CHAPTER I.

PLAN AND SCOPE OF INQUIRY.

I. Provisions of law ...................................................................................................................... 1-3
II. Development of mining statistics .......................................................................................... 3-18
   Table 1.—Character of inquiries concerning mines and quarries: 1850 to 1902 .................. 4
   Table 2.—Subjects included in Census reports concerning mines and quarries: 1850 to 1902 . 4, 5
   Table 3.—Mining statistics reported at censuses: 1850 to 1902 ............................................ 5
   Census of 1870 ......................................................................................................................... 6
   Census of 1880 ......................................................................................................................... 6, 7
   Census of 1890 ......................................................................................................................... 7-9
   Table 4.—Summary of mineral industries: 1889 ................................................................. 8
   Census of 1902 ......................................................................................................................... 9
   Mining and manufacturing ....................................................................................................... 9, 14
   Special schedules .................................................................................................................... 14, 15
   Expert special agents ............................................................................................................. 15, 16
   Collaboration with the United States Geological Survey ..................................................... 16-18

III. Difficulties and defects of the enumeration .......................................................................... 18-22

IV. Office and field work ........................................................................................................... 22-24

V. Classification of minerals ...................................................................................................... 24-35
   Percentage of metal contained in ores of economic importance ......................................... 33-35

CHAPTER II.

SUMMARY AND ANALYSIS OF RESULTS.

I. General review of the mining industry ................................................................................... 36-55
   Table 1.—Summary: 1902 ....................................................................................................... 36
   Table 2.—Comparative statement, quantities and values of minerals: 1902 and 1889 ........ 36, 37
   Decreases in 1902 .................................................................................................................. 38, 39
   Early development ................................................................................................................. 39, 40
   Rank of the United States in mining ..................................................................................... 41, 42
   Table 3.—Production of coal, iron ore, copper, lead, gold, and silver in the principal producing countries: 1902. 41
   Increase since 1880 ................................................................................................................. 42-44
   Table 4.—Increase in population and in value of agricultural products, manufactures, and mineral products: 1880 to 1900 ................................................................. 42
   Table 5.—Mineral products: 1882 to 1902 .......................................................................... 42
   Leading minerals .................................................................................................................... 44
   Table 6.—Summary for leading minerals, and percentage each formed of total: 1902 ........ 44
   Table 7.—Summary for metallic and nonmetallic products: 1902 ....................................... 44
   Table 8.—Summary for minerals grouped according to character of ore and uses: 1902 ...... 45
   Table 9.—Percentage each group of minerals forms of total: 1902 .................................... 48
   Mineral products by states ..................................................................................................... 48-51
   Table 10.—Summary by states and territories: 1902 ......................................................... 50
   Table 11.—Rank of states and territories in population, agriculture, manufactures, and mining ......................................................................................................................... 50, 51
   Mineral products by geographic divisions .............................................................................. 54, 55
   Table 12.—Population, value of agricultural products, manufactures (gross and net), and mineral products, with rank of each, by geographic divisions .......................................................................................................................... 55

II. Development work ................................................................................................................. 58-67
   Table 13.—Productive and unproductive mines, quarries, and wells: 1902 ....................... 56
   Table 14.—Development work, by states and territories: 1902 ....................................... 57

III. Limitations of the use of census statistics of mining .......................................................... 57-58

IV. Number of producing mines for principal minerals: 1902 and 1889 .................................. 59
   Table 15.—Number of active and idle mines by classification of minerals: 1902 .............. 60
CONTENTS

V. Number of operators .............................................. 60-64
Table 16.—Average number of wage-earners, wages, and values of products per operator, for the principal minerals: 1902 ................................. 60
Large and small operators ......................................... 61
Table 17.—Number of operators and value of their products, grouped by minerals into classes based on value of product: 1902 .... 61, 62
Table 18.—Number of operators, classed by value of product, with percentage each class is of total: 1902 ..... 62, 63
Table 19.—Number of operators, natural gas and petroleum, classed by value of product: 1902 ................................. 64
Table 20.—Natural gas and petroleum, classed by value of product, with percentage each class is of total: 1902 ................................. 64

VI. Character of ownership ........................................ 64-74
Table 21.—Number of operators and value of product, by character of ownership: 1902 ........................................ 65
Table 22.—Per cent distribution, by character of ownership, of number of operators, and value of product for each mineral and group of minerals: 1902 ................................. 66
Individual ownership .............................................. 66, 67
Firms or partnerships .............................................. 67
Incorporated companies ............................................ 67
Table 23.—Comparison of statistics for incorporated companies and for all other forms of ownership, by minerals, and groups of minerals: 1902 ................................. 68-70
Petroleum ............................................................. 73
Table 24.—Summary for petroleum for incorporated and unincorporated operators: 1902 ........................................ 73
Industrial combinations ........................................... 72-74
Table 25.—Summary for minerals for which industrial combinations are reported: 1902 ........................................ 74

VII. Capital ............................................................. 74-80
Reasons for not securing statistics ................................ 74, 75
Capitalization of incorporated companies, by minerals ........ 75-80
Table 28.—Capitalization of incorporated companies, by minerals and groups of minerals: 1902 ................................. 78, 79
Dividend paying companies ......................................... 80-84
Table 27.—Capitalization of incorporated companies paying either dividends on stock or interest on bonds, by minerals: 1902 ................................. 82, 83
Table 28.—Capital stock of incorporated companies paying dividends on common or preferred stock, by minerals: 1902 ................................. 84
Common stock ....................................................... 84, 85
Table 29.—Common stock of incorporated companies paying dividends on such stock: 1902 ........................................ 85
Table 30.—Capitalization of incorporated companies paying dividends on preferred stock but not on common stock: 1902 ................................. 85
Preferred stock ...................................................... 85
Table 31.—Preferred stock of incorporated companies paying dividends on such stock, by minerals: 1902 ................................. 85
Bonds ................................................................. 86
Table 32.—Bonds of incorporated companies paying interest on bonds, by minerals: 1902 ................................. 86
Natural gas and petroleum .......................................... 86, 87
Table 33.—Capitalization of incorporated companies producing natural gas and petroleum and reporting capitalization: 1902 ................................. 87
Table 34.—Capitalization of natural gas and petroleum companies paying dividends or interest on bonds: 1902 ................................. 87
Capitalization of incorporated companies, by states and territories ........................................ 87-89
Table 35.—Capitalization of incorporated companies, by states and territories: 1902 ................................. 88, 89

VIII. Employees and wages ........................................ 90-101
Table 36.—Employees by classes: 1902 ............................... 91
Table 37.—Distribution of wage-earners according to occupations, by minerals and groups of minerals: 1902 ................................. 92
Table 38.—Wage-earners, men and boys, by minerals: 1902 ................................. 93
Table 39.—Average number of wage-earners employed during each month: 1902 ........................................ 94
Table 40.—Average number of wage-earners employed during each month, by minerals, in the mining of which more than 2,000 were employed: 1902 ................................. 95
Average earnings of wage-earners ................................ 95, 96
Wage-earners at specified daily rates of pay ........................ 96, 101
Table 41.—Distribution of wage-earners according to daily rates of pay, by occupations: 1902 ................................. 96, 97
Table 42.—Average number of wage-earners, and per cent of total number, at specified daily rates of pay, by occupations: 1902 ................................. 99
Table 43.—Average number of wage-earners at specified daily rates of pay, by states and territories: 1902 ................................. 100
Table 44.—Distribution of wage-earners according to daily rates of pay, by geographic divisions: 1902 ................................. 101

IX. Contract mining and quarrying ................................ 103-104
Table 45.—Comparison of contract miners with all miners, by minerals: 1902 ................................. 102
Table 46.—Wages paid for contract coal mining, and amount paid in allowances, by states and territories: 1902 ................................. 103

X. Contract work .................................................... 104-106
Table 47.—Comparison of contract work with value of product, by minerals: 1902 ................................. 104
Table 48.—Contract work at nonproducing mines, by minerals: 1902 ................................. 106

XI. Production without employees ................................ 108, 109
Table 49.—Production without employees, by minerals: 1902 ................................. 107
CONTENTS.

XII. Irregular producers ........................................ 107, 108
XIII. Time in operation ......................................... 108-111
   Table 50. Time in operation: 1902 .......................... 108, 110
XIV. Miscellaneous expenses .................................. 111-114
   Table 51. Miscellaneous expenses, by groups of minerals and percentage each group is of total: 1902 .......................... 111
   Royalties and rent ........................................... 111-114
   Table 52. Coal, anthracite: number of operators at various rates of royalty: 1902 .......................... 111
   Table 53. Coal, bituminous: number of operators in each state at various rates of royalty: 1902 .......................... 112
XV. Cost of supplies and materials ........................................ 114-115
   Table 54. Cost of supplies and materials, and percentage this is of value of product, by minerals and groups of minerals: 1902 .......................... 115
XVI. Power and machinery ....................................... 115-122
   Table 55. Number of operators reporting the use of power and the value of their products compared with totals for all operators, by minerals and groups of minerals: 1902 .......................... 116
   Table 56. Horsepower: 1870 to 1902 .......................... 117
   Table 57. Number of operators reporting the use of the different kinds of power, and total horsepower: 1902 .......................... 118
   Per cent of each kind of power employed in the different groups of minerals: 1902 .......................... 119
   Per cent of operators reporting power, and per cent of those reporting steam, gas, water, or other power, by groups of minerals: 1902 .......................... 119
   Number of hoisting and pumping engines employed in gold and silver and copper mining: 1902 .......................... 120
   Power driven mining and ore dressing machinery: 1902 .......................... 120
XVII. Quantity and value of products ........................... 122-126
   Scope of the statistics ...................................... 122, 123
   Table 58. Production and commercial value of silver .......................... 123
   Table 59. Production of anthracite and bituminous coal: 1902 .......................... 123
   Value of products for 1902 .................................. 124-126
   Value of products for groups of minerals and percentage each is of the total: 1902 .......................... 124
   Value of products by geographic divisions: 1902 .......................... 124
   Value per unit of measure ................................... 125, 126
   Table 60. Comparative summary of quantity, value, and average value per unit of measure of products for selected minerals: 1902 and 1900 .......................... 125
   By products ................................................. 126
   Abusive materials and the quantity and value of such materials obtained from quarries included under other classifications: 1902 .......................... 126
XVIII. Mining operations of governmental institutions ............ 126-132
   Table 61. Summary, mining operations of governmental institutions: 1902 .......................... 127
   Table 62. Mines, quarries, and natural gas wells operated by the United States and city or town governments: 1902 .......................... 127
   Penal institutions ........................................... 128
   Table 63. Mines and quarries operated by penal institutions: 1902 .......................... 128
   Eleemosynary institutions ................................... 128, 129
   Table 64. Quarries and natural gas wells operated by eleemosynary institutions: 1902 .......................... 129
XIX. The verification of the mining census ........................ 130-131
   Comparison with Geological Survey .......................... 130-131
   Table 65. Comparison of minerals and mineral products reported by the Bureau of the Census and the Geological Survey: 1902 .......................... 130
   Comparison with state reports ................................ 131
   Table 66. Yearly production of coal as reported by United States Census and state offices: 131
XX. Mining and manufacturing .................................... 131-136
   Table 67. Mining and manufactures: 1902 and 1900 .......................... 132
   Table 68. Interdependent growth in the mining and manufactures of coal and iron in Alabama and Colorado: 1902 .......................... 133
   and 1889 .................................................. 133
   Table 69. Value of mine and quarry products and manufactures thereof, by geographic divisions: 134
   Table 70. Movement of iron ore on the Great Lakes: 1902 .......................... 134
   Table 71. Mine and quarry products and the chief manufacturing industries utilizing same: 135
XXI. Exports and imports of minerals ............................. 136-143
   Table 72. Exports of domestic merchandise and products of mines, exclusive of gold and silver and phosphate rock: 1889 to 1902 .......................... 136
   Table 73. Value of exports of products of mines, including crude mineral oils: 1889 to 1902 .......................... 136
   Table 74. Value of production and imports of certain comparable minerals: 1902 .......................... 137
   Table 75. Imports for consumption: 1889 to 1902 .......................... 140-143

CHAPTER III.

ELECTRICITY IN MINING. By Thomas Commerford Martin .......................... 145-151
   Table 1. Electric power, by minerals: 1902 .......................... 146
   Power generation and transmission: 146-149
   Coal cutting machinery: 149-151
   Drills .................................................. 151
   Shot firing: 151, 152
CONTENTS.

Production by states.—Continued.

Wyoming

Table 77.—Coal production of Wyoming, by counties: 1902

Table 78.—Summary by counties having a production of 200,000 tons or over: 1902

Occurrence

Table 79.—Coal, Pennsylvania anthracite—detailed summary, by counties: 1902.

Table 80.—Coal, bituminous—detailed summary, by states and territories: 1902

Petroleum. By F. H. Oliphant...

Table 1.—Comparative summary: 1860 to 1902.

Wells and tankage

Table 2.—Record of wells and tankage, by states and territories: 1902.

Capital stock of incorporated companies

Table 3.—Capitalization of incorporated companies: 1902.

Employees and wages

Table 4.—Average number of wage-earners employed during each month: 1902.

Table 5.—Average number of wage-earners at specified daily rates of pay, by occupations: 1902.

Contract work

Supplies, materials, and miscellaneous expenses

Mechanical power

Production

Table 6.—Quantity and value, with percentages, by states and territories: 1902.

Table 7.—Production, value, and average price per barrel, by states and territories, and by districts: 1902 and 1901.

Petroleum and natural gas

Table 8.—Value of petroleum and natural gas: 1902.

Exports

Table 9.—Production and exports of crude and manufactured products: 1864 to 1902.

Table 10.—Exports of petroleum in its various forms from the United States, by countries, for the fiscal years 1894 to 1902.

Table 11.—Exports of petroleum and petroleum products to Europe, North and South America, Asia and Oceania, and Africa, with percentages for the fiscal year ending June 30, 1902.

Prices

Average yearly prices per gallon of refined petroleum: 1892 to 1902.

Table 12.—Monthly average prices per gallon of all exported from the United States in bulk: 1895 to 1900.

Production in the United States since 1859.

Table 13.—Production, by states and territories: 1859 to 1902.

Table 14.—Quantity and value of production: 1859 to 1902.

Review of the industry by fields

Table 15.—Production, by fields and states: 1880 to 1902.

Per cent of total crude petroleum produced in the several fields: 1890 to 1902.

Appalachian field

Table 16.—Production of petroleum in the Appalachian oil field, by states: 1889 to 1902.

Table 17.—Total number of wells completed in the Appalachian oil field, by districts: 1892 to 1902.

Table 18.—Well record in the Appalachian oil field: 1902.

Appalachian, Lima-Indiana, and all other fields

Table 19.—Production of petroleum in the Appalachian, Lima-Indiana, and all other fields, percentages of each, value per barrel, and the value of petroleum and natural gas, separate and combined: 1890 to 1902.

Table 20.—Production and value of natural lubricating petroleum, by states and districts: 1896 to 1902.

Table 21.—Pipe line runs in the Appalachian field, in detail: 1888 to 1902.

Table 22.—Total of pipe line runs in the Appalachian and Lima-Indiana fields: 1888 to 1902.

Table 23.—Shipment of the Appalachian and Lima-Indiana fields: 1894 to 1902.

Table 24.—Stocks of petroleum in the Appalachian and Lima-Indiana fields at the close of the year: 1894 to 1902.

Table 25.—Stocks of petroleum held in the several fields, states, and territories at the close of 1902, 1901, and 1900.

Table 26.—Average yearly price of all the petroleum produced: 1889 to 1902.

Table 27.—Range of prices paid for petroleum in the Appalachian oil region by the Seat Purchasing Agency during 1902.

Table 28.—Average monthly prices of Appalachian crude petroleum: 1902 and 1901.

Table 29.—Average monthly prices of Ohio and Indiana crude petroleum: 1902 and 1901.

Table 30.—Fluctuations in prices of Lima (Ohio) and Indiana crude petroleum: 1892.

Table 31.—Highest, lowest, and average prices of Lima (Ohio) crude petroleum: 1887 to 1902.

Review of the industry by states and territories

Alaska

Table 32.—Production of petroleum in Alaska: 1897 to 1902.

Log of well east of Catella bay, Kayak district, drilled in 1902.

California

Table 33.—Production of crude petroleum in California, by counties: 1897 to 1902.

Table 34.—Production of petroleum in California: 1897 to 1902.

Table 35.—Production of petroleum in Illinois: 1897 to 1902.

Table 36.—Production of petroleum in Illinois: 1897 to 1902.

LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE AND LABOR,
BUREAU OF THE CENSUS,
Washington, D. C., July 7, 1904.

Sir:

I have the honor to transmit herewith a report on mines and quarries and petroleum and natural-gas wells for the year ending December 31, 1902. This report contains the statistics of the Twelfth Census of the mining industries of the United States. At all prior censuses the mining industries have been enumerated at the same time as the population, manufactures, and agriculture, but the date of the enumeration was changed by the act of Congress of March 6, 1902, which provides that the statistics relating to mines, mining, quarries, and minerals, should be collected decennially after the completion and return of the enumeration and of the work upon the schedules relating to the products of agriculture and to manufacturing and mechanical establishments.

The mining census was conducted in collaboration with the United States Geological Survey, the statistics being collected in connection with the data required for the annual report of the mineral resources of the United States. The objects of this collaboration were to avoid duplication of the fieldwork and the necessity of calling on the mine operators for duplicate reports; also to obtain harmonious results for the two offices. The totals for the two offices agree, with the exception of a few minerals, for which the Geological Survey includes manufacturing processes carried on entirely distinct from the mining operations, and in some instances where that office calls for the product marketed or sold instead of that produced during the year.

Mining industries are frequently carried on by establishments engaged in both mining and manufacturing, and for statistical purposes it is often impossible to separate the operations. The report on manufactures for the Twelfth Census includes the statistics for all products that could be considered as the results of manufacturing processes, and such products have, as far as possible, been excluded from this report. It would add to the value of these statistics if the mining and manufacturing industries were covered by the same enumeration and the total presented as the manufacturing and mechanical industries of the country. Under the existing law it is impossible to compile such a total for the same year for all branches of industry.

This report has been prepared in the division of manufactures, under the supervision of Mr. William M. Stenart, chief statistician for manufactures, assisted by Mr. Joseph D. Lewis, chief of division. I desire also to acknowledge the services of the efficient force of the Geological Survey that worked under the supervision of Dr. David T. Day, chief of the division of mining and mineral resources, and of Mr. William A. Countryman, of this Bureau, who assisted in the preparation of the textual discussion.

Very respectfully,

[Signature]

Director.

Hon. Victor H. Metcalf,
Secretary of Commerce and Labor.
