

CHAPTER I.

NUMBER AND DISTRIBUTION OF INHABITANTS.

INTRODUCTION.

This chapter presents the results of the Thirteenth Census with respect to the number of inhabitants, and their distribution over the territory of the United States.

The tables show the number of inhabitants enumerated in each state, county, and city, or other incorporated place of 2,500 inhabitants or more. Comparative figures are given for the states and 50 principal cities back to the first census in 1790, and for the medium-sized cities—those having from 25,000 to 100,000 inhabitants—as far back as 1850, but for the counties and smaller cities the comparison is confined to 1910, 1900, and 1890.

In connection with the population of states, counties, and cities considerable attention is given to the increase of the population, especially for the last two decades. Tables are also presented showing for 1910 the population which was taken as the basis of apportionment of Representatives, under the act of 1911, and showing the membership of the House of Representatives under each of the earlier apportionment acts. Statistics of area and density of population are given for the several states and territories, as well as statements describing the location of the center of population, at each census, 1790-1910, and of the median point and median lines at each census, 1880-1910.

The chapter shows further the distribution of the population between urban and rural communities, together with the growth of population in urban and rural territory. It also further distributes the urban population by classes of communities grouped according to size. In the case of cities of 100,000 or more inhabitants tables have been prepared covering, in addition to the population of the given city, the population residing within the suburban territory adjacent to it and lying within approximately 10 miles of its boundaries.

At the date of the Thirteenth Census, April 15, 1910, the jurisdiction of the United States embraced 46 states, 2 territories (Arizona and New Mexico), and the District of Columbia, together with the following outlying possessions: Alaska, Hawaii, Porto Rico, the Philippine Islands, Guam, Samoa, and the Panama Canal Zone. The act providing for the Thirteenth Census did not provide for an enumeration of the population of the Philippine Islands, Guam, Samoa, or the Panama Canal Zone. Since the enumeration

Arizona and New Mexico have been admitted as states, and in the reports of the present census they are not generally distinguished from the states as territories.

In the Thirteenth Census reports the term "United States" when used without qualification embraces the 48 states and the District of Columbia but not the outlying territories and possessions of the United States. Sometimes, however, the United States in this sense is referred to as the United States proper, or as continental United States.

Returns of the population relate to the census day, April 15, 1910. All persons living on that date, including those who had subsequently died before the schedules covering their respective households were actually filled out, were enumerated, while children born after April 15, and immigrants arriving in the country after that date, were excluded. At previous censuses, beginning with that of 1830, the date of enumeration was June 1, and at the censuses of 1790, 1800, 1810, and 1820, it was the first Monday in August.

For the country as a whole, and for each state, county, city, or other specified area, the population enumerated is the resident population. The enumerators, under the law, were instructed to enumerate persons at their "usual place of abode"—that is, where they may be said to "live" or "belong" or to have their "home." More specifically, the usual place of abode is defined as commonly the place where one "regularly sleeps." Hence persons were not in every instance counted in the place where they happened to be found by the enumerators. Persons temporarily absent from the country or from their usual place of abode—temporarily away from home on a visit, or on business, or traveling for pleasure, or attending school or college, or sick in a hospital—were enumerated at the place of their habitual residence, information regarding them having been obtained from relatives or other persons; while visitors, lodgers, and in general individuals present temporarily within any given district at the time of the census, but having a usual place of abode elsewhere, were not returned by the enumerator of the district, unless it was practically certain that they would not be enumerated anywhere else.

POPULATION OF THE UNITED STATES AND OF ITS OUTLYING POSSESSIONS.

In 1910 the aggregate population of the United States with its outlying possessions exceeded 101,000,000. The population given in Table 1 for the Philippine Islands is for 1903, in which year a census was taken by the Philippine Commission; that included for the Panama Canal Zone is for 1912, in which year a census was taken by the Department of Civil Administration of the Isthmian Canal Commission; the fig-

ures for Guam and Samoa are estimates. Although the data included for these four outlying possessions were not obtained by an enumeration in 1910, the aggregate given in the table may nevertheless be accepted as a close approximation to the actual population of the United States with its possessions in that year. This aggregate is distributed by areas as shown in Table 1.

AREA.	Gross area (land and water) in square miles.	Population: 1910
United States, with outlying possessions	3,743,306	101,115,487
United States, exclusive of outlying possessions.....	3,026,789	91,972,266
Outlying possessions.....	716,517	9,143,221
Alaska.....	590,884	64,356

Samoa (population estimated).....	77	6,100

¹ Population in 1903.

² Population in 1912.

The United States with its outlying possessions occupies approximately 6.7 per cent of the world's land area and embraces 5.9 per cent of its population.¹

¹ The area and population of the United States may be compared with that of other countries and of the continental divisions in the following table, which gives separate figures for the 11 countries or empires whose population, each as estimated, exceeds 25,000,000. Areas and populations, except as regards the United States, are taken from Hübner's Geographisch-statistische Tabellen (1911). Somewhat different figures representing a different classification of Polar regions, inland seas, coastal waters, and spheres of influence might be given, taken from various sources, and in general the figures given must be regarded as being in the nature of estimates. Approximately two-thirds (65.1 per cent) of the world's land area is occupied by these 11 countries, which embrace nearly seven-eighths (87.2 per cent) of the estimated aggregate population of the world.

¹ The square kilometer is taken as equal to 0.3861 of a square mile.

² Grouping the countries by continents the area of North America is 8,040,000 square miles, of South America 7,018,000. For population of North and South America separately, see Note 2, p. 23.

³ Less than one-tenth of 1 per cent.

⁴ The English sphere of influence in the Libyan Desert extends over 400,000 square miles. The population of this area is about 7,000.

Area of enumeration.—The area of enumeration in 1910 embraced the 48 states and territories with the District of Columbia, and the following outlying possessions: Alaska, Hawaii, and Porto Rico. Persons in the military and naval service of the United States stationed abroad (that is, stationed beyond the limits of the United States proper and outside of the outlying possessions included in the area of enumeration in 1910) were enumerated through co-operation with the War and the Navy Departments. This class of persons in 1910 numbered 55,608, as compared with 91,219 in 1900, and comprised officers and enlisted men and civilian employees at military and naval stations and on naval vessels abroad and, in addition, officers' servants and members of families of certain officers and enlisted men and of civilian employees. The total population enumerated was 93,402,151. Of this aggregate, 1,429,885 were enumerated in outlying possessions. At the census of 1900 the population enumerated aggregated 76,303,387, of which 308,812 were enumerated in outlying possessions; but to this may be added the population of Porto Rico (953,243) as enumerated in 1899, giving a grand total of 77,256,630 for the same territory as that covered by the enumeration of 1910.

Table 2 gives, for the areas enumerated in 1910, the aggregate population in 1910 and in 1900.

The census of 1890 was the first at which a complete enumeration was made of the area now comprised within the boundaries of the 48 states. In 1880 no enumeration was made of persons living in Indian Territory and on Indian reservations, and at earlier censuses large tracts of unorganized and sparsely settled

territory lay without the area of enumeration.¹ The population of Alaska was included in the census of the United States for the first time in 1880 and that of Hawaii in 1900. The population of Porto Rico was

enumerated by a special census taken under the direction of the War Department in 1899 but was first included in the general census of the United States in 1910.

AREA.	POPULATION.	
	1910	1900
Total area of enumeration in 1910.....	93,402,151	¹ 77,256,630
United States, exclusive of outlying possessions.....	91,972,266	75,994,575
Outlying possessions enumerated in 1910.....	1,429,885	1,262,055
Alaska.....	64,356	63,592
Hawaii.....	191,909	154,001
Porto Rico.....	1,118,012	² 953,243
Persons in military and naval service stationed abroad....	55,608	91,219

¹ Includes 953,243 persons enumerated in Porto Rico in 1899.
² According to the census of Porto Rico taken in 1899 under the direction of the War Department.

United States, exclusive of outlying possessions.— Excluding the population of outlying possessions and of the military and naval service abroad, the population of the United States in 1910 was 91,972,266.² The population of this area in 1900 was 75,994,575, the increase for the decade 1900–1910 being 15,977,691. This increase exceeds that for any other decade, being greater by nearly 3,000,000 than the increase in the decade 1890–1900, and greater by more than 2,800,000 than the increase in the half century 1790–1840. The percentage increase in the last decade, 21, exceeds slightly the increase of the decade immediately preceding, 20.7, but is below that of any earlier decade.

The growth of population since 1790 is shown in Table 3, which gives the population at each census and the increase during each decade for the country as a whole, exclusive of noncontiguous territory. A diagram, page 35, shows the increase in population of the United States and principal countries of Europe, from 1800 to 1910.

¹ The area added at each census to the area of enumeration within the boundaries of the present states may be briefly indicated as follows:

1800.—The five states entirely within the Northwest Territory of 1790—Ohio, Indiana, Illinois, Michigan, and Wisconsin— together with territory west of Georgia (now embraced within the boundaries of Alabama and Mississippi). Practically all of this territory was within the limits of the United States in 1790, but was not enumerated at the first census.

1810.—Louisiana, Arkansas, and Missouri. The rest of the Louisiana Purchase (1803) was not enumerated in 1810.

1820.—No change. Florida was purchased in 1819, but was not enumerated in 1820.

1830.—Florida.

1840.—Minnesota and Iowa.

1850.—Texas, New Mexico, Arizona, Utah, Washington, Oregon, and California.

1860.—North Dakota, South Dakota, Nebraska, Kansas, Montana, Idaho, Wyoming, Colorado, and Nevada. The Gadsden Purchase (1853) was added at this census, but its population can not be determined separately.

1870.—No change.

1880.—No change.

1890.—Indian Territory, Oklahoma, and Indian reservations.

1900.—No change.

1910.—No change.

It should be noted, however, that the territories added at each census did not always at the time have the same boundaries and areas as states of the same name have at the present time.

Since the Twelfth Census was taken as of June 1, 1900, and the Thirteenth as of April 15, 1910, the intercensal period was 9 years, 10½ months. It may be assumed that the population increase from April 15, 1910, to June 1, the end of the full decennial period, was not less than 200,000, a number sufficient to raise the decennial rate from 21 to 21.3 per cent.

Some explanation is required of the revised percentages given in the last column of the table for the

² The distribution by countries of the population of the two American continents is shown in the following table. The figures given are generally from recent census reports, or from the Bulletin of the Pan American Union, but in a few instances are taken from other sources and in such cases are in the nature of estimates. They relate to the population in 1910–1911, or at that date approximately.

³ Estimate for 1910, 2,159,471.

⁴ Estimated.

two decades 1860-1870 and 1870-1880. The percentages of increase in these decades for the country as a whole were materially affected by the small increase recorded for the Southern states at the census of 1870. The evidence is conclusive, however, that the enumeration of 1870 was incomplete in those states, and that their population was in consequence understated. The census returns, therefore, give for the decade 1860-1870 a rate of increase which is undoubtedly below, and for the decade 1870-1880 one which is undoubtedly above, the true rate. An estimate of the true population of the country in 1870 was

made in the census report of 1890 (Population, Part I, pp. xi, xii, and xvi). In this report the number of omissions in the census of 1870 is estimated to have exceeded 1,200,000, and the true population of the country in 1870 is accordingly estimated to have been 39,818,449 instead of 38,558,371, the number derived from the 1870 returns. On the basis of this revised population total, the increase for the decade 1860-1870 becomes 8,375,128, or 26.6 per cent (instead of 7,115,050, or 22.6 per cent), and that for the succeeding decade 10,337,334, or 26 per cent (instead of 11,597,412, or 30.1 per cent).

1790.....	3,929,214			

¹ See explanation in text above.

Indians and other persons in Indian Territory and on Indian reservations were, as noted above, enumerated for the first time in 1890. Consequently the whole population of these areas in 1890—that is, 325,464, and not simply the excess of the 1890 over the 1880 population (which can not be determined)—enters into the aggregate population increase given in Table 3 for the decade 1880-1890. Since this increase is therefore partly attributable to extension of the area of enumeration in 1890, it does not accurately indicate growth of population within the area enumerated in either 1880 or 1890. The increase within the area enumerated in 1880 may be determined by eliminating from the 1890 population these 325,464 Indians and other persons. The population in 1890 of the area enumerated in 1880 within the states and territories was 62,622,250, which gives an increase for the decade 1880-1890, within this area, of 12,466,467, or 24.9 per cent. This is perhaps a more correct statement of the increase than that which, taking no account of the extension of the area of enumeration, derives directly from the returns the increase of 12,791,931, or 25.5 per cent, shown in Table 3 (also in Table 11).

For each of the earlier decades also, in which the area enumerated has been extended, the increase may be similarly determined by excluding the population of the areas newly added. The results of such a calculation are shown in Table 4. While the rates so computed do not differ very materially from those given in

the general table, the modifications result in making the percentage increases of the first seven decades more nearly uniform. The exceptionally high rates shown in Table 3 for the decades ending, respectively, in 1800, 1810, 1850, and 1860 are largely accounted for by extensions of the area of enumeration. Since, however, the population within these added areas in each given decade has undoubtedly grown to a greater or less extent by net immigration from other sections of the country—in which obviously the population growth has been to an equal extent lessened—the rate obtained by excluding the population of these areas is somewhat below, as the unadjusted rate of Table 3 is somewhat above, the true rate for the country as a whole. The error arises, in one case, from including in the increase the population at the beginning of the decade of the areas added during the decade; in the other case, it arises from excluding a certain number of migrants from the population at the end of the decade. In Table 4 the estimated population of 1870 has been used in reckoning the increases for the decades ending in 1870 and 1880. To complete the table, increases have been included from Table 3 for decades in which there has been no change in the area of enumeration.

Since it includes a net gain by immigration, the growth of the aggregate population from census to census exceeds the natural increase, or excess of births over deaths. Some analysis of the increase in the enumerated population with reference to the native

and the foreign-born population elements is undertaken in subsequent sections of this Report, and for certain of these elements the increase shown is approximately a natural increase.

Table 4

CENSUS YEAR.	Total decennial increase.	Population of area enumerated first in year specified.	INCREASE WITHIN AREA ENUMERATED AT PRECEDING CENSUS.	
			Number.	Per cent.
1910.....	15,977,691	15,977,691	21.0
1900.....	13,046,861	13,046,861	20.7
1890.....	12,791,931	325,464	12,466,467	24.9
1880.....	¹ 10,337,334	10,337,334	26.0
1870.....	¹ 8,375,128	8,375,128	26.6
1860.....	8,251,445	182,528	8,068,917	34.8
1850.....	6,122,423	391,410	5,731,013	33.6
1840.....	4,203,433	49,563	4,153,870	32.3
1830.....	3,227,697	40,048	3,187,649	33.1
1820.....	2,398,572	2,398,572	33.1
1810.....	1,931,398	97,401	1,833,997	34.5
1800.....	1,379,260	61,128	1,318,132	33.5

¹ Estimated increase (see p. 24).

Summarizing, it may be noted that during each of the seven decades, 1790-1860, the population increased with remarkable uniformity by approximately one-third, during each of the next three decades, 1860-1890, by approximately one-fourth, and during each of the two decades following, 1890-1910, by approximately one-fifth. The lowering of the decennial rate, therefore, has not been by a gradual decline from decade to decade, but has been by two abrupt breaks downward, each rate of growth being maintained for more than one decade. Even in those decades which show the most considerable decline in the percentage of increase, however, as in every other decade, the absolute increase has exceeded that of the decade preceding, the greatest growth of the absolute increase being that shown in 1910. To the large immigration of recent years may be attributed the slight increase in the rate for the last decade over that for the decade immediately preceding.

POPULATION BY DIVISIONS AND STATES.

Distribution of the population and rank of states and divisions.—The population of each state and territory and its rank according to population at each Federal census, from 1790 to 1910, are given in Table 10 (pp. 30 and 31), which includes also the aggregate population and rank at each census of the areas constituting the nine geographic divisions in which the states are grouped in the 1910 census tabulations. The table includes data for Alaska, Hawaii, and Porto Rico.

At each of the last ten censuses, beginning with that of 1820, New York has ranked first among the states in population. In 1910 its population of 9,113,614 was approximately one-tenth of the total population of the country. In 1790 it was the fifth most populous state; in 1800, the third; and in 1810, the second. Pennsylvania, with a population in 1910 of 7,665,111, has ranked second at each census beginning with that of 1830; it ranked second also in 1790 and in 1800, but third in 1810 and in 1820. Illinois (population in 1910, 5,638,591) and Ohio (population in 1910, 4,767,121) have ranked third and fourth, respectively, at each of the last three censuses. In the last decade Texas rose from the sixth to the fifth, and Massachusetts from the seventh to the sixth position in population rank. Missouri, the fifth state in 1900, was seventh in 1910; Michigan rose from the ninth to the eighth place; and Indiana dropped from the eighth to the ninth place. These nine states were therefore, in 1910 as in 1890, the nine most populous states, the four most populous of them having maintained their rank unchanged since 1890. Seven of them, with an aggregate population in 1910 of 36,061,902, lie north of the Ohio River and extend in an unbroken band east from the Mississippi to the Atlantic seaboard. Of the ten least populous states, seven are located in the Mountain division, Nevada's population in 1910 (81,875) being less than that of any other state.

Nearly one-fifth of the total population of the country in 1790 was returned from Virginia, whose population at this date was 747,610. Virginia maintained its rank as the most populous of the states at the census of 1800 and at that of 1810.

In 1790 Maine was a district of Massachusetts, and Vermont had not been admitted to the Union. The population of these two states is, however, shown separately for 1790. Virginia extended over the area now constituting Kentucky and West Virginia, while the territory of Georgia extended west to the Mississippi River. The area now embraced within the boundaries of Tennessee was then known as the "territory south of the river Ohio," while the area now constituting the states of Ohio, Indiana, Illinois, Michigan, Wisconsin, and a part of Minnesota was in 1790 known as the "territory northwest of the river Ohio." Florida and a strip along the southern border of what was then Georgia, together with the region west of the Mississippi River, were held by Spain.

Although the territory of the United States, at the date of the First Census—the first Monday in August, 1790—embraced the area lying between the Atlantic seaboard and the Mississippi River, not over 5 per cent of the population lived west of the Appalachian Mountains, the geographic distribution of the population giving an average depth of settlement or distance of habitation from the coast of 255 miles. Practically the total population returned in 1790, numbering 3,929,214, with the exception of 109,368 persons credited to the region which is now Kentucky and Tennessee, lived within the area now constituting the three Atlantic Seaboard divisions.

The geographic distribution of the population by divisions and sections, at each of the four censuses 1850, 1890, 1900, and 1910, is shown by percentages in Table 5, which gives also the population in 1910 of each section and division. In this table, as in other

tables where data are presented by sections, the North embraces the 21 states which—grouped by geographic divisions—constitute the New England, Middle Atlantic, East North Central, and West North Central divisions; the South embraces the 16 states and the District of Columbia, which constitute the South Atlantic, East South Central, and West South Central divisions; and the West embraces the 11 states of the two far western divisions, namely, the Mountain and the Pacific. In 1910, 55,757,115, or 60.6 per cent, of the total population of the country were in the North; 29,389,330, or 32 per cent, were in the South; and 6,825,821, or 7.4 per cent, were in the West.

Data for 1850 are included in Table 5 as representing conditions immediately after the last considerable accession to the area now constituting the territory of the states. As stated above, a very large area lying west of the Mississippi River was unenumerated at the census of 1850—the extent of the area unenumerated at that census being in fact approximately as great as the extent of the area enumerated. Since this unenumerated area was, however, practically all unsettled territory, its scanty population if taken into account could not materially affect the percentages shown below. In 1910, 70.4 per cent of the population was returned from states lying east, and 29.6 per cent from states lying west of the Mississippi River. In 1850 the states east of the Mississippi reported 91.4 per cent of the population. The proportion returned from the Rocky Mountain and Pacific Coast regions has increased since 1850 from 0.8 to 7.4 per cent. The North had substantially the same proportion of the total population in 1910 as in 1850, but the South had a smaller proportion in the later year than in the earlier.

The Middle Atlantic division, which ranked second among the nine geographic divisions in 1900, ranked first in 1910, the East North Central division ranking second.

SECTION AND DIVISION.	Population: 1910	PER CENT OF TOTAL POPULATION.			
		1910	1900	1890	1850

¹ The territory of Oklahoma in 1900 ranked 38 and Indian Territory 39. The rank given in Table 6 for 1900 is based upon the population of Indian Territory and Oklahoma combined.

The following statement based upon Table 6 shows that east of the Mississippi River a majority of the states lost in rank, while west of the Mississippi River only four states—Iowa, Missouri, Louisiana, and Nebraska—lost in rank in the decade 1900-1910.

SECTION.	Total number of states.	Gain- ing in rank: 1900- 1910	Not chang- ing in rank: 1900- 1910	Los- ing in rank: 1900- 1910
East of the Mississippi River.....	127	4	8	115
West of the Mississippi River.....	22	11	7	4

¹ Includes the District of Columbia.

Growth of population.—The decennial increase, by number and per cent, by divisions and states, during each decade 1790-1910, is given in Table 11 (pp. 32 and 33). For convenience the figures for the last two decades are repeated in Table 8, the divisions and states being arranged in the order of their percentages of increase during the decade 1900-1910. The maps on page 34 show graphically the relative rates of

NUMBER AND DISTRIBUTION OF INHABITANTS.

growth in the several states for the decades 1900-1910 and 1890-1900.

Table 8

¹ A minus sign (-) denotes decrease.
² Includes population of Indian Territory for 1900 and 1890.

High percentage increases between 1900 and 1910 in the Rocky Mountain and Pacific Coast states indicate a continuation since 1900 of the migration westward which has characterized other decades. For certain states located in other sections of the country, however, a growth due to migration is indicated by their high percentage increases; and the wide range of variation from state to state in the rates of population growth indicates in general a migratory movement of population the country over, which can not be completely summarized as a westward drift.

It is true that all of the eleven states in which the population increase during the last decade exceeded 50 per cent lie in the region west of the Mississippi River, six of them being located in the

Mountain division. Of the three states in which the population has more than doubled, one—Washington, with an increase of 120.4 per cent—is located in the Pacific division; one—Oklahoma, with an increase of 109.7 per cent—is in the West South Central division; and one—Idaho, with an increase of 101.3 per cent—is in the Mountain division.

If, however, the geographical distribution of the states in which the percentage increase of population during the last decade considerably exceeded the average for the country as a whole, and if those in which it was materially below that average be noted, the state areas with relatively high and those with relatively low rates are found to be widely scattered and interspersed. Of the nine states, for example, in which the increase was from 25 to 50 per cent, one is in New England, two are in the Middle Atlantic division, one is in the West North Central, two are in the South Atlantic, one is in the West South Central, and two are in the Mountain. Of the 16 states in which the increase did not exceed 15 per cent, three are in New England, three are in the East North Central division, four—including one in which the population has slightly decreased—are in the West North Central, four are in the South Atlantic, and two are in the East South Central.

Certain of the Eastern states in which the percentages of increase were high, notably New Jersey and New York, have received large accessions of population by foreign immigration; and in general it may be noted, as will be shown by subsequent chapters, that the population growth of the North, during the last decade as in earlier periods, to a much greater degree than that of the South, has been due to immigration from foreign countries. In the Northern states generally, moreover, to a greater degree than in the Southern, the percentages of population growth have been affected by that migratory shifting of population over extensive but undefined areas, which has accompanied the development of urban industrial communities. Finally, as regards certain states, the relatively large extent, within their boundaries, of areas sparsely populated and available for settlement has attracted population during the decade.

Natural increase, foreign immigration, industrial development, westward drift, and agricultural development within certain regions of the West and South may be mentioned as the chief causes of variations in the rates of population growth by states. As a result of the combination of these influences, the increase in certain states and divisions greatly exceeds, in others falls short of, the natural growth by excess of births over deaths. The more detailed presentations of the census returns—those relating to the foreign born, the growth of urban communities, state of birth, etc.—indicate, so far as data are available, for each state and division, the extent to which its population growth has been affected by these influences severally considered.

Even for states within the same division no approximation to uniform rates of increase is found. The increase of 17.2 per cent for New England covers three states with increases of 6.9, 4.6, and 3.6 per cent, respectively, and three with 20, 26.6, and 22.7 per cent. Although the increase of 25 per cent for the three Middle Atlantic states is close to the rate for New York state—25.4 per cent—it covers an increase of 34.7 per cent in New Jersey and of 21.6 per cent in Pennsylvania. The rate of 14.2 per cent for the East North Central division covers an increase of 7.3 per cent in Indiana and of 16.9 per cent in Illinois. In the West North Central division the increase of 12.5 per cent covers a decrease of 0.3 per cent in one state, and an increase of 80.8 per cent in another, the intermediate rates being 6, 11.8, 15, 18.5, and 45.4. In the South Atlantic states a divisional increase of 16.8 per cent covers an increase of 9 per cent in Maryland and of 42.4 per cent in Florida; in the East South Central division, under a general rate of 11.4 per cent, the four states range from 6.6 to 16.9 per cent; in the West South Central a rate of 34.5 per cent covers the four rates, 20, 19.9, 109.7, and 27.8 per cent; in the Mountain division a rate of 57.3 per cent covers a range from 34.9 to 101.3 per cent; and in the Pacific division a rate of 73.5 per cent covers the three rates 60.1, 62.7, and 120.4 per cent. In four divisions—the Middle Atlantic, West South Central, Mountain, and Pacific—the percentage of increase for each of the last two decades has exceeded that for the country as a whole, and excepting one—the West South Central—these divisions with high percentage increases for the decade 1890–1900 show still higher rates for the decade 1900–1910, while the divisions with relatively low rates in the earlier decade have grown more slowly since 1900.

In considering the decennial increase in the population of divisions and states prior to 1890, allowance should be made in some instances for differences in the area of enumeration at the several censuses, as already explained for the United States as a whole, on page 22. This is the case particularly with respect to the decade 1880–1890, because of the inclusion in 1890 of the population of Indian Territory and Indian reservations specially enumerated at that census. The population of the equivalent areas in 1880 was not ascertained. For the divisions and states affected, somewhat different percentages would be obtained if the population specially enumerated in 1890 were excluded in figuring the decennial increase.

The absolute increase of population during the decade ending in 1910 exceeded that of any earlier decennial period in each of the three Atlantic Seaboard divisions, as also in the West South Central, the Mountain, and the Pacific divisions. While the 10 years 1900 to 1910 has therefore been for these divisions the decade of their maximum population increase, of no one of the nine geographic divisions is it

true, as it is of the country as a whole, that the population growth during each decade has exceeded that during the decade preceding. This would be true of the Mountain division except that the increase for this division from 1880 to 1890 (560,816) exceeded that from 1890 to 1900 (460,722). In the Middle Atlantic division the only decades for which the amount of increase falls below that for the decade preceding are 1850–1860 and 1860–1870. In the West North Central division such decades are 1890–1900 and 1900–1910; and in the Pacific division 1860–1870 and 1890–1900. In the West North Central division the population growth of the decade 1880–1890 (2,774,669) was more than twice as great as that of the decade ending in 1910 (1,290,498), and while the increase shown for this division in 1910 exceeded slightly that of the decade 1850–1860 (1,289,497), it was less than that of any one of the four decades following. The population growth of the East North Central division was greatest during the decade 1890–1900 (2,507,276), the increase of the last decade (2,265,040) being exceeded also by that of the decades 1850–1860 (2,403,624) and 1880–1890 (2,271,637). The greatest increase shown for the East South Central division was for the 10 years from 1870 to 1880 (1,180,706), the second greatest that for the decade ending in 1900 (1,118,603), and the third greatest that for the decade ending in 1910 (862,144).

The population of one state, Iowa, decreased during the decade 1900–1910, the decrease of 7,082, or 0.3 per cent (from 2,231,853 to 2,224,771), being slight. Iowa's greatest decennial increase is that shown in 1870 (519,107); in the three decades 1850 to 1880, however, its population rose from 192,214 to 1,624,615. The increase in the 10 years 1880 to 1890 outside of Indian reservations was 287,682 and in the following 10 years, 319,556. The 1910 returns indicate a loss by net emigration out of the state during the decade, which exceeds the gain by excess of births over deaths. These emigrants have undoubtedly contributed to the rapid population increase of newly developed agricultural regions in other sections of the country and in Canada.

The three New England states with low percentage increases for the last decade, namely, Maine (6.9), New Hampshire (4.6), and Vermont (3.6), had in 1910 an aggregate population of 1,528,899. In 1850 these states had an aggregate population of 1,215,265, the increase in the six decades 1850–1910 amounting to 313,634, or 25.8 per cent. Maine's population growth during the last decade (47,905), however, exceeded that of any other decade since 1850, and the increase shown for Vermont in 1910 (12,315) exceeded the increases shown for this state at the censuses of 1900, 1890, and 1880.

The per cent distribution of the increase in the two decades 1890–1900 and 1900–1910, and for the sixty-year period 1850–1910, is shown by sections

and divisions in Table 9, together with the absolute increase for the decade 1900-1910.

SECTION AND DIVISION.	Increase in population: 1900-1910	PER CENT DISTRIBUTION OF THE INCREASE IN POPULATION.

Approximately one-fourth (24.2 per cent) of the increase since 1900 in the country as a whole has been in the Middle Atlantic division. The four northern divisions, which contained more than three-fifths (62.3 per cent) of the total population in 1900, contributed 52.4 per cent of the increase since 1900; the three southern divisions, which contained very nearly one-third (32.3 per cent) of the population in 1900, contributed 30.5 per cent of the increase, and the two western divisions, which contained about one-twentieth (5.4 per cent) that of the population in 1900, contributed 17.1 per cent of the increase. Three-fifths

of the total increase was in the region east, and two-fifths in the region west of the Mississippi.

Fifteen states¹ have taken state censuses since 1900, 13 of them in the year 1905, Michigan in 1904, and Oklahoma in 1908. The provisions of law under which these state censuses are taken, and the practices followed in making the enumeration, vary from state to state. The returns are in certain cases made up by local assessors, incidentally to the performance of other duties, and are admittedly more or less incomplete or inaccurate. In other states, however, enumerators are appointed, and the census report is detailed, accurate, and of great value. Several of the states—for example, Minnesota, New Jersey, New York, and Wisconsin—took their 1905 census as of June 1. In other states the date of enumeration was April 1, May 1, or July 1, although the returns do not in every case clearly pertain to any single day. Although for these 15 states the increase may be determined for periods which are approximately quinquennial, going back in the case of certain states to 1850 or even an earlier date, the state censuses have in some cases been taken at intervals which are more or less irregular. The territorial law of Oklahoma, for example, provided for a biennial census, and under this provision a census was taken in 1908—the population being returned as 1,445,261—following the Federal enumeration taken on occasion of the admission of the territory as a state in 1907, when the population was returned as 1,414,177.

¹ Florida, Iowa, Kansas, Massachusetts, Michigan, Minnesota, New Jersey, New York, North Dakota, Oklahoma, Oregon, Rhode Island, South Dakota, Wisconsin, and Wyoming.

POPULATION.

¹ Includes population (325,464) of Indian Territory and Indian reservations, specially enumerated in 1890, but not included in the general report on population in 1890.

² Includes persons (6,100 in 1840 and 5,318 in 1850) on public ships in the service of the United States, not credited to any division or state.

³ For 1890 the rank of South Dakota advances from 37 to 35 and that of Arizona from 48 to 47, when the population specially enumerated is included; and that of

Oklahoma advances from 46 to 39, when the population of Indian Territory and Indian reservations specially enumerated is included.

⁴ Population for that part of Dakota territory taken to form North Dakota, in 1880, 35,909; and in 1870, 2,405; and for that part taken to form South Dakota, in 1880, 95,298; and in 1870, 11,776.

⁵ Dakota territory.

⁶ Includes population of Indian Territory as follows: 1900, 392,060; 1890, 180,182.

⁷ The territory of Oklahoma in 1900 ranked 38 and Indian Territory 39. In computing the rank for 1900 the population of Indian Territory was included with that of Oklahoma.
⁸ Alaska was specially enumerated under the law, but the population was not included in the general report on population in 1890 and 1880.

⁹ According to the census taken as of Dec. 23, 1890, under the direction of the Hawaiian Government.
¹⁰ According to the census of Porto Rico taken in 1899 under the direction of the War Department.
¹¹ Persons in the military and naval service of the United States (including civilian employees, etc.) stationed abroad, not credited to any division or state.

POPULATION.

INCREASE IN TOTAL POPULATION OF THE UNITED STATES, BY DIVISIONS

Table 11 DIVISION, STATE, AND POSSESSION.		INCREASE IN POPULATION.

¹ A minus sign (-) denotes decrease.

² In computing the increase from 1880 to 1890, the population specially enumerated in 1890 was included.

³ In computing the decennial increases from 1820 to 1850, persons on public ships in 1830 and 1840 (see Table 10) were included.

¹ Less than one-tenth of 1 per cent.
² Decrease due to loss of territory, West Virginia having been set off from Virginia, Dec. 31, 1862.

POPULATION.

PERCENTAGE OF INCREASE IN TOTAL POPULATION, BY STATES: 1900-1910.

PERCENTAGE OF INCREASE IN TOTAL POPULATION, BY STATES: 1890-1900.

NUMBER AND DISTRIBUTION OF INHABITANTS.

INCREASE OF POPULATION IN THE UNITED STATES AND THE PRINCIPAL COUNTRIES OF EUROPE: 1800-1910.

APPORTIONMENT OF REPRESENTATION.

Population for apportionment purposes: 1910.—Table 12 gives, for 1910, the population of each state exclusive of Indians not taxed, who, according to the Constitution, are not to be included in the population forming the basis of the apportionment of representatives among the several states. The population of Arizona and New Mexico is not included in the main

table but is added as an appendix. These states were still territories when the apportionment act of 1911 was passed, though provision for their representation was made in the act. Now that they have been admitted as states the total apportionment population of the states (that is, exclusive of Indians not taxed and the District of Columbia) is 91,569,325.

Number of representatives under each apportionment.—As the count of population is made primarily for the purpose of fixing the membership of the House of Representatives, under the provisions of section 2 of Article I of the Constitution, as modified by section 2 of Article XIV of the Amendments, a statement is given in Table 13 of the number of representatives assigned to each of the states by the Constitution in 1789 and by the several apportionment acts from the formation of the Government to the present time.

The membership of the House of Representatives was originally fixed at 65, under the provisions of section 2 of Article I of the Constitution.

The apportionments of representatives in Congress under the first six censuses—1790 to 1840, inclusive—were made by Congress, each by a separate act.

The law for taking the census of 1850 (act of May 23, 1850, 9 Stat. L., 428), which was intended to be permanent, presented a rule of apportionment, fixed the number of members of the House at 233, and

directed the Secretary of the Interior thereafter to make the apportionment. The apportionment under the census of 1860 also was made under this law, but Congress, on March 4, 1862, fixed the total number of members at 241, and the Secretary of the Interior apportioned the new quotas to the states.

The apportionments based on the census of 1870 and subsequent censuses were made by Congress, each by a separate act; hence it may be assumed that the power conferred on the Secretary of the Interior by the act of May 23, 1850, was repealed by implication.

Although the successive reapportionments, except that based upon the census of 1840, have each, incidentally to apportionment of representation, increased the membership of the House—from 65 in 1789 to 435 under the act of 1911—the increase in the number of representatives has been relatively much less rapid than the growth of population. This is shown by the increasing ratio of number of inhabitants to number of representatives.

APPORTIONMENT OF REPRESENTATION.

NUMBER OF MEMBERS IN THE HOUSE OF REPRESENTATIVES UNDER EACH APPORTIONMENT: 1789-1910.

¹ Membership originally fixed at 283, but increased by act of May 30, 1872, to 292 (17 Stat. L., 192).
² Membership increased from 233 to 241 by act of Mar. 4, 1862 (12 Stat. L., 353).
³ Membership increased from 233 to 234 by act of July 30, 1852 (10 Stat. L., 25).

⁴ Assigned after apportionment.
⁵ Included in apportionment act in anticipation of its becoming a state.
⁶ Included in the 20 members originally assigned to Massachusetts, but credited to Maine after the admission of that district as a state, Mar. 15, 1820 (3 Stat. L., 555).

Table 14 gives the dates of the apportionment acts and the ratio of representation according to each act. This ratio indicates for the country as a whole, approximately, the average population per representative under each apportionment.

Table 14	CENSUS YEAR.	Date of apportionment act.	Ratio.	CENSUS YEAR.	Date of apportionment act.	Ratio.

	1850.....	May 23, 1850.....	93,423		Constitution, 1789	30,000

The original apportionment of 1789 was based upon a ratio of 30,000 inhabitants to 1 representative. Under the act of 1911 the ratio is 211,877 to 1. It should be explained that this number, 211,877, is not the quotient obtained by dividing the apportionment population by the number of representatives, but is a number somewhat arbitrarily determined upon as a

divisor in apportioning representatives in 1911. It may be briefly described as the mean of the numbers which, had they been used as divisors, would each under the rule of apportionment adopted have given an apportionment identical with that actually made.¹

The actual ratio of representation—that is, the quotient obtained by dividing the apportionment population of 1910 by the number of representatives under the act of 1911—is for the country as a whole 210,504. By states the ratio varies from 80,293 in Nevada to 228,027 in Washington, as shown in Table 15. Nevada and three other states, Delaware, Wyoming, and Arizona, whose populations were less than the number which would have entitled them to one representative by apportionment, were each given one under the constitutional provision that each state shall have at least one representative in the House.

¹ For a detailed account of the method of apportionment in 1911 and at earlier dates see the report on "Apportionment of Representatives," from the House Committee on the Census. Report No. 12, Apr. 25, 1911.

¹ Exclusive of Indians not taxed. ² Exclusive of the District of Columbia.

It is obvious from the above table that the representation of the states is not exactly proportional to

their population. This results necessarily from the fact that the population of no state is exactly divisible by the ratio of representation, and also from the fact noted before that each state, whatever its population, is under the Constitution entitled to at least one representative.

Under the apportionment of 1789 the entire membership of the House came from the Atlantic Seaboard states and the same was true of the apportionment of 1790, except that under the act based on the census of that year two representatives were assigned to Kentucky and, after apportionment, one to Tennessee. Under the apportionment of 1810 the region west of the Mississippi secured its first representative—the member from Louisiana—while under that of 1911 the trans-Mississippi members number 131. In Table 16 the House membership under the apportionment of 1790, and under each apportionment from that based on the census of 1850 to that based on the census of 1910, is distributed by geographic divisions and sections of the country, with corresponding percentages.

AREA AND DENSITY OF POPULATION.

AREA.

United States as a whole.—The gross area, land and water, of the territory under the jurisdiction of the United States at the Thirteenth Census was 3,743,306 square miles. The outlying territories had an area of 716,517 square miles, and constituted 19.1 per cent, or approximately one-fifth, of the aggregate area. The area in 1790 was 892,135 square miles, or somewhat less than one-fourth of the present area, and embraced substantially all the territory lying between the Atlantic Ocean and the Mississippi River excepting Florida. This original area, and the areas of successive accessions of territory from 1790 to 1910, are shown in Table 17. In 1803 the area of the country was nearly doubled by the Louisiana Purchase. Three accessions of territory during the decade 1840-1850, aggregating 1,204,896 square miles, increased the area of the country from 1,792,223 to 2,997,119 square miles. These three accessions constitute 39.8 per cent, or approximately two-fifths, of the present area of the country, exclusive of noncontiguous territory.

ACCESSION OF TERRITORY.	Gross area (land and water) in square miles.	PER CENT DISTRIBUTION.

¹ Does not include the water surface of the oceans, the Gulf of Mexico, or the Great Lakes, lying within the jurisdiction of the United States.

Divisions and states.—The total land area of the United States and of each state and territory at the date of each census from 1790 to 1910, inclusive, is given in Table 21 on page 40. This table refers to the land area exclusively. For 1910, the gross area and the land and water area, respectively, of the states, ranked according to gross area, are given in Table 19.

Seven states, each of which embraces within its limits over 100,000 square miles of territory and all lying west of the Mississippi River, have an aggregate gross area of 1,022,418 square miles, or approximately one-third of the total area of the United States. Texas, the largest of these, with 265,896 square miles of land and water, has an area more than four times that of the New England states, and more than 213 times that of Rhode Island, the smallest state. California, the next largest state, with an extent of territory about three-fifths as great as that of Texas, nearly equals in area the New England and Middle Atlantic states combined. The aggregate area of these two states exceeds that of the Atlantic Seaboard states from Maine to Florida. The 5 remaining states with areas exceeding 100,000 square miles are in the Mountain division, and one other state in this division, Wyoming, falls just below the limit indicated. Twenty-one states, 14 of which are located west of the Mississippi River, have areas ranging from 50,000 to 100,000 square miles, and 20 states have areas of less than 50,000 square miles. The 22 states west of the Mississippi River have an average area of 97,514 square miles; the 26 states east of that river an average of 33,900, but little more than one-third that of the states west of the Mississippi.

Missouri territory.....									608,565	674,183	777,940		
Indian Territory and unorganized territory.....													
Dakota territory.....		30,790	30,790	69,414	69,414	69,414	535,003	511,967	52,750				

¹ Net reduction of 260 square miles due to the drainage of lakes and swamps in Illinois and Indiana (201 square miles of land), and the building of the Roosevelt and Laguna Reservoirs (80 square miles of water surface), and the overflow of the Colorado River into the Salton Sea in California (440 square miles of water surface).

² Increase of 194 square miles due to the reclamation of 2 square miles of Potomac River Flats in the District of Columbia and 192 square miles of Lake Tulare in California.

³ Includes Gadsden Purchase (29,028 square miles) in 1853.

⁴ Includes Texas annexation (385,590 square miles) in 1845; Oregon territory (282,257 square miles) in 1846; and Mexican Cession (522,902 square miles) in 1848.

⁵ Includes Florida Purchase (54,861 square miles) and territory gained by treaty with Spain (12,802 square miles) in 1819.

⁶ Includes Louisiana Purchase (817,885 square miles) of 1803.

⁷ Includes the drainage basin of the Red River of the North.

⁸ Decrease of 25 square miles due to the building of the Roosevelt Reservoir and 5 square miles due to the building of the Laguna Reservoir.

⁹ Decrease of 440 square miles due to the overflow of the Colorado River into the Salton Sea.

¹⁰ Increase of 192 square miles due to the reclamation of part of Lake Tulare, Cal.

¹¹ Area given is that in 1861.

¹² Increase of 2 square miles due to reclamation of Potomac River Flats in the District of Columbia.

¹³ Increase of 41 square miles due to drainage of lakes and swamps.

¹⁴ Increase of 160 square miles due to drainage of lakes and swamps.

¹⁵ Then part of Virginia; area given is that in 1782, when it was admitted as a state.

¹⁶ Then named Orleans territory; includes 4,611 square miles of disputed territory attached to the state of Louisiana in 1812, and excludes 1,134 square miles gained by treaty with Spain in 1819.

¹⁷ Then under the jurisdiction of Massachusetts; admitted as a state in 1820.

¹⁸ Includes 5,880 square miles of disputed territory attached to Mississippi territory in 1812.

¹⁹ Then part of Dakota territory.

²⁰ Then part of "territory northwest of the Ohio River"; area given is that in 1802, when it was admitted as a state.

²¹ Includes 314 square miles ceded to the United States by the state of New York in 1781 and sold to the state of Pennsylvania in 1792.

²² Then known as "territory southwest of the Ohio River"; includes 5,290 square miles of territory ceded to the United States by the state of South Carolina in 1787.

²³ Then named territory of Louisiana.

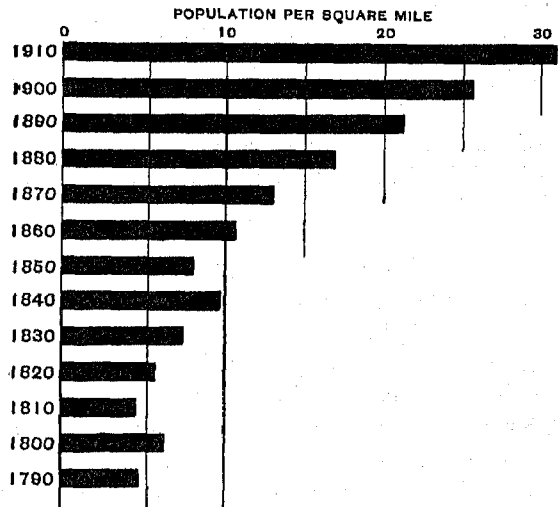

POPULATION PER SQUARE MILE.

United States as a whole.—Table 22 shows, for the United States, the total population, land area in square miles, and population per square mile of land area, at each census, 1790-1910; the diagram which follows also shows the density of population at each census.

The decrease shown in the average number of inhabitants per square mile at the censuses of 1810 and 1850 was due in each case to large accessions of thinly populated territory during the preceding decade. At every other census from 1790 to 1910, the number of inhabitants per square mile had increased, from 4.5 in 1790 to 30.9 in 1910.

CENSUS YEAR.	Population of the United States.	Land area in square miles.	Population per square mile.
1910.....	91,072,260	2,973,800	30.9
1900.....	75,004,575	2,974,159	25.6
1890.....	62,047,714	2,973,965	21.2
1880.....	50,155,783	2,973,965	16.9
1870.....	38,558,371	2,973,965	13.0
1860.....	31,443,321	2,973,965	10.6
1850.....	23,191,870	2,944,837	7.9
1840.....	17,009,453	1,753,588	9.7
1830.....	12,806,020	1,753,588	7.3
1820.....	9,038,453	1,753,588	5.5
1810.....	7,239,881	1,685,865	4.3
1800.....	5,308,483	867,080	6.1
1790.....	3,920,214	867,080	4.5

POPULATION PER SQUARE MILE: 1790-1910.

Divisions and states.—The population per square mile in the United States and in each state and territory at each census from 1790 to 1910, inclusive, is given in Table 26, page 44, while a diagram in the next column shows the relative density for the last two decades only.

The relative density of population of each state of the United States in 1910 and 1900, is indicated by the maps on page 43, while Table 23 shows, for each geographic division and state, the population and land area in 1910 and the population per square mile at each of the last three censuses. The distribution of

the population of the United States in 1910 is also indicated by a map following page 124, in which, in computing density of population the county has been taken as the unit and its total population divided by the land area in square miles.

In the order of density of population, as shown by Table 23, the geographic divisions ranked as follows in 1910: Middle Atlantic, 193.2 inhabitants per square mile; New England, 105.7; East North Central, 74.3; East South Central, 46.8; South Atlantic, 45.3; West North Central, 22.8; West South Central, 20.4; Pacific, 13.2; Mountain, 3.1.

POPULATION PER SQUARE MILE, BY STATES: 1910 AND 1900.

It will be noted that, while increases in density of population during the last two decades have been marked generally in the sparsely populated states of the West, such increases have been no less marked in some of the more populous states of the East, as, for example, in the Middle Atlantic and in the three most southern New England states.

DIVISION AND STATE.	Population: 1910	Land area in square miles: 1910	POPULATION PER SQUARE MILE.

¹ Includes population of Indian Territory for 1900 and 1890.

Aside from the District of Columbia there were 10 states in which there was in 1910 a population per square mile of more than 100. These states, in the order of density of population for 1910, are shown in Table 24, from which it will be seen that, with respect to density of population, the rank was the same at each of the censuses named.

The combined population (36,574,123) of these 10 states and the District of Columbia in 1910 constituted very nearly two-fifths (39.8 per cent) of the

total population of the United States, while their combined land area (222,675 square miles) comprised hardly more than one-fourteenth (7.5 per cent) of the entire land area of the country.

STATE.	POPULATION PER SQUARE MILE.		
	1910	1900	1890
Rhode Island.....	508.5	401.6	323.8
Massachusetts.....	418.8	349.0	278.5
New Jersey.....	337.7	250.7	192.3
Connecticut.....	231.3	188.5	154.8
New York.....	191.2	152.5	126.0
Pennsylvania.....	171.0	140.6	117.3
Maryland.....	130.3	119.5	104.9
Ohio.....	117.0	102.1	90.1
Delaware.....	103.0	94.0	85.7
Illinois.....	100.6	86.1	68.3

The other states, arranged in the order of their density of population in 1910, are shown in the following table:

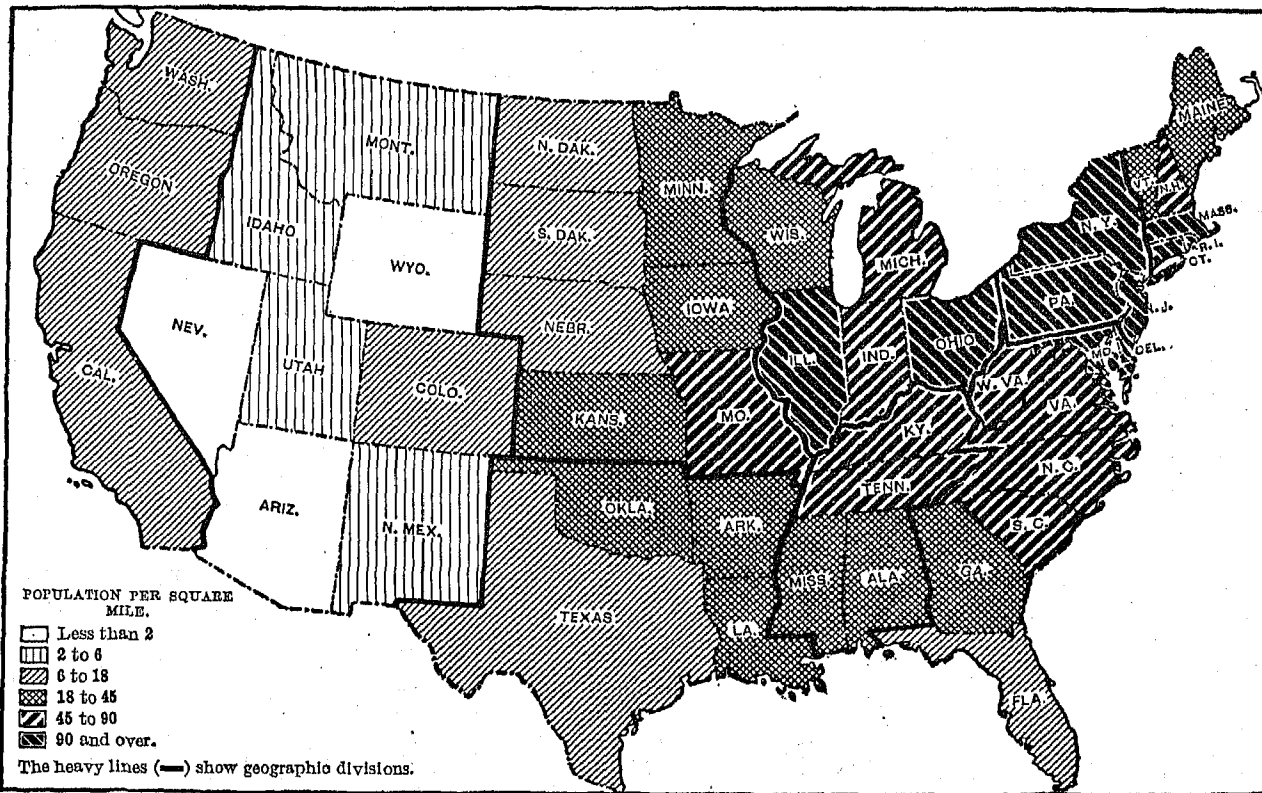

STATE.	Popula- tion per square mile: 1910	STATE.	Popula- tion per square mile: 1910
Indiana.....	74.9	Maine.....	24.8
Kentucky.....	57.0	Oklahoma.....	23.9
Tennessee.....	52.4	Kansas.....	20.7
Virginia.....	51.2	Washington.....	17.1
West Virginia.....	50.8	Nebraska.....	15.5
South Carolina.....	49.7	California.....	15.3
Michigan.....	48.9	Texas.....	14.8
Missouri.....	47.9	Florida.....	13.7
New Hampshire.....	47.7	North Dakota.....	8.2
North Carolina.....	45.3	Colorado.....	7.7
Georgia.....	44.4	South Dakota.....	7.6
Wisconsin.....	42.2	Oregon.....	7.0
Alabama.....	41.7	Utah.....	4.5
Iowa.....	40.0	Idaho.....	3.9
Vermont.....	39.0	New Mexico.....	2.7
Mississippi.....	38.8	Montana.....	2.6
Louisiana.....	36.5	Arizona.....	1.8
Arkansas.....	30.0	Wyoming.....	1.5
Minnesota.....	25.7	Nevada.....	0.7

There were 16 states, as shown by Table 25, which had, on the average, fewer than 18 inhabitants to the square mile. Eight of these states are in the Mountain division (comprising its entire area), 3 are in the Pacific division (comprising its entire area), 3 are in the West North Central division, 1 is in the West South Central division, and 1 in the South Atlantic division. Their combined land area (1,718,338 square miles) comprises very nearly three-fifths (57.8 per cent) of the entire land area of the United States, while their combined population (13,828,140) constituted only a little more than one-seventh (15 per cent) of the total population of the country in 1910.

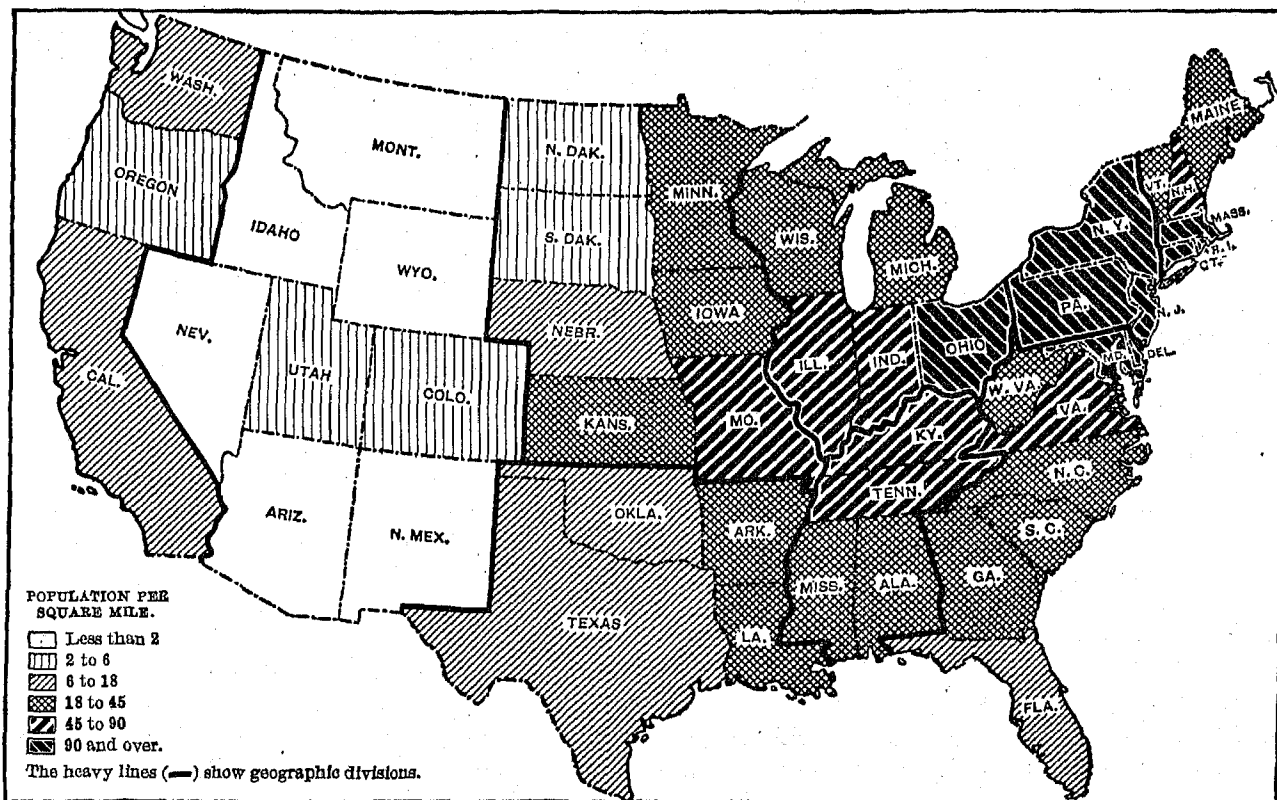

Among the outlying possessions Alaska had an average density of 0.1 per square mile; Hawaii, of 29.8, nearly that of Arkansas; and Porto Rico, of 325.5, which is greater than that of any state of the United States except Rhode Island, Massachusetts, and New Jersey.

AREA AND DENSITY.

POPULATION PER SQUARE MILE, BY STATES: 1910.

POPULATION PER SQUARE MILE, BY STATES: 1900.

POPULATION PER SQUARE MILE, BY STATES: 1790-1910.

[The density of population is obtained by dividing the population of each state and of the United States by its total land area in square miles at each census, as given in Table 21, p. 40.]

STATE.	1910	1900	1890	1880	1870	1860	1850	1840	1830	1820	1810	1800	1790

⁴ Oklahoma and Indian Territory combined.

ACRES PER INHABITANT.

United States as a whole.—The density of population may be indicated, also, by average area per inhabitant. Table 27 is a summary and shows, for the United States, the number of acres per inhabitant at each of the last three censuses.

CENSUS YEAR.	Population.	Land area (acres).	Acres per inhabitant.
1910.....	91,972,266	1,903,289,600	20.7
1900.....	75,994,575	1,903,461,700	25.0
1890.....	62,947,714	1,903,337,600	30.2

In 1890 there were, on the average, 30.2 acres to each inhabitant in the United States, but this number was reduced to 25 in 1900 and to 20.7 in 1910, the total

reduction during the 20 years being very nearly a third.

Divisions and states.—Table 28 shows, by divisions and states, the total population and land area in acres in 1910 and the number of acres to each inhabitant in 1910, 1900, and 1890, respectively.

In the Middle Atlantic division there were in 1910, on the average, 3.3 acres of land to each inhabitant, while in the Mountain division there were 208.8 acres, the corresponding numbers for 1890 being 5 and 453, respectively. In Rhode Island, the most densely populated state, there were but 1.3 acres per inhabitant in 1910, while in Nevada there were 858.4 acres. The changes in the number of acres per inhabitant are of course simply the converse of the changes in the number of inhabitants per square mile.

CENTER OF POPULATION AND MEDIAN LINES.

CENTER OF POPULATION AND MEDIAN LINES.

DEFINITION OF TERMS.

On the basis of the Thirteenth Census returns the center of population and the median point for the United States have been determined for April 15, 1910. In these calculations no account is taken of the territory and population of Alaska and of other outlying possessions. The location of the center at the dates of the several censuses from 1790 to 1910, and the movement of the point from census to census, are indicated in the tables and maps of this section, which includes also a map on which are drawn the median parallel of latitude and the median meridian of longitude for 1910.

The term "center of population" as used in census publications has a somewhat technical significance, different from that frequently attached to it. The center is often understood to be the point of intersection of a north and south line which divides the population equally, with an east and west line which likewise divides it equally. This point of intersection is, in a certain sense, a center of population; it is here, however, designated the median point to distinguish it from the point technically defined as the center.

The character of these two points may be made clear through a physical analogy. The center of population may be said to represent the center of gravity of the population. If the surface of the United States be considered as a rigid plane without weight, capable of sustaining the population distributed

thereon, individuals being assumed to be of equal weight, and each, therefore, to exert a pressure on any supporting pivotal point directly proportional to his distance from the point, the pivotal point on which the plane balances would, of course, be its center of gravity; and this is the point referred to by the term "center of population," as used in this chapter. Continuing the above analogy, it may be noted that the median point, which may be described as the numerical center of population, is in no sense a center of gravity. In determining the median point, distance is not taken into account, and the location of the units of population is considered only in relation to the intersecting median lines—as being north or south of the median parallel and east or west of the median meridian. Extensive changes in the geographic distribution of the population may take place without affecting the median point, whereas the center of population responds to the slightest population change in any section of the country. To illustrate, since the median point lies east of Minnesota, a million persons could move from Minnesota to Oregon without affecting the median point, while the removal of 500 persons from one town in Indiana to another, across the north and south line passing through the median point, would change the location of the point. On the other hand, the removal of a million persons from Minnesota to Oregon would have a very considerable effect on the center of population, since, in terms of the

above analogy, the pressure exerted by each individual would increase in proportion to the distance traveled away from the center. If all the people in the United States were to be assembled at one place, the center of population would be the point which they could reach with the minimum aggregate travel, assuming that they all traveled in direct lines from their residences to the meeting place.

METHOD OF DETERMINING THE CENTER OF POPULATION.

In locating the center of population it is first assumed to be approximately at a certain point. Through this point a parallel and a meridian are drawn, crossing the entire country. In determining the center of population in 1910 it was assumed to be at the intersection of the parallel of 39° north latitude with the meridian of 86° west longitude, which lines were taken as the axes of moments.

The product of the population of a given area by its distance from the assumed parallel is called a north or south moment, and the product of the population of the area by its distance from the assumed meridian is called an east or west moment. In calculating north and south moments the distances are measured in minutes of arc; in calculating east and west moments it is necessary to use miles, on account of the unequal length of the degrees and minutes in different latitudes. The population of the country is grouped by square degrees—that is, by areas included between consecutive parallels and meridians—as they are convenient units with which to work. The population of the principal cities is then deducted from that of the respective square degrees in which they lie, and treated separately. The center of population of each square degree is assumed to be at its geographical center, except where such an assumption is manifestly incorrect; in these cases the position of the center of population of the square degree is estimated as nearly as possible. The population of each square degree north and south of the assumed parallel is multiplied by the distance of its center from that parallel; a similar calculation is made for the principal cities; and the sum of the north moments and the sum of the south moments are ascertained. The difference between these two sums, divided by the total population of the country, gives a correction to the latitude. In a similar manner the sums of the east and of the west moments are ascertained and from them the correction in longitude is made.

THE CENTER OF POPULATION: 1910.

At the Thirteenth Census the center of population was in the following position:

Latitude..... 39° 10' 12" N.
Longitude..... 86° 32' 20" W.

This point is in southern Indiana, in the western part of Bloomington city, Monroe County, as shown on the map on the opposite page.

During the last decade, 1900-1910, the center of population moved west 43' 26'', approximately 39 miles, while its northward movement was only 36'', or approximately seven-tenths of a mile. The great increase of population in New York and Pennsylvania tended to counterbalance the increase in Texas, Oklahoma, and southern California. The advance toward the west was, to a large extent, due to the increase of population in the Pacific Coast states, their distance from the center giving any increase of population in those states much greater weight than an equal increase in the states of the East, which are nearer the center. The cities of San Francisco, Seattle, Portland, and Sacramento combined, with a population in 1910 of 906,016, had, for example, as great an influence on the center as had the cities of Philadelphia, Boston, and Baltimore combined, with a population of 2,778,078. An increase of 100,000 in the population of these far western cities would, therefore, approximately counterbalance an increase of 300,000 in the eastern cities named. The westward advance in the last decade was nearly three times as great as that in the decade 1890-1900, but was less than that in any decade between 1810 and 1890.

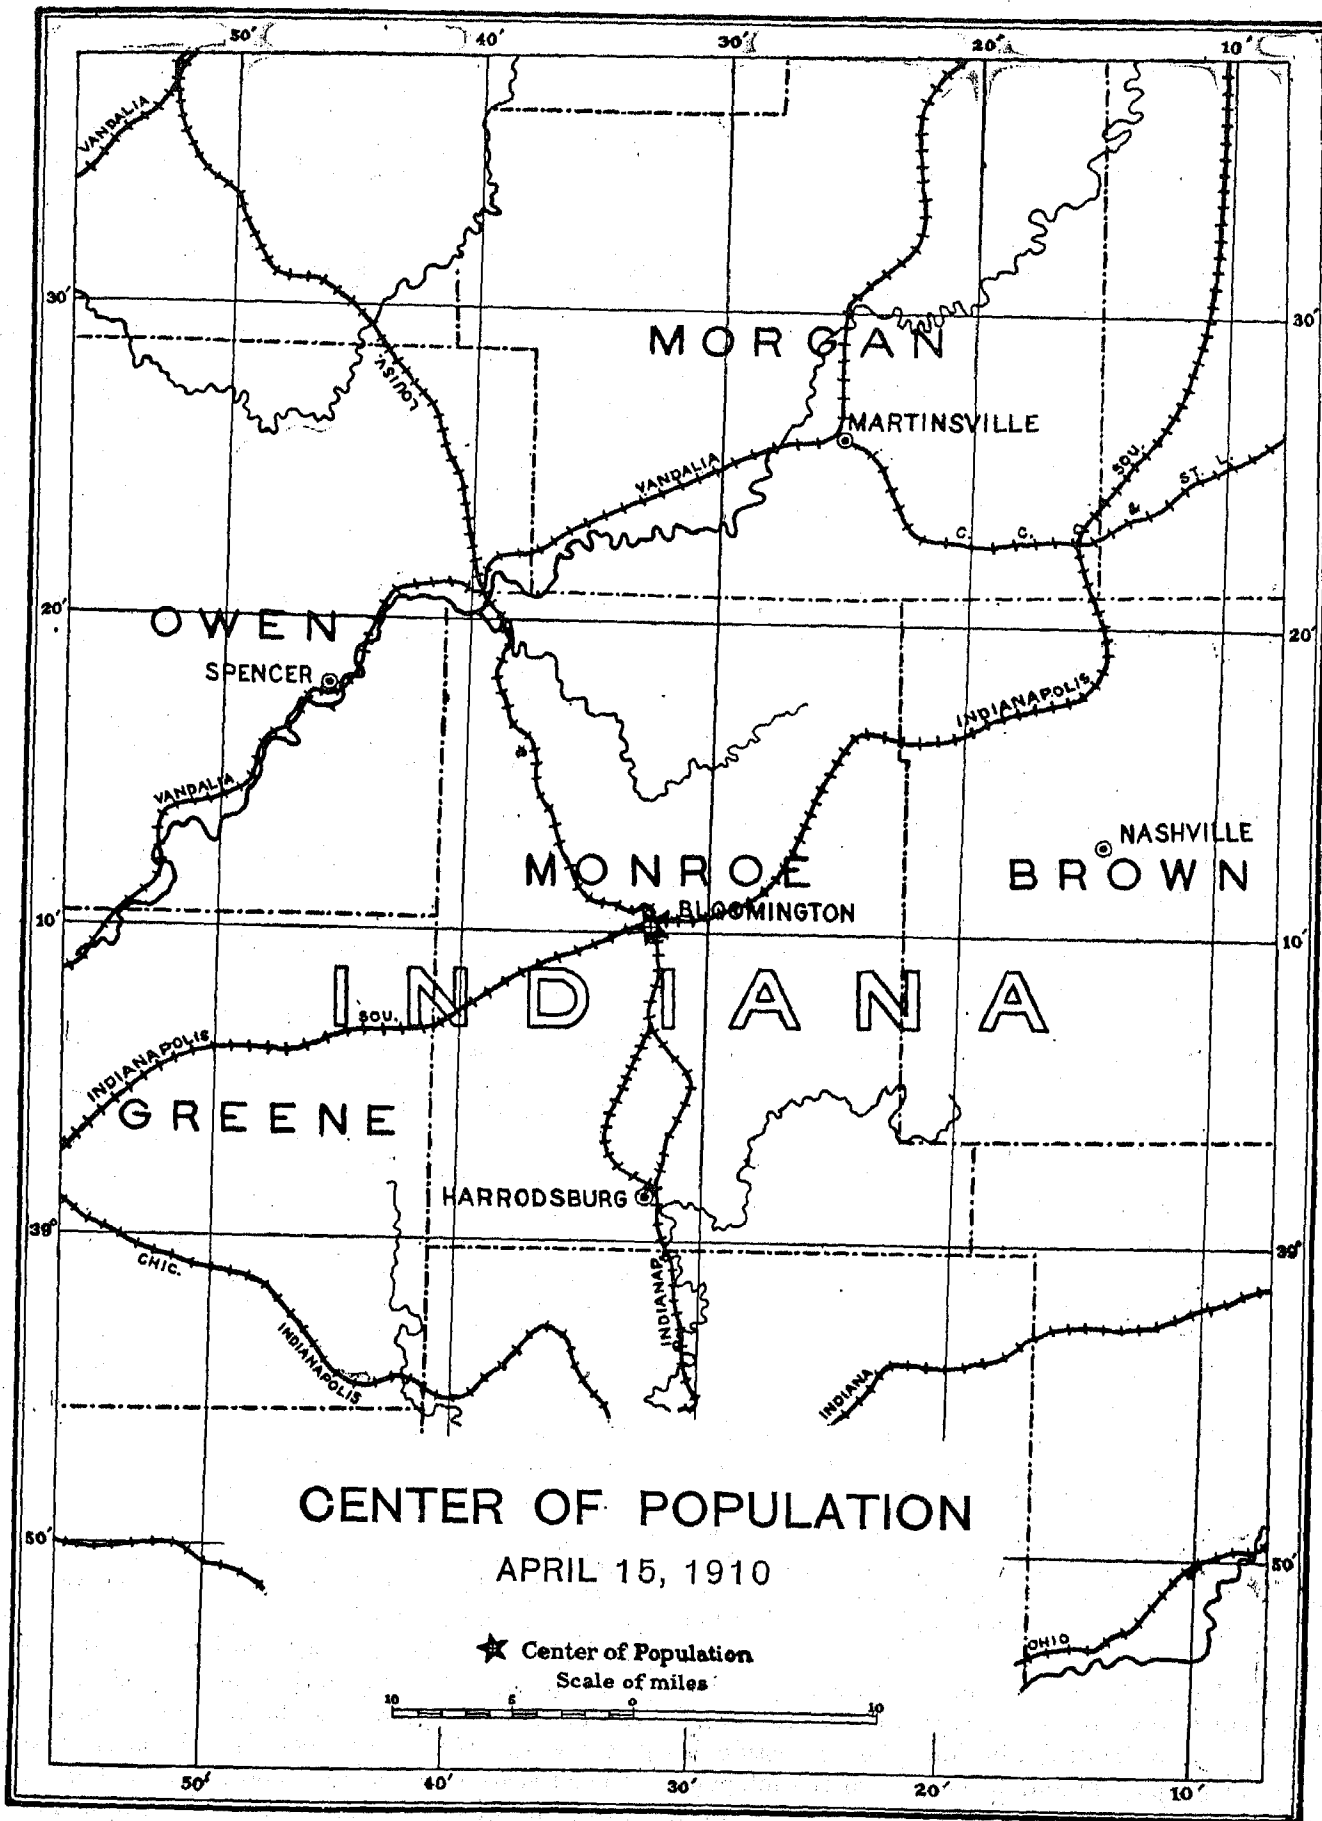

LOCATION OF THE CENTER: 1790-1910.

Table 29 and the map on page 49 show the location of the center of population and its proximity to important places at each Federal census.

In the period of 120 years, 1790-1910, the center advanced westward 557 miles from its position in 1790 a little east of Baltimore. The progress westward from census to census has been uninterrupted, being greatest—80.6 miles—in the decade ending in 1860, and least—14.4 miles—in the decade ending in 1900.

The net advance southward in this period was only 7.5 miles. The position of the center in 1790, in latitude 39° 16' 30'', was the extreme northern point, and the position in 1830, in latitude 38° 57' 54'', the extreme southern point occupied at any of the several censuses from 1790 to 1910, the distance separating these parallels being approximately only 21.5 miles. The closeness with which the center throughout its progress westward has clung to the thirty-ninth parallel of latitude is remarkable. In 1790 it was less than 20 miles north of this parallel, and in 1830 less than 2.5 miles south of it.

In each of the first four decades, 1790-1830, the center moved westward and southward, the aggregate advance westward in this period of 40 years being 166.6 miles, and the aggregate advance southward, as noted above, 21.5 miles. In the eight decades from 1830 to 1910, the point moved alternately northward and southward, but considering the period as a whole the net deviation from a course due west was very slight. The aggregate advance westward in this period of 80 years was 390.6 miles; the net advance northward 13 miles. In traversing this distance the deviations north and south from a course due west were confined to the very narrow range of 16.1 miles.

POSITION OF THE CENTER OF POPULATION: 1790-1910.

¹ West Virginia formed part of Virginia until 1860.

During the decade 1790-1800 the center moved south only 0.5 mile in advancing west 40.6 miles, but in the three decades following it moved south 21 miles in advancing west 126 miles. The progress southward during this period is largely accounted for by the course of the northern boundary of the country, which breaks southward through the Great Lakes. The population of the area south of the Great Lakes embraced within the two East Central divisions was during this period increasing rapidly. The proportion of the total population of the country living within this area increased from 7.3 per cent in 1800 to 13.5 per cent in 1810, 20.6 per cent in 1820, and 25.6 per cent, or more than one-quarter of the total, in 1830. The proportion living in New England and the Middle Atlantic states, on the other hand, decreased from 49.6 per cent in 1800 to 43.1 per cent in 1830, while the total number of inhabitants enumerated west of the Mississippi River at the census of 1830 aggregated only 386,582, or 3 per cent of the total population of the country. The migration into the East Central divisions from the states of the New England and Middle Atlantic divisions is in the aggregate a migration southward as well as westward. This migration, together with the natural increase of population within the area itself, would tend to move the center of population south. Another factor which may be noted as in part accounting for the advance southward during the decade 1800-1810 is the fact that at the census of 1810 the area of enumeration was extended to include the three southern states just west of the Mississippi River (Missouri, Arkansas, and Louisiana). At the census of 1830, also, the area of enumeration was extended southward to include Florida.

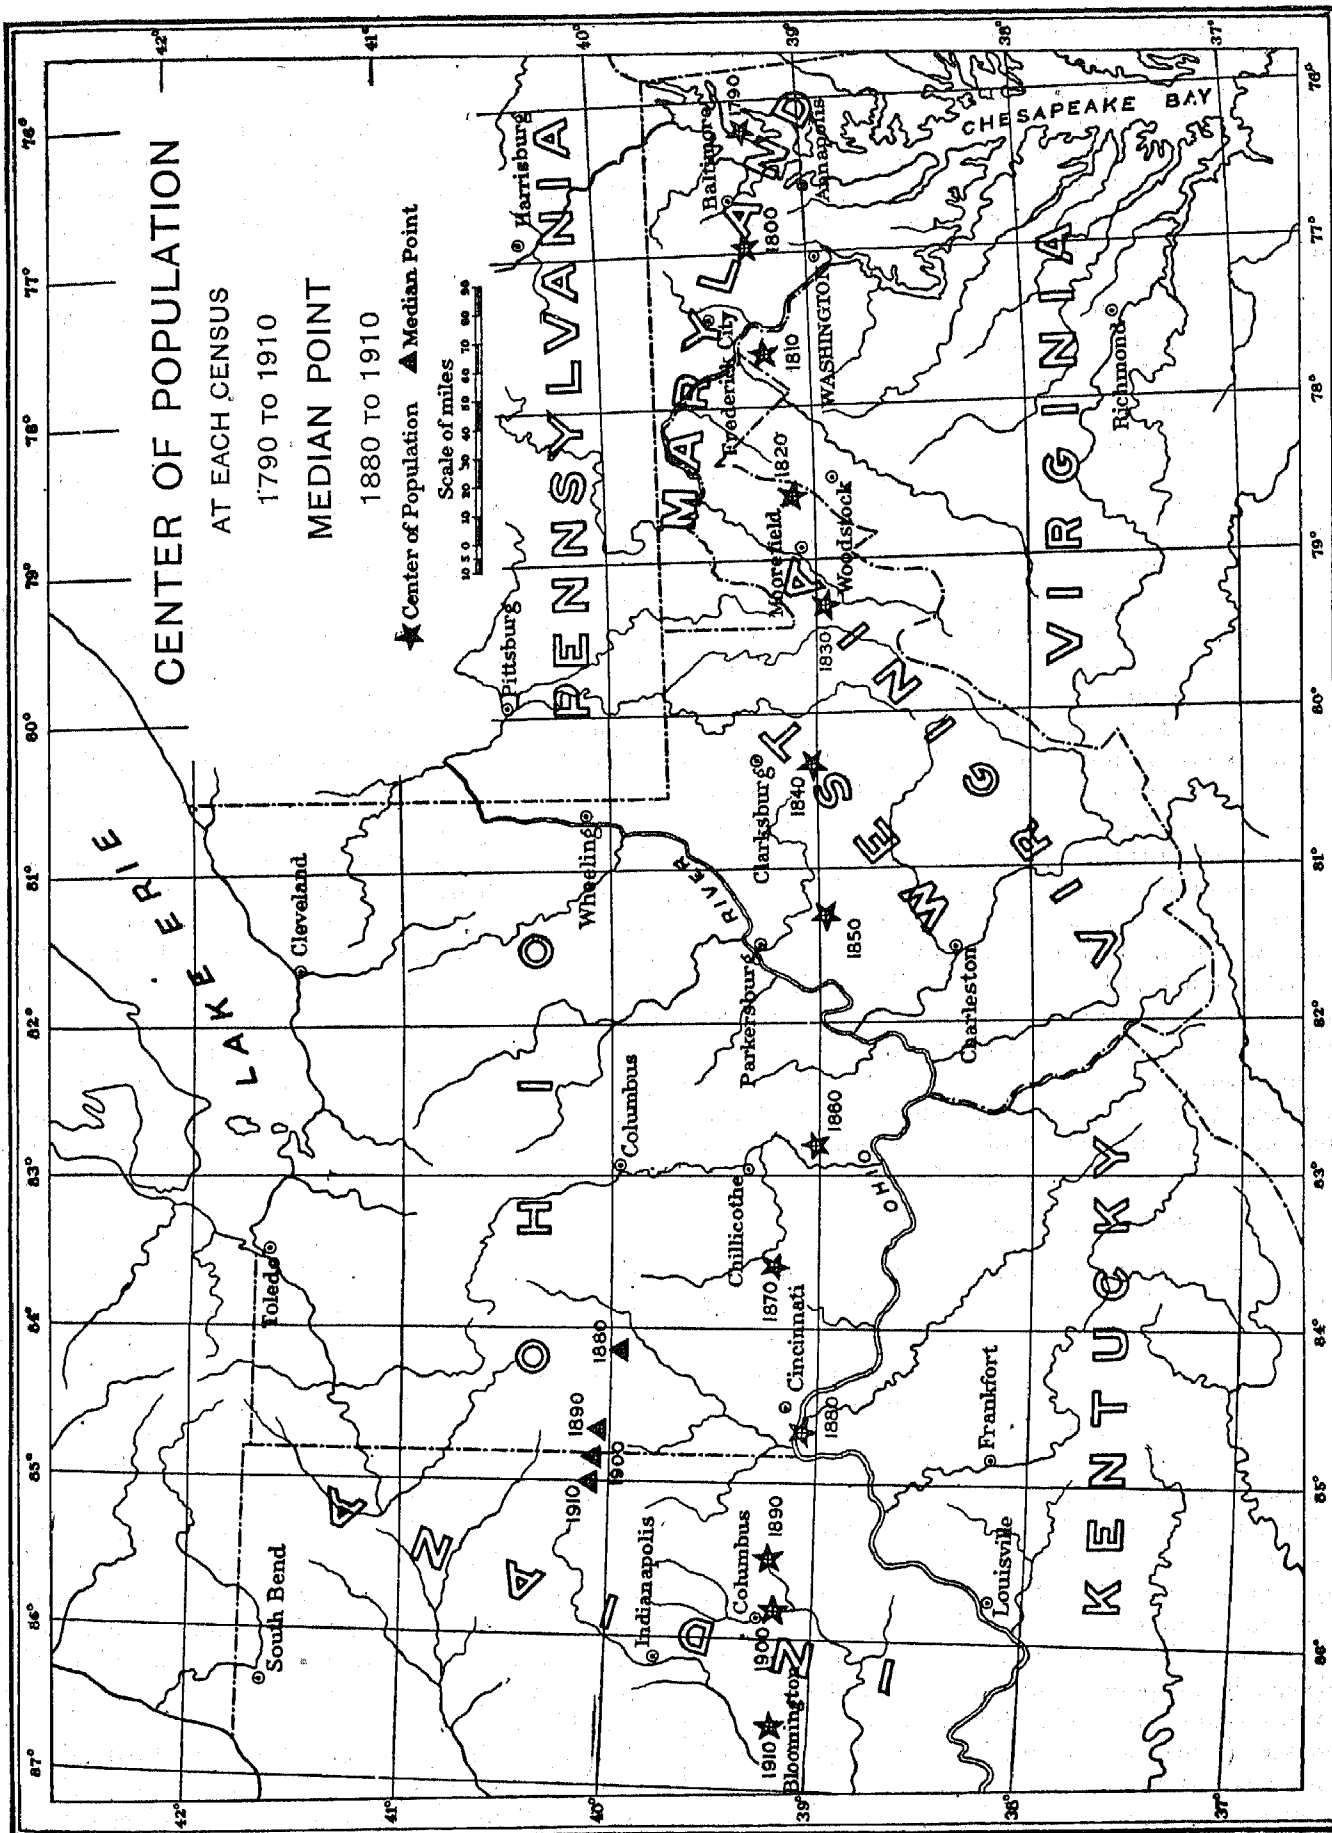

In the decade 1820-1830 the increase in the East North Central division did not greatly exceed that in the East South Central division, the respective increases being 677,299 and 625,480. In the following decade, however, the population growth was much greater in the Northern than it was in the Southern division, the increases being 1,454,710 and 759,476,

respectively. A very considerable portion of the increase in the Northern division was in the territory north of the thirty-ninth parallel and would therefore tend to move the center northward. The population of Michigan, for example, increased from 31,639 in 1830 to 212,267 in 1840, or 570.9 per cent. In this decade for the first time the center of population moved northward 4.7 miles in a progress westward of 54.8 miles.

During the decade 1840-1850 the center moved westward 54.7 miles and southward 3.5 miles, reaching a point in Virginia—now West Virginia—23 miles southeast of Parkersburg, in latitude 38° 59' and longitude 81° 19'. In explanation of the deflection of the course southward, it may be noted that at the census of 1850 extensive territory in the Southwest, including the state of Texas with a population of 212,592, was added to the area of enumeration, and that the increase of population during the decade was large in Louisiana (165,351), Arkansas (112,323), and Missouri (298,342).

In the decade 1850-1860 the rapid growth of population in California and generally in the states of the far West and of the Mississippi Valley carried the point west 80.6 miles, a distance which very considerably exceeds the westward advance in any other decade. There was a slight deflection (1.6 miles) of the course northward.

The maximum advance northward shown for any decade—13.3 miles—is that for the decade 1860-1870 and the maximum advance southward—9.1 miles—that for the succeeding decade, 1870-1880. The northerly advance indicated by the census of 1870 is largely accounted for by the defective enumeration of the population in the Southern states at that census (see p. 24). The population returns for 1870 do not in fact accurately indicate the location of the center in that year. If it be assumed that the advance during the 20 years from 1860 to 1880 was in a course whose direction was practically unvarying throughout the period, the location of the center in 1870 was approximately 11 miles south of the position given in Table 29.

The net advance northward in these 20 years was 4.2 miles. This advance for two decades is not inconsistent with the advance northward of 1.6 miles in the decade 1850-1860. It is, however, quite conceivable that the loss of population in the South, caused by the Civil War, may have been sufficient to carry the center of population northward somewhat out of the course which it would have followed in moving directly from the position occupied in 1860 to that occupied in 1880.

In 1880 the center was located near Cincinnati, Ohio. During the decade 1880-1890 it moved westward 47.7 miles, and northward 9 miles, the advance northward being the result of the rapid population growth during the decade in the states of the Northwest. The population of Washington, for example, increased 282,116, or 375.6 per cent during this decade.

Between 1890 and 1900 the growth of population in the country as a whole, amounting to 13,046,861, was so distributed geographically as to occasion only a very slight shifting of the center of population. The distance moved from point to point was only 14.6 miles, the westward advance being 14.4 miles and the southward 2.8 miles. If the percentages of increase for the several divisions be noted it will be found that the range of variation in these rates was much less for the decade 1890-1900 than in any other decade, the range being from 15.8 in the West North Central division to 38 in the Mountain division. In the preceding decade the range of variation in the rates for the different divisions was from 15.1 to 85.9, and in the decade 1900-1910, from 11.4 to 73.5. The slight shifting in the position of the center shown by the census of 1900 indicates that the geographic distribution of the increase in population during the decade 1890-1900 was more nearly proportional to the distribution of the population at the beginning of the decade than has been the case in any other decade from 1790 to 1910.

THE CENTER OF AREA.

In connection with the location of the center of population it is of interest to note also the position of what may be termed the center of area—that is, the point on which the surface of the United States would balance if it were a plane of uniform weight per unit of area. This point is located in northern Kansas, 10 miles north of Smith Center, the county seat of Smith County (approximate latitude $39^{\circ} 55'$, longitude $98^{\circ} 50'$), and is therefore about three-fourths of a degree (51 miles) north and $12\frac{1}{4}$ degrees (657 miles) west of the center of population. Its location is shown on the map opposite designating the position of the median lines. This would be the center of population if the population were distributed evenly over the territory of the United States. In locating the center of area, no account is taken of the area of outlying possessions.

MEDIAN LINES.

Another method of indicating the geographic distribution of the population is that involving the loca-

tion of median lines. A parallel of latitude is determined which evenly divides the population so that the population north of that parallel is the same as that south. Similarly, a meridian of longitude is determined which divides the population evenly so that the population east is equal to that west of the meridian. In locating these median lines it is necessary, in the case of the square degrees of latitude and longitude which are traversed by the lines themselves to assume that the population is evenly distributed through these square degrees or to make an estimated adjustment where this is obviously not the case.

The eastern terminus of the median parallel, according to the census of 1910, is on the New Jersey coast near Sea Girt. In its course west this line passes through central New Jersey, leaving the state near Burlington and entering Pennsylvania a few miles north of Philadelphia, thence passing through Norristown and continuing through southern Pennsylvania and across the northern extremity of West Virginia, leaving the latter state at a point a few miles north of Wheeling. It nearly bisects Ohio, Indiana, and Illinois, crossing about 10 miles north of Columbus, Ohio, 25 miles north of Indianapolis, Ind., and about 20 miles north of Springfield, Ill. Through Missouri it runs about 30 miles south of the Iowa and Missouri line, thence passing through Nebraska about 10 miles north of its southern boundary, and across the northern part of Colorado, passing about 5 miles north of Boulder city. Its location in Utah is about 45 miles south of Salt Lake City near Spanish Fork. There are no large towns near its course across the northern part of Nevada and California. The western terminus of the median parallel is on the Pacific coast, in Humboldt County, Cal., about 5 miles north of Point Delgada and 20 miles south of Cape Mendocino, the point of continental United States extending farthest west.

The median meridian starts at Whitefish Point, on the northern peninsula of Michigan, near the eastern end of Lake Superior, thence passing south through the southern peninsula of Michigan about 25 miles west of Lansing and through Indiana about 10 miles west of the Indiana-Ohio boundary and 25 miles west of Cincinnati. South of the Ohio River it bisects Kentucky about 40 miles east of Louisville, crosses eastern Tennessee, and leaves the state 20 miles east of Chattanooga. Through Georgia it passes close to the Georgia-Alabama line, about 2 miles west of Columbus, Ga., leaving the state near the conjunction of the Alabama, Georgia, and Florida boundary lines. It then crosses the northwestern portion of Florida and terminates in the Gulf of Mexico at the city of Apalachicola.

During the last three decades, from 1880 to 1910, there has been little change in the location of these lines—so slight in fact that the changes can not be accurately shown on a small map. For this reason the median lines are not drawn on the following map for any years prior to 1910.

The median parallel has moved north a distance of 11.3 miles since 1880. In the same period the median meridian has moved west 45.3 miles. Each of the three decades has shown a slight movement of the parallel north and of the meridian west. Between 1900 and 1910, however, the northern movement was only 2.3 miles, and the westward only 7.5 miles. The

greatest change took place in the decade 1880-1890, during which period the median parallel moved north 6.6 miles, and the median meridian west 27 miles. The location of these lines at the several censuses, from 1880 to 1910, is shown in Table 30. Their location in 1910 is shown on the map on the preceding page.

MEDIAN LINES: 1880-1910.

CENSUS YEAR.	Median parallel, north latitude.	Median meridian, west longitude.	MOVEMENT IN MILES DURING PRECEDING DECADE.	
			Median parallel, northward.	Median meridian, westward.
1880.....	39 57 00	84 7 12
1890.....	40 2 51	84 40 1	6.6	27.0
1900.....	40 4 22	84 51 29	2.4	10.8
1910.....	40 6 24	84 59 59	2.3	7.5

It may be observed that while each median line exactly bisects the population as a whole it does not at any given point or through any given section of its course necessarily bisect the population even approximately. The median parallel does not bisect even approximately the population living either west or east of the Mississippi River. Similarly, the median meridian does not bisect the population either of the northern or the southern section of the country. Nor does any one of the four sections into which the intersecting median lines divide the country contain one-quarter of the total population. It is obvious, however, that the diagonally opposite sections are necessarily exactly equal in population.¹ The population of the northeastern section exactly equals the population of the southwestern; and, similarly, the population of the southeastern exactly equals that of the northwestern. The northeastern and southwestern each contain, in fact, a population of about 27,500,000, while the southeastern and northwestern sections each contain a population of about 18,500,000.

MEDIAN POINT.

What is termed by the Census Bureau the "median point" of the population corresponds, as already stated, to a common conception of the center of population; that is, it is the junction of the median line dividing the population equally north and south with

¹ The mathematical demonstration of this is simple. If A, B, C, and D represent, respectively, the population of the northwestern, northeastern, southeastern, and southwestern sections, then:

$$A+B=\frac{1}{2}\text{ population of U. S.}$$

$$B+C=\frac{1}{2}\text{ population of U. S.}$$

$$A+B=B+C.$$

$$\text{Therefore } A=C.$$

Similarly it may be proven that B=D.

the median line dividing it equally east and west, distance of the population from the point not being considered. As already indicated, the changes in the median point reflect only the difference between the growth of population east of the point and the growth west of it and the difference between the growth north and south of the point. Other differences in relative growth do not affect its location.

In 1910 the median point was located at latitude 40° 6' 24" north and longitude 84° 59' 59" west, practically the eighty-fifth meridian, or 3¼ miles south of Winchester, Randolph County, Ind.; its westward movement during the decade was 7.5 miles, its northward movement 2.3 miles. Comparing its movement since 1900 with that of the center of population, it will be noted that the north movement of the median point was 1.5 miles more than that of the center, while the center of population moved west 31.4 miles more than the median point, showing that the increase in the population of the Pacific coast and of the far west generally had a much greater influence on the movement of the center of population than upon that of the median point.

The exact location of the median point is indicated by the median lines already shown; in Table 31 its approximate location with reference to certain places is described.

POSITION OF THE MEDIAN POINT: 1880-1910.

CENSUS YEAR.	APPROXIMATE LOCATION BY IMPORTANT PLACES.
1880.....	16 miles due west of Springfield, Ohio.
1890.....	5 miles southwest of Greenville, Ohio.
1900.....	In Spartanburg, Ind.
1910.....	3 miles south of Winchester, Ind.

URBAN AND RURAL POPULATION.

DEFINITION OF TERMS.

The Census Bureau classifies as urban population that residing in cities and other incorporated places of 2,500 inhabitants or more, including New England towns of that size. In most sections of the country all or practically all densely populated areas of this size are set off from rural territory and incorporated as municipalities (variously known as cities, towns, villages, boroughs, etc.). In New England, however, this is often not the case.

Some of the New England towns are densely populated throughout their area, and some are, on the other hand, strictly rural throughout. Many of the towns consist in part of distinctly rural territory and in part of densely populated areas which are not incorporated separately and for which it is impossible to make separate population returns. For this reason it has been necessary in the New England states to include with the urban population residing in incorporated cities the population also of all towns having 2,500 inhabitants or more. The urban areas in New England, as classified by the census, therefore, include some population which, in other sections of the United States, would be segregated as rural. Nevertheless, in most of the New England towns of 2,500 inhabitants or more, the larger part of the population is embraced in the densely settled parts, so that the proportion of the population classed as urban in the New England states is not so greatly exaggerated by the practice thus adopted as might appear at first thought.

Urban population being thus defined, the remainder of the country is classed as rural, consisting of all unincorporated territory and of incorporated places and New England towns of less than 2,500 inhabitants.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions *as they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural territory for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes in population which have occurred from one decennial census to another in exactly the *same* territory. For this purpose the territory which in 1910 was

urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This method avoids the disturbing effect on comparisons of the rate of growth which would arise from the passage, for example, of communities formerly classed as rural into the urban group.

It should be noted in this connection that, even if there were no difference between urban and rural communities with respect to the rate of growth, there would nevertheless be a constantly increasing proportion of urban population provided the population of the country as a whole were increasing. Were there no movement from country to city, no disturbing effect from international migration, and no difference between urban and rural communities with respect to the natural increase from excess of births over deaths, there would still be, in a growing population, a constant passage of certain communities from the rural to the urban class. The smaller towns, maintaining a rate of growth uniform with that of the country as a whole, would one by one pass the limit of 2,500 inhabitants fixed for the urban population, and thus the proportion of urban population would increase gradually from census to census. As a matter of fact, however, in the United States the urban communities have a much higher rate of growth than the rural communities, and the rapid increase in the proportion of urban population is largely due to the difference in the rate of growth.

The statistics as to urban and rural population in this section relate only to the United States exclusive of outlying possessions.

PROPORTION URBAN AND RURAL.

United States as a whole.—The proportion of the total population living in urban and in rural territory at the censuses of 1910, 1900, 1890, and 1880, respectively, for the United States as a whole, is shown in Table 32.

CLASS.	POPULATION OF THE UNITED STATES.			
	1910	1900	1890	1880
Total, number....	91,972,266	75,994,575	62,947,714	50,155,788
Urban.....	42,623,383	30,797,185	22,720,223	14,772,438
Rural.....	49,348,883	45,197,390	40,227,491	35,383,345
Total, per cent....	100.0	100.0	100.0	100.0
Urban.....	46.3	40.5	36.1	29.5
Rural.....	53.7	59.5	63.9	70.5

Of the total population of the United States in 1910, 42,623,383, or 46.3 per cent, lived in urban territory, and 49,348,883, or 53.7 per cent, lived in rural territory.

Table 32 shows a steady and rapid increase in the proportion of urban population, which rose from 29.5 per cent in 1880 to 36.1 per cent in 1890, 40.5 per cent in 1900, and 46.3 per cent in 1910. This is a continuation of a tendency which has been manifested conspicuously ever since 1820. While the advance in the percentage of urban population from 1900 to 1910 was appreciably greater than from 1890 to 1900, it was somewhat less than the advance from 1880 to 1890.

It would be extremely difficult, if at all possible, from the earlier census reports to even approximate closely the population in urban territory, as herein defined, and no such compilation, therefore, has been attempted for censuses prior to that of 1880. (For a tabulation giving the last four censuses see Table 40.) The census report for 1880, however, contained a comparative statement of the population living in places of 8,000 inhabitants or more at each census back to 1790, and, as affording an approximation of the steady growth of urban population from the earliest to the latest census, it seems worth while to reproduce in Table 33 so much of this statement as applies to the censuses prior to 1880 and to give in conjunction therewith substantially equivalent figures for the last four censuses, 1880-1910, covering the same limit of population—8,000 inhabitants or more—but including New England towns of that size.

CENSUS YEAR.	Total population.	PLACES OF 8,000 INHABITANTS OR MORE.		
		Population.	Number of places.	Per cent of total population.
1910.....	91,972,266	35,726,720	778	38.8
1900.....	75,994,575	25,142,978	556	33.1
1890.....	62,947,714	18,327,987	449	29.1
1880.....	50,155,753	11,450,894	291	22.8
1870.....	38,558,371	8,071,875	225	20.9
1860.....	31,443,321	5,072,256	141	16.1
1850.....	23,191,876	2,897,586	85	12.5
1840.....	17,089,453	1,453,994	44	8.5
1830.....	12,866,020	864,509	26	6.7
1820.....	9,638,453	475,135	13	4.9
1810.....	7,239,881	356,920	11	4.9
1800.....	5,308,433	210,873	6	4.0
1790.....	3,929,214	131,472	6	3.3

POPULATION IN PLACES OF 8,000 INHABITANTS OR MORE AT EACH CENSUS: 1790-1910.

From Table 33 and the accompanying diagram it may be seen that in 1790 about one-thirtieth (3.3 per cent) of the population of the country was living in places of 8,000 inhabitants or more, in 1820 about one-twentieth (4.9 per cent), in 1850 about one-eighth (12.5 per cent), in 1900 about one-third (33.1 per cent), and in 1910 not quite two-fifths (38.8 per cent). A diagram is presented below, showing the proportions of urban (2,500 inhabitants or more) and rural population at each census from 1880 to 1910.

URBAN AND RURAL POPULATION: 1880-1910.

Divisions and states.—Table 36 (p. 56) shows, by divisions and states, the urban and rural population, and the per cent urban and rural, at the censuses of 1910, 1900, 1890, and 1880, respectively. As shown by this table, the proportions of the total population living in urban and rural territory vary greatly in different sections of the country.

In the New England division more than four-fifths of the population in 1910 lived in urban territory, as defined by the Census Bureau. Vermont was the only state in this division in which the proportion was less than one-half, while in Rhode Island and Massachusetts it was more than nine-tenths. Were it possible to determine the urban population in this division on the same basis as for the rest of the country, the proportion for New England as a whole would probably be somewhat less than three-fourths. It is probable that among the individual states the exaggeration resulting from the census definition of urban territory is least in Massachusetts, Rhode Island, and Connecticut, and that in the three remaining states the exaggeration is considerable, especially in Vermont. Urban population constituted more than seven-tenths of the total in the Middle Atlantic division and more than one-half in the East North Central and Pacific divisions. The lowest proportion of urban population is found in the South—25.4 per cent in the South Atlantic division, 18.7 in the East South Central, and 22.3 in the West South Central.

In the North the urban population in 1910 numbered 32,669,705 and the rural 23,087,410, the percentage urban being 58.6. In the South the urban population was 6,623,838 and the rural 22,765,492, the proportion urban being 22.5 per cent. In the West, with an urban population of 3,329,840 and a rural of 3,495,981, the percentage urban was 48.8.

In each of the nine geographic divisions the proportion of the population living in urban communities was larger in 1910 than in 1900, and larger in 1900 than in 1890. The proportion increased with exceptional rapidity from 1900 to 1910 in the Pacific division, where cities have shown a remarkable growth.

The per cent distribution by geographic sections and divisions, of the urban and rural population, respectively, in 1910 is given in Table 34.

SECTION AND DIVISION.	POPULATION: 1910				
	Urban.	Rural.	Per cent urban.	Per cent distribution.	
				Urban.	Rural.
United States.....	42,623,383	49,348,883	46.3	100.0	100.0
The North.....	32,669,705	23,087,410	58.6	76.6	46.8
New England.....	5,455,345	1,097,336	83.3	12.8	2.2
Middle Atlantic.....	13,723,373	5,592,519	71.0	32.2	11.3
East North Central.....	9,617,271	8,633,350	52.7	22.0	17.5
West North Central.....	3,873,716	7,764,205	33.3	9.1	15.7
The South.....	6,623,838	22,765,492	22.5	15.5	46.1
South Atlantic.....	3,092,153	9,102,742	25.4	7.3	18.4
East South Central.....	1,574,229	6,835,672	18.7	3.7	13.9
West South Central.....	1,957,456	6,827,078	22.3	4.6	13.8
The West.....	3,329,840	3,495,981	48.8	7.8	7.1
Mountain.....	947,511	1,686,006	36.0	2.2	3.4
Pacific.....	2,382,329	1,809,975	56.8	5.6	3.7
East of the Mississippi River..	33,462,371	31,261,619	51.7	78.5	63.3
West of the Mississippi River..	9,161,012	18,087,264	33.6	21.5	30.7

More than two-thirds of the urban population of continental United States in 1910 was contained in three geographic divisions, namely, the New England, Middle Atlantic, and East North Central. These divisions, on the other hand, contained only a little more than three-tenths of the rural population of the country in 1910.

The maps on page 58 and the diagram in the next column show the percentage of urban population in 1910 and 1900, respectively, for each of the states, while the full-page diagram on page 59 presents graphically for each state the per cent urban in the total population for each decade from 1880 to 1910. As shown by the map for 1910 and by Table 36 there are 14 states in which more than half the population in 1910 was living in territory classified as urban. The percentage urban for each of these states in 1910 was as follows: Rhode Island, 96.7; Massachusetts, 92.8; Connecticut, 89.7; New York, 78.8; New Jersey, 75.2; California, 61.8; Illinois, 61.7; Pennsylvania, 60.4; New Hampshire, 59.2; Ohio, 55.9; Washington, 53; Maine, 51.4; Maryland, 50.8; Colorado, 50.7. For reasons already stated the percentages for the New England states are somewhat exaggerated.

In Table 35 the density of the rural population in 1910 is given by divisions. In this table the rural

population is related to the total land area, no deduction being made for area classified as urban. Outside of New England the urban area in the divisional aggregates is too inconsiderable materially to affect the results. The distribution by states of the rural population in 1910 is also indicated by a map following page 124, in which the county has been taken as the unit.

DIVISION.	Total rural population: 1910	Land area in square miles.	Rural population per square mile.
United States.....	49,348,883	2,973,890	15.8
New England.....	1,097,336	61,976	17.7
Middle Atlantic.....	5,592,519	100,000	55.9
East North Central.....	8,633,350	245,564	35.2
West North Central.....	7,764,205	510,804	15.2
South Atlantic.....	9,102,742	269,071	33.8
East South Central.....	6,835,672	170,600	38.1
West South Central.....	6,827,078	420,746	15.9
Mountain.....	1,686,006	859,125	2.0
Pacific.....	1,809,975	318,005	5.7

PER CENT URBAN IN TOTAL POPULATION, BY STATES: 1910 AND 1900.

POPULATION.

PER CENT URBAN IN TOTAL POPULATION, BY STATES: 1910.

PER CENT URBAN IN TOTAL POPULATION, BY STATES: 1900.

URBAN AND RURAL POPULATION.

PER CENT URBAN IN TOTAL POPULATION, BY STATES: 1880-1910.

INCREASE IN URBAN AND RURAL POPULATION.

United States as a whole.—In order to compare the rate of growth in urban and rural communities, it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the same territory from one decennial census to another. For this purpose communities are classed as urban or rural according to their population in 1910, and the population of the places as thus classified is then determined for 1900 for purposes of comparison. It should be noted further that, in the case of communities whose boundaries were changed between 1900 and 1910, the population for 1900 in the area comprised within the boundaries of 1910 has been taken as the basis for comparison wherever it was possible to segregate such population.

The increase from 1900 to 1910 in urban and rural population on this basis is shown, for the United States, in Table 37.

The total population living in urban territory in 1910—that is, in those incorporated places and New England towns which at that time had a population of not less than 2,500 each—was 42,623,383; in 1900 the total population of these same places (so far as separately reported) was 31,609,645. The increase in urban population was thus 11,013,738, or 34.8 per cent. The total population living in rural territory in 1910—that is, in territory outside of urban communities as above defined—was 49,348,883, as compared with a total population of 44,384,930 living in the same territory in 1900, an increase of 4,963,953, or 11.2 per cent. The rate of increase for the population of areas which were urban in 1910 was thus over three times that for the population of territory which was rural. The figure given for 1900 is considerably larger than the figure previously given for the total population in 1900 of those places which at that time had over 2,500 each, namely, 30,797,185. The difference (812,460) is the net result of the changes which have occurred in the several states and territories, arising, first, from the passage of places classed as rural in 1900 into the urban group in 1910, either as separate communities or by annexation to places which in 1910 had over 2,500 inhabitants; and, second, from the falling back into the rural group in 1910 of a few places which in 1900 had over 2,500 inhabitants but which in 1910 had less than that number.

Of the total increase in the population of the United States during the past decade (15,977,691), approximately seven-tenths was in territory urban in 1910 and three-tenths in territory rural.

Divisions and states.—Table 39 (p. 62) shows, by divisions and states, the aggregate population in 1910 and 1900 of the territory classed as urban and of that classed as rural in 1910, and the increase or decrease during the decade.

The largest percentages of increase in urban population between 1900 and 1910 were reported for the

Pacific, West South Central, and Mountain divisions, in the order named, these percentages being 101.8, 68.5, and 64.7, respectively. These same divisions also showed higher rates of increase in rural population than any of the others, though the increase in rural population was much less rapid than that in urban population, being for these divisions 46.4, 27.1, and 53.4 per cent, respectively. The New England division, on the other hand, showed the smallest percentage of increase in urban population, namely, 21.5 per cent. For this division there was a slight decrease in rural population which, it will be remembered, is the population living in towns which had less than 2,500 inhabitants in 1910.

The other five geographic divisions differed little from one another in the percentages of increase in urban population, the rates ranging from 28.2 per cent for the West North Central division to 33.1 per cent for the Middle Atlantic division. They showed greater contrasts in the growth of rural population. In the South Atlantic division the increase in rural population was 12.3 per cent; in the Middle Atlantic, West North Central, and East South Central divisions it was between 5 and 10 per cent; and in the East North Central division there was a slight decrease in rural population.

Although, as is shown in Table 37, the aggregate absolute increase (7,501,782) in the four divisions of the North for territory classified as urban in 1910, greatly exceeded the corresponding aggregate increase in the three divisions of the South (1,938,095) and in the two divisions of the West (1,573,861), the percentage increase for the urban in the North (29.8) was much below the corresponding percentage for the South (41.4), or for the West (89.6). The percentage increase for the rural population in the North (3.9) was much below the corresponding percentage for the South (14.8) and for the West (49.7).

Territory rural in 1910.....	3,465,981	2,335,370	1,160,611	49.7

There was in every state between 1900 and 1910 an increase in urban population, but in six states—namely, New Hampshire, Vermont, Ohio, Indiana, Iowa, and Missouri—there was a decrease in rural population. In all but two states—Montana and Wyoming—the urban population increased faster than the rural population, and generally at a much more

rapid rate. There is no state in which the increase in urban population was less than 10 per cent, and in six states—namely, Oklahoma, Idaho, Arizona, Nevada, Washington, and Oregon—it was more than 100 per cent. There are 22 states, on the other hand, in which the rural population either decreased or showed an increase of less than 10 per cent. These include nearly all the northern states east of the Rocky Mountains, the Dakotas, however, being conspicuous exceptions.

The decrease or slow increase in the rural population throughout large areas is in no sense due to lack of agricultural prosperity. On the contrary, in almost all such areas there has been a remarkable increase in the value of farm property. In Table 38, which includes 22 states with little or no increase in rural population, the percentage changes in rural population are compared with the percentage changes in average value of farm land per acre for the decade 1900-1910.

The maps on page 63 show the rates of increase in urban and in rural population since 1900 for each state. In states shown in white on the second map

the rural population decreased; for the other states, as for all states on the first map, the different rates of increase are indicated by differences in shading.

URBAN AND RURAL POPULATION.

PERCENTAGE OF INCREASE IN URBAN POPULATION, BY STATES: 1900-1910.

PERCENTAGE OF INCREASE IN RURAL POPULATION, BY STATES: 1900-1910.

COMMUNITIES CLASSIFIED ACCORDING TO SIZE.

PROPORTION IN THE SEVERAL CLASSES OF COMMUNITIES.

United States as a whole.—In addition to classifying the population according to the broad grouping into urban and rural, a further analysis may be made on the basis of a more detailed size classification. Comparison is first made of the proportion of the total population residing in communities of the several groups at each of the last four censuses. In making this comparison, therefore, a community may at one census be in one group and at another census in another group.

Table 40 shows, for the United States as a whole, the number of places constituting each of the specified classes at the censuses of 1910, 1900, 1890, and 1880, the combined population of each group, and the percentage which each group contained of the total population of the country. Under the heading "Urban territory," which in the previous discussion has been considered as a unit, the communities of 2,500 inhabitants or more are here divided into nine classes of places by size, while the population of the rural

territory is also subdivided by distinguishing the population living in incorporated places of less than 2,500 inhabitants from that living in unincorporated territory. Only incorporated places and New England towns of 2,500 inhabitants or more are included in the urban classes for 1910, 1900, and 1880. At the census of 1890, however, separate returns for urban communities were not confined to incorporated places, and as the incorporated places were not distinguished from the unincorporated, the number of incorporated places can not be accurately determined for that year. The number of unincorporated places of 2,500 or more inhabitants outside of New England was, however, small. For the urban classes, therefore, the figures for 1890 are fairly comparable with those of other censuses. In order to make the figures for incorporated places of less than 2,500 inhabitants in 1890 comparable with corresponding figures for the three other years shown in the table, the number of such places in 1890 has been estimated according to the method adopted in the Census Report for 1900. (See Note 2, Table 40.)

¹ The total number of places of certain classes for the United States as a whole, and for certain geographic divisions, is less than the sum of the numbers shown for the individual states of the country or of the division, for the reason that three cities each lie in two adjoining states, namely, Bristol (Virginia and Tennessee), Texarkana (Arkansas and Texas), and Union City (Indiana and Ohio), and are therefore counted twice. Moreover, one of these cities—Bristol—lies in two different divisions (South Atlantic and East South Central). Each of these cities consists of two incorporated municipalities, but each is, from the statistical standpoint, one city, and should be classed according to its total population. In each case that part of the population lying in each state, whatever its number, is credited to the group of cities to which, according to the total population, the city belongs. According to total population, Bristol fell in 1910 in the class of cities of 10,000-25,000, in 1900 and in 1890 in the class 2,500-5,000, and in 1880 in the class 5,000-10,000; Texarkana fell in 1910 and 1900 in the class of 10,000-25,000, in 1890 in the class 5,000-10,000, and in 1880 in the class 2,500-5,000; and Union City fell at each census from 1880 to 1910 in the class of 2,500-5,000.

² The number of incorporated places can not be exactly determined from the returns for 1890. This census did not distinguish incorporated from unincorporated places, and did not enumerate separately very small places, whether incorporated or not. It has been assumed that those places were incorporated in 1890 which were separately returned in that year and returned in 1900 as incorporated. (See Census of 1900, Population, I, lviii.) The figures given for 1890 in Table 40, for incorporated places of less than 2,500 inhabitants may, therefore, include some unincorporated places and omit some incorporated places.

In addition to the 46.3 per cent of the total population which in 1910 resided in communities classed by the Census Bureau as urban, 8.8 per cent resided in incorporated places of less than 2,500 inhabitants, the aggregate population living in incorporated places being 50,742,208, or 55.1 per cent of the total population. Although this aggregate does not include the population living in unincorporated villages, it is approximately the total for what may be described as the agglomerated population of the country. The population living in rural territory outside of incorporated places—numbering 41,230,058, and constitut-

ing 44.8 per cent of the total population—although it includes a small village population is in the aggregate a scattered population, and is, therefore, more essentially rural in character than the aggregate rural given in Table 40, which includes the population of small incorporated places. It may be noted that the conditions of environment and of occupation for the population of small as well as of large villages are essentially different from those which prevail in distinctly rural districts outside of such villages.

The urban population of continental United States in 1910 was contained in 2,402 cities and other urban

places with a combined population of 42,623,383, or 46.3 per cent of the total population of the country. Fifty of these places were cities of 100,000 inhabitants or more, with a combined population of 20,302,138, or 22.1 per cent of the total population, and 179 were cities of from 25,000 to 100,000 inhabitants, with a combined population of 8,241,678, or 9 per cent of the total population. These two groups together had a combined population of 28,543,816, or somewhat more than three-tenths (31.1 per cent) of the total population of the country.

Nearly one-tenth (9.2 per cent) of the total population in 1910 resided in the three cities (New York, Chicago, and Philadelphia) which had more than 1,000,000 inhabitants each. The small urban communities of from 2,500 to 25,000 inhabitants contained 15.3 per cent of the total population.

Comparing the percentages for the four censuses, it is seen that each of the several groups of communities classed as urban comprised a larger percentage of the population of the country in 1910 than in 1900; that, with three exceptions, each class in 1900 comprised a larger percentage of the total population than in 1890; and that, with one exception, each class in 1890 comprised a larger percentage than in 1880. The fact that the proportion of the population residing in cities of from 250,000 to 500,000 inhabitants was less in 1900 than in 1890 was due to the passage of two cities (Boston and Baltimore) from this class in 1890 to the next higher class in 1900. A similar explanation applies to the fact that the proportion residing in cities of 100,000 to 250,000 inhabitants was slightly less in 1900 than in 1890.

In Table 41 the grouping of cities is such as to throw into one aggregate the total population living in cities having more than the specified population.

CLASS OF PLACES.	1910	1900	1890	1880
Number of places of specified size:				
25,000 or more.....	229	161	125	77
100,000 or more.....	50	38	28	20
250,000 or more.....	19	15	11	8
500,000 or more.....	8	6	4	4
1,000,000 or more.....	3	3	3	1
Population living in places of specified size:				
25,000 or more.....	28,543,816	19,754,401	14,024,294	8,637,565
100,000 or more.....	20,302,138	14,208,347	9,697,980	6,241,240
250,000 or more.....	15,461,680	10,935,857	6,916,086	4,424,126
500,000 or more.....	11,511,841	8,074,561	4,498,458	3,123,317
1,000,000 or more.....	8,501,174	6,429,474	3,662,115	1,206,299
Percentage of total population living in places of specified size:				
25,000 or more.....	31.0	26.0	22.3	17.2
100,000 or more.....	22.1	18.7	15.4	12.4
250,000 or more.....	16.8	14.4	11.0	8.8
500,000 or more.....	12.5	10.6	7.1	6.2
1,000,000 or more.....	9.2	8.5	5.8	2.4

Whereas, in 1880, 2.4 per cent of the population resided in cities of 1,000,000 inhabitants or more, this proportion had risen to 9.2 per cent in 1910. Cities of over 100,000 inhabitants together contained, in 1880, 12.4 per cent of the population, as compared with 22.1 per cent in 1910. Cities of medium size, namely, those

having from 25,000 to 100,000 inhabitants, contained 4.8 per cent of the population in 1880 and 8.9 per cent in 1910. The proportion of the population residing in smaller urban communities having 2,500 to 25,000 inhabitants has shown somewhat less change, being 12.2 per cent in 1880 and 15.3 per cent in 1910.

Divisions and states.—The population of each class of urban places and that of rural districts in the several geographic sections and divisions in 1910 is shown in Table 43, from which the percentages in Table 42 are derived. Very great differences appear among the several divisions with respect to the distribution of the urban population among communities of different sizes. There are only two of the nine divisions which contained cities of more than 1,000,000 inhabitants in 1910 and two contained no city of over 250,000 inhabitants. In Table 43, because of the facts just stated, the classes of cities having more than 100,000 inhabitants are combined.

SECTION AND DIVISION.	PER CENT OF POPULATION IN 1910 LIVING IN—					Rural districts.
	Places of—					
	100,000 or more.	25,000 to 100,000.	10,000 to 25,000.	5,000 to 10,000.	2,500 to 5,000.	
United States.....	22.1	9.0	6.1	4.7	4.5	53.7
The North.....	23.7	10.9	7.4	5.7	4.8	41.4
New England.....	24.5	25.0	14.3	11.3	8.2	16.7
Middle Atlantic.....	44.5	10.9	7.0	4.5	4.1	29.0
East North Central.....	26.1	8.5	7.0	6.0	4.5	47.3
West North Central.....	13.5	6.9	3.9	4.3	4.7	69.7
The South.....	7.2	5.6	3.5	2.9	3.4	77.5
South Atlantic.....	9.6	5.8	3.6	3.3	3.0	74.6
East South Central.....	7.1	3.4	2.6	2.7	2.8	81.3
West South Central.....	3.9	7.2	4.0	2.6	4.5	77.7
The West.....	24.2	7.3	6.6	4.5	6.2	51.2
Mountain.....	8.1	8.8	5.5	6.6	7.0	64.0
Pacific.....	34.2	6.4	7.3	3.2	5.7	43.2
East of the Mississippi River.....	25.9	9.7	6.7	5.1	4.2	48.3
West of the Mississippi River.....	13.1	7.1	4.6	3.8	5.0	68.4

Table 42 shows that the Middle Atlantic division had in 1910 a larger proportion (44.5 per cent) of its population living in cities of 100,000 inhabitants or more than any other division. The next division was the Pacific, in which a little more than one-third of the inhabitants lived in cities of that size. In the New England division a little less than one-fourth and in the East North Central a little more than one-fourth of the population resided in such cities, while in the other five divisions the proportion found in such cities was very much smaller. In three of the four divisions just named as having a large proportion of their population in cities of 100,000 inhabitants or more, there is no other class of cities having anything approaching to the same proportion; but in New England 25 per cent of the population was found in cities and towns of from 25,000 to 100,000 inhabitants, as compared with 24.5 per cent in cities of more than 100,000. In the West South Central and Mountain divisions also a larger proportion of the population was found in cities of from 25,000 to 100,000 inhabitants than in the larger cities.

¹ See Note 1 to Table 40, p. 64.

The population of the several divisions and states at the last four Federal censuses is distributed among cities and other places grouped according to specified limits of population in Table 46.

The 229 places of 25,000 inhabitants or more as shown by Table 46, are distributed among 40 states, 9 states having no cities of over 25,000 inhabitants. Besides the District of Columbia, which is wholly urban, there are 15 states in which the percentage of the total population in 1910 living in cities of over 25,000 inhabitants exceeded that for continental United States as a whole (31.1) and in some of these states the proportion was very large, notably in New York, Rhode Island, Massachusetts, and New Jersey.

There are only three states—Delaware, Utah, and Nevada—which did not in 1910 contain one or more places belonging to each of the other groups of smaller urban communities.

The distance which would separate cities from one another if they were so located within the given area as to be equidistant from one another, measuring the distance from central points within the cities, may be called the proximity of cities. This index—which assumes an artificial distribution of cities and area—is somewhat similar to the density figure for population, which assumes an artificial distribution of individuals over a given area. At each census the proximity of cities has decreased, and for each class of cities it is less in the eastern divisions than it is in the western, as shown in Table 44. On the assumption made, places of 2,500 inhabitants or more in 1910 would, considering the country as a whole, be separated by 38.1 miles. The average proximity of such places in 1900 was 43 miles, and in 1890 48.1 miles. Considering places of 10,000 inhabitants, or more their average proximity was, in 1910, 76.2 miles; in 1900, 88.5 miles; and in 1890, 98.9 miles. Restricting the calculation to places of 25,000 or more, the average

proximity of such places was, in 1910, 123.5 miles; in 1900, 147.3 miles; and in 1890, 167.2 miles. In 1910 places of 2,500 inhabitants or more in the Mountain division would, on the assumption made, be separated by a distance of 101.5 miles; in New England by 14.5 miles. The average proximity of places of 10,000 inhabitants or more, in 1910, was 235.5 miles in the Mountain division, and 27.3 miles in New England; of places of 25,000 or more, 408 miles in the Mountain division, and 42.7 miles in New England.

DIVISION.	AVERAGE PROXIMITY IN MILES OF URBAN PLACES HAVING A POPULATION OF—								
	2,500 or more.			10,000 or more.			25,000 or more.

Of the total urban population of the United States in 1910, nearly one-third was found in places of 2,500 to 25,000 inhabitants, nearly one-fifth in places of 25,000 to 100,000, and nearly one-half in places of more than 100,000 inhabitants. Comparing 1880 with 1910 there has been a material decrease in the proportion in places of from 100,000 to 1,000,000 inhabitants and in those of from 2,500 to 25,000 inhabitants, and a material increase in the proportion in places of more than 1,000,000 inhabitants, with a slight increase as well in those of from 25,000 to 100,000 inhabitants.

GROWTH OF THE SEVERAL CLASSES OF URBAN COMMUNITIES.

United States as a whole.—In comparing the growth of the several classes of urban communities from 1900 to 1910, each community is grouped, for both censuses, according to its population in 1910, so as to avoid the disturbing effect of the passage of communities from one group to another. The population shown for

1900 represents, so far as it could be ascertained, the population within the boundaries of the communities as constituted in 1910. The comparison for the United States as a whole is presented in Table 47. With one exception, there was no very great difference in the rates of growth of the several classes of urban communities. There are two groups in which the increase in population between 1900 and 1910 was somewhat more than 40 per cent, namely, cities of from 100,000 to 250,000 inhabitants and those of from 50,000 to 100,000. For all but one of the other groups the increase was between 30 and 40 per cent. The remaining group—that comprising five cities having in 1910 from 500,000 to 1,000,000 inhabitants—showed an increase during the decade of barely 20 per cent. The five cities comprising this group are St. Louis, Boston, Cleveland, Baltimore, and Pittsburgh, and for only one of them was the individual rate of increase more than 20 per cent, namely, Cleveland, with 46.9 per cent.

COMMUNITIES CLASSIFIED BY SIZE.

¹ See Note 1 to Table 40, p. 64.

Divisions and states.—Table 48 presents a comparison of the increase, between 1900 and 1910, in the population of different classes of urban communities and of rural territory in each of the nine

geographic divisions of the United States. The number of classes of urban communities shown in Table 48 has been reduced to three by consolidating some of the minor groups shown in the table immediately preceding.

For the Pacific, West South Central, and Mountain divisions—the three divisions having the largest percentages of increase in total urban population since 1900—the table shows increases ranging from about 50 to more than 100 per cent for each of the three classes of urban communities, with one exception, that the single city of over 100,000 in the West South Central division (New Orleans) increased only 18.1 per cent.

In the remaining divisions, with one exception, the rates of increase for the three classes of urban communities ranged from 20 to somewhat more than 40 per cent. The exception is the group of smaller urban communities in the New England division, for which there was an increase of only 16.7 per cent.

DIVISION.	PLACES OF 100,000 OR MORE IN 1910.				PLACES OF 25,000 TO 100,000 IN 1910.				PLACES OF 2,500 TO 25,000 IN 1910.				TERRITORY RURAL IN 1910.

¹ A minus sign (—) denotes decrease.

² See Note 1 to Table 40, p. 64.

³ Decrease of less than one-tenth of 1 per cent.

In five divisions—the Middle Atlantic, South Atlantic, East South Central, Mountain, and Pacific—the rate of increase for places of 2,500 to 25,000 inhabitants was higher than for either of the other two groups. In three divisions—the New England, East North Central, and West South Central—the rate of increase was highest for the medium-sized places, those having from 25,000 to 100,000 inhabitants. Only in the West North Central division was the rate for cities of 100,000 or more higher than for either of the other two groups.

The general fact that urban communities in all sections of the United States are growing more rapidly than rural communities has already been shown. Table 49 shows that this is true, with few exceptions, also of each class of urban communities.

In each of the three groups of urban communities,

as shown by Table 48, there has been, for the United States as a whole, an increase from 1900 to 1910 of more than 30 per cent. There are 10 states, however, in which the increase during the decade was less than 30 per cent for each group of urban communities represented in the respective states. These states, in their geographic order, are Maine, New Hampshire, Vermont, Rhode Island, Missouri, Nebraska, Delaware, Maryland, Kentucky, and Wyoming. There are 17 other states in which the increase for one or more of the specified groups was also less than 30 per cent, these states with one exception, Montana, being in the eastern and central sections of the country. In 21 states, on the other hand, the increase during the decade was, in each group represented, more than 30 per cent, the majority of these states being in the western and southwestern sections of the country.

POPULATION OF URBAN CLASSES AND OF RURAL TERRITORY, WITH PER CENT OF INCREASE, BY DIVISIONS AND STATES: 1900-1910.

¹ A minus sign (-) denotes decrease.² See Note 1 to Table 40, p. 64.³ Decrease of less than one-tenth of 1 per cent.

CITIES AND THEIR SUBURBS.

In its general tables dealing with the population of cities, the Bureau of the Census must necessarily deal with political units, or, in other words, with the population contained within the municipal boundaries of each city. It is a familiar fact that, in some cases, the municipal boundaries give only an inadequate idea of the population grouped about one urban center, and as regards the large cities in very few cases do these boundaries exactly define the urban area. In the case of many cities there are suburban districts with a dense population outside the city limits, which, from many standpoints, are as truly a part of the city as the districts which are under the municipal government. These suburbs are bound to the cities by a network of transportation lines. Many of the residents in the suburbs have their business or employment in the city, and, to a certain extent, persons who reside in the city are employed in the suburbs.

It seems desirable to show the magnitude of each of the principal population centers taken as a whole. Statistics have, therefore, been compiled for each city in the United States with a population of 100,000 inhabitants or more, which, in addition to the population within the city limits, show the population in adjoining communities that may be considered as intimately associated with the urban center. Two sets of computations have been made.

(1) For each city having 100,000 inhabitants or more within its municipal boundaries a computation has been made of the total population in civil divisions within 10 miles of the city boundary. The areas thus mapped out may be briefly defined as "cities and adjacent territory."

(2) In the case of each city having within its own boundaries 200,000 inhabitants or more, the bureau has also mapped out what may be termed a "metropolitan district," which besides the city itself includes only those sections of the adjacent territory which may be considered as urban in character.

Method of defining districts.—In laying out the two classes of districts the population is first determined for all civil divisions (that is, cities, towns, boroughs, precincts, etc.) which are located within 10 miles of the city boundaries. Divisions which lie partly within and partly without the 10-mile limit are included if either one-half of their total population or one-half of their total area comes within that limit. State boundaries are disregarded, so that in some cases the adjacent territory and the metropolitan district lie partly in two states. The area within the 10-mile limit thus defined is the "adjacent territory." It is, of course, very different from the territory included within a circle drawn with a radius of 10 miles from the center of the city; nor is it the territory included within a line drawn parallel to the city boundary at an exact distance of 10 miles, because in making up the "adjacent territory" no civil divisions are subdivided. Hence the outline of the area can

not follow geometrical lines, but must conform to the boundaries of the political divisions which are on the outer edge of the included area. Owing to this fact, the boundary of the adjacent territory thus defined may vary considerably from point to point in its actual distance from the city limits.

The "metropolitan district," which, as previously noted, has, as its nucleus, a city of at least 200,000 inhabitants, includes the population and area of the central city itself and of all minor civil divisions lying within the "adjacent territory" except, as a rule, those which had a density of population of less than 150 per square mile. Where the density was less than that the division was considered as rural rather than urban in character, and as not properly a part of the metropolitan district. This limit of density, however, was not always rigidly applied. In some instances for special reasons divisions having a somewhat higher density, perhaps as high as 200 per square mile, have been omitted, and in a few instances a minor civil division has been included within the metropolitan district, even though it had a lower density than that just stated, because that division was completely or almost surrounded by other civil divisions having a density which would require them to be included. The exception in such cases seems justified in order to avoid undue irregularity in the shape of the districts, or gaps lying wholly within their area.

It is safe to say that these deviations from the rule have had very little effect upon the totals finally arrived at and have yielded on the whole as consistent and satisfactory results as would have been obtained by the application of any rigid rule. In fact, absolute exactness in applying a density limit is out of the question because in most cases the area of the minor civil divisions can only be approximated from the available maps and data.

In general, the city with its "adjacent territory," as here defined, includes the central city, and in addition all cities, towns, villages, or other divisions located within 10 miles of the boundary of the central city; while the metropolitan district includes, besides the central city, only those divisions within the 10-mile limit which had a density of population of not less than 150 persons per square mile.

Two special instances of slight exceptions to the application of the definition of metropolitan districts should be mentioned. Since a strict application of the rules for determining the metropolitan district of Boston would give an area almost identical with the area of the "industrial district" of Boston, as laid out in Census Bulletin 101, Industrial Districts for 1905, the latter area is for convenience of comparison considered as the metropolitan district. The same is true of New York City, except that Nassau County, which was not included in the industrial district, has been added to the metropolitan district. In the case of the other industrial districts shown in

the bulletin mentioned, the areas were so different from the metropolitan districts as determined by the application of the rule here described, that no attempt was made to secure conformity.

METROPOLITAN DISTRICTS.

Table 50 shows for 1910 and 1900 the population of the 25 metropolitan districts containing individual cities of 200,000 or more inhabitants, distinguishing

the population lying within the city proper from that outside the city. The districts are arranged in the order of their aggregate population. The table also shows the total population of each city with all its "adjacent territory."

It will be noted that two cities of more than 200,000 inhabitants—Newark and Jersey City—do not appear in the table. They are included within the metropolitan district of New York.

NOTE.—The following statement gives the name and population of each municipality of 5,000 inhabitants or more falling within each metropolitan district, except the central city itself.

New York district.—New York: Yonkers city, 79,803; Mount Vernon city, 30,919; New Rochelle city, 28,887; Mamaroneck village, 5,699. New Jersey: Newark city, 347,469; Jersey City, 267,779; Paterson city, 125,600; Elizabeth city, 73,409; Hoboken city, 70,324; Bayonne city, 55,545; Passaic city, 54,773; West Hoboken town, 36,403; East Orange city, 34,371; Perth Amboy city, 32,121; Orange city, 29,630; Montclair town, 21,550; Union town, 21,023; Kearny town, 18,659; Bloomfield town, 15,070; Harrison town, 14,498; Hackensack town, 14,050; West New York town, 13,560; Irvington town, 11,877; Englewood city, 9,924; Rahway city, 9,337; Rutherford borough, 7,045; South Orange village, 6,014; Nutley town, 6,009; Roosevelt borough, 5,786; Guttenberg town, 5,647.

Chicago district.—Illinois: Evanston city, 24,978; Oak Park village, 19,444; Cicero town, 14,557; Chicago Heights city, 14,525; Blue Island village, 8,043; Maywood village, 8,033; Harvey city, 7,227; Forest Park village, 6,594; Berwyn city, 5,841; La Grange village, 5,282. Indiana: Hammond city, 20,925; East Chicago city, 19,098; Gary city, 16,802; Whiting city, 6,587.

Philadelphia district.—Pennsylvania: Chester city, 38,537; Norristown borough, 27,875; Bristol borough, 9,256; Conshohocken borough, 7,480; Darby borough, 6,305. New Jersey: Camden city, 94,538; Gloucester city, 9,462; Burlington city, 8,336.

Boston district.—Cambridge city, 104,839; Lynn city, 89,336; Somerville city, 77,230; Malden city, 44,404; Salem city, 43,697; Newton city, 39,806; Everett city, 33,484; Quincy city, 32,642; Chelsea city, 32,452; Waltham city, 27,834; Brookline town, 27,792; Medford city, 23,150; Revere town, 18,219; Peabody town, 15,721; Melrose city, 15,715; Hyde Park town, 15,507; Woburn city, 15,308; Framingham town, 12,948; Weymouth town, 12,895; Watertown town, 12,875; Wakefield town, 11,404; Arlington town, 11,187; Winthrop town, 10,132; Natick town, 9,866; Winchester town, 9,309; Dedham town, 9,284; Braintree town, 8,066; Saugus town, 8,047; Norwood town, 8,014; Milton town, 7,924; Marblehead town, 7,338; Stoneham town, 7,090; Swampscott town, 6,204; Belmont town, 5,542; Wellesley town, 5,413; Needham town, 5,026.

Pittsburgh district.—McKeesport city, 42,694; Braddock borough, 19,357; Wilkinsburg borough, 18,924; Homestead borough, 18,713; Duquesne borough, 15,727; McKees Rocks borough, 14,702; North Braddock borough, 11,824; Carnegie borough, 10,009; Sharpsburg borough, 8,163; Jeannette borough, 8,077; Millvale borough, 7,801; New Kensington borough, 7,707; Tarentum borough, 7,414; Swissvale borough, 7,331; Bellevue borough, 6,323; Wilmerding borough, 6,133; Carrick borough, 6,117; Rankin borough, 6,042; Etna borough, 5,830; Knoxville borough, 5,651; St. Clair borough, 5,640; East Pittsburgh borough, 5,615; Glassport borough, 5,540; Coraopolis borough, 5,252; Munhall borough, 5,185.

St. Louis district.—Missouri: Wellston city, 7,312; Webster Groves city, 7,080; Illinois: East St. Louis city, 58,547; Granite city, 9,903; Madison village, 5,046.

San Francisco-Oakland district.—Berkeley city, 40,434; Alameda city, 23,383; Richmond city, 6,802; San Rafael city, 5,934.

Cleveland district.—Lakewood city, 15,181; East Cleveland city, 9,179; Newburgh city, 5,813.

Cincinnati district.—Ohio: Norwood city, 16,185; Madisonville city, 5,193; St. Bernard city, 5,002. Kentucky: Covington city, 53,270; Newport city, 30,309; Dayton city, 6,979; Bellevue city, 6,683.

Detroit district.—Wyandotte city, 8,287.

Buffalo district.—Laakawanna city, 14,549; North Tonawanda city, 11,055; Tonawanda city, 8,290.

Los Angeles district.—Pasadena city, 30,291; Long Beach city, 17,809; Santa Monica city, 7,847; Alhambra city, 5,021.

Milwaukee district.—West Allis city, 6,045; South Milwaukee city, 6,002.

Providence district.—Pawtucket city, 51,622; Warwick town, 26,629; Central Falls city, 22,754; Cranston city, 21,107; East Providence town, 15,803; Cumberland town, 10,107; Lincoln town, 9,325; Johnston town, 5,935; North Providence town, 5,407.

Washington district.—Alexandria city (Va.), 15,329.

Kansas City (Mo. and Kans.) district.—Rosedale city (Kans.), 5,980.

Louisville district.—Indiana: New Albany city, 20,020; Jeffersonville city, 10,412.

The importance of the suburbs of great cities is conspicuously indicated by the combined statistics for the 25 metropolitan districts, which appear at the beginning of the table. The combined population of the metropolitan districts in 1910 was 22,088,331, of which 17,099,904 represents the population of the central cities and 4,988,427 that of the suburban areas, the latter being equal to nearly 30 per cent of the population of the cities proper. The total of 17,099,904 represents the population of 28 "central cities," since there are three metropolitan districts each of which em-

braces two cities of such large population that both together are treated as constituting the urban center of the district. The cities are Minneapolis and St. Paul; Kansas City, Kans., and Kansas City, Mo.; and San Francisco and Oakland.

The table shows further that the population of the metropolitan districts outside of the central cities increased between 1900 and 1910 more rapidly than that of the central cities, the increase for the suburban districts being 43 per cent and for the central cities 33.2 per cent. In addition to the strictly urban popu-

lation of the 25 metropolitan districts, there were in 1910 nearly 1,000,000 people residing in territory adjacent to the central cities, but not included within the metropolitan districts—that is, in divisions which lie wholly, or in greater part, within 10 miles of the boundaries of the central cities, but in which the density of population was not sufficient to justify calling them strictly urban. The total population of the cities in the 25 metropolitan districts plus that of all their “adjacent territory” was 23,018,533. This, in other words, is the total population which lived in 1910 either in cities of not less than 200,000 inhabitants or within approximately 10 miles of such cities. It constituted 25 per cent of the total population of the United States.

It will be noted from Table 50 that there are great differences among the several metropolitan districts with respect to the proportion which the population outside of the central city represents of the total population of the district. These differences are due to the fact that some of the large cities have made no annexations of territory for many years, while in others extensive annexations have been made, so that most of the densely populated area within the metropolitan district has been added to the city itself. The column in the table giving the area of the various districts shows that there is very little correspondence between the population of the central cities and their area, some cities having several times as many inhabitants per acre as others. The difference in policy with regard to the extension of municipal boundaries makes it the more obviously necessary to exclude thinly settled areas in the neighborhood of the cities in calculating the true metropolitan population; for, in the case of a city which has very extensive boundaries, there is also necessarily a very large area in civil divisions lying within 10 miles of the boundary, and naturally the population of many such divisions is likely to be rural rather than urban in character.

The table emphasizes the well-known fact that most of the large cities of the country have quite a different rank when their suburbs are taken into account from that which they hold when only the population living within their municipal boundaries is considered.

CITIES OF 100,000 TO 200,000 INHABITANTS AND THEIR ADJACENT TERRITORY.

Table 51 shows, for each city having from 100,000 to 200,000 inhabitants, the population within the city proper, the population in other civil divisions all or more than half of which (in area or population) lie within 10 miles of the city boundary, and the combined population of the city and such adjacent territory. In three cases, cities of 100,000 to 200,000 inhabitants do not appear in this list because they are adjacent to other cities. This is true of Paterson, N. J., which forms part of the New York district; of Cambridge, Mass., which forms part of the Boston district; and of Oakland, Cal., which forms a part of the San Francisco-

Oakland district, given in Table 50. It will be further noted that in three cases there are one or more cities within the adjacent territory which approximate in population the central city itself. For this reason the names of such smaller cities are inserted in connection with that of the larger city from whose boundaries the distances are determined.

For reasons already stated, it should not be considered that all of the population included in Table 51 is strictly urban in character or that the figures furnish an accurate comparison of the relative importance of the several cities as centers of urban population. Nevertheless, they do indicate the relative importance approximately. The combined population in 1910 of the 19 central cities covered, together with their adjacent territory, was 4,002,285, of which 2,438,878 represents the population in the 19 principal cities themselves and 1,563,407 the population in adjacent territory. It will be noted that the population of the adjacent territory increased less rapidly during the decade than that of the cities themselves.

The fact that the population of the adjacent territory is larger relatively to that of the central cities in the figures given in Table 51 than it is in the case of the larger cities given in Table 50 should not be misunderstood. It does not imply that the smaller cities have relatively more important suburbs than the larger. It is due to two facts, namely, (1) that in the combined area of the city and its adjacent territory, the smaller the size of the city the greater relatively is the share of the adjacent area in the total; (2) that in Table 51 a number of cities are included, principally in New York state and in New England, in whose “adjacent territory” there are other cities of large size which can not in any true sense be considered suburbs. Troy and Schenectady can not be considered as suburbs of Albany, but these three cities combined, together with other adjacent territory, constitute what may in a sense be considered as a single urban community. For convenience in interpreting the table in this respect there is appended to it a note, giving the name and population of each municipality of 5,000 inhabitants or more falling within the territory adjacent to each of the principal cities listed. To what extent any of these outlying cities are to be considered as depending upon the central city or constituting its suburbs, this report does not attempt to discuss.

Table 52 gives a condensed summary of the statistics in Tables 50 and 51. It thus covers 44 districts and shows the total population within the 47 cities which give their names to these districts, and that in adjacent territory within approximately 10 miles of the municipal boundaries. While a considerable number, perhaps in the neighborhood of 2,000,000, of the population thus included, were living under conditions more or less rural, nevertheless the table gives a comprehensive idea of the importance of the great urban centers of the country.

CITIES AND THEIR SUBURBS.

NOTE.—The following statement gives the name and population of each municipality of 5,000 inhabitants or more falling within the territory adjacent to each of the above cities:
Albany district.—Troy city, 76,813; Schenectady city, 72,826; Cohoes city, 24,709; Watervliet city, 15,074; Rensselaer city, 10,711.
Scranton district.—Dunmore borough, 17,615; Carbondale city, 17,040; Pittston city, 16,267; Old Forge borough, 11,324; Dickson City borough, 9,331; Taylor borough, 9,060; Olyphant borough, 8,505; Duryea borough, 7,437; Archbald borough, 7,194; West Pittston borough, 6,843; Blakeley borough, 5,345; Winton borough, 5,280; Throop borough, 5,133.
Fall River district.—New Bedford city, 96,652; Taunton city, 34,259; Fairhaven town, 5,122.

Lowell district.—Massachusetts: Lawrence city, 85,892; Methuen town, 11,448; Andover town, 7,301; Concord town, 6,421; North Andover town, 5,529; Chelmsford town, 5,010. New Hampshire: Nashua city, 26,005.
New Haven district.—Ansonia city, 15,152; Naugatuck borough, 12,722; Derby city, 8,991; Wallingford borough, 8,690; West Haven borough, 8,543.
Worcester district.—Clinton town, 13,075; Northbridge town, 8,807; Spencer town, 6,740; Grafton town, 5,705; Westborough town, 5,440.
Birmingham district.—Bessemer city, 10,864.
Omaha district.—Nebraska: South Omaha city, 26,259. Iowa: Council Bluffs city, 20,292.
Syracuse district.—Solvay village, 5,139.
Bridgeport district.—South Norwalk city, 8,968; Norwalk city, 6,954.

Table 52	Area in acres.	POPULATION.		INCREASE: 1900-1910	
		1910	1900	Number.	Per cent.
Total in 44 districts.....	18,293,031.5	27,020,818	20,190,213	6,830,605	33.8
Total in 47 central cities.....	1,454,406.3	19,538,782	14,601,233	4,937,549	33.8
Total in adjacent territory.....	16,838,625.2	7,482,036	5,588,980	1,893,056	33.9

The total population of these districts in 1910 was 27,020,818, which is equal to 29.4 per cent of the total population of the United States. The population of the districts has increased a trifle over one-third during the decade, 1900-1910, it being noteworthy that the percentage of increase in the cities proper was almost precisely the same as that in the adjacent territory.

POPULATION OF INDIVIDUAL CITIES.

The statistics of population for individual cities and other incorporated places having, in 1910, 2,500 inhabitants or more are given in this section. The population of smaller places appears only in the various state reports contained in Volumes II and III of the Reports of the Thirteenth Census.

The statistics in this section cover only cities in the United States exclusive of outlying possessions. Statistics regarding the cities and other minor civil divisions in Alaska, Hawaii, and Porto Rico are presented in the special reports for those possessions appearing at the end of Volume III. It may be noted at this point, however, that the cities and towns of more than 10,000 inhabitants in 1910 found in these outlying possessions are the following: Honolulu, H. I., with 52,183 inhabitants; San Juan, P. R., with 48,716; Ponce, P. R., with 35,005; Mayaguez, P. R., with 16,563; and Caguas, P. R., with 10,354.

Table 56 (pp. 80 and 81) shows the population of cities having in 1910 over 100,000 inhabitants, with number and per cent of decennial increase, alphabetically arranged, for each Federal census from 1790 to 1910, inclusive.

Table 57 (pp. 82 and 83) shows the population of the 50 cities, in the order of their rank, which were the largest at each Federal census from 1840 to 1910, inclusive. Naturally, a considerable number of cities which ranked among the 50 largest at one or more of the earlier censuses have ceased to do so at later censuses, and several others have been consolidated with larger cities.

Table 58 (pp. 84 to 87) shows the population of cities and other incorporated places, and also New England towns, having, in 1910, 25,000 inhabitants or more, alphabetically arranged by states, for each Federal census from 1850 to 1910, inclusive, with the increase during each decade from 1890 to 1910.

Table 59 (pp. 87 to 97) shows the population of incorporated places and New England towns having, in 1910, 2,500 inhabitants or more, alphabetically arranged by states, for the last three Federal censuses, namely, those of 1910, 1900, and 1890.

In using the figures given in these tables, it should be remembered that, in some instances, the growth of a city or other incorporated place may have been due in part to annexation of suburban territory. Except in the cases of New York City, Pittsburgh, and a few other similar instances of consolidation mentioned in footnotes to the tables, no allowance has been made for such annexations.

Cities of 100,000 inhabitants or more.—In 1910 there were 50 cities containing a population of 100,000 or more. Fourteen of these cities had risen above the 100,000 limit since 1900, namely, Albany, N. Y., Atlanta, Ga., Birmingham, Ala., Bridgeport, Conn., Cambridge, Mass., Dayton, Ohio, Grand Rapids, Mich.,

Lowell, Mass., Nashville, Tenn., Oakland, Cal., Portland, Oreg., Richmond, Va., Seattle, Wash., and Spokane, Wash.

Of these 50 cities, 32 show a greater absolute increase of population for the decade 1900-1910 than for the preceding decade, and 23 show also a greater percentage of increase, while 2 show an increase for the decade 1900-1910, following a decrease during the earlier decade. The comparison of the total population in 1910 and 1900 for each city of 100,000 inhabitants or more in 1910 is made in the diagram below.

POPULATION OF CITIES HAVING, IN 1910, 100,000 INHABITANTS OR MORE: 1910 AND 1900.

Although the rates of increase since 1900 for individual cities vary widely, ranging from 6.5 per cent in Albany, N. Y., to 245.4 per cent in Birmingham, Ala., it is rather noteworthy that of the 19 cities of over 250,000 inhabitants there are 8 which show approximately the same rate of increase for the last decade,

namely, Boston (19.6 per cent), Buffalo (20.2), New Orleans (18.1), Philadelphia (19.7), Pittsburgh (18.2), St. Louis (19.4), San Francisco (21.6), and Washington (18.8).

Table 53, based on Table 56, gives the cities having in 1910 a population of over 250,000, with their population and rank in 1910, 1900, and 1890, and their decennial increase during two decades.

CITY.	POPULATION.			RANK.			INCREASE.

¹ Population of New York as it then existed; population in 1890 of New York as now constituted, 2,507,414.
² Increase based on population of New York as now constituted.
³ Population of Pittsburgh as it then existed; population, including that of Allegheny, in 1900, 451,512; in 1890, 343,004.
⁴ Increase based on population of Pittsburgh, including that of Allegheny.

There were, in 1910, 19 cities having over a quarter of a million inhabitants, 4 of which—Newark, Los Angeles, Minneapolis, and Jersey City—have entered this group since 1900. The rank of the 5 largest cities remained the same in 1910 as in 1900. Seven cities have advanced in rank since 1900; 3 of these—Cleveland, Detroit, and Milwaukee—are situated on the Great Lakes. The greatest advance in rank among the cities in question is shown by Los Angeles, which ranked fifty-seventh in 1890, thirty-sixth in 1900, and seventeenth in 1910.

Cities of 25,000 inhabitants or more.—As shown by Table 49, there were 229 cities having in 1910 a population of 25,000 or more, of which, as already stated, 50 had a population of 100,000 or more. Of the 179 cities having between 25,000 and 100,000 inhabitants in 1910, there were 108 which had in 1900 a population of 25,000 to 100,000, 70 which had risen above the 25,000 limit since 1900, and 1 which had fallen below the 100,000 limit since 1900.

Of the 225 cities of 25,000 inhabitants or more for which comparative figures for the two decades are given, 145 showed a greater absolute increase in the decade 1900-1910 than in the preceding decade, and 106 of these showed also a higher percentage of increase, while 8 showed an increase for the decade 1900-1910 following a decrease during the earlier decade.

As regards rates of increase from 1900 to 1910, the cities having at least 25,000 inhabitants are distributed as shown in Table 54. About one-third (68 out of 229) of the cities of 25,000 inhabitants or more showed an increase of over 50 per cent from 1900 to 1910. Of the northern cities, about one-fifth (35 out of 167) showed such an increase; of the southern cities, about two-fifths (19 out of 44); and of the western cities,

about three-fourths (14 out of 18). (For territory included in the North, South, and West, see Table 5.)

RATE OF INCREASE.	NUMBER OF CITIES OF 25,000 INHABITANTS OR MORE: 1910			
	United States.	The North.	The South.	The West.

¹ Includes population of Allegheny as follows: 1900, 129,896; 1890, 105,287; 1880, 78,632; 1870, 53,180; 1860, 28,702; 1850, 21,262; 1840, 10,039; and 1830, 2,801.

² Population as reported by state census of 1852; the returns for 1850 for San Francisco were destroyed by fire.

³ Population as returned from 1880 to 1910 is for the District of Columbia, with which the city is now coextensive.

FIFTY LARGEST CITIES AT EACH CENSUS FROM 1840 TO 1910, ARRANGED IN THE ORDER OF THEIR RANK.

¹ A minus sign (—) denotes decrease.
² Population as reported by state census of 1852; the returns for 1850 for San Francisco were destroyed by fire.
³ Now coextensive with town in which located.
⁴ Population of town; town and city not returned separately.
⁵ Population as returned from 1880 to 1910 is for the District of Columbia, with which the city is now coextensive.
⁶ Not returned separately in 1850; in 1852, according to a census taken by local authorities, it had a population of 10,217.
⁷ Not returned separately.

POPULATION OF CITIES.

POPULATION OF CITIES HAVING, IN 1910, 25,000 INHABITANTS OR MORE, 1850-1910, AND DECENNIAL INCREASE, 1890-1910—Continued.

¹ Joint population of Bristol town, Sullivan County, Tenn., and Bristol city, Va.: 1910, 13,395; 1900, 9,850; 1890, 6,226.

² Includes population (367) of West Clifton Forge town.

³ Fairhaven and New Whatcom cities consolidated under the name of Bellingham city in 1903.

POPULATION OF COUNTIES OR EQUIVALENT DIVISIONS.

The population of states and territories by counties or equivalent subdivisions, as shown by the returns of the Thirteenth Census, taken as of April 15, 1910, is given in this section. The states and territories of the United States are, in general, divided into counties, but in Louisiana the equivalent subdivisions are called parishes; and there are also a few cities which are independent of any county organization, namely, Baltimore in Maryland, St. Louis in Missouri, and most of the cities of Virginia. There are no counties in the District of Columbia, the county organization having been abolished in 1874. Of the outlying possessions enumerated, Hawaii is the only territory which has a county organization, but in the case of Alaska recorders' districts and in the case of Porto Rico municipal districts are treated as equivalent to county areas.

Table 63 (p. 102) shows the number of counties in each state of the United States which have either increased or decreased in population since 1900, and classifies those which have increased according to the rate of increase, while Tables 60 and 61 give the aggregate area of counties in which population decreased. The relative increase in the population of counties, from 1900 to 1910, is also shown graphically in a map following page 124.

The states comprising continental United States were in 1910 divided into 2,953 counties or equivalent subdivisions, but, because of the organization of new counties from parts of other counties since 1900, the number of areas for which increase or decrease in population is shown in Table 63 is only 2,841. Of these areas, 2,785 are single counties, and 56 are combinations each of two or more counties. In the case of each state the total area is embraced within the counties and combinations of counties for which population increases or decreases are shown.

The counties which are combined in order to determine the rates of increase are given in Table 62.

Table 64 (pp. 103 to 123) gives the area and population in 1910, by counties, for each state in the United States, and, so far as possible, in comparison with similar figures for 1900 and 1890, respectively.

For the state of Oklahoma, formed from the territory of Oklahoma and Indian Territory since 1900, comparison is made with the figures of the special census taken as of July 1, 1907, and also, where possible, with those of the censuses of 1900 and 1890.

Table 65 (pp. 123 and 124) gives the population of Alaska in 1910, by recorders' districts, but without comparison for former censuses; that of Hawaii, by counties, for 1910, 1900, and 1890; and that of Porto Rico, by municipal districts, in 1910, in comparison with similar figures derived from the special census taken in 1899 under the direction of the War Department.

When counties have been organized or have undergone changes in boundaries during the 20 years from 1890 to 1910 an explanatory statement is made in the notes which immediately follow Table 65.

For the United States as a whole, as shown in Table 63, the population decreased in the decade 1900-1910 in 769 counties, or combinations of counties, representing 27.1 per cent of the entire number considered, while in 2,072 counties, or 72.9 per cent, it increased. In 327 counties, or 11.5 per cent of the entire number considered, the increase in population since 1900 was less than 5 per cent; in 561, or 19.7 per cent, it was from 5 to 15 per cent; in 373, or 13.1 per cent, it was from 15 to 25 per cent; in 364, or 12.8 per cent, it was from 25 to 50 per cent; and in 447, or 15.7 per cent, it was 50 per cent or more.

The 769 counties or combinations of counties in which the population decreased during the decade 1900-1910 had an aggregate area of 472,462 square miles, representing 15.9 per cent, or nearly one-sixth, of the total land area of the country. The extent of the area of decreasing population and the geographical distribution of the counties composing it are of significance when taken in conjunction with the high rates of population growth during the decade in urban communities generally, and in the rural districts of certain sections of the country.

Table 60 shows that the proportion which the area of decreasing population formed of the total area in 1910 was greatest in the North, where nearly one-third of the total area (30.4 per cent) was embraced within the counties or combinations of counties which had decreased in population since 1900, and was least in the West, for which the corresponding percentage was 5.

POPULATION OF COUNTIES.

The North, which embraces 30.9 per cent of the total land area of the country, embraced, in 1910, 59 per cent of the total area of the counties or combinations of counties in which the population decreased during the decade 1900-1910. The South embraced very nearly the same proportion of the total area as of the area of decreasing population, the percentages being 29.5 and 28.4, respectively, while the West, which embraces 39.6 per cent of the total area of the country, embraced in 1910 only 12.6 per cent of the area of decreasing population.

Table 61 shows for each division and state the aggregate area of the counties or combinations of

counties in which the population decreased during the decade 1900-1910, together with the percentage which this aggregate forms of the total area of the division or state.

In Iowa the counties within which the population decreased between 1900 and 1910 embraced 38,929 square miles, or 70 per cent of the total land area of the state; in Missouri such counties embraced 42,937 square miles, or 62.5 per cent of the total area. The corresponding percentage for Indiana is 59.7; for Illinois, 44.7; and for Ohio, 43.5. In ten other states the proportion exceeded one-fourth of the total area.

¹ Based on the returns of 1907. See Table 64, p. 116.² Including Yellowstone National Park.

POPULATION OF COUNTIES.

AREA AND POPULATION OF COUNTIES OR EQUIVALENT SUBDIVISIONS IN THE UNITED STATES:
1910, 1900, AND 1890.

[In computing the increase from 1890 to 1900 for certain counties the population of Indian reservations in 1900 has been deducted from the total population of the county, in order to make that total comparable with the total for 1890, which does not include the population of Indian reservations.]

[Per cent not shown where base is less than 100. A minus sign (-) denotes decrease.]

¹ State total includes population (384) specially enumerated in 1890, not distributed by counties.
² For changes in boundaries, etc., of counties, see p. 124.
³ State total includes population (3,065) of San Carlos Indian Reservation, not returned by counties in 1900; returned in 1910 in Gila and Graham Counties.

⁴ State total includes population (28,623) of Indian reservations specially enumerated in 1890, not distributed by counties.
⁵ See headnote to table.
⁶ State total includes population (32) specially enumerated in 1890, not distributed by counties.

AREA AND POPULATION OF COUNTIES OR EQUIVALENT SUBDIVISIONS IN THE UNITED STATES: 1910, 1900, AND 1890—Continued.

[Per cent not shown where base is less than 100. A minus sign (-) denotes decrease.]

Table 64—Con.	COUNTY.	Land area in square miles: 1910	POPULATION.			PER CENT OF INCREASE.		COUNTY.	Land area in square miles: 1910	POPULATION.			PER CENT OF INCREASE.

¹ For changes in boundaries, etc., of counties, see p. 124.
² Includes land area (51 square miles) of that part of Yellowstone National Park in Idaho. No population reported.
³ State total includes population (4,103) of Indian reservations specially enumerated in 1890, not distributed by counties; also, population (6,798) of Alturas and Logan Counties, taken to form Blaine and Lincoln Counties in 1896.

⁴ See headnote to table, p. 103.
⁵ State total includes population (1) specially enumerated in 1890, not credited to any county.
⁶ Less than one-tenth of 1 per cent.

POPULATION OF COUNTIES.

AREA AND POPULATION OF COUNTIES OR EQUIVALENT SUBDIVISIONS IN THE UNITED STATES: 1910, 1900, AND 1890—Continued.

[Per cent not shown where base is less than 100. A minus sign (-) denotes decrease.]

¹ For changes in boundaries, etc., of counties, see p. 124.
² State total includes population (3,486 in 1900) of White Earth Indian Reservation not returned by counties in 1900; returned in 1910 in Becker, Clearwater, and Mahnomon Counties.
³ State total includes population (8,457) of Indian reservations specially enumerated in 1890, not distributed by counties.
⁴ See headnote to table, p. 103.
⁵ Less than one-tenth of 1 per cent.

AREA AND POPULATION OF COUNTIES OR EQUIVALENT SUBDIVISIONS IN THE UNITED STATES: 1910, 1900, AND 1890—Continued.

[Per cent not shown where base is less than 100. A minus sign (-) denotes decrease.]

Table 64—Con.		POPULATION.					PER CENT OF INCREASE.		COUNTY.		POPULATION.					PER CENT OF INCREASE.

¹ For changes in boundaries, etc., of counties, see p. 124.
² See headnote to table, p. 103.
³ State total includes population (6,689) of Indian reservations specially enumerated in 1890, not distributed by counties.

⁴ State total includes population (5,321) of Indian reservations specially enumerated in 1890, not distributed by counties.
⁵ State total includes population (2) specially enumerated in 1890, not credited to any county.

POPULATION OF COUNTIES.

AREA AND POPULATION OF COUNTIES OR EQUIVALENT SUBDIVISIONS IN THE UNITED STATES: 1910, 1900, AND 1890—Continued.

[Per cent not shown where base is less than 100. A minus sign (-) denotes decrease.]

Table 64—Con.	COUNTY.	Land area in square miles: 1910	POPULATION.			PER CENT OF INCREASE.		COUNTY.	Land area in square miles: 1910	POPULATION.			PER CENT OF INCREASE.

1 For changes in boundaries, etc., of counties, see p. 124.

2 State total includes population (9,216) of Cheyenne River and Rosebud Indian Reservations and part of Standing Rock Indian Reservation, not returned by counties in 1900.

3 State total includes population (19,792) specially enumerated in 1890, not distributed by counties; also population (1,351) of Choteau, Ewing, Harding, Martin, Dolano, Scobey, Jackson, Ziebach, Nowlin, Pratt, Presho, and old Todd Counties, annexed to Butte, Meade, Stanley, Lyman, Gregory, and Pennington Counties between 1890 and 1900.

4 Exclusive of population of part in Pine Ridge Indian Reservation, not returned by counties.

5 See headnote to table, p. 103.

6 Not returned separately.

7 For 1910 comprises the unorganized counties of Shannon and Washington, and parts of Bennett and Washabaugh, for which the population was not returned separately.

8 Total land area within the limits of Pine Ridge Indian Reservation, 4,374 square miles, comprising Shannon, Washington, and parts of Bennett and Washabaugh Counties, included under the respective counties.

POPULATION OF COUNTIES.

AREA AND POPULATION OF COUNTIES OR EQUIVALENT SUBDIVISIONS IN THE UNITED STATES: 1910, 1900, AND 1890—Continued.

[Per cent not shown where base is less than 100. A minus sign (-) denotes decrease.]

OKLAHOMA.—Most of the counties were organized in 1907. Among the few existing in 1890 there was no change till after 1900. There has been no later change in Cleveland, Kingfisher, Logan, and Oklahoma, but since 1900 Canadian has gained in area, Beaver and Payne have lost, while Greer has had both gains and losses. The counties organized between 1890 and 1900 were formed from Indian reservations. Of these counties the following remain unchanged: Dewey, Garfield, Grant, Lincoln, and Pottawatomie; there has been a gain in area in Blaine, Custer, Kay, Noble, Pawnee, and Washita, and both gains and losses in Roger Mills, Woods, and Woodward. For comparison of the special enumeration of 1907 with that of 1910 it may be noted that Harmon was organized in 1909; there was a loss of area in Bockham and both gain and loss in Greer.

OREGON—1900-1910: Organized, Hood River; gain in area, Baker; loss in area, Union, Wasco. 1890-1900: Organized, Lincoln, Wheeler; gain in area, Sherman, Wallowa; loss in area, Benton, Crook, Gilliam, Grant, Tillamook, Union, Wasco.
