CALIFORNIA.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of California, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 144) shows the population of California, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. The counties and primary divisions are arranged alphabetically, with the exception of 18 counties, in which the primary divisions are arranged numerically. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. This is for the most part due to the territorial changes that have been made in the minor civil divisions of certain counties since 1890. In other cases cities returned in 1910 as parts of townships were returned independently in 1900 and 1890, and some townships reported separately at one census were reported in combination with other townships at another census.

Table 2 (p. 152) shows the cities and incorporated towns in California, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of California, by counties, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, judicial townships, election precincts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions *as they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and

---

HISTORICAL NOTE.—California was named by Spanish discoverers from a fabulous island described in a Spanish romance as "on the right hand of the Indies * * * very near to the Terrestrial Paradise."

The territory now constituting the state of California was first visited by white men in 1542, when Juan Cabrillo, a Portuguese navigator in the service of Spain, explored the coast and islands in the Santa Barbara region and probably sailed as far north as Monterey Bay. In 1579 Sir Francis Drake sailed along the coast and landed, supposedly at Drake's Bay, a few miles northwest of San Francisco. He named the country New Albion and took possession in the name of Elizabeth of England. The English did not occupy the region, however, and the first settlement was made by the Spaniards, in 1769, when the Franciscan Fathers founded a mission at San Diego. In 1776 the Mission Dolores was established where San Francisco now stands.

California was under Spanish rule until 1822, when, on the successful termination of the Mexican Revolution, it declared its independence of Spain and its allegiance to the newly established Mexican Government.

For several years prior to 1846 large numbers of immigrants from the United States had been arriving in California, and in June of that year a revolt against Mexico was begun by the American settlers. The Mexican War was already in progress, and during July and August, 1846, the American flag was raised at Monterey, San Francisco, Sonoma, Sacramento, San Jose, San Juan Bautista, San Diego, Santa Barbara, San Pedro, and Los Angeles. The final surrender of the Mexican forces to those of the United States took place in January, 1847. In February, 1848, by the treaty of Guadalupe Hidalgo, the Mexican claims to California and to territory north of the Gila and Rio Grande were ceded to the United States.

From 1846 to 1849 California was under military and provisional rule by the United States. In October, 1849, a state constitution was adopted by a convention held at Monterey; in the following month it was ratified by the people, and state officers were elected. On September 9, 1850, California became a state of the Union.

over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes in population for the *same* territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of California is 2,377,549. Compared with a population of 1,485,053 in 1900, this represents an increase during the last decade of 892,496, or 60.1 per cent. During the same period the total population of the United States increased 21 per cent. The percentage of increase for the state during this decade is nearly three times the rate shown for the preceding decade, 1890–1900.

The following table shows the population of California at each census from 1850 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910	2,377,549	892,496	60.1	21.0
1900	1,485,053	271,655	22.4	20.7
1890	[1] 1,213,398	348,704	40.3	25.5
1880	864,694	304,447	54.3	30.1
1870	560,247	180,253	47.4	22.6
1860	379,994	287,397	310.4	35.6
1850	92,597	.....	.....	.....

[1] Includes population (5,268) of Indian reservations specially enumerated.

California was admitted as a state in 1850 and appears in the Federal census reports for the first time in that year. Naturally, its most rapid growth was during the decade immediately following the discovery of gold in the state, which was its first decade of statehood, 1850–1860. The percentage of increase for this decade is more than five times the rate shown for any succeeding decade. Although the growth of the state during the 50 years since 1860 has been much slower than during the decade from 1850 to 1860, it has been substantial, the rates of decennial increase ranging from 22.4 per cent for the decade 1890–1900 to 60.1 per cent for the last decade.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that during each decade since 1850 the population of California has increased more rapidly than that of the United States. The difference between the two rates during the decade 1850–1860 was large; and the differences have been moderately large during every decade since then except during the decade 1890–1900, when the two rates approached each other very closely. The population of the state in 1910 was more than twenty-five times as large as in 1850, when the population of the state was first returned, while the population of the United States in 1910 was a little less than four times that in 1850.

Principal cities.—California has 125 cities. San Francisco, the largest city, has a population of 416,912 and Los Angeles, the second city, a population of 319,198. Oakland, with 150,174 inhabitants, is the only other city in the state having over 100,000 inhabitants. There are also 5 cities having from 25,000 to 50,000, 13 from 10,000 to 25,000, 10 from 5,000 to 10,000, 34 from 2,500 to 5,000, and 60 less than 2,500 inhabitants. The aggregate population of the 125 cities is 1,539,144, or 64.7 per cent of the total population of the state.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table on page 139 shows the population of the 8 cities having in 1910 over 25,000 inhabitants, as reported at each census since their incorporation either as cities or towns, so far as figures are available, together with the increase during each decade.

Of the cities included in this table, Pasadena shows the highest rate of increase during the last decade, namely, 232.2 per cent, and San Francisco the lowest, 21.6 per cent.

The most rapid growth of San Francisco was during the decades from 1860 to 1880, its population increasing more than fourfold during this period, while during the 30 years since 1880 its population has less than doubled. Its lowest rate of decennial increase was 14.6 per cent for the decade 1890–1900. The next lowest rate, 21.6 per cent, was for the last decade, 1900–1910. Had it not been for the great earthquake and fire of 1906, the growth would probably have been much larger.

Los Angeles, unlike San Francisco, has shown its most rapid growth during the recent decades. For the first decade after its incorporation the percentage of increase was 172.4, this representing, however, an absolute increase of only 2,775. For the next two decades the percentages of increase were much smaller. Since 1890 the population of the city has increased more than sixfold, the absolute increase of the last decade being more than twice the population of the city in 1900 and more than four times its population in 1890.

CITY AND CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.	
		Number.	Per cent.

1880	12,567	3,478	38.3
1870	9,089	.....	.....

[1] The returns for 1850 for San Francisco were destroyed by fire; the state census for 1852 reports a population of 34,776.

Counties.—California has 58 counties. The population of these counties ranges from 309 in Alpine County to 504,131 in Los Angeles County.

The following territorial changes have been made in the counties of California since 1900: Part of San Diego County was taken to form Imperial County in 1907 and part of Fresno County was annexed to Kings County in 1909.

Owing to the organization since 1900 of one new county from part of another county as shown above, the comparison of increase or decrease in population is made for only 56 counties and one combination of counties. The combined counties are San Diego and Imperial. In order to determine the actual rate of increase for this combination of counties it is necessary to add the population of the new county to that of the old county from which it was formed. Forty-six counties and the one combination of counties increased in population during the last decade. The rates of increase of the 46 counties that show an increase range from four-tenths of 1 per cent in Del Norte County to 196 per cent in Los Angeles County, and the absolute increases of the same group of counties range from 9 in Del Norte County to 333,833 in Los Angeles County. The combined counties of San Diego and Imperial increased 40,166, or 114.5 per cent. Ten counties have decreased in population during the last decade, the rates of decrease ranging from 5.8 per cent in Mono County to 39.3 per cent in Alpine County, and the absolute decreases from 125 in Mono County to 2,834 in Nevada County. The aggregate increase of population from 1900 to 1910 in the one combination and the 46 counties that show increases is 904,732; the aggregate decrease of population in the 10 counties that show decreases is 12,236. The difference, 892,496, is, of course, the total increase of population in the state.

The maps on page 142 show the increase or decrease in the total and the rural population, respectively, of each county of California during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 155,652 square miles. The average number of persons to the square mile in 1910 was 15.3; in 1900

and 1890 it was 9.5 and 7.8, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in the maps on page 143, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 or more, but not excluding the land area of such places.

San Bernardino County, with 20,157 square miles, has the largest area. San Francisco County, coextensive with San Francisco city, with 43 square miles and 9,695.6 persons per square mile, has the smallest area and the highest density. Alpine, Inyo, and Mono Counties each average less than 1 person per square mile.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In California the counties are divided into 578 primary divisions, comprising 576 judicial townships and 2 cities. There are also 196 secondary divisions, comprising 123 cities and 73 towns. These secondary divisions usually form parts of their respective townships, but 10 cities and 1 town are coextensive with the judicial townships in which they are located. Besides these minor civil divisions there are 4 Indian reservations in the state, returned under the counties in which located.

Urban and rural population compared.—The following table presents the population of California at the censuses of 1910, 1900, and 1890, respectively, distributed among cities and towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.

[1] Includes population (5,268) of Indian reservations specially enumerated.

As shown by the above table, the urban territory of the state in 1910—that is, the cities and incorporated towns of 2,500 inhabitants or more—contained 1,469,739 inhabitants, or 61.8 per cent of the total population, while 907,810 inhabitants, or 38.2 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities and incorporated towns then having 2,500 inhabitants or more—contained 777,699 inhabitants, or 52.4 per cent of the total population, while 707,354 inhabitants, or 47.6 per cent, lived in rural territory. There has thus been a considerable increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

In 1910 the combined population of San Francisco, Los Angeles, and Oakland, the three cities having over 100,000 inhabitants each, represented 37.3 per cent of the total population of the state. In 1900 these three cities contributed 34.5 per cent of the total population of the state. At that time, however, Oakland was not in the group of places having over 100,000 inhabitants, for this city did not reach that figure until some time between 1900 and 1910. The combined population of the remaining urban places, or those containing from 2,500 to 50,000 inhabitants each, in 1910 and 1900, represented 24.5 per cent and 17.9 per cent, respectively, of the total population of the state. In 1890 San Francisco contributed 24.6 per cent of the population of the state and the remaining urban places 23.9 per cent.

The 128 places of less than 2,500 inhabitants each, comprising 60 cities and 68 towns, have an aggregate population of 153,052, or 6.4 per cent of the total population of the state. These places comprise 66 having from 1,000 to 2,500 inhabitants each, with a combined population of 111,155; 47 having from 500 to 1,000 inhabitants each, with a combined population of 36,525; and 15 having less than 500 inhabitants each, with a combined population of 5,372. The population living in unincorporated territory represents 31.7 per cent of the total population of the state.

The above table shows further that in all cities and incorporated towns, including those of less than 2,500 inhabitants, there was in 1910 a population of 1,622,791, or 68.3 per cent of the population of the state. The population of all cities and incorporated towns, as

they existed in 1900, was 868,447, or 58.5 per cent of the population of the state.

Table I of Chapter 2 shows that 26 counties and the one combination of counties had a larger proportion and 1 county a smaller proportion of urban population in 1910 than in 1900, while for 1 county the proportion was the same. Six counties wholly rural in 1900 were partly urban in 1910. Twenty-two counties were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the table in the next column, the total population in 1910 of the cities and towns which at that time had 2,500 inhabitants or more was 1,469,739; in 1900 the total population of these same cities and towns (so far as separately reported) was 810,193. It may be noted that the latter figure exceeds the total population in 1900 of the cities and towns which at that time had over 2,500 inhabitants each, 777,699 (see table on p. 140) by 32,494. The difference is the net result of the passage, since 1900, of certain communities from the rural to the urban class and vice versa, and of annexations of territory during the same period.

A comparison of the total population in 1910 of cities and towns having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table in the next column, shows an increase of 81.4 per cent. This represents the rate of growth of urban communities as thus defined. During the same period there has been an increase of 34.5 per cent in the population living in rural territory. Urban population thus increased nearly two and one-half times as rapidly as rural. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent.

As shown by Table I of Chapter 2 there are 15 counties in which the population living in rural territory decreased and 1 county in which there was a decrease in urban population. Nevada was the only county that decreased in population in both urban and rural districts.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the combined population of cities having in 1910 100,000 inhabitants or more, the combined population of cities and towns having from 25,000 to 100,000, and from 2,500 to 25,000 inhabitants, respectively, and the population of the remainder of the state.

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state	**2,377,549**	**1,485,053**	**892,496**	**60.1**
Urban territory in 1910	1,469,739	810,193	659,546	81.4
Cities and towns of—				
100,000 inhabitants or more in 1910	886,284	514,008	372,276	72.4
25,000 to 100,000 inhabitants in 1910	183,945	90,813	93,132	102.6
2,500 to 25,000 inhabitants in 1910	399,510	205,372	194,138	94.5
Remainder of the state	907,810	674,860	232,950	34.5

From this table it appears that the population in the group of urban places having 100,000 inhabitants or more increased during the last decade about one and one-fifth times, the group of places having from 25,000 to 100,000 inhabitants about one and two-thirds times, and the group of places having from 2,500 to 25,000 inhabitants about one and one-half times as rapidly as that of the state as a whole. The rate of increase in population for rural territory was a little more than half that of the state as a whole.

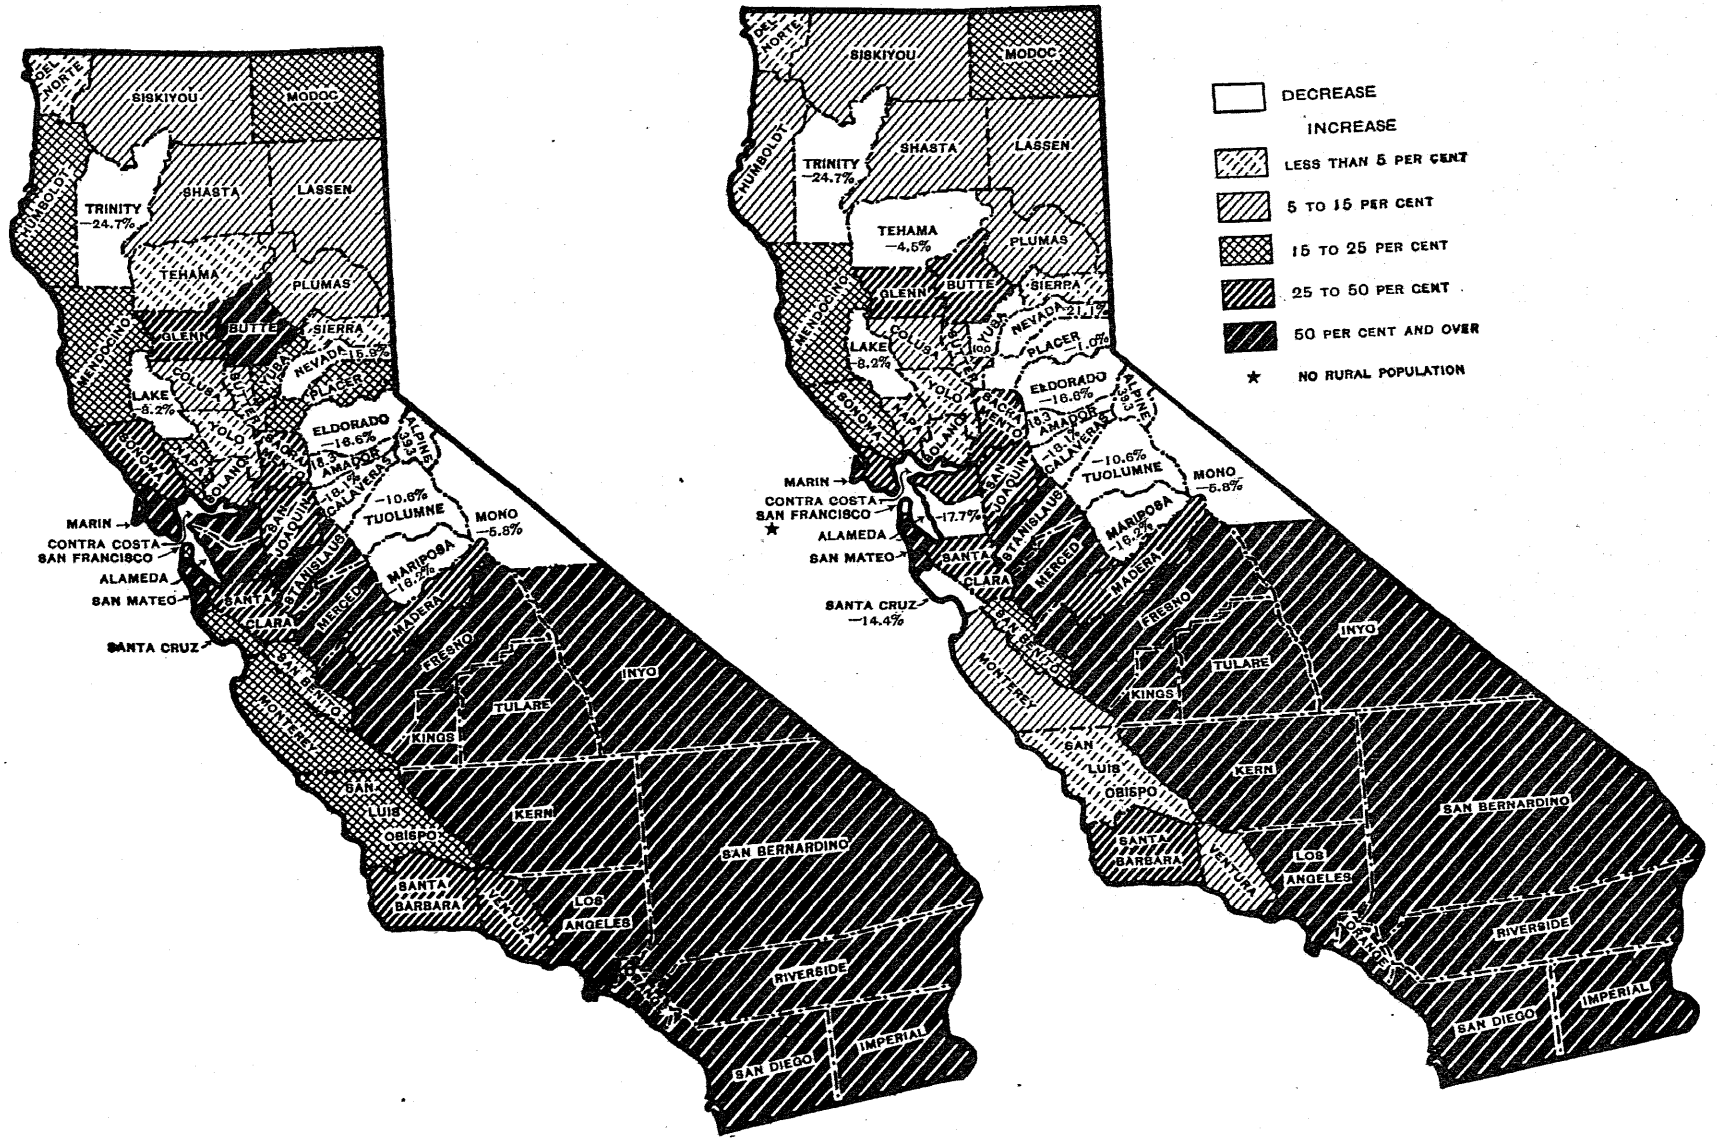
It also appears from this table that of the total increase in the population of the state during the decade, namely, 892,496, more than two-fifths was in cities of over 100,000 inhabitants.

PER CENT OF INCREASE OR DECREASE OF POPULATION OF CALIFORNIA, BY COUNTIES: 1900–1910.

In case of decrease the per cent is inserted under the county name.

TOTAL POPULATION.

RURAL POPULATION.

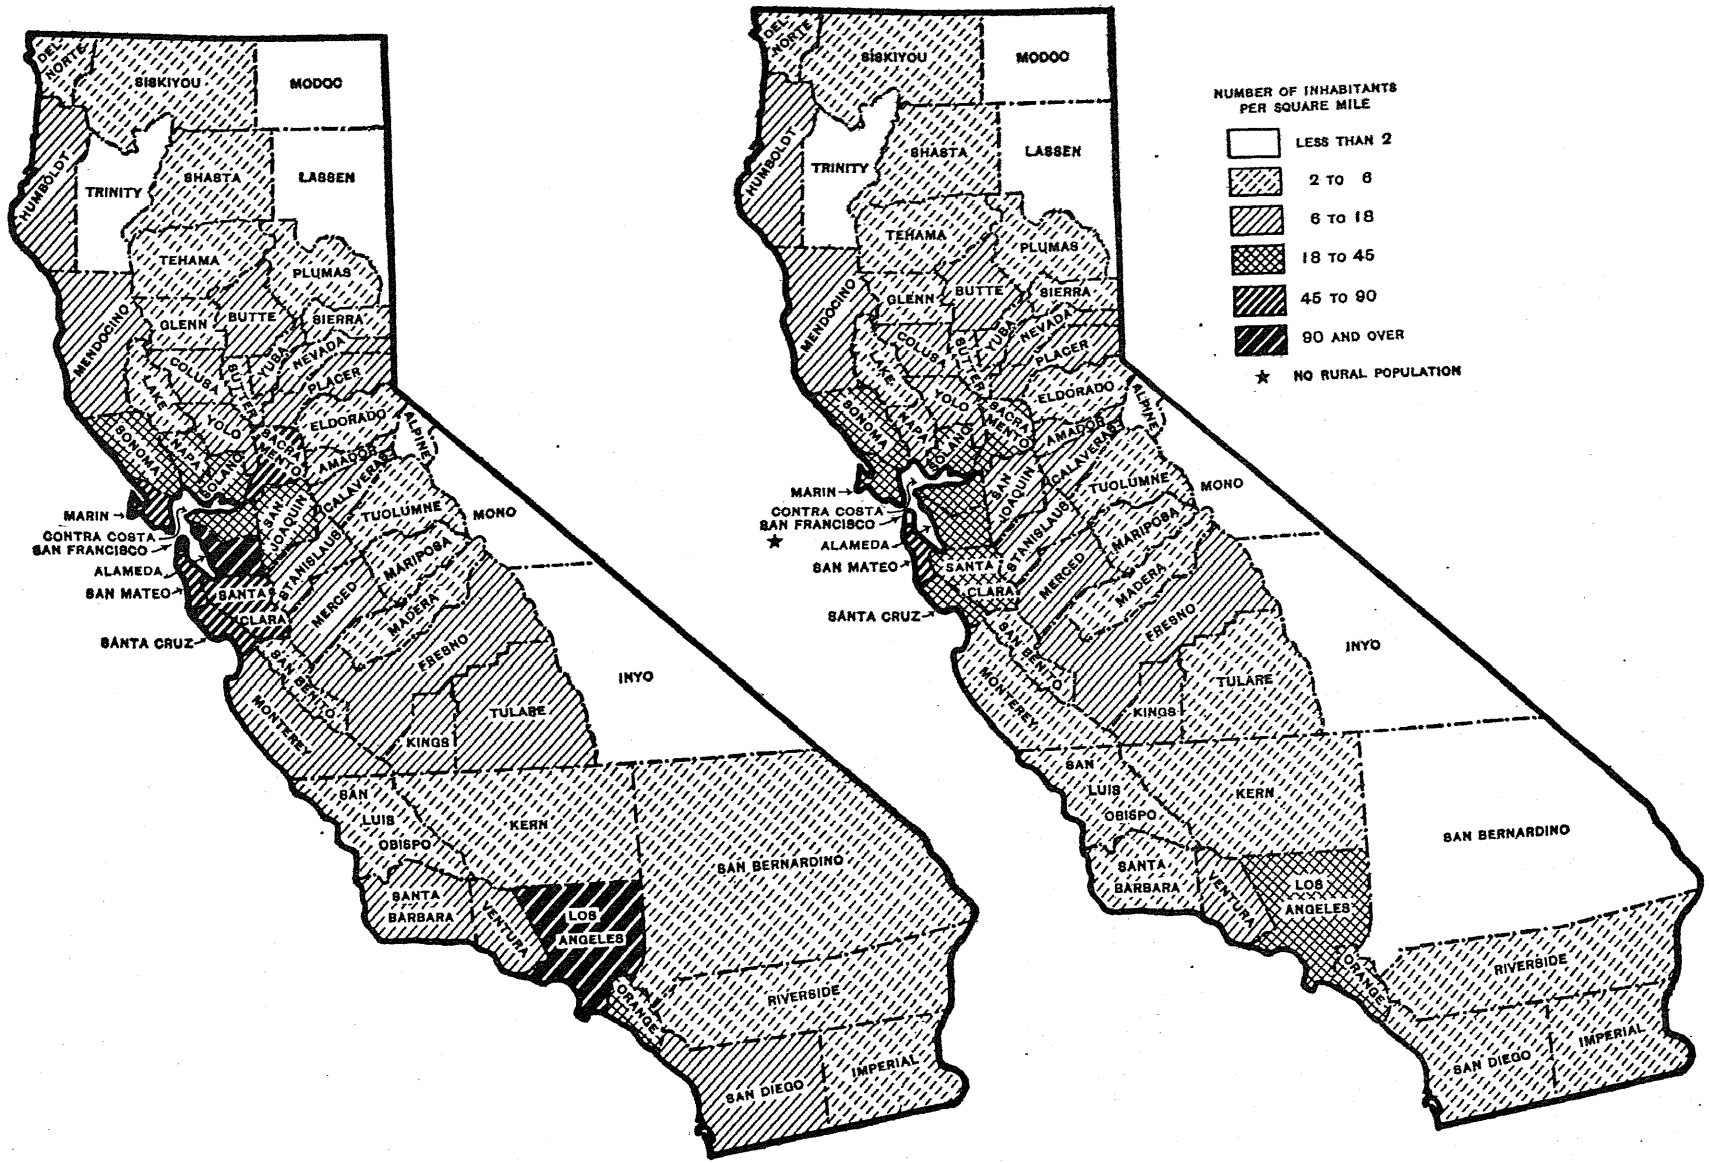


Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

DENSITY OF POPULATION OF CALIFORNIA, BY COUNTIES: 1910.

TOTAL POPULATION.

RURAL POPULATION.



Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890.

[Township means judicial township. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

[1] County totals include population (169 in 1900; 58 in 1890) of Canyon Creek township and population (322 in 1900; 507 in 1890) of New River and North Fork townships, annexed to Junction City township; population (575 in 1900; 566 in 1890) of Lewiston township and population (110 in 1900; 81 in 1890) of Minersville township, annexed to Trinity Center township; and population (343 in 1900; 290 in 1890) of Douglas City township, annexed to Hay Fork township, since 1900.

[2] Douglas City township annexed in 1904.

[3] Canyon Creek, New River, and North Fork townships annexed in 1904.

[4] Name changed from Long Ridge in 1904.

[5] Lewiston and Minersville townships annexed in 1904.

[6] County total includes population (143) of Tule River Indian Reservation, returned independently in 1900.

[7] County total includes population (5,525) of Mussel Slough township, taken to form Kings County between 1890 and 1900.

[8] Organized from part of Tipton township in 1907.

[9] Ducor, Porterville, and Springville townships organized from parts of Tule River township in 1909, 1904, and 1901, respectively.

[10] Not returned separately in 1900.

[11] Incorporated in 1902.

[12] Lemon Cove township organized from part of Visalia township in 1906.

[13] Incorporated in 1910.

[14] Tipton and Woodville townships returned as Tipton township in 1900. Part taken to form Alpaugh township in 1907.

[15] Returned with Tipton township in 1900.

[16] County total includes population (1,959) of township 6, annexed to township 4 since 1900.

[17] Part annexed to township 2 in 1902.

[18] Parts of townships 1 and 4 annexed in 1902.

[19] Part annexed to township 2 in 1902; township 6 annexed in 1902.

[20] No comparison of population can be made; county redistricted in 1906 and 1910.

[21] Incorporated in 1903.

[22] County total includes population (671 in 1900; 770 in 1890) of Fairview township, part taken to form Dunnigan township and part annexed to Capay township since 1900.

[23] Part of Fairview township annexed in 1904.

[24] Organized from part of Fairview township in 1904.

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of California by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of more than 25,000 inhabitants; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards or assembly districts of the three cities of more than 50,000.

A series of summary tables (numbered 1 to 17) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of California, 1,106,533, or 46.5 per cent, are native whites of native parentage; 635,889, or 26.8 per cent, are native whites of foreign or mixed parentage; and 517,250, or 21.8 per cent, are foreign-born whites. The corresponding percentages in 1900 were 43.4, 29.7, and 21.3, respectively, the proportion of native whites of native parentage increasing somewhat during the decade. In 1910 Japanese constituted 1.7 per cent of the population; Chinese, 1.5; negroes, 0.9; and Indians, 0.7. In 8 of the 58 counties the foreign-born whites represent as much as one-fourth of the population, the percentage being highest (32) in San Mateo. The proportion of native whites of foreign or mixed parentage exceeds one-fourth in 24 counties and is highest in San Francisco County (36.9 per cent). (See maps on page 167.)

Of the urban population, 44.4 per cent are native whites of native parentage; of the rural, 50 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 28.8 and 23.5 per cent, respectively; for foreign-born whites 22.6 and 20.4 per cent. The percentage of Chinese and Japanese is 3 in the urban and 3.8 in the rural.

Sex (Tables 2 and 15).—In the total population of the state there are 1,322,978 males and 1,054,571 females, or 125.5 males to 100 females. In 1900 the ratio was 123.5 to 100. Among native whites the ratio is 108.7 to 100 and among foreign-born whites, 169.6 to 100. In the urban population there are 113.6 males to 100 females, and in the rural, 147.8.

State of birth (Tables 3 and 4).—Of the native population—that is, population born in the United States—50.5 per cent were born in California and 49.5 per cent outside the state; of the native white population, 49.9 per cent were born outside the state; of the native negro, 75.6 per cent; and of the native Indian, 6.4 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Tables 5 and 12).—Of the foreign-born white population of California, persons born in Germany represent 14.8 per cent; Italy, 12.3; Ireland, 10.1; England, 9.4; Canada, 8.6; Mexico, 6.5;

Sweden, 5.1; Portugal, 4.3; France, 3.4; Austria, 3.3; Russia, 3.2; all other countries, 18.8 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Germany contributed 17.9 per cent; Ireland, 13.8; England, 10; Italy, 8.9; Canada, 8.4; Portugal, 4.5; Mexico, 4.4; Sweden, 4; France, 2.8; Scotland, 2.8; Switzerland, 2.4; Russia, 2.4; Denmark, 2.3 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 920,397, representing 38.7 per cent of the population. Of such males, 40 per cent are native whites of native parentage, 19.7 per cent native whites of foreign or mixed parentage, 32.3 per cent foreign-born whites, 6.5 per cent Chinese and Japanese, 0.9 per cent negroes, and 0.5 per cent Indians. Of the 297,365 foreign-born white males of voting age, 137,274, or 46.2 per cent, are naturalized. Males of militia age—18 to 44—number 665,522.

Age (Tables 7, 8, 13, and 14).—Of the total population, 8.1 per cent are under 5 years of age, 14.7 per cent from 5 to 14 years, inclusive, 18 per cent from 15 to 24, 35.7 per cent from 25 to 44, and 23.1 per cent 45 years and over. The proportion of children is low among the foreign-born whites, negroes, Chinese, and Japanese. Only 4.2 per cent of the foreign-born whites are under 15 years of age, while 82.9 per cent are 25 years of age and over. Of the native whites of foreign or mixed parentage, 47.5 per cent are 25 and over, and of the native whites of native parentage, 52.9 per cent.

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 37.3 per cent are from 25 to 44 years of age, inclusive, and of the rural, 32.9 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 555,554, of whom 361,077, or 65 per cent, attended school. In addition to these, 6,788 children under 6 and 9,801 persons of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 63.1; for girls, 67. For children from 6 to 14 years, inclusive, the percentage attending school was 86.9. The percentage for children of this age among native whites of native parentage was 87.4; among native whites of foreign or mixed parentage, 88.1; among foreign-born whites, 82.3; among negroes, 88.4; among Indians, 61.4; among Chinese, 70.1; and among Japanese, 61.5. (See Table I.) For all classes combined, the percentage attending school is somewhat higher in urban than in rural communities.

Illiteracy (Table 10).—There are 74,902 illiterates in the state, representing 3.7 per cent of the total population 10 years of age and over, as compared with 4.8 per cent in 1900. The percentage of illiteracy is 0.5 among native whites, 10 among foreign-born whites, 7.1 among negroes, 49 among Indians, 15.5 among Chinese, and 8.6 among Japanese.

For all classes combined, the percentage of illiterates is 2.4 in urban communities and 5.9 in rural. For each class separately, also, the rural percentage exceeds the urban, the differences in some cases being very marked.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 1.7. (See Table I.)

Marital condition (Tables 11 and 16).—In the population 15 years of age and over, 45.8 per cent of the males are single and 27.9 per cent of the females. The percentage married is 47.3 for males and 58.4 for females, and the percentage widowed 4.4 and 12.2, respectively. The percentages of those reported as divorced, 1 and 1.3, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due partly to the excess of males in the total population, and partly to the fact that women marry younger. Thus 9.1 per cent of the females from 15 to 19 years of age are married, as compared with 0.6 per cent of the males; and 47.2 per cent of the females from 20 to 24 years are married, as compared with 14.8 per cent of the males. In the next age group, 25 to 34 years, the percentages are 72.4 and 46, respectively. In the age group 35 to 44 the difference is less marked, while among those aged 45 and over the percentage for males exceeds that for females. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 49.8 for males and 65.1 for females; native whites of native parentage, 49.7 and 57.6, respectively; native whites of foreign or mixed parentage, 42.4 and 53.5; negroes, 48.9 and 55.8; Indians, 50.3 and 59.2; Chinese, 44.7 and 69; Japanese, 28 and 86.8.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married for males is higher in the urban population, for females in the rural.

Dwellings and families.—The total number of dwellings in California is 513,481, and the total number of families 563,636, there being 109.8 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling is 4.6, and the average number per family, 4.2.

NOTES REGARDING CHANGES IN BOUNDARIES, ETC.

COUNTIES.

COLUSA.—Part taken to form Glenn in 1891.

DEL NORTE.—Part annexed to Siskiyou between 1880 and 1890.

FRESNO.—Part taken to form Madera in 1893 and part annexed to Kings in 1909.

GLENN.—Organized from part of Colusa in 1891.

HUMBOLDT.—Part of Klamath annexed in 1874.

IMPERIAL.—Organized from part of San Diego in 1907. (See also Note 1.)

KINGS.—Organized from part of Tulare in 1893 and part of Fresno annexed in 1909.

LAKE.—Part annexed to Napa in 1872.

LOS ANGELES.—Part taken to form Orange in 1889.

MADERA.—Organized from part of Fresno in 1893.

MODOC.—Organized from part of Siskiyou in 1874.

MONTEREY.—Part taken to form San Benito in 1874.

NAPA.—Part of Lake annexed in 1872.

ORANGE.—Organized from part of Los Angeles in 1889.

RIVERSIDE.—Organized from parts of San Bernardino and San Diego in 1893.

SAN BENITO.—Organized from part of Monterey in 1874.

SAN BERNARDINO.—Part taken to form part of Riverside in 1893.

SAN DIEGO.—Part taken to form part of Riverside in 1893; part taken to form Imperial in 1907. (See also Note 1.)

SANTA BARBARA.—Part taken to form Ventura in 1871.

SISKIYOU.—Part taken to form Modoc in 1874; part of Klamath annexed in 1874 and part of Del Norte annexed between 1880 and 1890.

TULARE.—Part taken to form Kings in 1893.

VENTURA.—Organized from part of Santa Barbara in 1871.

INCORPORATED PLACES.

ALHAMBRA.—Incorporated in 1903.

BAKERSFIELD.—Part of township 3 (Kern City) annexed in 1909.

BERKELEY.—Parts of Oakland township annexed in 1906 and 1908.

COALINGA.—Incorporated in 1906.

FRESNO.—Part of township 3 annexed in 1910.

GLENDALE.—Incorporated in 1906.

LODI.—Incorporated in 1906.

LOS ANGELES.—Parts of Ballona, Burbank, Cahuenga, and San Antonio townships annexed between 1890 and 1900; part of Ballona township annexed in 1906; part of Wilmington township (including San Pedro city) annexed in 1909, and parts of Burbank and Cahuenga townships annexed in 1910.

MILL VALLEY.—Incorporated in 1900.

OAKLAND.—Parts of Brooklyn and Oakland townships annexed in 1909.

OCEAN PARK.—Incorporated in 1904.

ONTARIO.—Part of Ontario township annexed in 1901.

OROVILLE.—Incorporated in 1906.

OXNARD.—Incorporated in 1903.

PASADENA.—Parts of Pasadena township annexed in 1904 and 1906.

PORTERVILLE.—Incorporated in 1902.

RICHMOND.—Incorporated in 1908.

ROSEVILLE.—Incorporated in 1909.

SAN LEANDRO.—Part of Brooklyn township annexed in 1909.

NOTE 1.—*Imperial and San Diego Counties combined.*—Total population: 1910, 75,256; 1900, 35,090; increase, 1900–1910, 40,166; per cent of increase, 114.5. Urban population—1910, 39,578; same places in 1900, 17,700; per cent of increase, 123.6. Rural population—1910, 35,678; same territory in 1900, 17,390; per cent of increase, 105.2. Urban population—1900, 17,700; rural population—1900, 17,390. Per cent in places of 2,500 or more in 1910, 52.6. Per cent in places of 2,500 or more in 1900, 50.4.

NOTE 2.—In computing this increase the population of Indian reservations in 1900 has been deducted from the total population of the county in order to make that total comparable with the total for 1890, which does not include the population of Indian reservations. The population thus deducted in the several counties was as follows: Humboldt, 1,112; Mendocino, 599; Riverside, 203; San Diego, 817; Tulare, 143.

COLORADO.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Colorado, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 196) shows the population of Colorado in 1910, distributed according to counties and minor civil divisions, and, so far as possible, in comparison with similar figures for 1900 and 1890. The arrangement of counties is alphabetical, while the primary divisions in each county are given in numerical order with the exception of Boulder, Denver, Pueblo, and Teller Counties. The figures for secondary divisions are printed in italics except those for Delta and Longmont cities, which are not returned by precincts. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

Owing to the territorial changes that have been made in the minor civil divisions of certain counties since 1900 and also to the fact that certain counties returned by precincts at the census of 1910 were not so returned at the census of 1890, comparisons of the population of the minor civil divisions in 1910 with those for 1900 and 1890 are to a large extent impossible. The county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. This is for the most part due to the territorial changes that have been made in the minor civil divisions of certain counties since 1900. In other cases, cities returned in 1910 as parts of election precincts were returned independently in 1900 and 1890 and vice versa, while some election precincts reported separately at one census were not reported separately at another census. Comparisons are, however, made as far as practicable for all the minor civil divisions existing in 1910 which were also in existence at one or both of the earlier censuses.

Table 2 (p. 207) shows the cities and the incorporated towns in Colorado, alphabetically arranged, with their population in 1910, 1900, and 1890, so far as separately reported.

The population of Colorado, by counties, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as incorporated villages or boroughs. These smaller political units are referred to as secondary divisions.

HISTORICAL NOTE.—The name Colorado, which was first applied to the river and later to the territory and state, is derived from the Spanish *colorado*, meaning colored or red.

The first explorers of the region now forming the state of Colorado were probably Spaniards. Claims have been made that Coronado's expedition of 1540 led through this country, but the first well-authenticated exploration was made in 1776 by Padre Francisco Escalante, who visited the region of the Dolores and Gunnison Rivers. The Spanish, however, made no attempts at settlement, and very few white men came to the Colorado country until long after the United States had gained possession. The discovery of gold attracted miners and in 1858 a settlement was made at Denver.

That part of Colorado lying north and east of the Arkansas River was originally a portion of the Louisiana country which was ceded by France to Spain in 1762, retroceded to France in 1800, and purchased by the United States in 1803. That part not originally comprised within the Louisiana region belonged to Spain until the Mexican revolution of 1821, after which it formed a part of Mexico. The eastern part of this Mexican territory became a part of Texas, which achieved its independence in 1836, and in 1845 was annexed to the United States; the western part was included in the lands ceded by Mexico to the United States in 1848 at the close of the Mexican War.

The section of Colorado included in the Louisiana Purchase belonged successively to the district of Louisiana (1804–5), the territory of Louisiana (1805–12), the territory of Missouri (1812–34), and the "Indian Country" (1834–54). When the territories of Utah and New Mexico were organized, in 1850, the western portion of what is now Colorado was included in Utah; the region east of the Rocky Mountains, south of the Arkansas, and west of the one hundred and third meridian was made a part of New Mexico; and the area east of the one hundred and third meridian and south of the Arkansas was left without organized government, as was the Indian Country to the north of it. In 1854, when Kansas and Nebraska were organized, all the Colorado region not included in Utah or New Mexico became a part of Kansas if south of the fortieth parallel and a part of Nebraska if north of that line.

In February, 1861, the region lying between the thirty-seventh and forty-first parallels and extending from the twenty-fifth to the thirty-second meridian from Washington (approximately the one hundred and second and one hundred and ninth meridians from Greenwich) was organized as the territory of Colorado; and in August, 1876, the territory, without change of boundaries, became a state of the Union.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions *as they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes in population for the *same* territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Colorado is 799,024. Compared with a population of 539,700 in 1900, this represents an increase during the last decade of 259,324, or 48 per cent. During the same period the total population of the United States increased 21 per cent. The rate of increase for the population of the state during the preceding decade, 1890–1900, was 30.6 per cent. The following table shows the population of Colorado at each census from 1860 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910	799,024	259,324	48.0	21.0
1900	539,700	126,451	30.6	20.7
1890	[1] 413,249	218,922	112.7	25.5
1880	194,327	154,463	387.5	30.1
1870	39,864	5,587	16.3	22.6
1860	34,277	.....	.....	.....

[1] Includes population (1,051) of Indian reservations specially enumerated.

Colorado was organized as a territory in 1861 but its population was separately enumerated at the Federal census of 1860. During the 10 years from 1860 to 1870 its population grew at a comparatively low rate, increasing about one-sixth. In 1876 Colorado was admitted as a state and during the 20 years, 1870–1890, a much more rapid growth was shown, its population increasing nearly five times during the decade 1870–1880 and somewhat more than twice during the decade 1880–1890. Since 1890 the state has shown a substantial though a slower growth than during the two preceding decades, the increase in population for the 20 years being 385,775, or 93.4 per cent.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that the population of the state has increased more rapidly than that of the country as a whole during every decade since 1870. The difference between the two rates was largest for the decade 1870–1880, when the rate of increase for the state was nearly thirteen times that for the United States. During the next decade, 1880–1890, the population of the state increased more than four times as rapidly as that of the country as a whole. Since 1890 the difference has not been so marked.

Principal cities.—Colorado has 36 cities. Denver, the largest, has a population of 213,381, and Pueblo, the second city, a population of 44,395. Colorado Springs, with 29,078, and Trinidad, with 10,204 inhabitants, are the other cities in the state having over 10,000 inhabitants each. There are also 7 cities having from 5,000 to 10,000, 13 having from 2,500 to 5,000, and 12 having less than 2,500 inhabitants. The aggregate population of the 36 cities is 413,939, or 51.8 per cent of the total population of the state.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table on page 191 shows the population of the 4 cities having in 1910 over 10,000 inhabitants, as reported at each census since their incorporation either as cities or towns, so far as figures are available, together with the increase during each decade.

Of the cities included in this table, Trinidad shows the highest rate of increase during the last decade, namely, 90.9 per cent, and Colorado Springs the lowest, 37.9 per cent. During the preceding decade Trinidad showed a decrease in population of 3.2 per cent, while Colorado Springs showed an increase of 89.3 per cent, which is the highest rate of increase shown for that decade by any of the cities included in the table.

CITY AND CENSUS YEAR.	Population.	INCREASE[1] OVER PRECEDING CENSUS.	
		Number.	Per cent.
Colorado Springs:			
1910	29,078	7,993	37.9
1900	21,085	9,945	89.3
1890	11,140	6,914	163.6
1880	4,226	.....	.....
Denver:			
1910	213,381	79,522	59.4
1900	133,859	27,146	25.4
1890	106,713	71,084	199.5
1880	35,629	30,870	648.7
1870	4,759	.....	.....
Pueblo:			
1910	44,395	16,238	57.7
1900	28,157	3,599	14.7
1890	24,558	21,341	663.4
1880	3,217	.....	.....
Trinidad:			
1910	10,204	4,859	90.9
1900	5,345	—178	—3.2
1890	5,523	3,297	148.1
1880	2,226	.....	.....

[1] A minus sign (—) denotes decrease.

At the census of 1870, the first for which figures for Denver are available after its incorporation as a city, it constituted only 11.9 per cent of the population of the state. The rate of increase in the population of this city has, in a general way, followed the course of the rate of increase in the population of the state during each of the four decades since 1870, the highest rate of increase in each case being for the decade 1870–1880 and the lowest for the decade 1890–1900. During the 40 years since 1870 the population of Denver has increased nearly forty-five times, while that of the state has increased about twenty times.

Counties.—Colorado has 60 counties. The population of these counties ranges from 642 in Dolores County to 213,381 in Denver County.

The following territorial changes have been made in the counties of Colorado since 1900: Parts of Arapahoe County were taken in 1902 to form Adams and Denver Counties, part of Larimer County was taken in 1909 to form Jackson County, parts of Adams and Arapahoe Counties were annexed in 1903 to Washington and Yuma Counties, part of Jefferson County was annexed to Park County in 1908, and part of Denver County annexed to Adams County in 1909.

Owing to the organization since 1900 of three new counties from parts of two counties, and to the annexation of parts of two of these newly organized counties to three counties, and a part of one county to two other counties, as shown above, the comparison of increase or decrease in population is made for only 53 counties and two combinations of counties. The combined counties are Adams, Arapahoe, Denver, Washington, and Yuma in one group, and Jackson with Larimer in another. In order to determine the actual rate of increase for these counties, it is necessary to add the population of the new county to that of the old county from which it was formed and to add the population of the county to which new territory was annexed to that of the county from which it was taken. Thirty-nine counties and the two combinations of counties increased in population during the last decade. The rates of increase for the counties which do not enter into the combinations and which show increases range from 2.3 per cent in Douglas County to 635.9 per cent in Cheyenne County, and the absolute increases of the same group of counties range from 72 in Douglas County to 22,369 in Weld County. The combined counties—Adams, Arapahoe, Denver, Washington, and Yuma—increased in population 91,050, or 58.4 per cent; and the combined counties—Jackson and Larimer—increased 14,115, or 116 per cent. Fourteen counties decreased in population during the last decade, the rates of decrease ranging from eight-tenths of 1 per cent in Eagle County to 59.9 per cent in Hinsdale County, and the absolute decreases from 23 in Eagle County to 14,651 in Teller County. The aggregate increase of population from 1900 to 1910 in the two combinations of counties and in the 39 counties that showed increases was 294,808; the aggregate decrease of population in the 14 counties that showed decreases was 35,484. The difference, 259,324, is, of course, the total increase of population in the state.

The maps on page 194 show the increase or decrease in the total and the rural population, respectively, of each county of Colorado during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 103,658 square miles. The average number of persons to the square mile in 1910 was 7.7; in 1900 and 1890 it was 5.2 and 4, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2 and in the maps on page 195, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 or more, but not excluding the land area of such places.

Routt County, with 6,967 square miles, has the largest area. Denver County, which is coextensive with Denver city, has the smallest area, namely, 58 square miles, and the highest density, 3,679 persons per square mile. Dolores, Hinsdale, Jackson, and Rio Blanco Counties each average less than one person per square mile.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Colorado the counties are divided into 1,062 primary divisions, comprising 1,058 election precincts and 4 cities. There are also 197 secondary divisions, comprising 32 cities and 165 towns. These secondary divisions usually form parts of the respective precincts in which they are wholly or partly located. Seventeen cities and 11 towns are either coextensive with one or more election precincts, or comprise one or more and parts of others. The city of Denver is coextensive with the county of the same name. Besides these primary and secondary divisions there is one Indian reservation, which, though independent of any county organization, is returned under the county in which it is located.

Urban and rural population compared.—The following table presents the population of Colorado at the censuses of 1910, 1900, and 1890, respectively, distributed among cities and towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.		
	Number of places.	Population.	Number of places.	Population.	Number of places.	Population.	1910	1900	1890

Cities and towns of less than 2,500 inhabitants	174	96,757	135	76,088	89	55,506	12.1	14.1	13.5
Other rural territory	.....	297,427	.....	202,961	.....	[1] 171,748	37.2	37.6	41.6

[1] Includes population (1,051) of Indian reservations specially enumerated.

As shown by the above table, the urban territory of the state in 1910—that is, the cities and incorporated towns of 2,500 inhabitants or more—contained 404,840 inhabitants, or 50.7 per cent of the total population, while 394,184 inhabitants, or 49.3 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities and incorporated towns then having 2,500 inhabitants or more—contained 260,651 inhabitants, or 48.3 per cent of the total population, while 279,049 inhabitants, or 51.7 per cent, lived in rural territory. There has thus been a slight increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

Denver's proportion of the total population of the state in 1910, 1900, and 1890 was 26.7, 24.8, and 25.8 per cent, respectively. The proportion of the population of the state in the other urban places increased from 19.2 per cent in 1890 to 23.5 per cent in 1900 and to 24 per cent in 1910.

The urban population of the state in 1910 was contained in 24 cities and 3 incorporated towns, while the rural population was in 174 cities and incorporated towns of less than 2,500 inhabitants each and in unincorporated territory. The 174 places of less than 2,500 inhabitants each have an aggregate population of 96,757, or 12.1 per cent of the total population of the state. These places comprise 24 having from 1,000 to 2,500 inhabitants each, with a combined population of 39,270; 46 having from 500 to 1,000 inhabitants each, with a combined population of 33,813; and 104 having less than 500 inhabitants each, with a combined population of 23,674.

The above table shows further that in all cities and incorporated towns, including those of less than 2,500 inhabitants, there was in 1910 a population of 501,597, or 62.8 per cent of the population of the state. The population of all cities and incorporated towns, as they existed in 1900, was 336,739, or 62.4 per cent of the population of the state.

Table I of Chapter 2 shows that nine counties and the two combinations of counties had a larger proportion and three counties a smaller proportion of urban population in 1910 than in 1900. Six counties wholly rural in 1900 were partly urban in 1910, and three counties partly urban in 1900 were wholly rural in 1910. Thirty-two counties were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the following table, the total population in 1910 of the cities

and towns which at that time had 2,500 inhabitants or more was 404,840; in 1900 the total population of these same places (so far as separately reported) was 269,662. It may be noted that the latter figure exceeds the total population in 1900 of the cities and towns which at that time had over 2,500 inhabitants each, 260,651 (see table on page 192), by 9,011. The difference is the net result of the passage, since 1900, of certain communities from the rural to the urban class and vice versa, and of annexations of territory during the same period.

A comparison of the total population in 1910 of cities and towns having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table in the next column, shows an increase of 50.1 per cent. This represents the rate of growth of urban communities as thus defined. During the same period there was an increase of 46 per cent in the population living in rural territory. There was little difference, therefore, between the rates of increase in population for urban and for rural territory. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent.

As shown by Table I of Chapter 2, there are 15 counties in which the population living in rural territory decreased and in 2 counties—Lake and Teller—there was a decrease in population in both urban and rural districts.

92399°—13——13

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the population of the city of Denver, the combined population of the other cities having in 1910 25,000 inhabitants or more, the combined population of cities and towns having in 1910 from 2,500 to 25,000 inhabitants, and the population of the remainder of the state.

CLASS OF PLACES.	POPULATION.		INCREASE: 1900–1910	
	1910	1900	Number.	Per cent.
The state	**799,024**	**539,700**	**259,324**	**48.0**
Urban territory in 1910	404,840	269,662	135,178	50.1
City of Denver	213,381	140,472	72,909	51.9
Other cities of 25,000 or more in 1910	73,473	49,242	24,231	49.2
Cities and towns of 2,500 to 25,000 in 1910	117,986	79,948	38,038	47.6
Remainder of the state	394,184	270,038	124,146	46.0

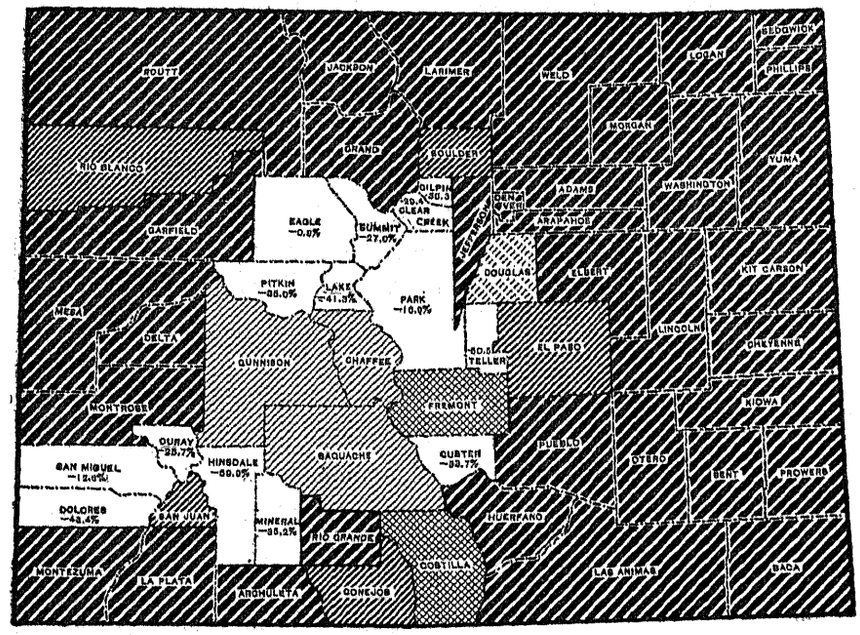
From this table it appears that the city of Denver and the remaining groups of urban places increased at about the same rate, Denver's rate being only 2.7 per cent above that for the group of other places having over 25,000 inhabitants each, and 4.3 per cent above that for the group of places having from 2,500 to 25,000 inhabitants each.

It also appears from this table that of the total increase in the population of the state during the decade, namely, 259,324, more than one-fourth was in the city of Denver.

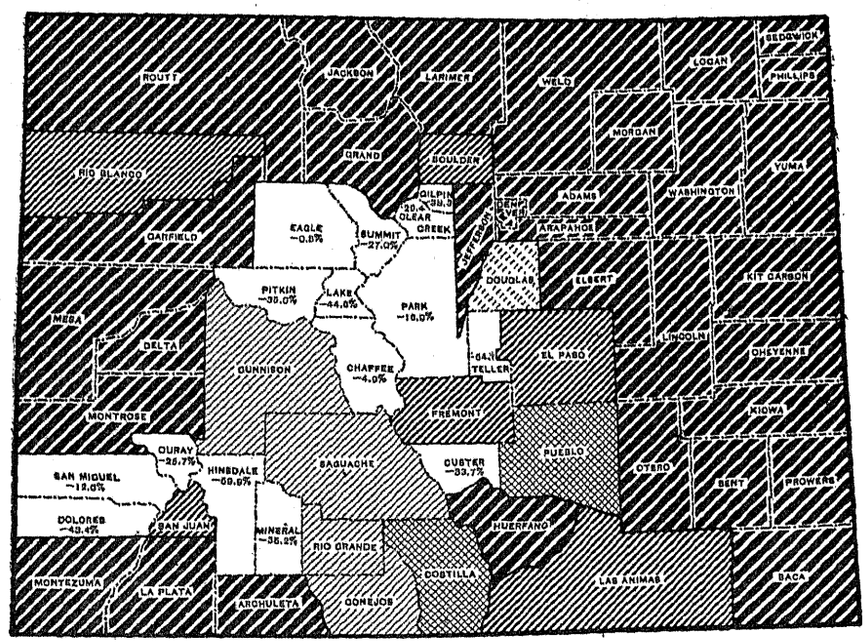
PER CENT OF INCREASE OR DECREASE OF POPULATION OF COLORADO, BY COUNTIES: 1900–1910.

In case of decrease the per cent is inserted under the county name.

TOTAL POPULATION.



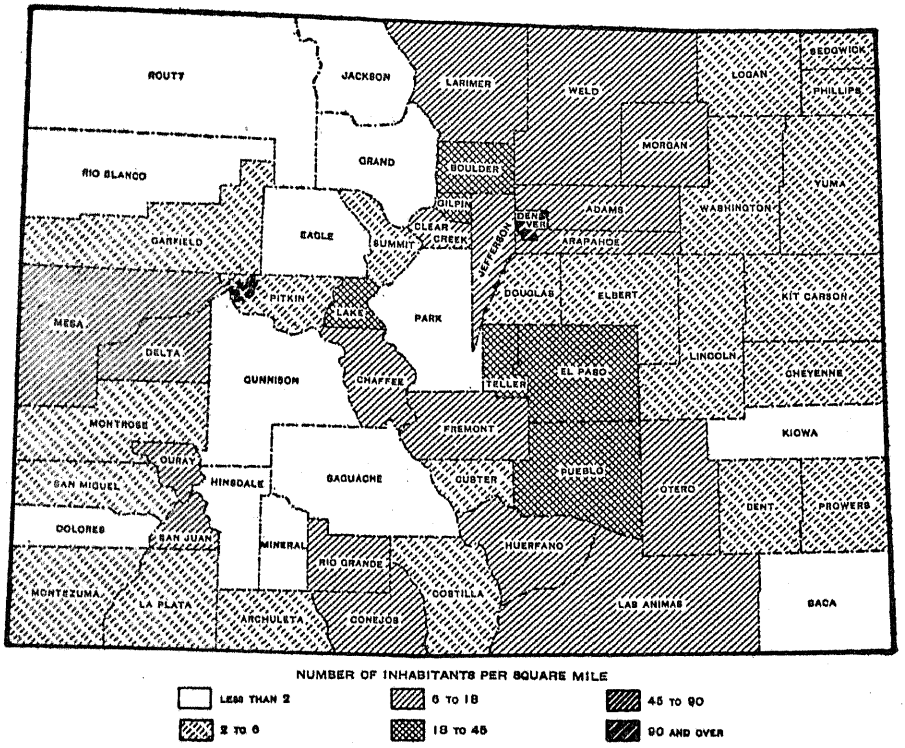
RURAL POPULATION.



Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

DENSITY OF POPULATION OF COLORADO, BY COUNTIES: 1910.

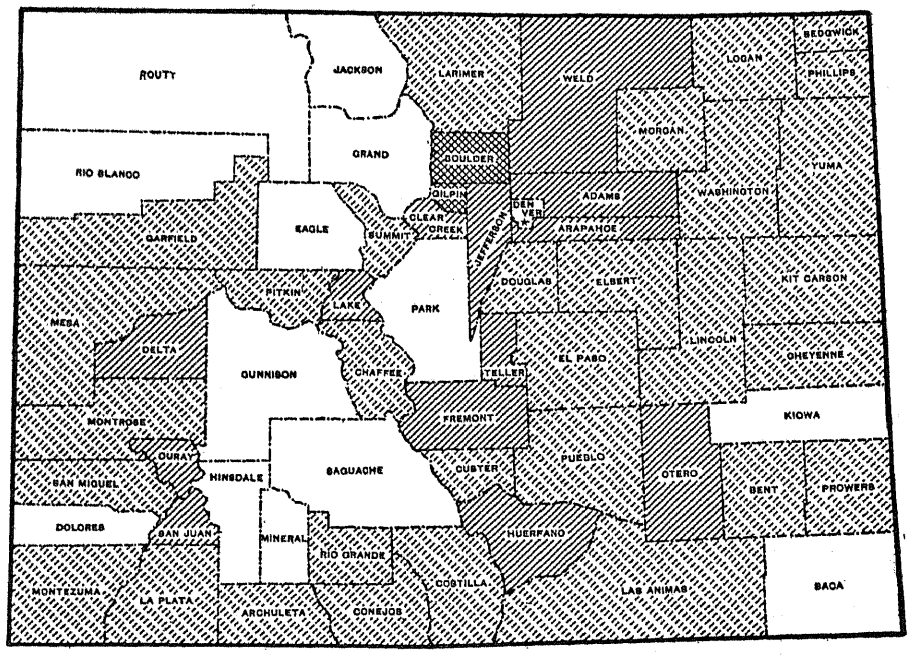
TOTAL POPULATION.



NUMBER OF INHABITANTS PER SQUARE MILE

LESS THAN 2	6 TO 18	45 TO 90
2 TO 6	18 TO 45	90 AND OVER

RURAL POPULATION.



NUMBER OF INHABITANTS PER SQUARE MILE

LESS THAN 2	6 TO 18	45 TO 90
2 TO 6	18 TO 45	90 AND OVER

★ NO RURAL POPULATION

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

[1] Organized from part of Arapahoe County in 1902 and part of Denver County annexed in 1909; parts annexed to Washington and Yuma Counties in 1903.
[2] Name changed from Fletcher in 1907.
[3] Parts taken to form Adams and Denver Counties in 1902 and parts annexed to Washington and Yuma Counties in 1903.
[4] No comparison of population can be made; county redistricted in 1903.
[5] Incorporated in 1909.
[6] County total includes population (100) of part of Southern Ute Indian Reservation, opened for settlement in 1899.
[7] No comparison of population can be made; not returned by precincts in 1890.
[8] Precinct 8 organized from part of precinct 4 in 1900.
[9] Precinct 9 organized from part of precinct 5 in 1900.
[10] Precinct 6 and precinct 7 returned as precinct 6 in 1900.
[11] No comparison of population can be made; county redistricted between 1890 and 1900.
[12] Precinct 7 organized from parts of precincts 4 and 6 in 1900.
[13] Returned as Atlanta in 1900.
[14] No comparison of population can be made; county redistricted in 1908.
[15] Incorporated as a city in 1908.
[16] County total includes population (1,523) of precincts 4, 22, 29, 30, and 31, parts taken to form precincts 36 and 37 and parts annexed to Boulder city; and population (72) of old precinct 36, annexed to precinct 34, since 1900.
[17] No comparison of population for 1890 can be made; information as to changes in minor civil divisions incomplete.
[18] Part taken to form part of precinct 40 in 1906.
[19] Exclusive of population of Longmont city.
[20] Precinct 38 organized from part of precinct 9 in 1906.
[21] Part taken to form part of precinct 41 in 1906.
[22] Incorporated in 1904.
[23] Old precinct 36 annexed in 1900.
[24] Organized from parts of precincts 4, 22, 29, 30, and 31 in 1908.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890—Continued.

[Precinct means election precinct. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Colorado by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for the three cities of more than 25,000 inhabitants; Table III for Trinidad, the only city of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of Denver, the only city of more than 50,000 inhabitants.

A series of summary tables (numbered 1 to 15) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910. The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Colorado, 475,136, or 59.5 per cent, are native whites of native parentage; 181,428, or 22.7 per cent, are native whites of foreign or mixed parentage; 126,851, or 15.9 per cent, are foreign-born whites; and 11,453, or 1.4 per cent, are negroes. The corresponding percentages in 1900 were 57.7, 23.6, 16.8, and 1.6, respectively, the comparison indicating very slight changes in the color, nativity, and parentage composition of the population. Among the individual counties the proportion of whites of foreign birth ranges from less than 5 per cent in 3 counties to 43.8 per cent in San Juan, and the proportion of native whites of foreign or mixed parentage from 7 per cent in Costilla County to 43.6 per cent in Gilpin. (See maps on page 233.)

Of the urban population, 56.9 per cent are native whites of native parentage; of the rural population, 62.1 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 24.7 and 20.7 per cent, respectively. The percentage of foreign-born whites is 15.7 in the urban population and 16 in the rural; the percentage of negroes is 2.3 in the urban and 0.5 in the rural.

Sex (Table 2).—In the total population of the state there are 430,697 males and 368,327 females, or 116.9 males to 100 females. In 1900 the ratio was 120.9 to 100. Among native whites the ratio is 109.7; among foreign-born whites 160.1. In the urban population there are 104.4 males to 100 females, and in the rural, 131.5.

State of birth (Tables 3 and 4).—Of the native population—that is, population born in the United States—34.9 per cent were born in Colorado and 65.1 per cent outside the state; of the native white population, 64.9 per cent were born outside the state, and of the native negro, 81 per cent. Persons born outside the state constitute a somewhat larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Tables 5 and 12).—Of the foreign-born white population, persons born in Germany represent 13.5 per cent; Italy, 11.3; Russia, 10.7; Austria, 10.3; England, 10.2; Sweden, 9.8;

Canada, 7.5; Ireland, 6.9; Scotland, 3.4; Denmark, 2.2; Mexico, 2; all other countries, 12.4 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Germany contributed 18.1 per cent; England, 11.9; Ireland, 10.7; Sweden, 8.2; Canada, 7.8; Italy, 7.8; Russia, 7.3; Austria, 6.9; Scotland, 3.8; Denmark, 1.9 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 271,648, representing 34 per cent of the population. Of such males, 54.2 per cent are native whites of native parentage, 17.2 per cent native whites of foreign or mixed parentage, 26 per cent foreign-born whites, and 1.6 per cent negroes. Of the 70,514 foreign-born white males of voting age, 35,245, or 50 per cent, are naturalized. Males of militia age—18 to 44—number 203,982.

Age (Tables 7, 8, and 13).—Of the total population, 10.3 per cent are under 5 years of age, 18.2 per cent from 5 to 14 years, inclusive, 18.8 per cent from 15 to 24, 33.1 per cent from 25 to 44, and 19.2 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 5.6 per cent of this class being under 15 years of age, while more than four-fifths (81.1 per cent) are 25 years of age and over. Of the native whites of foreign or mixed parentage, only 41.8 per cent are 25 and over, and of the native whites of native parentage, 48.5 per cent.

The urban population shows a somewhat smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 35.5 per cent are from 25 to 44 years of age, inclusive, and of the rural population, 30.7 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 215,940, of whom 147,626, or 68.4 per cent, attended school. In addition to these, 2,483 persons under 6 and 3,303 of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 67.4; for girls, 69.3. For children from 6 to 14 years, inclusive, the percentage attending school was 86.7. The percentage for children of this age among native whites of foreign or mixed parentage was 88.4; among native whites of native parentage, 86.4; among negroes, 85.4; and among foreign-born whites, 81.7. (See Table I.) In urban communities the percentage of children of that age attending school was 89.3, in rural communities, 84.6.

Illiteracy (Table 10).—There are 23,780 illiterates in the state, representing 3.7 per cent of the total population 10 years of age and over, as compared with 4.2 per cent in 1900. The percentage of illiteracy is 11.3 among foreign-born whites, 8.6 among negroes, and 1.6 among native whites, these percentages being lower than the corresponding figures for 1900 for each class except the foreign-born whites, whose percentage of illiteracy in 1900 was 8.1.

For all classes combined, the proportion of illiterates is lower in urban than in rural communities, the percentages being 2.4 and 5.2, respectively.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 1.6. (See Table I.)

Marital condition (Tables 11 and 14).—In the population 15 years of age and over, 41.2 per cent of the males are single and 25.8 per cent of the females. The percentage married is 53.2 for males and 62.8 for females, and the percentage widowed, 4.3 and 10.1, respectively. The percentages of those reported as divorced, 0.9 and 1.2, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is partly accounted for by the excess of males in the total population, but is due largely to the fact that women marry younger. Thus 12.4 per cent of the females from 15 to 19 years of age are married, as compared with 0.8 per cent of the males, and 53.8 per cent of the females from 20 to 24 years are married, as compared with 19.9 per cent of the males. In the next age group, 25 to 34 years, the percentages are 78 for females and 56.5 for males, while in the age group 35 to 44 the difference is much less, and of those aged 45 and over a larger percentage are married among males than among females. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 57.6 for males and 72 for females; native whites of native parentage, 54.1 and 62.5, respectively; native whites of foreign or mixed parentage, 46.1 and 56.5, respectively; negroes, 54.8 for males and 57.2 for females.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married for males is higher in urban communities, but for females it is higher in rural.

Dwellings and families.—The total number of dwellings in Colorado is 183,874, and the total number of families, 194,467, there being 105.8 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling is 4.3, and the average number per family, 4.1.

[4] State total includes population (510) of Greenwood County, taken to form Bent County and part of Elbert County in 1874.
[5] See Note 3 on page 232.
[6] Includes 66 whites specially enumerated in 1890, not distributed by counties.
[7] Native whites having both parents born in countries other than specified, and also those having both parents of foreign birth but born in different countries.

NOTES REGARDING CHANGES IN BOUNDARIES, ETC.

COUNTIES.

ADAMS.—Organized from part of Arapahoe in 1902 and part of Denver annexed in 1909; parts annexed to Washington and Yuma in 1903. (See also Note 1.)

ARAPAHOE.—Parts taken to form Adams and Denver in 1902 and parts annexed to Washington and Yuma in 1903. (See also Note 1.)

ARCHULETA.—Organized from part of Conejos in 1885.

BACA.—Organized from part of Las Animas in 1889.

BENT.—Organized from part of Greenwood in 1874; parts taken to form Kiowa, Otero, Prowers, and parts of Cheyenne and Lincoln in 1889.

CHAFFEE.—Organized from part of Lake in 1879; part annexed to Fremont between 1890 and 1900.

CHEYENNE.—Organized from parts of Bent and Elbert in 1889.

CONEJOS.—Parts taken to form parts of Hinsdale, La Plata, and Rio Grande in 1874 and Archuleta in 1885.

COSTILLA.—Parts taken to form parts of Hinsdale, La Plata, and Rio Grande in 1874.

CUSTER.—Organized from part of Fremont in 1877.

DELTA.—Organized from part of Gunnison in 1883.

DENVER.—Organized from part of Arapahoe in 1902; part annexed to Adams in 1909. (See also Note 1.)

DOLORES.—Organized from part of Ouray in 1881.

DOUGLAS.—Part taken to form part of Elbert in 1874.

EAGLE.—Organized from part of Summit in 1883.

EL PASO.—Part taken to form part of Teller in 1899.

ELBERT.—Organized from parts of Douglas and Greenwood in 1874; parts taken to form Kit Carson and parts of Cheyenne and Lincoln in 1889.

FREMONT.—Parts taken to form Custer in 1877 and part of Teller in 1899; part of Chaffee annexed between 1890 and 1900.

GARFIELD.—Organized from part of Summit in 1883; part taken to form Rio Blanco in 1889.

GRAND.—Organized from part of Summit in 1874; part taken to form Routt in 1877.

GUNNISON.—Organized from part of Lake in 1877; parts taken to form Pitkin in 1881 and Delta, Mesa, and Montrose in 1883.

HINSDALE.—Organized from parts of Conejos, Costilla, and Lake in 1874; part taken to form part of Mineral in 1893.

JACKSON.—Organized from part of Larimer in 1909. (See also Note 2.)

JEFFERSON.—Part annexed to Park in 1908.

KIOWA.—Organized from part of Bent in 1889.

KIT CARSON.—Organized from part of Elbert in 1889.

LA PLATA.—Organized from parts of Conejos, Costilla, and Lake in 1874; parts taken to form San Juan in 1876 and Montezuma in 1889.

LAKE.—Parts taken to form Gunnison in 1877, Chaffee in 1879, and parts of Hinsdale, La Plata, and Rio Grande in 1874.

LARIMER.—Part taken to form Jackson in 1909. (See also Note 2.)

LAS ANIMAS.—Part taken to form Baca in 1889.

LINCOLN.—Organized from parts of Bent and Elbert in 1889.

LOGAN.—Organized from part of Weld in 1887; parts taken to form Phillips and Sedgwick in 1889.

MESA.—Organized from part of Gunnison in 1883.

MINERAL.—Organized from parts of Hinsdale, Rio Grande, and Saguache in 1893.

MONTEZUMA.—Organized from part of La Plata in 1889.

MONTROSE.—Organized from part of Gunnison in 1883.

MORGAN.—Organized from part of Weld in 1889.

OTERO.—Organized from part of Bent in 1889.

OURAY.—Organized from part of San Juan in 1877; parts taken to form Dolores in 1881 and San Miguel in 1883.

PARK.—Part of Jefferson annexed in 1908.

PHILLIPS.—Organized from part of Logan in 1889.

PITKIN.—Organized from part of Gunnison in 1881.

PROWERS.—Organized from part of Bent in 1889.

RIO BLANCO.—Organized from part of Garfield in 1889.

RIO GRANDE.—Organized from parts of Conejos, Costilla, and Lake in 1874; part taken to form part of Mineral in 1893.

ROUTT.—Organized from part of Grand in 1877.

SAGUACHE.—Part taken to form part of Mineral in 1893.

SAN JUAN.—Organized from part of La Plata in 1876; part taken to form Ouray in 1877.

SAN MIGUEL.—Organized from part of Our y in 1883.

SEDGWICK.—Organized from part of Logan in 1889.

SUMMIT.—Parts taken to form Grand in 1874 and Eagle and Garfield in 1883.

TELLER.—Organized from parts of El Paso and Fremont in 1899.

WASHINGTON.—Organized from part of Weld in 1887; part taken to form Yuma in 1889; parts of Adams and Arapahoe annexed in 1903. (See also Note 1.)

WELD.—Parts taken to form Logan and Washington in 1887 and Morgan in 1889.

YUMA.—Organized from part of Washington in 1889; parts of Adams and Arapahoe annexed in 1903. (See also Note 1.)

NOTE 1.—*Adams, Arapahoe, Denver, Washington, and Yuma Counties combined.*—Total population: 1910, 247,037; 1900, 155,987; increase, 1900–1910, 91,050; per cent of increase, 58.4. Urban population—1910, 216,364; same places in 1900, 140,472; per cent of increase, 54. Rural population—1910, 30,673; same territory in 1900, 15,515; per cent of increase, 97.7. Urban population—1900, 133,859; rural population—1900, 22,128. Per cent in places of 2,500 or more in 1910, 87.6. Per cent in places of 2,500 or more in 1900, 85.8.

NOTE 2.—*Jackson and Larimer Counties combined.*—Total population: 1910, 26,283; 1900, 12,168; increase, 1900–1910, 14,115; per cent of increase, 116. Urban population—1910, 11,861; same places in 1900, 4,588; per cent of increase, 158.5. Rural population—1910, 14,422; same territory in 1900, 7,580; per cent of increase, 90.2. Urban population—1900, 3,053; rural population—1900, 9,115. Per cent in places of 2,500 or more in 1910, 45.1. Per cent in places of 2,500 or more in 1900, 25.1.

NOTE 3.—In computing this increase the population of Indian reservations in 1900 has been deducted from the total population of the county in order to make that total comparable with the total for 1890 which does not include the population of Indian reservations. The population thus deducted in the several counties was as follows: Archuleta, 100; La Plata, 486; Montezuma, 559.

CITIES.

BOULDER.—Part of precinct 31 annexed in 1905 and parts of precincts 4, 22, 29, 30, and 31 annexed in 1908.

COLORADO SPRINGS.—Parts of precinct 22 annexed in 1901 and 1910, parts of precinct 50 annexed in 1902 and 1903, part of precinct 5 annexed in 1905, and parts of precinct 21 annexed in 1906 and 1910.

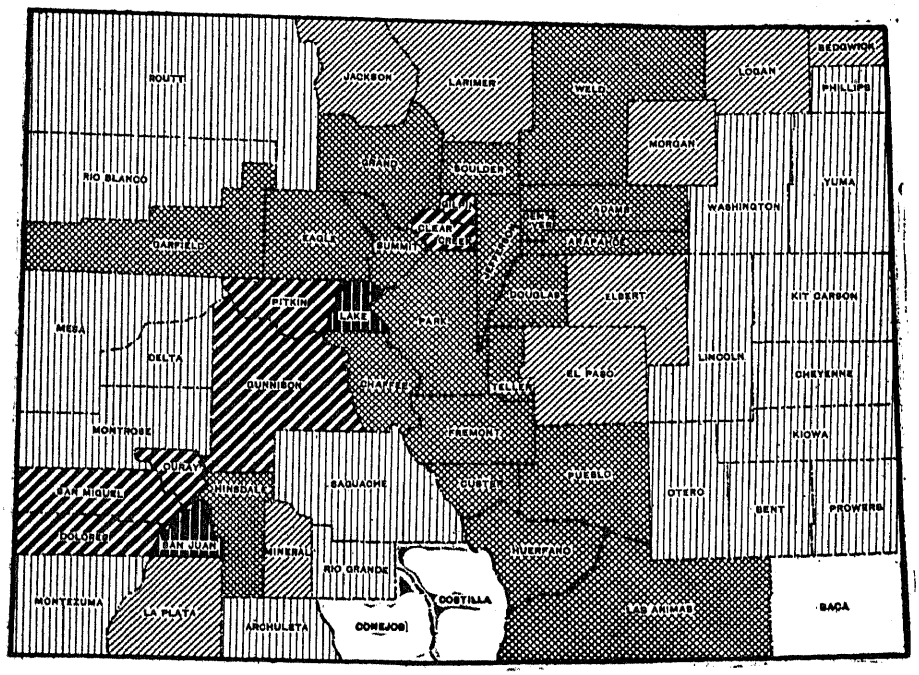
DENVER.—Middle, North, and South Globeville precincts and part of Retreat Park precinct (comprising Globeville town), West Elyria precinct and part of East Elyria precinct (comprising Elyria town), part of Argo precinct (comprising Argo town), part of Berkeley precinct (comprising Berkeley town), part of Montclair precinct (comprising Montclair town), part of Valverde precinct (comprising Valverde town), and Paper Mills precinct, all in Arapahoe County, annexed in 1902. Highlands city annexed between 1890 and 1900.

ENGLEWOOD.—Incorporated in 1909.

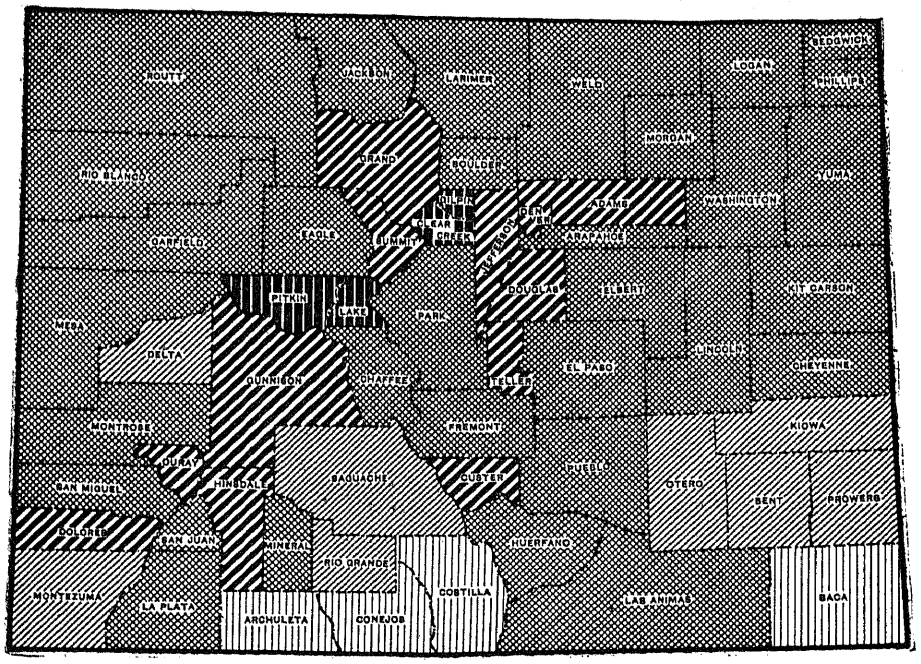
PUEBLO.—Part of old precinct 5 annexed in 1904. Bessemer city annexed between 1890 and 1900.

PROPORTION OF FOREIGN-BORN WHITE AND NATIVE WHITE OF FOREIGN OR MIXED PARENTAGE OF COLORADO, BY COUNTIES: 1910.

PER CENT OF FOREIGN-BORN WHITE IN TOTAL POPULATION.



PER CENT OF NATIVE WHITE OF FOREIGN OR MIXED PARENTAGE IN TOTAL POPULATION.



Less than 5 per cent.
5 to 10 per cent.
10 to 15 per cent.

CONNECTICUT.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Connecticut, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 241) shows the population of Connecticut, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties and of the primary divisions in each county is alphabetical. The figures for secondary divisions and for wards and voting districts of cities are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

Table 2 (p. 243) shows separately the towns having in 1910, 2,500 inhabitants or more and the cities and boroughs in Connecticut, alphabetically arranged, with their population in 1910, 1900, and 1890. For cities and boroughs there is given in each case, in addition to the county, the name of the town in which it is located or with which it is coextensive.

The population of Connecticut, by counties, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more. In the New England States, in addition to cities having this population, all towns having a population of 2,500 or more have also been classed as urban, without regard to the population of the villages (whether incorporated or not) which they may contain. The result is that the "urban areas" in New England include some population which in other sections of the United States would be segregated as "rural." This departure from the general rule, rendered necessary by local conditions in New England, probably makes no great change in the proportions of urban and rural population in those sections where population is dense and generally devoted to manufacturing. In other sections a considerable variation doubtless results, but there is no reason to suppose that it materially affects the distinguishing characteristics of urban and rural population as defined by census statistics.

Urban population being thus defined, the remainder of the state or county is classed as rural. In the New England States, therefore, the rural population consists of the population outside of towns and cities having 2,500 inhabitants or more.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the *proportion* of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the

---

HISTORICAL NOTE.—Connecticut derives its name from that of the Connecticut River, the pure Indian form of the name, *Quinnitukut*, meaning "long river."

The first European to visit the region now constituting Connecticut was probably Adrian Block, a Dutch navigator, who in 1614 discovered and explored the Connecticut River. The English claimed it by virtue of the discoveries of the Cabots of 1497 and more particularly of 1498. The present area of Connecticut was included in the grants conveyed by James I of England to the Plymouth Company in 1606 and 1620.

In 1633 some English settlers from the Plymouth colony sailed up the Connecticut River and erected a trading house on the present site of Windsor. They found that the Dutch had already constructed a rude earthwork at a point where Hartford now stands, a post which men of the nation named held for the next 20 years. The first permanent settlements, however, were made during the period 1634–1636 at Wethersfield, Windsor, and Hartford by the migration of a large majority of the inhabitants of three Massachusetts towns, Dorchester, Watertown, and Newtown, who moved to Connecticut on account of their dissatisfaction with the theocratic government of Massachusetts. A constitution for the government of these colonies was approved by general vote of the people in 1639.

In July, 1635, John Winthrop, jr., was made governor of the "River Connecticut." In 1635 a party of 20 men was sent out by Winthrop and took possession of the region at the mouth of the Connecticut River. This tract, of between 60 and 80 square miles, which they called Saybrook, remained independent of the other colonies until 1644, when it was sold to Connecticut by its agent, Col. Fenwick, on his own authority.

New Haven was settled in 1638 by a group mainly composed of Londoners who had the previous year come to Boston under the leadership of John Davenport.

In 1662 the colony of Connecticut obtained from the King a charter, which was really a royal confirmation of the constitution of 1639. By this charter Connecticut was defined as bounded on the north by Massachusetts and as extending from Narragansett Bay to the Pacific Ocean. Accordingly the colony of New Haven, in spite of its vehement opposition, was incorporated into the colony of Connecticut.

With the exception of the brief period of the Andros régime, the charter of 1662 remained the fundamental law of the colony and later of the state until 1818, when the present constitution was adopted. Boundary disputes with Rhode Island on the east and New York on the west were finally adjusted by the adoption of what are practically the present boundary lines, the former in 1727–28, the latter in 1683.

In 1786 Connecticut ceded to the Federal Government her claims to western lands which were based on the charter of 1662, but the state was given title to the region in northeastern Ohio known as the Western Reserve. In 1792 part of this tract was devoted to the relief of persons burned out or plundered by the British; the rest of it was sold—the last of it being disposed of in 1825.

Connecticut was one of the original thirteen states.

According to estimates and censuses taken prior to the first Federal census, in 1790, the population of the colony of Connecticut at different dates was as follows: 1643 (estimate), 5,500; 1665 (estimate), 9,000; 1679 (estimate), 14,000; 1689 (estimate), 20,000; 1713 (estimate), 34,000; 1730 (estimate), 51,600; 1749 (estimate), 100,000; 1756 (census), 130,612; 1761 (census), 146,520; 1774 (census), 197,910; 1782 (census), 208,850.

territory according to the conditions *as they existed* at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their *rate of growth*, it is necessary to consider the changes in population for the *same* territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Connecticut is 1,114,756. Compared with a population of 908,420 in 1900, this represents an increase during the past decade of 206,336, or 22.7 per cent. During the same period the total population of the United States increased 21 per cent. The percentage of increase for the state during this decade, though comparatively small, is larger than that shown at any census since 1860.

The following table shows the population of Connecticut at each census from 1790 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent. of increase for the United States.
		Number.	Per cent.	
1910	1,114,756	206,336	22.7	21.0
1900	908,420	162,162	21.7	20.7
1890	746,258	123,558	19.8	25.5
1880	622,700	85,246	15.9	30.1
1870	537,454	77,307	16.8	22.6
1860	460,147	89,355	24.1	35.6
1850	370,792	60,814	19.6	35.9
1840	309,978	12,303	4.1	32.7
1830	297,675	22,427	8.1	33.5
1820	275,248	13,306	5.1	33.1
1810	261,942	10,940	4.4	36.4
1800	251,002	13,056	5.5	35.1
1790	237,946	.....	.....	.....

This table shows that for the earlier decades the rate of increase of the population of the state was slow. During the 50 years from 1790 to 1840 the increase was only 72,032, during the decade from 1840 to 1850 the increase was 60,814, and since 1850 the increase has been 743,964. The highest rate of increase, 24.1 per cent, was during the decade from 1850 to 1860, and the nearest approach to this has been the rate of increase for the last decade. The increase in population during the last decade nearly equaled the total population of the state in 1790.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that the increase during each decade up to 1890 was much less rapid for the state than for the country as a whole. During the last two decades the rate of increase for the state has been slightly higher than that for the United States. The population of the state in 1910 was almost five times as large as in 1790, when the First Census was taken, while the population of the United States in 1910 was more than twenty-three times that in 1790.

In 1790 Connecticut contained 23.6 per cent of the total population of New England, which was 1,009,408. The proportion of New England's population in Connecticut decreased steadily until 1850, when it was 13.6 per cent. In 1910, after 60 years of more rapid growth, Connecticut comprised 17 per cent of the population of New England, which was 6,552,681. In the years that have elapsed since the First Census was taken, the population of the New England States has multiplied more than six times, while that of Connecticut has multiplied less than five times.

Principal cities.—Connecticut has 18 cities. Seven of the cities have a population of 25,000 inhabitants or more. New Haven, the largest city, has a population of 133,605, while Bridgeport, the second city, has a population of 102,054. Hartford and Waterbury are the only other cities in the state having over 50,000 inhabitants. There are three cities having from 25,000 to 50,000, 6 from 10,000 to 25,000, and 5 from 5,000 to 10,000 inhabitants, respectively. The aggregate population of the 18 cities was 642,054, or 57.6 per cent of the total population of the state.

Table 2 shows the population of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table on page 237 shows the population of the 10 largest cities in 1910, as reported at each census since their incorporation as cities in so far as figures are available, together with the increase during each decade.

CITY AND CENSUS YEAR.	Population.	INCREASE[1] OVER PRECEDING CENSUS.	
		Number.	Per cent.
Bridgeport:

[1] A minus sign (−) denotes decrease.

[2] Town and city not returned separately.

Of the cities included in the foregoing table, New Britain shows the highest percentage of increase during the last decade, namely, 68.9 per cent, and New London the lowest, 12 per cent. Although Hartford and New Haven show a substantial growth during the decade, their percentages of increase are lower than for any decade since 1880. New Haven still remains the largest city in the state. The second city in point of size is now Bridgeport, which during the last decade passed Hartford, the population of Bridgeport increasing 43.7 per cent, while that of Hartford increased but 23.9 per cent.

Counties.—Connecticut has eight counties. The population of these counties ranges from 337,282 in New Haven County to 26,459 in Tolland County.

There have been no changes in the territorial boundaries of the counties since 1900.

Every county in the state has increased in population during the last decade, the percentages of increase ranging from 3.2 per cent in Windham County to 33.2 per cent in Fairfield County, and the absolute increases from 1,500 in Windham County to 68,119 in New Haven County. In three of the eight counties the percentage of increase is larger than that for the state as a whole, which, as before stated, was 22.7 per cent.

A map on page 240 shows the increase in the total population of each county of Connecticut during the last decade, the different rates of increase being indicated by differences in shading.

Density of population.—The total land area of the state is 4,820 square miles. The average number of persons to the square mile is 231.3; in 1900 and 1890 it was 188.5 and 154.8, respectively. The average number per square mile for the United States as a whole is 30.9.

In density of population Connecticut ranks fourth among the states, being preceded by Rhode Island, Massachusetts, and New Jersey, in the order named.

The density of population is shown by counties in Table I of Chapter 2 and in a map on page 240.

Litchfield County, with 925 square miles, has the largest area, and Middlesex County, with 369 square miles, the smallest area. New Haven County has the highest density of any county, namely, 559.3 persons per square mile, and Tolland County the lowest, namely, 65.5.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." The counties of Connecticut are divided into 168 primary divisions, comprising that number of towns. There are also 18 cities and 26 incorporated boroughs in the state. The cities and boroughs are not independent minor civil divisions, but usually form parts of the towns in which they are located. Eight of the cities and one borough, however, are coextensive with the towns in which they are located. One borough, Fair Haven East, forms part of New Haven, and for this reason is not shown separately in Tables 1 and 2.

Cities and boroughs.—Of the 25 incorporated boroughs in Connecticut in 1910 for which the population is shown separately, 14 had more than 2,500 inhabitants each, with a combined population of 89,743, while 11 had less than 2,500 inhabitants each, with a combined population of 11,812.

The 43 places having in 1910 either the city or the borough form of incorporation had an aggregate population of 743,609, or 66.7 per cent of the total population of the state. Four boroughs have been incorporated since the census of 1900. The population in 1900 of the 39 cities and boroughs incorporated prior to that year was 560,681, or 61.7 per cent of the total population of the state. In 1910 the same cities and boroughs had a population of 739,509, or 66.3 per cent of the total population of the state. This represents an increase during the decade of 178,828, or 31.9 per cent. Outside these cities and boroughs the population increased 27,508, or 7.9 per cent. The changes in population resulting from changes in the limits of boroughs and cities have not been considered in calculating these increases.

Urban and rural population compared.—The following table presents the population of Connecticut at the censuses of 1910, 1900, and 1890, respectively, distributed among towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census. It may be noted in connection with this table that the classification is by towns and that no reference is made to cities. This is because every city in Connecticut is either coextensive with a town or is included within and forms part of a town.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.		
	Number of places.	Population.	Number of places.	Population.	Number of places.	Population.	1910	1900	1890

Towns of 5,000 to 10,000 inhabitants	19	132,894	16	115,215	15	99,956	11.9	12.7	13.4
Towns of 2,500 to 5,000 inhabitants	32	114,721	36	123,970	36	121,997	10.3	13.6	16.3
Rural territory[1]	**96**	**114,917**	**98**	**115,825**	**102**	**123,097**	**10.3**	**12.8**	**16.5**

[1] Towns of less than 2,500 inhabitants.

The population living in towns of 2,500 inhabitants or more is here classified as urban; the number of said towns is 72. More than one-half of the urban population in 1910 was in towns of 25,000 inhabitants or more, these towns having a combined population of 540,752, or 48.5 per cent of the total population of the state.

The urban territory of the state in 1910—that is, the towns of 2,500 inhabitants or more—contained 999,839 inhabitants, or 89.7 per cent of the total population, while 114,917 inhabitants, or 10.3 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the towns then having 2,500 inhabitants or more—contained 792,595 inhabitants, or 87.2 per cent of the total population, while 115,825 inhabitants, or 12.8 per cent, lived in rural territory. There has thus been a slight increase in the proportion of urban population during the last decade. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

In 1890 no city or town in Connecticut had over 100,000 population. New Haven passed that limit between 1890 and 1900, and Bridgeport between 1900 and 1910. As a result, the class, "towns of 100,000 or more," which was not represented in 1890, contained 21.1 per cent, or more than one-fifth, of the total population of the state in 1910. The relative importance of all classes below that limit has diminished since 1890.

Table I of Chapter 2 shows that in every county in the state a larger proportion of the population lived in urban territory in 1910 than in 1900. This table also indicates that in 1910 each county in the state had more than one-half of its population living in urban territory as here defined. The largest proportions of urban population are found in Fairfield, New Haven, and Hartford Counties, in each of which at least 95 per cent of the population lives in urban territory.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis, and the aggregate population in 1910 and 1900 of the same places is then compared. Thus, as shown in the following table, the total population in 1910 of those towns which at that time had 2,500 inhabitants or more was 999,839; in 1900 the total population of these same towns was 794,381. It may be noted that the latter figure exceeds the total population in 1900 of those towns which at that time had over 2,500 inhab-

itants each, 792,595 (see table, p. 238), by 1,786. This difference is due to two things: First, four towns having less than 2,500 inhabitants each in 1900, with a combined population of 8,017, had more than 2,500 inhabitants each in 1910; and, second, two towns having more than 2,500 inhabitants each in 1900, with a combined population of 6,231, had less than 2,500 inhabitants each in 1910.

The comparison of the total population in 1910 of places having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the next table, shows an increase of 25.9 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased eight-tenths of 1 per cent. Urban population thus increased much more rapidly than rural. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2, there were three counties in Connecticut in which the population living in rural territory as here defined decreased and none in which there was a decrease in urban population.

For the state as a whole population classified as urban is still further distributed in the following table, which shows, for 1910 and 1900, the combined population of the towns having in 1910, 100,000 inhabitants or more, from 25,000 to 100,000, and from 2,500 to 25,000 inhabitants, respectively, and the population of the remainder of the state.

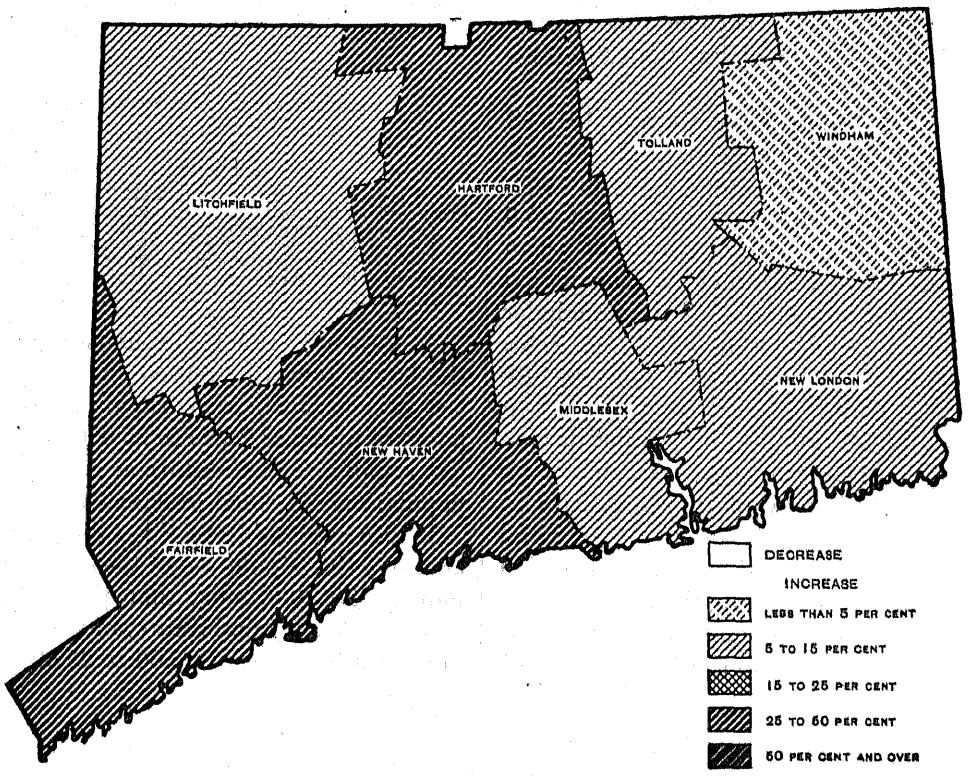
CLASS OF PLACES.	POPULATION.		INCREASE: 1900–1910	
	1910	1900	Number.	Per cent.
The state	**1,114,756**	**908,420**	**206,336**	**22.7**
Urban territory in 1910	999,839	794,381	205,458	25.9
Towns of 100,000 or more in 1910	235,659	179,023	56,636	31.6
Towns of 25,000 to 100,000 in 1910	305,093	231,362	73,731	31.9
Towns of 2,500 to 25,000 in 1910	459,087	383,996	75,091	19.6
Remainder of the state	114,917	114,039	878	0.8

As shown by this table the two groups composed of the larger towns increased in population during the last decade much more rapidly, and the group composed of towns of 2,500 to 25,000 inhabitants increased less rapidly, than the state as a whole, while the rural population remained practically stationary.

It also appears from this table that of the total increase in the population of the state during the decade, namely, 206,336, more than three-fifths was in towns of over 25,000 inhabitants and somewhat more than one-third in towns of 2,500 to 25,000 inhabitants.

INCREASE AND DENSITY OF POPULATION OF CONNECTICUT, BY COUNTIES: 1910.

INCREASE OF POPULATION.



DENSITY OF POPULATION.

[1] Now coextensive with town in which located.

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Connecticut by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for towns of over 25,000 inhabitants; Table III for towns of 10,000 to 25,000; Table IV for towns of 2,500 to 10,000; and Table V for wards of cities of 50,000 or more.

A series of summary tables (numbered 1 to 16) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, it is desirable that the two classes be distinguished in presenting census data. The Bureau of the Census has undertaken to do this by classifying as urban the population of all incorporated places of 2,500 inhabitants or more. In New England, however, where many villages of considerable size are not separately incorporated, it was deemed best to classify also towns of 2,500 inhabitants or more as urban, although this classification is not very satisfactory because such towns generally include more or less population that is essentially rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Connecticut, 395,649, or 35.5 per cent, are native whites of native parentage; 374,489, or 33.6 per cent, are native whites of foreign or mixed parentage; 328,759, or 29.5 per cent, are foreign-born whites; and 15,174, or 1.4 per cent, are negroes. The corresponding percentages in 1900 were 41, 31.1, 26.1, and 1.7, respectively, the proportion of native whites of native parentage having decreased during the decade. In each county of the state the foreign-born whites constitute a considerable proportion (from 24.5 to 31.7 per cent) of the population, and in each the percentage of native whites of foreign or mixed parentage exceeds that of foreign-born whites. (See maps on page 265.)

Of the urban population, 33.1 per cent are native whites of native parentage; of the rural, 56.4 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 34.9 and 22.3 per cent, respectively. The percentage of foreign-born whites is 30.6 in the urban population and 20.1 in the rural.

Sex (Tables 2 and 12).—In the total population of the state there are 563,642 males and 551,114 females, or 102.3 males to 100 females. In 1900 the population was about equally divided between the sexes. Among native whites the ratio is 96.8, and among foreign-born whites 116.7, to 100. In the urban population there are 101.7 males to 100 females, and in the rural, 107.8.

State of birth (Tables 3 and 4).—Of the native population—that is, population born in the United States—77.3 per cent were born in Connecticut and 22.7 per cent outside the state; of the native white population, 22.1 per cent were born outside the state; and of the native negro, 50.7 per cent. Persons born outside the state constitute approximately the same proportion of the native population in urban as in rural communities.

Foreign nationalities (Tables 5 and 13).—Of the foreign-born white population of Connecticut, persons born in Ireland represent 17.8 per cent; Italy, 17.3; Russia, 16.5; Germany, 9.5; Canada, 8.1; Austria, 7.2; England, 6.8; Sweden, 5.5; Hungary, 4.2; Scotland, 2.1; all other countries, 4.9. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Ireland contributed 25.9 per cent; Italy, 12.8; Russia, 11.9; Germany, 11.1; Canada, 8.5; England, 7.5; Austria, 5.4; Sweden, 4.9; Hungary, 3.1; Scotland, 2.1; France, 0.7; Denmark, 0.7.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 347,692, representing 31.2 per cent of the population. Of such males, 34.4 per cent are native whites of native parentage, 20 per cent native whites of foreign or mixed parentage, 44.1 per cent foreign-born whites, and 1.4 per cent negroes. Of the 153,168 foreign-born white males of voting age, 60,608, or 39.6 per cent, are naturalized. Males of militia age—18 to 44—number 257,996.

Age (Tables 7, 8, and 14).—Of the total population, 10.1 per cent are under 5 years of age, 17.6 per cent from 5 to 14 years, inclusive, 18.8 per cent from 15 to 24, 31.7 per cent from 25 to 44, and 21.6 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 5.9 per cent of this class being under 15 years of age, while 75 per cent are 25 years of age and over. Of the native whites of foreign or mixed parentage, 32.3 per cent are 25 and over and of the native whites of native parentage, 55.2 per cent.

Of the urban population, 47 per cent are under 25 years of age, 32.2 per cent from 25 to 44, and 20.7 per cent 45 and over. The corresponding percentages for the rural are 42.2, 27.4, and 30, respectively, thus showing that the proportion under 45 is smaller in the rural population, while the proportion of older people is larger.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 208,454, of whom 192,497, or 64.5 per cent, attended school. In addition to these, 11,492 persons under 6 and 2,966 of 21 and over attended school. For boys and for girls from 6 to 20 years, inclusive, the percentage attending school was 64.5. For children from 6 to 14 years, inclusive, the percentage attending school was 92.3. The percentage for children of this age was the same (92.6) among native whites of native parentage and native whites of foreign or mixed parentage, and it was slightly lower for foreign-born whites (89.2). (See Table I.) There is little difference between urban and rural communities as regards school attendance, although the percentage in school for children from 6 to 14 is slightly higher in the urban, and for those from 15 to 20 slightly higher in the rural.

Illiteracy (Table 10).—There are 53,665 illiterates in the state, representing 6 per cent of the total population 10 years of age and over, as compared with 5.9 for 1900. The percentage of illiteracy is 15.4 among foreign-born whites, 6.3 among negroes, and 0.6 among native whites.

For all classes combined, the percentage illiterate in urban communities (6) is somewhat higher than that in rural communities (5.2), although for each class separately the percentage is higher in the rural.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is only 2.2. (See Table I.)

Marital condition (Tables 11 and 15).—In the population 15 years of age and over, 39.3 per cent of the males are single, and 33.6 per cent of the females. The percentage married is 55.3 for males and 54.6 for females, and the percentage widowed 4.8 and 11.2, respectively. The percentages of those reported as divorced, 0.3 and 0.4, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is smaller for women than for men is due largely to the fact that women marry younger. Thus 5.7 per cent of the females from 15 to 19 years of age are married, as compared with 0.5 per cent of the males, and 39.6 per cent of the females from 20 to 24 years are married, as compared with 18.5 per cent of the males. In the next age group, 25 to 34 years, the difference is not so great, the percentages being 68.9 for females and 59.8 for males, while in the age group 35 to 44 the difference practically disappears. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 63.2 for males and 66.2 for females; native whites of native parentage, 56.7 and 51.8, respectively; native whites of foreign or mixed parentage, 39.4 and 42.9, respectively; negroes, 56.5 for males and 51.1 for females.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married for females is slightly higher in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Connecticut is 181,911, and the total number of families 246,659, there being 135.6 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling is 6.1, and the average number per family, 4.5.

WATERBURY.—Waterbury city made coextensive with Waterbury town in 1902.

DELAWARE.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Delaware, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole, of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 273) shows the population of Delaware distributed according to counties and minor civil divisions at the last three censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties is alphabetical, while the primary divisions in each county are given in numerical order. The figures for secondary divisions and for wards of cities are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

The population of the state in 1910 was returned by representative districts; in 1900 it was returned by hundreds. Comparisons of the population in 1910 are made in this table with the population of 1900 and of 1890 wherever the representative districts coincide in area with the hundreds for which the population was returned at the earlier censuses. In many cases, however, these areas do not coincide, and for this reason it is impossible to present strictly comparable figures for all representative districts. As a result in the case of two counties the totals for 1900 and 1890 exceed the aggregate population of the minor civil divisions given in the table.

Table 2 (p. 274) shows the cities and incorporated towns in Delaware, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of Delaware, by counties, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The total density of population is obtained by dividing the population of the state or county by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make a scarcely appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, representative districts, etc. Of these minor civil divisions, those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units or subdivisions are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses. The territory comprising the urban and the rural population of the state, respectively, remained unchanged from 1900 to 1910. Thus, in Delaware, there are no disturbing effects on these comparisons such as arise in other states from the passage, for example, of communities classed as rural in 1900 into the urban group in 1910.

HISTORICAL NOTE.—Delaware takes its name from the river and bay which form a part of its eastern boundary, and which were named in honor of Lord de la Warr, governor of Virginia, by Samuel Argall, one of his associates, who explored the bay in 1611.

The region now constituting Delaware was included in the several Virginia charters (1606-1612), but the first explorer to visit it was Henry Hudson, sailing under the Dutch flag, who discovered the bay and river in 1609. In 1631 a Dutch settlement was made near the present site of Lewes, but it was destroyed by the Indians shortly afterwards. The first permanent settlement within the present limits of the state was made in 1638 by a colony of Swedes under Peter Minuit, who built Fort Christiana near the present site of Wilmington and named the country New Sweden. The Swedes were conquered by the Dutch of New Netherland in 1655, and from that time until 1664 the Dutch claimed and controlled the territory.

In 1664 New Netherland was taken by the English under the Duke of York. The counties now forming Delaware were surrendered by the Dutch at the same time, and from 1664 to 1673 were under the jurisdiction of New York. In the latter year the Dutch retook New York and a Dutch governor was appointed for the Delaware counties. In the following year, however, these counties reverted to the English and again passed under the jurisdiction of New York.

In 1682 William Penn, who in the preceding year had been granted the province of Pennsylvania, acquired the Delaware counties (then called "The Territories") from the Duke of York. Lord Baltimore disputed the possession of this territory, but the crown ruled against his claim. For about 20 years The Territories were governed as a part of Pennsylvania; then they were given a separate legislature, but remained under the governor of Pennsylvania until the outbreak of the Revolution.

In 1776 The Territories, under the name of Delaware and with substantially the present boundaries of the state, adopted a state constitution. The new commonwealth took part in the Revolution, and in December, 1787, ratified the Federal Constitution.

Delaware was one of the original thirteen states.

According to estimates made prior to the first Federal census, in 1790, the population of the colony of Delaware at different dates was as follows: 25,000 in 1770 and 37,000 in 1780.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Delaware is 202,322. Compared with a population of 184,735 in 1900, this represents an increase during the past decade of 17,587, or 9.5 per cent. During the same period the total population of the United States increased 21 per cent. The percentage of increase for the state during this decade is almost identical with that for the preceding decade, 1890–1900, but it is considerably lower than that for any other decade since 1840.

The following table shows the population of Delaware at each census from 1790 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910	202,322	17,587	9.5	21.0
1900	184,735	16,242	9.6	20.7
1890	168,493	21,885	14.9	25.5
1880	146,608	21,593	17.3	30.1
1870	125,015	12,799	11.4	22.6
1860	112,216	20,684	22.6	35.6
1850	91,532	13,447	17.2	35.9
1840	78,085	1,337	1.7	32.7
1830	76,748	3,999	5.5	33.5
1820	72,749	75	0.1	33.1
1810	72,674	8,401	13.1	36.4
1800	64,273	5,177	8.8	35.1
1790	59,096	.....	.....	.....

It will be noticed from this table that the earlier censuses showed a slower and more irregular growth in the population of the state than have the later ones. From 1790 to 1810 the absolute increase in population was 13,578, or 23 per cent; from 1810 to 1840 the increase was 5,411, or 7.4 per cent. The increase for the 50 years from 1790 to 1840, therefore, was 18,989, or 32.1 per cent. During the next 50 years, from 1840 to 1890, the population of the state more than doubled. Since 1890 the absolute increase has been 33,829, or 20.1 per cent. The absolute increase in the last decade nearly equaled the total growth in the population of the state from 1790 to 1840.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that the increase during each decade has been much less rapid for the state than for the country as a whole. The population of the state in 1910 was less than three and one-half times as large as in 1790, when the First Census was taken, while the population of the United States in 1910 was more than twenty-three times that in 1790.

Counties.—Delaware has 3 counties, Kent, New Castle, and Sussex. There have been no changes in the territorial boundaries of the counties since 1900.

Two of the three counties, New Castle and Sussex, showed increases in population during the last decade. The increase in New Castle County was 13,491, or 12.3 per cent; that in Sussex County, 4,137, or 9.8 per cent. There was a decrease of 41, or one-tenth of 1 per cent, in the population of Kent County.

The maps on page 271 show the increase or decrease in the total and the rural population, respectively, of each county of Delaware during the last decade. In the one county shown in white the population decreased, while in the two counties shaded with diagonal lines it increased.

Cities.—Delaware has two cities, Wilmington and New Castle, with 87,411 and 3,351 inhabitants, respectively. The following table shows the population of Wilmington at each census since its incorporation as a city, together with the increase during each decade.

CITY AND CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.	
		Number.	Per cent.
Wilmington:			
1910	87,411	10,903	14.3
1900	76,508	15,077	24.5
1890	61,431	18,953	44.6
1880	42,478	11,637	37.7
1870	30,841	9,583	45.1
1860	21,258	7,279	52.1
1850	13,979	5,612	67.1
1840	8,367	.....	.....

Wilmington has grown rapidly since its incorporation as a city in 1832. The rate of increase, however, for the last decade has been lower than that shown at any previous census since it became a city. In 1840 its population constituted 10.7 per cent of the total population of the state; in 1910 it constituted 43.2 per cent.

Density of population.—The total land area of the state is 1,965 square miles. The average number of persons to the square mile is 103; in 1900 and 1890 it was 94 and 85.7, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9. In density of population Delaware ranks ninth among the states.

The density of population is given by counties in Table I of Chapter 2 and in the maps on page 272, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 inhabitants or more, but not excluding the land area of such places.

Sussex County, with 913 square miles, has the largest area, and New Castle County, with 435 square miles, has the smallest. New Castle County, containing Wilmington city, has the highest density of any county, 283.2 persons per square mile, while Sussex County, with 50.8 persons per square mile, has the lowest.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Delaware the counties are divided into 35 primary divisions, comprising that number of representative districts; there are also 46 secondary divisions, of which 2 are cities and 44 are incorporated towns. One city comprises five representative districts.

Formerly, the counties of Delaware were divided, for purposes of local government, into civil divisions known as "hundreds." Under the provisions of the constitution of 1897, however, the "hundred" is no longer recognized as a civil division and in its stead there have been created 35 representative districts. In Table 1 the population is given by representative districts, and the population of cities and towns is presented as forming a part of the population of the representative districts in which these cities and towns are located. The representative district, however, is little more than an election district, serving also as the unit of local taxation.

Urban and rural population compared.—The following table presents the population of Delaware at the censuses of 1910, 1900, and 1890, respectively, distributed among cities and towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.		
	Number of places.	Population.	Number of places.	Population.	Number of places.	Population.	1910	1900	1890
Total population	.....	202,322	.....	184,735	.....	168,493	100.0	100.0	100.0
Urban territory	**4**	**97,085**	**4**	**85,717**	**4**	**71,067**	**48.0**	**46.4**	**42.2**
Cities and towns of—									
50,000 inhabitants or more	1	87,411	1	76,508	1	61,431	43.2	41.4	36.5
2,500 to 5,000 inhabitants	3	9,674	3	9,209	3	9,636	4.8	5.0	5.7
Rural territory	.....	**105,237**	.....	**99,018**	.....	**97,426**	**52.0**	**53.6**	**57.8**
Towns of less than 2,500 inhabitants	42	29,027	31	24,332	30	21,150	14.3	13.2	12.6
Other rural territory	.....	76,210	.....	74,686	.....	76,276	37.7	40.4	45.3

As shown by the above table, the urban territory of the state in 1910—that is, the cities and incorporated towns of 2,500 inhabitants or more—contained 97,085 inhabitants, or 48 per cent of the total population, while 105,237 inhabitants, or 52 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities and incorporated towns then having 2,500 inhabitants or more—contained 85,717 inhabitants, or 46.4 per cent of the total population, while 99,018 inhabitants, or 53.6 per cent, lived in rural territory. There has thus been a slight increase in the proportion of urban population. The proportion of urban population outside the city of Wilmington, or that in cities and towns of 2,500 to 5,000 inhabitants, however, has decreased slightly since 1900. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

The urban population of the state in 1910 was contained in 4 places comprising, as just stated, a combined population of 97,085, or 48 per cent of the total population of the state. Wilmington city, the only place in the state having over 5,000 inhabitants, had 90 per cent of the urban population. The rural population comprised 29,027 persons living in 42 incorporated towns of less than 2,500 inhabitants each, and 76,210 persons living in unincorporated territory. The 42 incorporated places of less than 2,500 inhabitants each comprised 10 towns having from 1,000 to 2,500 inhabitants, with a combined population of 16,866; 8 towns having from 500 to 1,000 inhabitants, with a combined population of 5,269; and 24 towns having less than 500 inhabitants, with a combined population of 6,892.

The comparison of the total population in 1910 of places having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table on page 270, shows an increase of 11,368, or 13.3 per cent. This represents the rate of growth of urban communities as thus defined. Similarly, in rural territory there has been an increase during the decade of 6,219, or 6.3 per cent. The popu-

lation of urban areas thus increased a little more than twice as fast as rural. Of the total increase in urban population 95.9 per cent was contributed by the city of Wilmington. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent.

In the next table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the population of the city of Wilmington, the combined population of the cities and towns having in 1910 from 2,500 to 25,000 inhabitants, and the population of the remainder of the state.

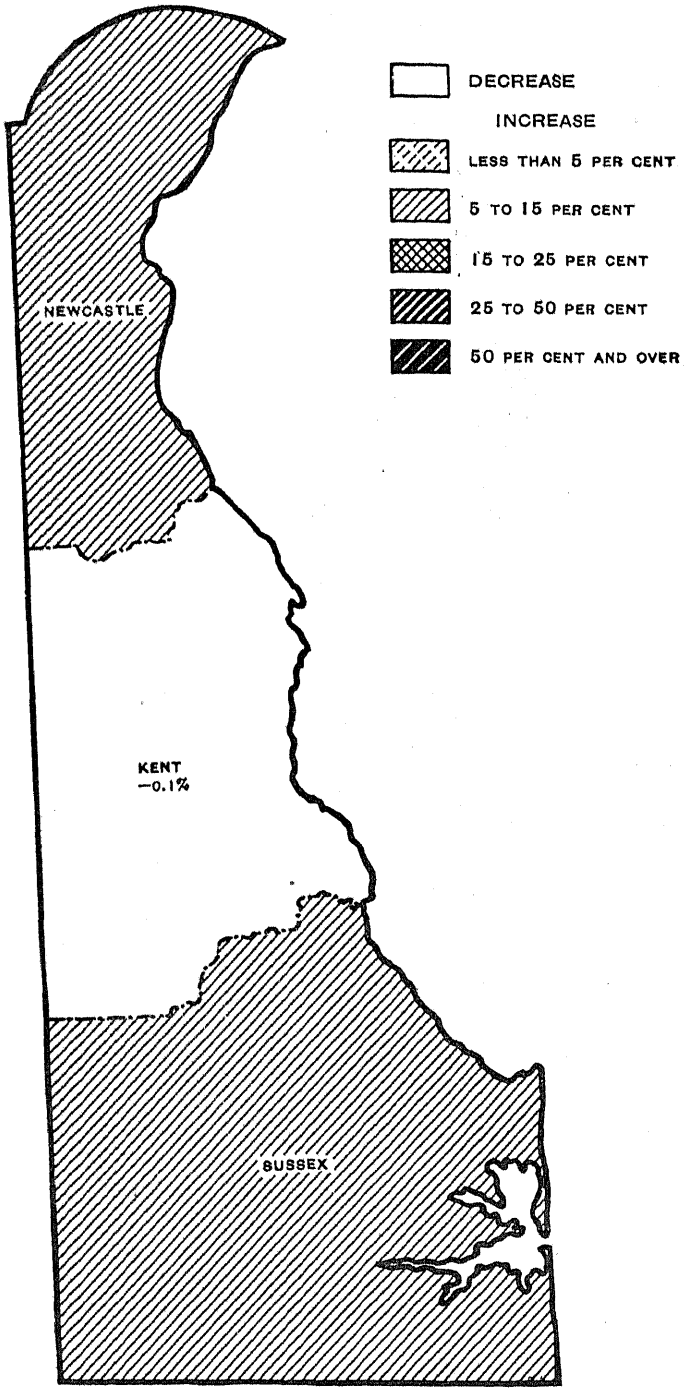
From this table it appears that the city of Wilmington increased more than one and one-half times as rapidly as the state as a whole, while the rate of increase for the cities and towns having from 2,500 to 25,000 inhabitants was only a little more than half that for the state as a whole.

CLASS OF PLACES.	POPULATION.		INCREASE: 1900–1910	
	1910	1900	Number.	Per cent.
The state	**202,322**	**184,735**	**17,587**	**9.5**
Urban territory in 1910	97,085	85,717	11,368	13.3
City of Wilmington	87,411	76,508	10,903	14.3
Cities and towns of 2,500 to 25,000 inhabitants in 1910	9,674	9,209	465	5.0
Remainder of the state	105,237	99,018	6,219	6.3

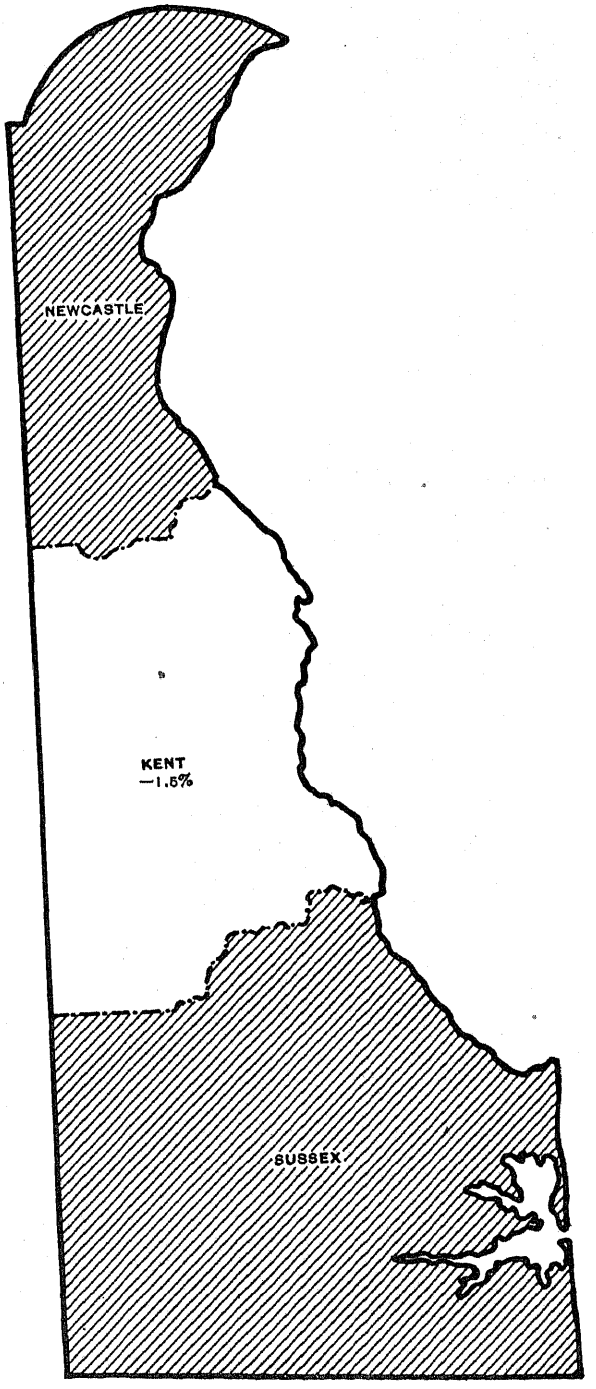
PER CENT OF INCREASE OR DECREASE OF POPULATION OF DELAWARE, BY COUNTIES: 1900–1910.

In case of decrease the per cent is inserted under the county name.

TOTAL POPULATION.



RURAL POPULATION.

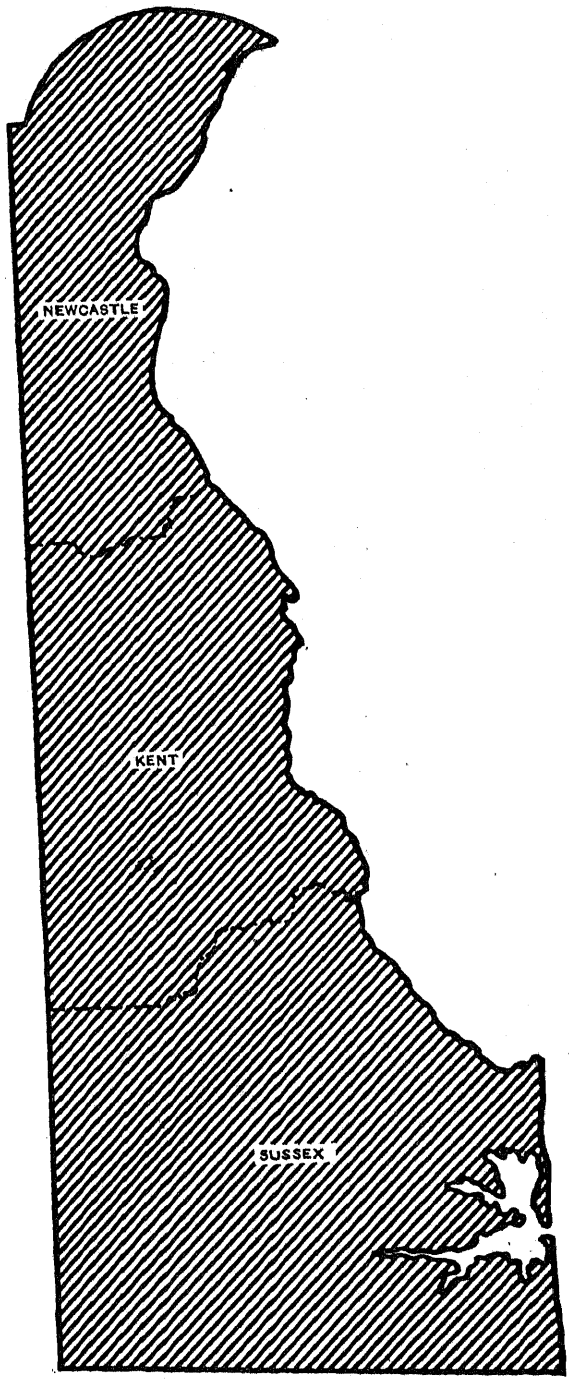


Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

DENSITY OF POPULATION OF DELAWARE, BY COUNTIES: 1910.

TOTAL POPULATION.

RURAL POPULATION.



Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890.

[Population in 1910 returned by representative districts; comparisons of population made wherever the representative districts coincide in area with the hundreds for which the population at former censuses was returned. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Delaware by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of four general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for Wilmington, the one city of more than 25,000 inhabitants; Table III for the three smaller cities of more than 2,500; and Table IV for wards of Wilmington.

A series of summary tables (numbered 1 to 13) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural. Nine-tenths of Delaware's urban population is in the city of Wilmington.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Delaware, 127,809, or 63.2 per cent, are native whites of native parentage; 25,873, or 12.8 per cent, are native whites of foreign or mixed parentage; 17,420, or 8.6 per cent, are foreign-born whites; and 31,181, or 15.4 per cent, are negroes. The corresponding percentages in 1900 were 63.9, 12, 7.4, and 16.6, respectively, the comparison indicating little change since 1900 in the color, nativity, and parentage composition of the population. In New Castle County the percentages of foreign-born whites (13.1) and of native whites of foreign or mixed parentage (19.5) are much higher than in the other two counties of the state, the percentages for Kent being 2.6 and 3.9, and for Sussex, 0.9 and 1.3, respectively.

Of the urban population, 52.9 per cent are native whites of native parentage; of the rural, 72.7 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 21.2 and 5.1 per cent, respectively. The percentage of foreign-born whites is 14.5 in the urban population and 3.2 in the rural; the percentage of negroes is 11.5 in the urban and 19 in the rural.

Sex (Table 2).—In the total population of the state there are 103,435 males and 98,887 females, or 104.6 males to 100 females. In 1900 the ratio was 104 to 100. Among native whites the ratio is 101.6 to 100; among foreign-born whites 132.4. In the urban population there are 100.4 males to 100 females, and in the rural, 108.6.

State of birth (Tables 3 and 4).—Of the native population—that is, population born in the United States—74.2 per cent were born in Delaware and 25.8 per cent outside the state; of the native white population, 25.5 per cent were born outside the state, and of the native negro, 27.2 per cent. Persons born outside the state constitute a much larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Table 5).—Of the foreign-born white population of Delaware, persons born in Ireland represent 22.9 per cent; Russia, 19.7; Italy, 16.6; Ger-

many, 14.8; England, 8.9; Austria, 5.7; Canada, 2.9; Scotland, 2; all other countries, 6.5 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Ireland contributed 32.4 per cent; Germany, 17.5; Russia, 12.5; England, 10.6; Italy, 10.6; Austria, 3.2; Canada, 2.2; Scotland, 2.1 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 61,887, representing 30.6 per cent of the population. Of such males, 60.9 per cent are native whites of native parentage, 10.3 per cent native whites of foreign or mixed parentage, 14.2 per cent foreign-born whites, and 14.6 per cent negroes. Of the 8,776 foreign-born white males of voting age, 3,707, or 42.2 per cent, are naturalized. Males of militia age—18 to 44—number 44,634.

Age (Tables 7, 8, and 12).—Of the total population, 9.9 per cent are under 5 years of age, 19 per cent from 5 to 14 years, inclusive, 19.1 per cent from 15 to 24, 29.4 per cent from 25 to 44, and 22.4 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 5 per cent of this class being under 15 years of age, while nearly four-fifths (77.8 per cent) are 25 years of age and over. Of the native whites of foreign or mixed parentage, only a little over two-fifths (43 per cent) are 25 and over and of the native whites of native parentage approximately one-half (51 per cent).

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 32.5 per cent are from 25 to 44 years of age, inclusive, and of the rural population, 26.5 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 57,932, of whom 35,304, or 60.9 per cent, attended school. In addition to these, 467 persons under 6 and 559 of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 61.3; for girls, 60.6. For children from 6 to 14 years, inclusive, the percentage attending school was 81.9. The percentage for children of this age among native whites of native parentage and native whites of foreign or mixed parentage (83.4 in each case) was higher than among negroes (76) or foreign-born whites (75.9). (See Table I.) There is little difference between urban and rural communities as regards the percentage of school attendance for the ages from 6 to 14, but of persons from 15 to 20 years, inclusive, 24.6 per cent in urban and 34.9 per cent in rural communities were reported as attending school.

Illiteracy (Table 10).—There are 13,240 illiterates in the state, representing 8.1 per cent of the total population 10 years of age and over, as compared with 12 per cent in 1900. The percentage of illiteracy is 25.6 among negroes, 19.8 among foreign-born whites, and 2.9 among native whites.

For all classes combined, the percentage illiterate is higher in the rural than in the urban population (9.6 and 6.5, respectively), but for foreign-born whites it is much higher in the urban.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is only 2.9. (See Table I.)

Marital condition (Tables 11 and 13).—In the population 15 years of age and over, 37.9 per cent of the males are single and 29.4 per cent of the females. The percentage married is 56.1 for males and 58.6 for females, and the percentage widowed 5.1 and 11.4, respectively. The percentages of those reported as divorced, 0.2 and 0.3, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that women marry younger. Thus 10.5 per cent of the females from 15 to 19 years of age are married, as compared with 0.9 per cent of the males, and 48.6 per cent of the females from 20 to 24 years are married, as compared with 23.4 per cent of the males. In the next age group, 25 to 34 years, the difference is not so great, the percentages being 73.8 for females and 63 for males, while in the age group 35 to 44 the difference practically disappears. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is, in fact, more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those over 15 years of age are as follows: Foreign-born whites, 60.7 for males and 67.1 for females; native whites of native parentage, 58 and 59.6, respectively; native whites of foreign or mixed parentage, 46.7 and 50.5; negroes, 51 and 54.6.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married is slightly higher for males, and decidedly higher for females in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Delaware is 43,183, and the total number of families 44,951, indicating that in very few cases does more than one family occupy a dwelling. (See Table I.) The average number of persons per dwelling is 4.7, and the average number per family, 4.5.

TABLE 1.—COLOR, NATIVITY, AND PARENTAGE.
