## 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

September 19, 1950

Washington 25, D. C.

Series PC-2, No. 46

POPULATION OF PENNSYLVANIA, BY COUNTIES APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in field offices and supersede those for the same areas which have been published in Series PC-1. Figures for some areas not published in Series PC-1 are also included in this report. Additional reports in Series PC-2 will be issued as preliminary counts for other States become available)

The population of Pennsylvania as of April 1, 1950, was 10,462,628, according to a preliminary count of the returns of the 1950 Decennial Census of Population, reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. This figure represents a gain of 562,448, or 5.7 percent, over the 9,900,180 inhabitants of the State enumerated in the 1940 Census.

The preliminary population counts shown below represent the number of

persons enumerated in the State, each county, and each incorporated place of 1,000 or more, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

Area	Preliminary count, April 1, 1950	April 1, 1940	Percent of change, 1940 to 1950

## 1950 CENSUS OF POPULATION

#### PRELIMINARY COUNTS

October 3, 1950

Washington 25, D. C.

Series PC-2, No. 47

POPULATION OF NEW YORK, BY COUNTIES APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in field offices and supersede those for the same areas which have been published in Series PC-1. Figures for some areas not published in Series PC-1 are also included in this report. Additional reports in Series PC-2 will be issued as preliminary counts for other States become available)

The population of New York as of April 1, 1950, was 14,741,445, according to a preliminary count of the returns of the 1950 Decennial Census of Population, reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. This figure represents a gain of 1,262,303, or 9.4 percent, over the 13,479,142 inhabitants of the State enumerated in the 1940 Census.

The preliminary population counts shown below represent the number of

persons enumerated in the State, each county, and each incorporated place of 1,000 or more, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

# 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

September 28, 1950

Washington 25, D. C.

Series PC-2, Mo. 48

POPULATION OF CALIFORNIA, BY COUNTIES APRIL 1, 1950

(The figures in this report are preliminary counts of population as occapiled in field offices and supersede those for the same areas which have been published in Series PC-1. Figures for some areas not published in Series PC-1 are also included in this report)

The population of California as of April 1, 1950, was 10,490,070, according to a preliminary count of the returns of the 1950 Decennial Census of Population, reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. This figure represents a gain of 3,532,683, or 51.9 percent, over the 6,907,387 inhabitants of the State enumerated in the 1940 Census.

The preliminary population counts shown below represent the number of

persons enumerated in the State, each county, and each incorporated place of 1,000 or more, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

Area	Preliminary count, April 1, 1950	April 1, 1940	Percent of change, 1940 to 1950

# 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

October 15, 1950

Washington 25, D. C.

Series PC-2, No. 49

POPULATION OF WASHINGTON, D. C., STANDARD METROPOLITAN AREA APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in field offices and supersede those for the same areas which have been published in Series PC-1 and PC-2)

The population of the Washington, D. C., Standard Metropolitan Area as of April 1, 1950 was 1,457,601, according to a preliminary count of the returns of the 1950 Decennial Census of Population, reported today by Roy V. Peel, Director, Bureau of the Census. Department of Commerce. Washington, D. C., the central city of this standard metropolitan area, had a population of 797,670, which constituted 54.7 percent of the total population of the area. In 1940, Washington, D. C., had a population of 663,091, or 68.5 percent of the total population of the standard metropolitan area. In the past ten years .the population of Washington,

D. C., increased by 134,579, or 20.8 percent, and the population of the standard metropolitan area by 489,616, or 50.6 percent.

The preliminary population counts shown below represent the number of persons enumerated in Washington, D. C., and in each county and independent city in Maryland and Virginia within the standard metropolitan area, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere and because of other revisions.

Area	Preliminary count, April 1, 1950	April 1, 1940	Percent of change, 1940 to 1950

### 1950 CENSUS OF POPULATION

#### PRELIMINARY COUNTS

October 15, 1950

Washington 25. D. C.

Series PC-3, No. 1

POPULATION OF CONTINENTAL UNITED STATES BY REGIONS, DIVISIONS, AND STATES: APRIL 1. 1950

(The figures in this report are preliminary counts of population as compiled in field offices. Comparable figures for areas within States have been published in Series PC-2, Nos. 1-49)

An all-time record population growth of about 19 million took place in continental United States in the 10 years ending April 1, 1950, according to a preliminary count of the returns of the 1950 Census reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce.

The Census returns for 1950 include 150,555,592 inhabitants of continental United States, as compared with 131,669,275 in 1940. The preliminary figure for 1950 includes 149,855,592 persons counted in the 48 States and the District of Columbia and an estimated 700,000 persons for whom census returns have not yet been completely distributed to the proper State of residence. The latter group consists mainly of crews of American vessels in ports of the United States and transients enumerated away from home. Military personnel and their dependents overseas, crews of American vessels at sea or in foreign ports, and American civilians in foreign countries are not included in this total. An earlier report showing the 1950 population of the United States to be 150,520,000 has been revised slightly to include delayed returns and to eliminate a small number of duplications.

The United States in 1950 had nearly twice as many inhabitants as it did in 1900, 50 years earlier. For the first 20 to 25 years of this period fairly heavy net immigration and natural increase, that is the excess of births over deaths, resulted in relatively large population increases. With the advent of legislation prescribing immigration quotas, net immigration grew less and less important as a source of population increase. After 1930, natural increase came to account for virtually all of the nation's population increase. During the thirties, natural increase, too, fell

off as economic depression gripped the country; and the population increase for the decade amounted to less than 9 million as compared with about 17 million in the preceding 10 years. Between 1940 and 1950, however, there was a spectacular increase of almost 19 million, or more than twice the increase of the thirties. It now appears that the severe slackening of population growth during the thirties did not portend a sharp alteration of the previous trend, but more likely a temporary deviation from that trend.

#### REGIONS AND DIVISIONS

As in the past, the West led the four regions of the United States in rate of population growth during the last 10 years. Between 1940 and 1950 the West had a 39.8 percent increase in population whereas no other region increased by more than 12.6 percent. Throughout the last 100 years, census returns consistently have pointed to the West as the region outstripping all others in rate of population gain. Now, for the first time, the numerical intercensal increase in the population of the West, 5,528,962, has also exceeded the numerical increase in any other region. Most of the increase in the West, 4,632,197, took place in the Pacific Division, the States bordering the Pacific Ocean. In the Mountain Division, the increase was only 896,765. The Pacific and Mountain Divisions surpassed all other divisions with respect to rates of population increase in the last 10 years, the former having an increase of 47.6 percent, and the latter an increase of 21.6 percent.

Second among the regions with respect to both amount and rate of population increase is the South, which had a gain of 5,265,453, or 12.6 percent. Much of this gain took

place in the South Atlantic Division which increased by 3,207,962, or 18.0 percent, and in the West South Central Division which gained 1,405,610, or 10.8 percent. In the East South Central Division there was only a relatively small increase, 651,881, or 6.0 percent. By and large, the prominent population gains in the South occurred in the States bordering the Atlantic Ocean and the Gulf of Mexico. On the other hand, the South also had a number of areas with population losses. Three of the only four States in the entire country which had population losses are in the South.

The remaining two regions, the North Central and Northeast, had moderate changes. The North Central Region increased by 4,086,431, or 10.2 percent, and the Northeast by 3,305,471, or 9.2 percent. In the North Central Region, the more prominent increases occurred in the East North Central Division which gained 3,608,589, or 13.6 percent. The West North Central Division also increased, but by only 477,842, or 3.5 percent. In the Northeast the bulk of the population increase took place in the already heavily populated Middle Atlantic Division which gained 2,487,114, or 9.0 percent.

#### STATES

The preliminary population counts from the 1950 Census show New York to be the largest and Nevada to be the smallest State, just as has been the case since 1890. In between these extremes, however, there has been a considerable rearrangement of the rank of the States with respect to total population. Thirteen States and the District of Columbia now rank higher than in 1940, whereas 21 other States have dropped in rank during the last 10 years.

California had the most conspicuous change in rank, becoming the second largest State in the United States. Its position in 1940 was fifth. Florida and Washington each moved 7 positions upward in rank, Arizona 6 positions upward, and Maryland 4 positions upward. Only one State, Arkansas, had a sharp drop in rank with respect to total population, falling from 24th to 30th place.

California surpassed all other States with respect to both amount and rate of population increase. Between 1940 and 1950, California had a population increase of 3,582,683, or 51.9 percent. Oregon and Washington which had increases of 38.8 percent and 36.1 percent, respectively, and California comprise the fastest growing section of the country during the last 10 In the southern portion of the Mountain Division, Arizona, Nevada, New Mexico, and Utah formed a second area of rapid population increase with recorded gains ranging from 24.8 percent for Utah to 49.3 percent for Arizona. A third center of heavy population increase is located in and near the seat of the United States Government. The District of Columbia, Maryland, and Virginia each had increases of more than 20 percent. The only other State with a population increase of more than one-fifth was Florida which increased by 846,322 or 44.6 percent. This high rate of growth was unique to Florida in its corner of the country; neither of its neighboring States had rates of increase as great as 10 percent.

Only four States, Arkansas, Mississippi, North Dakota, and Oklahoma, had population losses. Three of these States were in the South and one in the North Central Region; all four States were predominantly rural and all were located between the Mississippi River and the Rockies.

## 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

For release November 5, 1950

Washington 25, D. C.

Series PC-3, No. 2

Revised copy follows this copy

POPULATION OF CONGRESSIONAL DISTRICTS: APRIL 1, 1950

(The figures in this report are preliminary counts of population compiled in field offices. Final population totals for the United States and each State will be given in a forthcoming report; final figures for all Congressional districts will be available by July 1, 1951)

Preliminary population figures from the 1950 Census for the 425 Congressional districts in the United States were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. Although the House of Representatives has 435 members, 10 are presently elected at large and do not represent specific Congressional districts.

Four out of every five Congressional districts increased in population between 1940 and 1950, with the greatest gain occurring in the Sixth District of California which increased by 352,255, or 98.8 percent. There were 19 States in which not a single Congressional district lost population, and there were no States which did not have at least one Congressional district which gained population.

Congressional districts in 1950 range in size from the Twenty-second District of Ohio with

a population of 908,403, to the Second District of South Dakota which had a population of 158,147. However, more than three-quarters of all Congressional districts fell within the much narrower range from 200,000 to 400,000. Only 2,8 percent of all districts had fewer than 200,000 population, and 6.4 percent more than a half-million inhabitants.

The preliminary population counts given in this report represent the number of persons enumerated in each Congressional district, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

## 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

For release November 5, 1950

Washington 25. D. C.

Series PC-3, No. 2 Rev.

Original copy precedes this copy

POPULATION OF CONGRESSIONAL DISTRICTS: APRIL 1, 1950

(The figures in this report are preliminary counts of population compiled in field offices. Final population totals for the United States and each State will be given in a forthcoming report; final figures for all Congressional districts will be available by July 1, 1951)

Preliminary population figures from the 1950 Census for the 425 Congressional districts in the United States were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. Although the House of Representatives has 435 members, 10 are presently elected at large and do not represent specific Congressional districts.

Four out of every five Congressional districts increased in population between 1940 and 1950, with the greatest gain occurring in the Sixth District of California which increased by 352,255, or 98.8 percent. There were 19 States in which not a single Congressional district lost population, and there were no States which did not have at least one Congressional district which gained population.

Congressional districts in 1950 range in size from the Twenty-second District of Ohio with

a population of 908,403, to the Second District of South Dakota which had a population of 158,147. However, more than three-quarters of all Congressional districts fell within the much narrower range from 200,000 to 400,000. Only 2.8 percent of all districts had fewer than 200,000 population, and 6.4 percent more than a half-million inhabitants.

The preliminary population counts given in this report represent the number of persons enumerated in each Congressional district, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

POPULATION OF CONCRESSIONAL DISTRICTS: 1950 AND 1940

# 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

For release November 5, 1950

Washington 25, D. C.

Series PC-3, No. 3

POPULATION OF STANDARD METROPOLITAN AREAS: APRIL 1, 1950

(The population figures for 1950 in this report are preliminary counts as compiled in field offices and may differ from the verified population totals which are now being compiled. Final population totals for the United States and each State are given in Series FC-9, No. 1)

More than half the population of continental United States was living in a standard metropolitan area on April 1, 1950, according to preliminary data from the 1950 Census reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. The population enumerated as residents of the 168 standard metropolitan areas in continental United States totals 83,929,863, on the basis of a count which excluded crews of American vessels in ports of the United States and persons enumerated away from home who have not yet been credited to their usual place of residence. A comparable figure for the United States as a whole was 149,855,592. The total population of the United States on April 1, 1950, was 150,697,361.

A standard metropolitan area contained at least one city of 50,000 or more in 1950, and each city of this size is included in one standard metropolitan area. In general, each standard metropolitan area comprises the county containing the city and any other contiguous counties which are deemed to be closely economically integrated with that city. In a broad sense the country's standard metropolitan areas include all the leading urban centers together with all adjoining territory that has been demonstrated to be closely linked with the central cities.

GROWTH OF STANDARD METROPOLITAN AREAS

Population growth in the United States during the last ten years was very largely growth within the standard metropolitan areas. More than four-fifths of the national population increase took place within the 168 standard metropolitan areas. The population of these areas increased from 69,276,481 to 83,929,863, representing a gain of 14,653,382, or 21.2 percent. On

the whole, the communities on the outskirts of the large cities of the United States grew much more rapidly than did the central cities themselves or the remainder of the country.

Area	Population increase, 1940 to 1950 <sup>1</sup>			
	Number	Percent		
United States Standard metropolitan areas Central cities Outlying parts Outside standard metropolitan	18,186,317 14,653,382 5,652,053 9,001,329	14.3 21.2 13.0 34.7		
areas	3,532,985	5.7		

<sup>1</sup> Computed on the basis of preliminary figures for 1950 which exclude crews of American vessels in ports of the United States and persons enumerated away from home who have not yet been credited to their specific usual place of residence.

The outlying parts of standard metropolitan areas also surpassed their central cities and the remainder of the country in numerical growth of population with an increase of 9,001,329. It appears that nearly half of the population increase of the entire country took place in the outlying parts of the 168 standard metropolitan areas. Since standard metropolitan areas are very largely urban, the population changes of the last decade point to an increasing urbanization of the country, with the more spectacular development occurring in the smaller urban and suburban communities adjoining our metropolitan centers.

Standard metropolitan areas ranged in size from the New York-Northeastern New Jersey Area with a population of 12,831,914 to the Laredo Area with a population of 55,904. Fourteen standard metropolitan areas had a population of one million or more each, and together contained a population of 44,153,019, or 29.5 percent of

the total population of the United States. In the middle rank, that is, areas with populations ranging from 100,000 to 1,000,000 inhabitants, there are 136 standard metropolitan areas with a combined population of 38,256,089. The smallest atandard metropolitan areas having populations of less than 100,000 numbered 18 and had a combined population of only 1,520,755.

As a group, the standard metropolitan areas in the middle range had a greater rate of growth than did the very large or the very small areas. The growth rate of the middle-sized areas between 1940 and 1950 was 24.7 percent, whereas the rates in the very large and very small areas were 18.2 percent and 22.5 percent, respectively. These figures suggest that in general the smallest standard metropolitan areas have not yet reached the stage of maximum rate of development and that the very large areas have already passed this stage. This suggestion is supported by the fact that standard metropolitan areas of 100,000 or more had 41.8 percent of their total population outside the central cities, whereas the smaller areas had only 29.6 percent of their population in their outlying parts. Population growth in the standard metropolitan areas with less than 100,000 inhabitants appears to be more heavily concentrated in the central cities than is the case for larger standard metropolitan areas.

Standard metropolitan areas with growth rates for their central cities exceeding the rates for their outlying parts are concentrated in the South, which has 25 of the 34 areas in this class. The metropolitan centers of the South appear not to have reached a stage of development in which the growth of suburban communities is as marked as elsewhere in the country.

In 1950, there were 40 standard metropolitan areas with less than half their total population in their central cities. These range from areas centering on such large cities as Los Angeles, Boston, Pittsburgh, and Atlanta, to the relatively small areas surrounding cities of the size of Orlando, Fla.; Asheville, N. C.; and Jackson, Mich. These standard metropolitan areas lie in 19 States, largely in the Northeast and the South, but are most numerous in 2 States, Pennsylvania and California. In Pennsylvania, 9 out of 13 standard metropolitan areas have more than half their population outside their central cities, and in California 6 out of 8 areas are of this class.

Of the 168 standard metropolitan areas, 161 gained population between 1940 and 1950, and 7 The areas with population lost population. losses were Altoona, Johnstown, Scranton, and Wilkes-Barre-Hazleton in Pa.; Duluth, Minn.-Superior, Wis.; Wheeling, W. Va.-Steubenville, Ohio; and St. Joseph, Mo. In each of these areas except the Duluth, Minn. -Superior, Wis., Area, the central cities also lost population. Of the 161 standard metropolitan areas that gained population, 90, or slightly more than half, had increases of 20 percent or more, and 43, or slightly more than a fourth of all standard metropolitan areas, had increases of one-third or more. One area, that of Albuquerque, N. Mex., with an increase of 110.4 percent, more than doubled in population.

# STANDARD METROPOLITAN AREAS IN PUERTO RICO AND THE TERRITORY OF HAWAII

In the Territories and possessions of the United States there are four standard metropolitan areas, none of which has a population as great as half a million. The largest of the four areas is that of San Juan, Puerto Rico, which had a population of 464,956, and is slightly smaller in population than the Memphis, Tenn., Standard Metropolitan Area which ranked 36th in size in continental United States. It is the only standard metropolitan area in the Territories and possessions to have more population in its outlying parts than in its central city and to have a greater rate of growth in the suburban portions than in the central city.

The Honolulu, Hawaii, Standard Metropolitan Area has a population of 347,529, slightly less than that of the Wheeling, W. Va.-Steubenville, Ohio, Area, which ranked 48th in size in continental United States. It is the only standard metropolitan area in the Territory of Hawaii, and contains more than 70 percent of the population of the Territory. The other two standard metropolitan areas outside continental United States are the Ponce and Mayagüez Areas in Puerto Rico, with populations of 126,451 and 87,038, respectively.

#### EXPLANATION OF TERMS

Standard metropolitan areas. The standard metropolitan areas for which data are presented in this report are areas defined and established cooperatively by a number of interested Federal agencies under the direction of the Bureau of the Budget for purposes of compilation and presented.

entation of a wide variety of statistical data on a uniform areal basis. It is expected that these areas will become widely used not only for data from the 1950 Census but also for other statistics compiled by Federal statistical agencies and perhaps by State and local governments and private bodies.

Except for standard metropolitan areas in New England, each area has been defined in terms of one or more entire contiguous counties. The county was chosen as the constituent unit because it was believed that more kinds of statistical data are compiled or are obtainable on a county basis than would be the case for minor civil divisions or other kinds of small areas. In New England, however, the town rather than the county is generally the basic geographic unit for statistical compilation; and for this reason the New England standard metropolitan areas have been defined in terms of contiguous towns or cities.

A standard metropolitan area has been established and defined in connection with each city of 50,000 or more in 1950 in continental United States, its Territories, and possessions. Each area therefore contains one, and may contain more than one, city of 50,000 or more. When two cities of 50,000 or more are within 20 miles of one another they have ordinarily been included in the same standard metropolitan area. Standard metropolitan areas standard metropolitan areas one State.

Each standard metropolitan area has as a nucleus the county or counties containing the central city or cities. Contiguous counties are included in a standard metropolitan area when they qualify on two types of criteria. One type is concerned with the character of the county as a place of work for nonagricultural workers and with the density of population. The other type is concerned with the extent to which contiguous counties are socially and economically integrated with the central city. Specifically, these criteria are:

1. The county must have --

44000

- a. 10,000 nonagricultural workers, or
   b. 10 percent of the nonagricultural
   workers in the standard metropolitan area,
- c. At least half of its population residing in contiguous minor civil divisions with a population density of 150 or more per square mile.

- 2. Nonagricultural workers must constitute at least two-thirds of the total employed labor force of the county.
- 3. There must be evidence of social and economic integration of the county with the central city as indicated by such criteria as the following:
  - a. 15 percent or more of the workers residing in the contiguous county work in the county containing the largest city in the standard metropolitan area, or
  - b. 25 percent or more of the persons working in the contiguous county reside in the county containing the largest city in the standard metropolitan area, or
  - c. An average of four or more telephone calls per subscriber per month from the contiguous county to the county containing the largest city in the standard metropolitan area.

In New England, where the city and town rather than the county were used to define standard metropolitan areas, the first and second criteria set forth above could not be applied. In their place, a population density criterion of 150 or more persons per square mile, or 100 or more persons per square mile where strong integration was evident, has been used.

Difference between standard metropolitan areas and metropolitan districts .-- The standard metropolitan area replaces another type of metropolitan community called the metropolitan district. Metropolitan districts were defined for every city of 50,000 or more in 1940, two or more such cities sometimes being in one district. In general, metropolitan districts included, in addition to the central city or cities, all adjacent and contiguous minor civil divisions or incorporated places with a population density of 150 or more per square mile. The metropolitan district lacks the advantage of being as suitable as are standard metropolitan areas for the compilation of data from sources other than the Census of Population because it is defined in terms of minor civil divisions rather than whole counties. Because of the difference in definition, the metropolitan district may include territory not included in the standard metropolitan area. Usually, however, the standard metropolitan area includes a larger territory than the metropolitan district. In general, the two kinds of areas are not comparable; however, there is a small number of areas for which the two definitions are entirely or almost identical. Central cities. -- Although there may be several cities of 50,000 or more in a standard metropolitan area, not all are necessarily central cities. On the other hand, a city of less than 50,000 may sometimes be a central city of a standard metropolitan area. The largest city in a standard metropolitan area is always a central city. Any other city of 25,000 or more within a standard metropolitan area, and with a population amounting to one-third or more of the population of the principal city, is also a central

city. However, no more than three cities have been defined as central cities of a standard metropolitan area. The names of standard metropolitan areas indicate the central cities since every central city name is included in the name of the area. One exception exists to this rule. In the case of the standard metropolitan area centering on New York City, the central cities are New York City, N. Y.; Jersey City, N. J.; and Newark, N. J.

<sup>1</sup> Preliminary population counts exclude crews of American vessels in ports of the United States and persons enumerated away from home who have not yet been credited to their specific usual place of residence. For the United States as a whole, there were 841,769 such persons, but the exact number of these who reside in each of the areas shown in this table has not yet been determined.

<sup>1</sup> Preliminary population counts exclude crews of American vessels in ports of the United States and persons enumerated away from home who have not yet been credited to their specific usual place of residence. For the United States as a whole, there were 841,769 such persons, but the exact number of these who reside in each of the areas shown in this table has not yet been determined.

2 The Lima Standard Metropolitan Area has been tentatively included in this list, since the allocation to Lima of residents who were enumerated elsewhere probably will result in a final population figure for the city of at least 50,000.

<sup>1</sup> Preliminary population counts exclude crews of American vessels in ports of the United States and persons enumerated away from home who have not yet been credited to their specific usual place of residence. For the United States as a whole, there were 841,769 such persons, but the exact number of these who reside in each of the areas shown in this table has not yet been determined.

E See footnote 2, page 7.

Table 2a.--POPULATION INSIDE AND OUTSIDE OF CENTRAL CITIES AND RANK OF STANDARD METROPOLITAN AREAS IN HAWAII AND PUERTO RICO ACCORDING TO POPULATION: APRIL 1, 1950

(A minus sign (-) denotes decrease)

<sup>1</sup> Preliminary population counts exclude crews of American vessels in ports of Hawaii and Puerto Rico and persons enumerated away from home who have not yet been credited to their specific usual place of residence. There are approximately 5,000 persons in this class in the Territory of Hawaii and approximately 2,500 in Puerto Rico, but the exact number of these who reside in each of the areas shown in this table has not yet been determined.

# 1950 CENSUS OF POPULATION

## PRELIMINARY COUNTS

For release November 5, 1950

Washington 25, D.C.

Series PC-3, No. 4

POPULATION OF COUNTIES: APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in field offices and are identical with those for the same areas which have been published in Series PC-2, Nos. 1 to 49. Final population totals for the United States and each State are given in Series PC-9, No. 1)

Preliminary population counts from the 1950 Census for 3,070 counties, 29 independent cities, the District of Columbia, and the parts of Yellowstone National Park in Idaho, Montana, and Wyoming, were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. Together, these 3,103 areas comprise continental United States.

Despite an impressive over-all population gain of about 19 million for the United States as a whole nearly half the counties in the United States lost population, and nearly a quarter lost 10 percent or more during the last 10 years. Of the 3,103 counties and similar areas, 1,543, or 49.7 percent lost population, and 720, or 23.2 percent, lost 10 percent or more. Of the 1,560 counties which gained population, there were 864 which gained 10 percent or more, 498 which gained 20 percent or more, and 28 which gained 100 percent or more.

All of the counties which more than doubled in size were in the South or in the West. In the Northeast more than 4 out of 5 counties and in the West more than 3 out of 5 counties gained population. Of the

217 counties in the Northeast, 177, or 81.6 percent, had population gains. In the West, 254 out of 414 counties, or 61.4 percent, gained during the decade. In the North Central Region and in the South, 43.9 and 47.0 percent, respectively, of all counties had population increases.

The fastest growing county in the United States was Benton County, Washington, which increased by 324.3 percent. At the other extreme, the county with the greatest percentage decline in population was the relatively small Esmeralda County, Nevada, which declined by 61.1 percent.

The preliminary population counts shown in this report represent the number of persons enumerated in each county, independent city, and other area listed, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

## 1950 CENSUS OF POPULATION

## PRELIMINARY COUNTS

November 21, 1950

Washington 25, D. C.

Series PC-3, No. 5

POPULATION OF CITIES OF 100,000 OR MORE BY WARDS APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in field offices. The city totals are identical with those which appear for these cities in Series PC-2, Nos. 1 to 49. Final figures for all cities of 5,000 or more by wards will be available by July 1, 1951)

The population of 77 cities in the United States of 100,000 or more inhabitants by wards or equivalent areas as of April 1, 1950, according to the preliminary count of the returns of the 1950 Census of Population, were released today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. Because of the interest in areas within cities, data for such areas as assembly districts and police precincts are given for those cities of 100,000 or more inhabitants for which ward data are lacking. The remaining 29 cities of 100,000 or more

are not subdivided into wards or equivalent areas.

The preliminary population counts shown below represent the number of persons enumerated in each city, and in each ward, or equivalent area, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

## 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

December 8, 1950

Washington 25, D. C.

Series PC-3, No. 6

POPULATION OF CITIES OF 25,000 OR MORE APRIL 1. 1950

(The figures for 1950 in this report are preliminary counts of population compiled in field offices and may differ from the verified population totals which are now being prepared. In general, 1950 figures are those given in Series PC-2, Nos. 1 to 49. Final figures for all cities will be available by July 1, 1950)

The number of cities and other incorporated and unincorporated places of 25,000 or more population in the United States has reached 477, according to preliminary figures from the 1950 Census reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. in this total are three unincorporated urban places -- East Bakersfield, California; Kannapolis, North Carolina; and Oak Ridge, Tennessee -- for which the Bureau of the Census has defined boundaries. At the time of the preceding census, in 1940, there were 397 cities and other incorporated places of 25,000 or more and an additional 15 umincorporated areas designated as urban under special rules. During the intervening 10 years, there was a net increase of 65 in the number of places of this size. Most of the places which grew to this size during the decade were in the South and in the West. In the West alone, there was an increase from 45 to 64, or about 42 percent, in the number of places of 25,000 or more.

According to the preliminary figures, there were 106 cities of 100,000 or more in the United States in 1950, whereas there were only 92 cities of this size in 1940. The net gain during the decade amounts to 14 cities; but because one city--Lowell, Massachusetts--dropped below 100,000 in population, there were actually 15 cities the population of which increased to pass 100,000. Nine of these 15 cities were in the South, 3 in the West, 2 in the Northeast, and 1 in the North Central Region.

The population in cities and other places of 25,000 or more in 1950 was 61,425,669, representing an increase of 8,676,670, or 16.4 percent, over the 52,748,999 persons living in places of this size in 1940. The population living in cities of 100,000 or more is also considerably greater than in 1940. On April 1, 1950, there were 43,954,910 persons, or about 30 percent of the total population -of the United States, 76324

in the 106 cities of 100,000 or more. This number is 5,966,921, or 15.7 percent, greater than the 37,987,989 residents of cities of this size in 1940.

Between 1940 and 1950 there were a number of changes in the ranking of the leading cities with respect to population. The three cities with the largest population, New York, Chicago, and Philadelphia, ranked first, second, and third, respectively, both in 1940 and 1950. Among the other cities in the first 10, St. Louis also retained its rank of eighth. However, Los Angeles replaced Detroit as the fourth largest city, and Baltimore replaced Cleveland as the sixth largest city. Washington, D.C., became one of the 10 largest cities for the first time, reaching minth position and replacing Boston which now ranks tenth among the cities of the United States. Pittsburgh, which had ranked tenth in 1940, is in twelfth position in 1950. Changes in rank of the other cities of 100,000 or more were often quite extreme. In addition to most of the 15 cities reaching 100,000 population for the first time, there were a number of cities which rose by 10 or more positions in rank during the decade. Charlotte rose 22 positions, Sacramento 18, Tacoma 17, Wichita 16, San Antonio 11, and San Diego, Long Beach, Norfolk, and Tulsa, 10 positions each.

The preliminary population totals for 1950 given in this report represent the number of persons enumerated in each city, town, village or other incorporated place of 25,000 or more and in each unincorporated place of this size. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked in an area but reported separately and thereby omitted from the field population counts, and because of other revisions.

## 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

December 27, 1950

Washington 25, D. C.

Series PC-3, No. 7

POPULATION OF STATE ECONOMIC AREAS: APRIL 1, 1950

(The figures for 1950 in this report are preliminary counts of population and may differ from the verified totals which are now being compiled)

Preliminary population counts for the 443 State economic areas to be used for the reporting of population and housing statistics from the 1950 Census were announced today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. State economic areas are divisions of States that have been defined by the Bureau of the Census jointly with the Bureau of Agricultural Economics of the Department of Agricultural Economics of the Department of Agriculture. Each such area consists of one or more counties with relatively homogeneous agricultural, industrial, social, and demographic characteristics which differentiate them from adjoining counties in the same State.

More than three-fourths of the 443 State economic areas had population increases between 1940 and 1950. There were 338 areas with population increases, of which 220 had gains of 10 percent or more and 120 had gains of 20 percent or more. On the other hand, only 21 of the areas which lost population had losses amounting to 10 percent or more and only 2 had losses of 20 percent or more. The accompanying map portrays the percent changes between 1940 and 1950.

The State economic areas characterized by heavy population growth were largely concentrated in the West and the South. In the West, which was the fastest growing region in the United States between 1940 and 1950, about three-fifths of the 59 State economic areas constituting the region had population gains of 20 percent or more. In California, the foremost State inthe Nation in both amount and rate of population growth between 1940 and 1950, all but 1 of the 17 State economic areas increased at a rate of 20 percent of more. In the South, which

contains 181 State economic areas, there were 54, or almost 30 percent, with growth rates of 20 percent or more between 1940 and 1950.

In the North Central Region, 24 of the 135 State economic areas have increases of 20 percent or more and in the Northeast, only 6 of the 68 State economic areas had such rapid population increases. Two State economic areas more than doubled in size during the past 10 years. These were areas Virginia-B and Maryland-B, each of which constitutes a part of the Washington, D. C., Standard Metropolitan Area. These State economic areas had increases of 130.0 and 106.2 percent, respectively.

The number of State economic areas with population losses between 1940 and 1950 and the extent of these losses were on the The area with declines of whole moderate. 10 percent or more in population were fairly well scattered throughout the Northeast, the South, and the North Central Regions. There was only one geographical concentration of State economic areas with population losses of 10 percent or more during This concentration is the last decade. found in eastern Texas, eastern Oklahoma, and western Arkansas. The only two State economic areas with population losses of one-fifth or more during the decade are found in this locality. State economic areas are designated by the State name and a letter or number suffix. Letter designations have been applied to metropolitan State economic areas, that is, areas containing only counties which are also in standard metropolitan areas. Number designations have been given to all other State economic areas.

A more complete discussion of the State economic areas and of the distinction between the lettered and numbered areas is given in Series Census-BAE, No. 15, dated August 3, 1950. This release is distributed with a map showing the counties comprising each State economic area listed in this report. A forth-coming bulletin of the Bureau of the Census entitled State Economic Areas: A Description of the Procedure Used in Making a Functional Grouping of the Counties in the United States will list the counties in each State economic area.

The preliminary population counts shown in this report represent the number of persons enumerated in each State and each State economic area, but not the final verified population total. The final population total for any area may differ from the preliminary count because of the allocation to the place of usual residence of persons enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

# 1950 CENSUS OF POPULATION

### PRELIMINARY COUNTS

FOR RELEASE

January 11, 1951

Washington 25, D. C.

Series PC-3, No. 8

Revised copy follows this copy

POPULATION OF URBAN PLACES: APRIL 1, 1950

(The figures for 1950 in this report are preliminary counts of population compiled in field offices and may differ from the verified population totals which are now being prepared. In general, figures for 1950 are those given in Series PC-2, Nos. 1 to 49. Final figures for all urban places will be available by July 1, 1951)

The number of urban places in the United States has reached a total of 4,270, and the population in these places, a total of 87,992,647, according to preliminary figures from the 1950 Census reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. Every city and other incorporated or unincorporated place of 2,500 inhabitants or more in 1950 is represented in these totals. The residents of these urban places constitute a large portion but not the whole of the urban population. The residents of smaller incorporated places and unincorporated territory in the nearby suburbs of cities of 50,000 or more are also classified as urban for the 1950 Census. forthcoming report in this series will present preliminary data for the total urban population.

More than 9 out of 10 urban places are incorporated places, that is, cities and other types of areas incorporated as municipalities. Only 397 urban places, or less than 10 percent of the total number, are unincorporated places. These unincorporated places, which contain heavy concentrations of population, are classified as urban places by virtue of their close physical resemblance to incorporated places of similar size. To make this classification possible, the Bureau of the Census has defined boundaries for all incorporated places of 1,000 inhabitants or more which lie outside the urban fringes of cities of 50,000 or more population. Because local practice as to incorporation varies considerably from one part of the country to

another, some States have very few if any unincorporated places and others have a great many.

All but seven States and the District of Columbia have at least one unincorporated urban place. More than a third of the 397 unincorporated urban places are concentrated in four States -- Massachusetts, California, Maine, and South Carolina -which had 45, 42, 29, and 22 such places, respectively. In addition to having more unincorporated urban places than any other State, Massachusetts, with 259,405 inhabitants of such places, led the States in regard to total population in this category. Massachusetts, California, and Maine together accounted for almost one-third of the 1,984,630 residents of unincorporated urban places in the United States.

The population of these 4,270 urban places is heavily concentrated in the larger cities. The 106 cities of 100,000 or more population comprise only 2.5 percent of the total number of urban places, but their combined population amounts to half of the total population in urban places. Another third of the population of urban places is found in those of from 10,000 to 100,000 population, and only one-sixth in places of from 2,500 to 10,000.

In 1940, at the time of the preceding census, there were 3,464 cities and other incorporated places of 2,500 or more population and places classified as urban under special rule. All but 141 of these

places were incorporated. The 141 other places were 1 county and 140 towns, townships, and other minor civil divisions not incorporated as municipalities. Thus, the figures for urban places in 1950 are not comparable with those for 1940 to be found in the reports of the Sixteenth Census. The figures on urban places for 1950 in this report and previously published figures for 1940 include all incorporated places of 2,500 or more, but only those for 1950 include unincorporated urban places and only those for 1940 include places then classified as urban under special rule. However, the figures for incorp

porated urban places in 1950 are comparable with corresponding figures for 1940.

The preliminary population counts given in this report represent the number of persons enumerated in each urban place in 1950, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons enumerated elsewhere, the inclusion of crews of vessels docked within an area but reported separately and not included in the preliminary count, and because of other revisions.

Table 1.—POPULATION IN GROUPS OF URBAN PLACES CLASSIFIED ACCORDING TO SIZE: 1950
