CHAPTER 1.

NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Texas, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 576) shows the population of Texas, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. In this table the counties are arranged alphabetically, while the primary divisions in each county, except a few not returned by precincts, are given in numerical order. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. This is for the most part due to the territorial changes that have been made in the minor civil divisions of certain counties since 1900. In a few cases, however, the population of certain divisions returned separately at one census was returned in combination with that of other divisions at another census.

Table 2 (p. 593) shows the cities and the incorporated towns and villages of Texas, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of Texas, by counties, at each of the last five censuses, from 1870 to 1910, inclusive;

HISTORICAL NOTE.—Texas was named from the Tejas Indians, who once occupied part of the region now constituting this state. The meaning of the name is uncertain but it probably signifies "friends."

The boundary between the Spanish possessions and the United States was in dispute during the early years of the nineteenth century, but in 1819, at the time of the Florida Purchase, the eastern and northern limits of the Spanish possessions were agreed upon and defined.

In 1821 Mexico, by revolution, became an independent nation, and three years later Texas and Coahuila were united into a single Mexican state. the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, justice precincts, etc. Of these minor civil divisions those which rank next to the country as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions as they existed at each census. In this comparison a place having less than 2,500 inhabitants in 1900

Many settlers came to Texas from the United States, and their discontent with Mexican rule resulted in a successful revolution in 1835-36. In March of the latter year a constitution was adopted for the republic of Texas, which continued an independent existence until 1845, when it was annaxed to the United States. Mexico's refusal to recognize the independence of Texas, together with a boundary dispute, led to war with the United States, which began early in 1846 and was brought to a close in 1848, when Mexico formally relinquished its claims to Texas, and to all lands north of the present southern boundary of California, the river Gila, and a line a little north of the thirty-second parallel.

From 1836 to 1850 Texas claimed as its southwestern and western boundaries the Rio Grande and a line drawn north from the source of that river to latitude 42°, the eastern and northern boundaries were formed by the limits of the Louisiana Purchase as defined in the Florida Purchase treaty of 1819. Texas thus included during this period, in addition to its present area, territory now constituting parts of New Mexico, Oklahoma, Kansas, Colorado, and a small part of southern Wyoming. In 1850 the state sold to the Federal Government for \$10,000,000 that part lying outside its present limits.

The first explorations of the area now constituting Texas were made by the Spaniards, Cabeza de Vaca, who wandered about in the southern part, 1528-1536, and Coronado, who crossed the northern part, 1540-1542. Other Spaniards visited the Texas country during the next hundred years, but the first attempt at settlement was made in 1685 by the French under La Salle. This attempt, though unsuccessful, incited the Spaniards to make settlements, the most important of which was begun at San Antonio in 1718. In 1728 the territory with vaguely defined limits was formed into a province of Spain.

SUPPLEMENT FOR TEXAS.

and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their rate of growth, it is necessary to consider the changes in population for the same territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Texas is 3,896,542. Compared with a population of 3,048,710 in 1900, this represents an increase during the last decade of 847,832, or 27.8 per cent. During the same period the total population of the United States increased 21 per cent. The growth of the state was somewhat slower than during the preced-

ing decade, 1890-1900, when the rate was 36.4 per cent.

The following table shows the population of Texas at each census from 1850 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER		Per cent of increase for the
1910. 1900. 1890. 1880. 1870. 1860. 1850.	3, 896, 542 3, 048, 710 2, 235, 527 1, 591, 749 818, 579 604, 215 212, 592	Number. 847, 832 813, 183 643, 778 773, 170 214, 864 391, 623	Per cent. 27. 8 36. 4 40. 4 94. 5 35. 5 184. 2	United States. 21. 0 20. 7 25. 5 30. 1 22. 6 35. 6

Texas was admitted as a state in 1845 and appears in the Federal census reports for the first time in 1850. Since that time Texas has grown rapidly, its population nearly trebling during the first decade, 1850– 1860, more than doubling during the 20 years, 1860– 1880, and nearly doubling again in the 20 years from 1880 to 1900.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that during each decade since 1850 the rate of increase for the state has been higher than the rate for the United States, the greatest difference between the two rates being for the decade 1850–1860 and the smallest difference for the last decade. The population of the state in 1910 was more than eighteen times its population in 1850, while the population of the United States in 1910 was not quite four times that in 1850.

Principal cities.—Texas has 132 cities. San Antonio, the largest, has a population of 96,614, and Dallas, the second city, a population of 92,104. Houston and Fort Worth, with 78,800 and 73,312 inhabitants, respectively, are the other cities in the state having over 50,000 inhabitants. There are also 4 cities having from 25,000 to 50,000, 12 having from 10,000 to 25,000, 18 having from 5,000 to 10,000, 32 having from 2,500 to 5,000, and 62 having less than 2,500 inhabitants.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible,

for 1900 and 1890. The table on page 569 shows the population of the 8 cities having in 1910 over 25,000 inhabitants, as reported at each census since their incorporation either as cities or towns, so far as figures are available, together with the increase during each decade.

Of the cities included in this table, five—Dallas, El Paso, Fort Worth, Houston, and San Antonio show a rate of increase for the last decade of more than 75 per cent. Fort Worth shows the highest rate of increase during the last decade, namely, 174.7 per cent, and Waco the lowest, 27.7 per cent. Aside from Galveston, which shows a decrease of 2.1 per cent during the last decade, Austin and Waco are the only cities showing a slower growth during the last than during the preceding decade.

Counties.—Texas has 245 counties, of which 6 are unorganized. The population of these counties ranges from 65 in Cochran County to 135,748 in Dallas County.

The following territorial changes have been made in the counties of Texas since 1900: Part of Tom Green County was taken in 1903 to form Reagan County and part of Pecos County was taken in 1905 to form Terrell County.

Owing to the organization since 1900 of two new counties from parts of other counties as shown above, the increase or decrease in population is calculated for only 241 counties and for two combinations of counties. The combinations of counties are Reagan with Tom Green, and Terrell with Pecos. In order to determine the actual rate of increase for these counties, it is necessary to add the population of the new county to that of the old county from which it was formed. Two hundred and seven counties and the two combinations of counties increased in population during the last decade. Of the 207 counties that show increases, 12 show rates of increase over 1,000 per cent. These high percentages are for the counties which in 1900 were practically uninhabited, but which since that time have become more or less settled. Of the remaining counties showing increases, 74 show percentages of increase over 100. Brazos County shows the smallest rate of increase, namely, three-tenths of 1 per cent. The largest absolute increase in any county, 56,196, representing a percentage of 107.3, was shown by Tarrant. The combined counties of Reagan and Tom Green increased 168.6 per cent, while Terrell and Pecos increased 48.3 per cent. Thirty-four counties decreased in population during the last decade, the rates of decrease ranging from 1.1 per cent in Madison County to 22.4 per cent in Washington County. The aggregate increase of population from 1900 to 1910 in the two combinations of counties and in the 207 counties that showed increases was 913,002; the aggregate decrease of population in the 34 counties that showed decreases was 65,170. The difference, 847,832, is, of course, the total increase of population in the state.

1 A minus sign (-) denotes decrease.

The maps on pages 572 and 573 show the increase or decrease in the total and the rural population, respectively, of each county of Texas during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 262,398 square miles. The average number of persons to the square mile in 1910 was 14.8; in 1900 and 1890 it was 11.6 and 8.5, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in the maps on pages 574 and 575, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 or more, but not excluding the land area of such places.

El Paso County, with 9,331 square miles, has the largest area, and Rockwall County, with 149 square

miles, has the smallest area. Dallas County, containing Dallas city, has the highest density of any county, namely, 158 persons per square mile, while Cochran County has the lowest density, namely, 0.1.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Texas, of the 239 organized counties, 236 are divided into 1,484 primary divisions, comprising 1,456 justices' precincts and 28 commissioners' precincts. There are also 320 secondary divisions, comprising 132 cities, 180 incorporated towns, and 8 incorporated villages. These secondary divisions usually form parts of the precincts in which they are wholly or partly located, but 2 cities are coextensive with precincts.

Urban and rural population compared.—The following table presents the population of Texas at the censuses of 1910, 1900, and 1890, respectively, distributed among cities, towns, and villages, grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census. For the purposes of this table Texarkana city is included in the group of urban places having from 10,000 to 25,000 inhabitants, although it had a population of only 9,790 in 1910, 5,256 in 1900, and 2,852 in 1890. This is due to the fact that Texarkana city, Tex., and Texarkana city, Ark., each separately incorporated, are together commonly known as Texarkana city, with a joint population of 15,445 in 1910, 10,170 in 1900, and 6,380 in 1890.

	1910		1900		1890		PEE CENT OF TOTAL POPULATION.		
CLASS OF FLACES.	Number of places.	Population.	Number of places.	Population.	Number of places.	Population.	1910	1900	1890
Total population		3, 896, 542		3, 048, 710		2, 235, 527	100.0	100.0	100.0
Urban territory	4	938,104 340,830 182,545 157,127 134,680 172,922	56 1 4 7 15 29	520,759 53,321 151,748 99,585 110,602 105,503	42 4 6 10 22	349,511 132,381 84,711 62,616 69,803	24.1 8.7 3.4 4.0 3.5 4.4	17.1 1.7 5.0 3.3 8.8 3.5	15.6 5.9 3.8 2.8 3.1
Rural territory	229	2,958,438 256,305 2 ,70 2 ,133	141	2,527,951 160,208 2,367,743	140	1,886,016 131,904 1,754,112	75.9 6.6 69.3	82.9 5.3 77.7	84.4 5.9 78.5

As shown by the above table, the urban territory of the state in 1910-that is, the cities and incorporated towns of 2,500 inhabitants or more-contained 938,104 inhabitants, or 24.1 per cent of the total population, while 2,958,438 inhabitants, or 75.9 per cent, lived in rural territory. The urban territory as it existed in 1900-that is, the cities and incorporated towns then having 2,500 inhabitants or more-contained 520,759 inhabitants, or 17.1 per cent of the total population, while 2,527,951 inhabitants, or 82.9 per cent, lived in rural territory. There has thus been since 1900 a considerable increase in the proportion of urban population. The change in the preceding decade was in the same direction but less marked. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

In 1910 the combined population of the cities of 25,000 inhabitants or more constituted 12.1 per cent of the total population of the state; the corresponding percentage in 1900 and 1890 was 6.7 and 5.9, respectively. The urban places having less than 25,000 inhabitants at the censuses of 1910, 1900, and 1890 contributed 11.9, 10.4, and 9.7 per cent, respectively, of the total population of the state.

The urban population of the state is contained in 70 cities and 21 towns, while the rural population is in 229 incorporated places of less than 2,500 inhabitants each and in the unincorporated territory. The 229 places of less than 2,500 inhabitants each have an aggregate population of 256,305, representing 6.6 per cent of the total population of the state. These places comprise 123 having from 1,000 to 2,500 inhabitants each, with a combined population of 189,500; 77 having from 500 to 1,000 inhabitants each, with a combined population of 56,475; and 29 having less than 500 inhabitants each, with a combined population of 10,330. The population living in unincorporated territory represents 69.3 per cent of the total.

The above table shows further that in all incorporated places, including those of less than 2,500 inhabitants, there was in 1910 a population of 1,194,409, or 30.7 per cent of the population of the state. The population of all incorporated places, as they existed in 1900, was 680,967, or 22.3 per cent of the population of the state.

Table I of Chapter 2 shows that 39 counties had a larger proportion and 11 counties a smaller proportion of urban population in 1910 than in 1900. Thirty-two counties and one combination of counties, which were wholly rural in 1900, were partly urban in 1910, while 159 counties and one combination of counties were wholly rural at both censuses.

In order to compare the rate of growth in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the same territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the table on page 571, the total population in 1910 of those places which at that time had 2,500 inhabitants or more was 938,104; in 1900 the total population of these same places (so far as separately reported) was 559,872. It may be noted that the latter figure exceeds the total population in 1900 of those places which at that time had over 2,500 inhabitants each, 520,759 (see table above) by 39,113. The difference is the net result of the passage, since 1900, of certain communities from the rural to the urban class and vice versa.

A comparison of the total population in 1910 of places having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table in the next column, shows an increase of 67.6 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased 18.9 per cent. The population of urban areas thus increased more than three and one-half times as fast as rural. For the United States as a whole urban population increased 34.9 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2, there are 42 counties in Texas in which rural population decreased and 11 counties in which there was a decrease in the urban population during the last decade, there being 6 counties that decreased in population in both rural and urban districts.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the combined population of the places having in

1910 over 25,000, and from 2,500 to 25,000 inhabitants, respectively, and the population of the remainder of the state.

		POPUL	ATION.	INCRE/ 1900-1	
	CLASS OF PLACES.	1910	1900	Number.	Per cent.
Urban terr Citiesand Citiesand	state itory in 1910 it towns of 25,400 or more in 1910. d towns of 2,600 to 25,000 in 1910 r of the state	473, 875	8,048,710 559,872 267,549 292,323 2,488,838	847,882 378,232 205,826 172,406 469,600	27.8 67.6 76.9 59.0 18.9

From this table it appears that the group of urban places having over 25,000 inhabitants increased in population during the last decade more than two and three-fourths times as rapidly as the state as a whole, and the group of places having from 2,500 to 25,000 inhabitants more than twice as rapidly. The rate of increase for rural territory was only about two-thirds that for the state as a whole.

PER CENT OF INCREASE OR DECREASE OF POPULATION OF TEXAS, BY COUNTIES: 1900-1910.

In case of decrease the per cent is inserted under the county name. RURAL POPULATION.

Fart of precinct 1 annexed to Sherman city in 1909.
Part of precinct 2 annexed to Denison city in 1908.
Incorporated in 1906.
Part of precinct 1 annexed to Longview city in 1904.
Contry total includes population (1,500) of precincts 4 and 8, not returned separately in 1890.
No comparison of population can be made; not returned by precincts in 1890.
Precinct 5 organized from part of precinct 1 in 1909.

¹¹ No comparison of population 6an De made, numerous and 1900. 1890 and 1900. 18 Part taken to form precincts 7 and 8 and part of precinct 6 in 1909. 14 Parts taken to form precincts 7 and 8 and part of precinct 6 in 1909. 15 Organized from parts of precinct 8 and 4 in 1909. 16 Organized from part of precinct 4 in 1909. 17 Part annexed to Houston city in 1903; part of precinct 8 (Houston Heights town) annexed in 1904. 18 Part of precinct 1 annexed in 1903.

TABLE 1.-POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890-Continued.

[Precinct, except as otherwise stated, means justice precinct. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

Incorporated in 1910.
Incorporated in 1909.
Unorganized in 1890.
Precinct 7 organized from part of precinct 4 in 1908.
Precinct 6 organized from part of precinct 5 in 1903.
County totals include population (1,063 in 1900; 1,117 in 1890) of precinct 5 and 6, annexed to precinct 4; population (239 in 1900; 185 in 1890) of precinct 7, annexed to precinct 1; and population (247 in 1900) of precinct 8, annexed to precinct 3, since 1900.

Precinct 8 annexed in 1904.
Precincts 5 and 6 annexed in 1904.
No comparison of population can be made; county redistricted between 1890 and 1900.
No teturned separately in 1900.
Precinct 7 organized from part of precinct 6 in 1900.
Incorporated in 1907.
No comparison of population can be made; not returned by precincts in 1890.
Organized from unorganized county of Lamb in 1908.

¹ Joint population of Texarkana city, Miller County, Ark., and Texarkana city, Bowie County, Tex.: 19.0, 15,445; 1900, 10,170; 1890, 6,380.

CHAPTER 2.

COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Texas by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of more than 25,000 inhabitants; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of cities of more than 50,000.

A series of summary tables (numbered 1 to 15) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural. The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Texas, 3,204,848, or 82.2 per cent, are whites, and 690,049, or 17.7 per cent, negroes. The corresponding percentages in 1900 were 79.6 and 20.4, respectively. Twenty-eight of the 245 counties report no negroes; in 137 other counties the percentage of negroes is less than 12.5; in 30 it is between 12.5 and 25; in 42, between 25 and 50, and in 8 the proportion exceeds one-half. (See map on page 659.)

Native whites of native parentage constitute 66.8 per cent of the total population of the state, and 81.2 per cent of the white population. Native whites of foreign or mixed parentage constitute only 9.3 per cent of the total population, and foreign-born whites only 6.2 per cent.

Of the urban population, 59.5 per cent are native whites of native parentage; of the rural, 69.1 per cent. The corresponding proportions for native whites of foreign or mixed parentage, are 12.2 and 8.4 per cent, respectively. The percentage of foreign-born whites is 9.2 in the urban population and 5.2 in the rural; the percentage of negroes is 19.1 in the urban and 17.3 in the rural.

Sex (Tables 2 and 12).—In the total population of the state there are 2,017,626 males and 1,878,916 females, or 107.4 males to 100 females, the ratio being the same in 1910 as it was in 1900. Among the whites there are 109 males to 100 females; among the negroes the population is about equally divided between the sexes. Among native whites the ratio is 107.3 to 100, as compared with 132.6 to 100 for the foreign-born whites. In the urban population there are 101.7 males to 100 females, and in the rural, 109.3.

State of birth (Tables 3 and 4).—Of the total native population—that is, population born in the United States—74.7 per cent were born in Texas and 25.3 per cent outside the state; of the native white population, 28.2 per cent were born outside the state, and of the native negro, 12.5 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

(595)

Foreign nationalities (Table 5).—Of the foreignborn white population of Texas, persons born in Mexico represent 51.8 per cent; Germany, 18.7; Austria, 8.6; England, 3.5; Italy, 3; Russia, 2.4; Ireland, 2.2; Sweden, 2; all other countries, 7.7 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Mexico contributed 38.7 per cent; Germany, 28.5; Austria, 8.8; England, 4.4; Ireland, 3.8; Italy, 2.3; Sweden, 1.9; Russia, 1.8; Canada, 1.6 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 1,003,357, representing 25.7 per cent of the population. Of such males, 83.3 per cent are whites and 16.6 per cent negroes. Native whites represent 72.1 per cent of the total number and foreign-born whites 11.2 per cent. Of the 112,152 foreign-born white males of voting age, 43,381, or 38.7 per cent, are naturalized. Males of militia age—18 to 44—number 804,980.

Age (Tables 7, 8, and 13).—Of the total population, 13.8 per cent are under 5 years of age, 24.8 per cent from 5 to 14, inclusive, 20.9 per cent from 15 to 24, 25.9 per cent from 25 to 44, and 14.4 per cent 45 and over. The foreign-born white population comprises comparatively few children, only 11.5 per cent of this class being under 15, while 72.4 per cent are 25 years of age and over. Of the native whites of native parentage and of the negroes, only 38.6 per cent are 25 and over. The negro population comprises a somewhat smaller proportion of children under 5 than the native white population of native parentage.

The urban population shows a smaller proportion of children than the rural, and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 32.7 per cent are from 25 to 44 years of age, inclusive, and of the rural, 23.7 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 1,363,713, of whom 790,736, or 58 per cent, attended school. In addition to these, 6,740 children under 6 and 12,601 persons 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 57.7; for girls, 58.3. For children from 6 to 14 years, inclusive, the percentage attending school was 70.2. The percentage for children of this age among native whites of native parentage was 74.3; among native whites of foreign or mixed parentage, 60.3; among foreign-born whites, 38.4; among negroes, 64.5. (See Table I.) In urban communities the percentage of children of that age attending school was 74.3, and in rural, 69.2.

Illiteracy (Table 10).—There are 282,904 illiterates in the state, representing 9.9 per cent of the total population 10 years of age and over, as compared with 14.5 per cent in 1900. The percentage of illiteracy is 30 among foreign-born whites, 24.6 among negroes, and 4.3 among native whites. It is 3.3 for native whites of native parentage, and 11.6 for native whites of foreign or mixed parentage.

For all classes combined, the percentage of illiterates is 7.1 in the urban population and 10.9 in the rural. For each class separately, also, the percentage of illiterates in the rural population greatly exceeds that in the urban.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 6.7. (See Table I.)

Marital condition (Tables 11 and 14).—In the population 15 years of age and over, 37.2 per cent of the males are single and 26 per cent of the females. The percentage married is 57.2 for males and 62.7 for females; and the percentage widowed 4.6 and 10.2, respectively. The percentages of those reported as divorced, 0.5 and 0.8, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that women marry younger. Thus 17.9 per cent of the females from 15 to 19 years of age are married, as compared with 1.9 per cent of the males, and 61 per cent of the females from 20 to 24 years are married, as compared with 31.6 per cent of the males. In the next age group, 25 to 34 years, the difference in the percentages is less marked, and in the age group 35 to 44 it is very slight, while among those 45 and over the percentage married is higher for the males. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 62.8 for males, 67.5 for females; native whites of native parentage, 57.5 and 64.2, respectively; native whites of foreign or mixed parentage, 49.3 and 57.1; negroes, 57 and 57.8.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married, both for males and for females, is higher in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Texas is 779,177, and the total number of families 798,426, indicating that in comparatively few cases does more than one family occupy a dwelling. (See Table I.) The average number of persons per dwelling is 5, and the average number per family, 4.9.

PER CENT OF NEGROES IN TOTAL POPULATION OF TEXAS, BY COUNTIES: 1910.

CHAPTER 3.

STATISTICS OF AGRICULTURE FOR THE STATE AND ITS COUNTIES.

Introduction.-This chapter presents a complete statement of the statistics of agriculture for Texas collected at the census of 1910. Statistics of farms and farm property relate to April 15, 1910; those of farm products, expenses, and receipts are for the calendar year 1909.

Definitions .--- To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

Farm.-A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term referring to the work of growing crops, producing other agricultural products, and raising animals, fowls, and bees. A "farm" as thus defined may consist of a single tract of land, or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. Further, when a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1909.

Farmer.-A "farmer" or "farm operator," according to the census definition, is a person who directs the operations of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, tenants, and managers.

Farm owners include (1) farmers operating their own land only, and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "owners" being then restricted to those owning all their land.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1910 in three classes: (1) Share tenants-those who pay a certain share of the products, as one-half, one-third, or one-quarter; (2) share-cash tenants-those who pay a share of the products for part of the land rented by them and cash for part; and (3) cash tenants-those who pay a cash rental or a stated amount of labor or products, such as \$7, 10 bushels of wheat, or 100 pounds of seed cotton per acre.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm land.-Farm land is divided into (1) improved land, (2) woodland, and (3) all other unimproved land. The same classification was followed in 1880. At former censuses, except that of 1880, farm land was divided into improved land and unimproved land, woodland being included with unimproved land. Improved

land includes all land regularly tilled or mowed, land pastured and cropped in rotation, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings. Woodland includes all land covered with natural or planted forest trees, which produce, or later may produce, firewood or other forest products. All other unimproved land includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest. The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics therefore must be considered at best only a close approximation.

Total value of farm products.-No attempt has been made at this census to compute or even to estimate approximately the total value of farm products. Among the numerous difficulties which stand in the way of obtaining a total which would be at once comprehensive, free from duplication, and confined exclusively to the products of a definite period of time are the following:

(1) The duplication resulting from the feeding of farm crops to farm live stock, when the value both of the products derived from such live stock and of the crops are included in the same total. In 1900 an attempt was made to eliminate this duplication by means of an inquiry as to the total value of the products of each farm fed to the live stock on that farm, but, aside from the fact that this would not eliminate the duplication where the products of one farm are fed to the live stock of another farm, it is believed that the farmers were unable to make even approximately accurate answers to the inquiry, and it was accordingly not included in the schedule for 1910.

(2) The fact that farmers may buy domestic animals during the census year which are subsequently sold or slaughtered during the same year, and that it is impossible to eliminate the duplication accurately; and the further fact that the value of domestic animals sold or slaughtered, or of forest products cut, during a given year (as well as some other minor items) does not usually represent a value created wholly during that year, and that it is quite impossible to ascertain the value created during the year.

(3) The fact that the returns for some products are incomplete. The returns for all products are to a considerable extent estimates made by the farmers. Special difficulty was encountered in cases where the person in possession of the farm in April, 1910, when the census was taken, was not in possession of it during the crop year 1909. In such cases the farmer was not always able to report completely and accurately the products of the land for the preceding year. It is probable that the returns for the principal crops are in general fairly accurate, but that those for minor crops and for dairy and poultry products are frequently understatements, particularly because the home consumption was disregarded or underestimated. In the belief that no accurate result could be obtained from such an inquiry, the Bureau of the Census did not even attempt to ascertain the total quantity and value of certain by-products, such as straw and cornstalks, which are of considerable importance, the schedule calling only for the value of such by-products sold.

AVERAGE VALUE OF FARM LAND PER ACRE IN TEXAS, BY COUNTIES: 1910.

FARMS AND FARM PROPERTY.

Texas ranks first in land area and fifth in population among the states and territories of continental United States. The state rises from sea level along its southeastern coast line to altitudes in excess of 6,000 feet among the ranges which cross the extreme western or trans-Pecos region. In general the surface slopes gently upward from the Gulf coast inland to the central portion of the state. Central Texas is occupied by high plateaus and rolling prairies which in the western and northwestern portions of the state merge into the high plains section of the Panhandle and into the mountain and basin topography of the trans-Pecos region.

Immediately back from the coast line there extends a broad belt, known as the coast prairies, which reaches from the Sabine River to the Rio Grande and varies in width from 30 to 100 miles. Practically all of this stretch of country is nearly level, its inner margin scarcely rising to an altitude of 100 feet above the sea. Northeastern Texas, immediately inland from this coastal belt, consists of a rolling Coastal Plains section stretching from the Louisiana border to the vicinity of San Antonio. It is known as the east Texas timbered region. Its highest elevations rise to 500 and 600 feet above sea level. Lying along the Rio Grande, immediately west of the coastal prairie belt in southwestern Texas, is a broad tract which is known as the Rio Grande Embayment. It rises from the Rio Grande River in the form of rolling prairies to altitudes of 1,000 feet. The divisions are separated from the plateau section of central Texas by the broad belt of the Black and Grand prairies, which have their greatest breadth along the Red River, and extend southward in a narrowing belt just past San Antonio. The altitudes within this Cretaceous prairie section range from 450 feet to approximately 1,000 feet above sea level. In the northern portion of this prairie section a narrow timber belt known as the eastern cross timbers extends southward from the Red River. separating the Black Prairie from the Fort Worth Prairie. In this region also the Cretaceous prairies are bounded on the west by what is known as the western cross timbers. North central Texas consists of an elevated plateau much dissected by the larger streams and rising from an altitude of approximately 1,000 feet along its eastern boundary to altitudes in excess of 2,000 feet, where it merges into the high plains of the Panhandle section. The southern portion of this plateau region consists of the deeply dissected Lampasas cut plain and the central mineral region. The northern portion of the Panhandle and practically all of the western part of Texas lie within the high plains region at an altitude ranging from 2,000 to 5,000 feet above

sea level. These high rolling plains are deeply cut by rivers which flow across them in gorges and "breaks," between which are broad stretches of rolling to nearly level plateau country. The high plains in the southwestern portion of the state are broken by the eastern Cordilleran Ranges which enter the state in the extreme western portion. Between these ranges there are numerous extensive intermountain basins, lying at altitudes from 2,000 to 4,000 feet above sea level, which constitute a continuance of the high plains southwest to the Rio Grande River. The southern portion of the high plains region is subdivided into the Edwards Plateau, east of the Pecos River, and the Stockton Plateau, west of it.

The surface features of the state of Texas thus possess a great diversity, ranging from a low coastal plains section through more elevated and rolling timber country and Cretaceous prairies to the plateau and high plains region of central and western Texas and to the mountain and basin region of the trans-Pecos country.

The soils of the coastal prairie are prevalently gray silty and fine sandy loams in the vicinity of the Sabine River. These gradually merge into brown and black sandy loam and loam soils which stretch from the vicinity of Houston and Galveston nearly to the Rio Grande. This region is also crossed by the alluvial bottoms of the principal Texas rivers whose soils consist of red and brown sandy loams or of black, sticky clays. The soils of the eastern Texas timbered region are gray sands, sandy loams, loam and clay soils of considerable variety which are usually rolling and well drained. The Cretaceous prairies of central Texas constitute the richest agricultural soils of large extent within the state. The prevailing soil is a black, waxy clay, although areas of loam and sandy loam are also found along the boundaries of the region. The soils of both cross timber belts are prevalently stony, sandy, and gravelly, resembling closely the soils found at the higher elevations in the rolling Coastal Plain.

The residual prairie region of Texas is occupied by sandstones, shale, and limestone rocks which give rise to a wide variety of soils. In the north central portion of the state the Permian red beds give rise to sandy and fine sandy loam soils of a red or brown color. In the cut plains region extensive areas of limestone give rise to brown loam and clay loam soils somewhat resembling those of the Cretaceous prairies.

Within the high plains region the soils are derived from calcareous, Tertiary, and Quaternary deposits. The soils are prevalently brown to reddish brown and include gravelly loams, sands, sandy loams, and silty clay loams, which are extensively developed in this region. The greater portion of the Rio Grande Embayment has alluvial soils, chiefly silty loams and silty clays.

The average altitude of the state of Texas above sea level is estimated at approximately 1,700 feet, the western portion of the state lying above this altitude and the eastern portion uniformly below it.

Over the greater part of the state the rainfall is sufficient to insure successful grain crops without irrigation, and the normal annual precipitation ranges all the way from about 50 inches along the eastern boundary to about 10 inches in the western counties. Irrigation is practiced extensively, however, in the rice growing counties on and near the Gulf of Mexico, and in localities in the valleys of the Rio Grande and Pecos Rivers where the annual precipitation is light. In the remainder of the state irrigation is limited to gardens and special crops of small acreage.

The two maps on the preceding pages show, for the different counties, the proportion of the total land area in farms and the average value of farm land per acre. Of the state's entire land area about two-thirds (67 per cent) is in farms. The percentage varies widely in the different counties, but the most common proportion is from 60 to 80 per cent, the proportion in 68 counties falling between these figures. Seventynine counties have less than 60 per cent of their land in farms. Most of these are on or near the boundaries of the state, particularly in the southeastern part.

A higher proportion of land in farms of from 80 to 90 per cent is found in 56 counties, located mainly in the north central part of the state. Scattered over the state there are as many as 42 counties which have more than 90 per cent of their land in farms; in 21 of these the proportion is from 90 to 95 per cent, and in an equal number 95 per cent and over.

For the state as a whole, the average value of farm land per acre is \$14.53. In nearly half of the counties (119) the average is between \$10 and \$25. Ninetyone counties show an average value of less than \$10 per acre. The greater number of these are in the western and southwestern parts of the state, but a few are in the extreme eastern part. Higher average values of farm land, ranging between \$25 and \$50, are found in 28 counties, nearly all of which are located in the eastern part of the state. Twenty of these lie in whole or in part in the belt of the Black and Grand Prairies before mentioned, where there are also six counties with average values between \$50 and \$75 per acre. In Galveston County, in the southeastern part of the state, in which the city of Galveston is located, the average value of farm land exceeds \$75 per acre.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900[°].

NUMBER ADDA AND VALUE OF FADAG	1910	1900	INCREASE.	L

1 A minus sign (-) denotes decrease.

NOTE.—Ranges or ranches using the public domain for grazing purposes, but not owning or leasing land, were counted as farms in 1910 and 1900. They were included as owned or managed, free from mortgage, and under 3 acres in fize. The counting of these ranges as farms affects all totals, averages, and percentages in which the number of farms is a factor. In 1910 there were 87 such ranges included as farms.

Between 1900 and 1910 there was an increase of 18.6 per cent in the number of farms in Texas, as compared with an increase of 27.8 per cent in the population. During the decade the total reported farm acreage decreased 10.6 per cent, while the acreage reported as improved increased 39.8 per cent. The increase in the number of farms and the decrease in farm acreage resulted in a lower average size of farms, which was 269.1 acres in 1910, as compared with 357.2 acres in 1900. The total value of farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), is \$2,218,645,000, representing an increase of 130.5 per cent since 1900. Land alone increased in value 176.1 per cent, as compared with an increase of 109.5 per cent in the value of buildings, of 88.5 per cent in that of implements and machinery, and of 32.5 per cent in that of live stock. In considering the increase of values in agriculture the general increase in the prices

of commodities in the last 10 years should be borne in mind.

The average value of a farm, including its equipment, is \$5,311, an increase of 94.3 per cent since 1900. During the decade the average value of land per acre increased from \$4.70 to \$14.53, or more than trebled.

Irrigation.—Of the 417,770 farms in the state, 5,238, or 1.3 per cent, were reported as irrigated in 1909. The acreage reported as irrigated in 1909 was 451,130 acres, or 1.6 per cent of the improved land in farms. Of this acreage, 286,847 acres, or 63.6 per cent of the total irrigated area, was in the rice growing counties. The area to which enterprises existing in 1910 were capable of supplying water was 690,991 acres, and the total acreage included in irrigation projects, completed or under way in 1910, was 1,253,-173 acres.

Population, number of farms, and farm acreage: 1850 to 1910.—The table following presents, for the state as a whole for each census from 1850 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

1 A minus sign (-) denotes decrease.

During the 60 years covered by the table the population of the state has increased continuously and quite regularly from 212,592 in 1850 to 3,896,542 in 1910. There has been an uninterrupted increase in the number of farms reported, the number increasing from 12,198 in 1850 to 417,770 in 1910, or at a rate averaging 6,760 per year. Between 1890 and 1900 the average rate of increase was 12,406 per year, while during the last decade the number increased at the rate of 6,558 per year.

The land surface of Texas is approximately 167,-934,720 acres, of which area 112,435,067 acres, or 67 per cent, are occupied by farms. During the last decade the total amount of land in farms decreased 13,371,950 acres, or 10.6 per cent. This falling off is attributable in a very large measure to changes which have been taking place in the western section of the state, where in 1900 most of the land was held in large tracts used for grazing purposes. During the last 10 years much of this land has been bought by speculators for sale in small farms, and at the time of the census enumeration a considerable quantity of such land was either in the hands of these speculators or of purchasers who had not yet begun its cultivation. During the decade there was in fact a decrease of about 25,000,000 acres of farm land in this section of the state, this reduction being offset in part by an increase of farm land in the other sections.

The reported acreage of improved farm land increased 7,784,590 acres, or 39.8 per cent. Thus the proportion of land improved is higher at the census of 1910 than in 1900, being 24.3 per cent, as compared with 15.6 per cent in 1900.

In 1850 the total amount of land in farms was 11,496,339 acres, or 6.8 per cent of the land area. The total farm acreage increased during the next 10 years, but decreased during the decade 1860-1870, occupying in 1860 15.1 per cent of the land area, and in 1870 only 11 per cent. During the next 20 years the farm acreage nearly trebled and constituted, in 1890, 30.6 per cent of the land area, but this proportion had risen in 1900 to 74.9 per cent. Thus the amount of land reported in farms was about two and one-half times as large in 1900 as in 1890. Between 1850 and 1910 the acreage of improved farm land increased from 643,976 to 27,360,666 acres. The proportion of all farm land which was improved rose continuously from 5.6 per cent in 1850 to 40.4 per cent in 1890. indicating for this period a less rapid growth in the total than in the improved acreage. During the decade 1890-1900 the number of acres of improved land decreased. Because of this decrease and of the remarkable increase in the total acreage during that decade, the proportion of improved land fell rapidly, being only 15.6 per cent in 1900.

Values of farm property: 1850 to 1910.-The total wealth in the form of farm property is, as before stated, \$2,218,645,000, of which 83.1 per cent represents land and buildings; 14.4 per cent, live stock; and 2.6 per cent, implements and machinery. The aggregate value of farm property increased during the last 10 years by \$1,256,169,000, or 130.5 per cent. To this total increase, \$1,151,435,000 was contributed by land and buildings, \$78,070,000 by live stock, and \$26,665,000 by implements and machinery. The total absolute gain is more than three times as great as that of any other decade covered by the table, while the percentage gain is nearly twice as great as that of the decade immediately preceding. Between 1850 and 1860 there was a marked increase in the value of all three classes of farm property, the aggregate value rising from \$29,115,000 to \$137,186,000, or 371.2 per cent. During the decade 1860-1870, however, there

was a considerable decline in the value of each class, the total value falling to \$80,778,000 in 1870. This decline was due to the destructive effects of the Civil War.

In the 40 years since 1870 the aggregate value has shown an increase of \$2,137,868,000, of which \$175,-307,000 took place in the first decade under consideration, \$296,043,000 in the second, 1880 to 1890, and \$410,349,000 in the third. Each class of farm property has shown a greater value at each successive census since 1870, the increase for the last 10 years being especially marked. Land and buildings at each census except 1870 and 1900 have constituted a larger proportion of the total value than at the census immediately preceding, and in the 60 years covered by the table this proportion has risen from 56.8 per cent of the total in 1850 to 83.1 per cent in 1910. Moreover, the relative value of live stock as compared with that of implements and machinery has undergone a considerable change. At the census of 1910 the value of implements and machinery is approximately one-sixth that of live stock, while it was about one-eighth as great in 1900 and less than one-tenth as great in 1890.

The agricultural changes in Texas since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

	FARM PROPERTY.

Average acreage and values per farm: 1850 to 1910.—The changes which have taken place during the past 60 years in the average acreage of Texas farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

		AVE	AVERAGE VALUE PER FARM. ¹						
CENSUS YEAR.	A verage acres per farm.		Land and buildings.	Imple- ments and ma- chinery.	Domestic animals, poultry, and bees.	value of land and buildings per acre.			
1910	269. 1 357. 2 225. 3 208. 4 301. 0 590. 9 942. 5	\$5,311 2,733 2 2,420 3 1,470 1,322 3,198 2,387	\$4,412 1,964 1,753 979 787 2,054 1,357	\$136 85 60 52 44 146 176	\$703 683 2 607 2 440 490 998 854	\$16. 39 5. 50 7. 78 4. 70 2. 62 3. 48 1. 44			

Averages are based on "all farms" in state.
 Includes estimated value of range animals.
 Computed gold values, being 80 per cent of the currency values reported.

Because of the essentially different types of land and the distinct types of agricultural operations carried on in the several portions of the state, the percentages and averages in the preceding and other summary tables throughout this chapter can not be relied upon as revealing a general condition or movement throughout the state. This is well illustrated in the figures for the average size of farms. At the censuses of 1850 and 1860, and to some extent at the census of 1870, the plantation was the common farm unit in a considerable portion of the eastern half of the state, and the large average size of farms at ² Computed gold values, being 80 per cent of the currency values reported.

those three censuses may be partly accounted for by the fact that each plantation was reported as one farm.

During the last 40 years most plantations have been divided gradually into smaller parcels of land operated largely by tenants. Each of these tenant holdings is reported as a farm and each tenant as a farmer, whether or not the owner of the property lives on the plantation and directs the operations.

In the case of many plantations, although most of the land is now worked, by tenants, each of whom is reported as a farmer operating his portion of land as a farm, yet there is some supervision by the owner, so that, in a sense, the entire plantation may be said to constitute a single farm. The Bureau of the Census has recently made an investigation of the extent to which the plantation unit of farm management still prevails, the results of which will appear in a later report.

While the subdivision of larger holdings in certain sections of the state has tended toward a reduction in the average size of farms, this tendency has been counteracted for the state as a whole in recent years by a contrary tendency toward large farms in the western half of the state, following the development of live stock farming on a large scale.

Perhaps the most striking characteristic of the western half of Texas is the great areas of arid and semiarid land utilized for grazing purposes only or left unutilized. The same was true until recently of the extreme southern portion. Upon this land are located many very large farms or ranches, which

tend to give a high average number of acres per farm. It is obvious that averages based on the totals of such diverse agricultural operations as cotton plantations and live stock ranches afford little opportunity for comparisons. It may be noted only that the average size of farms decreased from 942.5 acres in 1850 to 208.4 acres in 1880, then increased to 357.2 acres in 1900, and again decreased to 269.1 acres in 1910. The falling off in the average size of farms during the last decade may be accounted for by the decrease in the reported farm acreage in the western section of the state already discussed. The average size of farms in 1910 for each county of the state is shown in the tables at the close of this chapter.

Bearing in mind the great diversity in the types of farms in the different sections of Texas, it may be noted that for the state as a whole the average value per farm is \$5,311, of which \$4,412 represents the value of land and buildings, \$763 that of live stock, and \$136 that of implements and machinery. The average value, which in 1850 was \$2,387, increased to \$3,198 in 1860, but decreased during the Civil War decade, and in 1870 was only \$1,322. Since 1870 there has been an unbroken increase in the average value, the greatest increase occurring during the last decade, the next greatest during the decade 1880-1890. The average value of land and buildings per acre rose, with considerable fluctuation, from \$1.44 in 1850 to \$16.39 in 1910.

Farm tenure: 1880 to 1910.-The following table shows the distribution of the farms of the state according to character of tenure at each census since 1880:

TENÚRE.	1910	1900	1890	1880
Number of all farms	417,770	352, 190	228, 126	174, 184
Farms operated by owners and man- agers	198, 195 167, 515	177,199 153,634	132, 616 (¹)	108,716 (¹)
land. Farms operated by managers.	28, 348 2, 332	21,005 2,560	(1) (1)	
Farms operated by tenants Share tenants Cash tenants Tenurs not specified ³	219, 575 184, 753 8, 639 17, 549 8, 634	174,991 } 149,181 } 25,810	95, 510 75, 429 20, 081	65,468 53,379 12,089
Per cent of farms operated by Owners and managers. Tenants. Share and share-cash. Cash and nonspecified	47.4 52.6 46.3 6.3	50.3 49.7 42.4 7.3	58.1 41.9 33.1 8.8	62, 4 37, 6 30, 7 6, 9

¹ Not reported separately, ² Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1880. ² Prior to 1910 nonspecified tenants were included with cash tenants.

The number of all farms, and therefore of all farm operators, is 417,770. Of the farm operators, 195,863 are classified as owners, 2,332 as managers, and 219,575 as tenants. Of the owners, 167,515 operate exclusively land owned by them, while 28,348 operate land which they rent in addition to that which they own. The tenants are classified according to the character of their tenancy; thus 184,753 are share tenants;

8,639 share-cash tenants; 17,549, cash tenants; while for 8,634 no report relative to character of tenure was secured.

While the total number of farm operators increased from 228,126 in 1890 to 417,770 in 1910, an increase of 83.1 per cent, the number of tenants increased from 95,510 to 219,575, or 129.9 per cent. The proportion of tenants has increased from 37.6 per cent of all farmers in 1880 to 52.6 per cent in 1910.

For the sake of comparison with the earlier figures the share and share-cash tenants of the census of 1910 have been grouped together, and likewise the cash tenants and those for whom the form of tenure was not specified. Throughout the 30-year period the cash group has been much smaller than the share group, and at the census of 1910 constitutes less than one-eighth of the total number of tenants. The cash tenants comprised slightly over one-seventh of all tenants in 1900, as compared with about one-fifth in 1890 and about one-sixth in 1880.

The following table shows, for white and colored farmers combined and for each class separately, the total and improved acreage and the value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED	ALL LAND (ACR	IN FARMS ES).		LAND IN ACRES).	VALUE OF LAND AND BUILDINGS.

Managers		0.1	2. 2	1.0	0.3	0, 4	1.2	1.1	
Tenants		69.1	54. 2	53.2	65.6	64. 9	65.3	63.2	

It will be seen that, in 1910, 61.6 per cent of all land in farms was in farms operated by their owners (including part owners), 16 per cent in farms operated by managers, and 22.5 per cent in farms operated by tenants, the percentage for owners and for tenants being higher and that for managers lower than in 1900.

Of all land in farms operated by white farmers 62.3 per cent was in farms operated by their owners, and 21.2 per cent in tenant farms, while of that in farms operated by colored farmers, 43.6 per cent was in farms operated by owners and 54.2 per cent in tenant farms. The proportion of land in farms operated by owners increased among white farmers between 1900 and 1910, while among colored farmers it showed a decrease.

As shown by the next table, the average size of farms operated by managers in 1910 (7,699.4 acres) was nearly 22 times as great as that of farms operated by owners (353.3 acres), which was in turn about three times as great as that of farms operated by tenants (115.1 acres). The average size of farms operated by owners and by managers decreased between 1900 and 1910, while that of farms operated by tenants increased. In 1910 the percentages of farm land improved was highest for farms operated by tenants and lowest for those operated by managers, being only 4 in the latter class of farms.

The average size of farms operated by white farmers in 1910 (310.9 acres) was about five times as large as that of farms of colored farmers (61.3 acres); the average size of farms of white farmers decreased decidedly between 1900 and 1910, while that of farms of colored farmers slightly increased. The proportion of land improved was larger for farms of colored farmers than for those of white farmers, being, respectively, 64.8 and 22.7 per cent of the total acreage in each class of farms.

Farm mortgages: 1890 to 1910.—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"-a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

· .	OWNED 1	PARMS. ¹	OWNED Hom		OWNED FARM HOMES. ² 1890		
CLASS.	191	lo	190	ю			
	Number.	Per cent. ³	Number.	Per cent. ³	Number.	Per cent.	
Total Free from mortgage Mortgaged Unknown	195, 863 128, 082 04, 008 3, 773	66.7 33.3	171, 975 125, 504 38, 408 8, 063	76.6 23.4	126, 314 119, 093 7, 221	94.3 5.7	

¹ Includes all farms owned in whole or in part by the operator. ³ The 981 "owned farm homes" for which no reports were secured were dis-tributed between "free from mortgage" and "mortgaged" in 1800. ³ Per cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 195,863. Of this number, 128,082 were reported as free from mortgage; 64,008 were reported as mortgaged; and for 3,773 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 33.3 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is much higher than it was in 1890 and somewhat higher than in 1900. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the numbers reported at the later censuses because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that between 1890 and 1910 the absolute increase in the number of mortgaged farms was greater than that in the number free of mortgage.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 64,008 farms reported as mortgaged, 52,207 are wholly owned by the farmers, and for 48,024 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should

SUPPLEMENT FOR TEXAS.

be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

•	OWNED FARM HOMES MOD	INCREASE.		
•	1910 ¹	18 90 *	Amount.	Per cent.
Number. Value—Land and buildings Amount of mortgage debt Per cent of dobt to value. Average value per farm. Average debt per farm. Average equity per farm	48,024 \$297,880,832 \$76,089,272 25.5 \$6,203 \$1,584 \$4,619	7, 221 \$15, 583, 093 \$6, 494, 633 41. 7 \$2, 158 \$899 \$1, 259	* \$4,045 \$685 \$3,360	187.4 76.2 266.9

¹ Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt. ² Includes all owned farm homes, estimates being made of value of farms and **amount** of debt for all defective reports.

The average debt of mortgaged farms increased in the 20 years from \$899 to \$1,584, or 76.2 per cent, while the average value of such farms increased from \$2,158 to \$6,203, or 187.4 per cent. Thus the owner's equity rose from \$1,259 in 1890 to \$4,619 in 1910, or 266.9 per cent. As a result of the greater relative increase in the total farm value than in the total farm debt, the mortgage indebtedness, which was 41.7 per cent of the value of the mortgaged farms in 1890, was only 25.5 per cent of this value in 1910.

Farms by size groups: 1910 and 1900.-More than one-fourth (26.9 per cent) of the farms in Texas are from 50 to 99 acres in size, nearly one-fourth (23.6 per cent) from 20 to 49 acres, and nearly one-fourth (22.6 per cent) from 100 to 174 acres. Hence nearly three-fourths of all the farms in the state are from 20 to 174 acres in size. About one-fifth are 175 acres or over, while the farms of less than 20 acres constitute about 7 per cent of the total. The number of places "under 3 acres" reported as farms is now less than one-third as great as 10 years ago. This decrease may be due to a different interpretation by the enumerators as to what constitutes a small farm, or may represent an actual decrease in that type of farm. A slight decrease, amounting to less than 1 per cent in each case, is shown in the "20 to 49 acres" group and the group "1,000 acres and over." The number of farms in all the other groups increased, but the relative importance of the groups has been changed somewhat during the decade. The very large farms and those of 10 to 49 acres constitute a smaller proportion of all farms in 1910 than in 1900; farms of 50 to 999 acres and those of 3 to 9 acres a larger proportion.

The next table shows the distribution of farms by size groups at the censuses of 1910 and 1900.

Farms of 50 to 99 acres constituted 27.2 per cent of the farms of white farmers, and farms of 100 to 174

acres ranked second, with 24.8 per cent of the total; among colored farmers, 46 per cent of the farms were farms of 20 to 49 acres, and 25.3 per cent farms of 50 to 99 acres. Of the farms operated by colored farmers, 58.7 per cent were farms of less than 50 acres, as compared with 25 per cent of the farms of white farmers.

The next table shows the per cent distribution, by size groups, of the items presented in the **preceding** table, and also of the number of farms.

Of the total farm acreage of the state in 1910, 57.2 per cent was in farms of 1,000 acres and over, this being from the standpoint of aggregate acreage the most important size group, although it comprised only 2.7 per cent of the total number of farms. The most notable change between 1900 and 1910 was the decrease in the proportion of the total acreage which was in farms of 1,000 acres and over, offset by increases in the proportion in farms of every

other size group, except that of under 20 acres, for which it remained the same.

			PEI	CENT	OF TOT.	AL.		:
SIZE GROUP.	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.

Total . Under 20 acres. 20 to 49 acres. 50 to 99 acres. 100 to 174 acres. 175 to 499 acres. 500 to 999 acres. 1,000 acres and over	$26.9 \\ 22.6 \\ 14.1$	100.0 7.9 28.1 25.1 20.3 12.5 2.9 3.2	100.0 0.3 2.9 6.9 10.9 14.2 7.7 57.2	100. 0 0. 3 2. 6 5. 0 7. 4 9. 4 5. 4 70. 1	$\begin{array}{c} \textbf{100.0}\\ \textbf{1.1}\\ \textbf{10.7}\\ \textbf{21.0}\\ \textbf{25.9}\\ \textbf{23.6}\\ \textbf{7.5}\\ \textbf{10.2} \end{array}$	100.0 1.6 14.9 21.9 23.7 20.3 6.5 11.1	$100.0 \\ 1.5 \\ 6.1 \\ 14.5 \\ 20.3 \\ 21.1 \\ 8.5 \\ 28.0$	100.0 1.7 8.9 15.2 18.0 18.5 6.9 30.7

As shown by the next table, the percentage of farm land improved diminishes as the average size of the farms increases. For this reason and also because buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land also diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group.

Domestic animals on farms: 1910.-The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this chapter, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

Of the total number of farms enumerated, 402,365, or 96.3 per cent, report domestic animals of some kind, the number without any domestic animals being 15,405.

The total value of live stock on farms, including domestic animals, poultry, and bees in 1910 was \$318,647,000, of which domestic animals contributed

Color and nativity of farmers: 1910.-Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910:

đ	FARM OPERATORS.									
COLOR AND	Total.					Per cent of total.				
NATIVITY.	Num- ber.	Per cent distri- bu- tion.	Own- ers.	Ten- ants.	Man- agers.	Own- ers.	Ten- ants.	Man- agers		
Total Native white Foreign-born white Negro and other	417,770 318,988 28,864	100.0 76.4 6.9	195,863 157,910 16,721	219,575 158,958 12,012	2,332 2,120 131	46.9 49.5 57.9	52, 6 49, 8 41, 6	0,6 0,7 0,1		
nonwhite	69,918	16.7	21,232	48,605	81	30.4	69.5	0.3		

Of the farmers in Texas, 347,852, or nearly fivesixths of the total number, were whites and 69,918, or approximately one-sixth, nonwhites. All but 28.864 of the white farmers were native born. Of the nonwhite farmers, 69,816 were negroes, 52 Indians, 44 Japanese, and 6 Chinese. Of the native white farmers, 49.8 per cent were tenants, as compared with 41.6 per cent among the foreign-born white farmers. Of the nonwhite farmers, the tenants constituted nearly seven-tenths (69.5 per cent) of the total number.

Of the 28,864 foreign-born white farmers in Texas in 1910, 10,815 were born in Germany; 5,236 in Austria; 1,026 in Sweden; 825 in England; and 710 in Italy. Other European countries were represented by a total of 3,170 farmers, and non-European countries by 7,082.

DOMESTIC ANIMALS, POULTRY, AND BEES.

\$313.165.000. The value of cattle represented 41.7 per cent of the total value of live stock; that of horses and mules, 49.6 per cent; that of swine, 3.7 per cent; that of sheep and lambs, 2 per cent; and that of poultry, 1.5 per cent, the other classes being insignificant.

Cattle are reported by 80.6 per cent of all farms, "dairy cows" by 77.8 per cent, and "other cows" by only 23.7 per cent. The average value of "dairy cows" increased from \$23.22 to \$27.28, while that of cows not kept for dairy purposes decreased from \$19.78 to \$18.84. The average number of "dairy cows" per farm reporting is about 3, while the average number of "other cows" per farm reporting that class is about 25. In 1900 the average number of "other cows" was about 36 per farm reporting.

Horses are reported by 76.4 per cent of all the farms in the state, but 12.4 per cent report yearling colts, and only 7 per cent spring colts. The average values of horses have more than doubled since 1900. Mules are reported by 58.1 per cent of the farms, and number nearly three-fifths as many as horses. ۶.,

Their average values are considerably higher than those of horses of the corresponding age groups.

Sheep and lambs are reported from only 6,876 farms, or 1.6 per cent of all farms in the state. Of the 6,876 farms, 77.3 per cent report spring lambs, the number of the latter being equal to 46.3 per cent of the number of ewes. The average flock in the state, including all classes, is about 263 sheep, and the average number of ewes is about 143 per farm reporting that class.

Of all farms, 70.3 per cent report swine, the average number being about 8 per farm reporting. The average value of the swine reported as "hogs and pigs born before January 1, 1910," is \$6.14, and that of spring pigs is \$2.24.

The following table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

	FARMS REF	ORTING.		ANIMALS.

¹ Less than one-tenth of 1 per cent,

Poultry on farms: 1910 and 1900.—The number of fowls on Texas farms decreased 1,191,737, or 8 per cent, during the last decade, while their value increased \$1,207,674, or 33.6 per cent. The number of farms reporting poultry increased from 304,713 to 357,363, or 17.3 per cent. All classes of fowls decreased in number, but the percentage losses were much greater This for turkeys, ducks, and geese than for chickens. last class represents 93 per cent of the number and 86.1 per cent of the value of all poultry. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value and the number of farms reporting each kind in 1910:

		(1	1900 (June 1)

⁴ 218 farms reported 736 peafowls, valued at \$1,919; 2 farms reported 20 pluctuations.
valued at \$130; and 2 farms reported 6 wild geese, valued at \$7.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has decreased from 60,043 in 1900 to 37,881 in 1910, or 36.9 per cent. The number of colonies of bees decreased from 392,644 to 238,107, or 30.4 per cent, and their value decreased from \$749,483 to \$675,327, or 9.9 per cent. The average value of bces per farm reporting was \$12.48 in 1900 and \$17.83 in 1910. About nine farms in every hundred report bees.

Domestic animals not on farms: 1910.-Most of the domestic animals not on farms are found in citics. towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table below age groups are omitted for the sake of brevity.

Horses are by far the most important class of domestic animals not on farms when value is considered, but the number of cattle (including dairy cows) is greater than the number of horses.

Domestic animals on farms and not on farms: 1910.— The total value of all domestic animals in the state in 1910 was \$339,434,000, of which the value of animals not on farms constituted 7.7 per cent.

The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FARMS REPORTING.				VALUE.

dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 260,032 (somewhat less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 833,000. The amount of milk reported was 197,040,000 gallons; assuming that there were the same number of cows in 1909 as in 1910 this would represent an average of 237 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk and cream sold as such and sold on the butter fat basis and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$15,680,000, which may be, defined as the total value of dairy products exclusive of milk and cream used on the farms producing.

Only a small proportion of the milk reported as produced by Texas farmers in 1909 was sold as such. The butter made on farms in 1909 was valued at \$12,912,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that the 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a decided increase between 1899 and 1909 in the amount of butter made, and also an increase in the production of cheese. Wool: 1909 and 1899.—The table below gives statistics as to the production of wool on farms, the figures being partly based on estimates:¹

	Num	(lbase of	wo	OL PRODUCE	D.
	ber of farms report- ing.	Sheep of shearing age.	Fleeces (number).	Weight (pounds).	Value,

Total production of wool, (partly esti- mated): 1909 Increase, 1899 to 1909 ¹ Per cent of increase ¹			2,007,365 2,038,535 -31,170 -1.5	10, 257, 779 9, 638, 002 619, 777 6. 4	2,202,342 1,428,122 774,220 54.2

1 A minus sign (-) denotes decrease.

The total number of sheep of shearing age in Texas on April 15, 1910, was 1,378,000, representing a decrease of 4.3 per cent as compared with the number on June 1, 1900 (1,440,000). The approximate production of wool during 1909 was 2,007,000 fleeces, weighing 10,258,000 pounds, and valued at \$2,202,000. Of these totals about one-fifth represents estimates. The number of fleeces produced in 1909 was 1.5 per cent less than in 1899. The average weight per fleece in 1909 was 5.1 pounds, as compared with 4.7 pounds in 1899, and the average value per pound was 21 cents, as compared with 15 cents in 1899.

Goat hair and mohair: 1909 and 1899.—Although 7,937 farmers reported 1,135,244 goats and kids on their farms April 15, 1910, only 1,544 reported the production of goat hair or mohair during 1909. These farmers, however, reported 1,077,463 fleeces, weighing 1,997,924 pounds and valued at \$468,219. The importance of the production increased decidedly between 1899 and 1909. Many farmers who have goats do not produce goat hair or mohair, but it is believed that the report is somewhat short of the actual production.

Poultry products: 1909 and 1899.—The next statement gives data relative to the production and sale of eggs and poultry.

The total number of fowls on Texas farms on April 15, 1910, was 13,670,000. Of the 357,363 farms reporting fowls, 65,086 did not report any eggs produced in 1909, and 70,166 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 62,480,000 dozens, valued at \$9,586,000. According to the Twelfth Census reports the production of eggs in 1899 was 58,041,000 dozens, the value being \$4,672,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 77,845,000 dozens, valued at \$11,944,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 25,656,000 fowls, valued at \$7,481,000.

Honey and wax: 1909.—Although, as noted elsewhere, 37,881 farms reported 238,107 colonies of bees on hand April 15, 1910, 20,749 of these farms, with 81,387 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 3,093,097 pounds of honey, valued at \$308,488, and 58,402 pounds of wax, valued at \$14,310; the true totals are doubtless somewhat above these figures.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The total value of domestic animals sold during 1909 was \$78,648,000, and that of animals slaughtered on farms \$15,152,000, making an aggregate of \$93,800,000. This total, however, involves considerable duplication, resulting from the resale or slaughter

¹ Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 2,648 farmers who reported the possession of 289,124 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909, but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented about three-fourths of the total value of animals sold; and the value of mules sold, representing about one-tenth of the total, ranked next in importance.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the value of those slaughtered during 1899, which amounted, respectively, to \$34,357,000 and \$11,033,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

The next statement presents statistics relating to the sale or slaughter of domestic animals by Texas farmers during the year 1909, with certain items for 1899.

⁴ Schedules called for receipts from sales of animals raised on the farms reporting.

CROPS.

Summary: 1909 and 1899.—The following table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is, on the whole, a better index of the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

The total value of crops in 1909 was \$298,133,000. Of this amount, 96.4 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 18,389,092, representing 67.2 per cent of the total improved land in farms (27,360,666 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

The general character of Texas agriculture is indicated by the fact that nearly two-thirds (63.3 per cent) of the total value of crops in 1909 was contributed by cotton and less than one-fourth (22.5 per cent) by the cereals. The remainder, representing 14.2 per cent of the total, consisted mostly of hay and forage. potatoes and other vegetables, and forest products.

The total value of crops in 1909 was 78.6 per cent greater than in 1899, this increase being no doubt due in part to higher prices. There was an increase of 21.7 per cent in the total acreage of crops for which acreage was reported. The greatest absolute increase was in the acreage of cotton, and the only important decrease was in the acreage of cereals.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909 .- The following table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, tobacco, cotton, broom corn, and sundry minor crops:

	I				

¹ Includes small amounts of soy beans and sunflower seed. ² A considerable amount of this acreage is probably a duplication of other crop acreage. ³ Theen the acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage crops, flowers and plants, etc. ⁴ Includes small amounts of willows and chufas.

The leading crops covered by the table, in the order of their importance as judged by value, are cotton, \$162,735,000; corn, \$50,565,000; cotton seed (estimated), \$25,939,000; hay and forage, \$12,824,000; rough rice, \$6,106,000; kafir corn and milo maize. \$3,785,000; oats, \$3,700,000; wheat, \$2,891,000; and sweet potatoes and yams, \$2,198,000. It should be noted, however, that the values of other crops, statistics for which appear elsewhere in this report, are greater than those of several of the crops listed above.

Cotton is the leading crop, with an acreage exceeding that of all other crops enumerated in the table, and a value almost twice as great. Corn is the leading cereal, the total acreage and value of all the other cereals being about one-third as great as those of corn. Of the other cereals rice stands first in value and fourth in acreage. In both acreage and value kafir corn and milo maize, oats, and wheat follow in the order named.

Among the hay and forage crops, "coarse forage" stands first both in acreage and value. "Wild, salt, or prairie grasses" is second in acreage and third in value, while "other tame or cultivated grasses" ranks third in acreage and second in value. These three crops together constitute about four-fifths of the acreage and three-fourths of the value of the entire crop.

The value of peanuts, sweet potatoes and yams, and potatoes combined is only about two-fifths as great as that of hay and forage.

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

	ACRES HARVESTED.										
CROP YEAR.	Corn.	Oats.	Wheat.	Rough rice.	Hay and forage.	Cotton,					
1909 1899 1889 1879	5,130,052 5,017,690 3,079,907 2,468,587	440,001 847,225 528,924 238,010	326, 176 1, 027, 947 352, 477 373, 570	237,586 8,711 178 335	1,311,967 938,024 877,523 58,033	9,930,17 6,960,30 3,934,52 2,178,43					

The acreage of cotton shows an uninterrupted and strikingly rapid increase throughout the period. During the first decade, 1879–1889, the absolute increase was 1,756,090 acres; during the second, 3,025,842 acres; and during the last, 2,969,812 acres. As a result, the cotton acreage is more than four and one-half times that of 30 years ago. Corn also has increased in acreage, but less rapidly. For the period it shows a continuous rise, the greatest gain, 1,937,783 acres, occurring during the second decade, 1889-1899. During the 20 years since 1889 hay and forage has more than trebled in acreage. Wheat shows a slight decrease in acreage for the first decade, a large increase for the second, but in the last decade it has fallen to a point lower than in 1889. Oats show a substantial gain in acreage for the first 20 years of the period, with a marked loss during the last 10 years, decreasing by almost one-half. Rice, from insignificant acreages in the first years of the period and a comparatively small one in 1899, has increased strikingly (more than 225,000 acres) during the last ten years.

The following table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909.

¹ A minus sign (-) denotes decrease. ² Less than one-tenth of 1 per cent.

Cotton is reported by 76 farms out of every 100, corn by 69, hay and forage by 27, oats by 7, kafir corn and milo maize by 6, and wheat by 2. Only 0.3 per cent of the farms report rice. Of the above percentages those for corn, oats, wheat, hay and forage, and cotton are lower than in 1899, while those for kafir corn and milo maize and rice are higher.

The seven crops included in the above table cover about 66 per cent of the improved land, as compared with about 76 per cent in 1899. Corn, oats, and wheat show decreases in the proportion of improved land occupied, as compared with that of 1899, while kafir corn and milo maize, rice, and cotton show increases. Hay and forage occupies the same proportion as in 1899. The decrease in the acreage of the cereals is 216,487 acres, or 3.1 per cent; the increase in that of hay and forage, 373,943 acres, or 39.9 per cent.

The average value per acre of the combined cereals is \$9.99. Of the cereals, only rice stands above this average, its value being more than two and one-half times as great. The average value per acre of hay and forage is slightly less than that of the combined cereals, and that of cotton is greater by \$6.40.

The principal acreages of cotton are found in the counties of the eastern half of the state, forming a group which stretches from the Red River on the north nearly to the southern and southeastern boundaries. There is, however, a concentration of the acreage in those counties lying in the portion of the state described as the Calcareous prairies. To a greater or less extent, 22 counties are included in this section, and these counties together report about one-third of the total acreage. Ellis County leads, with 274,666 acres. Several other counties—Hill, McLennan, Williamson, and Navarro also run over 200,000 acres. The greatest absolute gain is reported for Runnels County; the greatest absolute loss for Fayette County.

In acreage corn follows very closely the same section as cotton. In fact, the large acreages of corn are found almost invariably in the counties that report large acreages of cotton. Collin County leads in corn acreage. Increases are recorded for several single counties and also for a number of groups of more or less importance. The main group is made up of a row of counties, two to three in width, stretching across the state from the extreme eastern line along the Red River until it meets that section topographically described as the high plains region, where the bulk of the increases are located. The largest absolute increase is reported for Wilbarger County. Hay and forage is quite evenly distributed throughout the state. The important acreages, as a rule, are reported for the counties of the Panhandle, the Red River Valley, the north central, and the south central parts of the state. Randall County leads in the hay and forage acreage. Though increases are prevalent throughout the state, decreases are reported for a number of counties. The greatest absolute increase is recorded for Randall County.

Rice is reported for 19 counties, almost all of which lie in the upper portion of the Coastal Plain prairie on and near the Gulf of Mexico. Jefferson County reports the greatest acreage. Over two-thirds of the total acreage is recorded for three counties-Jefferson, Matagorda, and Wharton. The principal acreages of kafir corn and milo maize are found in the counties just to the northwest of the center of the state and extending into the Panhandle. These 17 counties together report over one-half of the total acreage. More than one-half of the acreage of oats is reported for 13 counties, consisting of two groups and three scattered counties. One group of seven counties is located in the northeastern part of the state on or near the Red River, while the second, a group of three counties, is in the east central part of the state. Grayson County reports the largest acreage.

In the acreage of wheat remarkably high relative decreases are reported from almost every county in the wheat growing section of the state. The Panhandle section, however, and a few scattered counties report increases. The greatest falling off in acreage is recorded for the counties of the Red River Valley and for those in the central part of the eastern half of the state. The greatest absolute loss is shown by Collin County, the decrease amounting to 67,387 acres.

Potatoes and sweet potatoes and yams are reported principally from the eastern half of the state, Harris County reporting the greatest acreage. There is a concentration of the peanut acreage in the northeastern and eastern portions of the state. Houston and Panola Counties report the greatest acreages.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details

75498°—13—44

SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899:

		1909		1899	INCREASE.		
EXPENSE.	Farms re	porting.				•	
	Number.	Per cent of all farms.	Amount.	Amount.	Amount.	Per cent.	
Labor Feed Fertilizer	160, 538 112, 866 15, 931	38.4 27.0 3.8	\$25,784,501 10,800,046 595,363	\$12, 331, 905 (¹) 124, 716	\$13, 452, 596 470, 647	109.1 377.4	

1 Not reported at the census of 1900.

Nearly two-fifths of the farmers hire labor, the average amount expended by the farmers hiring being \$161. During the decade the total expenditure for labor increased \$13,453,000, or 109.1 per cent. About one-eighth of the amount reported as expended for labor is in the form of rent and board. At prior censuses no tabulation was made of the number of farmers reporting expenditures for labor.

About one farmer out of every four reports some expenditure for feed, but only about four out of every hundred purchase fertilizer. The expenditure for feed amounted to \$10,800,000 in 1909, and averaged \$95,69 per farm reporting. The total amount reported as paid for fertilizer has increased \$471,000, or 377.4 per cent, during the decade, the average per farm reporting being \$37.37.

Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as of the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

•	FAR REPOR		QUANTITY			
GROP.	Num- ber.	Percent of all farms.	Amount.	Unit.	Amount received.	
Total. Corn. Oats. Barley. Hay and coarse forage	49, 469 5, 488 63 12, 480	11.8 1.3 (¹) 3.0	7,528,837 2,388,879 9,510 201,434	Bu Bu Bu Tons	\$8,295,157 4,809,808 1,254,369 5,920 2,135,060	

¹ Less than one-tenth of 1 per cent.

While the total amount expended by Texas farmers for the purchase of feed in 1909 was \$10,800,000, the total receipts from the sale of feed by those reporting sales amounted to \$8,295,000.

COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or

trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

Change of boundaries.—In comparing the data secured in 1910 with those for 1900, the following changes in county boundaries should be considered: Reagan County was organized from a part of Tom Green County in 1903; and Terrell County was organized from a part of Pecos County in 1905.

Land in farms in specified counties.—Following the instructions to enumerators to assign all of the acreage of a farm to the county in which the residence of the operator is located, large acreages belonging to adjoining counties have been tabulated in Armstrong, Dickens, Howard, Jackson, Lamb, Mitchell, Motley, Nueces, Tom Green, and Upton Counties.
