automobiles, trucks, or tractors.

**Expenditures for advertising** include the usual expenditures for this purpose as well as the cost of catalogues and mailing pieces, and dues paid to trade associations.

**Size of establishment** refers to the classification of establishments by size of operation on the basis of the total value at wholesale prices of all crops sold.

**Value of land, structures, and equipment** includes the value of structures directly connected with the business. In some instances, it may include the value of the operator's residence and other structures, not directly connected with the business, on the place where the production and selling operations are performed.

**Greenhouse area** represents the square feet of land covered by greenhouse structures. It does not include frame area. In the average greenhouse establishment two-thirds of the amount reported can be considered as the square footage of bench or bed area.

**Area of frames and lath houses** represents the square feet of land area covered.

**Storage-house floor area** consists of the square feet of floor area regardless of whether there is more than one story in the structure.

**Refrigerated storage** represents the capacity in cubic feet of such facilities. The floor area of the refrigerated storage space is included in the area for storage-house floor area.

## RELIABILITY OF DATA

There are no reliable data with which statistics secured in this special census can be compared. The enumeration of general data for nurseries and similar establishments in the 1950 Census of Agriculture provided an independent source for checking the list of establishments compiled from other sources.

The information obtained from the individual establishments was examined during the office processing. Questionable entries were examined by technical personnel and, in case of important items, questionable information was verified or corrected on the basis of correspondence with the establishment.

It is believed that the coverage of establishments is at least 97 percent complete. The limiting of this special census to establishments having sales of \$1,000 or more, made it possible to obtain relatively complete reports for all establishments as the very small establishments with inadequate records were excluded from the cen-

sus. For establishments having about 2 percent of the total sales of all establishments, it was necessary to estimate detailed data for the quantity of crops sold, the value of crops at wholesale prices, etc. These estimates were based upon data obtained in the 1950 Census of Agriculture, State certification reports, and reports for establishments producing similar crops or products.

## SUMMARY OF DATA

Of the establishments which qualified for the special Horticultural-Specialty Census, 4,643 reported the production and sale of nursery crops. Of these establishments the 1,181 with a crop value of more than \$10,000 per establishment reported 89.5 percent of the wholesale sales, 70.6 percent of the retail sales, and 84.1 percent of the wholesale value of the crops sold.

NURSERIES—NUMBER OF ESTABLISHMENTS, 1950, AND VALUE OF CROPS AT WHOLESALE PRICES, 1949, BY SIZE OF ESTABLISHMENT, FOR THE UNITED STATES

The employment in nurseries totaled 38,228 persons. Unpaid family workers and proprietors of unincorporated establishments made up one-fifth of the total number of persons employed. More than 75 percent of the persons employed were paid employees for the pay period of March 15, 1949, and 14,661, or 50 percent of the paid employees, were reported as holding year-round positions.

The value of land, structures, and equipment reported by the 4,643 nurseries was \$110,322,213.

The production of nursery products was concentrated in a relatively few areas. The 100 leading counties reported 65.8 percent of the total wholesale value of all nursery crops sold. Of the wholesale value of nursery crops sold, 95 percent was reported in the 30 leading States.

On the basis of value of crops at wholesale prices the most important nursery crops, together with the percentage that their value is of the total value of all crops at wholesale prices, are as follows: ornamental evergreens (not broad-leaved), 26.3 percent; rose plants, 15.9 percent; broad-leaved evergreens, 14.9 percent; deciduous shrubs (not roses), 7.9 percent; deciduous fruit trees and grapevines, 7.5 percent; deciduous trees, 6.7 percent; and herbaceous plants, 3.7 percent. Apples, peaches, and cherries were the only kinds of fruit trees having a value of crops of more than \$1,000,000.

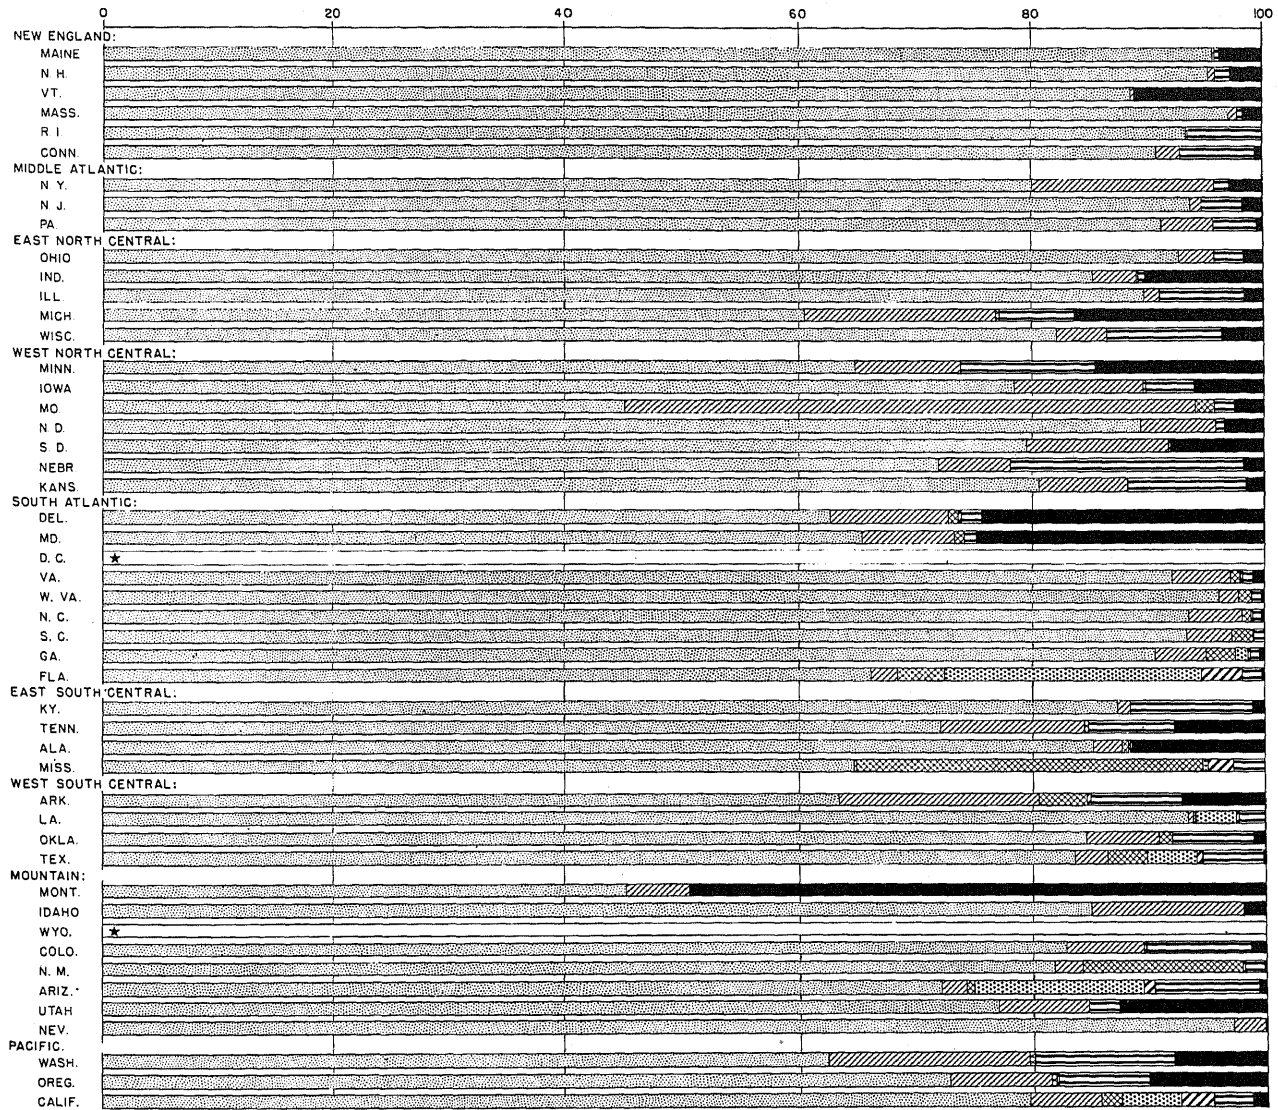

The figures for seedlings sold for forest planting given in United States Summary Table 5 do not represent the total production of such seedlings as many nurseries operated by the Federal and State governments were not included as the seedlings were not sold. The value of seedlings produced for sale was influenced by the low values reported by some governmentally-operated establishments which sold seedlings at low prices.

Values for rose plants, and for broad-leaved evergreens, especially for Kansas were also affected by reports of State-operated conservation and forest nurseries.

Broad-leaved evergreens include rhododendron, azalea, camellia, and similar crops but do not include subtropical ornamental plants produced largely in Florida and California. "All other ornamental plants" include subtropical ornamental plants, cacti, succulents, and other miscellaneous crops grown outdoors as nursery crops in the

## HORTICULTURAL SPECIALTIES

Southern States. Outside of the Southern States, many of these crops are grown as flowering or foliage plants in greenhouses.

A comparison of data for 1929 and 1949 indicates that there has been a reduction in the sale of fruit trees and plants, and

deciduous ornamental trees and shrubs. On the other hand, there has been a considerable increase in the sale of broad-leaved and ornamental evergreens (other than broad-leaved), and in rose plants.

Table A.—QUANTITIES OF NURSERY CROPS SOLD, 1949 AND 1929
