MINES AND QUARRIES

# CHAPTER 1.

## NUMBER OF INHABITANTS.

**Introduction.**—This chapter gives the population of Connecticut, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 573) shows the population of Connecticut, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties and of the primary divisions in each county is alphabetical. The figures for secondary divisions and for wards and voting districts of cities are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

Table 2 (p. 575) shows separately the towns having in 1910, 2,500 inhabitants or more and the cities and boroughs in Connecticut, alphabetically arranged, with their population in 1910, 1900, and 1890. For cities and boroughs there is given in each case, in addition to the county, the name of the town in which it is located or with which it is coextensive.

The population of Connecticut, by counties, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not ap-

parent. The census usage in regard to certain terms is, however, explained below:

**Density of population.**—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area.

**Minor civil divisions.**—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

**Urban and rural population defined.**—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more. In the New England States, in addition to cities having this population, all towns having a population of 2,500 or more have also been classed as urban, without regard to the population of the villages (whether incorporated or not) which they may contain. The result is that the "urban areas" in New England include some population which in other sections of the United States would be segregated as "rural." This departure from the general rule, rendered necessary by local conditions in New England, probably makes no great change in the proportions of urban and rural population in those sections where population is dense and generally devoted to manufacturing. In other sections a considerable variation doubtless results, but there is no reason to suppose that it materially affects the distinguishing characteristics of urban and rural population as defined by census statistics.

Urban population being thus defined, the remainder of the state or county is classed as rural. In the New England States, therefore, the rural population consists of the population outside of towns and cities having 2,500 inhabitants or more.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the

**HISTORICAL NOTE.**—Connecticut derives its name from that of the Connecticut River, the pure Indian form of the name, *Quinnitukut*, meaning "long river."

The first European to visit the region now constituting Connecticut was probably Adrian Block, a Dutch navigator, who in 1614 discovered and explored the Connecticut River. The English claimed it by virtue of the discoveries of the Cabots of 1497 and more particularly of 1498. The present area of Connecticut was included in the grants conveyed by James I of England to the Plymouth Company in 1606 and 1620.

In 1633 some English settlers from the Plymouth colony sailed up the Connecticut River and erected a trading house on the present site of Windsor. They found that the Dutch had already constructed a rude earthwork at a point where Hartford now stands, a post which men of the nation named held for the next 20 years. The first permanent settlements, however, were made during the period 1634-1636 at Wethersfield, Windsor, and Hartford by the migration of a large majority of the inhabitants of three Massachusetts towns, Dorchester, Watertown, and Newtown, who moved to Connecticut on account of their dissatisfaction with the theocratic government of Massachusetts. A constitution for the government of these colonies was approved by general vote of the people in 1639.

In July, 1635, John Winthrop, jr., was made governor of the "River Connecticut." In 1635 a party of 20 men was sent out by Winthrop and took possession of the region at the mouth of the Connecticut River. This tract, of between 60 and 80 square miles, which they called Saybrook, remained independent of the other colonies until 1644, when it was sold to Connecticut by its agent, Col. Fenwick, on his own authority.

New Haven was settled in 1633 by a group mainly composed of Londoners who had the previous year come to Boston under the leadership of John Davenport.

In 1662 the colony of Connecticut obtained from the King a charter, which was really a royal confirmation of the constitution of 1639. By this charter Connecticut was defined as bounded on the north by Massachusetts and as extending from Narragansett Bay to the Pacific Ocean. Accordingly the colony of New Haven, in spite of its vehement opposition, was incorporated into the colony of Connecticut.

With the exception of the brief period of the Andros régime, the charter of 1662 remained the fundamental law of the colony and later of the state until 1818, when the present constitution was adopted. Boundary disputes with Rhode Island on the east and New York on the west were finally adjusted by the adoption of what are practically the present boundary lines, the former in 1727-28, the latter in 1688.

In 1786 Connecticut ceded to the Federal Government her claims to western lands which were based on the charter of 1662, but the state was given title to the region in northeastern Ohio known as the Western Reserve. In 1792 part of this tract was devoted to the relief of persons burned out or plundered by the British; the rest of it was sold—the last of it being disposed of in 1825.

Connecticut was one of the original thirteen states.

According to estimates and censuses taken prior to the first Federal census, in 1790, the population of the colony of Connecticut at different dates was as follows: 1643 (estimate), 5,500; 1665 (estimate), 9,000; 1679 (estimate), 14,000; 1689 (estimate), 20,000; 1713 (estimate), 34,000; 1730 (estimate), 51,600; 1749 (estimate), 100,000; 1766 (census), 130,612; 1761 (census), 146,520; 1774 (census), 197,910; 1782 (census), 208,860.

territory according to the conditions as they existed at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes in population for the *same* territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may

be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

### TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

**Population of the state.**—The population of Connecticut is 1,114,756. Compared with a population of 908,420 in 1900, this represents an increase during the past decade of 206,336, or 22.7 per cent. During the same period the total population of the United States increased 21 per cent. The percentage of increase for the state during this decade, though com-

paratively small, is larger than that shown at any census since 1860.

The following table shows the population of Connecticut at each census from 1790 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of Increase for the United States.
		Number.	Per cent.	
1910.....	1,114,756	206,336	22.7	21.0
1900.....	908,420	162,162	21.7	20.7
1890.....	746,258	123,558	19.8	25.5
1880.....	622,700	85,246	15.9	30.1
1870.....	537,454	77,307	16.8	22.6
1860.....	460,147	89,355	24.1	35.6
1850.....	370,792	60,814	19.6	35.9
1840.....	309,978	12,303	4.1	32.7
1830.....	297,675	22,427	8.1	33.5
1820.....	275,248	13,306	5.1	33.1
1810.....	261,942	10,940	4.4	36.4
1800.....	251,002	13,056	5.5	35.1
1790.....	237,946	.....	.....	.....

This table shows that for the earlier decades the rate of increase of the population of the state was slow. During the 50 years from 1790 to 1840 the increase was only 72,032, during the decade from 1840 to 1850 the increase was 60,814, and since 1850 the increase has been 743,964. The highest rate of increase, 24.1 per cent, was during the decade from 1850 to 1860, and the nearest approach to this has been the rate of increase for the last decade. The increase in population during the last decade nearly equaled the total population of the state in 1790.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that the increase during each decade up to 1890 was much less rapid for the state than for the country as a whole. During the last two decades the rate of increase for the state has been slightly higher than that for the United States. The population of the state in 1910 was almost five times as large as in 1790, when the First Census was taken, while the population of the United States in 1910 was more than twenty-three times that in 1790.

In 1790 Connecticut contained 23.6 per cent of the total population of New England, which was 1,009,408. The proportion of New England's population in Con-

necticut decreased steadily until 1850, when it was 13.6 per cent. In 1910, after 60 years of more rapid growth, Connecticut comprised 17 per cent of the population of New England, which was 6,552,681. In the years that have elapsed since the First Census was taken, the population of the New England States has multiplied more than six times, while that of Connecticut has multiplied less than five times.

**Principal cities.**—Connecticut has 18 cities. Seven of the cities have a population of 25,000 inhabitants or more. New Haven, the largest city, has a population of 133,605, while Bridgeport, the second city, has a population of 102,054. Hartford and Waterbury are the only other cities in the state having over 50,000 inhabitants. There are three cities having from 25,000 to 50,000, 6 from 10,000 to 25,000, and 5 from 5,000 to 10,000 inhabitants, respectively. The aggregate population of the 18 cities was 642,054, or 57.6 per cent of the total population of the state.

Table 2 shows the population of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table on page 569 shows the population of the 10 largest cities in 1910, as reported at each census since their incorporation as cities in so far as figures are available, together with the increase during each decade.

				1870.....	10,820		

<sup>1</sup> A minus sign (—) denotes decrease.

<sup>2</sup> Town and city not returned separately.

Of the cities included in the foregoing table, New Britain shows the highest percentage of increase during the last decade, namely, 68.9 per cent, and New London the lowest, 12 per cent. Although Hartford and New Haven show a substantial growth during the decade, their percentages of increase are lower than for any decade since 1880. New Haven still remains the largest city in the state. The second city in point of size is now Bridgeport, which during the last decade passed Hartford, the population of Bridgeport increasing 43.7 per cent, while that of Hartford increased but 23.9 per cent.

**Counties.**—Connecticut has eight counties. The population of these counties ranges from 337,282 in New Haven County to 26,459 in Tolland County.

There have been no changes in the territorial boundaries of the counties since 1900.

Every county in the state has increased in population during the last decade, the percentages of increase ranging from 3.2 per cent in Windham County to 33.2 per cent in Fairfield County, and the absolute increases from 1,500 in Windham County to 68,119 in New Haven County. In three of the eight counties the percentage of increase is larger than that for the state as a whole, which, as before stated, was 22.7 per cent.

A map on page 572 shows the increase in the total population of each county of Connecticut during the last decade, the different rates of increase being indicated by differences in shading.

**Density of population.**—The total land area of the state is 4,820 square miles. The average number of persons to the square mile is 231.3; in 1900 and 1890 it was 188.5 and 154.8, respectively. The average number per square mile for the United States as a whole is 30.9.

In density of population Connecticut ranks fourth among the states, being preceded by Rhode Island, Massachusetts, and New Jersey, in the order named.

The density of population is shown by counties in Table I of Chapter 2 and in a map on page 572.

Litchfield County, with 925 square miles, has the largest area, and Middlesex County, with 369 square miles, the smallest area. New Haven County has the highest density of any county, namely, 559.3 persons per square mile, and Tolland County the lowest, namely, 65.5.

**Minor civil divisions.**—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." The counties of Connecticut are divided into 168 primary divisions, comprising that number of towns. There are also 18 cities and 26 incorporated boroughs in the state. The cities and boroughs are not independent minor civil divisions, but usually form parts of the towns in which they are located. Eight of the cities and one borough, however, are coextensive with the towns in which they are located. One borough, Fair Haven East, forms part of New Haven, and for this reason is not shown separately in Tables 1 and 2.

**Cities and boroughs.**—Of the 25 incorporated boroughs in Connecticut in 1910 for which the population is shown separately, 14 had more than 2,500 inhabitants each, with a combined population of 89,743, while 11 had less than 2,500 inhabitants each, with a combined population of 11,812.

The 43 places having in 1910 either the city or the borough form of incorporation had an aggregate population of 743,609, or 66.7 per cent of the total population of the state. Four boroughs have been incorporated since the census of 1900. The population in 1900 of the 39 cities and boroughs incorporated prior to that year was 560,681, or 61.7 per cent of the total population of the state. In 1910 the same cities and boroughs had a population of 739,509, or 66.3 per cent of the total population of the state. This represents an increase during the decade of

178,828, or 31.9 per cent. Outside these cities and boroughs the population increased 27,508, or 7.9 per cent. The changes in population resulting from changes in the limits of boroughs and cities have not been considered in calculating these increases.

**Urban and rural population compared.**—The following table presents the population of Connecticut at the censuses of 1910, 1900, and 1890, respectively, distributed among towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census. It may be noted in connection with this table that the classification is by towns and that no reference is made to cities. This is because every city in Connecticut is either coextensive with a town or is included within and forms part of a town.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.

<b>Rural territory</b> <sup>1</sup> .....	<b>96</b>	<b>114,917</b>	<b>98</b>	<b>115,825</b>	<b>102</b>	<b>123,097</b>	<b>10.3</b>	<b>12.8</b>	<b>16.5</b>

<sup>1</sup> Towns of less than 2,500 inhabitants.

The population living in towns of 2,500 inhabitants or more is here classified as urban; the number of said towns is 72. More than one-half of the urban population in 1910 was in towns of 25,000 inhabitants or more, these towns having a combined population of 540,752, or 48.5 per cent of the total population of the state.

The urban territory of the state in 1910—that is, the towns of 2,500 inhabitants or more—contained 999,839 inhabitants, or 89.7 per cent of the total population, while 114,917 inhabitants, or 10.3 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the towns then having 2,500 inhabitants or more—contained 792,595 inhabitants, or 87.2 per cent of the total population, while 115,825 inhabitants, or 12.8 per cent, lived in rural territory. There has thus been a slight increase in the proportion of urban population during the last decade. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

In 1890 no city or town in Connecticut had over 100,000 population. New Haven passed that limit between 1890 and 1900, and Bridgeport between 1900 and 1910. As a result, the class, "towns of 100,000 or more," which was not represented in 1890, contained 21.1 per cent, or more than one-fifth, of the

total population of the state in 1910. The relative importance of all classes below that limit has diminished since 1890.

Table I of Chapter 2 shows that in every county in the state a larger proportion of the population lived in urban territory in 1910 than in 1900. This table also indicates that in 1910 each county in the state had more than one-half of its population living in urban territory as here defined. The largest proportions of urban population are found in Fairfield, New Haven, and Hartford Counties, in each of which at least 95 per cent of the population lives in urban territory.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis, and the aggregate population in 1910 and 1900 of the same places is then compared. Thus, as shown in the following table, the total population in 1910 of those towns which at that time had 2,500 inhabitants or more was 999,839; in 1900 the total population of these same towns was 794,381. It may be noted that the latter figure exceeds the total population in 1900 of those towns which at that time had over 2,500 inhab-

itants each, 792,595 (see table, p. 570), by 1,786. This difference is due to two things: First, four towns having less than 2,500 inhabitants each in 1900, with a combined population of 8,017, had more than 2,500 inhabitants each in 1910; and, second, two towns having more than 2,500 inhabitants each in 1900, with a combined population of 6,231, had less than 2,500 inhabitants each in 1910.

The comparison of the total population in 1910 of places having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the next table, shows an increase of 25.9 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased eight-tenths of 1 per cent. Urban population thus increased much more rapidly than rural. For the United States as a whole urban population increased 34.9 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2, there were three counties in Connecticut in which the population living in rural territory as here defined decreased and none in which there was a decrease in urban population.

For the state as a whole population classified as urban is still further distributed in the following table,

which shows, for 1910 and 1900, the combined population of the towns having in 1910, 100,000 inhabitants or more, from 25,000 to 100,000, and from 2,500 to 25,000 inhabitants, respectively, and the population of the remainder of the state.

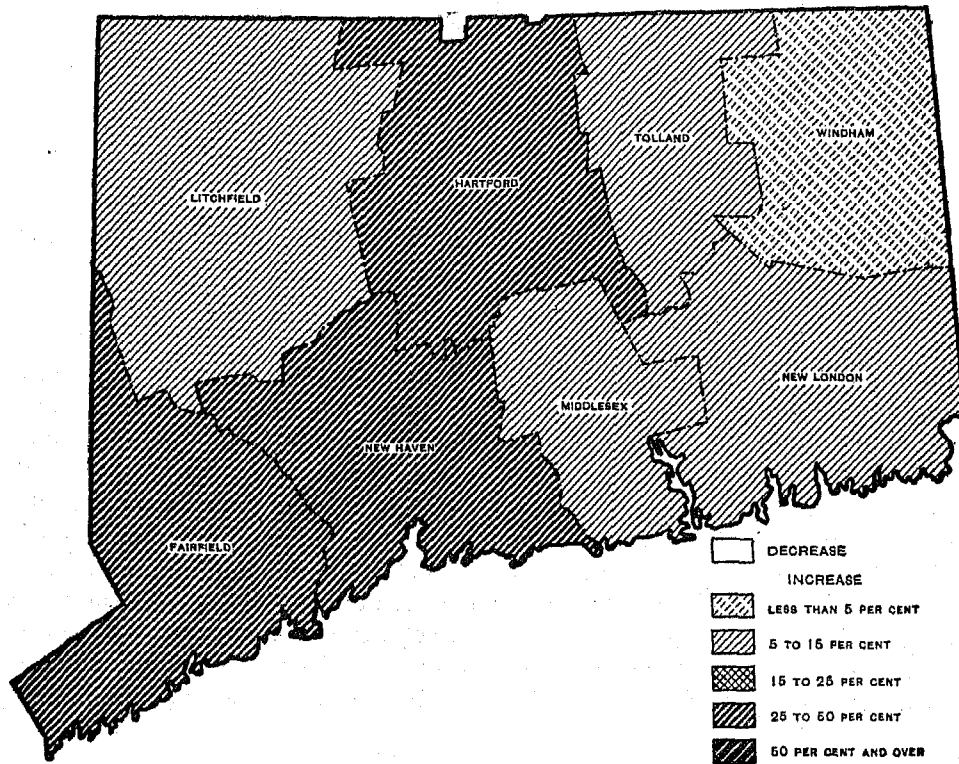

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state .....	1,114,756	908,420	206,336	22.7
Urban territory in 1910 .....	999,839	794,381	205,458	25.9
Towns of 100,000 or more in 1910.	235,659	179,023	56,636	31.6
Towns of 25,000 to 100,000 in 1910.	305,093	231,362	73,731	31.9
Towns of 2,500 to 25,000 in 1910.	459,087	383,996	75,091	19.6
Remainder of the state.....	114,917	114,039	878	0.8

As shown by this table the two groups composed of the larger towns increased in population during the last decade much more rapidly, and the group composed of towns of 2,500 to 25,000 inhabitants increased less rapidly, than the state as a whole, while the rural population remained practically stationary.

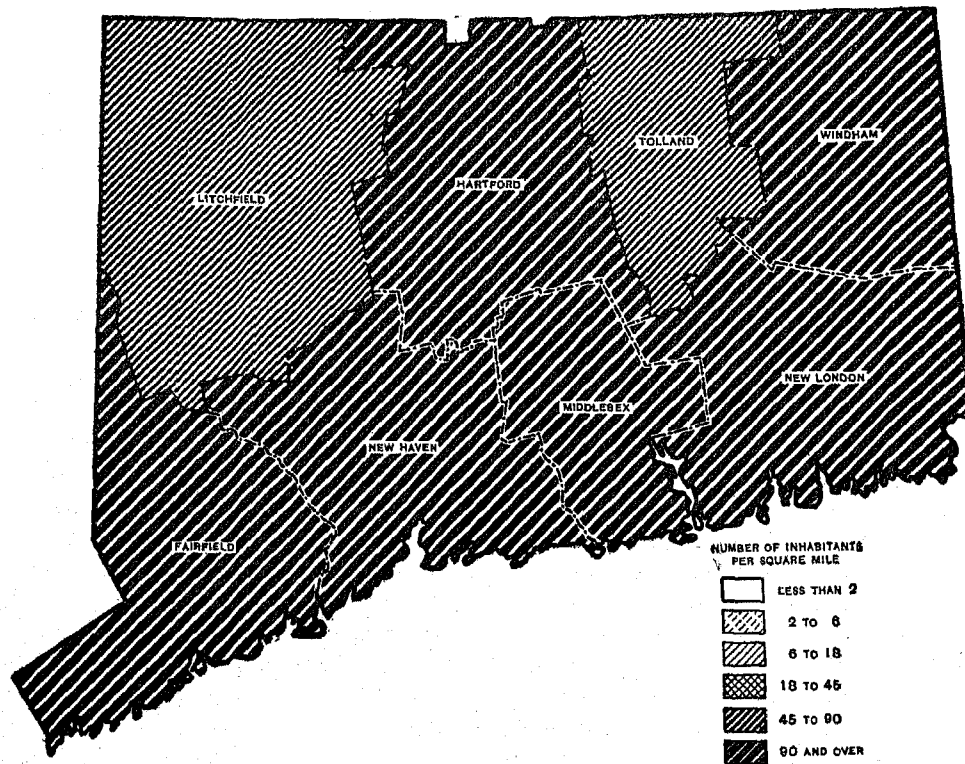

It also appears from this table that of the total increase in the population of the state during the decade, namely, 206,336, more than three-fifths was in towns of over 25,000 inhabitants and somewhat more than one-third in towns of 2,500 to 25,000 inhabitants.

INCREASE AND DENSITY OF POPULATION OF CONNECTICUT, BY COUNTIES: 1910.

INCREASE OF POPULATION.

DENSITY OF POPULATION.

<sup>1</sup> Now coextensive with town in which located.

## CHAPTER 2.

### COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

**Introduction.**—The first chapter having given the number of inhabitants of Connecticut by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

**Description of the tables.**—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for towns of over 25,000 inhabitants; Table III for towns of 10,000 to 25,000; Table IV for towns of 2,500 to 10,000; and Table V for wards of cities of 50,000 or more.

A series of summary tables (numbered 1 to 16) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, it is desirable that the two classes be distinguished in presenting census data. The Bureau of the Census has undertaken to do this by classifying as urban the population of all incorporated places of 2,500 inhabitants or more. In New England, however, where many

villages of considerable size are not separately incorporated, it was deemed best to classify also towns of 2,500 inhabitants or more as urban, although this classification is not very satisfactory because such towns generally include more or less population that is essentially rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

**Color and nativity (Table 1).**—Of the total population of Connecticut, 395,649, or 35.5 per cent, are native whites of native parentage; 374,489, or 33.6 per cent, are native whites of foreign or mixed parentage; 328,759, or 29.5 per cent, are foreign-born whites; and 15,174, or 1.4 per cent, are negroes. The corresponding percentages in 1900 were 41, 31.1, 26.1, and 1.7, respectively, the proportion of native whites of native parentage having decreased during the decade. In each county of the state the foreign-born whites constitute a considerable proportion (from 24.5 to 31.7 per cent) of the population, and in each the percentage of native whites of foreign or mixed parentage exceeds that of foreign-born whites. (See maps on page 597.)

Of the urban population, 33.1 per cent are native whites of native parentage; of the rural, 56.4 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 34.9 and 22.3 per cent, respectively. The percentage of foreign-born whites is 30.6 in the urban population and 20.1 in the rural.

**Sex (Tables 2 and 12).**—In the total population of the state there are 563,642 males and 551,114 females, or 102.3 males to 100 females. In 1900 the population was about equally divided between the sexes. Among native whites the ratio is 96.8, and among foreign-born whites 116.7, to 100. In the urban population there are 101.7 males to 100 females, and in the rural, 107.8.

**State of birth (Tables 3 and 4).**—Of the native population—that is, population born in the United States—77.3 per cent were born in Connecticut and 22.7 per cent outside the state; of the native white population, 22.1 per cent were born outside the state; and of the native negro, 50.7 per cent. Persons born outside the state constitute approximately the same proportion of the native population in urban as in rural communities.

**Foreign nationalities** (Tables 5 and 13).—Of the foreign-born white population of Connecticut, persons born in Ireland represent 17.8 per cent; Italy, 17.3; Russia, 16.5; Germany, 9.5; Canada, 8.1; Austria, 7.2; England, 6.8; Sweden, 5.5; Hungary, 4.2; Scotland, 2.1; all other countries, 4.9. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Ireland contributed 25.9 per cent; Italy, 12.8; Russia, 11.9; Germany, 11.1; Canada, 8.5; England, 7.5; Austria, 5.4; Sweden, 4.9; Hungary, 3.1; Scotland, 2.1; France, 0.7; Denmark, 0.7.

**Voting and militia ages** (Table 6).—The total number of males 21 years of age and over is 347,692, representing 31.2 per cent of the population. Of such males, 34.4 per cent are native whites of native parentage, 20 per cent native whites of foreign or mixed parentage, 44.1 per cent foreign-born whites, and 1.4 per cent negroes. Of the 153,168 foreign-born white males of voting age, 60,608, or 39.6 per cent, are naturalized. Males of militia age—18 to 44—number 257,996.

**Age** (Tables 7, 8, and 14).—Of the total population, 10.1 per cent are under 5 years of age, 17.6 per cent from 5 to 14 years, inclusive, 18.8 per cent from 15 to 24, 31.7 per cent from 25 to 44, and 21.6 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 5.9 per cent of this class being under 15 years of age, while 75 per cent are 25 years of age and over. Of the native whites of foreign or mixed parentage, 32.3 per cent are 25 and over and of the native whites of native parentage, 55.2 per cent.

Of the urban population, 47 per cent are under 25 years of age, 32.2 per cent from 25 to 44, and 20.7 per cent 45 and over. The corresponding percentages for the rural are 42.2, 27.4, and 30, respectively, thus showing that the proportion under 45 is smaller in the rural population, while the proportion of older people is larger.

**School attendance** (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 298,454, of whom 192,497, or 64.5 per cent, attended school. In addition to these, 11,492 persons under 6 and 2,966 of 21 and over attended school. For boys and for girls from 6 to 20 years, inclusive, the percentage attending school was 64.5. For children from 6 to 14 years, inclusive, the percentage attending school was 92.3. The percentage for children of this age was the same (92.6) among native whites of native parentage and native whites of foreign or mixed parentage, and it was slightly lower for foreign-born whites (89.2). (See Table I.) There is little difference between urban and rural communities as regards school attendance, although the percentage in school for children from 6 to 14 is slightly higher in the urban, and for those from 15 to 20 slightly higher in the rural.

**Illiteracy** (Table 10).—There are 53,665 illiterates in the state, representing 6 per cent of the total popu-

lation 10 years of age and over, as compared with 5.9 for 1900. The percentage of illiteracy is 15.4 among foreign-born whites, 6.3 among negroes, and 0.6 among native whites.

For all classes combined, the percentage illiterate in urban communities (6) is somewhat higher than that in rural communities (5.2), although for each class separately the percentage is higher in the rural.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is only 2.2. (See Table I.)

**Marital condition** (Tables 11 and 15).—In the population 15 years of age and over, 39.3 per cent of the males are single, and 33.6 per cent of the females. The percentage married is 55.3 for males and 54.6 for females, and the percentage widowed 4.8 and 11.2, respectively. The percentages of those reported as divorced, 0.3 and 0.4, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is smaller for women than for men is due largely to the fact that women marry younger. Thus 5.7 per cent of the females from 15 to 19 years of age are married, as compared with 0.5 per cent of the males, and 39.6 per cent of the females from 20 to 24 years are married, as compared with 18.5 per cent of the males. In the next age group, 25 to 34 years, the difference is not so great, the percentages being 68.9 for females and 59.8 for males, while in the age group 35 to 44 the difference practically disappears. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 63.2 for males and 66.2 for females; native whites of native parentage, 56.7 and 51.8, respectively; native whites of foreign or mixed parentage, 39.4 and 42.9, respectively; negroes, 56.5 for males and 51.1 for females.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married for females is slightly higher in rural than in urban communities.

**Dwellings and families.**—The total number of dwellings in Connecticut is 181,911, and the total number of families 246,659, there being 135.6 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling is 6.1, and the average number per family, 4.5.

**COUNTIES.**  
 NEW LONDON.—Part of Windham annexed in 1831.  
 WINDHAM.—Part annexed to New London in 1831.  
**CITIES AND TOWNS.**  
 NORWICH.—Part of Norwich town annexed to Norwich city in 1901.

NEW BRITAIN.—New Britain city made coextensive with New Britain town in 1906.  
 NEW HAVEN.—Includes Fair Haven East borough.  
 STAMFORD CITY.—Incorporated between 1860 and 1900.  
 WATERBURY.—Waterbury city made coextensive with Waterbury town in 1902.

## CHAPTER 3.

### STATISTICS OF AGRICULTURE FOR THE STATE AND ITS COUNTIES.

**Introduction.**—This chapter presents a complete statement of the statistics of agriculture for Connecticut collected at the census of 1910. Statistics of farms and farm property relate to April 15, 1910; those of farm products, expenses, and receipts are for the calendar year 1909.

**Definitions.**—To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

**Farm.**—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term referring to the work of growing crops, producing other agricultural products, and raising animals, fowls, and bees. A "farm" as thus defined may consist of a single tract of land, or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. Further, when a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1909.

**Farmer.**—A "farmer" or "farm operator," according to the census definition, is a person who directs the operations of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, tenants, and managers.

*Farm owners* include (1) farmers operating their own land only, and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "owners" being then restricted to those owning all their land.

*Farm tenants* are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1910 in three classes: (1) *Share tenants*—those who pay a certain share of the products, as one-half, one-third, or one-quarter; (2) *share-cash tenants*—those who pay a share of the products for part of the land rented by them and cash for part, and (3) *cash tenants*—those who pay a cash rental or a stated amount of labor or products, such as \$7, 10 bushels of wheat, or 100 pounds of seed cotton per acre.

*Managers* are farmers who are conducting farm operations for the owner for wages or a salary.

**Farm land.**—Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. The same classification was followed in 1880. At former censuses, except that of 1880, farm land was divided into improved land and unimproved land, woodland being included with unimproved land. *Improved*

*land* includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. *Woodland* includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. *All other unimproved land* includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics therefore must be considered at best only a close approximation.

**Total value of farm products.**—No attempt has been made at this census to compute or even to estimate approximately the total value of farm products. Among the numerous difficulties which stand in the way of obtaining a total which would be at once comprehensive, free from duplication, and confined exclusively to the products of a definite period of time are the following:

(1) The duplication resulting from the feeding of farm crops to farm live stock, when the value both of the products derived from such live stock and of the crops are included in the same total. In 1900 an attempt was made to eliminate this duplication by means of an inquiry as to the total value of the products of each farm fed to the live stock on that farm, but, aside from the fact that this would not eliminate the duplication where the products of one farm are fed to the live stock of another farm, it is believed that the farmers were unable to make even approximately accurate answers to the inquiry, and it was accordingly not included in the schedule for 1910.

(2) The fact that farmers may buy domestic animals during the census year which are subsequently sold or slaughtered during the same year, and that it is impossible to eliminate the duplication accurately; and the further fact that the value of domestic animals sold or slaughtered, or of forest products cut, during a given year (as well as some other minor items) does not usually represent a value created wholly during that year, and that it is quite impossible to ascertain the value created during the year.

(3) The fact that the returns for some products are incomplete. The returns for all products are to a considerable extent estimates made by the farmers. Special difficulty was encountered in cases where the person in possession of the farm in April, 1910, when the census was taken, was not in possession of it during the crop year 1909. In such cases the farmer was not always able to report completely and accurately the products of the land for the preceding year. It is probable that the returns for the principal crops are in general fairly accurate, but that those for minor crops and for dairy and poultry products are frequently understatements, particularly because the home consumption was disregarded or underestimated. In the belief that no accurate result could be obtained from such an inquiry, the Bureau of the Census did not even attempt to ascertain the total quantity and value of certain by-products, such as straw and cornstalks, which are of considerable importance, the schedule calling only for the value of such by-products sold.

PER CENT OF LAND AREA IN FARMS, AND AVERAGE VALUE OF FARM LAND PER ACRE, IN CONNECTICUT,  
BY COUNTIES: 1910.

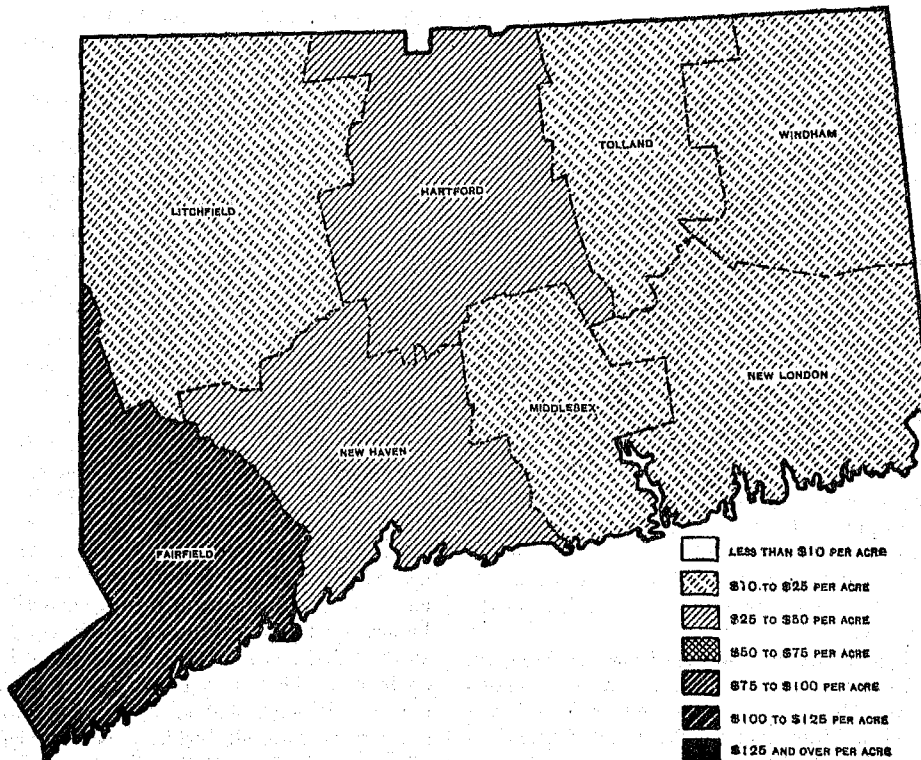

PER CENT OF LAND AREA IN FARMS.

[Per cent for the state, 70.9.]

AVERAGE VALUE OF FARM LAND PER ACRE.

[Average for the state, \$33.03.]

FARMS AND FARM PROPERTY.

Connecticut ranks forty-sixth in area and thirty-first in population among the states and territories of continental United States. The greater part of the state of Connecticut consists of rolling to mountainous highlands, interspersed by innumerable small valleys, and bordered toward the coast line by a low-rolling plateau. The eastern highland portion of the state is more gently rolling than the western highland, which near the New York state line attains to mountainous altitudes and possesses rugged topography. The two principal highland portions of the state are separated by the Connecticut Basin, occupied in part by the Connecticut River, which flows across the eastern margin of this basin and through the eastern highland to the sea. The basin itself is in general nearly level, although it is broken by mountainous ridges constituting the southern extension of the Holyoke Range.

Practically all of the soils of the state of Connecticut are derived either directly or indirectly through the glaciation of the numerous varieties of underlying rock. The highland portions of the state have been chiefly swept bare of the finer soil-forming material at all of the higher altitudes and upon the more precipitous slopes. The lower slopes and the more gently rolling portions of the highlands are deeply covered with complex glacial débris known as the till. This gives rise chiefly to stony sandy loams and stony loams, with smaller areas of heavier loam.

Within the Connecticut Basin and in all of the smaller valleys found within both portions of the

highland there have been deposited gravels, sands, sandy loams, and clays at the time of the recession of the glacial ice. These more level portions of the state constitute some of the best agricultural lands within its borders. Upon the sandy loams and the loamy soils the tobacco industry, the market gardening, and a considerable part of the fruit industry of the state are carried on. The upland soils are principally used for grazing and the production of grass and corn. Extensive areas are too steep in slope or too rocky for any other occupation than that of forestry or pasturage. The growing horticultural interests of the state are located chiefly upon the deeper areas of the glacial loams in the highland portion of the state.

The two maps on the opposite page show by counties the proportion of the total land area which is in farms and the average value of farm land per acre. Over two-thirds (70.9 per cent) of the state's total land area is in farms. The first map shows that in each county of the state from 60 to 80 per cent of all land is in farms. New London County shows the highest proportion, 75.5 per cent, of land in farms, while Middlesex County shows the smallest proportion, 63.4 per cent. The four northern counties show higher proportions of farm land than do the southern counties, New London excepted.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 (June 1)	INCREASE. <sup>1</sup>	
			Amount.	Per cent.
Population.....	1, 114, 756	908, 420	206, 336	22.7
Number of all farms.....	26, 815	26, 948	-133	-0.5
Approximate land area of the state..... acres..	3, 084, 800	3, 084, 800		
Land in farms..... acres..	2, 185, 788	2, 312, 083	-126, 295	-5.5
Improved land in farms..... acres..	988, 252	1, 064, 525	-76, 273	-7.2
Average acres per farm.....	81.5	85.8	-4.3	-5.0
Value of farm property:				
Total.....	\$159, 399, 771	\$113, 305, 580	\$46, 094, 191	40.7
Land.....	72, 206, 058	52, 441, 508	19, 764, 550	37.7
Buildings.....	66, 113, 163	44, 983, 560	21, 129, 603	47.0
Implements and machinery.....	6, 916, 648	4, 948, 300	1, 968, 348	39.8
Domestic animals, poultry, and bees.....	14, 163, 902	10, 932, 212	3, 231, 690	29.6
Average value of all property per farm.....	\$5, 944	\$4, 205	\$1, 739	41.4
Average value of land per acre.....	\$33.03	\$22.68	\$10.35	45.6

<sup>1</sup> A minus sign (-) denotes decrease.

The average value per acre of farm land for the whole state is \$33.03. The second map shows that in the eastern part of the state the value of farm land is from \$10 to \$25 per acre, while in Fairfield County,

which is in the extreme southwestern part of the state, the average value is from \$75 to \$100 per acre, or over two and a half times as high as for the state as a whole. New Haven and Hartford Counties, located

in the central part of the state, show an average value for farm land of from \$25 to \$50 per acre.

During the last 10 years there was an increase in the population of the state of 206,336, or 22.7 per cent, while there was a decrease of 133, or 0.5 per cent, in the number of farms, and of 126,295 acres, or 5.5 per cent, in farm land. The relative decrease in number of farms was much less than that in the acreage of farm land, and the average size of farms decreased 4.3 acres.

Farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), has increased in value during the decade about \$46,000,000, or 40.7 per cent. This great increase is chiefly made up of increases of nearly \$20,000,000 in the value of land and of about \$21,000,000 in the value of buildings. There is also an increase of \$5,200,000 in the value of farm equipment, including implements and machinery and live stock, of which over three-fifths represents a gain in the value of live stock. In considering the increase of values in agriculture the general increase in the prices of all commodities in the last 10 years should be borne in mind.

The average value of a farm with its equipment in 1900 was \$4,205, while 10 years later it was \$5,944. The average value of land alone rose from \$22.68 per acre in 1900 to \$33.03 in 1910, this advance being accompanied by increases in the average value per farm of implements and machinery and of live stock.

Population, number of farms, and farm acreage: 1850 to 1910.—The table following presents, for the state as a whole for each census from 1850 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

CENSUS YEAR.	Population.	FARMS.		LAND IN FARMS.			Per cent of land area in farms.	Per cent of farm land improved.
		Num-ber.	Per cent of in-crease. <sup>1</sup>	All land.		Improved land (acres).		
				Acres.	Per cent of in-crease. <sup>1</sup>			
1910.....	1,114,756	25,815	-0.5	2,185,788	-5.5	988,252	70.9	45.2
1900.....	908,420	26,948	2.3	2,312,033	2.6	1,064,525	74.9	46.0
1890.....	746,258	26,350	-13.9	2,253,432	-8.2	1,379,419	73.0	61.2
1880.....	622,700	30,598	20.0	2,453,541	3.8	1,642,188	79.5	66.9
1870.....	537,464	25,598	1.3	2,364,416	-5.6	1,646,752	76.6	69.6
1860.....	460,147	25,180	12.2	2,504,264	5.0	1,830,807	81.2	73.1
1850.....	370,792	22,445	.....	2,383,879	.....	1,768,178	77.3	74.2

<sup>1</sup> A minus sign (-) denotes decrease.

In the 60 years since 1850 the population of the state has increased from 370,792 to 1,114,756, or a little more than trebled.

There was a continuous increase in the number of farms between 1850 and 1880, followed by a net

decrease during the past 30 years. From 1900 to 1910 the number of farms decreased only 133, or 0.5 per cent.

The land surface of Connecticut is approximately 3,084,800 acres in extent. Of this area, 2,185,788 acres, or 70.9 per cent, are included in farms. Of the farm acreage, 988,252 acres, or 45.2 per cent, are reported as improved land, representing 32 per cent of the total land area of the state. The total acreage of farm land decreased 5.5 per cent during the past decade and 8.3 per cent during the past 60 years. The reported acreage of improved land shows a greater relative decrease from 1900 to 1910 than does the total acreage in farms. The acreage of farm land which is improved was in 1910 about 76,000 acres less than it was 10 years ago.

The foregoing table shows also that both the total farm acreage and the acreage of improved land are smaller in 1910 than in any of the preceding years. The farm acreage has increased and decreased alternately during the successive decades since 1850, while the acreage of improved land increased during the decade ending in 1860, but has decreased continuously since that time. Of all farm land, the percentage which was improved has decreased continuously since 1850. The slightest change, however, was during the past decade, while the greatest change was during the decade between 1890 and 1900. The decrease doubtless represents a change in the classification of land by many farmers who now report as "unimproved land" some acreage which they formerly called "improved."

Values of farm property: 1850 to 1910.—The agricultural changes in Connecticut since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

CENSUS YEAR.	FARM PROPERTY.							
	Total.		Land and buildings.		Implements and machinery.		Domestic animals, poultry, and bees.	
	Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase. <sup>1</sup>
1910.....	\$159,399,771	40.7	\$138,319,221	42.0	\$6,915,648	39.8	\$14,163,902	29.6
1900.....	113,305,580	4.9	97,425,068	2.6	4,948,300	60.9	10,932,212	8.6
1890.....	108,050,708	-20.1	95,000,595	-21.5	3,075,495	-2.8	9,974,613	-9.0
1880.....	135,185,834	18.5	121,063,910	21.8	3,162,628	21.8	10,959,294	-21.0
1870.....	116,028,415	11.1	99,393,106	9.4	2,597,279	11.0	14,036,030	24.1
1860.....	104,480,566	27.3	90,830,005	24.9	2,339,481	23.6	11,311,079	51.6
1850.....	82,086,453	.....	72,726,422	.....	1,892,541	.....	7,467,490	.....

<sup>1</sup> A minus sign (-) denotes decrease.

<sup>2</sup> Computed gold values, being 80 per cent of the currency values reported.

The total wealth in the form of farm property is about \$159,400,000, of which 86.8 per cent is represented by land and buildings, 4.3 per cent by implements and machinery, and 8.9 per cent by live stock. The gain (40.7 per cent) in the total value of farm property from 1900 to 1910 is a much greater relative increase than has taken place in any earlier decade,

while the actual amount of the gain (\$46,094,191) is more than twice as great as the increase reported for any other decade and contrasts particularly with the large decrease from 1880 to 1890—a decrease which was shared by all three of the specified classes of property. The percentage increase in value of implements and machinery from 1900 to 1910, however, was less than from 1890 to 1900.

**Average acreage and values per farm: 1850 to 1910.**—The changes which have taken place during the past 60 years in the average acreage of Connecticut farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

CENSUS YEAR.	Average acres per farm.	AVERAGE VALUE PER FARM. <sup>1</sup>				Average value of land and buildings per acre.
		All farm property.	Land and buildings.	Implements and machinery.	Domestic animals, poultry, and bees.	
1910.....	81.5	\$5,944	\$5,158	\$258	\$528	\$63.28
1900.....	85.8	4,205	3,615	184	406	42.14
1890.....	85.5	4,101	3,605	117	379	42.16
1880.....	80.2	4,418	3,957	103	358	49.34
1870 <sup>2</sup> .....	92.7	4,549	3,897	102	550	42.04
1860.....	99.5	4,149	3,607	93	449	36.27
1850.....	106.2	3,657	3,240	84	333	30.51

<sup>1</sup> Averages are based on "all farms" in state.  
<sup>2</sup> Computed gold values, being 80 per cent of the currency values reported.

In average size the Connecticut farm has shown a net decrease of 24.7 acres since 1850. There was a rapid decrease from 1850 to 1880, an increase during the next 20 years, and a decrease of 4.3 acres during the past decade.

The average value of a Connecticut farm, including its equipment, has grown during the last decade from \$4,205 to \$5,944. Of this \$5,944, \$5,158 represents the value of land and buildings, \$528 the value of live stock, and \$258 the value of implements and machinery. The average value per farm of all farm property increased more than three times as much in the last decade as during the preceding half century, and is now over one and a half times as great as in 1850. During the last decade the value per acre of land and buildings has increased \$21.14, or over one and three-fourths times as much as during the preceding half century. The value per farm of equipment, which includes implements and machinery and live stock, is about one and seven-eighths times as great as 60 years ago.

**Farm tenure: 1880 to 1910.**—The next table shows the distribution of the farms of the state according to character of tenure at each census since 1880.

While there was a decrease of 133 in the total number of farms during the past decade, the number operated by owners and managers increased 702 and the number operated by tenants decreased 835.

In 1880 about ten out of every one hundred farms were operated by tenants. This proportion increased during the next 20 years, until in 1900 about thirteen farms in every one hundred were operated by tenants.

In the last decade, however, the movement was reversed, and tenancy is a little less frequent in 1910 than in 1880.

Throughout the 30-year period share tenancy has decreased, while cash tenancy, which increased between 1880 and 1900, decreased since that time. "Cash tenants" here include "nonspecified" and "share tenants" include "share-cash." In 1890 cash tenancy was more than twice as frequent and in 1910 about seven times as frequent as share tenancy. During the past decade the number of farms operated by share tenants decreased 374 and those operated by cash tenants decreased 461. Cash tenancy represents 8.6 per cent of all the farms, while share tenancy represents 1.2 per cent.

TENURE.	1910	1900	1890	1880
Number of all farms.....	26,815	26,943	26,350	30,598

Farms consisting of owned land only.....	22,147	21,573	(1)	(1)
Farms consisting of owned and hired land	1,087	1,132	(1)	(1)
Farms operated by managers.....	949	776	(1)	(1)
Farms operated by tenants.....	2,632	3,467	3,040	3,126
Share tenants.....	288	704	938	1,206
Share-cash tenants <sup>1</sup> .....	42			
Cash tenants.....	1,705	2,763	2,102	1,920
Tenure not specified <sup>2</sup> .....	607			
Per cent of farms operated by—				
Owners and managers.....	90.2	87.1	88.5	89.8
Tenants.....	9.8	12.9	11.5	10.2
Share and share-cash.....	1.2	2.6	3.6	3.9
Cash and nonspecified.....	8.6	10.3	8.0	6.3

<sup>1</sup> Not reported separately.  
<sup>2</sup> Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1880.  
<sup>3</sup> Prior to 1910 nonspecified tenants were included with cash tenants.

The following table shows the acreage, improved acreage, and value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED BY—	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	2,185,738	2,312,083	983,252	1,064,525	\$138,319,221	\$97,425,068
Owners.....	1,831,807	1,910,774	827,009	876,335	106,841,306	79,196,530
Managers.....	136,649	104,667	61,553	46,956	19,672,948	7,145,348
Tenants.....	217,332	296,642	99,685	141,234	11,804,967	11,083,190

The following table shows the per cent distribution, by tenure groups, of the items in the preceding table, and also of the number of farms:

FARMS OPERATED BY—	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Owners.....	86.6	84.3	83.8	82.6	83.7	82.3	77.2	81.3
Managers.....	3.5	2.9	6.3	4.5	6.2	4.4	14.2	7.3
Tenants.....	9.8	12.9	9.9	12.8	10.1	13.3	8.6	11.4

It will be seen that, in 1910, 83.8 per cent of all land in farms was in farms operated by their owners (including part owners), 6.3 per cent in farms operated

by managers, and 9.9 per cent in farms operated by tenants, the percentage for owners and for managers being higher and that for tenants lower than in 1900.

As shown by the next table, the average size of farms operated by managers in 1910 (144 acres) was much greater than that of tenant farms (82.6 acres), which was in turn somewhat larger than that of farms operated by owners (78.8 acres). The average size of farms operated by managers increased between 1900 and 1910, while that of farms operated by owners and by tenants decreased. In 1910 the percentage of farm land improved was slightly higher for tenant farms than for farms operated by owners or those operated by managers.

FARMS OPERATED BY—	AVERAGE ACRES PER FARM.				PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	All land.		Improved land.		1910	1900	Per farm.		Per acre.	
	1910	1900	1910	1900			1910	1900	1910	1900

**Farm mortgages: 1890 to 1910.**—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

CLASS.	OWNED FARMS. <sup>1</sup>		OWNED FARM HOMES.		OWNED FARM HOMES. <sup>2</sup>	
	1910		1900		1890	
	Number.	Per cent. <sup>3</sup>	Number.	Per cent. <sup>3</sup>	Number.	Per cent.
Total.....	23,234		22,669		21,765	
Free from mortgage.....	13,080	56.8	13,250	59.3	14,996	68.9
Mortgaged.....	9,958	43.2	9,038	40.7	6,769	31.1
Unknown.....	196		321			

<sup>1</sup> Includes all farms owned in whole or in part by the operator.  
<sup>2</sup> The 357 "owned farm homes" for which no reports were secured were distributed between "free from mortgage" and "mortgaged" in 1890.  
<sup>3</sup> Per cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 23,234. Of this number, 13,080 were reported as free from mortgage;

9,958 were reported as mortgaged; and for 196 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 43.2 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is only slightly greater than it was in 1900 and considerably greater than it was in 1890. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the numbers reported at the later censuses, because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that from 1890 to 1910 the number of mortgaged farms increased much more than the number free of mortgage decreased.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 9,958 farms reported as mortgaged, 9,439 are wholly owned by the farmers, and for 9,062 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARMS OR FARM HOMES MORTGAGED.		INCREASE.	
	1910 <sup>1</sup>	1890 <sup>2</sup>	Amount.	Per cent.
Number.....	9,062	6,769		
Value—Land and buildings.....	\$37,906,308	\$21,084,559		
Amount of mortgage debt.....	\$11,859,468	\$8,587,786		
Per cent of debt to value.....	31.3	40.6		
Average value per farm.....	\$4,183	\$3,115	\$1,068	34.3
Average debt per farm.....	\$1,309	\$1,266	\$43	3.4
Average equity per farm.....	\$2,874	\$1,849	\$1,025	55.4

<sup>1</sup> Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.  
<sup>2</sup> Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms covered by these statistics increased in 20 years from \$1,266 to \$1,309, or 3.4 per cent, while the average value of such farms rose from \$3,115 to \$4,183, or 34.3 per cent. Thus the owner's equity increased from \$1,849 to \$2,874, or 55.4 per cent. As a result of the greater relative increase in farm value than in farm debt, the

mortgage indebtedness, which was 40.6 per cent of the value of the farm in 1890, has decreased to 31.3 per cent of this value in 1910.

**Farms by size groups: 1910 and 1900.**—The largest number of Connecticut farms is found in the "50 to 99 acres" group, which comprises nearly a quarter of all the farms. The two groups on either side, namely, the "20 to 49 acres" group with 23.5 per cent of the farms, and the "100 to 174 acres" group, with 18.6 per cent, are, in the order named, next in importance. Together the three groups comprise about two-thirds of all the farms. The changes during the last decade have been in the direction of increases in the relative number of smaller farms at the expense of the relative number of larger ones. The percentages of farms in every size group under 49 acres, except that "under 3 acres," have increased, and the percentages of farms in every group over 50 acres, except the comparatively few farms in the groups over 500 acres, have decreased during the decade.

The decrease in the number of places "under 3 acres" reported as farms may be due to a different interpretation by the enumerators as to what to include as a small farm, or may represent an actual decrease in that type of farm.

The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP.	NUMBER OF FARMS.		INCREASE. <sup>1</sup>		PER CENT OF TOTAL.	
	1910	1900	Number.	Per cent.	1910	1900
Total.....	26,815	26,948	-133	-0.5	100.0	100.0
Under 3 acres.....	223	377	-154	-40.8	0.8	1.4
3 to 9 acres.....	2,693	2,060	643	31.4	10.0	7.6
10 to 19 acres.....	3,119	2,699	420	15.6	11.6	10.0
20 to 49 acres.....	6,306	6,218	88	1.4	23.5	23.1
50 to 99 acres.....	6,634	6,943	-309	-4.5	24.7	25.8
100 to 174 acres.....	4,990	5,494	-495	-9.0	18.6	20.4
175 to 499 acres.....	1,702	1,945	-243	-12.5	6.3	7.2
500 to 999 acres.....	911	1,009	-98	-9.7	3.4	3.7
1,000 acres and over.....	188	187	1	0.5	0.7	0.7
	40	26	14	53.8	0.1	0.1

<sup>1</sup> A minus sign (-) denotes decrease.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 6,035), and also the farms of between 175 and 499 acres (numbering 2,613):

SIZE GROUP.	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	2,185,788	2,312,083	988,252	1,064,525	\$138,319,221	\$97,425,068
Under 20 acres.....	58,797	51,662	42,447	38,537	21,940,957	12,502,040
20 to 49 acres.....	204,701	204,106	115,940	118,470	25,912,631	17,964,110
50 to 99 acres.....	462,650	485,968	232,989	248,689	31,914,010	23,475,298
100 to 174 acres.....	632,896	695,076	285,839	320,083	29,049,908	22,445,340
175 to 499 acres.....	649,805	729,126	261,958	292,568	23,625,686	18,517,830
500 to 999 acres.....	117,232	111,087	37,725	35,318	4,042,753	2,002,960
1,000 acres and over.....	59,707	35,058	11,354	10,860	1,833,281	517,490

The following table shows the per cent distribution, by size groups, of the items presented in the preceding table, and also of the number of farms:

SIZE GROUP.	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 20 acres.....	22.5	19.0	2.7	2.2	4.3	3.6	15.9	12.8
20 to 49 acres.....	23.5	23.1	9.4	8.8	11.7	11.1	18.7	18.4
50 to 99 acres.....	24.7	25.8	21.2	21.0	23.6	23.4	23.1	24.1
100 to 174 acres.....	18.6	20.4	29.0	30.1	28.9	30.1	21.0	23.0
175 to 499 acres.....	9.7	11.0	29.7	31.5	26.5	27.5	17.1	19.0
500 to 999 acres.....	0.7	0.7	5.4	4.8	3.8	3.3	2.9	2.1
1,000 acres and over.....	0.1	0.1	2.7	1.5	1.1	1.0	1.3	0.5

Of the total farm acreage of the state in 1910, 29 per cent was in farms of 100 to 174 acres, and 29.7 per cent in farms of 175 to 499 acres, these two being from the standpoint of aggregate acreage the most important size groups. Between 1900 and 1910 the proportion of the total acreage which was in farms of less than 100 acres, as well as the proportion in farms of 500 acres or more, increased, while the proportion in farms of from 100 to 499 acres decreased.

As shown by the next table, the percentage of farm land improved diminishes as the size of the farms increases. For this reason, and also because buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land also diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group. Many of the small farms in Connecticut are practically places of residence of wealthy persons, with expensive buildings, and many others are highly improved truck farms.

SIZE GROUP.	PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	1910	1900	Per farm.		Per acre.	
			1910	1900	1910	1900
Total.....	45.2	46.0	\$5,158	\$3,615	\$63.28	\$42.14
Under 20 acres.....	72.2	74.6	3,686	2,439	373.16	242.00
20 to 49 acres.....	56.0	58.0	4,109	2,889	128.59	88.01
50 to 99 acres.....	50.4	51.2	4,811	3,381	68.93	48.31
100 to 174 acres.....	45.2	46.0	5,811	4,085	45.90	32.29
175 to 499 acres.....	40.3	40.1	9,042	6,269	36.36	25.40
500 to 999 acres.....	32.2	31.8	21,504	10,711	34.49	18.03
1,000 acres and over.....	19.0	31.0	45,832	19,903	30.70	14.76

**Color and nativity of farmers: 1910.**—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers.

Three out of every 4 Connecticut farmers were native whites and 1 out of 4 was a foreign-born white. Only 113, or 0.4 per cent of all farmers, were nonwhites, 105 being negroes and 8 being Indians. Of the native whites, 10 per cent were tenants, as compared with

9.2 per cent among foreign-born whites and 19.5 per cent among the nonwhite farmers.

Of the 6,861 foreign-born white farmers in Connecticut in 1910, 1,538 were born in Germany; 1,164 in Ireland; 676 in Russia; 675 in Sweden; 551 in England; 544 in Austria; 396 in Canada; 319 in Italy; and 191 in Hungary. Other European countries were represented by a total of 778 farmers, and non-European countries, other than Canada, by 29.

The table which follows shows the color and nativity of farm operators by character of tenure for 1910.

COLOR AND NATIVITY.	FARM OPERATORS.							
	Total.		Own-ers.	Ten-ants.	Man-agers.	Per cent of total.		
	Num-ber.	Per cent dis-tribution.				Own-ers.	Ten-ants.	Man-agers.

Negro and other non-white.....	113	0.4	79	22	12	69.9	19.5	10.6

### DOMESTIC ANIMALS, POULTRY, AND BEES.

**Domestic animals on farms: 1910.**—The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this chapter, but in the general census reports the figures for the several states will be presented.

The total value of live stock on farms, including domestic animals, poultry, and bees, in 1910 was \$14,164,000, of which domestic animals contributed \$13,133,000. The value of cattle represented 47.5 per cent of the total value of live stock; that of horses and mules, 41 per cent; that of swine, 3.3 per cent; that of sheep and lambs, 0.8 per cent, and that of poultry, 7 per cent, the other classes being insignificant.

Of all the farms in the state, 79.5 per cent report cattle, 77.7 per cent report "dairy cows," and only 18.8 per cent "other cows." Only 471 farms have cattle without having dairy cows. The number of all cows increased somewhat during the decade, and the average value of dairy cows increased from \$33.71 to \$41.60, while that of other cows decreased from \$26.26 to \$25.71. The farms reporting dairy cows show an average of nearly 6 per farm.

The census of 1900 was taken as of June 1, after all the spring calves were born, while that of 1910 was taken as of April 15, before the close of the calving season and when the calves on hand were on the average younger than at the enumeration of 1900. As a result, the calves enumerated were fewer in number and of lower average value in 1910 than in 1900, the number decreasing from 37,300 to 20,601, and the average value decreasing from \$7.86 to \$6.52.

Horses are reported by 78.2 per cent of all the farms in the state, but only 2 per cent report colts born in 1909, and 0.3 per cent report spring colts. The average value of mature horses is reported at \$124.62.

Less than one farm out of every hundred reports mules. No mule colts born in the spring of 1910 are reported. The average value of mature mules is considerably higher than that of horses.

Sheep and lambs are reported from 741, or only 2.8 per cent, of all the farms in the state. Of these 741 farms, 535 report spring lambs and 692 report ewes, the latter averaging over 18 per farm reporting.

Of all farms, 33 per cent report swine, the average number being nearly 6 per farm reporting. The average value of the swine reported as "hogs and pigs born before January 1, 1910," is \$12.26, while that of spring pigs is more than one-third as much.

The following table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Num-ber.	Per cent of all farms.	Number.	Value.	Average value.
Total.....	24,262	90.5	.....	\$13,133,340	.....

<sup>1</sup> Less than one-tenth of 1 per cent.

**Poultry on farms: 1910 and 1900.**—The increase reported in the number of fowls on Connecticut farms during the past decade amounts to 15.2 per cent, while the value increased from \$644,000 to \$989,000, or 53.5 per cent. The number of farms reporting poultry increased only from 23,064 to 23,214, but the average number of fowls per farm reporting increased from 48 to 55. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value and the number of farms reporting each kind in 1910:

KIND.	1910 (April 15)				1900 (June 1)
	Farms reporting.		Number of fowls.	Value.	Number of fowls.
	Number.	Per cent of all farms.			
Total.....	23,214	88.6	1,265,702	\$988,652	1,098,373
Chickens.....	23,161	89.4	1,217,723	936,701	1,073,026
Turkeys.....	905	3.4	3,911	14,137	7,717

Guinea fowls.....	1,052	3.9	7,653	5,480	(1)
Pigeons.....	599	2.2	21,988	12,230	(2)
All other <sup>3</sup> .....	7	(4)	418	1,140	(3)

<sup>1</sup>Included with chickens.

<sup>2</sup>Not reported.

<sup>3</sup>Four farms report 9 peafowls, valued at \$105; 2 farms report 405 pheasants, valued at \$1,010; and 1 farm reports 4 Chinese geese, valued at \$25.

<sup>4</sup>Less than one-tenth of 1 per cent.

**Bees on farms: 1910 and 1900.**—The number of farms reporting bees has decreased from 2,252 in 1900 to 1,798 in 1910, or 20.2 per cent. The number of colonies of bees decreased from 11,438 to 9,445, or 17.4 per cent, and their value increased from \$40,528 to \$41,839, or 3.2 per cent. The average value of bees per farm reporting was \$18 in 1900 and \$23.27 in 1910. About six farms in every one hundred report bees.

**Domestic animals not on farms: 1910.**—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on

farms. In the table below age groups are omitted for the sake of brevity.

KIND.	Number of inclosures reporting.	ANIMALS.		
		Number.	Value.	Average value.
Total.....	17,582		\$6,623,579	
All cattle.....	4,285	7,896	321,093	\$40.67
Dairy cows.....	4,126	6,152	283,180	46.03
Horses.....	14,868	38,520	6,225,519	161.62
Mules.....	80	183	32,856	179.54
Asses and burros.....	18	26	1,990	76.54
Swine.....	1,325	3,882	36,460	9.39
Sheep.....	28	489	2,688	5.50
Goats.....	239	395	2,973	7.53

As would be expected, horses are by far the most important class of domestic animals not on farms, both in number and in value; cattle, about three-fourths of which are dairy cows, rank next in importance.

**Domestic animals on farms and not on farms: 1910.**—The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

KIND.	DOMESTIC ANIMALS.					
	Total.		On farms.		Not on farms.	
	Number.	Value.	Number.	Value.	Number.	Value.
Total.....		\$19,756,919		\$13,133,340		\$6,623,579
All cattle.....	203,214	7,051,380	195,318	6,730,287	7,896	321,093
Dairy cows.....	129,005	6,393,338	122,853	5,110,158	6,152	283,180
Horses.....	84,861	11,904,919	46,341	5,739,400	38,520	6,225,519
Mules.....	599	105,677	410	72,721	183	32,856
Asses and burros.....	87	5,047	41	3,057	26	1,990
Swine.....	56,254	509,201	52,372	472,741	3,882	36,460
Sheep.....	22,907	115,037	22,413	112,349	489	2,688
Goats.....	895	6,758	500	2,785	395	2,973

The total value of all domestic animals in the state in 1910 was \$19,757,000, of which the value of animals not on farms represented 33.5 per cent, this comparatively high proportion being attributable to the urban character of a considerable portion of the population of Connecticut. The number of horses not on farms was more than three-quarters of the number on farms, but in the case of other classes of animals the proportion not on farms was much lower.

**LIVE STOCK PRODUCTS.**

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, dupli-

cation would result from the fact that part of the crops are fed to the live stock.

**Dairy products: 1909 and 1899.**—The number of farms reporting dairy cows on April 15, 1910, was 20,844, but only 17,812 reported dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than

the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 15,324 (materially less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 93,874. The amount of milk reported was 45,750,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 487 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk, cream, and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$7,669,000, which may be defined as the total value of dairy products exclusive of milk and cream used on the farm producing.

About three-fourths of the milk produced in Connecticut in 1909 was sold as such. A comparatively large quantity of milk and cream was sold on the butter fat basis. The butter made on farms in 1909 was valued at \$1,078,000.

The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FARMS REPORTING.		Number or quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms.			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	20,844	77.7	122,863	Head		
On farms reporting dairy products in 1909.....	17,812	66.4	112,577	Head		
On farms reporting milk produced in 1909.....	15,324	57.1	93,874	Head		
Specified dairy products, 1909:						
Milk reported.....			45,749,849	Gals.		
Butter made.....	9,196	34.3	3,498,551	Lbs.	\$1,077,658	\$0.31
Cheese made.....	143	0.5	79,156	Lbs.	7,862	0.09
Milk sold.....	7,755	28.9	34,000,152	Gals.	5,903,480	0.17
Cream sold.....	889	3.3	452,427	Gals.	326,311	0.72
Butter fat sold.....	847	3.2	1,063,096	Lbs.	354,382	0.33
Butter sold.....	5,141	19.2	2,337,834	Lbs.	736,701	0.32
Cheese sold.....	75	0.3	55,075	Lbs.	4,559	0.08
Total receipts from sales, 1909.....					7,325,433	
Total value of milk, cream, and butter fat sold and butter and cheese made, 1909.....					7,669,183	
Specified dairy products, 1899:						
Butter made.....	12,188	45.2	4,501,739	Lbs.		
Cheese made.....	123	0.5	40,623	Lbs.		
Butter sold.....			3,453,219	Lbs.	823,877	0.24
Cheese sold.....			32,886	Lbs.	4,416	0.13

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced

and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material decrease between 1899 and 1909 in the amount of butter made, while the production of cheese shows a decided increase.

**Wool: 1909 and 1899.**—The table below gives statistics as to the production of wool on farms, the figures being partly based on estimates:<sup>1</sup>

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value.
Sheep of shearing age on farms April 15, 1910.....	704	14,043			
Wool produced, as reported, 1909.....	433		10,884	57,750	\$15,153
On farms reporting sheep April 15, 1910.....	406	10,690	10,246	54,255	14,106
On other farms.....	27		638	3,495	1,047
Total production of wool (partly estimated):					
1909.....			13,460	71,272	18,530
1899.....			23,324	104,438	22,534
Decrease, 1899 to 1909.....			9,864	33,166	4,004
Per cent of decrease.....			42.3	31.8	17.8

The total number of sheep of shearing age in Connecticut on April 15, 1910, was 14,043, representing a decrease of 39 per cent as compared with the number on June 1, 1900 (23,021). The approximate production of wool during 1909 was 13,460 fleeces, weighing 71,272 pounds, and valued at \$18,530. Of these totals about one-fifth represents estimates. The number of fleeces produced in 1909 was 42.3 per cent less than in 1899. The average weight per fleece in 1909 was 5.3 pounds, as compared with 4.5 pounds in 1899, and the average value per pound was 26 cents, as compared with 22 cents in 1899.

**Goat hair and mohair: 1909.**—Although 98 farmers reported 500 goats and kids on their farms April 15, 1910, only 12 farmers reported the production of goat hair or mohair during 1909. These farmers reported 316 fleeces, weighing 1,009 pounds and valued at \$231.

**Poultry products: 1909 and 1899.**—The next statement gives data relative to the production and sale of eggs and poultry.

The total number of fowls on Connecticut farms on April 15, 1910, was 1,266,000. Of the 23,214 farms reporting fowls, 2,664 did not report any eggs produced in 1909, and 3,310 did not report any poultry

<sup>1</sup> Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 298 farmers who reported the possession of 3,353 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909, and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

raised in 1909. The production of eggs actually reported for the year 1909 was 7,883,000 dozens, valued at \$2,279,000. According to the Twelfth Census reports, the production of eggs in 1899 was 7,959,000 dozens, the value being \$1,523,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 8,566,000 dozens, valued at \$2,476,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 2,046,000 fowls, valued at \$1,375,000.

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms April 15, 1910.....	23, 214	1, 265, 702

Per cent of increase.....				39. 7
Fowls sold, as reported, 1909.....	12, 812		843, 065	598, 132

**Honey and wax: 1909.**—Although, as noted elsewhere, 1,798 farms reported 9,445 colonies of bees on hand April 15, 1910, 677 of these farms, with 1,914 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 145,722 pounds of honey, valued at \$25,558, and 1,096 pounds of wax, valued at \$355; the true totals are doubtless somewhat above these figures.

**Summary: 1909 and 1899.**—The next table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in

**Sale or slaughter of domestic animals on farms: 1909 and 1899.**—The following statement presents statistics relating to the sale or slaughter of domestic animals by Connecticut farmers during the year 1909, with certain items for 1899:

	FARMS REPORTING.		Number of animals.	VALUE.	
	Number.	Percent of all farms.		Total.	Average.
1909—All domestic animals:					
Sold.....				\$2, 687, 816

Sold <sup>1</sup> .....				1, 169, 235	
Slaughtered.....				845, 123	

<sup>1</sup> Less than one-tenth of 1 per cent.

<sup>2</sup> Schedules called for receipts from sales of animals raised on the farms reporting.

The total value of domestic animals sold during 1909 was \$2,688,000 and that of animals slaughtered on farms \$753,000, making an aggregate of \$3,441,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year. The value of the cattle (including calves) sold during 1909 represented about 80 per cent of the total value of animals sold.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the total value of those slaughtered during 1899, which amounted, respectively, to \$1,169,000 and \$845,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales, whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

**CROPS.**

quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

The total value of crops in 1909 was \$22,488,000. Of this amount 85.2 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of

by-products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 534,846, representing 54.1 per cent of

the total improved land in farms (988,252 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

<sup>1</sup> A minus sign (-) denotes decrease.  
<sup>2</sup> Less than one-tenth of 1 per cent.

<sup>3</sup> Less than 1 acre.  
<sup>4</sup> Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The general character of Connecticut agriculture is indicated by the fact that only 9.1 per cent of the total value of crops in 1909 was contributed by the cereals, while nearly one-third (32.1 per cent) was contributed by hay and forage, nearly one-fifth (19.6 per cent) by tobacco, and about one-sixth (17.1 per cent) by potatoes and other vegetables. The remainder, representing in value about 22 per cent of the total, consisted mostly of forest products, fruits and nuts, flowers and plants, and nursery products.

The total value of crops in 1909 was 35.3 per cent greater than that in 1899, this increase being due in large measure to higher prices. There was a decrease of 11.4 per cent in the total acreage of crops for which acreage was reported, this being due largely to a decrease in the acreage of hay and forage.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, tobacco, and sundry minor crops.

The leading crops covered by the table, in the order of their importance as judged by value, are hay and forage, \$7,225,000; tobacco, \$4,416,000; potatoes, \$1,882,000; and corn, \$1,694,000. It should be noted, however, that vegetables (other than potatoes and sweet potatoes and yams), statistics for which are reported in another table, are more important than corn.

By far the most important crop of the state in acreage and value is hay and forage, it being almost eight times as great in extent as corn, the second crop in acreage, and valued at more than 60 per cent above tobacco, the second crop in value. Potatoes,

with an acreage of about 50 per cent above that of tobacco, show a value less than half as great. Corn, with an acreage a little more than double that of potatoes, is reported at 10 per cent less in value, while oats fall in acreage and value, respectively, to one-fifth and one-tenth of that of corn.

Sundry minor crops, total <sup>4</sup> .....		<b>(<sup>5</sup>)</b>			<b>833</b>

<sup>1</sup> Includes small amounts of flaxseed, dry peas, and tobacco seed.  
<sup>2</sup> Includes small amounts of grass seeds.  
<sup>3</sup> The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage, flowers and plants, etc.  
<sup>4</sup> Includes small amounts of broom corn, ginseng, and hops.  
<sup>5</sup> Less than 1 acre.

Among the hay and forage crops "other tame or cultivated grasses" leads in farms reporting in acreage and in yield, although "timothy and clover mixed" is reported at a little higher value. Third in order in both acreage and value is "timothy alone."

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

CROP YEAR.	ACRES HARVESTED.					
	Corn.	Oats.	Rye.	Hay and forage.	Potatoes.	Tobacco.
1909.....	52,717	10,207	7,601	401,322	23,959	16,042
1899.....	47,914	9,883	10,282	478,555	27,148	10,119
1889.....	40,445	24,423	16,100	511,728	23,090	6,331
1879.....	55,796	36,691	29,794	542,495	27,789	8,666

The acreage of corn decreased very greatly from 1879 to 1889, since which time it has shown a considerable increase, though there is still a net loss of over 3,000 acres for the 30-year period. Oats decreased in acreage during the three decades over 72 per cent, notwithstanding a slight increase from 1899 to 1909. The acreage of rye shows a decrease for the 30 years of 74.5 per cent. The total acreage of cereals increased slightly during the decade, there being 72,032 acres in 1899 and 74,083 acres in 1909.

In the acreage of potatoes there has been a constant fluctuation. Starting with nearly 28,000 acres in 1879, there was a decrease of nearly 5,000 acres in 1889, an increase nearly equaling this loss during the next decade and a decline between 1899 and 1909 of over 3,000 acres. The acreage of tobacco, after a decrease of over one-fourth between 1879 and 1889, increased during the next 20 years to more than two and a half times the acreage of 1889.

The next table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909.

CROP.	PER CENT OF FARMS REPORTING.		PER CENT OF IMPROVED LAND.		Per cent of increase in acres: 1899 to 1909 <sup>1</sup>	AVERAGE YIELD PER ACRE.	AVERAGE VALUE PER ACRE.
	1909	1899	1909	1899		1909	1909
	Corn.....	60.9	60.2	5.3	4.5	10.0	48.0 Bu.

Potatoes.....	80.1	82.2	2.4	2.6	-11.7	112.0 Bu.	78.56
Tobacco.....	10.7	10.8	1.6	1.0	58.5	1,752.3 Lbs.	275.27

<sup>1</sup> A minus sign (-) denotes decrease.

Seven-eighths of the farms report hay and forage, eight-tenths report potatoes, and six-tenths report corn; none of the other crops are reported by a large proportion of the farms, rye coming next in order below corn, but with a frequency less than one-fourth as great, oats and tobacco ranking still lower.

The crops enumerated in the preceding table account for 52 per cent of all improved land, the remaining 48 per cent being occupied by crops not here enumerated and by building sites and pasture.

During the past decade the increases in acreage are in tobacco, corn, and oats; the decreases are in rye, buckwheat, hay and forage, and potatoes.

The acreage of hay and forage is fairly evenly distributed over the state. The counties of Litchfield and Fairfield rank first and second, with Middlesex last. The decrease in acreage during the past decade is likewise general, being shared in by every county and in not widely differing degrees. The acreage in corn varies by counties from about 13,600, a fourth of that for the state, in Hartford County, down to less than 3,000 acres in Middlesex County. The increase during the past decade includes every county, except Fairfield, Litchfield, and Windham. More than one-third of the oats is reported for Litchfield County, the next county in order being Fairfield. Nearly seven-eighths of the acreage of tobacco is reported from Hartford County.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere) and also with regard to flowers and plants and nursery products:

CROPS.	FARMS REPORTING: 1909		ACRES.		VALUE OF PRODUCTS.	
	Number.	Per cent of all farms.	1909	1899	1909	1899
Vegetables, other than potatoes and sweet potatoes and yams, total.....	1 20,775	77.5	10,250	12,349	\$1,965,635	\$1,266,902

All other farms.....	28	0.1	.....	.....	4,144	.....

<sup>1</sup> Does not include 1,916 farms which reported that they had vegetable gardens, but gave no information as to their products.

In 1909 the total acreage of potatoes and other vegetables was 40,250 acres and their value \$3,851,867. Excluding (so far as reported separately<sup>1</sup>) potatoes and sweet potatoes and yams, the acreage of vegetables was 16,250 and their value \$1,966,000, both acreage and value being materially greater than in 1899. The table distinguishes between farms which make the raising of vegetables a business of some importance (having produced vegetables valued at \$500 or more in 1909) and other farms, on most of which vegetables are raised mainly for home consumption. While there

<sup>1</sup> It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

were in 1909 only 571 farms in the first class, they reported somewhat less than one-third of the total acreage of vegetables and about two-fifths of the total value, the average acreage of vegetables per farm for these farms being 8.3 and the average value of products per acre \$169.25.

The raising of flowers and plants and of nursery products is also relatively important in Connecticut, 1,330 acres being devoted to them in 1909, and the output being valued at \$1,308,937. Most of the product was raised on a few farms where these branches of agriculture were carried on as an important business.

**Small fruits: 1909 and 1899.**—The following table shows data with regard to small fruits on farms:

CROP.	Number of farms reporting: 1909	ACRES.		Quantity (quarts): 1909	Value: 1909
		1909	1899		
<b>Small fruits, total</b> .....		<b>1,597</b>	<b>1,987</b>	<b>3,823,522</b>	<b>\$316,752</b>
Strawberries.....	2,200	993	971	3,016,295	235,648
Blackberries and dewberries.....	555	128	177	192,752	16,899
Raspberries and loganberries.....	943	289	366	384,256	40,618
Currants.....	570	54	175	74,488	7,056
Gooseberries.....	130	9	7	9,023	878
Cranberries.....	105	123	275	145,408	9,555
Other berries.....	4	1	16	1,300	128

Strawberries were by far the most important of the small fruits grown in Connecticut, with raspberries and loganberries ranking next. The total acreage of small fruits in 1909 was 1,597 and in 1899, 1,987, a decrease of 19.6 per cent. The production in 1909 was 3,824,000 quarts, as compared with 3,839,000 quarts in 1899, and the value \$317,000, as compared with \$278,000.

**Orchard fruits, grapes, and nuts: 1909 and 1899.**—The next table presents data with regard to orchard fruits, grapes, and nuts. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

The total quantity of orchard fruits produced in 1909 was 1,874,000 bushels, valued at \$1,327,000. Apples contributed more than four-fifths of this quantity, peaches and nectarines and pears most of the remainder. The production of grapes and nuts was relatively unimportant. The nuts consisted chiefly of hickory nuts, black walnuts, butternuts, and chestnuts.

The production of all orchard fruits in 1909 was 51.2 per cent less in quantity than in 1899, and grapes also showed a decrease. The value of orchard fruits increased from \$1,011,000 in 1899 to \$1,327,000 in 1909, and that of grapes from \$43,112 in 1899 to \$43,523 in 1909. It should be noted in this connection that the values for 1899 include the value of more advanced products derived from orchard fruits or

grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

CROP.	TREES OR VINES OF BEARING AGE: 1910		TREES OR VINES NOT OF BEARING AGE: 1910		PRODUCT.

Sirup made.....	293	1.1				4,854
Total, 1899.....	59	0.2		4,930	Lbs....	1,736
Sugar made.....				948	Gals....	750
Sirup made.....				121	Tons...	986
Sorghum cane, 1909 <sup>2</sup> .....	17	0.1	9			1,043

<sup>1</sup> Number of trees. <sup>2</sup> Used as coarse forage.

**Forest products: 1909 and 1899.**—The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in 1909." There were 15,378 farms in Connecticut (57.3 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$1,861,853, as compared with \$1,275,720 in 1899, an increase of 45.9 per cent. Of the value in 1909, \$743,211 was reported as that of products used or to be used on the farms themselves, \$781,723 as that of products sold or for

sale, and \$336,919 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

**Miscellaneous crops: 1909.**—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 640 farmers in Connecticut sold, during 1909, 1,824 tons of straw, for which they received \$28,449 and that 328 farmers sold 1,267 tons of cornstalks and leaves, for which they received \$8,807.

**SELECTED FARM EXPENSES AND RECEIPTS.**

**Farm expenses: 1909 and 1899.**—The following table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899:

EXPENSE.	1909		1899	INCREASE.		
	Farms reporting.		Amount.	Amount.	Per cent.	
	Number.	Per cent of all farms.				
Labor.....	17,955	67.0	\$6,881,619	\$4,103,420	\$2,778,199	67.7
Feed.....	21,569	80.4	5,416,108	(1)	.....	.....
Fertilizer.....	15,584	58.1	1,954,163	1,078,240	875,923	81.2

<sup>1</sup> Not reported at the census of 1900.

Over two-thirds of the farmers in Connecticut hire labor, and the average amount expended by those hiring is \$383. About one-fifth of the amount expended for labor is in the form of rent and board, and the total amount expended is more than one and two-thirds times as great as that reported in 1900. At prior censuses no tabulation was made of the number of farmers reporting expenditures for labor.

About four-fifths of all Connecticut farms report some expenditure for feed, while about three-fifths

report the purchase of fertilizer. There is a marked increase—81.2 per cent—since 1899 in the total amount reported as paid for fertilizer, the average for those reporting being \$125 per farm.

**Receipts from sale of feedable crops: 1909.**—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales, as well as of the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

CROP.	FARMS REPORTING.		QUANTITY SOLD.		Amount received.
	Number.	Percent of all farms.	Amount.	Unit.	
<b>Total.....</b>	.....	.....	.....	.....	\$510,307

Oats.....	44	0.2	1,928	Bu.....	1,282
Hay and coarse forage.....	3,120	11.6	29,722	Tons...	490,244

While the total amount expended by Connecticut farms for the purchase of feed in 1909 was \$5,416,000, the total receipts from sales of feed by those reporting sales amounted to only \$510,000, of which \$490,000 was for hay and coarse forage.

**COUNTY TABLES.**

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products

of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of all domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

TABLE 1.—FARMS AND FARM PROPERTY, BY COUNTIES: APRIL 15, 1910.

## CHAPTER 4.

# STATISTICS OF MANUFACTURES FOR THE STATE, CITIES, AND INDUSTRIES.

**Introduction.**—This chapter gives the statistics of manufactures for the state of Connecticut for the calendar year 1909 as shown by the Thirteenth Census.

The text summarizes the general results of the census inquiry, presenting a series of special tables in which the main facts printed in the general tables are given in convenient form for the state as a whole and for important industries. It also presents tables in which the statistics for the industries of the state as a whole and for a few important industries are classified by character of ownership, size of establishments, number of wage earners, and prevailing hours of labor, information which could not be presented in general tables for each industry without disclosing the facts for individual establishments.

At the end of the chapter are three general tables.

Table I gives for 1909, 1904, and 1899 the number of establishments and of persons engaged in the industries, primary power, capital, salaries and wages, cost of materials, value of products, and value added by manufacture reported for all industries combined and for certain important industries (1) for the state as a whole and (2) for the cities of Bridgeport, Hartford, New Haven, and Waterbury. It also gives the same items for all industries combined for every city and borough having in 1910 a population of over 10,000 but less than 50,000.

Table II gives statistics in detail for 1909 for the state and for a larger number of industries.

Table III gives statistics in detail for 1909 for Bridgeport, Hartford, New Haven, and Waterbury for all industries combined and for selected industries, and for each city having from 10,000 to 50,000 inhabitants for all industries combined.

**Scope of census: Factory industries.**—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of organization, location of establishments, size of establishments, labor force, and similar subjects. When use is made of the data for these purposes, it is imperative that due attention should be given to the limitations of the figures. Particularly is this true when the attempt is made to derive from them figures purporting to show average wages, cost of production, or profits. These limitations will be fully discussed in the general report on manufactures for the United States as a whole.

The census of 1909, like that of 1904, was confined to manufacturing establishments conducted under the factory system, as

distinguished from the neighborhood, hand, and building industries. Where statistics for 1899 are given they have been reduced to a comparable basis by eliminating the latter classes of industries. The census does not include establishments which were idle during the entire year, or had a value of products of less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions, or in governmental establishments, except those of the Federal Government.

**Period covered.**—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for establishments which began or discontinued business during the year.

**The establishment.**—The term "establishment" comprises the factories, mills, or plants which are under a common ownership or control, and for which one set of books of accounts is kept.

If, however, the plants constituting an establishment as thus defined were not all located within the same city or state, separate reports were secured in order that the separate totals might be included in the statistics for each city or state. In some instances separate reports were secured for different industries carried on in the same establishment.

**Classification by industries.**—The establishments were assigned to the several classes of industries according to their products of chief value. The products reported for a given industry may thus, on the one hand, include minor products very different from those covered by the class designation, and, on the other hand, may not include the total product covered by this designation, because some part of this product may be made in establishments in which it is not the product of chief value.

**Selected industries.**—The general tables at the end of this chapter give the principal facts separately for the industries of the state. A selection has been made of the leading industries of the state for more detailed consideration. Sometimes an industry of greater importance than some of those selected is omitted because it comprises so few establishments that these detailed presentations would reveal the operations of individual concerns.

**Comparisons with previous censuses.**—Owing to the changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. Table I, giving comparable figures for 1909, 1904, and 1899, therefore, does not embrace all the industries shown for 1909 in Table II.

**Influence of increased prices.**—In considering changes in cost of materials, value of products, and value added by manufacture, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures can not be taken as an exact measure of increase in the volume of business.

**Persons engaged in industry.**—At the censuses of 1909, 1904, and 1899, the following general classes of persons engaged in manufacturing industries have been distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks, and (5) wage earners. In the censuses of 1904 and 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. The second group included the

three classes of salaried officers of corporations, superintendents and managers, and clerks. In the present census an entirely different grouping is employed: that into (1) proprietors and officials, (2) clerks, and (3) wage earners. The first group includes proprietors and firm members, salaried officers of corporations, and superintendents and managers.

At this census the number of persons engaged in the industries, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for December 15, or the nearest representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where conditions were exceptional, and particularly in the case of certain seasonal industries, such as canning, the December date could not be accepted as typical, and an earlier date had to be chosen.

In the case of employees other than wage earners the number thus reported on December 15, or other representative day, has been treated as equivalent to the average for the year, since the number of employees of this class does not vary much from month to month in a given industry. In the case of wage earners the average is obtained in the manner explained in the next paragraph.

**Wage earners.**—In addition to the report by sex and age of the number of wage earners on December 15, or other representative day, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported each month by 12. The average thus obtained represents the number of wage earners that would be required to perform the work done if all were constantly employed during the entire year. Accordingly, the importance of any industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given for each separate industry, is not totaled for all industries combined, because, in view of the variations of date, such a total is believed not to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation.

In particular, totals by sex and age for the wage earners reported for the representative day would be misleading because of the undue weight given to seasonal industries, in some of which, such as canning and preserving, the distribution of the wage earners by sex and age is materially different from that in most industries of more regular operation. In order to determine as nearly as possible the sex and age distribution of the average number of wage earners in the state as a whole, the following procedure has been adopted:

The percentage distribution by sex and age of the wage earners in each industry, for December 15, or the nearest representative day, has been calculated from the actual numbers reported for that date. This percentage has been applied to the average number of wage earners for the year in that industry, to determine the average number of men, women, and children employed. These calculated averages for the several industries have been added up to give the average distribution for the state as a whole.

In 1899 and 1904 the schedule called for the average number of wage earners of each sex 16 years and over, and the total number under 16 years of age, for each month, and these monthly statements were combined in an annual average. Comparatively few manufacturing concerns, however, keep their books in such way as to show readily the number of men, women, and children (under 16) employed each month. These monthly returns by sex and age were, in fact, largely estimates. It was believed that a more accurate and reliable sex and age distribution could be secured by taking as a basis of estimate the actual numbers employed on a single day.

**Prevailing hours of labor.**—The census made no attempt to ascertain the number of employees working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one period to another are disregarded, and no attention is given to the fact that a limited number of employees may have hours differing from those of the majority. In the tables all the wage earners of each establishment are counted in the class within which the establishment itself falls. In most establishments, however, all or practically all the employees work the same number of hours, so that these figures give a substantially correct picture of the hours of labor in manufacturing industries.

**Capital.**—For reasons stated in prior census reports, the statistics of capital secured by the census canvasses are so defective as to be without value, except as indicating very general conditions. The instructions on the schedule for securing capital were as follows:

The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises.

**Materials.**—Cost of materials refers to the materials used during the year, which may be more or less than the materials purchased during the year. The term materials includes fuel, rent of power and heat, mill supplies, and containers, as well as materials forming a constituent part of the product. Fuel includes all fuel used, whether for heat, light, or power, or for the process of manufacture.

**Expenses.**—Under "Expenses" are included all items of expense incident to the year's business, except interest, whether on bonds or other forms of indebtedness, and allowances for depreciation.

**Value of products.**—The value of products for any industry includes the total value of all products manufactured in establishments whose products of chief value fall under the industry designation. The amounts given represent the selling value at the factory of all products manufactured during the year, which may differ from the value of the products sold. Amounts received for work on materials furnished by others are included.

**Value added by manufacture.**—The value of products is not a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing process carried on in the industry itself. Another part of it, and often by far the larger part, represents the value of the materials used, which have been produced by agriculture or mining or by other industrial establishments. For many purposes, therefore, the best measure of the importance of different classes of industry is the value created as the result of the manufacturing operations carried on within the industry. This value is obtained by deducting the cost of the materials consumed from the value of the product. The figure thus obtained is termed in the census reports "value added by manufacture."

There is a further statistical advantage which "value added" has over gross value of products. In combining the value of products for all industries the value of products produced by one establishment and used as materials in another is duplicated, and the total, therefore, gives a greatly exaggerated idea of the wealth created. No such duplication takes place in the total "value added by manufacture."

**Cost of manufacture and profits.**—Census data do not show the entire cost of manufacture, and consequently can not be used to show profits. No account has been taken of interest and depreciation. Even if the amount of profit could be determined by deducting the expenses from the value of the products, the rate of profit on the investment could not properly be calculated, because of the very defective character of the returns regarding capital.

**Primary power.**—The figures given for this item show the total of the primary power used by the establishments. They do not cover the power developed by motors operated by such power, the inclusion of which would evidently result in duplication.

**Location of establishments.**—The Census Bureau has classified establishments by their location in cities or classes of cities. In interpreting these figures consideration should be given to the fact that often establishments are located just outside the boundaries of cities, and are so classified, though locally they are looked upon as constituting a part of the manufacturing interests of the cities.

**Laundries.**—The census of 1909 was the first to include statistics of laundries. The reports are confined to establishments using mechanical power. The data are presented separately and are not included in the general total for manufacturing industries, in order to avoid interference with comparisons with prior censuses.

**Custom sawmills and gristmills.**—In order to make the statistics for 1909 comparable with those for 1904, the data for these mills have been excluded from all the tables presenting general statistics, and are given in a separate table at the end of this chapter.

### INDUSTRIES IN GENERAL.

**General character of the state.**—Connecticut, with a gross area of 4,965 square miles, of which 145 represent water surface, is one of the smallest of the states and territories of continental United States—only two states, Delaware and Rhode Island, having a less area. Its population in 1910 was 1,114,756, as compared with 908,420 in 1900 and 746,258 in 1890. In 1910 the density of population for the state was 231.3 per square mile, the corresponding figure for 1900 being 188.5. Only three states had a greater average number of inhabitants per square mile. It ranked thirty-first among the 49 states and territories as regards population in 1910 and twenty-ninth in 1900. Eighty-nine and seven-tenths per cent of the entire population of the state resided in places having a population of 2,500 inhabitants or over, as against 87.2 per cent in 1900.

The state has four cities having a population of over 50,000—Bridgeport, Hartford, New Haven, and Waterbury. There are also 11 cities and boroughs having a population of over 10,000 but less than 50,000—Ansonia, Danbury, Meriden, Middletown, Naugatuck, New Britain, New London, Norwich, Stamford, Torrington, and Willimantic. These 15 cities and boroughs contained 56.6 per cent of the total population of the state and were credited with 68.2 per cent of the total value of its manufactures. Apart from the cities and boroughs named, 33.1 per cent of the population of the state resided in places of 2,500 inhabitants or over.

The prominence of Connecticut as a manufacturing state is due to several causes, chief of which are the early establishment of a number of important industries in the state and the unusually large amount of capital available for investment in manufacturing industries. Additional causes are the comparatively abundant water power in the state and its geographic location near New York City, with which many of the manufacturing centers of Connecticut have direct water transportation facilities. Bridgeport, New Haven, and New London are seaports of considerable prominence, and afford ample opportunities for domestic coastwise commerce. In addition, the main line of the most important railroad system in New England traverses Connecticut and gives direct and adequate connection with all parts of the country.

**Importance and growth of manufactures.**—Connecticut is preeminently a manufacturing state, and the growth and concentration of its population have been closely related to the increase in the importance of its manufacturing industries. During 1849 an average of 50,731 wage earners, representing 13.7 per cent of the total population, were employed in manufactures, while in 1909 an average of 210,792 wage earners, or 18.9 per cent of the total population, were so engaged. In 1849 the total value of the manufactures of the state, including the products of the neighborhood and hand industries, amounted to \$47,115,000, while in 1909, exclusive of the value of products of the neighborhood and hand industries, it reached \$490,272,000. These figures represent increases of 315.5 per cent in number of wage earners and 940.6 per cent in value of products. During this period the gross value of products per capita of the total population of the state increased from \$127 to \$440. Nevertheless the state's proportion of the total value of products manufactured in the United States fell from 4.6 per cent in 1849 to 2.8 per cent in 1899 and 2.4 per cent in 1909.

The rank of Connecticut among the states in regard to the value of its manufactured products was twelfth in 1909, as compared with eleventh in 1899, and fifth in 1849.

The next table gives the most important figures relative to all classes of manufactures combined for the state as returned at the censuses of 1909, 1904, and 1899, together with the percentages of increase from census to census.

In 1909 the state of Connecticut had 4,251 manufacturing establishments, which gave employment to an average of 233,871 persons during the year and paid out \$135,756,000 in salaries and wages. Of the persons employed, 210,792 were wage earners.

These establishments turned out products to the value of \$490,272,000, to produce which materials costing \$257,259,000 were used. The value added by manufacture was thus \$233,013,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that the manufacturing industries of Connecticut as a whole showed greater development during the more recent five-year period, 1904-1909, than during the preceding five-year period, 1899-1904, although a marked increase is shown for both periods in all items, except in the number of establishments from 1899 to 1904. During the later period the number of establishments increased 22.3 per cent, the average number of wage

earners 16.1 per cent, the value of products 32.8 per cent, and the value added by manufacture 31.1 per cent.

As pointed out in the Introduction, it would be improper to infer that manufactures increased in volume to the full extent indicated by the figures representing values, since the increase shown is certainly due, in part, to the increase that has taken place in the price of commodities.

Value of products.....	490,272,000	369,082,000	315,106,000	32.8	17.1
Value added by manufacture (value of products less cost of materials).....	233,013,000	177,780,000	145,434,000	31.1	22.2

<sup>1</sup> Figures not available.

The relative importance and growth of the leading manufacturing industries of the state are shown in the table on page 623.

It should be borne in mind in considering this table that the value of products in some of the industries involves a certain amount of duplication, due to the use of the product of one establishment in the industry as material for another establishment.

In addition to the industries presented separately in the following table there are 20 other important industries, each of which had a value of products in 1909 in excess of \$1,000,000. They are included under "All other industries" in the table in some cases because the operations of individual establishments would be disclosed if they were shown separately; in others, because the returns do not properly present the true condition of the industry, for the reason that it is more or less interwoven with one or more other industries, or because comparable statistics for the different census years can not be presented on account of changes in classification. These industries are as follows: Belting and hose, leather; bicycles, motorcycles, and parts; boots and shoes, rubber; brick and tile; carpets and rugs, other than rag; dentists' materials; furnishing goods, men's; gas and electric fixtures and lamps and reflectors; gold and silver, reducing and refining, not

from the ore; house-furnishing goods, not elsewhere specified; iron and steel, steel works and rolling mills; iron and steel, bolts, nuts, washers, and rivets, not made in steel works or rolling mills; iron and steel, nails and spikes, cut and wrought, not made in steel works or rolling mills; phonographs and graphophones; rubber goods, not elsewhere specified; screws, machine; screws, wood; sewing machines, cases, and attachments; soap; and wire. Statistics, however, for the manufacture of men's furnishing goods, gas and electric fixtures and lamps and reflectors, of rubber goods, "not elsewhere specified," and of sewing machines, cases, and attachments are presented in Table II for 1909.

Connecticut ranked second among the states in the production of rubber boots and shoes, measured by value of products, and the three gold and silver refineries of Connecticut reported a greater value of products than did those of any other state.

Although a few industries predominate in importance, it will be seen from Table II that there is, on the whole, a wide diversity in the manufacturing activities of the state. The most important industries listed in the next table, in which they are arranged in the order of the value of products, are briefly considered, by classification, in the paragraphs following the table.

INDUSTRY.	Number of establishments.	WAGE EARNERS.		VALUE OF PRODUCTS.		VALUE ADDED BY MANUFACTURE.		PER CENT OF INCREASE. <sup>1</sup>			
		Average number.	Per cent distribution.	Amount.	Per cent distribution.	Amount.	Per cent distribution.	Value of products.		Value added by manufacture.

<sup>1</sup> Percentages are based on figures in Table I; a minus sign (-) denotes decrease. Where the percentages are omitted, comparable figures can not be given.  
<sup>2</sup> Less than one-tenth of 1 per cent.

**Textiles.**—The textile manufactures of the state, consisting of cotton goods, including cotton small wares; silk and silk goods, including throwsters; woolen, worsted, and felt goods; and hosiery and knit goods, but exclusive of cordage and twine, and shoddy, form its leading manufacturing industry. Combined, these four branches gave employment to an average of 34,192 wage earners during 1909, or 16.2 per cent of the total for all manufacturing industries in the state, and the value of their products amounted to \$70,459,000, or 14.4 per cent of the total value of manufactured products. Of the total value of products for these four branches of the textile industry, 34.4 per cent was contributed by the cotton mills, 29.9 per cent by the silk mills, 27.5 per cent by the woolen and worsted mills, and 8.2 per cent by the hosiery and knitting mills.

**Brass and bronze products.**—This is the leading individual industry of the state, measured by value of products, reporting 13.7 per cent of the total value of products for the state in 1909. It includes the manufacture of rolled brass and copper, which composed the major portion of the product, and of brass ware, in the manufacture of which Connecticut is particularly prominent. Brass castings, brass finishing, and bronze castings, also included in this classification, form only a small part of the total output. At the census of 1904 Connecticut reported more than four-fifths of the total value of the output of rolled brass and copper of the country, and also led in the production of brass ware, with over one-half of the total value of output. In 1909 it ranked first among the states in the combined value of brass and bronze products, reporting 44.6 per cent of the total for the United States.

*Foundry and machine-shop products.*—This industry is of greater importance in the state than is indicated by the statistics, as some machine shops manufactured a distinctive product and were assigned to other classifications. The most important product consists of hardware, of which more than two-fifths of the total value reported for the United States in 1909 was reported from Connecticut. Some of the largest establishments, other than those producing hardware, were engaged in the manufacture of textile and metal-working machinery and internal-combustion engines.

*Firearms and ammunition.*—This industry is now mainly centralized in New Haven and Bridgeport. The increase in the value of products was much greater from 1899 to 1904 than from 1904 to 1909, being 57.2 per cent and 12.3 per cent, respectively, for the two five-year periods. In 1904, exclusive of governmental establishments, almost four-fifths of the total value of the ammunition and over one-fourth of the total value of the firearms manufactured in the United States was reported from establishments located in this state. Connecticut was the leading state in the total value of products reported for the combined industries in 1909.

*Silverware and plated ware.*—In 1909 the combined products of this industry for the state formed over one-third of the total value for the country. The manufacture of plated ware comprises the principal part of this industry. In 1904 and 1909 over two-thirds of the total value of plated ware in the United States was reported from Connecticut.

*Corsets.*—Of the 17 establishments reported in 1909 as primarily engaged in the manufacture of corsets, 5 were located in Bridgeport and 9 in New Haven. The value of products for the industry increased from \$5,591,000 in 1904 to \$12,815,000 in 1909, a gain of \$7,224,000, or 129.2 per cent, for the five years. This increase is noteworthy in view of the fact that from 1899 to 1904 the value of products decreased 18.3 per cent. In 1904 and in 1909 Connecticut was the leading state in the production of corsets, reporting over one-third of the total value of products for the United States in both years.

*Automobiles, including bodies and parts.*—This industry includes 8 establishments reporting the manufacture of automobiles and 20 establishments (with about one-fourth of the total value of products for the whole industry) reporting automobile bodies and parts as the most important product. A marked increase is shown in value of products and in value added by manufacture from 1904 to 1909.

*Cutlery and tools, not elsewhere specified.*—Connecticut ranked second in this industry in the United States in 1909, and in 1904 it ranked first among the states in the value of its manufactures of cutlery and edge tools, and fourth in tools "not elsewhere specified."

*Hats, fur-felt.*—The manufacture of hats in Connecticut was begun in 1780 at Danbury, which city is still

the leading center of the industry. In 1904 and in 1909 this state was second in importance in the industry, with 23.6 per cent of the total value of products for the United States in 1904 and 21.7 per cent in 1909.

*Electrical machinery, apparatus, and supplies.*—The exceptionally rapid progress during recent years in the use of electricity has created a demand for appliances with which to utilize this energy. The establishments engaged in this industry in Connecticut are devoted primarily to the production of insulated wires and cables and electric-light fixtures.

*Lumber and timber products.*—Under this classification are included the statistics for establishments engaged in logging, as well as for sawmills, planing mills, and wooden packing-box factories. About three-fifths of the total value of products reported for the entire industry in the state was contributed by the planing-mill branch.

*Clocks and watches, including cases and materials.*—The state ranked first in the total value of products for this industry in 1909. Nine of the 16 establishments in the state were engaged primarily in the manufacture of clocks. This branch of the industry in Connecticut dates from early in 1800, and much of its early development took place in that state, where it has been largely centralized. In 1904 nearly three-fourths of the total value of the output of clocks in the United States was reported from Connecticut factories.

Of the first 10 industries shown separately in the preceding table, the cotton-goods industry is the only one which occupies the same position when measured by value added by manufacture as when measured by value of products. The positions of the first two, the foundry and machine-shop and the brass and bronze products industries, are reversed; the firearms and ammunition industry exchanges places with the silk industry; and the silverware and plated-ware industry takes sixth place instead of the woolen, worsted, and felt goods industry, which latter falls to ninth place. The cutlery industry becomes seventh in order, having advanced from tenth place, and the automobile industry moves from ninth to eighth place, while the manufacture of corsets drops from eighth to tenth place.

This table shows also the percentages of increase for these leading industries in respect to value of products and value added by manufacture. The automobile industry showed greater rates of increase from 1904 to 1909 in value of products and in value added by manufacture than any other of the important industries shown separately in the table, namely, 341.3 per cent and 360 per cent, respectively. Remarkable increases in both these items also are shown for the manufacture of silverware and plated ware, corsets, electrical machinery, apparatus, and supplies, typewriters and typewriter supplies, and paint and varnish.

Some striking differences appear among the several industries as respects the increase from 1899 to 1904 as compared with that from 1904 to 1909. All but six of the industries listed separately showed an increase from 1904 to 1909 in value of products, and all but eight an increase in value added by manufacture. None of the industries showing decreases are among the first 15 industries shown separately. From 1899 to 1904, 11 of the industries given separately showed losses in value of products, and 12 showed decreases in value added by manufacture. Of the 15 most important industries, measured by value of products, which are presented separately, the silverware and the corset industries were the only ones that showed decreases during this period.

Persons engaged in manufacturing industries.—The following table shows, for 1909, the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

CLASS.	PERSONS ENGAGED IN MANUFACTURES.		
	Total.	Male.	Female.
All classes.....	233,871	176,478	57,393
Proprietors and officials.....	9,030	8,066	364
Proprietors and firm members.....	3,468	3,311	157
Salared officers of corporations.....	2,124	2,088	36
Superintendents and managers.....	3,438	3,267	171
Clerks.....	14,049	10,163	3,886
Wage earners (average number).....	210,792	157,659	53,133
16 years of age and over.....	205,371	154,724	50,647
Under 16 years of age.....	5,421	2,935	2,486

The average number of persons engaged in manufactures during 1909 was 233,871, of whom 210,792 were wage earners. Of the remainder, 9,030 were proprietors and officials and 14,049 were clerks. Corresponding figures for individual industries will be found in Table II, page 648.

The next table shows, for 1909, the percentage of proprietors and officials, clerks, and wage earners, respectively, among the total number of persons employed in manufactures. It covers all industries combined and 19 important industries individually.

Of the total number of persons engaged in all manufacturing industries, 3.9 per cent were proprietors and officials, 6 per cent clerks, and 90.1 per cent wage earners. In the bakery and the printing and publishing industries the majority of the establishments are small and the work is done to a large extent by the proprietors or their immediate representatives, so that the proportion of persons engaged in these industries falling into the class of proprietors

and officials is much higher than for most other industries or for all industries combined. Similar conditions prevail to some extent in the manufacture of lumber and timber products, where the proprietors and officials formed 13.1 per cent of the total number of persons engaged.

On account of the large average number of wage earners employed in the textile, the corset, and the brass and bronze industries, they show the smallest proportions of proprietors and officials.

INDUSTRY.	PERSONS ENGAGED IN MANUFACTURES.			
	Total number.	Per cent of total.		
		Proprietors and officials.	Clerks.	Wage earners (average number).
All industries.....	233,871	3.9	6.0	90.1

Silk and silk goods, including throwsters.....	9,385	1.8	5.4	92.7
Silverware and plated ware.....	6,812	2.0	6.7	91.4
Woolen, worsted, and felt goods, and wool hats.....	8,140	2.8	1.5	95.7
All other industries.....	70,698	5.2	6.5	88.3

The next table shows, in percentages, for 1909, for all industries combined, the distribution of the average number of wage earners, by age periods and for those 16 years of age and over by sex, calculated in the manner described in the Introduction. It also shows for some of the important industries separately a similar distribution of wage earners as reported for December 15, or the nearest representative day. As a means of judging the importance of the several industries the average number employed for the year is also given in each case.

For all industries combined, 73.4 per cent of the average number of wage earners were males 16 years of age and over, 24 per cent females 16 years of age and over, and 2.6 per cent persons under the age of 16. Nearly one-third of the total number of female wage earners were employed in the textile industries. In the cotton-goods industry nearly two-fifths of the wage earners were women 16 years of age and over; in the hosiery and knit-goods industry, about two-thirds; in the silk industry, nearly one-half; and in the woolen and worsted industry, over one-fourth. The manufacture of corsets shows the largest proportion of this class of female wage earners, namely, 82.1 per cent.

INDUSTRY.	WAGE EARNERS.			
	Average number. <sup>1</sup>	Per cent of total.

<sup>1</sup> For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904 it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

CLASS.	PERSONS ENGAGED IN MANUFACTURES.				
	1909		1904		Per cent of increase, 1904-1909.
	Number.	Percent distribution.	Number.	Percent distribution.	
<b>Total</b> .....	<b>233,871</b>	<b>100.0</b>	<b>188,046</b>	<b>100.0</b>	<b>18.1</b>
Proprietors and firm members.....	3,468	1.5	2,918	1.5	18.8
Salaried employees.....	19,611	8.4	13,523	6.8	45.0
Wage earners (average number).....	210,792	90.1	181,605	91.7	16.1

Comparable figures are not obtainable for 1899. The table shows a greater percentage of increase in the salaried employees than in the other two classes.

The next table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over, according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number reported for a single representative day. (See Introduction.)

This table indicates that for all industries combined there has been only a slight change during the 10 years in the proportion of male and female wage earners, although there has been a decided actual increase in the number of both classes of employees. In 1909 males 16 years of age and over formed 73.4

per cent of all wage earners, as compared with 73.1 in 1904 and 72.3 in 1899. During the same period there has been a small actual and proportional increase in the employment of persons under 16 years of age.

CLASS.	AVERAGE NUMBER OF WAGE EARNERS.					
	1909		1904		1899	
	Number.	Percent distribution.	Number.	Percent distribution.	Number.	Percent distribution.
<b>Total</b> .....	<b>210,792</b>	<b>100.0</b>	<b>181,605</b>	<b>100.0</b>	<b>159,783</b>	<b>100.0</b>
16 years of age and over.....	205,371	97.4	177,304	97.6	156,319	97.9
Male.....	154,724	73.4	132,750	73.1	115,499	72.3
Female.....	50,647	24.0	44,554	24.5	40,820	25.6
Under 16 years of age.....	5,421	2.6	4,301	2.4	3,414	2.1

**Wage earners employed, by months.**—The following table gives the number of wage earners employed on the 15th of each month during the year 1909, for all industries combined; it gives also the percentage which the number reported for each month is of the greatest number reported for any month. In Table II, page 648, are shown, for practically all of the important industries in the state, the largest number and also the smallest number of wage earners reported for any month. The figures are for the 15th day, or the nearest representative day, of the month.

MONTH.	WAGE EARNERS.		MONTH.	WAGE EARNERS.	
	Number.	Per cent of maximum.		Number.	Per cent of maximum.
January.....	201,545	89.2	July.....	206,295	91.3
February.....	199,325	88.2	August.....	211,295	93.6
March.....	202,523	89.7	September.....	218,637	96.8
April.....	203,599	90.1	October.....	222,052	98.3
May.....	205,198	90.9	November.....	224,430	99.4
June.....	208,732	92.4	December.....	225,882	100.0

There are no seasonal industries of importance in Connecticut, and few of the important industries show conditions which differ from those for all industries combined.

The number of wage earners employed in all industries combined was smallest in February. With the exception of July, the increase was steady month by month to the end of the year, when the largest number was employed. During the month of least employment 11.8 per cent fewer wage earners were employed than during the month of greatest employment.

**Prevailing hours of labor.**—In the next table wage earners have been classified according to the hours of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed during the year is used, and the number employed in each establishment is classified as a total, according to the hours prevailing in that establishment, even though a few employees work a greater or less number of hours.

INDUSTRY.	AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS GROUPED ACCORDING TO PREVAILING HOURS OF WORK PER WEEK.

It is evident from these figures that for the great majority of wage earners employed in the manufacturing industries of Connecticut the prevailing hours of labor range from 54 to 60 a week, only 8.4 per cent of the total number being employed in establishments where the prevailing hours are less than 54 a week, and but 1.4 per cent in establishments where more than 60 hours a week prevail.

The foundries and machine shops gave employment to 37,736 wage earners, or more than twice as many as any other single industry in the state, and 96.2 per cent of these were employed from 54 to 60 hours per week, inclusive. In most of the other industries employing large numbers of wage earners, employment was for a week of over 54 but less than 60 hours. Of those employed in the tobacco manufacturing industry, 95.3 per cent were employed 48 hours per week or less, and of those employed in railroad repair shops and in

printing and publishing, 53.1 per cent and 47.7 per cent, respectively. Nearly 70 per cent of the wage earners employed in making fur-felt hats worked less than 54 hours a week. The majority of the wage earners in the bakery and flour-mill and gristmill industries and in establishments engaged in the manufacture of needles, pins, and hooks and eyes were in plants operating 60 hours a week, while for the majority of the wage earners in the gas industry the prevailing hours of labor were over 60 a week.

**Location of establishments.**—The next table shows the extent to which the manufactures of Connecticut are centralized in cities or boroughs of 10,000 inhabitants or over. (See Introduction.) The statistics for 1904 are omitted from this table, because there was no Federal census of population for that year and it was impossible to determine the cities or boroughs that came within the group having over 10,000 inhabitants.

ITEM.	Year.	Aggregate.	CITIES AND BOROUGHES HAVING A POPULATION OF 10,000 AND OVER.								DISTRICTS OUTSIDE OF CITIES AND BOROUGHES HAVING A POPULATION OF 10,000 AND OVER.

Average number of wage earners.	1909	210,792	133,499	63.7	29,038	13.8	60,139	28.5	49,322	23.4	72,293	34.3
	1899	159,733	91,209	57.1	24,656	15.4	48,959	30.6	17,594	11.0	68,524	42.9
Value of products.....	1909	\$490,271,695	\$334,336,355	68.2	\$79,549,035	16.2	\$138,107,117	28.2	\$116,680,203	23.8	\$155,935,340	31.8
	1899	315,106,150	193,446,554	61.4	59,755,550	19.0	98,791,567	31.4	34,899,437	11.1	121,659,596	38.6
Value added by manufacture...	1909	233,012,302	153,754,210	65.1	31,797,487	13.6	72,542,476	31.1	54,414,247	23.4	74,258,092	31.9
	1899	145,434,502	89,456,068	61.5	23,354,908	16.1	47,337,239	32.5	18,763,921	12.9	55,978,434	38.5

In 1909, 68.2 per cent of the total value of products was reported from cities and boroughs having over 10,000 inhabitants, and 65.7 per cent of the average number of wage earners were employed in these places. The figures indicate that not only has a considerable change taken place during the last decade in the relative importance of the manufacturing industries of the different groups of cities and boroughs having over 10,000 inhabitants, but the combined industries of such places have gained considerably on those of the districts outside.

The increase in the population of the different places has affected the grouping in the table. In 1900 Meriden and Stamford were included in the group of cities and boroughs having from 10,000 to 25,000 inhabitants, but both now belong to the group made up of cities having between 25,000 and 100,000 inhabitants. New Haven was the only city in the state in 1900 which had over 100,000 inhabitants, but in 1910 Bridgeport had reached that group. Prior to 1910 Middletown, Torrington, and Willimantic each had less than 10,000 inhabitants, and their statistics, therefore, were included with the districts outside in 1899.

The group of cities having over 100,000 inhabitants shows a decided gain in its proportions of the total, largely as the result of the addition of Bridgeport, while the other two groups show losses. Of the total value of the products reported for the state in 1909, 16.2 per cent was reported from the eight cities and boroughs having from 10,000 to 25,000 inhabitants, 28.2 per cent from the five cities having between 25,000 and 100,000 inhabitants, and 23.8 per cent from the two cities having more than 100,000 inhabitants. The corresponding proportions for 1899 were 19 per cent, 31.4 per cent, and 11.1 per cent, respectively.

The population for 1910 and 1900 of the 15 cities and boroughs which had 10,000 inhabitants or over in 1910 is given in the next statement.

CITY OR BOROUGH.	1910	1900	CITY OR BOROUGH.	1910	1900
New Haven.....	133,605	108,027	Danbury.....	20,234	16,537
Bridgeport.....	102,054	70,996	New London.....	19,059	17,548
Hartford.....	98,915	79,850	Torrington.....	15,483	8,360
Waterbury.....	73,141	45,850	Ansonia.....	15,162	12,681
New Britain.....	43,918	25,998	Naugatuck.....	12,722	10,541
Meriden.....	27,265	24,296	Middletown.....	11,851	9,589
Stamford.....	25,138	15,997	Willimantic.....	11,230	8,937
Norwich.....	20,367	17,251			

The relative importance of each of these 15 cities and boroughs in the manufacturing industries is shown in the following table, in which the value of products and average number of wage earners are shown for each city for 1909, 1904, and 1899.

CITY OR BOROUGH.	AVERAGE NUMBER OF WAGE EARNERS.			VALUE OF PRODUCTS.		
	1909	1904	1899	1909	1904	1899

Middletown <sup>1</sup> .....	2,434	2,318	2,495	4,954,709	4,351,201	4,152,071
New London.....	2,225	2,554	1,963	4,483,239	4,709,028	4,221,058

<sup>1</sup> Figures do not agree with those published in 1904, because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the city.

Every city and borough for which comparable figures are available, except New London, shows an increase in value of products for the 10 years and for each of the five-year periods. New London shows a decrease of 4.8 per cent from 1904 to 1909, due to the decline in shipbuilding. The largest relative gains in value of products during the decade were as follows: Stamford, 122.9 per cent; Willimantic, 122.7 per cent; New Britain, 98.5 per cent; and Bridgeport, 95.6 per cent. For most of the cities shown in the table the percentages of increase in value of products were greater from 1904 to 1909 than from 1899 to 1904.

During the later period the average number of wage earners employed in the manufacturing industries of each place, except New London and Ansonia, increased much less, relatively, than the value of products. In New London there was an actual decrease in the number of wage earners.

Bridgeport, the foremost city of the state in manufactures, shows an increase in 1909, as compared with 1904, of 47.1 per cent in value of products and 32.2 per cent in average number of wage earners. The gain in value of products was due largely to the increases in the output of automobiles, corsets, electrical machinery, foundry and machine-shop products, and gold and silver reducing and refining. Compared with other manufacturing cities of the country, Bridgeport ranked thirty-ninth in 1899, thirty-fifth in 1904, and thirty-third in 1909 in value of products. In 1909 the foundries and machine shops of this city turned out products valued at \$9,752,000, or 14.9 per cent of the corresponding total for the state. The corset industry was also of considerable importance, with an output valued at \$6,899,000, or 53.8 per cent of the total for this industry in the state, while the establishments engaged in the manufacture of electrical machinery, apparatus, and supplies reported products valued at \$3,321,000, or 33.8 per cent of the state total. Other industries of importance in which this city produced over half of the value of products for the state are the manufacture of phonographs and graphophones and of sewing machines and attachments.

New Haven, the second city of the state in importance when measured by value of products, shows an increase from 1904 to 1909 of 28.8 per cent in value of products and 9.8 per cent in average number of wage earners. These gains were due largely to increases in the production of automobiles, firearms and ammunition, corsets, rubber goods, and foundry and machine-shop products (including hardware), and in the output of slaughtering and meat-packing establishments. The value of the clocks and watches made in New Haven during 1909 is considerable, but exact figures can not be given without disclosing individual operations. The statistics for some of the most important industries are included with "All other industries" because they can not be presented separately in Table I without disclosing the operations of individual establishments. Among these industries, each of which reported products amounting to more than \$1,000,000 in value, are automobiles, including bodies and parts; boots and shoes, including cut stock and findings; boots and shoes, rubber; boxes, fancy and paper; clocks and watches, including cases and materials; confectionery; corsets; firearms and ammunition; gas, illuminating and heating; rubber goods, not elsewhere specified; and slaughtering and meat packing.

Waterbury shows an increase of 55.6 per cent in value of products and 30.9 per cent in number of wage earners in 1909 as compared with 1904. Unlike the manufactures of the other cities of importance in the state, those of Waterbury are concentrated largely in a single industry, that of brass and bronze manufactures, which in 1909 reported products amounting to \$31,462,000, or 62.5 per cent of the total for the city. Twenty-four and three-tenths per cent of the total value of rolled brass and copper and 42.2 per cent of the total value of brass ware manufactured in the United States during 1904 were reported from this city, and in 1909, of the value of all brass and bronze products, 21 per cent was reported from this city. Over two-fifths of the total value of clocks and watches manufactured in the state during 1909 was reported from Waterbury. Other industries of importance in the city are the manufacture of foundry and machine-shop products; gas and electric fixtures and lamps and reflectors; needles, pins, and hooks and eyes; and buttons.

Hartford shows an increase of 56.6 per cent in value of products and 30.4 per cent in number of wage earners from 1904 to 1909. These gains are due largely to the increase in the manufacture of automobiles, foundry and machine-shop products, rubber goods, and typewriters and typewriter supplies, the four leading industries in the city. The major portion of the total value of the output for the state of dentists' materials, nails and spikes not made in steel works or rolling mills, leather belting, and machine screws was reported from Hartford.

Of the other cities given separately in the preceding table Norwich shows the greatest relative increase from 1904 to 1909 in value of products, 55.9 per cent, and New Britain the greatest in number of wage earners, 34.2 per cent. The manufacturing interests of New Britain are so centralized in the manufacture of hardware that the output of this industry represents 52.9 per cent of the total value of products for the city. Forty-four and two-tenths per cent of the value of the cutlery and tools made in the state in 1909 was reported from New Britain. In Norwich the textile industries are of most importance.

The manufacture of brass and bronze products is the most important industry in Ansonia and in Torrington. The silverware and plated-ware industry is the most important in Meriden. In 1909 this city reported 65.9 per cent of the total value of gas and electric fixtures and lamps and reflectors manufactured in the state. The leading industries in Naugatuck are the manufacture of rubber boots and shoes and of rubber goods. The manufacture of men's furnishing goods (elastic goods) is the most important industry in Middletown. In Danbury the leading industry is the manufacture of

fur-felt hats, the output of which in 1909 was valued at \$7,114,683, and formed 68.4 per cent of the total value reported for this industry in the state. The manufacture of locks makes the foundry and machine-shop industry the most important in Stamford; and the textile industries predominate in Willimantic and in New London.

**Character of ownership.**—The table that follows has for its purpose the presentation of conditions in respect

to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available. Figures for 1909 only are presented for several important industries individually. In order to avoid disclosing the operations of individual concerns it is necessary to omit several important industries from this table and the one following.

INDUSTRY AND CHARACTER OF OWNERSHIP.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.	INDUSTRY AND CHARACTER OF OWNERSHIP.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

<sup>1</sup> Includes the group "Firm," to avoid disclosure of individual operations.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined 35.3 per cent of the total number of establishments were in 1909 under corporate ownership, as against 64.7 per cent under all other forms. The corresponding figures for 1904 were 34.1 per cent and 65.9 per cent, respectively. In 1909 the establishments operated by corporations reported 90 per cent of the total value of manufactured products for the state, as against 10 per cent for those under all other forms of ownership, while in 1904 the corresponding figures were 85.2 per cent and 14.8 per cent, respectively. This gain in the relative importance of establishments under corporate ownership was due largely to increases in the manufacture of automobiles, brass and bronze products, corsets, cotton goods, firearms and ammunition, foundry and machine-shop products, silk and silk goods, and silverware and plated ware. All but three-tenths of 1 per cent of the value of silverware and plated ware and all but five-tenths of 1 per cent of the value of electrical machinery, apparatus, and supplies reported for 1909 were returned by establishments under corporate ownership. There are three other industries shown in the table in which over 95 per cent of the value of products was reported by this class of establishments.

**Size of establishment.**—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it the next table groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for important industries separately as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

This table shows that, in 1909, of the 4,251 establishments only 93, or 2.2 per cent, had a value of products exceeding \$1,000,000. These 93 establishments, however, employed an average of 95,373 wage earners, or 45.2 per cent of the total number in all establishments, and reported 49.3 per cent of the total

value of products and 44.7 per cent of the total value added by manufacture.

On the other hand, the very small establishments—that is, those having a value of products less than \$5,000—constituted a considerable proportion (30.9 per cent) of the total number of establishments, but the value of their products amounted to only six-tenths of 1 per cent of the total. The great bulk of the manufacturing was reported by establishments having products valued at not less than \$100,000.

It will be seen from the table that during the five years from 1904 to 1909 there was a considerable increase in the relative importance, as measured by value of products, of the largest establishments—those reporting products of not less than \$1,000,000 in value—and a decrease in the importance of all other classes except that having a value of products of less than \$5,000, the proportion in that class remaining unchanged. Of the 93 establishments whose products in 1909 exceeded \$1,000,000 in value, 13 were engaged in the manufacture of brass and bronze products, 4 in the manufacture of cotton goods, 3 in the manufacture of cutlery and edge tools, 14 in the manufacture of foundry and machine-shop products, 6 in the manufacture of silk goods, and 5 in the manufacture of silverware and plated ware.

The fact that the average value of products per establishment increased from \$106,150 to \$115,331, and the value added by manufacture from \$51,130 to \$54,814, can not be taken as in itself indicating a tendency toward concentration. These increased values shown may be, and probably are, due wholly or in part to the increase that has taken place in the prices of commodities.

The average number of wage earners per establishment decreased from 52 to 50. The table shows further that when the size of establishments is measured by the average value of products per establishment, the bakery, the lumber, and the printing and publishing industries are conducted chiefly in rather small establishments, while the manufacture of brass and bronze products, cotton goods, cutlery, electrical machinery, foundry and machine-shop products, fur-felt hats, silk and silk goods, silverware, and woolen and worsted goods is mainly carried on in larger establishments.

INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.	INDUSTRY AND VALUE OF PRODUCTS.	Number of establishments.	Average number of wage earners.	Value of products.	Value added by manufacture.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed. The

following table shows, for 1909, such a classification for all industries combined and for 19 important industries individually, and gives not only the number of establishments falling into each group but also the average number of wage earners employed:

INDUSTRY.	Total.	ESTABLISHMENTS EMPLOYING—								
		No wage earners.	1 to 5 wage earners.	6 to 20 wage earners.	21 to 50 wage earners.	51 to 100 wage earners.	101 to 250 wage earners.	251 to 500 wage earners.	501 to 1,000 wage earners.	Over 1,000 wage earners.

<sup>1</sup> Less than one-tenth of 1 per cent.

Of the 4,251 establishments reported for all industries, 9.6 per cent employed no wage earners; 44.6 per cent, from 1 to 5; 21 per cent, 6 to 20; 9.6 per cent, 21 to 50; and 15.2 per cent, over 50. The most numerous single group consists of the 1,896 establishments employing from 1 to 5 wage earners, and the next of the 893 establishments employing from 6 to 20. There were 84 establishments that employed over 500 wage earners, and 37 that employed over 1,000.

Of the total number of wage earners, 60.9 per cent were in establishments employing over 250 wage earners. The single group having the largest number of employees was the group comprising establishments employing over 1,000 wage earners. Of the 11 industries represented in this group for which separate presentation is made in the table, the foundries and machine shops reported the largest number of wage earners, 13,102. Five other industries, however, exceeded the

foundries and machine shops in the proportion of their wage earners in this group, namely, firearms and ammunition, brass and bronze products, clocks and watches, corsets, and cutlery and tools. The industries listed in this table but not in the preceding one, namely, automobiles, clocks and watches, corsets, firearms and ammunition, hosiery and knit goods, musical instruments, and paper and wood pulp, are all industries in which comparatively large establishments do most of the business, as appears from the classification according to the number of wage earners.

**Expenses.**—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses which make up the total.

The following table shows for 1909, in percentages, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II, page 648.

INDUSTRY.	PER CENT OF TOTAL EXPENSES REPORTED.			
	Salaries.	Wages.	Materials.	Miscellaneous expenses.

This table shows that, for all industries combined, 59.8 per cent of the total expense was for materials, 31.6 per cent for services—that is, salaries and wages—and but 8.6 per cent for other purposes. These proportions vary greatly in the different industries.

**Engines and power.**—The following table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899.

Of the owned power in 1909, 75.9 per cent was steam, as compared with 72 per cent in 1899. Water power, although showing an actual increase during the decade of 6,723 horsepower, decreased in proportion of owned power from 27.2 per cent in 1899 to 20.4 per cent in 1909. The more general use of gas engines is shown,

the number of such engines being 460 in 1909, as against 254 in 1904 and 171 in 1899. The figures also show that the practice of renting power is on the increase, 9.5 per cent of the total power being rented in 1909, as against 4.7 per cent in 1904 and 3.6 per cent in 1899. The use of electric motors for the purpose of applying the power generated within the establishment is also shown to be rapidly increasing, the horsepower of such motors having increased from 8,710 in 1899 to 26,346 in 1904 and 64,051 in 1909.

NOTE.—In addition, there were 20,180 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and cost of materials, the quantity and value of products, and the number of machines used in manufactures which do not appear on the general schedule. Certain data of this character for nine important industries in Connecticut are here presented.

Textiles.—The following statement shows the number of producing spindles, looms, knitting machines, sets of woolen cards, and wool-combing machines used by the four most important textile industries in Connecticut during 1909, 1904, and 1899, and indicates the progress during the decade of the four industries combined as well as each of the branches separately.

MACHINE.	Cen- sus.	Total.	Cotton goods, including cotton small wares.	Silk and silk goods, including throw- sters.	Woolen, worsted, and felt goods, and wool hats. <sup>1</sup>	Hosiery and knit goods.
Producing spindles....	1909	1,593,418	1,241,524	118,302	179,688	53,904

	1899	49	.....	.....	40	9

<sup>1</sup> Statistics for 1899 not available for two establishments manufacturing felt goods.

The above table shows that from 1904 to 1909 the number of producing spindles increased 82,625, or 5.5 per cent, and the number of looms 4,521, or 16 per cent, while knitting machines show a decrease of 56, or 2.2 per cent. The number of sets of woolen cards decreased 29, or 5.3 per cent, and the number of wool-combing machines increased 8, or 32 per cent. Of the total number of producing spindles reported in 1909 for these four industries combined, 1,241,524, or 77.9 per cent, were in cotton mills; 118,302, or 7.4 per cent, in silk mills; 179,688, or 11.3 per cent, in woolen, worsted, and felt mills; and 53,904, or 3.4 per cent, in hosiery and knitting mills. The cotton industry made the largest absolute gain in number of spindles during the last five years, the increase being 90,609, or 7.9 per cent. The largest relative gain in number of spindles, however, was in the silk industry, where there was an increase of 11,598, or 10.9 per cent. The falling off in the number of spindles in knitting mills is due to the tendency to purchase yarn already spun. In addition to the spindles shown in the table there were 13,756 producing spindles employed in the manufacture of cordage and twine in 1909. There were 3,567 more looms used in the cotton industry and 746 more in the silk industry in 1909 than in 1904.

Cotton goods, including cotton small wares.—Cotton manufacturing maintains the lead in the textile group, although the silk industry has grown more rapidly during the last decade.

The quantity and cost of the principal materials used in the manufacture of cotton goods and the quantity and value of the principal products reported in 1909, 1904, and 1899 are given below.

<sup>1</sup> Excluding statistics for two establishments, to avoid disclosure of individual operations.

The cotton consumed in this industry in 1909 amounted to 57,723,360 pounds, costing \$7,484,047, and representing an increase over 1904 of 4,444,878 pounds, or 8.3 per cent, in quantity, and \$623,481, or 9.1 per cent, in cost. In 1909 the quantity and cost of domestic cotton represented 89.5 per cent and 85.9 per cent, respectively, of the total quantity and cost of all cotton consumed, proportions somewhat smaller than the corresponding figures for 1904, which were 93.4 per cent and 91 per cent, respectively. The consumption of foreign cotton increased considerably between 1899 and 1909, although a pronounced decrease occurred from 1899 to 1904. Cotton waste purchased increased for the decade as a whole, although a decrease is shown for the period from 1899 to 1904.

Each kind of product presented separately shows an increase in value from 1904 to 1909, with the exception of ticks, denims, and stripes. Twills and sateens made the largest gain during the period, the increase in value being \$1,749,520, or 124.7 per cent. Plain cloths for printing and converting were the most important class of fabrics manufactured in both quantity and value, although the output shows a decrease in 1909 of 7,244,235 square yards as compared with 1904 and 830,120 square yards as compared with 1899; there has, however, been an increase during the decade in the value of this class of products. Twills and sateens stand next to plain cloths in the quantity manufactured in 1909. The increase for the decade in the output of this class of goods was 21,103,585 square yards, or 107 per cent, the greater part of which occurred between 1904 and 1909. The increases in the quantity and value of sheetings and shirtings were very much less than the gains shown for twills and sateens. Fancy woven fabrics, which are made in considerable quantities, show a decrease of 3,296,535 square yards, or 16.1 per cent, for the 10-year period, and an increase in value of \$252,491, or 16.9 per cent. It will be noted that the value of the thread manufactured exceeds that reported for any other class of products.

**Silk and silk goods, including throwsters.**—The second industry of importance in respect to value of products among the textile industries of Connecticut is the manufacture of silk and silk goods. The state has one of the largest factories in the country manufacturing broad silks and other woven silk goods. Of the 47 establishments reported in 1909 a number are engaged solely in throwing silk for others on contract.

The quantity and cost of the various materials used in the silk mills and the quantity and value of the different classes of products reported for 1909, 1904, and 1899 are shown in the next table.

Cotton and mercerized yarns formed the principal material according to weight, and showed the most marked increase, while raw silk was the material of greatest value.

Three groups of products furnished nearly equal proportions of the total value, namely, velvets and plushes, with \$5,959,175, or 28.3 per cent of the total; broad silks, with \$5,890,233, or 28 per cent; and machine twist, sewing, embroidery, wash, fringe, and floss silks, with \$5,108,180, or 24.3 per cent.

The output of velvets and plushes increased 125.9 per cent in quantity and 114.7 per cent in value during the 10-year period, that of broad silks 108.4 per cent in quantity and 93.4 per cent in value, and that of machine twist and other sewing and embroidery silks 5.4 per cent in quantity and 12.3 per cent in value. Organzine, tram, and spun silk yarns, which ranked

next in value of output, increased 76.4 per cent in quantity and 80.2 per cent in value between 1899 and 1909. Ribbons show a gain of 71.7 per cent in value for the decade as a whole, although a decrease of 2.5 per cent occurred during the last five years.

Ribbons constitute the only item which shows a decrease in value between 1904 and 1909. "All other products," on the other hand, which fell off somewhat during the earlier five-year period, increased 324.2 per cent between 1904 and 1909.

In 1909, 290,253 pounds of silk were thrown on commission, 150,332 pounds into organzine, and 139,921 pounds into tram. The corresponding total for 1904 was 216,454 pounds, of which 131,038 pounds were thrown into organzine and 85,416 pounds into tram.

<sup>1</sup> Not reported separately.

**Woolen, worsted, and felt goods.**<sup>1</sup>—Three establishments were primarily engaged in the manufacture of felt goods in 1909, one in 1904, and two in 1899. The following table gives the details concerning the cost of the different materials used in the manufacture of woolen and worsted goods and the quantity and value of the leading kinds of products for these two branches of the industry in 1909, 1904, and 1899, the cost of materials used and the value of products for felt goods also being included for 1909.

<sup>1</sup> The title of this industry in the tables, being uniform for all states, is "Woolen, worsted, and felt goods, and wool hats," but in Connecticut no wool hats were reported.

MATERIAL OR PRODUCT.	1909	1904 <sup>1</sup>	1899 <sup>1</sup>

<sup>1</sup> Excluding statistics for one establishment in 1904 and two in 1899, to avoid disclosure of individual operations.  
<sup>2</sup> Includes tapes.

The increase during the decade in the total cost of materials was proportionally greater than the increase in the value of products. Both the quantity and the cost of foreign wool consumed have decreased since 1899, although there has been a slight gain in quantity since 1904. From 1899 to 1904 there was a decided gain in the quantity and cost of domestic wool consumed, but from 1904 to 1909 a decrease occurred in both items. For the decade the quantity of domestic wool decreased slightly, although its cost shows a considerable increase. The most conspicuous gain was for worsted yarns purchased, which increased during the last five-year period, 1904-1909, 99.8 per cent in quantity and 125.4 per cent in cost.

The quantity of all-wool woven goods reported, whether woolen or worsted, was 17,987,303 square yards in 1909, 18,377,887 square yards in 1904, and 11,549,809 square yards in 1899. The combined value of these classes of goods represented 78 per cent of the total value of products for the industry in 1909, 72.8 per cent in 1904, and 63.1 per cent in 1899. The quantity and value of union tweeds increased from 1899 to 1904, but decreased from 1904 to 1909, with the result that both items were smaller in 1909 than in 1899. The output of all other union or cotton-mixed woven goods decreased steadily from 1899 to 1909, and their value was also lower in 1909 than in 1899, although somewhat higher than in 1904. For each of the two classes into which goods woven on cotton warps are divided in the table, the values declined regularly from 1899 to 1909, but the output of wool-filling cassimeres and jeans was greatest in 1909 and that of the cotton-warp goods included under the head of "All other" was greatest in 1904.

**Hosiery and knit goods.**—Twenty-one establishments—three less than in 1904 and four less than in 1899—were reported in this industry at the census of 1909. The quantity and cost of the principal materials used and the quantity and value of the products reported for the hosiery and knit-goods industry at the last three censuses were as follows:

MATERIAL OR PRODUCT.	1909	1904	1899
<b>Materials used, total cost</b> .....	<b>\$3,048,547</b>	<b>\$2,825,014</b>	<b>\$2,202,640</b>

<b>All other products</b> .....	<b>\$685,890</b>	<b>\$1,067,121</b>	<b>\$409,518</b>

<sup>1</sup> Included with domestic cotton.

<sup>2</sup> Includes silk or silk mixed.

The consumption of domestic cotton was 26 per cent less in 1909 than in 1904. Because of the demand for long fiber the quantity of foreign cotton increased 32.7 per cent from 1904 to 1909. The consumption of both domestic and foreign wool decreased, the quantity reported being 966,738 pounds less in 1909 than in 1904. Waste and noils show the largest gain, the increase during the last five years being 116.6 per cent in quantity and 178.9 per cent in cost. Both the quantity and the cost of cotton and woolen, worsted, and merino yarns purchased in 1909 were greater than in 1904.

The gain shown in both quantity and value of hose and half hose during the 10-year period is marked, although the quantity decreased considerably from 1904 to 1909. The growth in the production of merino and mixed shirts and drawers is noticeable; there was, however, a falling off in the production of all-wool underwear.

**Automobiles, including bodies and parts.**—The number and value of the different classes of machines manufactured as reported at the censuses of 1909 and 1904 are shown in the following table:

PRODUCT.	NUMBER.		VALUE.	
	1909	1904	1909	1904
<b>Total</b> .....	2,913	832	\$11,668,228	\$2,644,334
Passenger vehicles:				
Gasoline.....	2,913	386	7,359,652	1,125,863
Electric.....	( <sup>2</sup> )	319	( <sup>2</sup> )	747,420
Steam.....		127		85,399
All other products, including parts.....			4,107,809	331,253
Custom work and repairing.....			200,767	354,399

<sup>1</sup> Excluding statistics for one establishment, to avoid disclosure of individual operations.

<sup>2</sup> Included with gasoline.

This table shows a remarkable increase in the number of machines manufactured and also in their value. The increase in value was, however, somewhat greater relatively than that in number, so that the average value per machine in 1909, \$2,526, was higher than in 1904, when it was \$2,354. The value of all other products reported increased even more rapidly than that of the complete machines, on account of the increased production of bodies and parts. In 1909 there were 20 establishments primarily engaged in making bodies and parts, as compared with 1 in 1904.

Although the electric machine was the type first produced in Connecticut, practically all machines built in the state in 1909 were of the gasoline type.

A detailed statement by classes of the automobiles manufactured is not presented, because to do so would disclose the operations of individual establishments. Touring cars rank first in number, runabouts second, and closed pleasure and family vehicles third. Cabs, patrol wagons, and ambulances rank in the order named. Nearly all the machines were equipped with engines of from 30 to 50 horsepower, although a few

pleasure and family vehicles exceeded that rating and a limited number fell below it.

**Hats, fur-felt.**—The manufacture of fur-felt hats has long been an important industry in the state, but the development was greater during the last five-year period. The following table shows the quantity and cost of materials used and the quantity and value of products reported for the industry at the last three censuses:

MATERIAL OR PRODUCT.	1909	1904	1899
<b>Materials used, total cost</b> .....	\$4,848,983	\$3,953,693	\$3,885,748
Hatters' fur:			
Pounds.....	1,673,332	1,385,325	1,499,767
Cost.....	\$1,909,916	\$1,536,579	\$1,463,491
Fur-felt hat bodies and hats in the rough, purchased:			
Dozens.....	87,117	30,783	61,726
Cost.....	\$491,161	\$194,207	\$381,362
Chemicals and dyestuffs.....	\$315,598	\$501,640	\$272,635
Fuel and rent of power and heat.....	\$178,076	\$162,748	\$119,884
All other materials.....	\$1,957,233	\$1,559,519	\$1,448,376
<b>Products, total value</b> .....	\$10,399,860	\$8,662,799	\$7,546,882
Fur-felt hats:			
Dozens.....	530,553	600,312	497,683
Value.....	\$7,358,882	\$3,193,376	\$6,543,736
Fur-felt hat bodies and hats in the rough, for sale:			
Dozens.....	335,947	63,676	153,188
Value.....	\$2,407,044	\$396,056	\$946,057
Amount received for contract work.....	\$123,273	\$50,612	\$52,371
All other products.....	\$10,661	\$17,755	\$3,818

The cost of hatters' fur, which was the principal material reported, represented 39.4 per cent of the total cost of all materials in 1909 and about the same proportion in 1904 and 1899. The quantity and cost were both highest in 1909, although the quantity decreased from 1899 to 1904. A decided increase is shown from 1904 to 1909 in the number and cost of hat bodies used, which followed a decided decrease in both items between 1899 and 1904.

The proportion that the value of finished hats represents of the total value of products for the industry has varied greatly during the last decade, being 86.7 per cent in 1899, 94.6 per cent in 1904, and 75.6 per cent in 1909. The decrease in the value of finished hats from 1904 to 1909 was more than offset by the gain in that of hat bodies and hats in the rough.

**Electrical machinery, apparatus, and supplies.**—This industry has developed rapidly during recent years, which may have been due, to some extent, to the fact that Connecticut is a center of the brass and bronze industry. The following tabular statement gives the quantity and value of the different products reported at the last two censuses. Comparable statistics are not available for 1899.

PRODUCT.	1909	1904
<b>Total value</b> .....	\$9,824,373	\$4,939,831
Sockets, receptacles, bases, etc.....	1,052,586	1,022,237
Electric-lighting fixtures of all kinds.....	111,054	195,098
Electric switches, signals, and attachments.....	1,382,183	( <sup>1</sup> )
Insulated wires and cables.....	3,772,881	2,156,369
All other products.....	2,905,669	1,566,077

<sup>1</sup> Included under "All other products," to avoid disclosure of individual operations.

The totals for this industry do not include the electric machinery and apparatus, to the value of \$689,696 in 1909 and \$591,094 in 1904, which were manufactured by establishments primarily engaged in some other industry.

Insulated wires and cables formed the products of highest value at both censuses. The largest relative gain was in the value of the different classes of machinery and apparatus included under the head of "All other products," which consisted mainly of electric lamps, dynamos, motors, storage and primary batteries, telephones and telephone parts, and magneto-ignition apparatus.

**Printing and publishing.**—The following table shows the number of the several classes of publications in the state during 1909, 1904, and 1899, and their aggregate circulation per issue:

PERIOD OF ISSUE.	NUMBER OF PUBLICATIONS.			AGGREGATE CIRCULATION PER ISSUE.		
	1909	1904	1899	1909	1904	1899
Total.....	160	158	158	539,765	566,791	457,622
Daily.....	38	36	44	255,543	229,357	203,815
Sunday.....	10	5	3	86,261	59,095	0
Semiweekly.....	9	2 11	22	23,312	27,560	29,325
Weekly.....	78	80	74	134,849	165,479	155,507
Monthly.....	18	19	9	23,950	46,950	44,375
All other classes.....	7	7	6	7,850	38,350	19,600

<sup>1</sup> Included in circulation of dailies.    <sup>2</sup> Includes one triweekly publication.

An increase of 82,143, or 17.9 per cent, is shown in the total circulation per issue of all publications during the last decade, yet a decided decrease is shown for 1909 as compared with 1904. With the exception of the dailies and the Sunday papers, each class shows a loss during the five-year period 1904-1909. The growth from 1904 to 1909 in the circulation of Sunday papers was 46 per cent, and the increase in that of the dailies was 12.7 per cent. Between 1904 and 1909 the number of Sunday papers increased by five and the number of dailies by two. The circulation of the dailies constituted 47.9 per cent of the total circulation of all publications in 1909, that of the weeklies 25 per cent, and that of the Sunday papers 16 per cent. The corresponding proportions in 1904 were 40.5 per cent, 29.2 per cent, and 10.4 per cent, respectively, while in 1899 the circulation of dailies and Sunday publications combined constituted 45.6 per cent of the total and the circulation of the weeklies 34 per cent. The circulation of evening newspapers increased from 177,728 in 1904 to 186,601 in 1909 and that of morning papers from 51,629 to 71,942. All of the publications were in the English language except one daily, which was in Italian; 10 weeklies, 4 of which were in German, 4 in Italian, 1 in Polish, and 1 in Swedish; and 1 semimonthly included under the head of "All other classes," which was in German.

**Paper and wood pulp.**—The quantity and value of the various products of this industry, as reported for the censuses of 1909, 1904, and 1899, are shown in the next table.

Product.	1909	1904	1899
Total value.....	\$5,527,334	\$5,039,147	\$3,565,021
Book paper:			
Tons.....	3,180	4,425	6,076
Value.....	\$399,856	\$517,562	\$676,248
Writing and other fine paper:			
Tons.....	2,896	6,439	2,298
Value.....	\$559,954	\$864,055	\$361,412
Wrapping paper:			
Tons.....	6,316	7,056	14,219
Value.....	\$538,830	\$502,544	\$743,747
Boards:			
Tons.....	65,567	64,610	30,762
Value.....	\$2,386,945	\$2,354,053	\$1,158,499
Tissue:			
Tons.....	2,041	2,169	1,740
Value.....	\$438,097	\$406,675	\$283,378
All other paper products:			
Tons.....	12,224	4,950	4,712
Value.....	\$750,683	\$367,442	\$270,312
All other products.....	\$452,969	\$36,816	\$71,425

The output of each class of products for which statistics as to quantity are given, with the exception of boards and "All other paper products," decreased from 1904 to 1909. Book paper and writing and other fine paper also show decreases in value. Slight increases in both quantity and value are reported for paper boards, which form the chief product of the industry in the state. Book paper showed a marked decrease in both quantity and value during each five-year period. "All other paper products" comprises principally news paper and blotting paper and card and bristol boards, the first of which was made much more extensively in 1909 than in 1904 or 1899.

The paper-making machinery in the mills of the state in 1909 consisted mainly of 17 Fourdrinier and 66 cylinder machines, having a yearly capacity of 127,025 tons and in 1904 of 17 Fourdrinier and 64 cylinder machines, with an annual capacity of 110,121 tons.

**Laundries.**—Statistics for steam laundries are not included in the general tables or in the totals for manufacturing industries. In 1909 there were 95 such establishments in Connecticut, 15 of which were in New Haven, 12 in Hartford, 7 in Bridgeport, 7 in Waterbury, 5 in New London, 4 each in Danbury, Meriden, and Stamford, and 3 in Norwich.

The following statement summarizes the statistics:

Number of establishments.....	95
Persons engaged in the industry.....	1,638
Proprietors and firm members.....	101
Salaried employees.....	96
Wage earners (average number).....	1,441
Primary horsepower.....	1,852
Capital.....	\$870,567
Expenses.....	1,089,900
Services.....	684,373
Materials.....	246,066
Miscellaneous.....	159,461
Amount received for work done.....	1,416,122

Of these establishments, 53 were operated by individuals, 23 by firms, and 19 by corporations. Twenty-two establishments had receipts for the year's business

## SUPPLEMENT FOR CONNECTICUT.

of less than \$5,000; 50 of \$5,000 but less than \$20,000, and 23 of \$20,000 but less than \$100,000.

The number of wage earners employed each month and the percentage which this number represented of the greatest number employed in any month were as follows:

MONTH.	WAGE EARNERS.		MONTH.	WAGE EARNERS.	
	Number.	Per cent of maximum.		Number.	Per cent of maximum.
January.....	1,350	86.3	July.....	1,564	100.0
February.....	1,342	85.8	August.....	1,547	98.9
March.....	1,343	86.9	September.....	1,503	95.1
April.....	1,303	87.1	October.....	1,485	94.9
May.....	1,399	89.4	November.....	1,451	92.8
June.....	1,497	95.7	December.....	1,451	92.8

The returns of the different kinds of primary power, the number of engines or motors, and the horsepower used in 1909 are shown in the following statement:

KIND.	Number of engines or motors.	Horsepower.
<b>Primary power, total.....</b>		<b>1,852</b>
Owned—Steam.....	85	1,695
Rented:		
Electric.....	21	135
Other.....		22

The kind and amount of fuel used are shown in the following statement:

KIND.	Unit.	Quantity.
Anthracite coal.....	Tons.....	3,492
Bituminous coal.....	Tons.....	10,448
Coke.....	Tons.....	11
Wood.....	Cords.....	39
Oil.....	Barrels.....	102
Gas.....	1,000 feet.....	12,249

Custom sawmills and gristmills.—Statistics for custom sawmills and gristmills are not included in the general tables or in the totals for manufacturing industries, but are presented in the following summary:

	Custom sawmills.	Custom gristmills.
Number of establishments.....	31	59
Persons engaged in the industry.....	86	80
Proprietors and firm members.....	36	61
Wage earners (average number).....	50	19
Primary horsepower.....	873	1,923
Capital.....	\$51,408	\$132,577
Expenses.....	23,026	187,152
Services.....	19,478	5,737
Materials.....	1,045	178,750
Miscellaneous.....	2,503	2,065
Value of products.....	46,481	1,220,775

<sup>1</sup> Includes estimate of all grain ground. A similar estimate for value of lumber sawed by custom sawmills is impracticable.

STATISTICS OF MANUFACTURES.

TABLE I.—COMPARATIVE SUMMARY FOR 1909, 1904, AND 1899.  
THE STATE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES.

INDUSTRY.	Census.	Number of establishments.	PERSONS ENGAGED IN INDUSTRY.				Primary horse-power.	Capital.	Salaries.	Wages.	Cost of materials.	Value of products.	Value added by manufacture.
			Total.	Proprietors and firm members.	Salaried employees.	Wage earners (average number).

## CHAPTER 5.

# MINES AND QUARRIES.

**Introduction.**—The present chapter contains a complete statement of the statistics of all mining industries, which include all mines and quarries, in the state of Connecticut for the year 1909, as shown by the Thirteenth Census.

A brief explanation of the scope of the census of mining industries and of the terms used, in so far as the usage differs from that followed in the census of manufactures, is presented below in order to prevent any misinterpretation of the statistics.

The explanations here given show the usage of the mining census generally, though some of the special rules have obviously no relation to particular states in which the industries referred to do not exist.

**Scope of census.**—The Thirteenth Census covered all classes of mines, quarries, and petroleum and gas wells that were in operation during any portion of the year 1909, both those which were producing and those whose operations were confined to development work. Mines, quarries, or wells that were idle during the entire year 1909 were omitted from the canvass. The following operations were likewise omitted from the canvass: Prospecting; the digging or dredging of sand and gravel for the construction of roads and for building operations; the production of mineral waters; and the operation of small bituminous coal banks producing less than 1,000 tons annually. Where the mineral products are not marketed in their crude condition, but are dressed or washed at the mine or quarry, the statistics of mining cover the entire work of obtaining the crude material and its preparation for the market.

**Period covered.**—The returns cover the calendar year 1909, or the business year which corresponds most nearly to that calendar year. The statistics cover a year's operations, except for enterprises which began or discontinued business during the year.

**Number of operators.**—As a rule, the unit of enumeration was the "operator." Every individual, firm, or corporation was required to furnish one report for all mines, quarries, or wells which were operated under the same management or for which one set of books of account was kept. Separate reports were obtained for all properties operated in different states, even where they were owned by the same operator. Likewise, where the operations of one individual, firm, or corporation covered more than one class of mines and quarries, such as coal, iron, limestone, etc., a separate report was received for each industry.

**Number of mines, quarries, and wells.**—This figure represents the total number of mines and quarries in operation or in the course of development at any time during the calendar year 1909, or the business year that corresponds most nearly to that calendar year, and the number of completed petroleum and natural gas wells in operation on December 31, 1909.

In most mining and quarrying industries the number of mines or quarries varies but little from the number of operators.

**Expenses of operation and development.**—A certain amount of development work is incidental to the operation of every mine. The expenses reported for producing mines include the cost both of operation and of development work which was done in connection with operation.

**Wages.**—The amount shown as wages includes only the compensation of regular wage earners hired by the day, week, or month, or under the piecework system.

**Supplies and materials.**—This item includes the cost of lumber and timber used for repairs, mine supports, track ties, etc.; iron and steel for blacksmithing; rails, frogs, sleepers, etc., for tracks and repairs; renewals of tools and machinery and materials for repairs; and supplies, explosives, oil, etc., as well as the cost of fuel and the rent of power. The schedule called only for the cost of such supplies and materials as had been used during the year covered by the report. Accurate figures, however, could be furnished only in those cases where the operators kept an account of supplies and materials used, or had an inventory made of all in stock at the beginning and at the end of the year. Such a system of accounting is far from general among mine operators, and there is reason to believe that in many cases the reported cost of supplies and materials covered all purchased during the year rather than those used during the year. The crude product of some operators was purchased by others for further dressing or refining; the cost of such materials is shown separately in the general table.

**Capital.**—The census schedule required every operator to state the total amount of capital invested in the enterprise on the last day of the business year reported, as shown by his books. There is, however, a great diversity in the methods of bookkeeping in use by different operators. As a result, the statistics for capital lack uniformity. Some of the figures reported apparently represent capital stock at face value; others include large investments in mineral lands which are not at present being actively mined, but are held in reserve; still others may include expenditures for unproductive mining ventures in no way related to the operations carried on during the census year.

**Persons engaged in mining industries.**—The statistics of the number of operators and officials, clerks, and wage earners, are based on the returns for December 15, or the nearest representative day. The reported number of wage earners includes overseers and foremen performing work similar to that of the men over whom they have charge; those whose duties are wholly supervisory are classed as superintendents and managers. Because of the common practice of shutting down mines at frequent intervals, it is impossible to ascertain with any satisfactory degree of accuracy the average number of employees—that is, the number who, if continuously employed, would be required to produce the actual output of the year.

**Value of products.**—Statistics of the value of mineral products were obtained by the Bureau of the Census in cooperation with the United States Geological Survey, but the two bureaus follow different methods in presenting these statistics. The Geological Survey shows separately the value of each mineral product, whereas the Bureau of the Census presents the value of products of each mining industry. The value of products given for a mining industry often includes the value of some products not covered by the industry designation. The crude product of metalliferous mines may include varying combinations of metals, such as gold, silver, copper, lead, zinc, and iron. Similarly, the total value of all products of the granite quarries is not identical with the value of the total output of granite, but may include the value of some marble or other stone quarried in connection with the principal product.

The value of products for 1909 in most cases represents the value of the products marketed during that year, not the value of those mined during that year.

## MINING IN CONNECTICUT.

**Summary.**—Statistics of the mining enterprises in the state of Connecticut are presented at the close of this chapter in Table 7, for all industries combined and for each industry which can be shown separately without revealing the operations of individual enterprises.

The total value of the products of all mines and quarries in Connecticut in 1909 was \$1,375,765, of which the stone industry, comprising the quarrying of granite, trap rock, and sandstone reported \$1,168,447, or 84.9 per cent.

In the feldspar industry and in the aggregate for the three industries shown under "All other" in Table 7 the expenses of operation and development exceeded the total value of the products. This may have been due to unprofitable mining ventures or to expenditures for development work resulting in improvements to the mining properties.

**Character of organization.**—Tables 1 and 2 present statistics classifying the mining operations of the state under form of organization.

INDUSTRY AND CHARACTER OF ORGANIZATION.	Number of operators.	Number of wage earners.	VALUE OF PRODUCTS.		PER CENT DISTRIBUTION.		
			Total.	Per operator.	Operators.	Wage earners.	Value of products.
<b>All industries</b> .....	71	1,690	\$1,375,765	\$19,377	100.0	100.0	100.0

Royalties and rent of mines.....	2,596	14,175
Taxes.....	15,614	2,043
Supplies and miscellaneous expenses.....	199,583	112,419
<b>Value of products.....</b>	933,501	442,264

Out of a total of 71 enterprises 19 were corporations. These corporations reported 67.9 per cent of the total value of products and employed 68.3 per cent of all wage earners. In the granite industry the corresponding percentages were 62.5 and 61.2, respectively.

**Size of enterprises.**—In Table 3 the mining enterprises of the state have been classified according to the number of wage earners employed. Of the 71 enterprises only 4 employed more than 100 wage earners each. These enterprises, however, employed 694 wage earners, or 41.1 per cent of the total number employed in all enterprises.

INDUSTRY AND WAGE EARNERS PER ENTERPRISE.	ENTERPRISES.		WAGE EARNERS.	
	Number.	Per cent distribution.	Number.	Per cent distribution.

1 to 20.....	10	62.5	95	36.0
Over 20.....	6	37.5	222	70.0

**Prevailing hours of labor.**—In Table 4 all mines and quarries, except those employing no wage earners or operated exclusively by contract work, have been classified according to the prevailing hours of labor per day in each enterprise or operating unit. The table shows the percentage of the total number of enterprises falling in each group, and also a per cent distribution in which each enterprise has been given a weight according to the total number of wage earners employed December 15, 1909, or the nearest representative day. It should be borne in mind that this latter distribution does not show the exact proportion of the total number of wage earners working the specified number of hours per day, since, in some cases, a part of the employees worked a greater or less number of hours than those generally prevailing in the enterprise. As appears from the table, a majority of all enterprises are operated on a 10-hour basis. Of the total number of enterprises, weighted according to the number of wage earners, 60.4 per cent were operated on this basis. For granite and traprock quarrying, the two leading industries, the corresponding percentages were, respectively, 45.9 and 95.6.

INDUSTRY AND HOURS PER DAY.	ENTERPRISES.		Per cent distribution of enterprises weighted according to number of wage earners.
	Number.	Per cent distribution.	
All industries.....	68	100.0	100.0
8 hours.....	13	19.1	22.0

10 hours.....	14	87.5	95.6

Engines and power.—As shown by Table 5 the aggregate horsepower employed in mining enterprises in Connecticut in 1909 was 6,298, of which 6,123 horsepower was developed by engines and water wheels owned by the enterprises using them and 175 by electric motors operated by purchased current.

CHARACTER OF POWER.	Total.	Granite.	Trap-rock.	Sand-stone.	All other.

Comparison of mining industries: 1902-1909.—In order to make comparisons between 1909 and 1902, it is necessary to omit from the 1902 figures, statistics for enterprises operated by governmental institutions, and to add to the 1909 statistics, figures for the production of lime which were omitted from the census of mines and quarries in 1909. Such items as are comparable for the two years are presented in Table 6. The principal increases in the value of products were in the value of the sandstone, which increased from \$128,579 to \$191,760, and in siliceous crystalline rock, consisting of granite and traprock, which increased from \$812,141 to \$976,687.

	1909	1902	Per cent of increase. <sup>1</sup>
Wages and salaries.....	\$1,000,409	\$900,014	11.1
Supplies and materials.....	\$474,711	\$223,813	112.1
Royalties and rent of mines.....	\$20,176	\$17,855	13.0
Contract work.....	\$13,121		
Value of products.....	\$1,923,965	\$1,372,144	40.6
Primary horsepower.....	6,463	7,965	-18.8

<sup>1</sup> A minus sign (-) denotes decrease.  
<sup>2</sup> Exclusive of amount paid to miners compensated by a share of the product, which is included under "Contract work," in Table 7.

Duplication between manufactures and mining.—In three industries, the mining of feldspar and quartz and the quarrying of granite, some of the operators subjected the products obtained to certain manufacturing processes on the premises before marketing. These enterprises have been included in the statistics both for manufactures and for mining. As a result of this fact the combined value of products for the manufacturing and mining industries in Connecticut involves a duplication of \$535,927, of which \$449,134 represented the value of the granite reported, \$46,793 the value of the feldspar, and \$40,000 the value of the quartz.
