1950 CENSUS OF POPULATION

PRELIMINARY COUNTS

Original copy precedes this
copy

POPULATION OF URBAN PLACES: APRIL 1, 1950

(The figures for 1950 in this report are preliminary counts of population compiled in field offices
    and may differ from the verified population totals which are now being prepared.   In general,
    figures for 1950 are those given in Series PC-2, Nos. 1 to 49.   Final figures for all urban
    places will be available by July 1, 1951)

The number of urban places in the United States has reached a total of 4,270, and the population in these places, a total of 87,992,647, according to preliminary figures from the 1950 Census reported to-day by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. Every city and other incorporated or unincorporated place of 2,500 inhabitants or more in 1950 is represented in these totals. The residents of these urban places con-stitute a large portion but not the whole of the urban population. The residents of smaller incorporated places and unincorpo-rated territory in the nearby suburbs of cities of 50,000 or more are also classi-fied as urban for the 1950 Census.   A forthcoming report in this series will pre-sent preliminary data for the total urban population.

More than 9 out of 10 urban places are incorporated places, that is, cities and other types of areas incorporated as municipalities.   Only 397 urban places, or less than 10 percent of the total number, are unincorporated places. These unincor-porated places, which contain heavy con-centrations of population, are classified as urban places by virtue of their close physical resemblance to incorporated places of similar size. To make this classifica-tion possible, the Bureau of the Census has defined boundaries for all unincorporated places of 1,000 inhabitants or more which lie outside the urban fringes of cities of 50,000 or more population.   Because local practice as to incorporation varies con-siderably from one part of the country to another, some States have very few if any unincorporated places and others have a great many.

All but seven States and the District of Columbia have at least one unincor-porated urban place. More than a third of the 397 unincorporated urban places are concentrated in four States--Massachusetts, California, Maine, and South Carolina--which had 45, 42, 29, and 22 such places, respectively.   In addition to having more unincorporated urban places than any other State, Massachusetts, with 259,405 inhabi-tants of such places, led the States in re-gard to total population in this category. Massachusetts, California, and Maine to-gether accounted for almost one-third of the 1,984,630 residents of unincorporated urban places in the United States.

The population of these 4,270 urban places is heavily concentrated in the larger cities.   The 106 cities of 100,000 or more population comprise only 2.5 per-cent of the total number of urban places, but their combined population amounts to half of the total population in urban places.   Another third of the population of urban places is found in those of from 10,000 to 100,000 population, and only one-sixth in places of from 2,500 to 10,000.

In 1940, at the time of the preceding census, there were 3,464 cities and other incorporated places of 2,500 or more popu-lation and places classified as urban under special rule.   All but 141 of these

places were incorporated. The 141 other places were 1 county and 140 towns, townships, and other minor civil divisions not incorporated as municipalities. Thus, the figures for urban places in 1950 are not comparable with those for 1940 to be found in the reports of the Sixteenth Census. The figures on urban places for 1950 in this report and previously published figures for 1940 include all incorporated places of 2,500 or more, but only those for 1950 include unincorporated urban places and only those for 1940 include places then classified as urban under special rule. However, the figures for incor- porated urban places in 1950 are comparable with corresponding figures for 1940.

The preliminary population counts given in this report represent the number of persons enumerated in each urban place in 1950, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons enumerated elsewhere, the inclusion of crews of vessels docked within an area but reported separately and not included in the preliminary count, and because of other revisions.

Table 1.—POPULATION IN GROUPS OF URBAN PLACES CLASSIFIED ACCORDING TO SIZE: 1950

Size of place	Number of places			Population		
	Total	Incorporated places	Unincorporated places	Total	Incorporated places	Unincorporated places

473-16

POPULATION OF URBANIZED AREAS: APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in field offices and may differ from the verified population totals which are now being compiled. Final population figures for the United States and each State are given in Series PC-9, No. 1)

One-quarter of the population of the United States is concentrated in 12 urbanized areas of 1,000,000 inhabitants or more with a combined population of 37,595,460, according to preliminary figures from the 1950 Census reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. An urbanized area consists of one or more cities of 50,000 or more and all the nearby closely settled suburban territory, or urban fringe. In all, 157 urbanized areas have been established and defined by the Bureau of the Census, accounting for every city of 50,000 or more population in 1940 or at a subsequent special census conducted by the Bureau of the Census prior to 1950. The total population of these 157 urbanized areas on April 1, 1950, was 68,787,978.

The population in urbanized areas represents a large part but not all of the urban population of the country. Also included in the urban population of 1950 were residents of incorporated and unincorporated places of 2,500 or more outside of urbanized areas. Figures for the total urban population will be given in a forthcoming report in this series.

The 12 urbanized areas of 1,000,000 inhabitants or more and their populations are as follows:

New York-Northeastern
New Jersey.............. 12,222,963
Chicago................. 4,902,801
Los Angeles............. 3,970,595
Philadelphia............ 2,913,516
Detroit................. 2,644,476
Boston.................. 2,218,893

San Francisco-Oakland.... 1,997,303
Pittsburgh............... 1,525,966
St. Louis................ 1,394,051
Cleveland................ 1,372,274
Washington, D. C......... 1,281,572
Baltimore................ 1,151,050

The combined population of the central cities of all urbanized areas was 47,988,213, or 69.8 percent of the total population of the areas. The proportion of the population residing in the central city or cities, however, varied greatly between areas, ranging from a low of 28.3 percent for the Wilkes-Barre Urbanized Area to a high of virtually 100 percent for the Beaumont Urbanized Area. There were 79 urbanized areas with 80 percent or more of their population in the central city or cities, and 150 with half or more of their population in central cities. Of the seven urbanized areas with less than half of the area population concentrated in the central city or cities, four--those having as their central cities Boston, Providence, Pittsburgh, and Wilkes-Barre-- were in the Northeast, and three--Los Angeles, Phoenix, and San Bernardino--were in the West.

The preliminary population counts shown in this report represent the number of persons enumerated in each urbanized area but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons who were enumerated elsewhere, the inclusion of crews of vessels docked within an area but not included in the preliminary count, and because of other revisions.

DEFINITIONS AND EXPLANATIONS

Urbanized areas.--The urbanized areas for which data are presented in this report are areas defined for the first time for use in the 1950 Census. The major objective of the Bureau of the Census in delineating these areas was to provide a better separation of urban and rural population in the vicinity of the larger cities. All persons who resided in urbanized areas on April 1, 1950, are included in the urban population in 1950. On the other hand, the urban definition used in the 1940 Census would have included as urban only a portion of the persons in urbanized areas, namely those who lived in incorporated places of 2,500 inhabitants or more and in a relatively few places designated as urban under special rules. In general, the effect of the adoption of the urbanized area concept is to include in the urban population many persons living under distinctly urban conditions in the immediate environs of our larger cities who under the 1940 rules would have been considered as part of the rural population.

The following types of areas are included in a city's urban fringe if they are contiguous to the central city or if they are contiguous to an area already included in the urbanized area.

    1. Incorporated places with 2,500 inhabitants or more.

    2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely-spaced street pattern.

    3. Unincorporated territory with at least 500 dwelling units per square mile.

    4. Territory devoted to commercial, industrial, transportational, recreational, and other purposes functionally related to the central city.

In addition, outlying noncontiguous areas, incorporated or unincorporated, meeting the residential density requirements are included in the urbanized area in the following cases. All outlying areas within 1½ miles of the central contiguous urban area, measured along the shortest connecting highway, are included. Also, any outlying area within one-half mile of another outlying area, itself within 1½ miles of the central contiguous urban area, is included.

48544

Since the delineation of the urbanized areas had to be completed prior to the enumeration date of the 1950 Census, urbanized areas have been defined only for those cities having a population of 50,000 inhabitants in 1940 or at some subsequent special census conducted by the Bureau of the Census. Two of the cities for which urbanized areas were defined--Fort Smith and Muskegon--fell below the 50,000 level on April 1, 1950; however, the urbanized areas for these cities were retained in the urbanized area list. There were 20 cities with a population of less than 50,000 in 1940 which passed that size by 1950 and which are not in any urbanized area.

Relationship with other kinds of areas.-- The urbanized areas must be distinguished from standard metropolitan areas. These, too, center on cities of 50,000 or more but are in general defined in terms of entire counties. As a result an urbanized area tends to be considerably smaller in area and somewhat smaller in population than the standard metropolitan area having the same central city. Figures for the two types of areas are not comparable.

In the 1940 Census and previous censuses data were provided for a somewhat different kind of area centering on cities of 50,000 or more, the metropolitan district. The metropolitan district was defined in terms of central cities and adjacent minor civil divisions with a population density of 150 or more per square mile. Because of the difference in definition, figures for urbanized areas and metropolitan districts are in general not comparable even though the two kinds of areas may have considerable territory in common in specific cases.

Central cities.--Although an urbanized area may contain more than one city of 50,000 or more, all cities of this size are not necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have populations amounting to at least one-third of the largest city in the area and have a minimum of 25,000 inhabitants. The names of the urbanized areas indicate the central cities of the areas since the central cities always appear in the title. The one exception to this rule is the New York-Northeastern New Jersey Urbanized Area of which the central cities are New York City, N. Y., Jersey City, N. J., and Newark, N. J.

POPULATION OF URBANIZED AREAS: APRIL 1, 1950

[1] Preliminary population counts exclude crews of American vessels in ports of the United States and persons enumerated away from home, who have not yet been credited to their specific usual place of residence. For the United States as a whole, there were 841,769 such persons, but the exact number of these who reside in each of the areas shown in this table has not yet been determined.

POPULATION OF THE UNITED STATES, URBAN AND RURAL, BY STATES
APRIL 1, 1950

(The figures for 1950 in this report are preliminary counts of population compiled in field offices
and may differ from the verified population totals which are now being prepared. Final figures on
the population, urban and rural, of each State will appear in Series PC-8, Nos. 1-49)

The urban population represented nearly two-thirds of the population of the United States on April 1, 1950, according to preliminary figures from the 1950 Census reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. The urban population totaled 95,892,000; the remainder of the population, 53,964,000 persons, constituted the rural population of the country.

Each of the four geographic regions of the United States had a substantial urban population, but the proportion of the population which was urban varied from about four-fifths in the Northeast to less than half in the South. In the West, almost 70 percent of the population was urban, and in the North Central region the proportion was 64.1 percent, virtually the same as the national average of 64.0 percent. The Northeast had a larger urban population and a larger proportion of its population classed as urban than did any other region; on the other hand, the South had the largest rural population and the largest proportion of population in rural territory of the four regions.

In terms of the proportion of urban population, the State with the highest proportion was New Jersey, which had 86.6 percent of its population classified as urban. Other States with more than four out of five inhabitants living in urban territory were Massachusetts, Rhode Island, New York, and California. In all, 30 States had half or more of their population in urban territory. The 18 States with less than half of their population in urban territory were most heavily concentrated in the South where 10, or the majority of the States in the region, were in this class. The State with the largest proportion

of rural population was North Dakota, where 72.2 percent of the population lived in rural territory. Three other States, South Dakota, Mississippi, and Arkansas, each had more than two-thirds of their population in rural territory. (See table 1.)

NEW URBAN DEFINITION

For the 1950 Census, urban territory has been defined to comprise (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, and villages; (b) the densely settled urban fringe, incorporated or unincorporated, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside of any urban fringe. The urban territory also includes incorporated towns of 2,500 inhabitants or more except in New England, New York, and Wisconsin, where "towns" are simply minor civil divisions of counties. All other territory is classified as rural.

In 1950, as in earlier censuses, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. However, a definition of urban territory restricted to such places would class as rural territory, merely because they lacked legal municipal boundaries, a number of large and equally densely settled places. For censuses prior to 1950 an effort was made to avoid some of the more obvious omissions, principally by classifying whole minor civil divisions of counties as urban on the basis of certain special rules. Under these rules, however, many large and closely built-up places continued to be classified as rural. To avoid this situation in the 1950 Census, the Bureau of the Census has

defined arbitrary boundaries for urbanized areas and for unincorporated places of 1,000 or more outside urbanized areas. All the population residing in urbanized areas and of those unincorporated places of 2,500 or more are classified as urban. Consequently, the special rules formerly used are no longer necessary.

An urbanized area consists of one or more cities of 50,000 or more, all nearby incorporated places of 2,500 or more, as well as nearby closely settled smaller incorporated places and unincorporated territory. Each urbanized area contains one or more central cities plus additional territory, incorporated or unincorporated, called the urban fringe. Although the entire urbanized area is urban by virtue of this definition, it is clear that the central city or cities as well as any incorporated place of 2,500 or more in the urban fringe would also have been classified as urban if there had been no urbanized area, since each such place is incorporated and has 2,500 inhabitants or more. In all, 157 urbanized areas have been established and defined by the Bureau of the Census, accounting for every city of 50,000 inhabitants or more in 1940 or at a subsequent special census conducted by the Bureau of the Census prior to 1950.

The composition of the urban population in accordance with the new urban definition is shown in table 2. For the United States as a whole, the total urban population of 95,892,000 includes 86,008,000 persons in incorporated places of 2,500 or more, 7,899,000 persons in urban fringe areas but not in incorporated places of 2,500 or more, and 1,985,000 persons in unincorporated places of 2,500 or more outside of urban fringe areas. Thus, about 90 percent of the urban population resides in incorporated places of 2,500 or more, about 8 percent in smaller incorporated places or unincorporated territory in urban fringe areas, and about 2 percent in unincorporated places outside of urban fringe areas. (The 157 urbanized areas had a total population of 68,788,000, or 71.7 percent of the total urban population; included were 47,988,000 inhabitants of central cities and 20,800,000 inhabitants of urban fringe areas.)

The contribution of each element to the total urban population varies considerably among the regions of the United States. In the North Central region, neither the unincorporated places nor the urbanized areas contribute substantially to the urban population. Only 0.6 percent of the urban population of this region represents persons in unincorporated places of 2,500 or more,

and only 4.7 percent represents persons in urban fringe areas who are not also classifiable as urban by virtue of residence in an incorporated place of 2,500 or more. The bulk of the urban population in the North Central region, 94.7 percent, comprises residents of incorporated places of 2,500 or more. In the West, however, the new elements of the urban definition contribute appreciably more to the total urban population. Only 84.5 percent of the urban population of the West comprises residents of incorporated places of 2,500 or more, an additional 12.1 percent represents persons in urban fringe areas but not in incorporated places of 2,500 or more, and an additional 3.4 percent, the population in unincorporated places. In the Northeast and in the South, the distribution of the urban population among these three components is considerably closer to the national average.

The variation in the contribution of each element to the total urban population is even more pronounced among the States. At one extreme, Delaware had slightly more than 25 percent of its urban population in urban fringe areas exclusive of incorporated places of 2,500 or more. Three other States, Arizona, Connecticut, and Maryland, each had from 20 to 25 percent of their urban population accounted for by this residence class. At the other extreme, there were 7 States with no territory in urban fringe areas, 4 States with less than 1 percent of their urban population in urban territory of this type, and 10 more States with 1 to 4 percent of their urban population so accounted for.

Similarly, in one State, Maine, slightly more than 25 percent of the urban population is found in unincorporated places of 2,500 or more. On the other hand, 7 States and the District of Columbia had no population in such places, 9 had less than 1 percent of their urban population in such places, and an additional 19 had 1 to 4 percent of their urban population in such places.

COMPARABILITY WITH OLD URBAN DEFINITION

In general, the distribution of the population by urban and rural residence according to the new urban definition is not comparable with corresponding distributions on the basis of the old definition used in the 1940 and earlier censuses. Both definitions include the population of incorporated places of 2,500 or more. They differ, however, in the definition of urban territory outside of the corporate limits of places of 2,500 or more. The new urban definition

defines this territory in terms of smaller incorporated places and unincorporated territory in urban fringe areas and unincorporated places of 2,500 or more outside of urban fringe areas, whereas the old urban definition delimits this territory in terms of places classed as urban under special rules--1 county and 140 minor civil divisions of counties in 1940. In short, the change in definition involves the substitution of specially delimited urban fringe areas and unincorporated places for places classified as urban under special rules. The urban and the rural population in 1950 have been compiled according to both the new and old urban definitions for the United States, regions, divisions, and States. (See table 3.)

For the United States as a whole, the urban population in 1950 was 95,892,000 according to the new definition, but only 88,370,000 according to the old definition. The net effect of the change in definition was to transfer 7,522,000 persons, or 5.0 percent of the total population, from the rural to the urban classification.

The West led the four regions of the United States with respect to the proportion of its population affected by the change in definition. In that region, the net change amounted to 10.6 percent of the total population. The impact of the change in definition on the other regions was relatively far smaller. In the South and in the Northeast, the net change amounted to 4.6 percent of the total population, and in the North Central region to 3.4 percent.

Most of the States were affected only slightly by the change in definition. In nine States and the District of Columbia there was either no change or a net change amounting to less than 1 percent of the total population. In 20 other States, the net change amounted to from 1 to 4 percent of the total population and in 19 States to 5 percent or more. The States most affected were Arizona with a net change amounting to 19.0 percent of its total population, Delaware with a net change of 16.0 percent, Maryland with 14.6 percent, California with 13.6 percent, and Connecticut with 13.5 percent. In each of the regions and in all States but Massachusetts and Rhode Island, the change in definition resulted in a net gain in the urban population at the expense of the rural population.

For the United States as a whole, the net transfer of 7,522,000 persons from the rural to the urban classification represents an addition of 8.5 percent to the urban population and a subtraction of 12.2 percent from the rural population. Each of the four regions had its urban population increased and its rural population diminished, with the greatest change taking effect in the West where the urban population was increased by 17.9 percent and the rural population reduced by 25.9 percent. Arizona led the States in percentage of addition to the urban population as a result of the change in definition; in that State more than one-third of the population classified as urban under the new definition would be classified as rural under the old. The greatest proportionate reduction of rural population brought about by the change in definition was the 41.3 percent in California. In most of the States, however, the impact of the new definition was far less marked.

URBAN AND RURAL POPULATION CHANGES, 1940 TO 1950

Data for 1940 based on the new definition are not available. Changes in the urban or in the rural population between 1940 and 1950, therefore, can be measured only in terms of figures compiled in accordance with the old urban definition. The difference in the urban population between 1940 and 1950 under the old definition is attributable in part to changes in urban territory between the censuses. Places with fewer than 2,500 inhabitants in 1940, for example, may have attained this size in 1950, others with more than 2,500 in 1950 may have dropped below this level in 1950, and incorporated places may have annexed or retroceded inhabitated territory. On the basis of figures compiled according to the old urban definition, the urban population increased by 13,946,000, or 18.7 percent, between 1940 and 1950. This was somewhat higher than the 14.3 percent rate of growth for the total population. During the same period the rural population as classified on the basis of the old definition increased by 7.4 percent, or at a rate about half that of the total population.

Each of the four regions of the United States had an increase in urban population. These increases ranged from 41.2 percent for the West to 6.8 percent for the Northeast. The West also led the regions in rate of growth of the rural population with an increase amounting to 37.9 percent. The South was the only region that lost rural population and had a decline of about 50,000, or 0.2 percent.

The State with the greatest rate of increase in urban population on the basis of the old urban definition was Nevada, the urban

population of which increased by 92.7 percent. Four other States, Arizona, New Mexico, Texas, and Wyoming, had increases in urban population of more than 50 percent, 11 other States had increases of more than one-third, and 32 States had increases ranging up to one-third. No State lost urban population.

Losses of rural population, however, were numerous. In 17 States, more than one-third of the total, there were net losses of rural population. Most of these States were in the West South Central and West North Central divisions, where every State lost rural population. The rest were scattered through the South and the West.

PRELIMINARY NATURE OF THE DATA

The preliminary population counts given in this report represent the number of persons enumerated in 1950 in each urban and rural area shown, but not the final verified population totals. The final population totals may differ from the preliminary counts because of the allocation to the place of usual residence of persons enumerated elsewhere, the inclusion of crews of vessels docked within an area but reported separately and not included in the preliminary count, and because of other revisions. These may also affect the distribution of the population by urban and rural residence through the change in the classification of places which have final population totals of more than 2,500 but which had under 2,500 according to the preliminary figures.

Figures for the United States, regions, and States given in this report may differ from corresponding data for the same date published or to be published in Series P-20, No. 32, and Series PC-7, for two reasons. First, the figures in this report do not take account of persons enumerated away from home and crews of vessels, whereas, the other figures incorporate estimates of the number of persons included in these classes pending a final determination of their number and distribution by urban and rural residence. Second, the data in this report incorporate a number of corrections of figures for the remainder of the population which had not yet been made when the sample of returns upon which data in Series P-20, No. 32, and Series PC-7 are based, was drawn.

1950 CENSUS OF POPULATION

PRELIMINARY COUNTS

FOR IMMEDIATE RELEASE

PRELIMINARY

POPULATION OF THE CANAL ZONE: APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in the Canal
Zone. Additional reports in this series will be issued as preliminary counts for other
Territories and possessions become available)

Preliminary 1950 Census counts of the population of the Canal Zone were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce.   The preliminary population total for the Canal Zone on April 1, 1950, was 52,300, representing an increase of 0.9 percent over the 1940 population total of 51,827.   Between 1940 and 1950, Balboa Court District increased 18.3 percent, from 31,502 persons to 37,271 persons; and Cristobal Court District decreased 26.1 percent, from 20,325 persons to 15,029 persons.

The preliminary population counts given below represent the number of persons enumerated in each area listed, but not the final verified population totals. The final population total for any place may differ from the preliminary count because of the allocation to the place of residents who were enumerated elsewhere and of crews of vessels docked in the place but not included in the preliminary count and because of other revisions.

Area	Population		Percent of increase, 1940 to 1950
	1950 (preliminary)	1940	
CANAL ZONE......................	52,300	51,827	0.9
Balboa District.....................	37,271	31,502	18.3

POPULATION OF THE VIRGIN ISLANDS OF THE UNITED STATES:
APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in the Virgin
Islands of the United States.   Additional reports in this series will be issued as
preliminary counts for other Territories and possessions become available)

Preliminary 1950 Census counts of the population of the Virgin Islands of the United States were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. The preliminary population total for the Virgin Islands on April 1, 1950 was 26,654, representing an increase of 7.1 percent over the 1940 population total of 24,889. Between 1940 and 1950, the municipality of St. Thomas and St. John increased 21.4 percent, from 11,987 persons to 14,558 persons; and the municipality of St. Croix decreased 6.2 percent, from 12,902 persons to 12,096 persons.

The preliminary population counts given below represent the number of persons enumerated in each area listed, but not the final verified population totals. The final population total for any place may differ from the preliminary count because of the allocation to the place of residents who were enumerated elsewhere and of crews of vessels docked in the place but not included in the preliminary count and because of other revisions.

Area	Population		Percent of increase, 1940 to 1950
	1950 (preliminary)	1940	
VIRGIN ISLANDS OF THE UNITED STATES...	26,654	24,889	7.1

Note: A minus sign (-) denotes decrease.
[1] Coextensive with St. Croix Island.

1950 CENSUS OF POPULATION

PRELIMINARY COUNTS

POPULATION OF GUAM: APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in Guam.
Additional reports in this series will be issued as preliminary counts for other
Territories and possessions become available)

Preliminary 1950 Census counts of the population of Guam were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce.   The preliminary population total for Guam on April 1, 1950, was 58,754, representing an increase of 163.6 percent over the 1940 population total of 22,290.

The preliminary population counts given below represent the number of persons enumerated in each area listed, but not the final verified population totals. The final population total for any place may differ from the preliminary count because of the allocation to that place of residents who were enumerated elsewhere and of crews of vessels docked in the place but not included in the preliminary count and because of other revisions.

Area	Population		Percent of increase, 1940 to 1950
	1950 (preliminary)	1940	
GUAM.......................................	58,754	22,290	163.6
Municipalities:			
Agaña[1]...................................	791	10,004	-92.1

Note: A minus sign (-) denotes decrease.
[1] Part of the Municipality of Agaña was annexed to the Municipality of Sinajana since 1940.

93514

POPULATION OF AMERICAN SAMOA: APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in American Samoa. Additional reports in this series will be issued as preliminary counts for other Territories and possessions become available)

Preliminary 1950 Census counts of the population of American Samoa were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. The preliminary population total for American Samoa on April 1, 1950, was 18,602, representing an increase of 44.1 percent over the 1940 population total of 12,908.

The preliminary population counts given below represent the number of persons enumerated in each area listed, but not the final verified population totals. The final population total for any place may differ from the preliminary count because of the allocation to that place of residents who were enumerated elsewhere and of crews of vessels docked in the place but not included in the preliminary count and because of other revisions.

Area	Population		Percent of increase, 1940 to 1950
	1950 (preliminary)	1940

1950 CENSUS OF POPULATION

PRELIMINARY COUNTS

POPULATION OF PUERTO RICO: APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in Puerto
Rico. Additional reports in this series will be issued as preliminary counts for
other Territories and possessions become available)

Preliminary 1950 Census counts of the population of Puerto Rico were reported to-day by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. The pre-liminary population total for Puerto Rico on April 1, 1950 was 2,205,398, represent-ing an increase of 18.0 percent over the 1940 population total of 1,869,255.

The preliminary population counts given below represent the number of persons enu-merated in each area listed, but not the final verified population totals. The final population total for any given place may differ from the preliminary count as the result of reallocating to that place any of its residents who were enumerated in other places. The count may also differ as the result of reallocation of crews of vessels docked in the place who were not included in the preliminary count, because of the reallocation of certain groups of persons to areas in the United States, its Terri-tories or other possessions, and because of other revisions.

1950 CENSUS OF POPULATION

PRELIMINARY COUNTS

POPULATION OF THE TERRITORY OF HAWAII:
APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in Hawaii. Additional reports in this series will be issued as preliminary counts for other Territories and possessions become available)

Preliminary 1950 Census counts of the population of the Territory of Hawaii were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. The preliminary population total for Hawaii on April 1, 1950, was 493,437, representing an increase of 16.6 percent over the 1940 population total of 423,330.

The preliminary population counts given below represent the number of persons enumerated in each area listed, but not the final verified population totals. The final population total for any given place may differ from the preliminary count as the result of reallocating to that place any of its residents who were enumerated in other places. The count may also differ as the result of reallocation of crews of vessels docked in the place who were not included in the preliminary count, because of the reallocation of certain groups of persons to areas in the United States, its Territories or possessions, and because of other revisions.

[1] The total for 1940 includes population (560) of outlying islands (Baker, Canton, Enderbury, Howland, Jarvis, Johnston, Midway) which have not been included in the 1950 Census of Hawaii.
[2] Reported separately in 1940 as Kailua village and Lanikai village.
[3] Coextensive with Kalawao County.
[4] Part of Wailuku district, including Puunene village, annexed to Kahului village since 1940.

1950 CENSUS OF POPULATION

PRELIMINARY COUNTS

POPULATION OF THE TERRITORY OF ALASKA
APRIL 1, 1950

(The figures in this report are preliminary counts of population as compiled in Alaska. Separate reports have been published in this release series which contain preliminary population counts for other Territories and possessions)

Preliminary 1950 Census counts of the population of the Territory of Alaska were reported today by Roy V. Peel, Director, Bureau of the Census, Department of Commerce. The preliminary population total for Alaska on April 1, 1950, was 126,661, representing an increase of 74.6 percent over the 1939 population total of 72,524.

The preliminary population counts given below represent the number of persons enumerated in each area listed, but not the final verified population totals. The final population total for any given place may differ from the preliminary count as the result of reallocating to that place any of its residents who were enumerated in other places. The count may also differ as the result of reallocation of crews of vessels docked in the place who were not included in the preliminary count, because of the reallocation of certain groups of persons to areas in the United States, its Territories or possessions, and because of other revisions.
