

KENTUCKY.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Kentucky, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 706) shows the population of Kentucky, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties is alphabetical, while the primary divisions in each county are given in numerical order, with the exception of those in Henry County, which are arranged alphabetically. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions as shown in the table. For the most part this is due to the redistricting since 1890 of certain counties, and to the fact that in 1890 some counties were not returned by magisterial districts, while in some counties precincts were incorrectly returned as magisterial districts. In other counties some of the minor civil divisions had gone out of existence by 1910, their territory having been annexed to other divisions, or taken to form new divisions. In a few instances divisions that were returned independently at one census were returned at another census as secondary divisions or in combination with other divisions.

HISTORICAL NOTE.—The word "Kentucky" is of Indian origin and has been variously defined as signifying "prairie or meadow land," "the hunting grounds," "at the head of a river," "river of blood," and "the dark and bloody ground." The last definition is the most generally accepted.

The region now constituting Kentucky was included within the limits of Virginia by the charters granted that colony by the English crown in 1609 and in 1612. The French also laid claim to this territory, together with the rest of the Mississippi Valley on account of the explorations made by Marquette, Joliet, La Salle, and others in the latter part of the seventeenth century. All French claims to land east of the Mississippi were, however, relinquished in favor of Great Britain in 1763, at the close of the French and Indian War. In 1768, by the treaty made at Fort Stanwix, N. Y., the Six Nations together with certain other dependent tribes of Indians ceded to Great Britain their rights to territory south of the Ohio River, including all but a small part of the area now known as Kentucky.

The first white man to visit what is now Kentucky was probably La Salle, a French explorer, who is said to have sailed down the Ohio to the Louisville Rapids in 1669. Capt. Thomas Batts, of Virginia, may also have reached Kentucky on his trip of exploration to the western wilderness in 1671. The first white men known to have discovered this region, however, were the French missionaries, Marquette

Table 2 (p. 717) shows the cities and the incorporated towns in Kentucky, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of Kentucky, by counties, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, magisterial districts, etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumera-

and Joliet, who in 1673 passed along the western boundary of Kentucky on their trip down the Mississippi. The first extensive explorations within the state were made in 1750 by Dr. Thomas Walker, and in 1751 by Christopher Gist. They were followed within the next 20 years by a number of explorers and surveyors, the most prominent among whom was Daniel Boone. In 1774 settlement began at various points, notably at Harrodsburg, and in 1775 Boonesborough was founded and fortified.

In 1775 a code of laws for the newly settled region was drawn up by the settlers, but this was not authorized by the legislature of Virginia, and in the following year Kentucky County, with Harrodsburg as the county seat, was organized from a part of Fincastle County, Va. Eight years later the three counties then existing in this region were united into Kentucky district, with a district court of its own.

In spite of the hostility of the Indians the Kentucky settlements grew, and in 1786, 12 years after the period of settlement began, Virginia passed the first of four successive enabling acts giving conditional consent to the organization of Kentucky as a separate state. In 1792, under authority of an act passed by Congress in the preceding year, Kentucky adopted a constitution, and with its present boundaries was admitted to the Union.

POPULATION—KENTUCKY.

tions or with respect to the increase between enumerations. In order to contrast the proportion of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions as they existed at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their rate of growth, it is necessary to consider the changes in population for the same territory which have occurred from one decennial census to another.

For this purpose the territory which in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Kentucky is 2,289,905. Compared with a population of 2,147,174 in 1900, this represents an increase during the last decade of 142,731, or 6.6 per cent, the smallest absolute increase shown by any census since 1840, and the smallest relative increase shown by any census. During the same period the total population of the

United States increased 21 per cent, or over three times the rate for the state.

The following table shows the population of Kentucky at each census from 1790 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910.....	2,289,905	142,731	6.6	21.0
1900.....	2,147,174	288,539	15.5	20.7
1890.....	1,858,635	209,945	12.7	25.5
1880.....	1,648,690	327,679	24.8	30.1
1870.....	1,321,011	165,327	14.3	22.6
1860.....	1,155,684	173,279	17.6	35.6
1850.....	982,405	202,577	26.0	35.9
1840.....	779,828	91,911	13.4	32.7
1830.....	687,917	123,600	21.9	33.5
1820.....	564,317	157,806	38.8	33.1
1810.....	406,511	185,556	84.0	36.4
1800.....	220,955	147,278	199.9	35.1
1790.....	73,677

As shown by this table, the most rapid growth in the population of the state was during the first two decades, 1790–1810, when the population increased more than fivefold. During the 100 years that have elapsed since 1810 the population of the state has increased only a little more than five and one-half times. The rates of increase for these 10 decades ranged from 6.6 per cent for the last decade to 38.8 per cent for the decade 1810–1820, there being only 4 decades which show rates of increase above 20 per cent, 5 which show rates between 10 and 20 per cent, and 1, the last, which shows a rate below 10 per cent.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that not since 1820 has the rate of increase for the population of the state been as high as that for the United States. During each decade prior to 1820 the population of the state increased more rapidly than that of the United States. The population of the state in 1820 was more than seven and one-half times that in 1790, while the population of the United

States increased, during the same period, a little less than two and one-half times. But from 1820 to 1910 the population of the United States increased about nine and one-half times, and that of the state about four times. During the decade 1900–1910 the rate for the country as a whole was more than three times as high as that for the state. The population of the state in 1910 was more than thirty-one times as great as in 1790, when the First Census was taken, while the population of the United States in 1910 was more than twenty-three times that in 1790.

Principal cities.—Kentucky has 61 cities. Louisville, the largest, has a population of 223,928, and Covington, the second city, a population of 53,270. Lexington, with 35,099 inhabitants, and Newport, with 30,309 inhabitants, are the only other cities having over 25,000 inhabitants. There are 4 cities having from 10,000 to 25,000, 12 having from 5,000 to 10,000, 13 having from 2,500 to 5,000, and 28 having less than 2,500 inhabitants. The aggregate population of the 61 cities is 575,259, or 25.1 per cent of the total population of the state.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table following shows the population of the 5 cities having in 1910

over 20,000 inhabitants, as reported at each census since their incorporation either as cities or towns, so far as figures are available, together with the increase during each decade.

¹ Not returned separately.

Of the cities included in this table, Lexington shows the highest rate of increase during the last decade, namely, 33.1 per cent, and Newport the lowest, 7.1 per cent.

In 1790 Louisville was a small frontier settlement of 200 inhabitants. By the middle of the century it had developed into a city of considerable size, with a population of 43,194. During the 60 years that have elapsed since 1850, its population increased a little more than five times, and the percentages of increase ranged from 9.4 for the last decade to 57.5 for the decade 1850–1860. The absolute increase in the population of the city during the last decade was smaller than that shown for any decade since 1840.

Counties.—Kentucky has 119 counties. The population of these counties ranges from 4,121 in Robertson County to 262,920 in Jefferson County.

There have been no changes in the territorial boundaries of the counties since 1900.

Seventy-six counties increased in population during the last decade, the rates of increase ranging from less than one-tenth of 1 per cent in Hickman County to 81.2 per cent in Bell County, and the absolute increases from 5 in Hickman County to 30,371 in Jefferson County. Forty-four counties show a larger rate of increase than is shown for the state as a whole, which, as before stated, was 6.6 per cent. Forty-three counties decreased in population during the

last decade, the rates of decrease ranging from six-tenths of 1 per cent in Butler and Larue Counties to 20.1 per cent in Grant County, and the absolute decreases from 63 in Larue County to 3,555 in Henderson County. The aggregate increase of population from 1900 to 1910 in the 76 counties that showed increases was 185,770; the aggregate decrease of population in the 43 counties that showed decreases was 43,089. The difference, 142,731, is, of course, the total increase of population in the state.

The maps on page 704 show the increase or decrease in the total and the rural population, respectively, of each county of Kentucky during the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 40,181 square miles. The average number of persons to the square mile in 1910 was 57; in 1900 and 1890 it was 53.4 and 46.3, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9. In density of population Kentucky ranks twelfth among the states.

The density of population is given by counties in Table I of Chapter 2 and in the maps on page 705, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 inhabitants or more, but not excluding the land area of such places.

Pike and Pulaski Counties, each having an area of 779 square miles, are the largest counties; Gallatin and Robertson Counties, with 109 square miles each, are the smallest counties. Jefferson County, containing Louisville city, has the highest density of any county, namely, 679.4 persons per square mile, while Harlan County, with 22.1 persons per square mile, has the lowest density.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Kentucky the counties are divided into 741 primary divisions, comprising that number of magisterial districts. There are also 395 secondary divisions in the state, comprising 61 cities and 334 towns. These secondary divisions usually

form parts of their respective districts, but each of 8 cities and 1 town is coextensive with the magisterial district in which it is located, and each of 7 cities is coextensive with two or more magisterial districts, while 1 city comprises the whole of one district and parts of two others.

Urban and rural population compared.—The following table presents the population of Kentucky at the censuses of 1910, 1900, and 1890, respectively, distributed among cities and towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.		
	Number of places.	Population.	Number of places.	Population.	Number of places.	Population.	1910	1900	1890

5,000 to 10,000 inhabitants.....	4	60,688	3	42,907	3	59,282	2.7	2.0	3.2
2,500 to 5,000 inhabitants.....	12	84,079	8	56,616	7	50,631	3.7	2.6	2.7
Other rural territory.....	20	68,069	19	65,806	14	48,300	3.0	3.1	2.6
Rural territory									
Cities and towns of less than 2,500 inhabitants.....	335	1,734,463	318	1,679,506	265	1,501,922	75.7	78.2	80.8
Other rural territory.....		188,872		107,560		135,395	8.2	7.8	7.8
		1,545,591		1,511,946		1,366,527	67.5	70.4	73.5

As shown by the above table, the urban territory of the state in 1910—that is, the cities and incorporated towns of 2,500 inhabitants or more—contained 555,442 inhabitants, or 24.3 per cent of the total population, while 1,734,463 inhabitants, or 75.7 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the incorporated places then having 2,500 inhabitants or more—contained 467,668 inhabitants, or 21.8 per cent of the total population, while 1,679,506 inhabitants, or 78.2 per cent, lived in rural territory. There has thus been a slight increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

Louisville, the only city in the state having over 100,000 inhabitants, contained 8.7 per cent of the total population of the state in 1890; this proportion increased to 9.8 per cent in 1910. In 1890 and 1900 there was no place in the state having from 50,000 to 100,000 inhabitants. During the decade 1900–1910, however, Covington entered this group, this city containing, in 1910, 2.3 per cent of the total population of the state. The combined population of the groups of urban communities having from 2,500 to 50,000 inhabitants represented 12.2, 12.2, and 10.5 per cent of the total population of the state in 1910, 1900, and 1890, respectively.

The urban population of the state is contained in 33 cities and 7 towns. Of the total population, 75.7 per cent is classed as rural, 8.2 per cent being contained in 355 incorporated places of less than 2,500 inhabitants each and 67.5 per cent in unincorporated communities. The 355 places of less than 2,500 inhabitants each have an aggregate population of 188,872. These places comprise 59 having from 1,000 to 2,500 inhabitants each, with a combined population of 85,845; 67 having from 500 to 1,000 inhabitants each, with a combined population of 47,736; and 229 having less than 500 inhabitants each, with a combined population of 55,291.

The above table shows further that in all cities and incorporated towns, including those of less than 2,500 inhabitants, there was in 1910 a population of 744,314, or 32.5 per cent of the population of the state. The population of all incorporated places, as they existed in 1900, was 635,228, or 29.6 per cent of the population of the state.

Table I of Chapter 2 shows 24 counties having a larger proportion and 5 counties a smaller proportion of urban population in 1910 than in 1900. Six counties that were wholly rural in 1900 were partly urban in 1910, while 84 counties were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as pre-

viously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the table in the next column, the total population in 1910 of the cities and towns which at that time had 2,500 inhabitants or more was 555,442; in 1900 the total population of these same places (so far as separately reported) was 483,233. It may be noted that the latter figure exceeds the total population in 1900 of those places which at that time had over 2,500 inhabitants each, 467,668 (see table on p. 702), by 15,565. The difference is the result of the passage, since 1900, of certain communities from the rural to the urban class and of annexations of territory during the same period.

A comparison of the total population in 1910 of cities and towns having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the table in the next column, shows an increase of 14.9 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased 4.2 per cent. The population of urban areas thus increased more than three times as rapidly as rural. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent.

As shown by Table I of Chapter 2, there are 51 counties in which the population living in rural territory decreased, and only 1 county in which there is a decrease in both urban and rural population.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the population of the city of Louisville, the combined population of the other cities having, in 1910, 25,000 inhabitants or more, the combined population of cities and towns having from 2,500 to 25,000 inhabitants, and the population of the remainder of the state.

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state.....	2,289,905	2,147,174	142,731	6.6

City of Louisville.....	223,928	205,173	18,755	9.1
Other cities of 25,000 or more in 1910.....	118,678	101,645	17,033	16.8
Cities and towns of 2,500 to 25,000 in 1910.....	212,836	176,415	36,421	20.6
Remainder of the state.....	1,734,463	1,663,941	70,522	4.2

From this table it appears that the population of the city of Louisville increased nearly one and one-half times as rapidly as that of the state as a whole; the population of the group of other urban places having 25,000 inhabitants or more, about two and one-half times as rapidly; and the population of the group of smaller urban places having from 2,500 to 25,000 inhabitants, a little more than three times as rapidly. Rural population increased only about two-thirds as rapidly as the population of the state as a whole.

PER CENT OF INCREASE OR DECREASE OF POPULATION OF KENTUCKY, BY COUNTIES: 1900-1910.

In case of decrease the per cent is inserted under the county name.

TOTAL POPULATION.

RURAL POPULATION.

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

DENSITY OF POPULATION OF KENTUCKY, BY COUNTIES: 1910.

TOTAL POPULATION.

RURAL POPULATION.

NUMBER OF INHABITANTS PER SQUARE MILE

LESS THAN 2	6 TO 18	45 TO 90
2 TO 6	18 TO 45	90 AND OVER

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

POPULATION—KENTUCKY.

TABLE 1.—POPULATION OF MINOR CIVIL DIVISIONS: 1910, 1900, AND 1890.

[District means magisterial district. For changes in boundaries, etc., between 1900 and 1910, see footnotes; for those between 1890 and 1900, see Reports of the Twelfth Census: 1900, Vol. I, Table 5.]

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Kentucky by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for cities of 25,000 inhabitants or more; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of the two cities of more than 50,000.

A series of summary tables (numbered 1 to 15) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage; and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Kentucky, 2,027,951, or 88.6 per cent, are whites, and 261,656, or 11.4 per cent, negroes. The corresponding percentages in 1900 were 86.7 and 13.3, respectively. In 72 of the 119 counties the population is less than 10 per cent negro; in 41 counties from 10 to 25; and in 6 counties over 25. (See also map on page 753.)

Native whites of native parentage constitute 81.4 per cent of the total population of the state, and 91.9 per cent of the white population. Native whites of foreign or mixed parentage constitute only 5.4 per cent of the total population, and foreign-born whites 1.7 per cent.

Of the urban population, 58.2 per cent are native whites of native parentage; of the rural population, 88.8 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 17.2 and 1.7 per cent, respectively. The percentage of foreign-born whites is 5.4 in the urban population and 0.6 in the rural; the percentage of negroes is 19.2 in the urban and 8.9 in the rural.

Sex (Table 2).—In the total population of the state there are 1,161,709 males and 1,128,196 females, or 103 males to 100 females. In 1900 the ratio was practically the same, 103.1 to 100. Among the whites there are 103.2 males to 100 females, and among the negroes, 101. For all native whites combined the ratio is 103 to 100, as compared with 117.2 to 100 for the foreign-born whites. In the urban population there are 94.1 males to 100 females, and in the rural, 106.

State of birth (Tables 3 and 4).—Of the native population—that is, population born in the United States—90.3 per cent were born in Kentucky and 9.7 per cent outside the state; of the native white population, 9.6 per cent were born outside the state, and of the native negro, 10.8 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Tables 5 and 12).—Of the foreign-born white population of Kentucky, persons born in Germany represent 48.3 per cent; Ireland, 14.8; Russia, 8; England, 6.5; Switzerland, 4.1; Italy, 3.3; Austria, 2.6; Canada, 2.5; all other countries, 9.8. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Germany contributed 56.0 per cent; Ireland, 18; England, 6; Russia, 3.4; Switzerland, 2.8; Canada, 1.7; France, 1.7; Italy, 1.5; Scotland, 1.5.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 603,454, representing 26.4 per cent of the population. Of such males, 87.4 per cent are whites and 12.5 per cent negroes. Native whites represent 84.1 per cent of the total number and foreign-born whites 3.4 per cent. Of the 20,440 foreign-born white males of voting age, 13,225, or 64.7 per cent, are naturalized. Males of militia age—18 to 44—number 457,493.

Age (Tables 7, 8, and 13).—Of the total population, 12.9 per cent are under 5 years of age, 22.9 per cent from 5 to 14 years, inclusive, 20 per cent from 15 to 24, 26.3 per cent from 25 to 44, and 17.7 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 2.2 per cent of this class being under 15 years of age, while more than nine-tenths (90.6 per cent) are 25 years of age and over. The negro population comprises a considerably smaller proportion of children under 15 than the native white population of native parentage.

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 32.8 per cent are from 25 to 44 years of age, inclusive, and of the rural population, 24.3 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 755,709, of whom 461,195, or 61 per cent, attended school. In addition to these, 5,188 persons under 6 and 7,098 of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 61.1; for girls, 61. For children from 6 to 14 years, inclusive, the percentage attending school was 76. The percentage for children of this age among native whites of foreign or mixed parentage was 87.1; among foreign-born whites, 83.8; among native whites of native parentage, 76.3; and among negroes, 70.3. (See Table I.) In urban communities the percentage of children of that age attending school was 85.1, in rural communities, 74.

Illiteracy (Table 10).—There are 208,084 illiterates in the state, representing 12.1 per cent of the total population 10 years of age and over, as compared with 16.5 per cent in 1900. The percentage of illiteracy is 27.6 among negroes, 10 among native whites, and 8.3 among foreign-born whites. It is 10.7 for native

whites of native parentage and only 1.5 for native whites of foreign or mixed parentage.

For all classes combined, illiterates are relatively fewer in urban than in rural communities, the percentages being 6.7 and 14, respectively. This difference between urban and rural communities appears in each class of the population, although among foreign-born whites, most of whom arrive in this country when past the school age, it is slight.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 6.7. (See Table I.)

Marital condition (Tables 11 and 14).—In the population 15 years of age and over, 35.6 per cent of the males are single and 27.8 per cent of the females. The percentage married is 58.4 for males and 60.3 for females, and the percentage widowed 5.1 and 10.9, respectively. The percentages of those reported as divorced, 0.5 and 0.8, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that women marry younger. Thus 17.3 per cent of the females from 15 to 19 years of age are married, as compared with 2.3 per cent of the males; and 56.3 per cent of the females from 20 to 24 years are married, as compared with 32.7 per cent of the males. In the next age group, 25 to 34 years, the difference is much less marked. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 67.8 for males, 53.6 for females; native whites of native parentage, 59.2 and 62.3, respectively; native whites of foreign or mixed parentage, 55.8 and 52.2; negroes, 52.6 and 53.9.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married, for each sex, is higher in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Kentucky is 469,669, and the total number of families 494,788, there being 105.3 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling is 4.9, and the average number per family, 4.6.

NOTES REGARDING CHANGES IN BOUNDARIES, ETC.

COUNTIES.

ANDERSON.—Part of Washington annexed between 1880 and 1890.
 BALLARD.—Part taken to form Carlisle in 1886.
 BATH.—Part of Menifee annexed in 1878.
 BELL.—Name changed from Josh Bell between 1870 and 1880. Part of Knox annexed in 1872.
 BREATHITT.—Part taken to form part of Knott in 1884.
 CARLISLE.—Organized from part of Ballard in 1886.
 CLAY.—Part taken to form part of Leslie in 1878.
 CUMBERLAND.—Part annexed to Russell in 1876.
 ESTILL.—Part annexed to Powell between 1890 and 1900.
 FLOYD.—Parts taken to form part of Martin in 1870 and part of Knott in 1884.
 GRANT.—Part of Owen annexed between 1870 and 1880.
 HARLAN.—Part taken to form part of Leslie in 1878.
 JOHNSON.—Part taken to form part of Martin in 1870.
 KNOTT.—Organized from parts of Breathitt, Floyd, Letcher, Magoffin, and Perry in 1884.
 KNOX.—Part annexed to Bell in 1872.
 LAUREL.—Part of Whitley annexed in 1876.
 LAWRENCE.—Part taken to form part of Martin in 1870.
 LESLIE.—Organized from parts of Clay, Harlan, and Perry in 1878.
 LETCHER.—Part taken to form part of Knott in 1884.
 MAGOFFIN.—Part taken to form part of Knott in 1884.

MARTIN.—Organized from parts of Floyd, Johnson, Lawrence, and Pike in 1870.
 MENIFEE.—Parts annexed to Bath and Morgan in 1878; parts of Powell and Wolfe annexed in 1880.

MORGAN.—Part annexed to Wolfe in 1878; part of Menifee annexed in 1878.

OWEN.—Part annexed to Grant between 1870 and 1880.

PERRY.—Parts taken to form part of Leslie in 1878 and part of Knott in 1884.

PIKE.—Part taken to form part of Martin in 1870.

POWELL.—Part annexed to Menifee in 1880; part of Estill annexed between 1890 and 1900.

RUSSELL.—Part of Cumberland annexed in 1876.

WASHINGTON.—Part annexed to Anderson between 1880 and 1890.

WHITELEY.—Part annexed to Laurel in 1876.

WOLFE.—Part of Morgan annexed in 1878; part annexed to Menifee in 1880.

CITIES.

BOWLING GREEN.—Parts annexed to magisterial districts 4 and 5 in 1901.

COVINGTON.—Part of magisterial district 3 annexed in 1903 and parts of district 4 (comprising Central Covington and Latonia towns) annexed in 1906 and 1909, respectively.

HENDERSON.—Parts of magisterial districts 4 and 5 annexed in 1905.

LOUISVILLE.—Parts of magisterial district 1 (including Crescent Hill town) annexed in 1900 and 1901; parts of district 3 annexed in 1908, 1909, and 1910; parts of district 4 annexed in 1900, 1902, and 1908; and part annexed to district 1 in 1909. East Louisville, South Louisville, and Parkland towns and part of Crescent Hill town annexed between 1890 and 1900.

LOUISIANA.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Louisiana, by parishes and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 764) shows the population of Louisiana, distributed according to parishes and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. The arrangement of the parishes is alphabetical, while the primary divisions in each parish are given in numerical order. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that have taken place since 1900 are indicated in the footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the parish totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions, as shown in the table. This is in part due to the territorial changes that have been made in the minor civil divisions of certain parishes since 1900. In other cases divisions returned by police jury wards at the census of 1910 were not so returned at the census of 1890.

Table 2 (p. 770) shows the cities and the incorporated towns and villages in Louisiana, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of Louisiana, by parishes, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of the total and the rural population at the census of 1910; and the distribution of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

HISTORICAL NOTE.—The name Louisiana was given to the entire Mississippi Valley by La Salle, in honor of Louis XIV of France.

The discoverers of the region constituting the present state of Louisiana were Spaniards. In 1519 De Pineda sailed along the coast and in 1543 De Soto's expedition returning from the interior of the country reached the Gulf by way of the Mississippi. Spain, however, set up no claim to this region, and in 1682 the French explorer, La Salle, completed his descent of the Mississippi River and took possession of the whole country drained by it in the name of France. The first permanent settlement within the present limits of Louisiana was made at Natchitoches, where the French established a trading post in 1715. Three years later New Orleans was founded.

The Louisiana region west of the Mississippi was ceded by France to Spain in 1762, retroceded to France in 1800, and purchased by the United States in 1803. At the time of the purchase it comprised the area of the present state of Louisiana west of the Mississippi and the Isle of Orleans east of the river. In addition, it included practically all the western watershed of the Mississippi. In 1804 the region was divided by the thirty-third parallel, which forms the present northern

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county (parish in Louisiana) is obtained by dividing its total population by the number of square miles in its land area. In calculating the density of the rural population, the same divisor is used as it is not practicable to ascertain and deduct the exact area covered by the urban districts, and even if this could be done with accuracy the deduction of this area from the total land area would ordinarily make no appreciable difference in the resulting quotient.

Minor civil divisions.—The counties (parishes in Louisiana) are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts, police jury wards, etc. Of these minor civil divisions those which rank next to the county (parish in Louisiana) as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as cities, incorporated villages, towns, or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more, and rural population as that residing outside of such incorporated places.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the proportion of the total population living in urban or rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions as they existed at each census.

In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their rate of growth, it is necessary to consider the changes in population for the same territory which have occurred from one decennial census to another. For this purpose the territory which

boundary of Louisiana, into the territory of Orleans on the south and the district of Louisiana on the north.

All of the present state of Louisiana lying east of the Mississippi, except the Isle of Orleans, was ceded to Great Britain in 1763, together with the rest of the French possessions east of the Mississippi, and in the same year the Floridas were transferred to Great Britain by Spain. Shortly afterwards the southern part of the French cession was made a part of West Florida. In 1783 the Floridas were retroceded to Spain, and in 1819 were purchased by the United States. This eastern section of Louisiana, which had been claimed by both France and Spain, was in dispute between the latter country and the United States from 1803 to 1819. In 1810, however, the inhabitants declared their independence of Spain and the United States assumed control.

In January, 1812, under authority of an enabling act passed by Congress in the preceding year, the territory of Orleans adopted a state constitution, and on April 30 of the same year it was admitted to the Union as the state of Louisiana. At this time the Baton Rouge district was not included as a part of the new state, but it was added very shortly thereafter, thus giving Louisiana its present extent.

in 1910 was urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing

effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county (parish in Louisiana) separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Louisiana is 1,656,388. Compared with a population of 1,381,625 in 1900, this represents an increase during the last decade of 274,763, or 19.9 per cent. During the same period the total population of the United States increased 21 per cent. The rate of growth of the state during this decade was less rapid than

during the preceding decade, 1890–1900, when the rate was 23.5 per cent.

The following table shows the population of Louisiana at each census from 1810 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910.....	1,656,388	274,763	19.9	21.0
1900.....	1,381,625	263,037	23.5	20.7
1890.....	1,118,588	178,642	19.0	25.5
1880.....	939,946	213,031	29.3	30.1
1870.....	726,915	18,913	2.7	22.6
1860.....	708,002	190,240	36.7	35.6
1850.....	517,762	165,351	46.9	35.9
1840.....	352,411	136,672	63.4	32.7
1830.....	215,739	62,332	40.6	33.5
1820.....	158,407	76,851	100.4	33.1
1810.....	76,556

The earliest population figures for Louisiana are those reported at the Federal census of 1810, when its population was returned as in the territory of Orleans. The total population (76,556) reported for 1810 does not include 20,845 returned for Louisiana territory which was taken to form Missouri and Arkansas territories in 1812 and 1819, respectively. The state showed a more rapid rate of growth in population during the first half than during the second half of the century covered by this table. In 1860 the population was more than nine times as great as in 1810, the percentages of increase ranging from 36.7 to 100.4. During the latter period, 1860–1910, its population increased two and one-third times, the lowest percentage of increase being 2.7 for the decade 1860–1870, while the percentages for the remaining decades ranged from 19 to 29.3. The numerical increase for the last decade was larger than that shown for any previous decade.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that from 1810 to 1860 the increase for the state during each decade was more rapid than that for the country as a whole. The largest difference between the two rates during this period was in the decade 1810–1820 and the smallest difference during the decade 1850–1860. Since 1860 the rates of increase for the state have been smaller than those for the country as a whole during each

decade, except 1890–1900, when the rate for the state was slightly larger. During the decade 1860–1870 the rate for the state was less than one-eighth that for the country as a whole, while during each of the three other decades showing percentages for the state smaller than those for the country as a whole, the rate for the state did not fall below three-fourths of that for the country as a whole. The population of the state in 1910 was almost twenty-two times as large as in 1810, while the population of the United States in 1910 was only about thirteen times that in 1810.

Principal cities.—Louisiana has 11 cities. New Orleans, the largest city, has a population of 339,075, and the next largest, Shreveport, a population of 28,015. Baton Rouge, Lake Charles, Alexandria, and Monroe, with 14,897, 11,449, 11,213, and 10,209 inhabitants, respectively, are the other cities in the state having over 10,000 inhabitants. There are also 3 cities having from 5,000 to 10,000 and 2 having less than 2,500 inhabitants.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures for 1900 and 1890. The following table shows the population of the six cities having in 1910 over 10,000 inhabitants, as reported at each census since their incorporation either as cities or towns, so far as figures are available, together with the increase during each decade.

CITY AND CENSUS YEAR.	Population.	INCREASE ¹ OVER PRECEDING CENSUS.		CITY AND CENSUS YEAR.	Population.	INCREASE ¹ OVER PRECEDING CENSUS.

				1850.	1,728

¹ A minus sign (—) denotes decrease.² Not returned separately.

Of the cities included in this table, Alexandria shows the highest rate of increase during the last decade, namely, 98.5 per cent, and New Orleans the lowest, 18.1 per cent. Alexandria, Baton Rouge, Monroe, and Shreveport show higher percentages of increase for the last decade than for the preceding decade.

New Orleans showed the most rapid growth during the early decades. During the 50 years from 1810 to 1860 the population of the city increased nearly ten times. The rate of increase for the decade 1840-1850 was only 13.9 per cent, but the rates of increase for the four other decades from 1810 to 1860 ranged from 44.9 per cent to 121.8 per cent. During the 50 years since 1860 its population has a little more than doubled, the percentages of increase ranging from 12 for the decade 1880-1890 to 18.6 for the decade 1890-1900. The numerical increase during the last decade is the largest shown for any decade since 1860.

Parishes.—Louisiana has 60 parishes. New Orleans city is coextensive with Orleans Parish. The population of these parishes ranges from 4,288 in Cameron Parish to 339,075 in Orleans Parish.

The following territorial change has been made in the parishes of Louisiana since 1900: Part of Catahoula Parish was taken in 1910 to form La Salle Parish.

Owing to the organization since 1900 of one new parish from part of another parish as previously shown, the comparison of increase or decrease in population is made for only 58 parishes and one combination of parishes. The combined parishes are La Salle and Catahoula. In order to determine the actual rate of increase for this combination, it is necessary to add the population of the new parish to that of the old parish from which it was formed. Forty-nine parishes and the one combination of parishes increased

in population during the last decade, while 9 parishes decreased in population. The rates of increase for the 49 parishes which showed an increase range from 2.3 per cent in East Carroll Parish to 106.3 per cent in Calcasieu Parish, and the absolute increases of the same group of parishes range from 246 in St. Bernard Parish to 51,971 in Orleans Parish. The combined parishes of La Salle and Catahoula increased 21.2 per cent in population. The rates of decrease for the 9 parishes which showed a decrease range from 1.1 per cent in Ascension Parish to 15.9 per cent in West Feliciana Parish, and the absolute decreases of the same group of parishes range from 146 in Red River Parish to 2,545 in West Feliciana Parish. Twenty-five parishes and the one combination of parishes each showed a higher rate of increase than that shown for the state as a whole, which, as before stated, was 19.9 per cent. The aggregate increase of population from 1900 to 1910 in the one combination of parishes and in the 49 parishes that showed an increase was 285,171; the aggregate decrease of population in the 9 parishes that showed a decrease was 10,408. The difference, 274,763, is, of course, the total increase of population in the state.

The maps on page 762 show the increase or decrease in the total and the rural population, respectively, of each parish of Louisiana during the last decade. In the parishes shown in white the population decreased; for the other parishes the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 45,409 square miles. The average number of persons to the square mile in 1910 was 36.5; in 1900 and 1890 it was 30.4 and 24.6, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by parishes in Table I of Chapter 2 and in the maps on page 763, both for the entire population and for that living in rural territory, excluding in the latter case the population of places of 2,500 inhabitants or more, but not excluding the land area of such places.

Calcasieu Parish, with 3,653 square miles, has the largest area, and Orleans Parish, with 200 square miles, has the smallest area. Orleans Parish, which is coextensive with New Orleans city, has the highest density of any parish, namely, 1,695.4 persons per square mile, while Cameron Parish, with 2.9 persons per square mile, has the lowest density.

Minor civil divisions.—The political divisions into which counties (parishes in Louisiana) are subdivided are collectively termed "Minor civil divisions." The parishes of Louisiana are divided into 471 primary divisions, comprising 470 police jury wards, and the

city of New Orleans, which is coextensive with Orleans Parish. There are also 171 secondary divisions, comprising 10 cities, 103 incorporated towns, and 58 incorporated villages. These secondary divisions usually form parts of the police jury wards in which they are wholly or partly located; one city and one town, however, are coextensive with the police jury wards in which they are located.

Urban and rural population compared.—The following table presents the population of Louisiana at the censuses of 1910, 1900, and 1890, respectively, distributed among places grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.

25,000 to 50,000 inhabitants.....	1	28,015					1.7		
10,000 to 25,000 inhabitants.....	4	47,768	2	27,282	2	22,457	2.9	2.0	2.0
5,000 to 10,000 inhabitants.....	5	29,491	4	24,571			1.8	1.8	
2,500 to 5,000 inhabitants.....	15	52,187	8	27,331	6	10,349	3.1	2.0	1.7
Rural territory.....		1,159,872		1,015,337		834,743	70.0	73.5	74.6
Cities, towns, and villages of less than 2,500 inhabitants.....	146	109,802	89	66,973	65	48,624	6.6	4.8	4.3
Other rural territory.....		1,050,070		949,364		786,119	63.4	68.7	70.3

As shown by the above table, the urban territory of the state in 1910—that is, the cities and incorporated towns of 2,500 inhabitants or more—contained 496,516 inhabitants, or 30 per cent of the total population, while 1,159,872 inhabitants, or 70 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, the cities and incorporated towns then having 2,500 inhabitants or more—contained 366,288 inhabitants, or 26.5 per cent of the total population, while 1,015,337 inhabitants, or 73.5 per cent, lived in rural territory. There has thus been a slight increase in the proportion of urban population. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900.

New Orleans, the only city having over 100,000 inhabitants, contained about one-fifth of the total population of the state at each of the last three censuses. In 1910 the remaining urban places, or those having less than 100,000 inhabitants, together contained 9.5 per cent of the total population of the state, while in 1900 and 1890 the proportion in these cities and towns was only 5.7 and 3.7 per cent, respectively.

The urban population of the state is contained in 9 cities and 17 towns, while the rural population is contained in 146 incorporated cities, towns, and villages of less than 2,500 inhabitants each, and in the unincorporated territory. The 146 cities, towns, and villages of less than 2,500 inhabitants each have an aggregate population of 109,802, representing 6.6 per cent of the total population of the state. These places comprise 38 having from 1,000 to 2,500 inhabitants each, with a combined population of 56,720; 45 having from 500 to 1,000 inhabitants each, with a combined population of 31,776; and 63 having less than 500 inhabitants each, with a combined population of 21,306. The population living in unincorporated territory represented 63.4 per cent of the total population of the state.

The above table shows further that in all incorporated places, including those of less than 2,500 inhabitants, there was in 1910 a population of 606,318, or 36.6 per cent of the population of the state. The population of all incorporated places, as they existed in 1900, was 432,261, or 31.3 per cent of the population of the state.

Table I of Chapter 2 shows that 13 parishes had a larger proportion and 1 parish a smaller proportion of urban

population in 1910 than in 1900, while for 1 parish the proportion was the same. Seven parishes which were wholly rural in 1900 were partly urban in 1910, while 36 parishes and the one combination of parishes were wholly rural at both censuses.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the table in the next column, the total population in 1910 of those cities and towns which at that time had 2,500 inhabitants or more was 496,516; in 1900 the total population of these same cities and towns was 380,997. It may be noted that the latter figure exceeds the total population in 1900 of those places which at that time had over 2,500 inhabitants each, 366,288 (see table on p. 760), by 14,709. The difference is the result of the passage, since 1900, of certain communities from the rural to the urban class.

A comparison of the total population in 1910 of cities and towns having a population of not less than 2,500 each with the total population of the same cities and towns in 1900, as given in the next table, shows an increase of 30.3 per cent. This represents the rate of growth of urban communities as thus defined. During the same period the rural population, comprising that of the remainder of the state, increased 15.9 per cent. Urban population thus increased less than twice as fast as rural. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2 there are 12 parishes in which

the population living in rural territory decreased, and 1 parish in which the population decreased in both urban and rural districts.

In the following table the population for the state as a whole is distributed so as to show, for 1910 and 1900, the population of the city of New Orleans, the combined population of the other cities and towns having in 1910 over 2,500 inhabitants, and the population of the remainder of the state.

CLASS OF PLACES.	POPULATION.		INCREASE: 1900-1910	
	1910	1900	Number.	Per cent.
The state.....	1,656,388	1,381,625	274,763	19.9
Urban territory in 1910.....	496,516	380,997	115,519	30.3
City of New Orleans.....	339,075	287,104	51,971	18.1
Other cities of 25,000 inhabitants or more in 1910.....	28,015	16,013	12,002	75.0
Cities and towns of 2,500 to 25,000 inhabitants in 1910.....	129,426	77,880	51,546	66.2
Remainder of the state.....	1,159,872	1,000,628	159,244	15.9

From this table it appears that the city of New Orleans increased in population less rapidly than the state as a whole, while the other two groups of urban places increased much more rapidly, the rate for Shreveport, the only city of over 25,000 inhabitants, exclusive of New Orleans, being nearly four times, and the rate for the group which comprises places of from 2,500 to 25,000 inhabitants each being three and one-third times as great as the rate for the state as a whole. The rate of increase for rural territory was four-fifths that for the state as a whole.

It also appears from this table that of the total increase in the population of the state during the decade, namely, 274,763, nearly one-fifth was in the city of New Orleans. The largest proportion of this increase, or nearly three-fifths, was contributed by rural territory.

PER CENT OF INCREASE OR DECREASE OF POPULATION OF LOUISIANA, BY PARISHES: 1900-1910.

In case of decrease the per cent is inserted under the parish name.

TOTAL POPULATION.

RURAL POPULATION.

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

DENSITY OF POPULATION OF LOUISIANA, BY PARISHES: 1910.

TOTAL POPULATION.

RURAL POPULATION.

Rural population is defined as that residing outside of incorporated places having 2,500 inhabitants or more.

¹Joint population of Junction City, Union County, Ark., and Junction City, Claiborne and Union Parishes, La.: 1910, 1,401; 1900, 1,640.

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Louisiana by parishes and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and parishes; Table II for New Orleans and Shreveport, the two cities of more than 25,000 inhabitants; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of New Orleans, the only city of more than 50,000.

A series of summary tables (numbered 1 to 15) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, the two classes are distinguished in connection with several of the subjects. Urban population, as defined by the Bureau of the Census, includes that of all incorporated places of 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Louisiana, 941,086, or 56.8 per cent, are whites, and 713,874, or 43.1 per cent, negroes. The corresponding percentages in 1900 were 52.8 and 47.1, respectively. In 25 of the 60 parishes the population is more than one-half negro, and in 5 of them more than four-fifths negro, the highest percentage of negroes being that for Tensas Parish (91.5). (See map on page 777.)

Native whites of native parentage constitute 46.9 per cent of the total population of the state, and 82.5 per cent of the white population. Native whites of foreign or mixed parentage constitute only 6.8 per cent of the total population, and foreign-born whites only 3.1 per cent.

Of the urban population, 43.8 per cent are native whites of native parentage; of the rural, 48.2 per cent. The corresponding proportions for native whites of foreign or mixed parentage are 17 and 2.4 per cent, respectively. The percentage of foreign-born whites is 6.7 in the urban population and 1.6 in the rural; the percentage of negroes is 32.4 in the urban and 47.7 in the rural.

Sex (Table 2).—In the total population of the state there are 835,275 males and 821,113 females, or 101.7 males to 100 females. In 1900 the ratio was 101.1 to 100. Among the whites there are 104.3 males to 100 females; among the negroes, 98.3. Among native whites the ratio is 102.8 to 100, as compared with 133.9 to 100 for the foreign-born whites. In the urban population there are 93 males to 100 females, and in the rural, 105.7.

State of birth (Tables 3 and 4).—Of the total native population—that is, population born in the United States—87.7 per cent were born in Louisiana and 12.3 per cent outside the state; of the native white population, 14.3 per cent were born outside the state, and of the native negro, 9.9 per cent. Persons born outside the state constitute a larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Tables 5 and 12).—Of the foreign-born white population of Louisiana, persons

born in Italy represent 39.1 per cent; Germany, 17.2; France, 10.2; Ireland, 7.2; England, 4; Russia, 3.5; Austria, 3.1; Canada, 2.3; Mexico, 1.9; all other countries, 11.8.

Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Italy contributed 26.1 per cent; Germany, 25.1; France, 12.1; Ireland, 11.5; England, 4.7; Russia, 1.9; Canada, 1.9; Austria, 1.8; Spain, 1.5; Scotland, 1.1.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over is 414,919, representing 25 per cent of the population. Of such males, 57.8 per cent are whites and 42 per cent negroes. Native whites represent 51.5 per cent of the total number and foreign-born whites 6.4 per cent. Of the 26,519 foreign-born white males of voting age, 10,024, or 37.8 per cent, are naturalized. Males of militia age—18 to 44—number 338,343.

Age (Tables 7, 8, and 13).—Of the total population, 13.5 per cent are under 5 years of age, 24.9 per cent from 5 to 14 years, inclusive, 20.6 per cent from 15 to 24, 26.5 per cent from 25 to 44, and 14.2 per cent 45 years of age and over. The foreign-born white population comprises comparatively few children, only 5.9 per cent of this class being under 15 years of age, while more than four-fifths (81.1 per cent) are 25 years of age and over. The proportion of children under 15 in the negro population is somewhat smaller than in the native white population of native parentage.

The urban population shows a smaller proportion of children than the rural and a larger proportion of persons in the prime of life. Migration to the city explains this at least in part. Of the urban population, 32.1 per cent are from 25 to 44 years of age, inclusive, and of the rural population, 24.2 per cent.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—is 575,866, of whom 248,420, or 43.1 per cent, attended school. In addition to these, 4,968 persons under 6 and 3,639 of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 42.6; for girls, 43.7. For children from 6 to 14 years, inclusive, the percentage attending school was 54.6. The percentage for children of this age among native whites of foreign or mixed parentage was 69.7; among native whites of native parentage, 68.4; among foreign-born whites, 50.7; and among negroes, 37.4. (See Table I.) In urban communities the percentage of children of that age attending school was 74.1, and in rural, 48.5.

Illiteracy (Table 10).—There are 352,179 illiterates in the state, representing 29 per cent of the total population 10 years of age and over, as compared with 38.5 per cent in 1900. The percentage of illiteracy is 48.4 among negroes, 24 among foreign-born whites, and 13.4 among native whites. It is 15 for native whites of

native parentage and 3.6 for native whites of foreign or mixed parentage.

For all classes combined, illiterates are fewer in urban than in rural communities, 10.7 per cent as against 38. For each class of the population the percentage of illiterates in the rural population greatly exceeds that in the urban.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy is 24.9. (See Table I.)

Marital condition (Tables 11 and 14).—In the population 15 years of age and over, 37.9 per cent of the males are single and 28.3 per cent of the females. The percentage married is 56.1 for males and 57.6 for females, and the percentage widowed 5 and 13.2, respectively. The percentages of those reported as divorced, 0.3 and 0.6, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single is so much smaller for women than for men is due largely to the fact that women marry younger. Thus 16.2 per cent of the females from 15 to 19 years of age are married, as compared with 1.6 per cent of the males, and 58 per cent of the females from 20 to 24 years of age are married, as compared with 32.3 per cent of the males. In the next age group, 25 to 34 years, the difference is less marked, the percentages being 76.6 and 69.1, respectively, while in the succeeding age groups the percentage married is higher among the males. That there is a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over are as follows: Foreign-born whites, 63.4 for males, 59.4 for females; native whites of native parentage, 53.8 and 58.6, respectively; native whites of foreign or mixed parentage, 54.8 and 51.8; negroes, 57.8 and 57.5.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married, both for males and females, is higher in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Louisiana is 331,220, and the total number of families 344,144, indicating that in comparatively few cases does more than one family occupy a dwelling. (See Table I.) The average number of persons per dwelling is 5, and the average number per family, 4.8.

ACADIA.—Organized from part of St. Landry in 1886.
 BIENVILLE.—Parts taken to form parts of Red River and Webster in 1871 and part of Lincoln in 1873.
 BOSSIER.—Parts taken to form parts of Red River and Webster in 1871.
 CADDO.—Part taken to form part of Red River in 1871.
 CALCASIEU.—Part taken to form part of Cameron in 1870.
 CAMERON.—Organized from parts of Calcasieu and Vermilion in 1870.
 CATAHOULA.—Part taken to form La Salle in 1910. (See also note in next column.)
 CLAIBORNE.—Parts taken to form part of Webster in 1871 and part of Lincoln in 1873.
 DE SOTO.—Part taken to form part of Red River in 1871.
 EAST CARROLL.—Organized from part of Carroll in 1877.
 JACKSON.—Part taken to form part of Lincoln in 1873; part of Lincoln annexed in 1877.
 JEFFERSON.—Part annexed to Orleans in 1877.
 LA SALLE.—Organized from part of Catahoula in 1910. (See also note in next column.)
 LINCOLN.—Organized from parts of Bienville, Claiborne, Jackson, and Union in 1873; part annexed to Jackson in 1877.

NATCHITOCHES.—Parts taken to form parts of Red River and Vernon in 1871.
 ORLEANS.—Part of Jefferson annexed in 1877.
 RAPIDES.—Part taken to form part of Vernon in 1871.
 RED RIVER.—Organized from parts of Bienville, Bossier, Caddo, De Soto, and Natchitoches in 1871.
 SABINE.—Part taken to form part of Vernon in 1871.
 ST. LANDRY.—Part taken to form Acadia in 1886.
 UNION.—Part taken to form part of Lincoln in 1873.
 VERMILION.—Part taken to form part of Cameron in 1870.
 VERNON.—Organized from parts of Natchitoches, Rapides, and Sabine in 1871.
 WEBSTER.—Organized from parts of Bienville, Bossier, and Claiborne in 1871.
 WEST CARROLL.—Organized from part of Carroll in 1877.

NOTE.—*Catahoula and La Salle Parishes combined.*—Total population: 1910, 10,817; 1900, 16,351; increase, 1900-1910, 3,466; per cent of increase, 21.2. Rural population—1910, 19,817; same territory in 1900, 16,351; per cent of increase, 21.2. Rural population—1900, 16,351.

INCORPORATED PLACES.

PATTERSON.—Incorporated in 1907.
 SHREVEPORT.—Part of police jury ward 4 annexed in 1908.
 WINFIELD.—Incorporated in 1900.

MAINE.

CHAPTER 1.—NUMBER OF INHABITANTS.

Introduction.—This chapter gives the population of Maine, by counties and minor civil divisions, as enumerated at the Thirteenth Census, taken as of April 15, 1910, with comparative statements of population where possible, and a statement and discussion for the state as a whole of the population living in urban and in rural territory. The statistics are given in detail in two general tables.

Table 1 (p. 801) shows the population of Maine, distributed according to counties and minor civil divisions, at the last three censuses, namely, those of 1910, 1900, and 1890. The arrangement of counties and of the primary divisions in each county is alphabetical. The figures for secondary divisions are printed in italics. The changes in boundaries, name, or form of organization that took place between 1900 and 1910 are indicated in footnotes to the table. For changes between 1890 and 1900 reference must be made to the census report of 1900.

It may be noticed that the county totals as given in Table 1 for 1900 and 1890 sometimes exceed the aggregate population of the minor civil divisions of the counties as shown in the table. This is due in part to the fact that some of the minor civil divisions of the respective counties had gone out of existence by 1910, their territory having been annexed to one or more other divisions or taken to form new divisions. In other cases, at the censuses of 1900 and 1890, some of the sparsely settled divisions were not returned separately.

Table 2 (p. 806) shows the cities and incorporated villages of Maine and also the towns having in 1910 2,500 inhabitants or more, alphabetically arranged, with their population in 1910, 1900, and 1890.

The population of Maine, by counties, at each of the last five censuses, from 1870 to 1910, inclusive; the increase during the last two decades; the density of population at the census of 1910; and the distribu-

HISTORICAL NOTE.—The name "Mayne" was applied by early explorers to the mainland of the territory now occupied by the state of Maine, as distinguished from the numerous islands along the coast.

About the close of the fifteenth century the Cabots, exploring in the service of England, discovered Newfoundland and the mainland of North America. On the basis of their discoveries England claimed a large part of North America, including all the region lying along the North Atlantic coast claimed by the French as a part of New France. The territory embraced within the present limits of Maine was included, either wholly or in part, both in the French grants to the Sieur de Monts in 1603 and to the Company of New France in 1628, and in the English grants to the Plymouth Company in 1606 and to the council of Plymouth in 1620. These conflicting claims were in part responsible for the controversy and bloodshed which, for a century and a half, occurred from time to time between the two powers.

A number of temporary settlements were made in this territory during the early years of the seventeenth century, but the first permanent settlement was probably that established at Pemaquid by the English about 1623 or 1624.

In 1622 the tract between the Merrimac and Kennebec Rivers was granted by the council of Plymouth to Capt. John Mason and Sir Ferdinando Gorges. In 1629

tion of the population at the last two censuses according to urban and rural districts, are given in Table I of Chapter 2.

The tables and text of the present chapter contain few technical expressions whose meaning is not apparent. The census usage in regard to certain terms is, however, explained below:

Density of population.—The density of population of a state or county is obtained by dividing its total population by the number of square miles in its land area.

Minor civil divisions.—The counties are divided generally into smaller political units which bear different designations in the different parts of the country, such as towns, townships, election precincts etc. Of these minor civil divisions those which rank next to the county as geographic areas are termed primary divisions. In many instances, however, these primary divisions contain political units of still smaller area, such as incorporated villages or boroughs. These smaller political units are referred to as secondary divisions.

Urban and rural population defined.—The Census Bureau, for purposes of discussion, has defined urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more. In the New England states, in addition to cities having this population, all towns having a population of 2,500 or more have also been classed as urban, without regard to the population of the villages (whether incorporated as such or not) which they may contain. The result is that the "urban areas" in New England include some population which in other sections of the United States would be segregated as "rural." This departure from the general rule, rendered necessary by local conditions in New England, probably makes no great change in the proportions of urban and rural population in those sections where population is dense and generally devoted to manufacturing. In other sections a considerable variation doubtless results, but there is no reason to suppose that it materially affects the distinguishing characteristics of urban and rural population as defined by census statistics.

Urban population being thus defined, the remainder of the state or county is classed as rural. In the New England states, therefore, the rural population consists of the population outside of towns and cities having 2,500 inhabitants or more.

The comparisons of the urban and rural population in 1910 with that at earlier enumerations may be made either with respect to the varying proportions of the two classes at successive enumerations or with respect to the increase between enumerations. In order to contrast the proportion of the total population living in urban or

the proprietors divided their grant, and Gorges retained the part east of the Piscataqua River, which now forms the extreme southwestern boundary of Maine. In 1639 he received a royal charter for this territory, under the name of "The Province or Countie of Mayne." In 1677 the Province of Maine was sold by the heirs of Gorges to the colony of Massachusetts Bay, which had for some time claimed this territory under a conflicting grant.

In 1663 Charles II granted to the Duke of York the territory between the St. Croix and the Kennebec Rivers, and in 1691, in the provincial charter, William and Mary granted the same territory to the Massachusetts Bay colony.

In 1763 France relinquished her claims to Maine territory to England; and in 1783, at the close of the Revolution, the British claims were ceded to the United States.

Up to March 15, 1820, Maine formed a part of the state of Massachusetts. On the date named it was admitted to the Union as a separate state, having substantially its present limits.

According to estimates and censuses taken prior to the first Federal census, in 1790, the population of the district of Maine at different dates was as follows: 1764 (census), 23,993; 1776 (census), 47,520; 1784 (partly estimated), 61,406.

rural territory at the census of 1910 with the proportion urban or rural at the preceding census, it is necessary to classify the territory according to the conditions as they existed at each census. In this comparison a place having less than 2,500 inhabitants in 1900 and over 2,500 in 1910 is classed with the rural population for 1900 and with the urban for 1910. On the other hand, in order to present fairly the contrast between urban and rural communities, as regards their rate of growth, it is necessary to consider the changes in population for the same territory which have occurred from one decennial census to another. For this purpose the territory which in 1910 was

urban or rural, as the case may be, is taken as the basis, and the population in 1900 for the same territory (so far as separately reported at that census) is presented, even though part of the territory may, on the basis of its population at the earlier census, have then been in a different class. This avoids the disturbing effect on comparisons which would arise from the passage, for example, of communities formerly classed as rural into the urban group. These two distinct forms of comparison are made in Table I of Chapter 2 for the state as a whole and for each county separately for the last two censuses.

TOTAL POPULATION, INCREASE, AND DISTRIBUTION.

Population of the state.—The population of Maine in 1910 was 742,371. Compared with a population of 694,466 in 1900, this represents an increase during the last decade of 47,905, or 6.9 per cent. During the same period the total population of the United States increased 21 per cent. The percentage of increase for the state during this decade, though com-

paratively small, is larger than that shown by any census since 1860.

The following table shows the population of Maine at each census from 1790 to 1910, inclusive, together with the increase and per cent of increase during each decade, in comparison with the per cent of increase for the United States as a whole.

CENSUS YEAR.	Population.	INCREASE ¹ OVER PRECEDING CENSUS.		Per cent of increase for the United States.
		Number.	Per cent.	
1910.....	742,371	47,905	6.9	21.0
1900.....	694,466	33,380	5.0	20.7
1890.....	661,086	12,150	1.9	25.5
1880.....	648,936	22,021	3.5	30.1
1870.....	626,915	-1,364	-0.2	22.6
1860.....	628,279	45,110	7.7	35.6
1850.....	583,169	81,376	16.2	35.9
1840.....	501,793	102,338	25.6	32.7
1830.....	399,455	101,120	33.9	33.5
1820.....	298,335	69,630	30.4	33.1
1810.....	228,705	70,986	50.7	36.4
1800.....	151,719	55,179	57.2	35.1
1790.....	96,540

¹ A minus sign (−) denotes decrease.

It will be noticed from this table that the early censuses showed the most rapid increase in the population of the state. From 1790 to 1810, a period of 20 years, the population more than doubled and from 1810 to 1840, a period of 30 years, it again more than doubled. During the period of 20 years from 1840 to 1860, however, the population increased only a little more than one-fourth and during the last 50 years, from 1860 to 1910, it increased somewhat less than one-fifth, or 18.2 per cent, the decade 1860–1870 even showing a slight decrease in population.

A comparison of the rates of increase for the state with those for the United States, as given in the preceding table, shows that there were only three decades in which the rate of increase for the state was higher than that for the country as a whole. Since 1850 the rates of increase for the state have been very much lower than those for the United States, while during one decade, as already pointed out, a decrease occurred. The population of the state in 1910 was less than eight times its population in 1790, when the First Census was taken, while the population of the United States in 1910 was more than twenty-three times that in 1790.

In 1790 Maine contained 9.6 per cent of the total population of New England, which was 1,009,408. The proportion of New England's population in Maine steadily increased until 1840, when it was 22.5 per cent. Since 1840 it has steadily decreased until in 1910, in an aggregate population of 6,552,681 in the New England states, Maine was represented by 11.3 per cent of the whole. Since the First Census the population of the New England states has multiplied more than six times, while that of Maine has multiplied nearly eight times.

Principal cities.—Maine has 20 cities, of which the largest, Portland, had in 1910 a population of 58,571, and the next largest, Lewiston, a population of 26,247. There were 5 cities having from 10,000 to 25,000 inhabitants, 9 from 5,000 to 10,000, and 4 from 2,500 to 5,000, respectively. The aggregate population of the 20 cities was 245,741, or 33.1 per cent of the total population of the state.

Table 2 shows the population in 1910 of all the cities of the state with comparative figures, where possible, for 1900 and 1890. The table on the opposite page shows the population of the 7 cities having in 1910 over 10,000 inhabitants, as reported at each

census since their organization as towns, so far as figures are available, together with the increase during each decade. Of the cities included in the table, Waterville showed the highest percentage of increase during the last decade, namely, 20.9 per cent, and Biddeford the

lowest, 5.8 per cent. The rate of increase in the population of Portland from 1900 to 1910 was 16.8 per cent, which is less than half the rate for the preceding decade, but more than twice that for any other decade since 1870.

¹A minus sign (—) denotes decrease.

Counties.—Maine has 16 counties. The population of these counties ranged in 1910 from 18,216 in Lincoln County to 112,014 in Cumberland County.

There were no changes in the territorial boundaries of the counties between 1900 and 1910.

Ten counties increased in population during the last decade, the percentages of increase ranging from 3.7 per cent in Franklin County to 22.9 per cent in Aroostook County, and the absolute increases from 675 in Franklin County to 13,920 in Aroostook County. Seven counties showed a larger percentage of increase than that shown for the state as a whole, which, as before stated, was 6.9 per cent. Six counties decreased in population during the last decade, the percentages of decrease ranging from 3.3 per cent in Waldo County to 8.6 per cent in Sagadahoc County. The aggregate increase of population in the 10 counties that showed an increase was 57,334; the aggregate decrease of population in the 6 counties that showed a decrease was 9,429. The difference, 47,905, is, of course, the total increase of population in the state.

A map on page 800 shows the increase or decrease in the total population of each county of Maine during

the last decade. In the counties shown in white the population decreased; for the other counties the different rates of increase are indicated by differences in shading.

Density of population.—The total land area of the state is 29,895 square miles. The average number of persons to the square mile in 1910 was 24.8; in 1900 and 1890 it was 23.2 and 22.1, respectively. The average number per square mile for the United States as a whole in 1910 was 30.9.

The density of population is given by counties in Table I of Chapter 2, and in a map on page 800.

Aroostook County, with 6,453 square miles, has the largest area, and Sagadahoc County, with 250 square miles, has the smallest area. Cumberland County in 1910 was the most densely populated, having 131.3 persons to the square mile. Androscoggin County followed closely, with 130.3 persons to the square mile. Piscataquis County, with 5.3 persons to the square mile, was the most sparsely settled.

Minor civil divisions.—The political divisions into which counties are subdivided are collectively termed "Minor civil divisions." In Maine the counties are

divided into 907 primary divisions comprising 429 towns, 20 cities, 81 plantations, 348 townships, 11 grants, 3 gores, 1 tract, 3 surpluses, and 11 islands. No population was reported at the last three censuses for 200 townships, 5 grants, 1 gore, and 2 surpluses. There are also 21 secondary divisions, all of which are villages. These incorporated villages, under the laws of Maine, are not independent minor civil divisions but form parts of the towns in which they are located. The form of government granted to plantations is very simple, while gores, grants, surpluses, tracts, and townships, as a rule, are unorganized.

Cities and villages.—In addition to the 20 cities already mentioned, Maine contains 21 communities incorporated as villages. Four of the incorporated villages had more than 2,500 inhabitants each in 1910, their combined population being 16,507; while 17 villages had less than 2,500 inhabitants each, their combined population being 18,929. The aggregate population of the 21 villages of the state in 1910 was, therefore, 35,436, or 4.8 per cent of the total population of the state.

The 41 places having in 1910 either the city or the village form of incorporation had an aggregate population of 281,177, or 37.9 per cent of the total population of the state. One village having 83 inhabitants in 1910 was not returned separately in 1900. The population in 1900 of the 40 cities and incorporated villages which the state then contained was 253,405, or 36.5 per cent of the total population of the state at that time. From 1900 to 1910 the population of these 40 cities and villages increased 27,689, or 10.9 per cent. Outside of these cities and villages the population increased 20,216, or 4.6 per cent.

Urban and rural population compared.—The following table presents the population of Maine at the censuses of 1910, 1900, and 1890, respectively, distributed among cities and towns grouped according to specified limits of population, together with the percentage of the total population contained in each group at each of the censuses named. The classification is based upon the population of each place as it existed at each census.

CLASS OF PLACES.	1910		1900		1890		PER CENT OF TOTAL POPULATION.

Other rural territory ¹	458	22,774	666	20,296	372	18,274	3.1	2.9	2.8

¹ Includes townships, plantations, islands, grants, gores, tracts, and surpluses.

The population of the state classified as urban in 1910 was contained in 20 cities and 35 towns. The entire rural population was in towns or unincorporated communities of less than 2,500 inhabitants, there being no cities in the state having less than this number of inhabitants.

The urban territory of the state in 1910—that is, the cities and towns of 2,500 inhabitants or more—contained 381,443 inhabitants, or 51.4 per cent of the total population, while 360,928 inhabitants, or 48.6 per cent, lived in rural territory. The urban territory as it existed in 1900—that is, cities and towns then having 2,500 inhabitants or more—contained 337,390 inhabitants, or 48.6 per cent of the total population, while 357,076 inhabitants, or 51.4 per cent, lived in rural territory. There was thus a slight increase in the proportion of urban population during the last decade. For the United States as a whole the urban population constituted 46.3 per cent of the total population in 1910 and 40.5 per cent of the total population in 1900. Table I of Chapter 2 shows 10 counties having a larger proportion and 6 counties having a smaller proportion of urban population in 1910 than in 1900.

A comparison of the figures for 1910 and 1890, as given in the above table, shows that the proportion of the population in cities of over 25,000 inhabitants has more than doubled since 1890. The proportion of population living in cities and towns having from 2,500 to 25,000 inhabitants increased only slightly, while the proportion of rural population decreased.

In order to compare the *rate of growth* in urban and rural communities it is necessary in each case, as previously explained, to consider the changes in population which have occurred in the *same* territory and from one decennial census to another. With this end in view places classed as urban or rural according to their population in 1910 are taken as a basis and the aggregate population in 1910 and in 1900 of the same places is then compared. Thus, as shown in the table on the following page, the total population in 1910 of those cities and towns which at that time had over 2,500 inhabitants was 381,443; in 1900 the total population of these same places was 339,564. It may be noted that the latter figure exceeds the total population in 1900 of those places which at that time had over 2,500 inhabitants each, 337,390 (see table above), by 2,174. The difference is due to

two things: First, four towns having less than 2,500 inhabitants each in 1900, with a combined population of 7,434, had more than 2,500 inhabitants each in 1910; and second, two towns having more than 2,500 inhabitants each in 1900, with a combined population of 5,260, had less than 2,500 inhabitants each in 1910.

The comparison of the total population in 1910 of places having a population of not less than 2,500 each with the total population of the same places in 1900, as given in the following table, shows an increase of 12.3 per cent. During the same period the rural population, comprising that of the remainder of the state, increased 1.7 per cent. Urban population thus increased much more rapidly than rural. For the United States as a whole urban population increased 34.8 per cent in the last decade and rural population 11.2 per cent. As shown by Table I of Chapter 2, there were nine counties in Maine in which the population living in rural territory decreased, and four counties in which there was a decrease in urban population.

For the state as a whole the population classified as urban is still further distributed in the following table, which shows, for 1910 and 1900, the combined population of the cities and towns having, in 1910,

25,000 inhabitants or more and from 2,500 to 25,000 inhabitants, respectively, and the population of the remainder of the state.

CLASS OF PLACES.	POPULATION.		INCREASE: 1900 TO 1910	
	1910	1900	Number.	Per cent.
The state.....	742,371	694,466	47,905	6.9
Urban territory in 1910.....	381,443	339,564	41,879	12.3
Cities and towns of 25,000 inhabitants or more in 1910.....	84,818	73,906	10,912	14.8
Cities and towns of 2,500 to 25,000 in- habitants in 1910.....	296,625	265,658	30,967	11.7
Remainder of the state.....	360,928	334,902	6,026	1.7

From this table it appears that both groups of urban communities increased in population during the last decade more rapidly than the state as a whole, the rate of increase for cities of over 25,000 inhabitants being a little more than double, and that for cities and towns of 2,500 to 25,000 inhabitants a little less than double the rate for the state; the rate of increase in rural territory, on the other hand, was only about one-fourth of that for the state.

It also appears that of the decennial increase in population, namely, 47,905, very nearly two-thirds was in cities and towns of 2,500 to 25,000 inhabitants.

INCREASE AND DENSITY OF POPULATION OF MAINE, BY COUNTIES: 1910.

In case of decrease the per cent is inserted under the county name.

CHAPTER 2.—COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

Introduction.—The first chapter having given the number of inhabitants of Maine by counties and minor civil divisions, the decennial increase and the density of population, and the proportions urban and rural, the present chapter deals with the composition and characteristics of the population. The two chapters cover all the principal topics of the population census except occupations and ownership of homes.

Description of the tables.—The greater part of this chapter consists of five general tables, which present statistics of color, nativity, parentage, sex, citizenship, illiteracy, school attendance, and dwellings and families, as follows: Table I for the state and counties; Table II for the two cities of more than 25,000 inhabitants; Table III for cities of 10,000 to 25,000; Table IV for places of 2,500 to 10,000; and Table V for wards of Portland, the one city of more than 50,000 inhabitants.

A series of summary tables (numbered 1 to 14) reproduces from the general tables the more important state and city totals, and presents also certain additional data relative to state of birth, age, and marital condition.

On account of the wide differences in characteristics among the different classes of the population, the statistics on each subject are shown according to race, and for the whites according to nativity and parentage. Classification according to nativity and parentage is scarcely necessary for the other races, since nearly all negroes and Indians are native born of native parentage, and nearly all Chinese and Japanese either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in some of the tables; in a few cases all three native white classes are combined.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of the population, it is desirable that the two classes be distinguished in presenting census data. The Bureau of the Census has undertaken to do this by classifying as urban the population of all incorporated places of 2,500 inhabitants or more. In New England, however, where many villages of considerable size are not separately incorporated, it was

deemed best in the census of 1910 to classify also towns of 2,500 inhabitants or more as urban, although this classification is not very satisfactory because such towns generally include more or less population that is essentially rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended any kind of school at any time between September 1, 1909, and the date of enumeration, April 15, 1910.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write, regardless of ability to read.

Color and nativity (Table 1).—Of the total population of Maine in 1910, 494,907, or 66.7 per cent, were native whites of native parentage; 134,955, or 18.2 per cent, were native whites of foreign or mixed parentage; 110,133, or 14.8 per cent, were foreign-born whites; and 1,363, or 0.2 per cent, were negroes. The corresponding percentages in 1900 were 71, 15.3, 13.4, and 0.2, respectively, the proportion of native whites of native parentage having decreased during the decade. In 12 of the 16 counties less than 15 per cent of the population was foreign-born white; the highest percentage for this element, 23.9, was for Androscoggin County. Approximately one-third (32.3 per cent) of the population of Aroostook County was native white of foreign or mixed parentage, and in 14 counties the percentage for this class exceeded that for foreign-born whites. (See maps on page 813.)

Of the urban population, 55.1 per cent were native whites of native parentage; of the rural, 78.9 per cent. The corresponding proportions for native whites of foreign or mixed parentage were 23.8 and 12.2 per cent, respectively. The percentage of foreign-born whites was 20.8 in the urban population and 8.5 in the rural.

Sex (Table 2).—In the total population of the state in 1910 there were 377,052 males and 365,319 females, or 103.2 males to 100 females. In 1900 the ratio was 102.2 to 100. Among native whites the ratio in 1910 was 101.8 to 100; among foreign-born whites, 111.1 to 100. In the urban population there were 98.4 males to 100 females, and in the rural, 108.6.

State of birth (Tables 3 and 4).—Of the native population—that is, population born in the United States—91.6 per cent were born in Maine and 8.4 per cent outside the state; of the native white population, 8.4 per cent were born outside the state, and of the native negro, 28.8 per cent. Persons born outside the state constituted a larger proportion of the native population in urban than in rural communities.

Foreign nationalities (Table 5).—Of the foreign-born white population of Maine in 1910, persons born in Canada represented 68.9 per cent (those of French parentage, 31.8, and all others, 37.1); Ireland, 7.2; England, 5.1; Russia, 4.3; Italy, 3.1; Scotland, 2.2; Sweden, 2; all other countries, 7.3 per cent. Of the total white stock of foreign origin, which includes persons born abroad and also natives having one or both parents born abroad, Canada contributed 67.8 per cent (French stock, 30.8, and all others, 37); Ireland, 10.2; England, 5.1; Russia, 2.9; Scotland, 2.1; Italy, 1.9; Sweden, 1.8; Germany, 1.3 per cent.

Voting and militia ages (Table 6).—The total number of males 21 years of age and over in 1910 was 235,727, representing 31.8 per cent of the population. Of these, 67.8 per cent were native whites of native parentage, 11.3 per cent native whites of foreign or mixed parentage, 20.6 per cent foreign-born whites, and 0.2 per cent negroes. Of the 48,464 foreign-born white males of voting age, 14,994, or 30.9 per cent, were naturalized. Males of militia age—18 to 44—numbered 151,325.

Age (Tables 7, 8, and 12).—Of the total population in 1910, 9.7 per cent were under 5 years of age, 17.7 per cent from 5 to 14 years, inclusive, 17.1 per cent from 15 to 24, 28.2 per cent from 25 to 44, and 27.1 per cent 45 years of age and over. The foreign-born white population comprised comparatively few children, only 8.1 per cent of this class being under 15 years of age, while 73.9 per cent were 25 years of age and over. Of the native whites of foreign or mixed parentage, 32.1 per cent were 25 and over, and of the native whites of native parentage, 57.6 per cent.

As compared with rural population, the urban showed in 1910 a slightly larger proportion of persons in the prime of life, 29.8 per cent of urban and 26.5 per cent of rural being in the age groups 25 to 44 years.

School attendance (Table 9).—The total number of persons of school age—that is, from 6 to 20 years, inclusive—in 1910 was 195,197, of whom 132,082, or 67.7 per cent, attended school. In addition to these, 6,393 persons under 6 and 2,356 of 21 and over attended school. For boys from 6 to 20 years, inclusive, the percentage attending school was 67.1; for girls, 68.2. For children from 6 to 14 years, inclusive, the percentage attending school was 89.2. The percentage for children of this age among native whites of native parentage was 90.3; among native whites of foreign or mixed parentage, 88.4; among foreign-born whites, 81; and for the 183 negro children aged 6 to 14, 90.7. (See Table I.) There is little difference between urban population and rural as regards school attendance for children of this age, but of those from 15 to 20 years, 38.4 per cent in rural communities, as against 32.4 per cent in urban, were reported as attending school.

Illiteracy (Table 10).—In 1910 there were 24,554 illiterates in the state, representing 4.1 per cent of the total population 10 years of age and over, as compared

with 5.1 per cent in 1900. The percentage of illiteracy was 13.7 among foreign-born whites, 2 among native whites, and 8 among negroes.

For the foreign-born whites the percentage of illiteracy was somewhat higher in urban communities than in rural, but for each of the other elements the percentage of illiteracy was higher in rural than in urban communities.

For persons from 10 to 20 years of age, inclusive, whose literacy depends largely upon present school facilities and school attendance, the percentage of illiteracy (2) was comparatively low. (See Table I.)

Marital condition (Tables 11 and 13).—In the population 15 years of age and over in 1910, 34.6 per cent of the males, were single and 27.4 per cent of the females. The percentage married was 57.8 for males and 59.2 for females, and the percentage widowed 6.4 and 12.3, respectively. The percentages of those reported as divorced, 1 and 0.9, respectively, are believed to be too small, because of the probability that many divorced persons class themselves as single or widowed.

That the percentage single was so much smaller for women than for men is due largely to the fact that they marry younger. Thus 9.5 per cent of the females from 15 to 19 years of age were married, as compared with 1.1 per cent of the males, and 46.7 per cent of the females from 20 to 24 years were married, as compared with 22 per cent of the males. In the next age group, 25 to 34 years, the difference was not so great, the percentage being 73.8 for females and 62.4 for males, while in the age group 35 to 44 the difference practically disappeared. That there was a larger proportion of widows than of widowers may indicate that men more often remarry than women, but, since husbands are generally older than their wives, the marriage relationship is more often broken by death of the husband than by death of the wife.

For the main elements of the population the percentages of married persons among those 15 years of age and over in 1910 was as follows: Foreign-born whites, 62 for males and 66.6 for females; native whites of native parentage, 59.4 and 59.3; native whites of foreign or mixed parentage, 43.9 and 48.9; negroes, 44.9 and 43.8.

These percentages by no means indicate the relative tendency of the several classes as regards marriage. To determine that, the comparison should be made by age periods, since the proportion married in any class is determined largely by the proportion who have reached the marrying age. Similarly, the proportion widowed depends largely on the proportion past middle life. The percentage married is slightly higher for males and decidedly higher for females in rural than in urban communities.

Dwellings and families.—The total number of dwellings in Maine in 1910 was 159,437, and the total number of families 177,960, there being 111.6 families to each 100 dwellings. (See Table I.) The average number of persons per dwelling was 4.7, and the average number per family, 4.2.
