### SUGGESTED IDENTIFICATION

U. S. Bureau of the Census. *U. S. Census of Population: 1950. Vol. IV, Special Reports, Part 5, Chapter C, Fertility.* U. S. Government Printing Office, Washington, D. C., 1955.

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., or any of the Field Offices of the Department of Commerce - - - - - Price \$1.00

## PREFACE

This report presents statistics on the fertility of women in the United States. The statistics provide a basis for the study of the contributions of different groups to population growth.

The data are based on tabulations of samples of the returns obtained in the Seventeenth Decennial Census of the population of the United States, its Territories and possessions, conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses, approved June 18, 1929. The major portion of the information compiled from the Census of Population of 1950 appears in Volume I, Number of Inhabitants, and in Volume II, Characteristics of the Population. These two volumes contain statistics for regions, divisions, States, and parts of States, as well as for the country as a whole.

This is one of a series of reports (Series P-E bulletins) which comprise Population, Volume IV, Special Reports, and which supplement the information contained in Volumes I and II. This bulletin constitutes Chapter C of Part 5 of Volume IV.

The Bureau of the Census completed the collection and most of the processing of 1950 Census data on fertility but was unable to tabulate the results and prepare them for publication within the 1950 Census period. The Population Council, Inc., made grants to P. K. Whelpton of the Scripps Foundation for Research in Population Problems, for an extension of his work on cohort fertility, and to Dr. Clyde V. Kiser of the Milbank Memorial Fund for data needed in the preparation of a 1950 Census monograph on fertility. The present report is based on tabulations by the Bureau of the Census for those studies. The Milbank Memorial Fund assisted in the posting of the tables.

The materials presented here were prepared under the supervision of Howard G. Brunsmann, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, with the assistance of Edwin D. Goldfield, then Program Coordinator. They were prepared by Wilson H. Grabill, Chief, Fertility Statistics Section, under the general direction of Dr. Paul C. Glick, Chief, Social Statistics Branch. The compilation of the statistics was under the direction of Robert B. Voight, Assistant Chief for Operations, assisted by Morton A. Meyer, Lawrence A. Marzetti, William S. Gibson, and Mary E. Ivins. Sampling procedures were under the direction of Joseph Steinberg, Chief, Statistical Sampling Branch, assisted by Joseph Waksberg and Albert Mindlin. The technical editorial work and planning were under the supervision of Mildred M. Russell, assisted by Dorothy M. Belzer. The collection of the information on which these statistics were based was under the supervision of Lowell T. Galt, then Chief, Field Division, and the tabulations were under the supervision of C. F. Van Aken, Chief, Machine Tabulation Division.

May 1955.

## U. S. CENSUS OF POPULATION: 1950

### Volume

- I Number of Inhabitants (comprising Series P-A bulletins)
- II Characteristics of the Population (comprising Series P-A, P-B, and P-C bulletins)
- III Census Tract Statistics (comprising Series P-D bulletins)
- IV Special Reports (comprising Series P-E bulletins):
  - 1A Employment and Personal Characteristics
  - \*1B Occupational Characteristics
  - 1C Occupation by Industry
  - 1D Industrial Characteristics
  - \*2A General Characteristics of Families
  - \*2B Detailed Characteristics of Families
  - 2C Institutional Population
  - 2D Marital Status
  - 2E Duration of Current Marital Status
  - 3A Nativity and Parentage
  - 3B Nonwhite Population by Race
  - 3C Persons of Spanish Surname
  - 3D Puerto Ricans in Continental United States
  - 4A State of Birth
  - \*4B Population Mobility--States and State Economic Areas
  - \*4C Population Mobility--Farm-Nonfarm Movers
  - \*4D Population Mobility--Characteristics of Migrants
  - 5A Characteristics by Size of Place
  - 5B Education
  - 5C Fertility

## U. S. CENSUS OF HOUSING: 1950

### Volume

- I General Characteristics (comprising Series H-A bulletins)
  - II Nonfarm Housing Characteristics (comprising Series H-B bulletins)
  - III Farm Housing Characteristics
  - IV Residential Financing
  - V Block Statistics (comprising Series H-E bulletins)
- Housing statistics for census tracts are included in the Population Series P-D bulletins.

\* Not yet published.

# Fertility

## GENERAL

This report presents statistics on the fertility of women in the United States as measured by the number of children ever born and by the number of own children under 5 years old in the household. Data are shown on a national basis by age, color, marital status, and urban-rural residence in relation to duration of marriage, labor force status of the woman, years of school completed by the woman, and major occupation group of husbands in the experienced civilian labor force. Fertility data are shown for women of Spanish surname in five Southwestern States and for women in the District of Columbia by birthplace. Finally, data on children ever born are presented for women by States, urban and rural. The appendix contains materials on the quality of the data.

The statistics are based on tabulations of several samples of the returns of the Seventeenth Decennial Census of Population, taken as of April 1, 1950. Those for ever-married women are based on "Sample C," a sample of about 2.4 percent on the average, as explained below; the State data for single women came from a 20-percent sample, and other data for single women came from a 3 1/3-percent sample.

These statistics throw light on processes of population growth and on the extent to which different groups of the population are contributing to the growth of the Nation. The materials on children ever born are especially valuable because they indicate the whole previous childbearing experience of women and in this sense provide direct information on the size of "families."<sup>1</sup> They show, for example, that the resurgence in annual numbers of births between 1940 and 1950 had not been accompanied by any increase in the size of "families" for women whose "families" had been completed by 1950. The materials on own children under 5 years old provide measures of "effective current fertility." Nearly all of the children have already passed through the first few days of life when mortality rates are high. They also provide measures of fertility by social and economic characteristics which are not available on birth records, such as farm residence and education of the mother.

### RELATED MATERIALS

**1950 Census reports.**--Ratios of young children to women of childbearing age can be derived from data in Volume II of the 1950 Census of Population on the population classified by age and sex for many different areas, such as cities, urbanized areas, standard metropolitan areas, and counties. Ratios of this type for urban places classified by size were published in the report, Series P-E, No. 5A, entitled "Characteristics by Size of Place." These ratios do not represent as precise measures of fertility, however, as those shown in the present report.

**1940 Census reports.**--The publications of the 1940 Census included a series of five reports under the general title "Differential Fertility, 1940 and 1910." The subtitles of the reports in this series were:

- Fertility for States and Large Cities
- Standardized Fertility Rates and Reproduction Rates
- Women by Number of Children under 5 Years Old
- Women by Number of Children Ever Born
- Fertility by Duration of Marriage

<sup>1</sup> For other census purposes, the term "family" is used in a different way, to denote a group of two or more mutually related persons living together.

**Current Population Reports.**--The Bureau of the Census conducts every month the Current Population Survey covering a scientifically selected sample of about 25,000 households. Irregularly since 1946, data on women (and, in some years, on men) by number of children under 5 years old have been tabulated by social and economic characteristics. In April 1952, data on children ever born were also collected and tabulated. The results for 1952 are published in Current Population Reports, Series P-20, No. 46.

**National Office of Vital Statistics.**--The National Office of Vital Statistics publishes statistics annually on registered births by ages of the parents, color, and order of the birth (first child born to the mother or second, etc., child). These data are available in diminishing detail from the larger to smaller geographic areas. The vital statistics relate to births occurring in a given year (or month). They do not provide information directly on the number of women who are subject to having a birth of a given order during the year. Elaborate computations covering many years of data are sometimes made to provide estimates of the missing information, but they generally provide less satisfactory results than census data on women by number of children ever born because of the difficulties encountered in making allowances for deaths, migration, and cumulative biases in the data. Census and vital statistics data may be used jointly; for example, census data on women by number of children ever born may be used for population bases and vital statistics on births by order for numerators, in the computation of parity-specific birth rates.

### INTERNAL CONSISTENCY OF DATA

In the 1950 Census of Population, many of the data were obtained from the enumeration of the total population; however, some data were based on reports from a 20-percent sample of the population and some from a 3 1/3-percent sample. As indicated earlier, the statistics in the present report were based largely on Sample C, which varies in size from less than 1 percent in New York City to 3 1/3 percent in some areas, with an average size of about 2.4 percent. Accordingly, because of sampling variability and certain small biases, described in the section on "Reliability of sample data," differences may be expected among figures obtained from the complete count, the 20-percent sample, the 3 1/3-percent sample, and Sample C.

Some differences between figures for corresponding items in different reports, or in tables within the same report, are caused by errors in the tabulation processes. These errors include machine failure, loss of punch cards, and other types. (The net effect is a tendency toward slightly smaller counts of the same item in successive tabulations.) Experience has shown that in mass operations two tabulations of a large set of punch cards are not likely to yield precisely identical results. Therefore, tolerance limits allowing for insignificant variations were established in advance for each tabulation. If the differences between the results of two tabulations fell within these limits, nothing was done to bring them into exact agreement with each other. This procedure was adopted in order to provide a greater volume of data within the limits of time and resources available. In earlier censuses, however, the results of different tabulations were adjusted to bring them into exact agreement.

In the present report, the figures in each table have been adjusted to agree with corresponding figures in all other tables.

## AVAILABILITY OF UNPUBLISHED DATA

This report presents most of the detail that was obtained in the fertility tabulations. Among the unpublished data are more detailed distributions by number of children ever born and information on own children under 5 years old by single years of age of native white and Negro women. Data are also available on children ever born for women married more than once by years in present marriage and on own children under 5 years old for women married once and women married more than once by years in present marriage. Statistics for nonwhite women have been tabulated for each State, urban and rural, but are not shown separately where

there were fewer than 30,000 nonwhite women 15 to 59 years old. The total number of children under 5 years old is derived from the number of women with 1, 2, 3, 4, and 5 or more such children; this frequency detail is not usually shown in this report. Finally, certain information on card replications was tabulated and used in the control and processing of the data but is not shown in this report.

The tabulated, but unpublished, statistics can be made available, upon request, for the cost of transcription or consolidation. Requests for such unpublished material should be addressed to the Director, Bureau of the Census, Washington 25, D. C.

## DEFINITIONS AND EXPLANATIONS

The definitions of the major concepts used in the 1950 Census are given below. Several of these definitions differ from those used in 1940. These changes were made after consultation with users of census data in order to improve the statistics, even though it was recognized that comparability would be adversely affected. In many cases, the new definitions were tested in connection with the Current Population Survey; and, where feasible, measures of the impact of the change on the statistics were developed.

For a discussion of the definitions of concepts used in the 1950 Census, the quality of the data, and the problems of comparability with earlier census data, see Volume II, Characteristics of the Population, Part 1, United States Summary, or the Series P-B and P-C United States Summary bulletins. The 1950 Population Census schedule and the major part of the instructions to enumerators are also reproduced in Volume II, Part 1.

## CHILDREN EVER BORN

## Definitions

The data on women by number of children ever born were derived from answers to the question, "How many children has she ever borne, not counting stillbirths?" A check box was provided for replies of "None." Although this question was not asked of women reported as single, the statistics are not limited strictly to legitimate fertility; many of the unmarried mothers with illegitimate children living in the household probably reported themselves as married, widowed, or divorced; and some women married after having had one or more illegitimate children. In the computation of fertility rates for all women, the women reported as single were assumed to have borne no children.

The enumerator (but not necessarily the respondent) was instructed to count all children ever born alive to the woman during her lifetime, including children by any previous marriage, children now deceased, and children not living in the household. The enumerator was instructed not to inquire about adopted children or stepchildren; but he was told that, if the question was raised, he was not to count children who were not born to the woman. It is thought, however, that most of the reports on the number of children ever born were accurate. (See appendix. The appendix also discusses the problem of nonresponse to the question on children ever born and how these "not-reported" cases were edited.)

## Comparability

The concept "children ever born" was the same in the 1940 and 1950 Censuses; but the design of the inquiry in 1940 differed in several respects from that in 1950. In 1940, the enumerator was instructed to make an entry, for women who were or had been married, in a column entitled "Number of children ever born (Do not include stillbirths)." There was no check box for "None" and no instructions were given as to the proper entry for childless women (a zero); some enumerators left the item blank instead of entering a zero.

Data for the United States on women by number of children ever born have been tabulated from the Censuses of 1950, 1940, and 1910, and from the Current Population Survey of April 1952. A rough indication of the comparability of the data for different dates is possible by taking data for women in one census who were close to 45 years old and comparing them with data for the same cohort of women in a later census. For example, the native white women who were 40 to 44 years old in 1910 reported more children at that time (3,542 children ever born per 1,000 women) than in 1940 when the surviving members of the cohort of women were 70 to 74 years old and reported about 3,200 children ever born per 1,000 women. The difference between these figures may be due to a combination of various things. For instance, it is possible that older women may overlook children who died in infancy many years earlier and that differential mortality between women with many children and women with few may be a factor. There may also have been some overreporting of children in 1910 because of the inclusion of some stillbirths, adopted children, etc., since the question wording in that census was vague: "Mother of how many children--(a) Number born, (b) Number now living." It probably is better, as a rule, to use data for women around age 45 in an earlier census in preference to data for the same cohort at an older age in a later census, despite other shortcomings of the earlier census. The 1910-1940 example shows a rather extreme difference. Some others, showing more moderate differences, are as follows: In 1940, white women 45 to 49 years old reported about 2,704 children ever born per 1,000 women (including estimates of children for women who made no report) as compared with a rate of 2,689 children per 1,000 women 55 to 59 years old in 1950. In 1950, women of all races 45 to 49 years old reported 2,292 children ever born per 1,000 women, compared with 2,249 children per 1,000 women 47 to 51 years old in the April 1952 Current Population Survey.

Censuses and surveys have varied in the proportion of nonreports on children ever born, from less than 1 percent in the April 1952 Current Population Survey to 12.6 percent in the 1940 Census. A low nonresponse rate was also obtained in the 1950 Census of Puerto Rico, where the question was asked on a complete-count basis and of single women as well as ever-married women; the proportion of nonreports in Puerto Rico was only 2.1 percent. (See U. S. Bureau of the Census, 1950 Census of Population, "Fertility by Social and Economic Status, for Puerto Rico: 1950," Series PC-14, No. 21, June 24, 1954.) The nonreports are not random in nature, as is evidenced by the fact that 1950 tabulations show that women with no report on children ever born had relatively fewer young children in the household than did women with a report on children ever born. (See appendix.) The non-random distribution was more pronounced in 1940 than in 1950 because of the weaknesses in the 1940 Census schedule design and instructions noted above.

## Mean Values

The distribution of women with 0, 1, 2, 3, 4, 5 and 6, 7 to 9, and 10 or more children ever born that is shown in most tables usually represents the full information tabulated. (Fuller detail was tabulated only for the type of data shown in tables 2 and 3.) In the computation of total children ever born, estimated mean values were applied to the broad and open-end groupings of children.

Table A.--NUMBER OF CHILDREN EVER BORN PER 1,000 WOMEN 15 TO 59 YEARS OLD, BY AGE AND MARITAL STATUS OF WOMAN, FOR THE UNITED STATES: 1950, 1940, AND 1910  
(Statistics based on samples. 1940 rates revised. Minus sign (-) denotes decrease)

Age of woman	Children ever born per 1,000 women				Children ever born per 1,000 women ever married			
	1950	1940	1910	Percent increase, 1940 to 1950	1950	1940	1910	Percent increase, 1940 to 1950
Total, 15 to 44 years.....	1,395	1,238	1,715	12.7	1,859	1,904	2,872	-2.4
15 to 19 years....	105	68	69	54.4	604	572	725	5.6
20 to 24 years....	738	522	681	41.4	1,082	987	1,407	9.6
25 to 29 years....	1,436	1,132	1,601	26.9	1,654	1,463	2,180	13.1
30 to 34 years....	1,871	1,678	2,446	11.5	2,059	1,964	2,956	4.8
35 to 39 years....	2,061	2,145	3,286	-3.9	2,247	2,414	3,781	-6.9
40 to 44 years....	2,170	2,430	3,904	-12.9	2,364	2,754	4,383	-14.2
45 to 49 years....	2,292	2,740	4,295	-16.4	2,492	2,998	4,744	-16.9
50 to 54 years....	2,497	3,157	4,529	-20.9	2,706	3,146	4,972	-14.0
55 to 59 years....	2,728	3,017	4,816	-9.6	2,954	3,305	5,218	-10.6

OWN CHILDREN UNDER 5 (UNDER 1) YEARS OLD

Definitions

In the present report, "own" children includes the sons and daughters living with their mother. Adopted children and step-children are excluded whenever they could be identified as such from information on the population schedule. There were relatively few such children, but we were not able to determine that most of them were not natural children of the women who appeared to be their mothers. The classification of women by number of own children is based not on a direct question but on an office examination of the enumerator's entries for each member of the household. The main items examined were surname, age, and relationship to the household head. The order of listing of persons was also important, because enumerators were instructed to list persons in order by natural family groupings. In most households there were no problems of identification of own children since it was clear that only the wife of the household head could be the mother. In a relatively few households, it was not clear which of two or more women was the mother of a child or whether the mother was present at all. The classification by number of own children was made only for women ever married. Separate data were compiled on the number of own children under 5 years old and on the number of own children under 1 year old.

Comparability

The data on own children under 5 years old that are shown for 1950 are strictly comparable with the data for 1940 and 1910 that are shown in the 1940 Census reports on fertility. The data are comparable for all practical purposes with those in the Current Population Survey.

The aggregate number of "children" of a given age classified as "own children" is, by definition, smaller than the total number of children of comparable age shown in the 1950 Census reports. The latter includes all children of a given age regardless of whether they are living with the mother. Most of the differences between the two sets of figures are fairly small, as may be noted from the figures below:

Area and color	Total children under 5 years old	Own children under 5 years old of women ever married 15 to 49 years old	
		Number	Percent
United States.....	16,163,571	15,622,710	96.7
Urban.....	9,772,719	9,497,910	97.2
Rural nonfarm.....	3,771,182	3,611,340	95.8
Rural farm.....	2,619,670	2,513,460	95.9
White.....	14,184,504	13,928,910	98.2
Nonwhite.....	1,979,067	1,693,800	85.6

The number of children under 5 whose mothers were 50 years old or older and therefore not included in the second column does not account for more than a small fraction of 1 percent of all children under 5 years old.

In most cases the children under 5 years old who were not living with their mothers were living with their grandmothers or other relatives; only rarely were they living with nonrelatives. It is estimated from life tables also that less than 1 percent of the mothers of children under 5 years had died.

Parity

The term "parity" has the same meaning as "number of children ever born," except that it refers to the number born by a given time and it is used to compute which order of birth the woman's next child would be, if she were to have one. That is, only the women of zero parity, or the women who have never had a child, are "at risk" of having a first child and the women of nth parity are the only ones "at risk" of having an "nth + 1" child, with the exception of the relatively few women who will have multiple births. In tables 30 and 31, parity is estimated as of 1 year before the census date. The women with a child under 1 year old were presumed to have had one fewer child ever born in 1949 than in 1950; those with no children under 1 year old were presumed to have had no change in parity since 1949. The classification by parity in these tables is only approximate since no allowance has been made for the absence of some children under 1 year old from the household, deaths, or for the few cases of multiple births.

Table B.--NUMBER OF OWN CHILDREN UNDER 5 YEARS OLD PER 1,000 WOMEN 15 TO 49 YEARS OLD, BY AGE AND MARITAL STATUS OF WOMAN, FOR THE UNITED STATES: 1950, 1940, AND 1910  
(Statistics based on samples. Minus sign (-) denotes decrease)

Age of woman	Children under 5 per 1,000 women				Children under 5 per 1,000 women ever married			
	1950	1940	1910	Percent increase, 1940 to 1950	1950	1940	1910	Percent increase, 1940 to 1950
Total, 15 to 49 years.....	403	281	425	43.4	524	413	661	26.9
15 to 19 years....	93	59	58	57.6	536	493	478	8.7
20 to 24 years....	603	396	467	52.3	883	747	906	18.2
25 to 29 years....	782	538	738	45.4	900	695	984	29.5
30 to 34 years....	594	434	685	36.9	653	508	818	28.5
35 to 39 years....	366	284	542	28.9	399	319	619	25.1
40 to 44 years....	167	140	316	19.3	181	155	353	16.8
45 to 49 years....	38	43	97	-11.6	41	47	106	-12.8

URBAN AND RURAL RESIDENCE

According to the new definition that was adopted for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, and villages, (b) incorporated towns of 2,500 inhabitants or more except in New England, New York, and Wisconsin, where "towns" are simply minor civil divisions of counties, (c) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more, and (d) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the old definition, the urban population was limited to all persons living in incorporated places of 2,500 inhabitants or more and in areas (usually minor civil divisions) classified as urban under special rules relating to population size and density. All of the statistics for 1950 on urban-rural residence in this report are presented according to the new definition, with the exception of tables 4 to 7, 36, and 37, where the old definition is used to compare fertility in 1950 and 1940. The net effect of the change in definition on urban-rural fertility differentials can be determined for 1950 by comparing the urban-rural data in other tables with those in tables 4 to 7, 36, and 37.

Farm and nonfarm population.--The farm population for 1950, as for 1940, includes all persons living on farms without regard to occupation. In determining farm and nonfarm residence in the 1950 Census, however, certain special groups were classified otherwise than in earlier censuses. In 1950, persons living on what might have been considered farm land were classified as non-farm if they paid cash rent for their homes and yards only. A few persons in institutions, summer camps, "motels," and tourist camps were classified as farm residents in 1940, whereas in 1950

all such persons were classified as nonfarm. For the United States as a whole, there is evidence from the Current Population Survey that the farm population in 1950 would have been slightly larger had the 1940 procedure been used. In this report data are presented for the rural-farm population only since virtually all of the farm population is located in rural areas. The rural-nonfarm population includes all persons living outside urban areas who do not live on farms. The data on rural-nonfarm and rural-farm population in 1950 according to the old definition are partly estimated. Because of tabulation limitations it was not feasible to tabulate farm-nonfarm residence for persons in areas that were urban by the new definition but rural by the old definition. The estimates were made by a pro rata process.

**Urban fertility.**--There has been special interest in urban fertility because, as far back as records go (to certain colonial censuses), urban fertility has been relatively low as compared with rural fertility, with a few local exceptions due to special circumstances. There have been times when demographers expected that cities were, or would become, areas of population depletion or areas unable to replace their population without migration from rural areas or abroad. These expectations were usually based on data on current fertility in a particular year or 5-year period of time; data on lifetime fertility were unavailable until a decade or two ago. There are some States, however, including New York and California, where data on women by number of children ever born show that urban fertility is inadequate for replacement at most or all age levels. That is, it does not seem that the lifetime reproduction will approach the level needed for replacement of the women in the next generation. (About 2,160 children would be needed to replace 1,000 women, on the basis of United States life tables, for 1950.)

#### AGE

The age classification is based on the age of the person at his last birthday as of the date of the enumeration, that is, the age of the person in completed years. The enumerator was instructed to obtain the age of each person as of the date of his visit rather than as of April 1, 1950.

The fertility of women is very much a function of their age, not only for biological reasons but also because of customary marriage ages and because most families attain a desired size within 10 years or so of the marriage, so that childbearing tends to be concentrated within certain ages (figure 2). Most tables in the present report present some cross-classification by age.

The 1950 Census tabulations on women by number of children ever born were limited to women between the ages of 15 and 59 years for reasons of economy and because older women were already of completed fertility when they were interviewed in the 1940 Census. The age limit used for 1950 permits a comparison of data on completed fertility for surviving women aged 55 to 59 years old in 1950 with those for the group aged 45 to 49 years in 1940, however. Also, there is some evidence that data on children ever born for older women are not strictly representative of fertility conditions in their generation; some slight lowering, on the average, of the reported number of children occurs as a net effect because respondents who report for some one else do not always know about deceased children and because of differential mortality between mothers of many children and mothers of few or none.

#### MARITAL STATUS AND NUMBER OF TIMES MARRIED

In the 1950 Census, data on marital status are based on the replies to the question, "Is he now married, widowed, divorced, separated, or [has he] never [been] married?" The classification refers to the status at the time of enumeration. Persons classified as "married" comprise, therefore, both those who have been married only once and those who have remarried after having been widowed or divorced. Persons reported as separated or in common-law marriages are classified as married. Those reported as never married or with annulled marriages are classified as single. Since it is probable that some divorced persons are

reported as single, married, or widowed, the census returns doubtless understate somewhat the actual number of divorced persons who have not remarried.

The category "Married" is further divided into "married, spouse present" and "married, spouse absent." A person is classified as "married, spouse present" if the person's husband or wife was reported as a member of the household or quasi household in which the person was enumerated, even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of the enumeration.

Persons reported as separated are included in the group designated as "married, spouse absent." Separated persons are married persons permanently or temporarily living apart from their spouse because of marital discord. Other married persons with spouse absent include persons in the Armed Forces or employed and living at a considerable distance from their homes and other persons whose place of residence was not the same as that of their spouse.

The classification of married women by number of times married is based on replies to the question, "Has this person been married more than once?" For persons with no report on times married, an appropriate entry was assigned by means of a pro-rating process based on a special national sample of 1950 Census data for approximately 60,000 women.

Variations in total fertility among different groups usually arise from variations in both the proportion of women who marry and the fertility of these women. Hence, many of the tables in this report have a cross-classification by marital status so that both factors can be examined. Also, the fertility of the married women depends in part on the age at marriage and the continuity of married life. The factor of continuity of married life can be studied by comparing data in some tables for women ever married with those in following tables for women married once, husband present.

#### DURATION OF MARRIAGE

Persons who had ever been married were asked to report the number of years they had been in their present marital status. For married persons the question was "How many years since this person was (last) married?" A check box was provided for answers of "Less than 1 year," but it is possible that some persons reported the nearest whole year of duration rather than completed years, since the intervals "Less than 1 year" and "1 year" seem to be underreported. The peak at "3 years" is correct, however, since this reflects the unprecedented numbers of marriages in 1946 and 1947 following World War II.

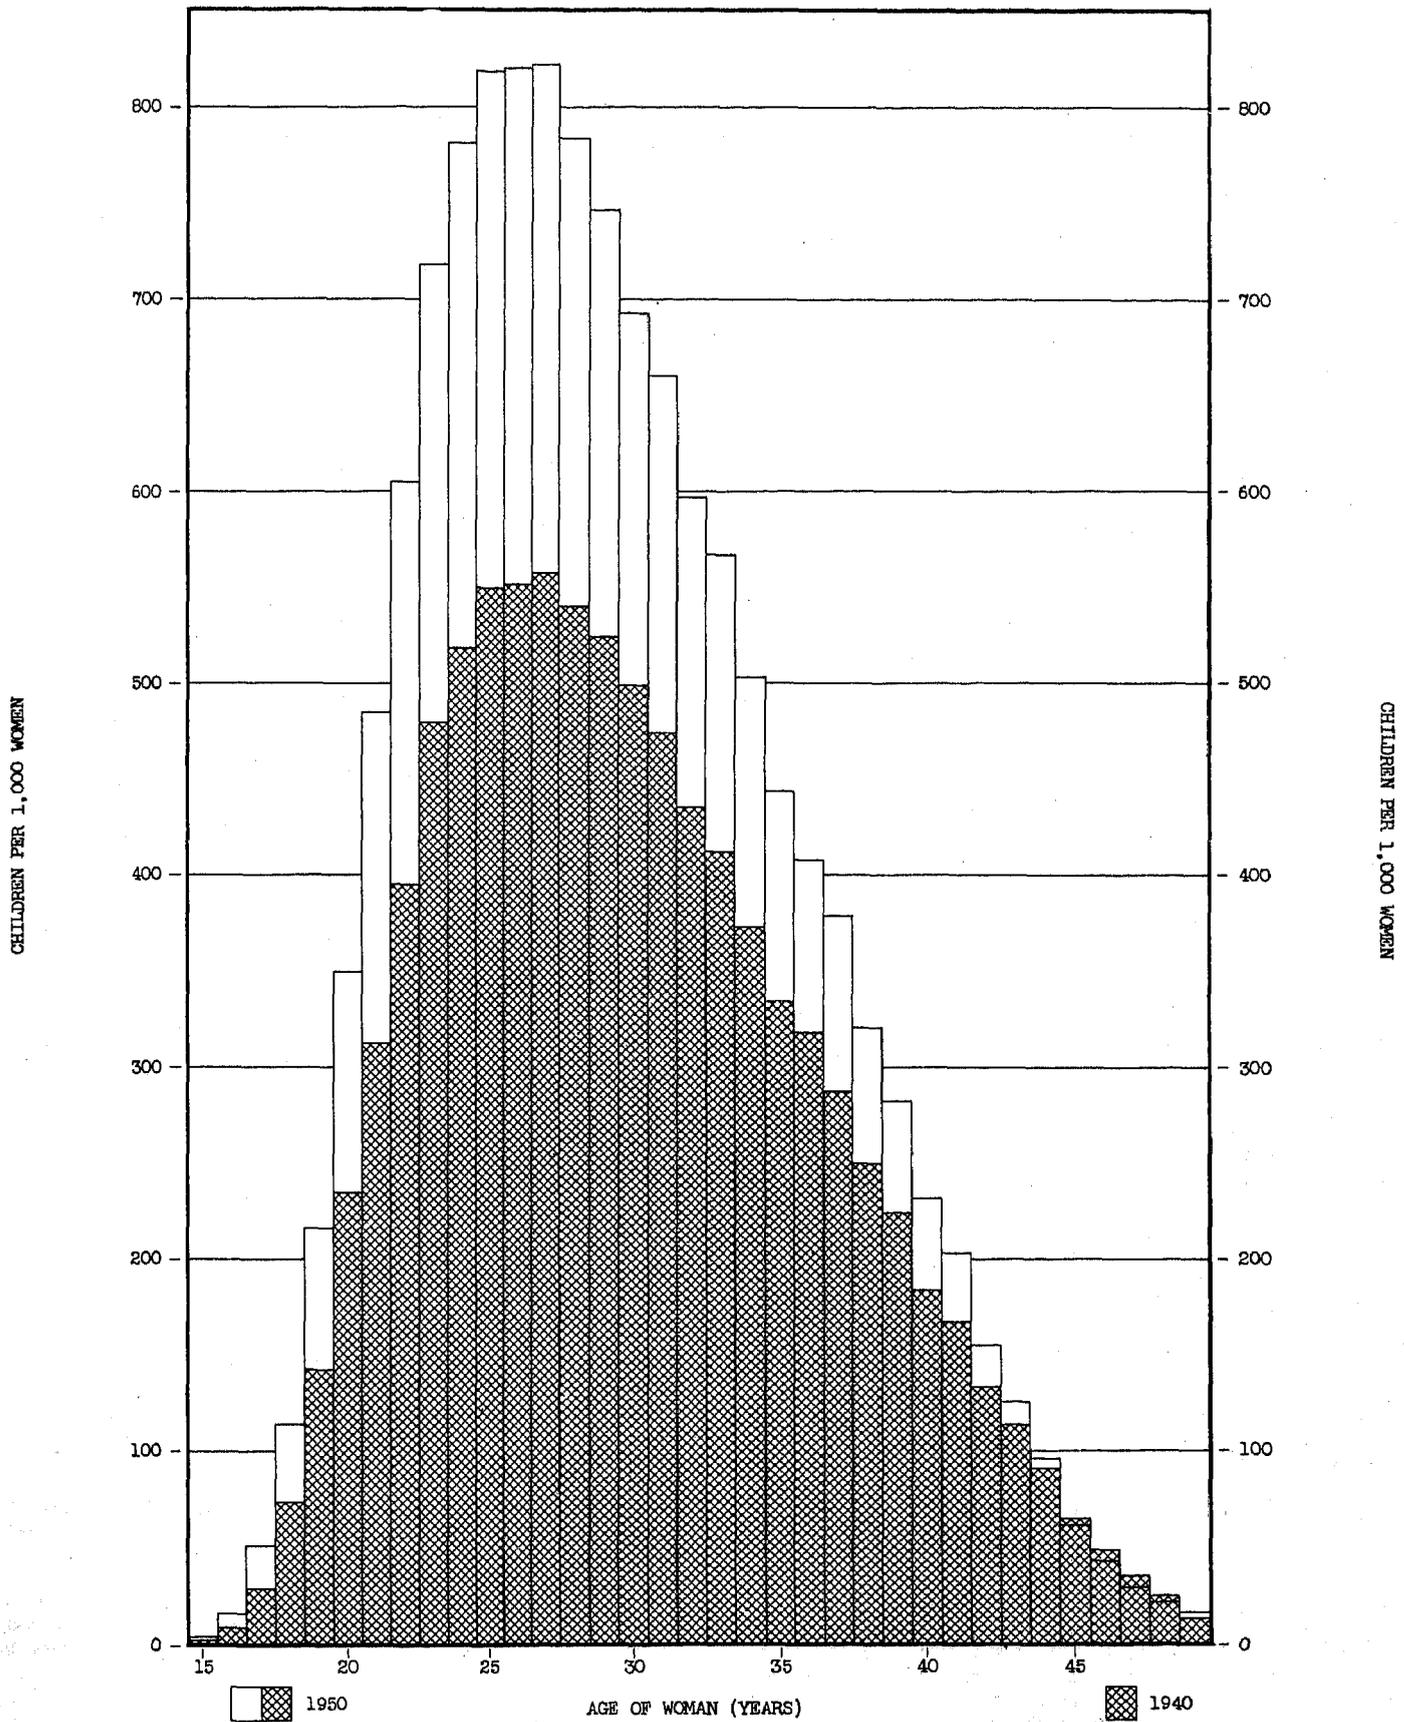

The data on duration of marriage in the present report are limited to women married once, husband present, and therefore pertain to unbroken first marriages. In general, they reflect an unbroken continuity of married life, but in some instances the couples may have lived apart for awhile. When duration of marriage was not reported, an estimate was made, based on data from the 1950 Census for a national sample of about 60,000 women.

The information on duration of marriage has many uses from the viewpoint of fertility statistics. The most common use, of course, is for the study of the increase in the number of children ever born with duration of marriage. The data can also yield some approximate information on the interval between marriage and the birth of the first child, through comparisons of the proportion childless among women at successive durations of marriage. Such an analysis would show that about four out of five first children are born during the first four to five years of marriage, with a median or half-way point reached shortly after the completion of two years of marriage. Earlier studies have shown a very high correlation between the annual numbers of marriages and the annual numbers of first births lagged by one year, but one year is not the average interval between marriage and the first birth. (A substantial part, roughly a third, of the women do have first births in the second year of marriage.)

SPECIAL REPORTS

Figure 2.—NUMBER OF OWN CHILDREN UNDER 5 YEARS OLD PER 1,000 WOMEN 15 TO 49 YEARS OLD, BY SINGLE YEARS OF AGE OF WOMAN, FOR THE UNITED STATES: WHITE WOMEN, 1950, AND NATIVE WHITE, 1940

(Statistics based on samples)

Source: 1950 data: Table 38.  
 1940 data: U. S. Bureau of the Census, Special Reports of the Sixteenth Census, Differential Fertility, 1940 and 1910--Women by Number of Children Under 5 Years Old, Washington, D. C., 1945, table 9.

## RACE, COLOR, AND NATIVITY

The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public as reflected in the action of legislative and judicial bodies of the country. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationalities.

**Color.**--The term "color" refers to the division of population into two groups, white and nonwhite. The group designated as "nonwhite" consists of Negroes, Indians, Japanese, Chinese, and other nonwhite races.

**Negro.**--In addition to full-blooded Negroes, this classification includes persons of mixed white and Negro parentage and persons of mixed Indian and Negro parentage unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian.

**Other races.**--This category includes Indians, Japanese, Chinese, and other nonwhite races.

**Mixed parentage.**--Persons of mixed parentage are classified according to the race of the nonwhite parent and mixtures of nonwhite races are generally classified according to the race of the father.

**Nativity.**--The classification of the white population into the two basic groups, native and foreign born, is based on replies to the question, "What State (or foreign country) was he born in?" A person born in the United States or any of its Territories or possessions is counted as native. Also included as native is the small group of persons who, although born in a foreign country or at sea, were American citizens by birth because their parents were American citizens. The small number of persons for whom place of birth was not reported were assumed to be native.

**Some uses of data by race-nativity.**--In the 1940 Census reports on fertility, extensive data were presented for native white women, less extensive data for Negro women, and a relatively small amount of data for women of all races. The present report gives data for 1950 for white or nonwhite women in most tables and information on the fertility of the total population in association with a given social or economic characteristic can usually be obtained by adding together the data in pairs of tables for white and nonwhite women. Experience has shown that many users of census data on fertility, including economists, market research workers, city planners, and some demographers are mainly interested in data for all races combined, whereas some other demographers and perhaps most social scientists are more interested in the characteristics of particular population groups. In 1940, there was considerable concern that the native white women of the country were having too few children for replacement in the next generation. Much of the demand at that time was for separate data, excluding the more fertile foreign-born white population. The foreign-born white population is now a small minority element in the childbearing ages, as may be seen from table 12. Ways of living are becoming more similar among whites and nonwhites, as illustrated by the equalization of the percentages of nonwhite and white women of childbearing age now residing in urban areas, and by the progress toward equalization of economic opportunities and educational facilities among the various races. Despite the transition--or perhaps in part because of it--nonwhite women in urban areas have higher rates of childlessness and other distinctive features with regard to fertility.

## SPANISH SURNAME

In the 1950 Census, data relating to persons of Spanish-American and Mexican-American origin were obtained by the identification of white persons of Spanish surname on the schedules as a part of the general coding operation. This procedure was limited to the five Southwestern States--Texas, California, New Mexico, Arizona, and California--which in 1940 had accounted for more than 80 percent of all persons of Spanish mother tongue.

The identification was built around a list of some 6,000 Spanish surnames compiled by the Immigration and Naturalization Service. It is recognized that surnames are only correlated with national origins and that some are common to several languages. Although Spanish surnames are not completely efficient indicators of Spanish-American descent, the classification as judged in terms of the results appears to have been adequate.<sup>2</sup>

The population of Spanish surname in the Southwest is of interest as a group of quite high fertility. The fact that the State of New Mexico usually ranks high in any list of States classified by fertility can be accounted for largely by the presence of this group. Ethnically, the population of Latin American and Mexican descent ranges from Indians to persons of unmixed Spanish ancestry, with many persons being of mixed Spanish-Indian ancestry. According to the report on Spanish surname, the women of Spanish surname who were 25 years old and over had a median educational attainment of only 5.4 years of grade school.

## BIRTHPLACE OF WOMEN LIVING IN WASHINGTON, D. C.

Information on the place of birth of the population residing in continental United States at the time of the 1950 Census was obtained as a response to the inquiry, "What State (or foreign country) was he born in?" The District of Columbia (coextensive with Washington, D. C.) was listed as a place of birth along with the States. It is thus the only urban place for which information from the 1950 Census can be obtained on the fertility of natives as distinguished from that of in-migrants, or persons born elsewhere.

There has been some speculation that perhaps urban fertility is relatively low partly because of the continual in-migration of single persons from rural areas and of out-migration of married persons to the suburbs. The in-migrants swell the population bases of fertility rates for urban areas but contribute few or no births to these areas, at least for a while. (At the same time, out-migration from rural areas has the opposite effect on fertility in those areas.) The data for women living in Washington, D. C., indicate that about 77.0 percent were born elsewhere. (See table 33.) It appears, however, that the in-migrants were only slightly less fertile than the natives. The situation assumes significance since Washington, D. C., has one of the least fertile populations of any part of the United States. The data are exclusive, however, of the nearby Maryland and Virginia suburbs of Washington, which contain a larger proportion of married women with children; many of the suburban women were natives of Washington. The fertility of women in the Washington metropolitan area is, of course, substantially higher than that for the central city alone.

## YEARS OF SCHOOL COMPLETED

The data on years of school completed were derived from the combination of answers to two questions: (a) "What is the highest grade of school that he has attended?" and (b) "Did he finish this grade?"

The questions on educational attainment applied only to progress in "regular" schools. Such schools are public, private, or parochial schools, either day or night, full time or part time--that is, those schools where enrollment may lead to an elementary or high school diploma, or to a college, university, or professional school degree. Schooling obtained through a correspondence course was counted only if the course was given by a regular school, such as a university, and the person received credit thereby in the regular school system.

The question on highest grade of school attended called for the highest grade attended, regardless of "skipped" or "repeated" grades, rather than the number of full school years which the person had spent in school.

<sup>2</sup> For further details, see U. S. Bureau of the Census, 1950 Census of Population, Volume IV, Special Reports, Part 3, Chapter C, Persons of Spanish Surname, Washington, D. C., 1952.

The question on completion of highest grade was to be answered "Yes" if the person had completed the full grade. If a person was still attending school in that grade, had completed only a half grade, or had dropped out of or failed to pass the last grade attended, the required answer was "No." In this report, persons who failed to report on completion of the grade were assumed to have finished.

Formal education or "years of school completed" is one of the most useful indices of social and economic status of women insofar as the study of differential fertility is concerned. Most women complete their schooling before marriage or by the age of 20 to 24 years. Therefore education is a relatively stable, lifetime characteristic, unlike most other social and economic characteristics, like income or occupation, which may change with age and environmental conditions. Educational level, of women and lifetime fertility have a strong inverse correlation, women with superior education generally having the fewest children, on the average. (See tables 20 and 22.)

#### LABOR FORCE STATUS

The labor force includes all persons 14 years old and over classified as employed or unemployed, as described below, and also members of the Armed Forces (persons on active duty with the United States Army, Navy, Air Force, Marine Corps, or Coast Guard). Husbands in the experienced civilian labor force comprise both those husbands who were employed and those who had previous work experience but were unemployed during the census week.

The 1950 data on employment status pertain to the calendar week preceding the enumerator's visit, which is defined as the census week.

Employed persons comprise civilians who during the census week were either (1) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or in a family business; or (2) "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of vacation, illness, industrial dispute, bad weather, or layoff with definite instructions to return to work within 30 days of layoff. Also included as "with a job" are persons who had new jobs to which they were scheduled to report within 30 days. In this report, these two categories are combined and shown as "Employed."

Unemployed persons comprise civilians who were not at work during the census week but were either looking for work or would have been looking for work except that (1) they were temporarily ill, (2) they expected to return to a job from which they had been laid off for an indefinite period, or (3) they believed no work was available in their community, or in their line of work.

Persons not in the labor force comprise civilians who are not classified as employed or unemployed, including persons doing only incidental unpaid family work (less than 15 hours). Included in this group are persons primarily engaged in their own home housework, students, seasonal workers in an "off" season, the retired, persons unable to work, inmates of institutions, and persons not reporting on their employment status.

Women in the labor force at a given point in time generally have fewer young children than women not in the labor force (tables 45 and 47). If a woman has a baby she is likely to give up a job or not to look for a job, as the case may be. In the last decade or so, however, a life pattern seems to be developing among many married women in which they work until the arrival of the first baby, temporarily withdraw from the labor force while their children are young, and then return to the labor force after their children are old enough to require little care. Even in terms of children ever born, young women who happen to be in the labor force are less fertile than those who happen not to be in the labor force; but it is possible that the two groups will not differ very much in the size of their completed families. (See tables 24 to 27.) Since labor force status is not a fixed characteristic throughout adult life, the status of women at the

end of the childbearing period does not tell us very much about their status during this period. Furthermore, the present pattern of childbearing, child care, and gainful employment mentioned above may be too recent to have had much effect on women over 45 in 1950. Nevertheless, the present data should shed some additional light on the interrelationships between fertility and the employment of women and hence on the most dynamic part of the labor supply.

#### MAJOR OCCUPATION GROUP

The data on major occupation group presented here are for husbands in the experienced civilian labor force and refer to the job held during the calendar week preceding the enumerator's visit or, if the person was unemployed, to the last job held. The data are based on answers to the question, "What kind of work was he doing?" If the person was employed at two or more jobs, the job at which he worked the greatest number of hours during the census week was reported.

The occupational classification system developed for the 1950 Census of Population consists of 469 items, 270 of which are specific occupation categories; the remainder are subgroupings (mainly on the basis of industry) of 13 of the occupation categories. The 469 detailed items are classified into 12 major occupation groups, which form the basis on which the occupation data are presented in this report. The 1950 major groups are generally comparable with the 1940 major groups, although there are a number of differences in title and content. For further information on comparability between 1950 and earlier census data on occupation, see Volume II, Characteristics of the Population, Part 1, United States Summary.

The composition of the 1950 major groups (except the "not reported" group) is indicated in the illustrative list shown below:

Professional, technical, and kindred workers.--Includes Accountants; Actors; Airplane pilots and navigators; Architects; Artists; Athletes; Auditors; Authors; Chemists; Chiropractors; Clergymen; College presidents, professors, and instructors; Conservationists; Dancers; Dentists; Designers; Dietitians; Draftsmen; Editors; Embalmers; Entertainers; Farm management advisors; Foresters; Funeral directors; Healers; Home management advisors; Judges; Lawyers; Librarians; Musicians; Natural scientists; Nutritionists; Optometrists; Osteopaths; Personnel workers; Pharmacists; Photographers; Physicians; Professional nurses; Radio operators; Recreation workers; Religious workers; Reporters; Social scientists; Social workers; Sports instructors and officials; Student professional nurses; Surgeons; Surveyors; Teachers; Technical engineers; Therapists; Veterinarians.

Farmers and farm managers.--Includes tenant farmers and share croppers.

Managers, officials, and proprietors, except farm.--Includes Buyers; Building superintendents; Credit men; Lodge officials; Postmasters; Public administration officials; Purchasing agents; Railroad conductors; Ship officers, pilots, pursers, and engineers; Shippers of farm products; Union officials.

Clerical and kindred workers.--Includes Bank tellers; Bill and account collectors; Bookkeepers; Cashiers; Dentist's office attendants; Express agents; Express messengers; Library assistants and attendants; Mail carriers; Messengers; Office boys; Office machine operators; Physician's office attendants; Railway mail clerks; Receiving clerks; Secretaries; Shipping clerks; Station agents; Stenographers; Telegraph messengers; Telegraph operators; Telephone operators; Ticket agents; Typists.

Sales workers.--Includes Advertising agents and salesmen; Auctioneers; Demonstrators; Hucksters; Insurance agents and brokers; Newsboys; Peddlers; Real estate agents and brokers; Stock and bond salesmen.

Craftsmen, foremen, and kindred workers.--Includes Annelers; Bakers; Blacksmiths; Boilermakers; Bookbinders; Brickmasons; Cabinetmakers; Carpenters; Cement finishers; Compositors; Concrete finishers; Coppermiths; Cranemen; Derrickmen; Diemakers;

## SPECIAL REPORTS

Die setters; Electricians; Electrotypers; Engravers; Excavating machinery operators; Forgemen; Glaziers; Goldsmiths; Grading machinery operators; Heat treaters; Hoistmen; Lens grinders and polishers; Lithographers; Locomotive engineers; Locomotive firemen; Log and lumber scalers and graders; Loom fixers; Machinists; Mechanics; Metal molders; Metal rollers; Metal roll hands; Millers; Millwrights; Motion picture projectionists; Opticians; Organ tuners; Painters (construction and maintenance); Paperhangers; Photoengravers; Piano tuners; Pipe fitters; Plasterers; Plate printers; Plumbers; Power linemen and servicemen; Printing pressmen; Road machinery operators; Roofers; Sheet metal workers; Shoemakers, except in factories; Silversmiths; Slaters; Stationary engineers; Stereotypers; Stone carvers; Stone cutters; Stonemasons; Structural metal workers; Tailors; Telegraph and telephone linemen and servicemen; Tile setters; Tinsmiths; Tool makers; Typesetters; Upholsterers; Watchmakers; Window dressers.

Operatives and kindred workers.--Includes Apprentices; Asbestos workers; Auto service attendants; Blasters; Boatmen; Bus conductors and drivers; Canalmen; Chauffeurs; Deck hands; Deliveryman; Dressmakers; Dry cleaning operatives; Dyers; Fruit, nut, and vegetable graders and packers; Furnacemen; Insulation workers; Laundry operatives; Meat cutters; Metal filers, grinders, and polishers; Metal heaters; Milliners; Mine operatives and laborers; Motormen; Painters (except construction and maintenance); Parking lot attendants; Photographic process workers; Powdermen; Power station operators; Railroad brakemen and switchmen; Routemen; Sailors; Sawyers; Seamstresses; Smeltermen; Stationary firemen; Street railway conductors; Surveying chainmen, rodmen, and axmen; Taxicab drivers; Textile spinners; Textile weavers; Tractor drivers; Truck drivers; Welders.

Private household workers.--Includes housekeepers and laundresses in private households.

Service workers, except private household.--Includes Attendants and ushers in amusement places; Bailiffs; Barbers; Bar-

tenders; Beauticians; Boarding house keepers; Bootblacks; Bridge tenders; Charwomen; Cooks, except in private households; Detectives; Doorkeepers; Elevator operators; Firemen (fire protection); Fountain workers; Guards; Hospital attendants; Janitors; Lodginghouse keepers; Manicurists; Marshals; Midwives; Policemen; Porters; Practical nurses; Sextons; Sheriffs; stewards; Waiters; Watchmen.

Farm laborers and foremen.--Includes both paid and unpaid family farm laborers, and self-employed farm service laborers.

Laborers, except farm and mine.--Includes Carwashers; Fishermen; Garage laborers; Groundskeepers; Longshoremen; Oystermen; Raftsmen; Stevedores; Teamsters; Woodchoppers.

The major occupation group of the husband is a valuable indicator of the general social and economic status of the family. It should be noted, however, that occupation is not a "fixed" characteristic; over a lifetime, many persons are attached to several different occupation groups. Workers shift from one group to another as a result of such factors as changing economic and technological conditions, sporadic job changes, and long-term "upward" movements associated with increasing age and experience.

The data in this report indicate only a very broad relation between fertility and occupation. The data show quite clearly, however, that women with husbands in farm occupations tend to have more children than do women with husbands in nonfarm occupations. Among the latter, manual workers have usually had more children than "white-collar" workers (tables 28, 29, 48, and 49.) One of the most interesting patterns concerns the professional workers group. Professional workers' wives 35 to 39 years old had more children ever born, on the average, than wives 40 to 44 years old, who in turn had more children than wives 45 to 49 years old. The fertility of professional workers appears to fluctuate more widely than that of other workers in response to changing economic conditions.

## RELIABILITY OF SAMPLE DATA

## SAMPLE DESIGN

The estimates for 1950 presented in this report are based on samples of women enumerated in the 1950 Census of Population. The statistics on single women were for the most part obtained from a 3 1/3-percent sample, the only exceptions being in tables 14 (Spanish surname), 32 (States) and 33 (District of Columbia residence and birthplace). All of the data for single women in table 32 and data for total single women in tables 14 and 33 were from a 20-percent sample. The statistics in tables 14 and 33 for single women not of Spanish surname and for women not born in the District of Columbia are residual estimates obtained by subtraction of 3 1/3-percent data from 20-percent totals.

The statistics on ever-married women were obtained from a sample of women which comprised, basically, a 1 1/9-percent sample of women in selected areas, a 2/3 of 1-percent sample in New York City, and a 3 1/3 percent in the greater part of the United States. In the tabulation of the data, however, information was used from a somewhat smaller number of ever-married women than these sampling fractions would indicate. Nationally, about 85 percent of the cards in the samples are unreplicated cards and 15 percent are replicated cards. (See Appendix, "Other Materials on Quality of Data.") The reason for the replications was to achieve a self-weighting deck of punch cards. The groups for which replications were required were as follows:

1. The number of children ever born was not reported for about 9 percent of ever-married women. In areas that were in the 3 1/3-percent sample, the number of children ever born was estimated for a subsample of three-tenths of the women not reporting on children. Data for these women were then inflated to the level of the full sample, to replace the seven-tenths of the women for whom no estimates were made. About 4.6 percent of the replications were for this purpose.

2. The fertility punch card was matched against the regular population card and certain data were reproduced from the

latter to the former. It was not possible to match some of the cards and hence complete them. Incomplete cards were eliminated from the sample. The cards that were eliminated were replaced by replications (duplications) of acceptable cards. About 4.2 percent of the replications were for this purpose.

3. The design of the sample was such as to produce somewhat less than 3 1/3 percent of the population in the sample (or 1 1/9 or 2/3 percent in the appropriate areas). Part of the shortage was of a purely random nature, arising mainly from the fact that the sample lines were near the bottom of the 1950 population schedule. More specifically, there were usually 2 sheets out of about 30 in each enumeration district in which the enumerated population filled only part of the sheet and in these sheets, there were generally no persons in the sample. About 3.4 percent of the replications were for this purpose.

4. Replications were a necessary part of a procedure developed for eliminating a small bias in the sample as constituted for enumeration. The reasons and procedures are discussed at greater length below. Replications for this purpose were about 2.6 percent of the total.

The 20-percent sample used for single women was selected in the following manner: In the 1950 Census, a separate line was provided on the population schedule for each person enumerated, with every fifth line designated as a sample line. Five versions of the schedule were designed, and within each enumeration district the schedules were divided approximately equally among the five versions. On each version the sample constituted a different set of lines; as a result, each line on the schedule was in the sample in one of the five versions. The 20-percent sample used in this report comprises the single women who were enumerated on a sample line of the population schedule.<sup>3</sup>

<sup>3</sup> In 19 counties of Michigan and Ohio, a different sampling procedure was used and the sample consisted of all women in every fifth household.

The 3 1/3-percent sample was obtained by selecting approximately every sixth person in the 20-percent sample. In six of the more populous States, however, a 1 1/9-percent sample was used in all territory outside selected large cities; in another six States a 1 1/9-percent sample was used in urban territory outside selected large cities, and a 3 1/3-percent sample in the rural territory. The 1 1/9-percent sample consisted of approximately every eighteenth person in the 20-percent sample. In New York City, the sample consisted of approximately every thirtieth person in the 20-percent sample. The over-all proportions of ever-married women in the sample for the United States, by regions and States, are summarized in table C.

Table C.--PERCENTAGE OF EVER-MARRIED WOMEN IN SAMPLE

(In those areas in which a constant sampling rate was used, the percentages are either 3.3 or 1.1; in other territory, the percentages are the weighted averages of the rates in the parts covered by 3 1/3-, 1 1/9-, and 2/3 of 1-percent samples)

Texas.....	1.9	2.1	1.1
Wisconsin.....	2.4	1.8	3.3
All other States.....	3.3	3.3	3.3

The procedure used to designate the 3 1/3-, 1 1/9-, and 2/3 of 1-percent samples by subsampling the 20-percent sample was initially subject to a small bias, arising from the design of the population schedule in the 1950 Census. The population schedule contained 30 lines of which 6, systematically spaced, comprised the 20-percent sample. The 3 1/3-percent sample as constituted for enumeration, consisted of the last sample line on each sheet (1 of the last 5 lines on the sheet) and the 1 1/9- and 2/3 of 1-percent samples comprised subsamples of these lines. Furthermore, population and housing items were both reported on the same schedule, with space available for only 12 dwelling units on a page. As a result, in many areas containing households averaging less than 2 to 2 1/2 persons, or those in which there was a high proportion of vacant units, some of the lower lines on the page were not used for population entries. This situation led to an undersample of such atypical areas in the 3 1/3-percent sample.

In 1950, a plan was developed for eliminating the bias by the following procedure:

1. Those schedules were identified on which no one could be included in the 3 1/3-percent sample because the housing schedules were filled.

2. A supplemental 3 1/3-percent sample of persons was selected from such schedules and added to the sample initially returned by the enumerators.

3. Supplemental information on children ever born for those added to the sample was to be obtained by a mail inquiry.

However, after steps 1 and 2 above had been completed, various considerations made it impractical to carry through step 3 and another matching operation. Consequently, the plan was modified in the following manner:

1. The number of children ever born, for women in the supplemental sample was estimated, according to the method outlined in the appendix, instead of being obtained directly from the women.

2. Since complete information was still lacking on other characteristics, the supplemental sample punch cards were then replaced by the replication of regular fertility cards. In carrying out this replication, the women in the supplemental sample were grouped according to their number of estimated children ever born, and in each case the replication was at random from among women within the same grouping.

The ultimate effect of the procedure used was largely to compensate for the tendency of the enumerated sample to produce a slight underestimate of the number of ever-married women with few children ever born.

Estimates for ever-married women were obtained by inflating the sample results by the factors necessary to make the total number of ever-married women in each State, by color and urban-rural residence, equal to previously prepared estimates of these quantities. These previously prepared estimates were produced by using estimates, based on the 20-percent sample, of the ratio of ever-married women 14 to 59 to all women 14 years old and over, and applying these ratios to complete counts of all ever-married women. This inflation was done separately by urban-rural residence within each State and by color where important. Estimates for single women obtained on a 3 1/3-percent basis were prepared by multiplying the sample data by 30, and for single women obtained on a 20-percent basis, by 5.

The data for 1940, shown in this report, are based on tabulations of samples of women reported in the 1940 Census. The sample used was designed so that in certain portions of the areas shown a 2 1/2-percent sample was used (multiplied by a uniform factor of 40), and elsewhere a 5-percent sample was used (multiplied by a uniform factor of 20). The 1940 Census reports on fertility contain more detailed descriptions of the sample and the expected sampling variability.

#### SAMPLING VARIABILITY

Since the data are based on samples, they are subject to sampling variability. The standard error is a measure of sampling variability. The chances are about 2 out of 3 that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of all women is less than the standard error. The amount by which the standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks. For example, the chances are about 19 out of 20 that the difference is less than twice the standard error, and 99 out of 100 that it is less than 2 1/2 times the standard error.

The standard error of estimates of the number of single women is approximately  $2.1\sqrt{X}$  where X is the estimate under consideration. Approximations to the standard errors, which apply to estimates of the numbers of ever-married women in specific classes, percentages computed by using ever-married women for both numerator and denominator, and the number of children ever born per 1,000 ever-married women can be determined from the standard errors shown in tables D through G and the information supplied in table H. These tables contain standard errors for estimates of selected sizes, but linear interpolation will provide reasonably accurate results for values not shown. These tables do not reflect any enumeration or processing errors. In addition, they are based on assumptions that the number in the class being considered is distributed among areas with different sampling fractions in approximately the same proportion as the total number of ever-married women. However, the standard errors computed by the use of these tables are useful in indicating the order of magnitude of variability to be expected on the basis of the sampling techniques used.

Table D shows the approximate standard error of estimates of the number of ever-married women in specific classes in which the area of tabulation is the entire United States or the urban or rural part of the United States. The "rural" column should be used for either rural-farm or rural-nonfarm characteristics. Table E (used in conjunction with table H) contains data which can be used to provide estimates of standard errors for numbers

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born											Children ever born			
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000.]

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born											Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State, totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married
				Number	Per cent

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample 0; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000.]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married
				Number	Per cent

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY-NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 1,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born											Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born											Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married	
				Number	Per cent

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample Q; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

## SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

## SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample G; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married
				Number	Per cent

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

5C-145

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000.]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born			
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born											Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample G; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born											Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married	
				Number	Per cent

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born										Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married

SPECIAL REPORTS

Table 32.—REGIONS AND STATES, URBAN AND RURAL—WOMEN 15 TO 59 YEARS OLD BY NUMBER OF CHILDREN EVER BORN, BY MARITAL STATUS AND AGE OF WOMAN, WITH COLOR FOR SELECTED AREAS: 1950—Con.

[Data for women ever married based on Sample C; for single women, based on 20-percent sample. White and nonwhite shown for regions, urban and rural; white shown for State totals; nonwhite shown for States (and for urban and rural parts of States) having 30,000 or more nonwhite women. Rate and percent not shown where base is less than 4,000]

Area, age, and color	Total women	Single women	Women ever married, with specified number of children ever born											Children ever born		
			Total	None		1	2	3	4	5 and 6	7 to 9	10 or more	Number	Per 1,000 total women	Per 1,000 women ever married
