

OKLAHOMA.

FARMS AND FARM PROPERTY.

Oklahoma ranks twenty-third in population and seventeenth in land area among the states and territories of continental United States. The average elevation of the state is about 1,300 feet above sea level, the altitudes ranging from approximately 350 feet in the extreme southeastern portion to more than 4,500 feet in the extreme western portion, adjoining New Mexico—the part of the state known as the Panhandle.

The eastern portion of the state is occupied by two mountainous regions separated by the valley of the Arkansas River. The northern portion of this district comprises a portion of the Ozark uplift, while the southern portion is known as the Ouachita Mountains. Within these regions are numerous mountain ranges and extensive stretches of plateau country, which are for the most part covered with forests. The valley of the Arkansas River is a rolling to ridged valley which separates the more mountainous portions of the state along the eastern boundary. The altitudes within the mountain and plateau district rise to 1,500 and 2,000 feet above sea level.

Immediately to the west of the mountainous region occur the broad plains and prairies which occupy practically all of the central portion of the state. These lie at altitudes ranging from 800 to 2,000 feet above sea level and merge into the High Plains of the extreme western portion of the state, which rise gradually westward from an altitude of 2,000 feet to approximately 5,000 feet in the extreme western portion of Cimarron County. In south central Oklahoma there are two smaller mountain ranges, the Arbuckle Mountains and the Wichita Mountains.

Along the extreme southern boundary of the state the Coastal Plain occupies a small area bordering the Red River. The altitudes within this region range from 350 to 600 feet above sea level.

The more mountainous eastern portion of the state is occupied by a wide variety of soils derived principally from sandstone, shale, and siliceous limestone rocks. Only the more level portions, chiefly derived from the limestone formations of the Ozark uplift and from associated shales, are used for agricultural purposes. From these soils in the northeastern portion of the state gray silty and stony loams have been formed. The more mountainous sections in the eastern part of the state are chiefly occupied by forests.

The eastern portion of the Residual Prairie region consists chiefly of sandstone and shale rocks, with numerous ledges of interbedded limestone. These formations give rise to sandy loam, loam, and clay soils. The west central portion of the state is occupied by extensive areas of brown or red sandy loam and

loam soils derived from the Permian red beds. Throughout this section there are broad belts of sand hills, occurring principally along the northern and northeastern banks of the principal rivers. The Residual Prairie section merges gradually into the High Plains, occupying the extreme western portion of the state. Within the plains section the soils are largely gravelly loams, sandy loams, and sands.

The soils of the Coastal Plain consist of considerable areas of dark-colored clays and clay loams occurring in the calcareous prairies of the south central portion of the state. In the extreme southeastern portion of the state occur sandy loams derived from the underlying formations of the rolling Coastal Plain. Extensive alluvial bottoms are found along the Red River and along the other larger streams which cross the state from west to east. The rainfall over the whole state of Oklahoma is sufficient for the growing of most crops without irrigation, the normal annual precipitation ranging from about 17 inches at the western boundary to about 40 inches at the eastern boundary. In the extreme western part of the state irrigation is practiced to a limited extent.

The two maps on the opposite page show, for the different counties, the proportion of the total land area in farms and the average value of farm land per acre. Of the state's entire land area, 65 per cent is in farms. As shown by the first map, in the greater number of counties in the eastern half of the state, corresponding quite closely to those which from 1893 to 1906 formed Indian Territory, less than three-fifths of the land area is in farms; two counties in the Panhandle also fall below this proportion. In the eastern half of the state, however, there is a group of eight counties, lying to the north of the center, which have between 60 and 80 per cent of their land in farms. The counties of the western half of the state are distributed among the four groups having over 60 per cent of their land in farms.

The average value of farm land per acre for the state as a whole is \$22.49. In all of the south central and eastern counties of the state, with the exception of Muskogee and Tulsa, the average value of farm land, as shown by the second map, is below \$25 per acre, and the western and northwestern counties likewise fall below this figure. Between these groups is a belt of 18 counties, extending from the middle of the northern boundary of the state to the southwest corner, with land values between \$25 and \$50 per acre. Oklahoma County alone shows a value above \$50 per acre, and three counties, Atoka, Pushmataha, and Cimarron, show values under \$10 per acre.

Irrigation.—Of the 190,192 farms in the state, 137, or 0.1 per cent, were reported irrigated in 1909. The acreage reported as irrigated in 1909 was 4,388 acres, or less than one-tenth of 1 per cent of the improved land in farms. The area to which enterprises existing in 1910 were capable of supplying water was 6,397 acres, and the total acreage included in irrigation

projects completed or under way in 1910 was 8,528 acres.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 ¹ (June 1)	INCREASE. ²	
			Amount.	Per cent.
Population.....	1,657,155	790,391	866,764	109.7

Average value of land per acre.....	\$22.49	\$6.50	\$15.99	246.0

¹ Includes Indian Territory.

² A minus sign (-) denotes decrease.

NOTE.—Ranges or ranches using the public domain for grazing purposes but not owning or leasing land were counted as farms in 1910 and 1900. They were included as owned or managed, free from mortgage, and under 3 acres in size. The counting of these ranges as farms affects all totals, averages, and percentages in which the number of farms is a factor. In 1910 there were 14 such ranges included as farms.

Between 1900 and 1910 the number of farms in Oklahoma increased from 108,000 to 190,192, a gain of 82,192, or 76.1 per cent. During the same time the population increased 109.7 per cent.

The approximate land area of the state is 44,424,960 acres. Of this area, 28,859,353 acres, or 65 per cent, are included in farms, representing an increase of 5,871,014 acres, or 25.5 per cent, over the figures for 1900. The improved acreage increased from 8,574,187 acres in 1900 to 17,551,337 acres in 1910, a gain of 104.7 per cent. In 1900 the improved land in farms was equal to 19.3 per cent of the total land area of the state; in 1910 it was 39.5 per cent. On account of the greater relative increase in the number of farms than in the farm acreage, the average size of farms, which was 212.9 acres in 1900, had decreased to 151.7 acres in 1910.

The total value of farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), is \$918,199,000, an increase of 230.9 per cent since 1900. Land alone increased in value \$499,669,000, or 334.5 per cent, as compared with an increase of \$68,204,000, or 318.6 per cent, in the value of buildings; of \$56,225,000, or 58.4 per cent, in that of live stock; and of \$16,576,000, or 157.7 per cent, in that of implements and machinery. In considering the increase of values in agriculture the general increase in the prices of commodities in the last 10 years should be borne in mind.

The average value of a farm, including its equip-

ment, is \$4,828, an increase of 87.9 per cent over the value in 1900. The average value of land per acre has increased since 1900 from \$6.50 to \$22.49, a gain of \$15.99, or 246 per cent.

Of the total wealth in the form of farm property, 80.4 per cent represents land and buildings, 16.6 per cent live stock, and 3 per cent implements and machinery. In 1900 the total value of farm property (\$277,525,000) was distributed among the three classes in widely different proportions from those of 1910, land and buildings contributing but 61.5 per cent of the total, live stock 34.7 per cent, and implements and machinery 3.8 per cent. Hence it will be seen that land has become a greater factor and live stock a smaller factor in the farm values of the state. The value of land and buildings is \$738,677,000, showing an increase of \$567,873,000, or 332.5 per cent, since 1900.

Average acreage and values per farm: 1900 to 1910.—The changes which have taken place during the past 10 years in the average acreage of Oklahoma farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the table following.

Of the average value of an Oklahoma farm (\$4,828), \$3,884 represents the value of land and buildings, \$801 that of live stock, and \$142 that of implements and machinery. The average value per farm of all farm property increased \$2,258, or 87.9 per cent, during the last decade. During the same period the value of land and buildings increased \$2,302, or 145.5 per cent.

The value of implements and machinery made a gain of \$45 per farm, while that of live stock decreased \$90. The average value of land and buildings per acre increased from \$7.43 in 1900 to \$25.60 in 1910.

CENSUS YEAR.	Average acres per farm.	AVERAGE VALUE PER FARM. ¹				Average value of land and buildings per acre.
		All farm property.	Land and buildings.	Implements and machinery.	Domestic animals, poultry, and bees.	
1910.....	151.7	\$4,828	\$3,884	\$142	\$801	\$25.60
1900 ²	212.9	2,570	1,582	97	891	7.43

¹ Averages are based on "all farms" in state.
² Includes Indian Territory. No comparable data for earlier censuses.

Farm tenure: 1900 to 1910.—The following table shows the distribution of the farms of the state according to character of tenure at the censuses of 1910 and 1900:

TENURE.	1910	1900 ¹
Number of all farms.....	190,192	108,000
Farms operated by owners and managers.....	86,055	60,750
Farms consisting of owned land only.....	64,884	53,619
Farms consisting of owned and hired land.....	20,520	6,590
Farms operated by managers.....	651	541
Farms operated by tenants.....	104,137	47,250
Share tenants.....	72,356	33,347
Share-cash tenants ²	3,962	
Cash tenants.....	21,751	
Tenure not specified ³	6,068	13,903
Per cent of farms operated by—		
Owners and managers.....	45.2	56.2
Tenants.....	54.8	43.8
Share and share-cash.....	40.1	30.9
Cash and nonspecified.....	14.6	12.9

¹ Includes Indian Territory. No comparable data for earlier censuses.
² Share-cash tenants were doubtless largely included with share tenants in 1900.
³ Prior to 1910 nonspecified tenants were included with cash tenants.

The number of all farms, and therefore of all farm operators, is 190,192. Of the operators, 85,404 are classified as owners, 651 as managers, and 104,137 as tenants. Of the owners, 64,884 operate exclusively land owned by them, while 20,520 operate land which they rent in addition to that which they own. The number of those who operate some land in addition to their own has increased more rapidly during the last decade than has the number who operate their own farms exclusively. The tenants are further distributed according to the character of their tenancy; thus 72,356 are reported as share tenants, 3,962 as share-cash tenants, 21,751 as cash tenants, and for 6,068 no report relative to character of tenure was secured.

While the total number of farms in the state has increased 76.1 per cent since 1900, the number of tenant farms has increased 120.4 per cent. Thus the relative number of tenants has increased from 43.8 per cent of all farm operators in 1900 to 54.8 per cent in 1910. Throughout the eastern and southern part of the state there are only four counties in which the number of tenant farms is below 50 per cent of the total, while in the northwestern portion the percentage is below that figure in every instance.

For the sake of comparison with the figures of 1900,

the share and share-cash tenants have been grouped together, and likewise the cash tenants and those with tenure not specified. In both 1900 and 1910 the share and share-cash group was much larger than the other.

The following table shows, for white and colored farmers together, and for each class separately, the total and improved acreage and the value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED BY—	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900 ¹	1910	1900 ¹	1910	1900 ¹

Colored.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Owners.....	53.9	77.1	70.3	83.5	62.6	83.3	68.5	84.8
Managers.....	0.1	0.4	0.3	5.1	0.1	1.7	0.3	2.6
Tenants.....	45.9	22.6	29.5	11.4	37.2	15.0	31.3	12.6

It will be seen that, in 1910, 55.4 per cent of all land in farms was in farms operated by their owners (including part owners), 1.5 per cent in farms operated by managers, and 43.1 per cent in farms operated by tenants, the percentage for owners and for tenants being higher and that for managers decidedly lower than in 1900.

Of all land in farms operated by white farmers, 54.2 per cent was in farms operated by their owners, and 44.3 per cent in tenant farms, while of that in farms operated by colored farmers, 70.3 per cent was in farms operated by owners, and 29.5 per cent in tenant farms. The proportion of land in farms operated by owners increased between 1900 and 1910 among white farmers, while among colored farmers it showed a decrease.

As shown by the next table, the average size of farms operated by managers in 1910 (658.5 acres) was about three and one-half times as great as that of farms operated by owners (187.3 acres), which was in turn about one and one-half times as great as that of farms operated by tenants (119.4 acres). The average size of all three classes of farms decreased between 1900 and 1910, the greatest decrease being that in the size of farms operated by managers. In 1910 the percentage of farm land improved was highest for tenant farms and lowest for farms operated by managers.

The average size of farms operated by white farmers in 1910 (156.8 acres) was nearly one and one-half times as large as that of farms of colored farmers (110.1 acres); both classes of farms decreased in size between 1900 and 1910. The proportion of land improved was larger for farms of white farmers than for those of colored farmers, being, respectively, 61.6 and 51.5 per cent of the total acreage of each class of farms.

FARMS OPERATED BY—	AVERAGE ACRES PER FARM.				PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.

Farm mortgages: 1900 to 1910.—The earliest available data for Oklahoma, relating to mortgage debt on farms, were secured by the population schedules of the Twelfth Census (1900), the basis of the returns being the "farm home" occupied by its owner. The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900.

In 1910 the total number of farms owned in whole or in part by the operators was 85,404. Of this number 46,889 were reported as free from mortgage; 36,036 were reported as mortgaged; and for 2,479 no

report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 43.5 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is between four and five times as high as it was in 1900, the number of mortgaged farms having increased rapidly, while the number free of mortgage has decreased.

CLASS.	OWNED FARMS. ¹		OWNED FARM HOMES.	
	1910		1900 ²	
	Number.	Per cent. ³	Number.	Per cent. ³
Total.....	85,404		60,635	
Free from mortgage.....	46,889	56.5	50,076	90.8
Mortgaged.....	36,036	43.5	5,073	9.2
Unknown.....	2,479		5,486	

¹ Includes all farms owned in whole or in part by the operator.
² Includes Indian Territory. No comparable data for earlier censuses.
³ Per cent of combined total of "free from mortgage" and "mortgaged."

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 36,036 farms reported as mortgaged, 26,215 are wholly owned by the farmers, and for 24,588 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included in the next tabular statement, which gives the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910. Comparable data for earlier censuses are not available.

	Owned farms or farm homes mortgaged: 1910. ¹
Number.....	24,588
Value—Land and buildings.....	\$122,327,300
Amount of mortgage debt.....	\$27,384,705
Per cent of debt to value.....	22.4
Average value per farm.....	\$4,975
Average debt per farm.....	\$1,114
Average equity per farm.....	\$3,861

¹ Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.

The average debt of mortgaged farms is \$1,114, while the average value is \$4,975. Hence the average owner's equity is \$3,861.

Farms by size groups: 1910 and 1900.—Farms of 100 to 174 acres formed 41.5 per cent of the total number operated by white farmers, and farms of 50 to 99 acres ranked next, with 19.8 per cent of the total; among colored farmers, farms of 20 to 49 acres constituted the most numerous size group, forming 30.6 per cent of the total number, and farms of 50 to 99 acres ranked next, with 26.3 per cent of the total. Of the farms operated by colored farmers, 38.5 per cent

were farms of less than 50 acres, as compared with 18.1 per cent of the farms of white farmers.

Nearly two-fifths (39.5 per cent) of the farms in Oklahoma are from 100 to 174 acres in size, more than one-fifth (20.5 per cent) from 50 to 99 acres, and almost one-sixth (16.6 per cent) from 20 to 49 acres. These three groups contain more than three-fourths of all the farms in the state. Less than 5 per cent are under 20 acres in size, while the farms of 175 acres or over constitute about one-fifth of the total. The group containing farms of 50 to 99 acres, and the two groups containing farms of 175 to 499 acres show increases from 1900 to 1910 in their respective percentages of the totals, while all other groups show decreases. The largest absolute gain was made in the group of farms having from 100 to 174 acres, the increase in this class amounting to 26,203. The greatest absolute decrease occurred in the number of farms of 1,000 acres and over. The greatest relative decrease was in places under 3 acres reported as farms, the number of these now reported being little more than one-fourth the number reported 10 years ago. This decrease may be due to a different interpretation made by the enumerators as to what constitutes a small farm, or may represent an actual decrease in that type of farm.

The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP.	NUMBER OF FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1910	1900 ²	Number.	Per cent.	1910	1900

¹Includes Indian Territory.

The following table shows the per cent distribution, by size groups, of the items presented in the preceding table, and also of the number of farms:

SIZE GROUP.	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 20 acres.....	3.8	6.2	0.3	0.3	0.4	0.9	0.9	0.3
20 to 49 acres.....	16.6	18.0	3.7	2.7	5.3	6.7	4.1	4.3
50 to 99 acres.....	20.5	15.1	9.7	5.0	11.6	10.0	10.3	7.4
100 to 174 acres.....	39.5	45.4	38.9	32.8	40.6	44.7	42.6	44.8
175 to 499 acres.....	17.8	12.2	32.7	16.2	33.7	24.4	35.7	20.1
500 to 999 acres.....	1.4	1.8	4.1	5.5	5.0	5.7	4.8	4.6
1,000 acres and over.....	0.5	1.3	8.7	37.4	3.4	7.6	3.6	18.1

Of the total farm acreage of the state in 1910, 38.9 per cent was in farms of 100 to 174 acres, and 32.7 per cent in farms of 175 to 499 acres, these two being from the standpoint of aggregate acreage the most important size groups. The most notable change between 1900 and 1910 was the decrease in the proportion of the total acreage which was in farms of 1,000 acres and over, offset by increases in the proportion for farms in every other size group, except that of under 20 acres for which it remained the same, the greatest increase being for the farms of 175 to 499 acres.

As shown by the next table, the percentage of farm land improved diminishes as the average size of the farms increases. For this reason and also because buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land in general also diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group.

SIZE GROUP.	PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	1910	1900	Per farm.		Per acre.	
			1910	1900	1910	1900
Total.....	60.8	37.3	\$3,884	\$1,582	\$25.60	\$7.43
Under 20 acres.....	64.9	94.0	932	213	82.44	18.22
20 to 49 acres.....	37.3	32.1	958	378	28.31	11.71
50 to 99 acres.....	73.0	74.3	1,947	774	27.13	10.98
100 to 174 acres.....	63.5	50.8	4,188	1,560	28.07	10.13
175 to 499 acres.....	62.7	56.2	7,302	2,596	26.40	9.20
500 to 999 acres.....	49.6	38.3	13,116	4,032	19.95	6.17
1,000 acres and over.....	23.7	7.6	31,278	21,264	10.73	3.69

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910:

COLOR AND NATIVITY.	FARM OPERATORS.							
	Total.		Owners.	Tenants.	Man-agers.	Per cent of total.		
	Number.	Per cent distribution.				Own-ers.	Ten-ants.	Man-agers.
Total.....	199,192	100.0	85,404	104,137	651	44.9	54.8	0.3
Native white.....	161,773	85.1	68,504	92,637	602	42.4	57.2	0.4
Foreign-born white	7,748	4.1	5,690	2,036	22	73.4	26.3	0.3
Negro and other nonwhite.....	20,671	10.9	11,150	9,494	27	53.9	45.9	0.1

Of the farmers in Oklahoma, 169,521, or practically nine-tenths, were whites and 20,671, or about one-

tenth, nonwhites. All but 7,748 of the white farmers were native born; of the nonwhite farmers, 13,209, or about two-thirds, were negroes, and the others, with the exception of 2 Chinese and 1 Japanese, were Indians.

Of the native white farmers, 57.2 per cent were reported as tenants, while of the foreign born, only 26.3 per cent occupy rented farms. Among nonwhite farmers the tenants constituted 45.9 per cent of the total number.

Of the 7,748 foreign-born white farmers in Oklahoma in 1910, 3,015 were born in Germany; 1,391 in Russia; 803 in Austria; 454 in England; 441 in Canada; 285 in Ireland; 258 in Sweden; 228 in Switzerland; 172 in Denmark; 140 in France; and 128 in Scotland. Other European countries were represented by a total of 356 farmers, and non-European countries, other than Canada, by 77.

DOMESTIC ANIMALS, POULTRY, AND BEES.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this bulletin.

The following table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

Of the total number of farms enumerated, 183,820, or 96.7 per cent, report domestic animals of some kind, the number without any domestic animals being 6,372.

Cattle are reported by 82.5 per cent of all farms, "dairy cows" by 80.8 per cent, and "other cows" by only 22.4 per cent. The average value of "dairy cows" increased from \$27.84 in 1900 to \$30.28 in 1910, while that of cows not kept for dairy purposes remained almost unchanged. The average number of "dairy cows" per farm reporting is only 3, while the average number of "other cows" per farm reporting that class is 7. In 1900 the average number of "other cows" per farm was 24.

Horses are reported by 85.8 per cent of all the farmers in the state, yearling colts by 21 per cent, and spring colts by 13.1 per cent. The average values of horses of the different age groups have more than doubled since 1900. Mules are reported by 47.6 per cent of the farmers, and are slightly over one-third as numerous as horses. Their average values are considerably higher than those for horses of the corresponding age groups.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.			AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Number.	Per cent of all farms.	Number.	Value.	Average value.		Number.	Per cent of all farms.	Number.	Value.	Average value.

Unclassified horses.....	6	(¹)	434	22,740	52.40						

¹ Less than one-tenth of 1 per cent.

Sheep and lambs are reported from only 880 farms, or 0.5 per cent of all farms in the state. Of these farms, 67.5 per cent report spring lambs, the number of the latter being equal to 32.6 per cent of the number of ewes. The average flock in the state, including all classes, numbers 71, and the average number of ewes per farm reporting that class is about 51.

Of all farms, 71.4 per cent report swine, the average number being about 14 per farm reporting. The average value of the swine reported under the head of "hogs and pigs born before January 1, 1910," is \$8.61, and that of spring pigs is \$2.48.

Poultry on farms: 1910 and 1900.—The increase in the number of fowls on Oklahoma farms during the last decade amounts to 3,584,639, or 72.9 per cent, while the relative increase in value (162.3 per cent) is over twice as great. The number of farms reporting poultry increased from 91,587 to 168,649, or 84.1 per cent. All but 187 of the farms reporting poultry report chickens, which class includes 94.3 per cent of the total number of poultry and represents 91.9 per cent of the total value. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value and the number of farms reporting each kind in 1910:

KIND.	1910 (April 15)				1900 ¹ (June 1)
	Farms reporting.		Number of fowls.	Value.	Number of fowls.
	Number.	Per cent of all farms.			
Total.....	168,649	88.7	8,501,237	\$3,713,943	4,916,598
Chickens.....	168,462	88.6	8,014,938	3,414,215	4,487,858
Turkeys.....	27,929	14.7	120,324	154,084	178,959

Pheasants.....	2	(5)	7	6	(3)

¹ Includes Indian Territory.
² Not reported.

³ Included with chickens.
⁴ Less than one-tenth of 1 per cent.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has increased from 3,438 in 1900 to 4,816 in 1910, or 40.1 per cent. The number of colonies of bees decreased from 20,137 to 19,413, or 3.6 per cent, and their value increased from \$45,423 to \$64,261, or

41.5 per cent. The average value of bees per farm reporting was \$13.21 in 1900 and \$13.34 in 1910. Less than three farms in every hundred report bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table below age groups are omitted for the sake of brevity, but it may be noted that in cities and villages a comparatively small proportion of the animals of each class are in the younger age groups.

KIND.	Number of inclosures reporting.	ANIMALS.		
		Number.	Value.	Average value.
Total.....	48,741		\$11,685,338	
All cattle.....	27,123	72,980	1,971,439	\$27.01
Dairy cows.....	26,387	36,511	1,336,307	36.60
Horses.....	34,610	77,852	7,691,073	98.79
Mules.....	3,980	11,696	1,511,603	129.24
Asses and burros.....	447	671	172,460	257.02
Swine.....	9,968	48,404	332,713	6.87
Sheep.....	36	261	796	8.05
Goats.....	248	1,485	5,254	8.54

As would be expected, horses are the most important class of domestic animals not on farms, both in number and in value; cattle, about one-half of which are dairy cows, rank next in importance.

Domestic animals on farms and not on farms: 1910.—The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

KIND.	DOMESTIC ANIMALS.					
	Total.		On farms.		Not on farms.	
	Number.	Value.	Number.	Value.	Number.	Value.

Goats.....	27,076	67,941	25,591	62,687	1,485	5,254

The total value of all domestic animals in the state in 1910 was \$160,338,000, of which the value of animals not on farms constituted 7.3 per cent.

LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this

value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The next table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899.

	FARMS REPORTING.		Number or quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms.			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	153,693	80.8	530,796	Head.

¹ Less than one-tenth of 1 per cent.

² Includes Indian Territory.

The number of farms reporting dairy cows on April 15, 1910, was 153,693, but only 118,116 reported dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 111,535 (considerably less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 409,000. The amount of milk reported was 103,578,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 253 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk, cream, and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$7,365,000, which may

be defined as the total value of dairy products exclusive of milk and cream used on the farm producing.

A small proportion of the milk reported as produced by Oklahoma farmers in 1909 was sold as such. The butter made on farms in 1909 was valued at \$5,613,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows that the amount of butter made in 1909 was nearly twice as great as that made in 1899, while the production of cheese shows a decrease.

Wool: 1909 and 1899.—The next table gives statistics as to the production of wool on farms, the figures being partly based on estimates.¹

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value.
Sheep of shearing age on farms April 15, 1910.....	814	48,896			
Wool produced, as reported, 1909.....	371		33,219	201,978	\$39,709
On farms reporting sheep April 15, 1910.....	319	29,129	27,697	167,848	32,877
On other farms.....	52		5,522	34,130	6,832
Total production of wool (partly estimated):					
1909.....			46,492	281,750	55,187
1899 ¹			64,187	329,136	45,249
Increase, 1899 to 1909 ²			-17,695	-47,386	9,938
Per cent of increase ²			-27.6	-14.4	22.0

¹ Includes Indian Territory.

² A minus sign (-) denotes decrease.

The total number of sheep of shearing age in Oklahoma on April 15, 1910, was 48,896, representing a decrease of 20.1 per cent as compared with the number on June 1, 1900 (61,183). The approximate production of wool during 1909 was 46,492 fleeces, weighing 281,750 pounds and valued at \$55,187. Of these totals about one-fourth represents estimates. The number of fleeces produced in 1909 was 27.6 per cent less than in 1899. The average weight per fleece in 1909 was 6.1 pounds, as compared with 5.1 pounds in 1899, and the average value per pound was 20 cents, as compared with 14 cents in 1899.

¹ Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 495 farmers who reported the possession of 19,767 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

Goat hair and mohair: 1909 and 1899.—Although 1,436 farmers reported 25,591 goats and kids on their farms April 15, 1910, only 129 reported the production of goat hair or mohair during 1909. These farmers reported 3,774 fleeces, weighing 10,503 pounds and valued at \$2,354.

Although the production is still unimportant, some increase is shown over that in 1899. Many farmers who have goats do not produce goat hair or mohair, but it is believed that the report is somewhat short of the actual production.

Poultry products: 1909 and 1899.—The statement below gives data relative to the production and sale of eggs and poultry:

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms April 15, 1910.....	168,649	8,501,237

1899 ¹			1,950,304	1,909,832
Increase, 1899 to 1909.....			3,437,829	3,478,301
Per cent of increase.....			176.3	179.3
Fowls sold, as reported, 1909.....	68,381	3,562,200	1,324,940

¹ Includes Indian Territory.

The total number of fowls on Oklahoma farms on April 15, 1910, was 8,501,000. Of the 168,649 farms reporting fowls, 42,537 did not report any eggs produced in 1909 and 42,738 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 38,522,000 dozens, valued at \$6,318,000. According to the Twelfth Census reports, the production of eggs in 1899 was 20,675,000 dozens, the value being \$1,910,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899, similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 46,001,000 dozens, valued at \$7,544,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 16,264,000 fowls, valued at \$5,388,000.

Honey and wax: 1909.—Although, as noted elsewhere, 4,816 farms reported 19,413 colonies of bees on hand April 15, 1910, 2,819 of these farms, with 8,682 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 140,234 pounds of honey, valued at \$23,783, and 1,088 pounds of wax, valued at \$313; the true totals are doubtless somewhat above these figures.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The following statement presents statistics relating to the sale or slaughter of domestic animals by Oklahoma farmers during the year 1909, with certain items for 1899:

	FARMS REPORTING.		Number of animals.	VALUE.	
	Number.	Per cent of all farms.		Total.	Average.
1909—All domestic animals:					
Sold.....				\$54,524,144
Slaughtered.....				6,575,550

Goats:					
Sold.....	250	0.1	5,049	15,078	2.99
Slaughtered.....	217	0.1	1,185	2,982	2.52
1899¹—All domestic animals:					
Sold ²				16,963,471
Slaughtered.....				4,482,985

¹ Includes Indian Territory.

² Schedules called for receipts from sales of animals raised on the farms reporting.

The total value of domestic animals sold during 1909 was \$54,524,000, and that of animals slaughtered on farms \$6,576,000, making an aggregate of \$61,100,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented somewhat less than one-half of the total value of animals sold, and the value of swine sold represented about one-third of the total.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the total value of those slaughtered during the year 1899, which amounted, respectively, to \$16,963,000 and \$4,483,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

CROPS.

Summary: 1909 and 1899.—The following table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general

changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

	ACRES.				PER CENT OF IMPROVED LAND OCCUPIED.		VALUE OF PRODUCTS.

¹ Includes Indian Territory.
² A minus sign (-) denotes decrease.

³ Less than one-tenth of 1 per cent.
⁴ Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The total value of crops in 1909 was \$133,454,000. Of this amount 97.8 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 11,921,670, representing 67.9 per cent of the total improved land in farms (17,551,337 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

The general character of Oklahoma agriculture is indicated by the fact that somewhat more than one-half (53.8 per cent) of the total value of crops in 1909 was contributed by the cereals, and somewhat less than one-third (30.9 per cent) by cotton. The remainder, representing 15.3 per cent of the total, consisted mostly of hay and forage and potatoes and other vegetables.

The value of crops in 1909 was 205 per cent greater than in 1899, this increase being no doubt due in part to higher prices. There was an increase of 88.7 per cent in the total acreage of crops for which acreage was reported, most of the important crops reporting increases, and the greatest absolute increase being that in the acreage of cereals.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The leading crops covered by the table, in the order of their importance as judged by value, are corn, \$48,081,000; cotton, \$35,399,000; wheat, \$13,854,000; hay and forage, \$9,639,000; oats, \$7,172,000; cotton seed (estimated), \$5,788,000; broom corn, \$2,559,000; and kafir corn and milo maize, \$2,531,000. It should be noted, however, that vegetables, other than potatoes and sweet potatoes and yams, are more important than broom corn or kafir corn and milo maize; the statistics for such vegetables are given in a later table.

Among the cereals, corn exceeds all others in importance, representing more than two-thirds of the total acreage and total value. Wheat ranks second among the cereals, having an acreage about two-tenths as great as corn, and a value about three-tenths as great. Oats, with a much smaller acreage, stands third among the cereals, and kafir corn and milo maize fourth.

Cotton ranks next to corn in both acreage and value, its acreage being about one-third as great as that of corn, and the value of the crop nearly three-fourths as great.

The acreage of hay and forage is less than one-sixth as great as that of the combined cereals, while the value of the crop represents an even smaller proportion. Of the total hay and forage crop, "wild, salt, or prairie grasses" represents more than one-half of the acreage and one-third of the value. Coarse

forage ranks second in acreage and third in value, having an acreage nearly one-half as great as "wild, salt, or prairie grasses," and a value nearly three-fifths as great. Alfalfa ranks third in acreage and second in value. These three crops represent over 90 per cent of the acreage of the entire hay and forage crop and nearly 90 per cent of its value. Potatoes show a value about one-eighth as great as that of hay and forage.

The following table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, tobacco, cotton, broom corn, and sundry minor crops:

CROP.	Farms reporting.	Acres harvested.	QUANTITY.		Value.

Sundry minor crops, total.....		40			201

¹ Includes a small amount of sunflower seed.

² A considerable part of this acreage is probably a duplication of other crop acreage.

³ The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage crops, flowers and plants, etc.

⁴ Consists entirely of hemp.

The changes in the acreages of some of the principal crops during the last decade are shown in the next table.

Between 1899 and 1909 the acreage of corn increased from 2,501,945 to 5,914,069, or 136.4 per cent, and the acreage of oats from 317,076 to 609,373, or 92.2 per cent. The acreage of wheat, however, shows a decrease from 1,527,073 to 1,169,420, or 23.4 per cent. The acreage of hay and forage increased from 1,095,706

to 1,347,598, or 23 per cent, and the acreage of potatoes from 15,360 to 32,295, or 110.3 per cent. The acreage of cotton increased at a higher rate than any other crop shown in the table, namely, 189.5 per cent.

CROP YEAR.	ACRES HARVESTED.					
	Corn.	Oats.	Wheat.	Hay and forage.	Potatoes.	Cotton.
1909.....	5,914,069	609,373	1,169,420	1,347,598	32,295	1,976,935
1899 ¹	2,501,945	317,076	1,527,073	1,095,706	15,360	682,743

¹ Includes Indian Territory. No comparable data for earlier censuses.

The following table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909:

CROP.	PER CENT OF FARMS REPORTING.		PER CENT OF IMPROVED LAND.		Per cent of increase in acres, 1899 to 1909. ²	AVERAGE YIELD PER ACRE.	AVERAGE VALUE PER ACRE.
	1909	1899 ¹	1909	1899 ¹			
	Corn.....	78.1	79.6	33.7	29.2	136.4	15.9 Bu.

Broom corn.....	5.3	0.8	1.2	0.1	1,595.1	197.6 Lbs.	11.83

¹ Includes Indian Territory.

² A minus sign (-) denotes decrease.

Corn is reported by 78 out of every 100 farms, cotton by 46, hay and forage by 34, potatoes by 24, oats by 17, kafir corn and milo maize by 16, wheat by 12, and broom corn by 5. With the exception of those for kafir corn and milo maize, cotton, and broom corn the percentages of farms reporting are smaller than in 1899.

The eight crops included in the preceding table cover about 67.3 per cent of the improved land of the state, corn alone occupying 33.7 per cent, or more than all the rest together. Oats, wheat, and hay and forage show decreases in the proportions of improved land occupied, while corn, kafir corn and milo maize, cotton, and broom corn show increases. Potatoes occupied the same proportion of improved land in 1909 as in 1899.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table following shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products.

In 1909 the total acreage of potatoes and other vegetables was 88,362 and their value \$4,210,844. Excluding (so far as separately reported¹) potatoes and sweet potatoes and yams, the acreage of vegetables was 51,011 and their value \$2,610,000, both acreage and value being decidedly greater than in 1899.

¹ It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

CROP.	FARMS REPORTING, 1909		ACRES.		VALUE OF PRODUCTS.	
	Number.	Per cent of all farms.	1909	1899 ¹	1909	1899

Nursery products, total.....	90	(2)	857	804	171,952	103,294
Farms reporting a product of \$250 or over.....	49	(2)			168,612	
All other farms.....	41	(2)			3,340	

¹ Includes Indian Territory.
² Does not include 46,311 farms which reported that they had vegetable gardens, but gave no information as to their products.
³ Less than one-tenth of 1 per cent.

The raising of flowers and plants and of nursery products was also of some importance in Oklahoma, 897 acres being devoted to them in 1909 and the output being valued at \$263,968. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

Small fruits: 1909 and 1899.—The following table shows data with regard to small fruits on farms:

CROP.	Number of farms reporting, 1909	ACRES.		Quantity (quarts), 1909	Value, 1909
		1909	1899 ¹		
Small fruits, total.....		2,745	1,388	2,310,367	\$202,291
Strawberries.....	1,182	825	626	830,404	71,266
Blackberries and dewberries.....	6,220	1,792	683	1,366,497	119,654
Raspberries and loganberries.....	387	85	43	74,104	6,851
Currants.....	212	36	11	31,024	3,559
Gooseberries.....	151	7	10	8,276	923
Other berries.....	2	(2)	15	62	8

¹ Includes Indian Territory. ² Reported in small fractions.

Blackberries and dewberries are the most important of the small fruits raised in Oklahoma, with strawberries ranking next. The total acreage of small fruits in 1909 was 2,745 and in 1899, 1,388, an increase of 97.8 per cent. The production in 1909 was 2,310,000 quarts, as compared with 1,476,000 quarts in 1899, and the value was \$202,291 in 1909, as compared with \$92,223 in 1899.

Orchard fruits, grapes, nuts, and tropical fruits: 1909 and 1899.—The following table presents data with regard to orchard fruits, grapes, nuts, and tropical fruits. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

CROP.	TREES OR VINES OF BEARING AGE, 1910		TREES OR VINES NOT OF BEARING AGE, 1910		PRODUCT.

Tropical fruits (figs).....	63	668	84	520	323	33	

¹ Includes Indian Territory.
² Expressed in bushels for orchard fruits and pounds for grapes, nuts, and figs.
³ Included with "unclassified."
⁴ Consists of products not separately named by the enumerator, but grouped under the designation "all other."
⁵ Includes hazelnuts, butternuts, almonds, chestnuts, and other nuts.

The total quantity of orchard fruits produced in 1909 was 1,137,000 bushels, valued at \$943,000. Apples contributed nearly two-thirds of this quantity; peaches and nectarines most of the remainder. The production of grapes in 1909 amounted to 3,763,000 pounds, valued at \$122,000, and the production of nuts to 1,019,000 pounds, valued at \$62,000.

The production of all orchard fruits together in 1909 was 72 per cent more in quantity than that in 1899, while the production of grapes decreased decidedly. The value of orchard fruits increased from \$383,000 in 1899 to \$943,000 in 1909, while that of grapes decreased from \$135,000 in 1899 to \$122,000 in 1909. It should be noted that the values for 1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

The following table shows the quantities of the more advanced products manufactured by farmers from orchard fruits and grapes. Values were not called for on the schedule.

PRODUCT.	FARMS REPORTING, 1909		QUANTITY PRODUCED.		
	Number.	Per cent of all farms.	Unit.	1909	1899 ¹
Cider.....	455	0.2	Gals...	30,081	36,823
Vinegar.....	713	0.4	Gals...	32,887	25,830
Wine and grape juice.....	418	0.2	Gals...	16,999	35,283
Dried fruits.....	703	0.4	Lbs....	45,684	30,000

¹ Includes Indian Territory.

Sugar crops: 1909 and 1899.—The table below shows data with regard to sugar beets, sorghum cane, and sugar cane. The total value of sorghum cane and sirup produced in 1909 was \$489,000, as compared with \$154,000 in 1899.

PRODUCT.	FARMS REPORTING.		Acres.	PRODUCT.		
	Number.	Per cent of all farms.		Amount.	Unit.	Value.
Sugar beets: 1909 ¹	101	0.1	207	359	Tons..	\$2,715
Sorghum cane: Total, 1909 ²						489,112
Cane grown.....	10,758	5.7	25,540	64,599	Tons.	232,771
Sirup made.....	7,313	3.8		514,807	Gals.	154,111
Total, 1899 ³						
Cane grown.....	4,696	4.3	16,477	49,237	Tons.	100,075
Cane sold as such.....				40,259	Tons.	54,036
Sirup made.....				179,272	Gals.	
Sugar cane: Total, 1909.....						56

Sirup made.....				56	Gals.	1,376
Total, 1899 ³						
Cane grown.....	25	(4)	35	550	Tons.	886
Cane sold as such.....	25	(4)		229	Tons.	

¹ Used as root forage. ⁴ Less than one-tenth of 1 per cent.
² Includes cane used as coarse forage. ⁵ Less than 1 acre.
³ Includes Indian Territory. ⁶ Includes cane reserved for seed.

Forest products: 1909 and 1899.—The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval

stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in 1909." There were 32,297 farms in Oklahoma (17 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$1,602,720, as compared with \$456,240 in 1899, an increase of 251.3 per cent. Of the value in 1909, \$1,227,906 was reported as that of products used or to be used on the farms themselves, \$309,710 as that of products sold or for sale, and \$65,104 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Miscellaneous crops: 1909.—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 349 farmers in Oklahoma sold, during 1909, 2,759 tons of straw, for which they received \$11,056 and that 1,050 farmers sold 47,212 tons of cornstalks and leaves, for which they received \$54,398.

SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899.

EXPENSE.	1909			1899 ¹	INCREASE.	
	Farms reporting.		Amount.	Amount.	Amount.	Per cent.
	Number.	Per cent of all farms.				
Labor.....	73,126	38.4	\$9,837,541	\$3,675,520	\$6,162,021	167.7
Feed.....	62,546	32.9	5,863,373	(2)		
Fertilizer.....	622	0.3	29,092			

¹ Includes Indian Territory. ² Not reported at the census of 1900.

Nearly two-fifths of the farmers hire labor, the average amount expended by the farmers hiring being \$135. During the decade the expenditure for labor increased \$6,162,000, or 167.7 per cent. About one-fifth of the amount reported as expended for labor is in rent and board. At prior censuses no tabulation was made of the number of farmers reporting expenditures for labor.

The expenditure for feed amounted to \$5,863,000, or \$94 per farm.

One farmer out of every three reports some expenditure for feed, but only three out of every thousand purchase fertilizer. The amount paid for fertilizer is \$29,100, the average per farm reporting being \$46.77.

Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

CROP.	FARMS REPORTING.		QUANTITY SOLD.		Amount received.
	Number.	Per cent of all farms.	Amount.	Unit.	
Total.....					\$16,430,110
Corn.....	52,051	27.4	24,497,297	Bu.....	12,761,019
Oats.....	11,107	5.8	4,674,729	Bu.....	2,006,477
Barley.....	301	0.2	60,086	Bu.....	36,030
Hay and coarse forage.....	11,409	6.0	236,828	Tons...	1,626,584

While the total amount expended by Oklahoma farmers for the purchase of feed in 1909 was \$5,863,000, the total receipts from the sale of feed by those reporting sales amounted to \$16,430,000.

COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Land in farms in Kay County.—Following the instructions to enumerators to assign all of the acreage

of a farm to the county in which the residence of the operator was located, a large acreage situated in adjoining counties has been tabulated as belonging to Kay County, which accounts for the large acreage of farm land as compared with total acreage.

TABLE 1.—FARMS AND FARM PROPERTY.

[Comparative data for June 1, 1900, for Oklahoma and Indian Territory combined are given in italics. The changes in county boundaries

TABLE 1.—FARMS AND FARM PROPERTY,

[Comparative data for June 1, 1900, for Oklahoma and Indian Territory combined are given in italics. The changes in county boundaries

	Latimer.	Le Flore.	Lincoln.	Logan.	Love.	McCain.	McCurtain.
1 Population.....	11,321	29,127	34,779	31,740	10,236	15,059	20,681
2 <i>Population in 1900.....</i>							
3 Number of all farms.....	786	3,433	5,001	3,186	1,408	1,891	1,954
4 <i>Number of all farms in 1900.....</i>							
5 Color and nativity of farmers:							
6 Native white.....	699	3,074	4,089	2,181	1,198	1,750	1,153
7 Foreign-born white.....	5	13	276	190	4	17	
8 Negro and other nonwhite.....	82	346	636	815	206	118	801
9 Number of farms, classified by size:							
10 Under 3 acres.....		1	1	1	1	1	
11 3 to 9 acres.....	37	103	54	50	9	8	60
12 10 to 19 acres.....	140	548	87	98	25	31	196
13 20 to 49 acres.....	352	1,864	606	320	341	326	957
14 50 to 99 acres.....	122	599	1,472	601	633	603	384
15 100 to 174 acres.....	85	189	2,409	1,551	261	598	239
16 175 to 259 acres.....	28	60	221	309	56	221	43
17 260 to 499 acres.....	17	48	142	239	50	80	46
18 500 to 999 acres.....	5	11	9	16	20	17	11
19 1,000 acres and over.....		10		1	12	6	9
LAND AND FARM AREA							
20 Approximate land area..... acres.	470,400	1,032,960	613,760	472,960	317,440	359,680	1,214,080
21 Land in farms..... acres.	48,174	180,588	596,927	449,481	152,833	224,718	137,823
22 <i>Land in farms in 1900.....</i>							
23 Improved land in farms..... acres.	24,042	120,257	322,446	282,213	98,097	165,940	61,002
24 <i>Improved land in farms in 1900.....</i>							
25 Woodland in farms..... acres.	21,050	48,303	219,722	91,849	36,970	25,276	58,165
26 Other unimproved land in farms..... acres.	3,082	12,028	54,759	75,419	17,766	33,502	18,656
27 Per cent of land area in farms.....	10.2	17.5	97.3	95.0	48.1	62.5	11.4
28 Per cent of farm land improved.....	49.9	66.6	54.0	62.8	64.2	73.8	44.3
29 Average acres per farm.....	61.3	52.6	119.4	141.1	108.5	118.8	70.5
30 Average improved acres per farm.....	30.6	35.0	64.5	88.0	69.7	87.8	31.2
VALUE OF FARM PROPERTY							
31 All farm property..... dollars.	1,098,635	4,671,267	17,638,259	16,754,257	3,440,657	7,167,501	2,565,740
32 <i>All farm property in 1900.....</i>							
33 Per cent increase, 1900-1910.....							
34 Land..... dollars.	535,754	2,559,705	11,800,737	11,743,645	2,162,668	5,066,920	1,480,645
35 <i>Land in 1900.....</i>

TABLE 1.—FARMS AND FARM PROPERTY,

[Comparative data for June 1, 1900, for Oklahoma and Indian Territory combined are given in italics. The changes in county boundaries

	Pawnee.	Payne.	Pittsburg.	Pontotoc.	Pottawatomie.	Pushmataha.	Roger Mills.
1 Population.....	17,332	23,735	47,650	24,331	43,595	10,118	12,861
2 <i>Population in 1900.....</i>							
3 Number of all farms.....	2,215	3,170	2,701	2,722	4,752	908	2,592
4 <i>Number of all farms in 1900.....</i>							
5 Color and nativity of farmers:							
6 Native white.....	1,966	2,858	2,384	2,520	4,313	779	2,516
7 Foreign-born white.....	88	138	37	17	138	3	60
8 Negro and other nonwhite.....	161	174	280	185	301	126	16
9 Number of farms, classified by size:							
10 Under 3 acres.....	3	3	2	2	2	18	7
11 3 to 9 acres.....	19	13	85	39	95	63	14
12 10 to 19 acres.....	30	50	253	89	128	411	64
13 20 to 49 acres.....	220	328	1,108	1,018	1,008	199	135
14 50 to 99 acres.....	424	784	659	877	1,806		
15 100 to 174 acres.....	1,156	1,556	336	473	1,348	151	1,375
16 175 to 259 acres.....	152	268	91	135	213	25	370
17 260 to 499 acres.....	185	157	90	61	84	23	527
18 500 to 999 acres.....	20	9	50	18	6	12	82
19 1,000 acres and over.....	6	2	22	12	2	6	18
LAND AND FARM AREA							
20 Approximate land area..... acres.....	373,760	433,920	876,800	465,920	507,520	915,200	726,400
21 Land in farms..... acres.....	337,115	424,012	249,472	241,155	447,373	80,614	562,812
22 <i>Land in farms in 1900.....</i>							
23 Improved land in farms..... acres.....	198,490	262,098	135,823	147,392	261,794	34,004	282,169
24 <i>Improved land in farms in 1900.....</i>							
25 Woodland in farms..... acres.....	46,387	68,442	68,998	58,934	155,083	40,072	8,943
26 Other unimproved land in farms..... acres.....	92,238	93,472	44,651	34,829	30,496	6,538	271,700
27 Per cent of land area in farms.....	90.2	97.7	28.5	51.8	88.1	8.8	77.5
28 Per cent of farm land improved.....	58.9	61.8	54.4	61.1	58.5	42.2	50.1
29 Average acres per farm.....	152.2	133.8	92.4	88.6	94.1	88.8	217.1
30 Average improved acres per farm.....	89.6	82.7	50.3	54.1	55.1	37.4	108.9
VALUE OF FARM PROPERTY							
31 All farm property..... dollars.....	10,038,085	15,451,022	6,398,826	5,813,273	16,279,605	1,443,831	10,581,497
32 <i>All farm property in 1900.....</i>							
33 Per cent increase, 1900-1910.....							
34 Land..... dollars.....	6,599,422	10,650,246	3,763,216	3,508,619	11,307,784	727,994	7,162,813
35 <i>Land in 1900.....</i>							
36 Buildings..... dollars.....	1,195,976	1,808,760	738,386	631,065	2,060,026	204,514	1,075,044
37 <i>Buildings in 1900.....</i>							
38 Implements and machinery..... dollars.....	301,511	455,877	209,738	209,487	455,442	56,802	402,177
39 <i>Implements, etc., in 1900.....</i>							
40 Domestic animals, poultry, and bees..... dollars.....	1,941,176	2,536,139	1,687,486	1,466,102	2,456,853	454,521	1,941,463
41 <i>Domestic animals, etc., in 1900.....</i>							
42 Per cent of value of all property in—							
43 Land.....	65.7	68.9	58.8	60.3	69.5	50.4	67.7

CHAPTER 4.

STATISTICS OF IRRIGATION FOR THE STATE AND ITS COUNTIES.

Introduction.—This chapter presents the larger part of the statistics of irrigation for Oklahoma obtained in connection with the Thirteenth Census. The statistics of the number of farms and acreage irrigated, cost of operation and maintenance, and irrigated crops are for the calendar year 1909; those of irrigation works, cost of enterprises, acreage enterprises were capable of irrigating in 1910, and acreage included in projects are of the date July 1, 1910.

These statistics have been collected under the law of February 25, 1910, which contained the following clause relating to irrigation:

Inquiries shall also be made as to the location and character of irrigation enterprises, quantity of land irrigated in the arid region of the United States and in each state and county in that section under state and Federal laws; the price at which these lands, including water rights, are obtainable; the character and value of crops produced on irrigated lands, the amount of water used per acre for said irrigation and whether it was obtainable from national, state, or private works; the location of the various projects and methods of construction, with facts as to their physical condition; the amount of capital invested in such irrigation works.

The information called for by this law which could be supplied by farm operators was obtained on supplemental schedules by the regular census enumerators as a part of the agricultural census. The remaining data, which were supplied by the owners or officials of irrigation enterprises, were obtained on special schedules by special agents. The data relating to number of farms irrigated and irrigated crops are taken from the supplemental schedules, while all data relating to acreage irrigated and to irrigation works and their construction and operation are taken from the special schedules.

In accordance with the law, the data collected have been classified primarily by the state and Federal laws by virtue of which the land was brought under irrigation. The results are presented in detail at the end of this chapter and summarized in text tables.

Such of the terms used as are not self-explanatory are defined below.

Farms irrigated.—The number of "farms irrigated" is the number of farms on which irrigation is practiced and is equivalent to the term "number of irrigators" used in previous census reports.

Types of enterprise.—The types of enterprise under which the lands irrigated in 1909 are classified are as follows:

United States Reclamation Service enterprises, which operate under the Federal law of June 17, 1902, providing for the construction of irrigation works with the receipts from the sale of public lands.

United States Indian Service enterprises, which operate under various acts of Congress providing for the construction by that service of works for the irrigation of land in Indian reservations.

Carey Act enterprises, which operate under the Federal law of August 18, 1894, granting to each of the states in the arid region 1,000,000 acres of land on condition that the state provide for its irrigation, and under amendments to that law granting additional areas to Idaho and Wyoming.

Irrigation districts, which are public corporations that operate under state laws providing for their organization and management, and empowering them to issue bonds and levy and collect taxes with the object of obtaining funds for the purchase or construction and for the operation and maintenance of irrigation works.

Cooperative enterprises, which are controlled by the water users under some organized form of cooperation. The most common form of organization is the stock company, the stock of which is owned by the water users.

Commercial enterprises, which supply water for compensation to parties who own no interest in the works. Persons obtaining water from such enterprises are usually required to pay for the right to receive water, and to pay, in addition, annual charges based in some instances on the acreage irrigated and in others on the quantity of water received.

Individual and partnership enterprises, which belong to individual farmers or to neighboring farmers, who control them without formal organization. It is not always possible to distinguish between partnership and cooperative enterprises, but as the difference is slight this is unimportant.

Source of water supply.—Of the terms used in the classification according to source of water supply, none requires explanation except "reservoirs." The only reservoirs which are treated as independent sources of supply are those filled by collecting storm water or from watercourses that are ordinarily dry. When reservoirs are filled from streams or wells, the primary source is considered the source of supply.

Acre-foot.—The "acre-foot," used to express the capacity of reservoirs, is the volume of water required to cover 1 acre to a depth of 1 foot, or 43,560 cubic feet.

Cost.—The cost of irrigation enterprises is that given by the owners. For the larger works the cost given is taken, in most cases, from the books of account and represents the actual cost. In the case of most of the private and partnership and many of the cooperative enterprises, however, the works were built by their owners without records of money or labor expended, and the cost given represents the owners' estimates. The cost reported for 1910 includes the cost of construction and of acquiring rights. The latter usually consists of filing fees only. In some instances it includes the purchase price of rights, but these cases are so rare that they are unimportant. The cost reported for 1899 is designated "cost of construction," but probably includes the cost of acquiring rights, as in 1910. The average cost per acre is based on the acreage enterprises were capable of irrigating in 1910 and the cost to July 1, 1910.

OKLAHOMA.

FARMS AND ACREAGE IRRIGATED.

Most of the irrigated land in Oklahoma is in the section made up of the three counties forming the western extension of the state and the adjoining county, Harper. The irrigated acreage in these four counties represented 90.1 per cent of all the land irrigated in the state in 1909. The following table shows for the state as a whole the number of farms and

acreage irrigated in 1909, in comparison with the total number of farms, the total land area, the total land in farms, and the total acreage of improved land in farms in 1910, together with the areas not yet irrigated for which water has been or is being made available. Comparative figures for the census of 1900 are included as far as possible.

	CENSUS OF—		INCREASE.	
	1910	1900 ¹	Amount.	Per cent.

¹ Figures for Oklahoma and Indian Territory combined.
² April 15.

³ June 1.
⁴ In 1909.

⁵ In 1899.
⁶ July 1.

⁷ Not reported.
⁸ Less than one-tenth of 1 per cent.

Number of farms irrigated.—According to the figures presented in the table irrigation was practiced on only 0.1 per cent of the farms of the state in 1909, being an almost negligible factor in agriculture in Oklahoma. The only county in which more than 1 per cent of the farms were irrigated is Cimarron, where the percentage was 2.4.

From 1899 to 1909 the increase in the number of farms irrigated was 10.5 per cent. Since the boundaries of all the counties represented in the table have been changed since 1900 no comparisons by counties can be made.

Acreage irrigated.—The total acreage reported as irrigated in 1909 was 4,388 as against 2,759 in 1899, an increase of 59 per cent. This percentage of increase is considerably higher than the percentage of increase in the number of farms irrigated, the average acreage irrigated per farm having increased from 22.3 in 1899 to 32 in 1909.

Acreage included in projects.—The table shows that in 1910 existing enterprises were ready to supply water to 6,397 acres, or 2,009 acres more than were irrigated in 1909. The acreage included in projects exceeds the acreage irrigated in 1909 by 4,140 acres, which is about two and one-half times the acreage brought under irrigation in the last decade, and almost equal to the total acreage irrigated in 1909. This acreage represents the area which will be available for

the extension of irrigation in the next few years upon the completion of the projects now under construction, and without new undertakings.

Acreage irrigated, classified by character of enterprise.—The entire acreage irrigated in Oklahoma in 1909 was supplied with water by enterprises which were controlled by the water users, 2,000 acres, or 45.6 per cent of the total, being served by cooperative enterprises, and 2,388 acres, or 54.4 per cent, by individual and partnership enterprises.

Acreage irrigated, classified by source of water supply.—The following table shows the distribution of the acreage irrigated in 1909 according to the source of water supply:

SOURCE OF WATER SUPPLY.	ACREAGE IRRIGATED IN 1909.	
	Amount.	Per cent distribution.
All sources.....	4,388	100.0
Streams.....	4,255	97.0
Lakes.....	28	0.6
Wells.....	99	1.6
Springs.....	16	0.4
Reservoirs.....	20	0.5

From the foregoing table it is apparent that up to the present time there has been little development of any source of water supply other than streams.

IRRIGATION WORKS.

The following table summarizes the data collected relating to works for supplying water for irrigation in 1910 and 1900:

IRRIGATION WORKS.	CENSUS OF—	
	1910	1900 ¹
Independent enterprises..... number.....	114	(²)
Ditches, total length..... miles.....	85	(²)
Main ditches..... number.....	47	119
Length..... miles.....	54	68
Capacity..... cubic feet per second.....	155	(²)
Lateral ditches..... number.....	106	(²)
Length..... miles.....	31	(²)
Reservoirs..... number.....	11	(²)
Capacity..... acre-feet.....	22	(²)
Pumped wells..... number.....	65	(²)
Capacity..... gallons per minute.....	1,791	(²)
Pumping plants..... number.....	68	(²)
Engine capacity..... horsepower.....	107	(²)
Pump capacity..... gallons per minute.....	4,541	(²)

¹ Figures relate only to systems obtaining water from streams in 1899.
² Not reported.

The only items contained in the table for which figures from the census of 1900 are available are the number and length of main ditches, in both of which there were decreases between 1900 and 1910. As crops can be grown in Oklahoma without irrigation, it is probable that some ditches were in use in 1900 which were not in use in 1909, and consequently not reported in the later year.

Assuming that the enterprises in operation in 1909 were identical with those reported in 1910, the average acreage irrigated per enterprise was 38.5, and the acreage irrigated per mile of main ditch was 81.3. For the enterprises represented by the figures from the preceding census, which include only the systems that received water from streams, the average acreage irrigated per mile of main ditch was 38.5.

There has been little utilization of underground water as yet. The table shows no flowing wells used for irrigation, and only 65 pumped wells, scattered through the state, which watered a total of 69 acres.

Cost of construction, operation, and maintenance.—The following table presents statistics in regard to the cost of construction, operation, and maintenance of irrigation enterprises:

	CENSUS OF—	
	1910	1900
Cost of irrigation enterprises.....	\$47,200	\$21,872
Average per acre.....	\$7.28	\$7.93
Estimated final cost of existing enterprises.....	\$47,200	(²)
Average per acre included in projects.....	\$5.53	(²)
Operation and maintenance:		
Acreage for which cost is reported.....	1,970	(²)
Total cost reported.....	\$1,000	(²)
Average cost per acre.....	\$0.51	(²)

¹ Reported July 1.
² Cost of construction of systems operated in 1899.
³ Based on acreage enterprises were capable of irrigating in 1910.
⁴ Based on acreage irrigated in 1899.
⁵ Not reported.
⁶ For 1900.

The cost of irrigation systems shows an increase of 115.8 per cent from 1900 to 1910, while in the average cost per acre as given in the table there was a slight decrease. The average cost per acre shown for the census of 1910 is based on the acreage under ditch in that year, but since the corresponding acreage for 1900 was not reported, the figure for the average cost at the earlier census is based on the acreage actually irrigated in 1899. If computed on the basis of the acreage irrigated in 1909, the average cost in 1910 would be \$10.76, representing an increase of 35.7 per cent over the figure for the average cost at the census of 1900.

The acreage for which cost of operation and maintenance in 1909 was reported constitutes 44.9 per cent of the total acreage reported as irrigated in 1909, and 98.5 per cent of the acreage reported as irrigated by the enterprises not under individual or partnership control, that is, by the cooperative enterprises. The cost reported can be said, therefore, to represent fairly the average annual expense for the cooperative enterprises.

CROPS.

The following table shows the acreage, yield, and value of the principal crops reported as grown under irrigation in 1909:

CROP.	IRRIGATED CROPS: 1909				Value.
	Acre- age.	Yield.			
		Unit.	Amount.	Average per acre.	
Cereals:					
Corn.....	77	Bu....	2,025	26.3	\$1,099
Oats.....	80	Bu....	3,350	41.9	1,000
Wheat.....	909	Bu....	25,500	28.3	25,220
Hay and forage:					
Alfalfa.....	1,383	Tons..	1,867	1.35	12,273
Wild, salt, or prairie grasses.....	231	Tons..	277	1.20	5,333

Of the total irrigated acreage of the crops given in the table 50.5 per cent is that of alfalfa. Wheat is next in importance in respect to irrigated acreage with 35.4 per cent of the total, and is followed by "wild, salt, or prairie grasses," with 8.4 per cent.

COUNTY TABLE.

The next table gives in detail, for the state and principal counties, the data from the Thirteenth Census that are summarized in this section, except those relating to crops. Comparative data for 1899 are given for the state as a whole, and for Beaver County. Owing to the fact that Cimarron and Texas Counties were organized from Beaver County in 1907, however, the figures for these counties for 1909 should be combined with those for Beaver County in making any comparison with 1899. The only other county shown in the table, Harper, was organized from a part of Woodward in 1907.

PER CENT OF LAND AREA IN FARMS, AND AVERAGE VALUE OF FARM LAND PER ACRE, IN OREGON, BY COUNTIES: 1910.

PER CENT OF LAND AREA IN FARMS.

[Per cent for the state, 19.1.]

The per cent of land area in farms, when less than 20, is inserted under the county name.

AVERAGE VALUE OF FARM LAND PER ACRE.

[Average for the state, \$35.23.]

When the value is less than \$10 per acre, it is inserted under the county name.

OREGON.

FARMS AND FARM PROPERTY.

Oregon ranks ninth in land area and thirty-fifth in population among the states and territories of continental United States. The surface features of the state are extremely diverse. The altitudes within the state range from sea level along the Pacific coast to an extreme altitude of over 9,000 feet in the summits of the Cascade Ranges.

Along the rugged coast line small valleys and elevated benches constitute excellent agricultural land. Elsewhere the Coast Ranges of mountains rise directly from the sea. They are forested and agriculture is practically undeveloped. Between them and the Cascade Mountains lies the broad interior valley traversed by the Willamette River. The Cascade Mountains are largely forested and too rough for agricultural occupation. These divisions, together with numerous small valleys, constitute western Oregon within which the greater part of the agricultural development has thus far taken place.

Eastern Oregon lies principally within the great Intermountain Region of the Columbia River drainage. The extreme southern and southeastern portion, however, falls within the great Basin Region, which has no outlet to the sea. Within the Intermountain Region there are many irrigated valleys, whose soils consist of loams and sandy loams. The soils are principally derived from basaltic outflows and volcanic ash, although extensive areas of soils derived from lake sediments are also to be found.

With reference to rainfall, Oregon is divided into two distinct sections by the Cascade Mountains. West of the Cascades the annual precipitation ranges from 40 to 100 inches, while east of these mountains it ranges from 10 to 20 inches. East of the mountains irrigation is quite generally practiced, although in some sections grain crops are grown without irrigation.

The two maps on the opposite page show for the different counties the proportion of the total land area of the state which is in farms and the average value of farm land per acre. Of the state's entire land area about one-fifth is in farms. The proportion of land area utilized for agriculture is greatest over the northern third of the state, where the country is less mountainous and where the rainfall is heaviest. As shown by the first map, the proportion of land in farms is less than 20 per cent in 17 counties. Of these, 14 form a continuous group which covers all of the southern half of the state and extends in the northern half into the extreme northeast corner; 2 are in the northwest corner, and 1, Hood River, lies on the northern boundary just east of the Cascade Mountains. Scattered through the northern part of the state are 8 counties in which the proportion ranges from 20 to 40 per cent, and 7 in which it ranges from 40 to 60 per cent, while

in 2 counties, Yamhill to the west and Sherman to the east of the Cascades, it is between 60 and 80 per cent.

The average value of farm land per acre for the whole state is \$35.23, and, as shown by the second map, in but 1 county, Wheeler, is the average less than \$10. This county is surrounded by counties in which the average ranges from \$10 to \$25 per acre and which form an otherwise nearly solid group extending from north to south through the central part of the state. In 3 other counties, including 2 coast counties, and 1, Wallowa, in the northeast corner, the average is also between \$10 and \$25. Thirteen counties report averages between \$25 and \$50, of which 8 are in the western half of the state, 1, Sherman, in the north central part, and 4 in the eastern half of the state. In 4 counties, which form a group in the northwestern part of the state, the average is between \$50 and \$75 per acre, while in 2 counties adjoining these and in 1, Jackson, in the southwest corner, it rises to between \$75 and \$100 per acre. It will thus be seen that in general by far the more valuable land in Oregon is located west of the Cascades, while the least valuable land extends in a broad belt across the center of the state east of the Cascades. In Multnomah County the average value of farm land is about \$230 per acre, and in Hood River County about \$340 per acre. These high average values are due in part to the proximity of the city of Portland, and in part to the presence of a considerable acreage in orchards.

Progress during the decade: 1900 to 1910.—The number of farms in Oregon is 45,502, an increase of 27 per cent over the number in 1900, as compared with an increase of 62.7 per cent in the population of the state. The acreage of farm land is 11,685,110 and that of improved land 4,274,803, representing increases of 16 per cent and 28.4 per cent, respectively, over the corresponding figures for 1900. In this connection, however, it should be noted that the statistics relative to the total acreage and value of farm land in 1900 are not strictly comparable with those for 1910, as an Indian reservation of over 484,000 acres was reported as a farm in Crook County at the earlier census but was not included in the reports for 1910. The apparent decrease during the decade of 24.2 acres, or 8.6 per cent, in the average size of the farms is due largely to this fact. The exclusion of the figures for the reservation referred to from the statistics for 1900 would reduce the decrease to 10.7 acres. In general, the state has experienced a period of exceptional agricultural development during the past decade.

The total value of farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), is \$528,244,000, representing an increase of 205.8 per cent

since 1900. Land alone increased in value 263.9 per cent, compared with an increase of 128.5 per cent in the value of buildings, 103 per cent in that of implements and machinery, and 75.3 per cent in that of live stock. In considering the increase of values in agriculture the general increase in the prices of commodities in the last 10 years should be borne in mind. The average value of a farm, including its equipment,

in 1910 was \$11,609, compared with \$4,821 in 1900. The average value per acre of farm land alone rose from \$11.23 in 1900 to \$35.23 in 1910, an increase of 213.7 per cent.

The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 (June 1)	INCREASE. ¹	
			Amount.	Per cent.
Population.....	672,765	413,536	259,229	62.7

Average value of land per acre.....	\$35.23	\$11.23	\$24.00	213.7

¹ A minus sign (-) denotes decrease.

NOTE.—Ranges or ranches using the public domain for grazing purposes but not owning or leasing land were counted as farms in 1910 and 1900. They were included as owned or managed, free from mortgage, and under 3 acres in size. The counting of these ranges as farms affects all totals, averages, and percentages in which the number of farms is a factor. In 1910 there were 62 such ranges included as farms.

Irrigation.—Of the 45,502 farms in the state, 6,669, or 14.7 per cent, were reported as irrigated in 1909. The acreage reported as irrigated in 1909 was 686,129 acres, or 16.1 per cent of the improved land in farms. The area to which enterprises existing in 1910 were capable of supplying water was 830,526 acres, and the total acreage included in existing projects completed or under way in 1910 was 2,527,208 acres.

Population, number of farms, and farm acreage: 1850 to 1910.—The table following presents, for the state as a whole for each census from 1850 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

CEN- SUS YEAR.	Popula- tion.	FARMS.		LAND IN FARMS.			Per cent of land area in farms.	Per cent of farm land im- prov- ed.
		Number.	Per cent of in- crease.	All land.		Improved land (acres).		
				Acres.	Per cent of in- crease.			
1910....	672,765	45,502	27.0	11,685,110	16.0	4,274,803	19.1	36.6
1900....	413,536	35,837	40.4	10,071,328	45.8	3,328,308	16.5	33.0
1890....	317,704	25,530	57.4	6,909,888	63.9	3,516,000	11.3	50.9
1880....	174,768	16,217	113.7	4,214,712	76.4	2,198,645	6.9	52.2
1870....	90,923	7,587	30.7	2,389,252	16.0	1,110,290	3.9	46.7
1860....	52,465	5,806	398.8	2,000,539	376.1	890,414	3.4	43.5
1850....	13,294	1,164	-----	432,808	-----	132,857	0.2	30.7

In the 60 years since 1850 a continuous and rapid increase has occurred in the population of the state, in the number of farms, and in the total farm acreage. The acreage of improved land also shows a continuous increase, except for the decade from 1890 to 1900, when a slight decrease occurred. The increase in the number of farms during the period covered by the table has, however, not kept pace with that in population; in 1910 there was one farm to every fifteen inhabitants, as compared with approximately one farm to every eleven inhabitants in 1850. During the last decade the number of farms increased at the rate of 966 per year, as compared with an increase of 1,031 per year between 1890 and 1900, and of 897 per year between 1870 and 1890.

In 1910 the total farm acreage was 11,685,110 and the improved acreage 4,274,803. The proportion of improved farm land was 36.6 per cent in 1910, as compared with 50.9 per cent in 1890, 52.2 per cent in 1880, and 46.7 per cent in 1870; thus since 1890 the total farm acreage has increased with much greater relative rapidity than has the improved acreage. The absolute increase in the total farm acreage has been on the average 238,761 acres per year for the 20 years since 1890, as compared with 226,032 per year for the preceding 20 years. The improved acreage, however, made a greater absolute as well as a greater relative increase during the earlier 20-year period than since 1890, increasing at the rate of 119,986 acres per year between 1870 and 1890, as compared with 37,940 acres per year for the past two decades.

The figures for improved land in 1900 require explanation. Thirty-three per cent of the total farm acreage was then reported as improved, a lower proportion than was reported either for 1890 or 1910. This is explained largely by the fact that the total area in farms included an Indian reservation of over 484,000 acres which was reported as a farm and which consisted almost entirely of unimproved land. The inclusion of this tract lowered the percentage of farm land reported as improved in 1900 and tends to make the total farm acreage reported for that year incomparable with that for the other years shown in the table. Another factor which tended to lower the percentage in 1900, as compared with that in previous census years, was the decrease between 1890 and 1900 in the reported acreage of improved land. Undoubtedly this decrease was due to a more strict construction of the word "improved" in 1900 than at any previous census, an explanation which is borne out by the fact that in the counties from which the greatest decreases in improved acreages were reported there was a decided increase reported in the acreages of the principal crops.

Values of farm property: 1850 to 1910.—The agricultural changes in Oregon since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

CENSUS YEAR.	FARM PROPERTY.							
	Total.		Land and buildings.		Implements and machinery.		Domestic animals, poultry, and bees.	
	Value.	Per cent of increase.	Value.	Per cent of increase.	Value.	Per cent of increase.	Value.	Per cent of increase.
1910.....	\$528,243,782	205.8	\$455,576,309	244.3	\$13,205,645	103.0	\$59,461,828	75.3
1900.....	172,761,287	20.8	132,337,514	14.3	6,506,725	42.8	33,917,048	49.8
1890.....	143,024,800	85.8	115,819,200	103.5	4,556,770	54.1	22,648,830	32.4
1880.....	176,975,140	152.0	56,908,575	154.6	2,956,173	128.5	17,110,392	150.6
1870 ²	30,475,381	37.9	22,352,989	47.1	1,293,717	35.8	6,828,676	14.8
1860.....	22,099,161	350.2	15,200,593	493.5	952,313	419.2	5,946,255	216.9
1850.....	4,908,782	2,846,170	183,423	1,876,189

¹ Includes estimated value of range animals.
² Computed gold values, being 80 per cent of the currency values reported.

The total wealth of the state in the form of farm property is \$528,244,000, of which 86.2 per cent is represented by land and buildings, 11.3 per cent by live stock, and 2.5 per cent by implements and machinery.

The total increase in value during the last 10 years was \$355,482,000, or more than eleven times as great as during the decade immediately preceding, and more than double that of the whole period from 1850 to 1900. Of this increase \$323,239,000 was contributed by land and buildings, \$25,545,000 by live stock, and \$6,699,000 by implements and machinery.

The value of farm property increased without interruption, though at widely varying rates, during the six decades following 1850. The periods of compara-

tively slow growth were from 1860 to 1870 and from 1890 to 1900, while the period of the greatest growth, exclusive of the last decade, was from 1870 to 1890. The individual classes of farm property followed the same general course in this respect as did the value of farm property as a whole, except that the greatest increase in the value of implements and machinery and of live stock for the decades preceding 1900 occurred in the decade 1890 to 1900, while the growth in the value of live stock between 1880 and 1890 was comparatively slow.

In 1850 the value of land and buildings was one and one-half times as much as that of live stock; in 1880 it was about three and one-third times as much; in 1910 it was over seven and one-half times as much.

Average acreage and values per farm: 1850 to 1910.—The changes which have taken place during the past 60 years in the average acreage of Oregon farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

CENSUS YEAR.	Average acres per farm.	AVERAGE VALUE PER FARM. ¹				Average value of land and buildings per acre.
		All farm property.	Land and buildings.	Implements and machinery.	Domestic animals, poultry, and bees.	
1910.....	256.8	\$11,609	\$10,012	\$290	\$1,307	\$38.99
1900.....	281.0	4,821	3,693	182	946	13.14
1890.....	270.7	5,602	4,537	178	887	16.76
1880.....	259.9	4,747	3,509	182	1,055	13.50
1870 ²	314.9	4,017	2,046	171	900	9.36
1860.....	354.9	3,806	2,618	164	1,024	7.38
1850.....	371.8	4,217	2,448	158	1,612	6.58

¹ Averages are based on "all farms" in state.
² Includes estimated value of range animals.
³ Computed gold values, being 80 per cent of the currency values reported.

The average size of the Oregon farm is 256.8 acres. From 371.8 acres in 1850 it decreased to 259.9 acres in 1880, then increased to 270.7 acres in 1890, since which time it has again decreased. The inclusion of a large Indian reservation as a farm in 1900 caused the average acreage per farm reported to be considerably greater than would otherwise have been the case, and making allowance for this fact it will be seen that the average size in reality varied but little between 1890 and 1900. The state has in its eastern portion a great amount of semiarid land upon which are many stock ranches much greater in size than the farms utilized for general agricultural purposes. During the past few decades, however, these live-stock ranches have formed a constantly decreasing proportion of all the farms in the state, and since the more recently developed farms are mainly of the general farming or fruit-growing type, the average size of all farms has decreased.

The average value of an Oregon farm, including its equipment, is \$11,609, of which \$10,012 represents the average value of land and buildings, \$1,307 that of live stock, and \$290 that of implements and machinery.

Each of these items increased during the last decade, both the absolute and the relative gain being greater than during any other decade covered by the table. Although the total value of live stock has increased continuously since 1850, the average value per farm was greater at that time than at any later census year. This is undoubtedly due to the fact that in these early days the state was almost entirely given over to stock raising. The average value per acre of land and buildings was \$38.99 in 1910, compared with \$13.14 in 1900 and \$16.76 in 1890. In 1850 the average was but \$6.58, since which time, with the exception of the period between 1890 and 1900, it has continuously increased.

Farm tenure: 1880 to 1910.—The following table shows the distribution of the farms of the state according to character of tenure at each census since 1880:

TENURE.	1910	1900	1890	1880
Number of all farms.....	45,502	35,837	25,530	16,217
Farms operated by owners and managers.....	38,643	29,471	22,324	13,938
Farms consisting of owned land only.....	32,982	24,712	(¹)	(¹)
Farms consisting of owned and hired land.....	4,814	4,251	(¹)	(¹)
Farms operated by managers.....	847	508	(¹)	(¹)
Farms operated by tenants.....	6,859	6,366	3,206	2,279
Share tenants.....	2,927	3,729	2,123	1,538
Share-cash tenants ²	245			
Cash tenants.....	3,037	2,637	1,083	741
Tenure not specified ³	650			
Per cent of farms operated by—				
Owners and managers.....	84.9	82.2	87.4	85.9
Tenants.....	15.1	17.8	12.6	14.1
Share and share-cash.....	7.0	10.4	8.3	9.5
Cash and nonspecified.....	8.1	7.4	4.2	4.0

¹ Not reported separately.
² Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1880.
³ Prior to 1910 nonspecified tenants were included with cash tenants.

The number of all farms, and therefore of all farm operators, is 45,502. Of the farm operators, 37,796 are classified as owners, 847 as managers, and 6,859 as tenants. Of the owners, 32,982 operate exclusively land owned by them, while 4,814 operate land which they rent in addition to that which they own. The tenants are further distributed according to the character of their tenancy; thus 2,927 are share tenants; 245, share-cash tenants; 3,037, cash tenants; and for 650 no report relative to character of tenure was secured.

In 1880 there were 2,279 tenant farms, representing 14.1 per cent of all the farms in the state; in 1910 the number of tenant farms was 6,859, or 15.1 per cent of the total. Thus the percentage of tenant farms is not greatly above that in 1880. There was, however, a sharp increase from 12.6 per cent in 1890 to 17.8 per cent in 1900, followed by a considerable decrease during the last decade. During this decade the number of tenant farms increased 493. Farms rented for cash, including those for which the form of tenure was not reported, have constituted an increasing proportion of all tenant farms throughout the period

covered by the table. In 1880 less than one-third of all tenant farms were in the cash and nonspecified group, while in 1910 more than one-half belonged to this group. The percentage of tenant farms for the state (15.1) is a little below the average for the Pacific division (17.2), and far below the percentage for the United States as a whole (37).

The following table shows the total and improved acreage and the value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED BY—	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	11,685,110	10,071,328	4,274,803	3,328,308	\$455,578,309	\$132,337,514
Owners.....	9,036,370	7,411,128	3,061,350	2,540,391	335,786,072	97,877,748
Managers.....	768,007	1,162,468	212,812	185,220	28,725,693	7,313,748
Tenants.....	1,880,733	1,497,732	1,000,641	602,697	91,064,544	27,141,020

The following table shows the per cent distribution by tenure groups of the items in the preceding table, and also of the number of farms:

FARMS OPERATED BY—	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Owners.....	83.1	80.8	77.3	73.6	71.6	70.3	73.7	74.0
Managers.....	1.9	1.4	6.6	11.5	5.0	4.1	6.3	5.5
Tenants.....	15.1	17.8	16.1	14.9	23.4	19.6	20.0	20.5

It will be seen that in 1910, 77.3 per cent of all land in farms was in farms operated by their owners (including part owners), 6.6 per cent in farms operated by managers, and 16.1 per cent in farms operated by tenants, the percentage for owners and for tenants being higher and that for managers lower than in 1900.

As shown by the next table, the average size of farms operated by managers in 1910 (904.4 acres) was much greater than that of farms operated by tenants (274.5 acres), which was in turn larger than that of farms operated by owners. The average size of tenant farms increased between 1900 and 1910, while that of farms operated by owners and by managers decreased. In 1910 the percentage of farm land improved was highest for farms operated by tenants, and lowest for those operated by managers.

FARMS OPERATED BY—	AVERAGE ACRES PER FARM.				PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	All land.		Improved land.		IMPROVED.		Per farm.		Per acre.	
	1910	1900	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	256.8	281.0	93.9	92.9	36.6	33.0	\$10,012	\$3,693	\$38.99	\$13.14
Owners.....	239.1	255.9	81.0	87.7	33.9	34.3	8,884	3,379	37.16	13.21
Managers.....	904.4	238.2	251.3	268.2	27.8	11.6	33,915	14,407	37.50	6.30
Tenants.....	274.5	235.3	145.9	102.5	53.1	43.6	13,277	4,233	48.37	18.12

Farm mortgages: 1890 to 1910.—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

CLASS.	OWNED FARMS. ¹		OWNED FARM HOMES.		OWNED FARM HOMES. ²	
	1910		1900		1890	
	Number.	Per cent. ³	Number.	Per cent. ³	Number.	Per cent.
Total.....	37,796		28,638		22,503	
Free from mortgage.....	24,855	66.3	20,708	74.8	17,240	76.6
Mortgaged.....	12,632	33.7	7,010	25.2	5,257	23.4
Unknown.....	309		862			

¹ Includes all farms owned in whole or in part by the operator.
² The 616 "owned farm homes" for which no reports were secured were distributed between "free from mortgage" and "mortgaged" in 1890.
³ Per cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 37,796. Of this number, 24,855 were reported as free from mortgage; 12,632 were reported as mortgaged; and for 309 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 33.7 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is higher than in 1890 or in 1900. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the numbers reported at the later censuses because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that the increase from 1890 to 1910 in the total number of owned farms was almost equally divided between those free of mortgage and the mortgaged farms, while during the last decade the greater increase occurred in the number mortgaged.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 12,632 farms reported as mortgaged, 10,643 are wholly owned by the farmers, and for 10,274 of these the

amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARMS OR FARM HOMES MORTGAGED.		INCREASE.	
	1910 ¹	1890 ²	Amount.	Percent
Number.....	10,274	5,257		
Value—Land and buildings.....	\$93,325,449	\$22,917,073		
Amount of mortgage debt.....	\$21,168,627	\$6,841,047		
Per cent of debt to value.....	22.6	29.9		
Average value per farm.....	\$9,103	\$4,359	\$4,744	108.8
Average debt per farm.....	\$2,060	\$1,301	\$759	58.3
Average equity per farm.....	\$7,043	\$3,058	\$3,985	130.3

¹ Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.
² Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms increased during the 20-year period from \$1,301 to \$2,060, or 58.3 per cent, while the average value of such farms rose from \$4,359 to \$9,103, or 108.8 per cent. Thus the owner's equity increased from \$3,058 to \$7,043, or 130.3 per cent. As a result of the greater relative increase in farm values than in farm debt, the mortgage indebtedness, which was 29.9 per cent of the value of the mortgaged farm in 1890, had decreased to 22.6 per cent of this value in 1910.

Farms by size groups: 1910 and 1900.—Of all the farms in Oregon, 26.4 per cent are from 100 to 174 acres in size, 15.1 per cent from 20 to 49 acres, and 14.9 per cent from 50 to 99 acres. Nearly three-fifths of all the farms in the state are, therefore, from 20 to 174 acres in size. About one-third of all farms comprise 175 acres or over, nearly half of this group being between 260 and 499 acres.

The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP.	NUMBER OF FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1910	1900	Number.	Per cent.	1910	1900
Total.....	45,502	35,837	9,665	27.0	100.0	100.0
Under 3 acres.....	244	404	-160	-39.6	0.5	1.1
3 to 9 acres.....	2,639	1,027	1,612	157.0	5.8	2.9
10 to 19 acres.....	3,147	1,640	1,507	91.9	6.9	4.6
20 to 49 acres.....	6,588	4,083	2,505	68.7	15.1	11.4
50 to 99 acres.....	6,800	4,673	2,127	45.5	14.9	13.0
100 to 174 acres.....	12,009	11,055	954	8.6	26.4	30.8
175 to 259 acres.....	3,680	3,402	278	8.2	8.1	9.5
260 to 499 acres.....	5,663	5,826	-163	-2.8	12.4	16.3
500 to 999 acres.....	2,716	2,440	276	11.3	6.0	6.8
1,000 acres and over..	1,716	1,287	429	33.3	3.8	2.6

¹ A minus sign (-) denotes decrease.

A study of the distribution of farms by size groups discloses the fact that between 1900 and 1910 the greatest actual increase—2,805—occurred in those of 20 to 49 acres, while the greatest relative increase—157 per cent—took place in those from 3 to 9 acres in size. A decrease of 163, or 2.8 per cent, occurred in the farms from 260 to 499 acres in size, while the number of places under 3 acres reported as farms decreased by 160 and now represents but one-half of 1 per cent of the total number of farms. In general, the figures show an increasing proportion of farms in each of the groups between 3 and 99 acres and of farms of 1,000 acres and over, and a decrease in the proportion of places under 3 acres in size and of farms containing from 100 to 999 acres.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 6,030) and also the farms of between 175 and 499 acres (numbering 9,343):

SIZE GROUP.	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	11,685,110	10,071,328	4,274,803	3,328,308	\$455,576,309	\$132,337,514
Under 20 acres....	55,128	29,799	42,075	21,358	23,517,363	4,031,865
20 to 49 acres....	227,085	140,669	127,814	71,664	37,654,879	7,192,420
50 to 99 acres....	495,834	350,734	238,549	151,310	48,774,337	10,518,760
100 to 174 acres....	1,753,678	1,647,337	583,111	548,873	82,082,016	23,970,966
175 to 499 acres....	2,791,920	2,815,702	1,140,175	1,148,316	124,131,232	44,780,828
500 to 999 acres....	1,876,662	1,657,634	818,971	653,790	59,579,881	19,928,580
1,000 acres and over.....	4,484,803	3,429,453	1,324,108	732,997	79,236,581	21,914,105

The following table shows the per cent distribution, by size groups, of the items presented in the preceding table, and also of the number of farms:

SIZE GROUP.	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 20 acres....	13.3	8.6	0.5	0.3	1.0	0.6	5.2	3.0
20 to 49 acres....	15.1	11.4	1.9	1.4	3.0	2.2	8.3	5.4
50 to 99 acres....	14.9	13.0	4.2	3.5	5.6	4.5	10.7	7.9
100 to 174 acres....	26.4	30.8	15.0	16.4	13.6	16.5	18.1	18.1
175 to 499 acres....	20.5	25.7	23.9	23.0	26.7	34.5	27.2	33.8
500 to 999 acres....	6.0	6.8	16.1	16.5	19.2	19.6	13.1	15.1
1,000 acres and over.....	3.8	3.6	38.4	34.1	31.0	22.0	17.4	16.6

Of the total farm acreage of the state in 1910, 38.4 per cent was in farms of 1,000 acres and over, this being from the standpoint of aggregate acreage the most important size group, although it comprised only 3.8 per cent of the total number of farms. Between 1900 and 1910 there was an increase in the proportion of the total acreage contained in farms of less than 100 acres, and also in the proportion in farms of 1,000 acres and over, while there was a decrease in the proportion contained in farms in all intermediate size groups.

In general, as shown by the table below, the percentage of farm land improved diminishes as the size of the farm increases, but the percentage is higher in farms of 175 to 499 acres than in farms of 100 to 174 acres and higher in farms of 500 to 999 acres than in those of either of the two preceding size groups. As a result partly of the higher proportion of improved land in small farms and partly of the fact that buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land diminishes with the increase in the size of the farms. It is very much higher for the farms under 20 acres in size than for those of any other group.

SIZE GROUP.	PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
			Per farm.		Per acre.	
	1910	1900	1910	1900	1910	1900

1,000 acres and over.....	29.5	21.4	46,175	17,027	17.67	6.39

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910:

COLOR AND NATIVITY.	FARM OPERATORS.							
	Total.		Own-ers.	Ten-ants.	Man-agers.	Per cent of total.		
	Num-ber.	Per cent distribution				Own-ers.	Ten-ants.	Man-agers.
1910	1900	1910	1900	1910	1900	1910	1900	
Total.....	45,502	100.0	37,796	6,859	847	83.1	15.1	1.9
Native white.....	35,819	78.7	29,215	5,883	721	81.6	16.4	2.0
Foreign-born white..	9,056	19.9	8,103	835	118	89.5	9.2	1.3
Negro and other non-white.....	627	1.4	478	141	8	76.2	22.5	1.3

Nearly four-fifths of the Oregon farmers were native whites and one-fifth foreign-born whites. Only 627, or 1.4 per cent of the total, were nonwhites, 452 being Indians; 83, Japanese; 65, Chinese; and 27, negroes. Among the native white farmers 16.4 per cent were tenants, as compared with 9.2 per cent among the foreign-born white farmers.

Of the 9,056 foreign-born white farmers in Oregon in 1910, 2,492 were born in Germany; 1,024 in Canada; 866 in Sweden; 784 in England; 680 in Switzerland; 533 in Norway; 498 in Denmark; and 410 in Ireland. Other European countries were represented by a total of 1,734 farmers, and non-European countries, other than Canada, by 35.

DOMESTIC ANIMALS, POULTRY, AND BEES.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this bulletin, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

Of the total number of farms enumerated, 42,209, or 92.8 per cent, report domestic animals of some kind, the number without any domestic animals being only 3,293.

Of all farms, cattle are reported by 83 per cent, "dairy cows" by 80.6 per cent, and "other cows" by 23.9 per cent. The farms reporting dairy cows show an average of 5 per farm, whereas the average number of other cows per farm reporting is 20. The number of all classes of cattle reported, except calves, was greater in 1910 than in 1900. The exception in the case of calves is explained by the fact that the census of 1900 was taken as of June 1, after all the spring calves were born, while that of 1910 was taken as of April 15, before the close of the calving season and when the calves on hand were on the average younger than at the enumeration of 1900. As a result, the calves enumerated were fewer in number and of lower average value in 1910 than in 1900, the number decreasing from 168,323 to 76,238, and the average value decreasing from \$9.13 to \$6.94.

Horses are reported by 85.3 per cent of all the farms in the state, but only 24 per cent report colts born in 1909, and 11.3 per cent spring colts. The average value of mature horses is about three times as great as in 1900. Only about one farm in every twenty-five reports mules or mule colts. The average values of mules are considerably higher than those of horses of the corresponding age groups.

Sheep and lambs are reported from 6,356 farms, or 14 per cent of all the farms in the state. Of these farms, 81.4 per cent report spring lambs, the number of the latter being equal to 51.2 per cent of the number of ewes. Ewes are reported from all but 354 of the farms reporting sheep, and for the farms reporting the average is 241 per farm. Those reporting rams and wethers show an average of 133 per farm. The average flock, exclusive of spring lambs, numbers 308, while in 1900 it numbered 293.

Of all farms, 49.4 per cent report swine, the average number being 10 per farm reporting. Only 20 per cent

of all farms report spring pigs, doubtless because of the early date of enumeration. The average value of the swine reported under the head of "hogs and pigs born before January 1, 1910," is \$9.77.

The following table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Number.	Percent of all farms.	Number.	Value.	Average value.
Total.....	42,209	92.8		\$58,243,021

Goats.....	4,144	9.1	185,411	370,637	2.00

Poultry on farms: 1910 and 1900.—The increase in the number of fowls on Oregon farms during the last decade amounts to 32.8 per cent, while the value shows an increase from \$583,000 to \$1,068,000, or 83.3 per cent. The increase in number is confined to chickens, there being a decrease in the number of every other kind of fowl reported. The number of farms reporting poultry increased from 29,997 to 37,126, or 23.8 per cent; thus the average number of fowls per farm reporting increased from 46 to 49. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together

with their value and the number of farms reporting each kind in 1910:

KIND.	1910 (April 15)				1900 (June 1)
	Farms reporting.		Number of fowls.	Value.	Number of fowls.
	Number.	Per cent of all farms.			
Total	37,126	81.6	1,823,680	\$1,067,743	1,378,208
Chickens.....	37,071	81.5	1,753,224	972,606	1,290,818
Turkeys.....	4,433	9.7	26,684	61,772	36,031
Ducks.....	1,976	4.3	10,757	8,371	19,774
Geese.....	2,599	5.7	14,106	16,191	26,580
Guinea fowls.....	842	1.9	2,608	1,769	(¹)
Pigeons.....	588	1.3	15,764	5,156	(²)
All others ³	19	(⁴)	537	1,878	(²)

¹ Included with chickens.

² Not reported.

³ Nine farms report 508 pheasants, valued at \$1,606; 8 farms report 21 peafowls, valued at \$167; 1 farm reports 3 wild geese, valued at \$5; 1 farm reports 5 wild turkeys, valued at \$100.

⁴ Less than one-tenth of 1 per cent.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has decreased from 8,895 in 1900 to 8,861 in 1910, or 0.4 per cent. The number of colonies of bees decreased from 55,585 to 47,285, or 14.9 per cent, and their value decreased from \$160,382 to \$150,164, or 6.4 per cent. The average value of bees per farm reporting was \$18.03 in 1900 and \$16.95 in 1910. Only one farm in every five reports bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the next table age groups are omitted for the sake of brevity, but it may be noted that in cities and villages a comparatively small proportion of the animals of each class are in the younger age groups.

LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The number of farms reporting dairy cows on April 15, 1910, was 36,684, but only 30,065 reported dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable

KIND.	Number of inclo- sures reporting.	ANIMALS.		
		Number.	Value.	Average value.
Total	14, 143	\$4, 997, 977
All cattle.....	8, 927	17, 006	588, 005	\$34.58
Dairy cows.....	8, 753	12, 014	507, 878	42.27
Horses.....	8, 928	30, 203	4, 124, 678	136.57
Mules.....	201	1, 377	232, 230	168.05
Asses and burros.....	38	73	15, 816	216.06
Swine.....	641	3, 060	27, 634	9.03
Sheep.....	71	1, 755	5, 580	3.18
Goats.....	89	1, 684	4, 034	2.40

As would be expected, horses are by far the most important class of domestic animals not on farms, both in number and in value; cattle, more than two-thirds of which consist of dairy cows, rank next in importance.

Domestic animals on farms and not on farms: 1910.—The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

KIND.	DOMESTIC ANIMALS.					
	Total.		On farms.		Not on farms.	
	Num- ber.	Value.	Num- ber.	Value.	Num- ber.	Value.
Total	\$63, 241, 898	\$58, 243, 921	\$4, 997, 977
All cattle.....	742, 261	18, 168, 690	725, 255	17, 570, 685	17, 006	588, 005
Dairy cows.....	184, 564	6, 810, 643	172, 550	6, 302, 765	12, 014	507, 878

Sheep.....	2, 700, 890	12, 219, 522	2, 699, 135	12, 213, 942	1, 755	5, 580
Goats.....	187, 095	374, 071	185, 411	370, 637	1, 684	4, 034

The total value of all domestic animals in the state in 1910 was \$63,242,000, of which the value of animals not on farms constituted 7.9 per cent.

to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 27,564 (some-what less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 134,000. The amount of milk reported was 56,107,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 417 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products

for 1909. For convenience, a partial total has been presented, comprising the reported value of milk, cream, and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$6,067,000, which may be defined as the total value of dairy products, exclusive of milk and cream used on the farm producing.

Only about one-fourth of the amount of milk reported as produced by Oregon farmers in 1909 was sold as such. Large quantities of milk and cream were sold on the butter fat basis. The butter made on farms in 1909 was valued at \$1,600,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material decrease between 1899 and 1909 in the amount of butter made and a still greater relative decrease in the production of cheese.

The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FARMS REPORTING.		Number of quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms.			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	36,684	80.6	172,550	Head
On farms reporting dairy products in 1909.....	30,065	66.1	151,371	Head
On farms reporting milk produced in 1909.....	27,564	60.6	134,424	Head
Specified dairy products, 1909:						
Milk reported.....			56,106,599	Gals

Wool: 1909 and 1899.—The total number of sheep of shearing age in Oregon on April 15, 1910, was 1,958,000, representing a decrease of 0.2 per cent as compared with the number on June 1, 1900 (1,961,000). The approximate production of wool during 1909 was 2,126,000 fleeces, weighing 18,842,000 pounds, and valued at \$3,783,000. Of these totals about one-eighth represents estimates. The number of fleeces produced in 1909 was 0.6 per cent less than in 1899. The average weight per fleece in 1909 was 8.9 pounds, as

compared with 8.6 pounds in 1899, and the average value per pound was 20 cents, as compared with 13 cents in 1899.

The table below gives statistics as to the production of wool on farms, the figures being partly based on estimates: ¹

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value.
Sheep of shearing age on farms April 15, 1910.....	6,038	1,958,342
Wool produced, as reported, 1909.....	4,773	1,860,374	16,459,722	\$3,300,179
On farms reporting sheep April 15, 1910.....	4,367	1,656,481	1,798,057	15,937,557	3,199,648
On other farms.....	406	62,317	522,165	106,531
Total production of wool (partly estimated):					
1909.....			2,125,717	18,841,862	3,782,721
1899.....			2,139,504	18,349,660	2,300,741
Increase, 1899 to 1909.....			-13,787	492,202	1,385,980
Per cent of increase.....			-0.6	2.7	57.8

¹ A minus sign (-) denotes decrease.

Goat hair and mohair: 1909 and 1899.—Although 4,144 farmers reported 185,411 goats and kids on their farms April 15, 1910, only 3,075 reported the production of goat hair or mohair during 1909. These farmers reported 141,588 fleeces, weighing 523,435 pounds, and valued at \$128,230. The production showed a decided increase between 1899 and 1909. Many farmers who have goats do not produce goat hair or mohair, but it is believed that the report is somewhat short of the actual production.

Poultry products: 1909 and 1899.—The total number of fowls on Oregon farms on April 15, 1910, was 1,824,000. Of the 37,126 farms reporting fowls, 6,460 did not report any eggs produced in 1909, and 7,790 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 10,556,000 dozens, valued at \$2,582,000. According to the Twelfth Census reports, the production of eggs in 1899 was 7,710,000 dozens, the value being \$1,162,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to

¹ Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 1,671 farmers who reported the possession of 301,861 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep or did not occupy the same farm during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 11,907,000 dozens, valued at \$2,913,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 2,655,000 fowls, valued at \$1,417,000.

The statement below gives data relative to the production and sale of eggs and poultry:

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms April 15, 1910.....	37,126	1,823,680		
On farms reporting eggs produced in 1909.....	30,666	1,634,686		
On other farms.....	6,460	198,994

1899.....				826,687
Increase, 1899 to 1909.....				589,921
Per cent of increase.....				71.4
Fowls sold, as reported, 1909.....	18,337		957,644	584,460

Honey and wax: 1909.—Although, as noted elsewhere, 8,861 farms reported 47,285 colonies of bees on hand April 15, 1910, 3,428 of these farms, with 11,498 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 839,981 pounds of honey, valued at \$92,476, and 8,383 pounds of wax, valued at \$2,034. The true totals are doubtless somewhat above these figures.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The total value of domestic animals sold during 1909 was \$14,973,000 and that of animals slaughtered on farms \$2,461,000, making an aggregate of \$17,434,000. This total, however, involves con-

siderable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The total value of the cattle (including calves) sold during 1909 represented about one-half of the total value of animals sold, and the value of sheep sold represented about one-fourth of the total.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the value of those slaughtered during 1899, which amounted, respectively, to \$6,598,000 and \$1,566,000.

The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales, whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

The following statement presents statistics relating to the sale or slaughter of domestic animals by Oregon farmers during the year 1909, with certain items for 1899:

	FARMS REPORTING.		Number of animals.	VALUE.	
	Num-ber.	Percent of all farms.		Total.	Aver- age.
1909—All domestic animals:					
Sold.....				\$14,972,615

Sold.....				6,598,325	
Slaughtered.....				1,565,895	

* Schedules called for receipts from sales of animals raised on the farms reporting.

CROPS.

Summary: 1909 and 1899.—The next table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations

in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

The total value of crops in 1909 was \$49,041,000. Of this amount, 86.2 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-

products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 2,281,288, representing 53.4 per cent of

the total improved land in farms (4,274,803 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

	ACRES.				PER CENT OF IMPROVED LAND OCCUPIED.		VALUE OF PRODUCTS.

¹ A minus sign (-) denotes decrease.

² Less than one-tenth of 1 per cent.

³ Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The general character of Oregon agriculture is indicated by the fact that somewhat more than one-third (36.4 per cent) of the total value of crops in 1909 was contributed by the cereals, somewhat less than one-third (31.0 per cent) by hay and forage, and about one-tenth (9.3 per cent) by potatoes and other vegetables. The remainder, representing 23.3 per cent of the total, consisted mostly of fruits and nuts, forest products, and hops.

The value of crops in 1909 was 124.9 per cent greater than in 1899, this increase being, no doubt, due in part to higher prices. There was an increase of 12.5 per cent in the total acreage of crops for which acreage was reported, all of the important crops showing increases in acreage; the increase in the acreage of cereals was relatively small, and that in hay and forage comparatively large.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The leading crops covered by the next table, in the order of their importance as judged by value, are hay and forage, \$15,226,000; wheat, \$10,849,000; oats, \$5,037,000; hops, \$2,839,000; and potatoes, \$2,099,000. It should be noted, however, that the production of vegetables, other than potatoes and sweet potatoes and yams, is more important than that of potatoes; statistics for such vegetables are given in a later table.

The table following presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, hops, and sundry minor crops.

CROP.	Farms reporting.	Acres harvested.	QUANTITY.		Value.

Hops.....	1,071	21,770	Lbs.	2,838,860	
Sundry minor crops, total ⁴		62		3,349	

¹ Includes small amounts of flaxseed and peanuts.

² Includes small amount of millet seed.

³ The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage crops, flowers, and plants, etc.

⁴ Includes small amounts of tobacco, ginseng, and teasels.

The total acreage of cereals is about one and one-third times that of hay and forage and their value about one and one-fifth times that of the latter crop. The two leading cereals, oats and wheat, combined exceed in acreage and value the entire hay and forage crop. The acreage and value of oats are less than one-half those of wheat and more than three times as great as those of barley.

Of the total acreage and total value reported for hay and forage, alfalfa represents, respectively, over one-eighth and slightly more than one-fifth. On the other hand, "grains cut green," with an acreage over three times that of alfalfa, represents less than two-fifths of the total value. "Wild, salt, or prairie grasses" rank second in acreage and third in value, while "timothy and clover mixed," with less than one-third as great an acreage, stands fourth in both respects.

Among "other grains and seeds" and "sundry crops," hops and potatoes are the most important. Potatoes, with an acreage little more than one-eighth that of oats, have a value about two-fifths that of the latter crop, and hops, though having an acreage less than one-half that of potatoes, greatly exceed them in value.

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

CROP YEAR.	ACRES HARVESTED.					
	Oats.	Wheat.	Barley.	Hay and forage.	Potatoes.	Hops.
1909.....	339,162	763,187	108,847	939,979	44,265	21,770
1899.....	261,496	673,379	60,375	731,823	30,635	15,433
1889.....	218,736	553,652	37,722	467,061	17,965	3,130
1879.....	151,624	445,077	29,311	166,506	(1)	304

¹ Not reported.

With the exception of wheat each of the cereals shows an increase in acreage during each decade covered by the table. Oats show a steady gain for the whole period, the largest increase occurring during the past decade. During the first 20 years of the period wheat nearly doubled its acreage, but for the past decade it shows a slight decrease. Barley has increased continuously, nearly quadrupling its acreage during the 30-year period.

The acreage of hay and forage increased over four and one-half fold during the 30-year period, the greatest gain, both absolute and relative, being made in the first decade, when it nearly trebled. During the 20 years since 1889 the acreage of potatoes shows a gain of 146.4 per cent, while that of hops increased during the 30-year period from 304 to 21,770.

The following table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of

increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909:

CROP.	PER CENT OF FARMS REPORTING.		PER CENT OF IMPROVED LAND.		Per cent of increase in acres, 1899 to 1909. ¹	AVERAGE YIELD PER ACRE.	AVERAGE VALUE PER ACRE.
	1909	1899	1909	1899		1909	1909
Corn.....	8.2	7.9	0.4	0.5	1.7	26.1 Bu.	\$17.96
Oats.....	30.0	35.5	7.9	7.9	29.7	32.1 Bu.	14.85
Wheat.....	29.0	45.6	17.9	26.2	-12.6	16.3 Bu.	14.22
Barley.....	7.2	8.3	2.5	1.8	80.3	21.8 Bu.	13.90
Hay and forage.....	72.4	81.7	22.0	22.0	28.4	1.69 Tons.	16.20
Potatoes.....	55.4	63.4	1.0	0.9	47.4	109.0 Bu.	47.41
Hops.....	2.4	3.1	0.5	0.5	41.1	761.7 Lbs.	130.40

¹ A minus sign (—) denotes decrease.

Of every 100 farms, 72 report hay and forage; 55, potatoes; 30, oats; 29, wheat; 8, corn; 7, barley; and 2, hops. Each of these crops, with the exception of corn, is reported by a smaller percentage of farmers than in 1899.

The seven crops included in the preceding table cover about 52 per cent of the improved land of the state. Wheat occupied 17.9 per cent of the total acreage of the improved land in 1909, as compared with 26.2 per cent in 1899. Oats, hay and forage, and hops each occupied the same proportion of the total acreage of improved land in 1909 as in 1899, while corn and wheat show decreases, and barley and potatoes show increases in the proportion of improved land occupied. The increase in the total acreage of the cereals for the past ten years is 19,652, or 1.6 per cent; the increase in that of hay and forage, 208,156, or 28.4 per cent.

The average value per acre of all cereals combined is \$14.38, corn and oats exceeding this average; wheat and barley falling below it. The average value per acre of hay and forage is a little above that of the cereals, but only about one-third as great as that of potatoes, and slightly less than one-eighth as great as that of hops.

The decrease in wheat is confined entirely to the counties west of the Cascade Mountains. More than three-fifths of the total wheat acreage is reported from four counties, Umatilla, Sherman, Gilliam, and Morrow, constituting a group along the northern boundary.

In the acreage of oats there has been a general increase, though Umatilla, Tillamook, and Morrow Counties, and a single group of four counties in the southwestern corner of the state report decreases. Approximately three-fourths of the total acreage and total yield of oats for the state is reported from the group of counties occupying the Willamette Valley. Nearly the whole production of hops is also reported from these counties, the greatest acreage and yield being reported by Marion and Polk Counties.

About one-half of the total acreage of potatoes is reported by a small group of counties, comprising

Clackamas, Marion, Multnomah, and Washington, in the lower Willamette Valley. All but three counties report barley. Gilliam and Umatilla report about two-fifths of the total acreage.

In the acreage of hay and forage reported, the leading county is Harney. Nearly one-fifth of the total hay and forage acreage is reported from Klamath, Lake, and Harney Counties, forming a row along the southern boundary. There are but seven scattered counties which show decreases.

The leading counties in the acreage of "grains cut green" are Lane, Linn, Crook, Douglas, Wasco, and Umatilla, the first five reporting over one-third of the total acreage of the state.

Every county except two reports alfalfa. One group, consisting of Umatilla, Union, Baker, and Malheur Counties, extending in a row through the eastern portion of the state, reports about one-half of the total acreage.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products.

CROP.	FARMS REPORTING, 1909		ACRES.		VALUE OF PRODUCTS.	
	Number.	Per cent of all farms.	1909	1899	1909	1899
Vegetables, other than potatoes and sweet potatoes and yams, total.....	29,036	63.8	23,129	16,345	\$2,448,917	\$1,074,468
Farms reporting a product of \$500 or over.....	498	1.1	3,851	672,679
All other farms.....	28,538	62.7	19,278	1,776,238
Flowers and plants, total.....	140	0.3	130	58	268,833	95,872
Farms reporting a product of \$250 or over.....	72	0.2	236,187
All other farms.....	68	0.1	32,646
Nursery products, total.....	112	0.2	2,108	1,014	783,020	151,498
Farms reporting a product of \$250 or over.....	57	0.1	767,738
All other farms.....	55	0.1	15,282

¹ Does not include 4,948 farms which reported that they had vegetable gardens, but gave no information as to their products.

In 1909 the total acreage of potatoes and other vegetables was 67,399, and their value \$4,548,523. Excluding (so far as reported separately ¹) potatoes and sweet potatoes and yams, the acreage of vegetables was 23,129 and their value \$2,449,000, both acreage and value being decidedly greater than in 1899.

The raising of flowers and plants and of nursery products is also of some importance in Oregon, 2,298 acres being devoted to them in 1909, and the output being valued at \$1,051,853. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

¹ It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

Small fruits: 1909 and 1899.—The following table shows data with regard to small fruits on farms:

CROP.	Number of farms reporting, 1909	ACRES.		Quantity (quarts), 1909	Value, 1909
		1909	1899		
Small fruits, total.....		5,122	3,470	9,348,480	\$641,194
Strawberries.....	3,701	2,941	1,792	5,322,040	395,340
Blackberries and dewberries.....	1,307	431	717	915,744	61,066
Raspberries and loganberries.....	3,294	1,460	479	2,644,948	150,729
Currants.....	877	89	169	117,354	9,452
Gooseberries.....	1,465	186	203	307,395	20,893
Cranberries.....	17	14	6	40,864	3,527
Other berries.....	3	1	104	145	178

Strawberries are by far the most important of the small fruits raised in Oregon, with raspberries and loganberries ranking next. The total acreage of small fruits in 1909 was 5,122 and in 1899, 3,470, an increase of 47.6 per cent. The production in 1909 was 9,348,000 quarts, as compared with 6,646,000 quarts in 1899, and the value was \$641,000 in 1909, as compared with \$387,000 in 1899.

Orchard fruits, grapes, nuts, and tropical fruits: 1909 and 1899.—The following table presents data with regard to orchard fruits, grapes, nuts, and tropical fruits. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

CROP.	TREES OR VINES OF BEARING AGE, 1910		TREES OR VINES NOT OF BEARING AGE, 1910		PRODUCT.		
	Farms reporting.	Number.	Farms reporting.	Number.	1909		1899

Chestnuts.....	104	713	202	1,783	5,731	599	(2)
Unclassified.....	19,350
Tropical fruits (figs.).....	55	149	92	340	5,486	376	550

¹ Expressed in bushels for orchard fruits and pounds for grapes, nuts, and figs.
² Included with "unclassified."
³ Consists of products not separately named by the enumerator, but grouped under the designation "all other."
⁴ Includes pecans, butternuts, filberts, French walnuts, Japanese walnuts, hazelnuts, Brazil nuts, beechnuts, chinquapins, hickory nuts, and nuts.

The total quantity of orchard fruits produced in 1909 was 4,423,000 bushels, valued at \$3,340,000. Apples were the most important of the orchard fruits produced, and plums and prunes ranked next. The production of grapes in 1909 amounted to 3,206,874 pounds, valued at \$98,776, and of nuts to 177,632 pounds, valued at \$13,208.

The production of all orchard fruits together in 1909 was 190.6 per cent greater than in 1899, while that of grapes declined. The value of orchard fruits increased from \$906,000 in 1899 to \$3,340,000 in 1909, while that of grapes declined from \$162,543 in 1899 to \$98,776 in 1909. It should be noted that the values for 1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore include some duplication, while the values shown for 1909 relate only to the products in their original condition.

The following table shows the quantities of the more advanced products manufactured by farmers from orchard fruits and grapes. Values were not called for on the schedule.

PRODUCT.	FARMS REPORTING, 1909		QUANTITY PRODUCED.		
	Num-ber.	Per cent of all farms.	Unit.	1909	
				1909	1899
Cider.....	1,346	3.0	Gals....	89,919	64,890
Vinegar.....	1,329	2.9	Gals....	60,648	36,855
Wine and grape juice.....	317	0.7	Gals....	31,232	21,219
Dried fruits.....	1,615	3.5	Lbs....	10,904,713	2,818,200

Forest products: 1909 and 1899.—The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in

1909." There were 20,641 farms in Oregon (45.4 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$2,889,991, as compared with \$1,300,724 in 1899, an increase of 122.2 per cent. Of the value in 1909, \$1,226,010 was reported as that of products used or to be used on the farms themselves, \$1,272,860 as that of products sold or for sale, and \$391,121 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Sugar crops: 1909 and 1899.—The table below shows data with regard to sugar beets and sorghum cane. The total value of sugar beets produced in 1909 was \$74,902, as compared with \$63,322 in 1899.

PRODUCT.	FARMS REPORTING.		Acres.	PRODUCT.		
	Num-ber.	Percent of all farms.		Amount.	Unit.	Value.
Sugar beets:						
1909 ¹	208	0.5	1,176	15,006	Tons...	\$74,902
1899.....	63	0.2	2,510	14,462	Tons...	63,322
Sorghum cane:						
Total, 1909 ²						8,143
Cane grown.....	85	0.2	153	1,787	Tons.....	
Sirup made.....	17	(³)		1,374	Gals....	1,131
Total, 1899.....						1,193
Cane grown.....	33	0.1	39	300	Tons.....	
Cane sold as such.....				11	Tons....	43
Sirup made.....				2,473	Gals....	1,150

¹ Includes beets used as root forage.
² Includes cane used as coarse forage.
³ Less than one-tenth of 1 per cent.

Miscellaneous crops: 1909.—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 795 farmers in Oregon sold, during 1909, 10,673 tons of straw, for which they received \$34,198.

SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899:

EXPENSE.	1909			1899	INCREASE.		
	Farms reporting.		Amount.		Amount.	Amount.	Per cent.
	Number.	Per cent of all farms.					
Labor.....	24,229	53.2	\$11,101,864	\$4,842,834	\$6,259,030	129.2	
Feed.....	21,012	46.2	3,198,363	(¹)			
Fertilizer.....	2,887	6.3	68,557	27,395	41,162	150.3	

¹ Not reported at the census of 1900.

Over half of the farmers hire labor, the average amount expended by the farmers hiring being \$458. During the decade the total expenditure for labor increased \$6,259,000, or 129.2 per cent. About a sixth of the amount reported as expended for labor is in the form of rent and board. At prior censuses no tabulation was made of the number of farmers reporting expenditures for labor.

About one farmer out of every two reports some expenditure for feed, but only about six out of every hundred purchase fertilizer. The total amount reported as paid for fertilizer has increased \$41,162, or 150.3 per cent, during the decade, the average per farm reporting being \$23.75.

Receipts from sale of feedable crops: 1909.—An effort was made at census of 1910 to secure as complete a statement as possible of the sales as well as the production of the more important feedable crops (that is crops ordinarily fed to live stock).

While the total amount expended by Oregon farmers for the purchase of feed in 1909 was \$3,198,000, the total receipts from the sale of feed by those reporting sales amounted to \$4,514,000.

The table following summarizes the data reported.

CROP.	FARMS REPORTING.		QUANTITY SOLD.		Amount received.
	Number.	Percent of all farms.	Amount.	Unit.	
Total					\$4,514,161
Corn	307	0.7	30,909	Bu.	23,191
Oats	5,458	12.0	3,240,248	Bu.	1,537,994
Barley	883	1.9	610,621	Bu.	389,830
Hay and coarse forage	6,629	14.6	252,290	Tons...	2,563,146

COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to products of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or

trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

Change in 1900 figures.—In 1900, 484,039 acres of the Warm Springs Indian Reservation were included as a farm in Crook County, but are not here included for 1910. Thus the statistics for Crook County and for the state as a whole for 1910 are not entirely comparable with those for 1900.

Change of boundaries.—In comparing the data secured in 1910 with those for 1900, the following changes in county boundaries should be considered: Hood River County was organized from a part of Wasco County in 1908, and a part of Union County was annexed to Baker County in 1902.

TABLE 1.—FARMS AND FARM PROPERTY,

[Comparative data for June 1, 1900, in Italics.]

31	Value of land and buildings..... dollars.....	28,725,693	129,390	165,000	701,300	120,500
MORTGAGE DEBT REPORTS *						
For all farms operated by owners:						
32	Number free from mortgage debt.....	24,855	691	559	2,036	208
33	Number with mortgage debt.....	12,632	417	311	1,061	94
34	Number with no mortgage report.....	309	13	9	9	1
For farms consisting of owned land only:						
35	Number reporting debt and amount.....	10,274	348	245	871	89
36	Value of their land and buildings..... dollars.....	93,525,449	3,145,745	1,793,965	5,297,140	531,410
37	Amount of mortgage debt..... dollars.....	21,165,627	800,275	800,643	1,290,555	151,625
38	Per cent of value of land and buildings.....	22.6	25.4	22.3	24.4	28.5

¹ Change of boundary. (See explanation at close of text.)

* Indian reservation included as a farm in 1900. (See explanation at close of text.)

TABLE 3.—LIVE STOCK PRODUCTS, AND DOMESTIC ANIMALS

LIVE STOCK PRODUCTS							
Dairy Products							
1	Dairy cows on farms reporting dairy products.....	number..	151,371	3,815	4,415	10,327	2,784
2	Dairy cows on farms reporting milk produced.....	number..	134,424	2,923	3,635	8,991	1,860
3	Milk—Produced.....	gallons..	56,106,590	945,003	1,326,772	3,742,461	575,040
4	Sold.....	gallons..	14,640,108	30,271	90,590	208,954	331,265
5	Cream sold.....	gallons..	827,541	22,630	7,657	60,921	40,608
6	Butter fat sold.....	pounds..	5,211,133	141,538	283,920	482,402	56,928
7	Butter—Produced.....	pounds..	5,667,964	140,640	119,628	466,623	77,647
8	Sold.....	pounds..	2,446,158	63,258	36,279	160,300	52,350
9	Cheese—Produced.....	pounds..	169,205	160	660	4,149	6,220
10	Sold.....	pounds..	154,328		120	1,887	6,120
11	Value of dairy products, excluding home use of milk and cream.....	dollars..	6,067,024	103,614	148,841	371,883	131,991
12	Receipts from sale of dairy products.....	dollars..	5,170,703	83,398	125,104	280,364	125,886
Poultry Products							
13	Poultry—Raised.....	number..	2,309,350	61,509	74,869	209,015	15,658
14	Sold.....	number..	957,644	22,042	36,440	96,125	6,605
15	Eggs—Produced.....	dozens..	10,555,840	227,687	306,308	939,776	120,731
16	Sold.....	dozens..	6,253,620	98,774	213,453	612,381	58,976
17	Value of poultry and eggs produced.....	dollars..	3,814,285	85,262	126,223	350,808	38,543
18	Receipts from sale of poultry and eggs.....	dollars..	2,116,392	37,092	77,856	209,449	25,056
Honey and Wax							
19	Honey produced.....	pounds..	830,981	103,468	22,411	40,133	8,718
20	Wax produced.....	pounds..	8,383	1,311	40	688	40
21	Value of honey and wax produced.....	dollars..	94,510	9,246	2,649	5,166	912
Wool, Mohair, and Goat Hair							
22	Wool, fleeces shorn.....	number..	1,860,374	129,950	26,276	10,010	836
23	Mohair and goat hair, fleeces shorn.....	number..	141,588	10	12,360	8,340	69
24	Value of wool and mohair produced.....	dollars..	3,434,400	227,415	59,317	25,912	1,371
DOMESTIC ANIMALS SOLD OR SLAUGHTERED							
25	Calves—Sold or slaughtered.....	number..	71,229	2,162	3,019	5,376	1,361
26	Other cattle—Sold or slaughtered.....	number..	274,025	27,313	4,777	4,289	817
27	Horses, mules, and asses and burros—Sold.....	number..	23,211	852	435	692	25
28	Swine—Sold or slaughtered.....	number..	232,396	9,551	8,087	16,386	934
29	Sheep and goats—Sold or slaughtered.....	number..	1,047,960	77,442	52,026	8,341	261
30	Receipts from sale of animals.....	dollars..	14,972,615	1,263,574	446,563	245,722	16,593
31	Value of animals slaughtered.....	dollars..	2,461,159	86,735	67,823	213,863	26,319

PER CENT OF TOTAL LAND AREA IRRIGATED, AND PER CENT OF NUMBER OF FARMS IRRIGATED,
IN OREGON, BY COUNTIES: 1909.

PER CENT OF TOTAL LAND AREA IRRIGATED.

[Per cent for the state, 1.1.]

PER CENT OF NUMBER OF FARMS IRRIGATED.

[Per cent for the state, 14.7.]

OREGON.

FARMS AND ACREAGE IRRIGATED.

The Cascade Mountain range, which parallels the coast line and extends across the state about 125 miles inland, divides Oregon into two parts, which differ widely in climatic characteristics. The western third of the state, lying between these mountains and the coast is, except in the extreme southern part, generally humid, with an average annual precipitation which is ample in most sections for the maturing of crops without irrigation. The regions east of the mountains, however, are arid or semiarid, and it is in this section of the state that irrigation is most widely practiced. Irrigation was reported in 1909 from all counties in the state except two, but of the total acreage supplied with water in that year about 96 per cent lies

east of the mountains. The location of irrigated lands is indicated in a general way by the accompanying maps, which show the class in which each county falls with reference to the percentage which irrigated land forms of the total land area and the percentage which irrigated farms represent of all farms.

The following table shows for the state as a whole the number of farms and acreage irrigated in 1909 in comparison with the total number of farms, the total land area, the total land in farms, and the total acreage of improved land in farms in 1910, together with the areas not yet irrigated for which water has been or is being made available. Comparative figures for 1900 are included as far as possible.

⁶ Not reported.

Number of farms irrigated.—The number of farms irrigated is made up of the number reported on the supplemental schedules by the regular enumerators, together with an estimate of the number of farms covered by enterprises which were reported by special agents but not by the regular enumerators. This estimate was based upon the average acreage irrigated per farm as shown by the supplemental schedules. According to the figures presented in the table, irrigation was practiced on about one-seventh (14.7 per cent) of the farms in the state in 1909. In 1899 the proportion of irrigated farms was 12.9 per cent, while in 1889 the proportion was 12.3 per cent. It is evident that between 1889 and 1899 the number of irrigated farms in the state increased at about the same rate as the number of unirrigated farms. During the later decade, however, the rate of increase in the number of irrigated farms was almost twice as great as that in the number of unirrigated farms.

Of the 34 counties in the state, only 4 report more than half their farms as irrigated; in 4 the proportion is between 40 and 50 per cent and in 2 it is between 30 and 40 per cent. - In only 6 out of the remaining 24 counties are as many as 10 per cent of the farms irri-

gated. In 16 counties less than 10 per cent of the farms are irrigated, while from 2 no irrigation at all is reported. The 18 counties last mentioned are all in the western part of the state, whereas the counties which have a large proportion of their farms irrigated are in the eastern part. In Baker County the irrigated farms form 80.6 per cent of the whole number of farms, and in Malheur and Hood River Counties, 77.7 and 62.4 per cent, respectively.

From 1899 to 1909 the increase in the number of farms irrigated was 43.9 per cent for the state as a whole. This percentage was exceeded in 7 counties in which no change of boundaries took place during the decade, and in the territory which comprised Wasco County in 1899 and Wasco and Hood River Counties in 1909. This high rate of increase was confined almost entirely to the counties east of the mountains, which together show an increase of 46.1 per cent. Although the counties west of the Cascades together show an increase of 32.8 per cent, the extension of irrigation in this section was confined almost entirely to Douglas, Jackson, and Josephine Counties. In the counties west of the Cascades which in the table at the end of this bulletin are included under the head of

"all other counties" the total number of irrigated farms fell off 51.5 per cent. In Crook County the number of such farms increased 157.5 per cent, in Umatilla County 108.2 per cent, in Klamath County 106.2 per cent, in Morrow County 88.2 per cent, and in Josephine County 70.6 per cent. The greatest absolute increase for a single county was reported for Umatilla County, 356 farms. The territory comprising Baker and Union Counties showed an increase of 395 farms.

Acreage irrigated.—The acreage irrigated is taken from special schedules filled out by agents from information obtained from owners or officials of irrigation enterprises and, in some instances, from public records. The acreage thus obtained is considerably larger than the irrigated acreage reported on the supplemental schedules filled out by the farm enumerators. This difference is due in a measure to the fact that the special agents found enterprises which were not reported on any schedules returned by the enumerators, indicating that the acreage reported on the supplemental schedules is to some extent under the true figure. There is, however, a natural tendency for the officials of enterprises to report as irrigated the entire area of farms of which only a part was irrigated. Furthermore, some farms are so situated as to receive water from more than one enterprise, and may be reported as irrigated by each, which results in duplication. Owing to the two causes last enumerated, it is probable that the acreage irrigated as shown in this bulletin is somewhat excessive, but the extent of this excess can not be determined. It is believed, however, to be less than 10 per cent for the state of Oregon.

The total acreage reported as irrigated in 1909 was 686,129 acres, as against 388,310 acres in 1899 and 177,944 acres in 1889. The percentage of increase from 1889 to 1899 was 118.2 and that from 1899 to 1909, 76.7. The absolute increase during the later decade was, however, 297,819 acres, while that during the earlier decade was only 210,366 acres.

The percentage of increase between 1899 and 1909 in the acreage irrigated was considerably higher than the percentage of increase in the number of farms irrigated. This indicates that there was an increase in the acreage irrigated per farm, the average being 102.9 acres in 1909, as compared with 83.8 acres in 1899. As a decrease from 281 acres to 256.8 acres in the average size of the farms of the state was reported for the same period, it is probable that farmers are irrigating larger parts of their holdings than formerly. It is not possible, however, to determine how far this is actually the case, as the higher average size shown for 1900 was due to a considerable extent to the inclusion of the entire acreage of an Indian reservation in Crook County that was not included in the returns for 1910. The percentage which the irrigated area represented of the total improved farm acreage was 11.7 per cent in 1899, while in 1909 it was 16.1 per cent.

The percentage of the total land area of the state irrigated in 1909 was 1.1, compared with 0.6 per cent in 1899 and 0.3 per cent in 1889.

The county for which the largest area of irrigated land was reported in 1909 was Baker, with an irrigated acreage of 129,673. Harney County, which in 1899 ranked first in area of irrigated land, was second in 1909, with 129,135 acres. In three other counties the area of irrigated land in 1909 exceeded 50,000 acres, while five counties contained irrigated areas of between 30,000 and 50,000 acres.

The county in which irrigated land formed the highest percentage of the total area was Baker, where 6.6 per cent of the land area was irrigated. In only 4 other counties—Harney, Hood River, Union, and Willowa—was the proportion as high as 2 per cent.

Acreage included in projects.—The preceding table shows that in 1910 existing enterprises were ready to supply water to 144,397 acres more than were irrigated in 1909. The acreage included in projects exceeds the acreage irrigated in 1909 by 1,841,079 acres, which is more than six times the acreage brought under irrigation in the last decade and nearly three times the total area irrigated in 1909. This acreage represents the area which will be available for the extension of irrigation in the next few years upon the completion of the projects now under construction. It indicates in a general way the area available for settlement, although much of this unirrigated land is in farms already settled.

Acreage irrigated, classified by character of enterprise.—The following table gives the distribution of the acreage irrigated in 1909 according to the character of the enterprise controlling the irrigation works. In Klamath County an area of 10,000 acres formerly irrigated by various enterprises has been taken over by the United States Reclamation Service and is here credited to that service.

CHARACTER OF ENTERPRISE.	ACREAGE IRRIGATED IN 1909.	
	Amount.	Per cent distribution.
All classes	686,129	100.0
U. S. Reclamation Service.....	22,000	3.2
U. S. Indian Service.....	429	0.1
Carey Act enterprises.....	24,750	3.6
Irrigation districts.....	1,500	0.2
Cooperative enterprises.....	149,985	21.9
Commercial enterprises.....	77,387	11.3
Individual and partnership enterprises.....	410,078	59.8

Irrigation districts, cooperative enterprises, and individual and partnership enterprises are all controlled by the water users. These supply about 82 per cent of the acreage irrigated, while United States Reclamation Service and Carey Act enterprises, which are to be turned over to the water users, supply about 7 per cent. Thus only a small percentage of the land irrigated is supplied by works which are not either

controlled by the water users or to be turned over to them ultimately. The cooperative enterprises, which supplied water for 21.9 per cent of the land irrigated in 1909, are principally stock companies, of which the stock is owned by the water users.

Acreage irrigated, classified by source of water supply.—The following table shows the distribution of the acreage irrigated in 1909 according to the source of water supply.

From this table it is apparent that up to the present time there has been no extensive development of any

source of water supply other than streams, although lakes and springs supply considerable areas.

SOURCE OF WATER SUPPLY.	ACREAGE IRRIGATED IN 1909.	
	Amount.	Per cent distribution.
All sources.....	686,129	100.0
Streams.....	646,866	94.3
Lakes.....	23,730	3.5
Wells.....	1,460	0.2
Springs.....	10,788	1.6
Reservoirs.....	3,279	0.5

IRRIGATION WORKS.

The following table summarizes the data collected relating to works for supplying water for irrigation in 1910 and 1900. As only two of the items reported in 1910 were reported in 1900, there is little opportunity for comparison between the two censuses. The figures shown for the earlier census relate only to those systems which received water from streams in 1899, but the other systems represented in the Twelfth Census report, which obtained water from wells, supplied only 199 acres of the total area reported as irrigated in 1899.

Assuming that the enterprises in operation in 1909 were identical with those reported in 1910, the average acreage irrigated per enterprise in 1909 was 183.2 and the acreage irrigated per mile of main ditch was 123.9. For the enterprises shown for 1900, the average acreage irrigated per enterprise in 1899 was 208.1 and the average per mile of main ditch was 170.

There has been little utilization of underground water for irrigation up to this time. The table shows 51 flowing wells, which irrigated 655 acres, and 92 pumped wells, which irrigated 805 acres. All but 6 of the flowing wells are in Harney and Klamath

Counties, while more than two-thirds of the pumped wells are in Jackson, Josephine, Umatilla, and Union Counties. Klamath County has the largest acreage irrigated by flowing wells—500 acres—while Umatilla has the largest acreage supplied from pumped wells—398 acres. Pumping from wells, lakes, or streams is but little practiced as yet, the total acreage supplied with pumped water being only 5,211 acres in 1909.

COST OF CONSTRUCTION, OPERATION, AND MAINTENANCE.

The table following shows the total cost of irrigation enterprises up to July 1, 1910, including construction of works and acquisition of rights but not operation and maintenance, with the average cost per acre, based on the acreage the enterprises were capable of irrigating in 1910; the estimated final cost of enterprises completed and enterprises now under construction, with the average cost per acre, based on the acreage included in projects; and the total cost and average cost per acre of operation and maintenance in 1909. Data relating to the cost of construction and maintenance of systems operated in 1899 are included for comparison. The figure for average cost per acre of operation and maintenance in 1899 does not cover the cost for systems receiving water from wells, but these are comparatively unimportant, having supplied only 199 acres in that year.

The cost of operation and maintenance is not reported for individual and partnership enterprises, for the reason that farmers whose land is irrigated by such systems generally clean their own ditches

at odd times without keeping any record of the time spent. In the case of the larger enterprises this cost represents a cash outlay by the farmers, while in the case of many of the smaller cooperative enterprises the cost is worked out by the farmers.

⁴ Based on acreage irrigated in 1899.
⁵ Figures not comparable. (See explanation in text.)
⁶ Not reported.
⁷ For 1909.
⁸ Exclusive of systems receiving water from wells.

The cost of irrigation systems shows the largest increase of any item included in the census of irrigation, 592.1 per cent, while the average cost per acre also shows a considerable increase. It should be noted that the average cost per acre shown for the census of 1900 is based on the acreage irrigated in 1899, instead of the acreage under ditch, which forms the basis of the average for 1910, the latter acreage not being reported in 1900. If computed on the basis of the acreage irrigated in 1909, the average cost in 1910 would be \$18.60, representing an increase of 291.6 per cent over the corresponding figure for the census of 1900. The year 1899 was near the close of the period of private and cooperative construction, when most of the works were built by the water users themselves with little or no expenditure of money, and near the beginning of the present period of large-scale construction by corporations and the Federal Government. This later construction is not only on a more extensive scale but also more difficult and of a better type. Largely as a result of these influences the average cost per acre of irrigation has greatly increased. The average cost up to July 1, 1910, for Oregon, as shown in the table, is, however, below the general average reported for the entire arid region. In Oregon this cost is slightly exceeded by the average (\$15.52) based on the estimated final cost and the acreage included in projects.

The highest cost of irrigation enterprises up to July 1, 1910, per acre enterprises were capable of irrigating—\$103.74—is reported from the counties grouped under the head of "all other counties" in the table at the end of this bulletin, a group which includes all the counties west of the Cascades, except Douglas, Jackson, Josephine, and Washington. In this section irrigation is an incidental, rather than an essential, feature of agriculture. Among the counties east of the Cascades, the highest average cost was reported by Umatilla County, where the unusual cost is due in a large measure to the heavy expenditures made on works which were nearly complete July 1, 1910, but on that date were ready to supply water to only a part of the land to be irrigated ultimately. The county showing the lowest average cost per acre—\$3.01—was Harney, in which county the acreage existing enterprises were capable of irrigating in 1910 was greater than in any other county.

The acreage for which cost of operation and maintenance in 1909 was reported constitutes 38.5 per cent of the total acreage reported as irrigated in 1909 and 95.6 per cent of the acreage reported as irrigated by other than individual and partnership enterprises. The cost reported can be said, therefore, to represent very fairly the average annual expense for all but individual and partnership enterprises.

CROPS.

As previously stated, the data relating to irrigated crops are taken from supplemental schedules filled out by the regular census enumerators. Since the special agents found enterprises which the enumerators had not reported, it is evident that the information relating to irrigated crops is incomplete to some extent. It shows, however, the relative importance of the different irrigated crops and is sufficiently complete to afford reliable averages of yields.

The table following shows the acreage, yield, and value of the principal crops reported as grown under

irrigation in 1909, in comparison with totals for the same crops reported for the entire state. While small quantities of other crops are grown both on irrigated and un-irrigated land, the leading crops of the state, as well as the leading crops grown under irrigation, are represented in the table. In the reports of the agricultural census the acreages of seed crops are not generally given, but since the growing of these crops, especially alfalfa seed, is coming to be an important industry in the irrigated sections of the country, the acreages are presented here.

¹ Includes millet or Hungarian grass.² Agricultural returns show number of trees and not acreage.

Acreage.—Of the entire acreage of the crops for which totals are presented in the table, slightly less than one-sixth is irrigated. The proportion irrigated varies widely for the different crops.

The cereals are very generally grown without irrigation, the irrigated acreage being only 5 per cent of the total acreage shown for these crops. The highest percentage of acreage irrigated shown for any cereal, 16.9, is reported for barley, and the next highest, 11.3, for rye. The proportions for oats and wheat are, respectively, 6 per cent and 2.8 per cent, the latter being the lowest percentage reported for any of the cereals.

Of the alfalfa acreage 83.6 per cent is irrigated, and of the land devoted to "wild, salt, or prairie grasses," 63.3 per cent. The corresponding percentage for timothy alone is 40.6, and that for timothy and clover mixed, 26.4. In the case of the remaining hay and forage crops the proportion of the total acreage irrigated is small.

Of the entire acreage in potatoes, 7.7 per cent is irrigated; of that in sugar beets, 49.5 per cent; and of that in small fruits, 23.5 per cent. The relative importance of the irrigated orchard acreage can not be determined, because the total acreage of orchards in the state is not reported, but it will be observed that but little more than one-seventh of the value of all orchard fruits produced in the state is that of products grown on irrigated land.

Of the irrigated crops shown in the table, "wild, salt, or prairie grasses" have the largest acreage, the acreage of this crop being 37.8 per cent of the total acreage of irrigated crops shown in the table. Alfalfa is next with 27.5 per cent, followed by wheat with 5.8 per cent; oats, with 5.6 per cent; and barley, with 5 per cent. No other single crop covers as much as 5 per cent of the total acreage of the irrigated crops presented in the table.

While most of the crops irrigated are well distributed geographically, there is a tendency toward the concentration of certain crops in particular localities. This is shown by the following statement, which gives the counties having the largest acreages of the principal irrigated crops, with the proportions which they contain of the total irrigated acreages of these crops in the state.

Corn.—Jackson County, 23.5 per cent; Baker, 18.8 per cent; Josephine, 15.7 per cent.

Oats.—Baker County, 46.2 per cent; Wallowa, 14.3 per cent; Crook, 9.9 per cent.

Wheat.—Baker County, 32.6 per cent; Klamath, 14.4 per cent; Wallowa, 13.5 per cent.

Barley.—Harney County, 29.3 per cent; Klamath, 19 per cent; Baker, 17.7 per cent.

Rye.—Crook County, 42.8 per cent; Malheur, 16.2 per cent; Wallowa, 11.6 per cent.

Timothy alone.—Baker County, 24.5 per cent; Grant, 22.9 per cent; Union, 15.2 per cent.

Timothy and clover mixed.—Baker County, 28.1 per cent; Grant, 23.7 per cent; Crook, 11 per cent.

Clover alone.—Josephine County, 17.7 per cent; Union, 16.4 per cent; Crook, 16.3 per cent.

Alfalfa.—Baker County, 21.7 per cent; Malheur, 18.9 per cent; Umatilla, 9.3 per cent.

Othertame or cultivated grasses.—Josephine County, 27.6 per cent; Grant, 20.5 per cent; Baker, 17.6 per cent.

Wild, salt, or prairie grasses.—Harney County, 27.1 per cent; Lake, 23.9 per cent; Malheur, 13.3 per cent.

Grains cut green.—Crook County, 30.6 per cent; Wallowa, 15.8 per cent; Harney, 9 per cent.

Potatoes.—Baker County, 18.3 per cent; Hood River, 12.9 per cent; Harney, 11.7 per cent.

Sugar beets.—Union County, 82.8 per cent; Wallowa, 17.2 per cent.

Orchard fruits and grapes.—Union County, 25 per cent; Hood River, 23 per cent; Baker, 14.9 per cent.

Small fruits.—Hood River County, 47.4 per cent; Umatilla, 23.7 per cent; Union, 7.6 per cent.

Yield.—In the following table the average yields per acre of crops extensively grown, both with and without irrigation, are shown. The yields on unirrigated land are obtained by subtracting the totals for irrigated crops from the totals for the state.

CROP.	AVERAGE YIELD PER ACRE.		
	On unirrigated land.	On irrigated land.	
		Amount.	Per cent of excess over yield on unirrigated land. ¹
Oats.....bushels..	31.3	43.9	40.3
Wheat.....bushels..	16.0	27.1	69.4
Barley.....bushels..	20.0	30.7	53.5
Rye.....bushels..	11.3	12.1	7.1
Alfalfa seed.....bushels..	3.4	4.1	20.6
Timothy alone.....tons..	1.48	1.98	52.4
Timothy and clover mixed.....tons..	2.00	1.78	-12.0
Clover alone.....tons..	1.76	2.15	22.2
Alfalfa.....tons..	2.22	3.29	48.2
Wild, salt, or prairie grasses.....tons..	1.15	1.14	-0.9
Grains cut green.....tons..	1.36	1.52	11.8
Potatoes.....bushels..	107.9	121.4	12.5
Sugar beets.....tons..	17.94	8.50	-52.6

¹ A minus sign (-) indicates that the yield on irrigated land is less than that on unirrigated land.

All the crops in the table except three, "timothy and clover mixed," "wild, salt, or prairie grasses," and "sugar beets," show larger average yields per acre under irrigation than without it in 1909. In the case of all of these except rye, grains cut green, and potatoes, the excess is at least 20 per cent.

In considering these comparisons it should be borne in mind that they are not comparisons of yields on irrigated and on unirrigated land in the same localities, but of yields under irrigation in localities where crops can not be grown successfully without it with yields in localities where irrigation is not necessary. They do not indicate, therefore, the relative advantages of farming with and without irrigation in a given community, but rather give one factor for determining the relative advantages of farming where irrigation is necessary and where it is not necessary for the successful growing of crops.

COUNTY TABLE.

The next table gives in detail, by counties, the data summarized above, except those relating to crops. For purposes of comparison the total number of farms in the state, the approximate land area of the state, the total land in farms, and the improved land in farms have been included in the table. Clatsop and Columbia Counties did not report any irrigation in 1909, but the number of farms, approximate land area, land in farms, and improved land in farms for these counties are included in the state totals and also in the last column of the table, under the heading "all other counties." These counties are all in the western part of the state, where irrigation was comparatively unimportant. The group of "all other counties" comprises for 1909 and 1910, in addition to the two named, twelve in which there was some irrigation, namely, Benton, Clackamas, Coos, Curry, Lane, Lincoln, Linn, Marion, Multnomah, Polk, Tillamook, and Yam-

hill. The counties represented under the head of "all other counties" for 1899 in the Twelfth Census Report were not named, but were all in the western section of the state.

Certain enterprises extend into more than one county, and in the case of some of these the reports do not segregate the data by counties. In such cases a distribution has been made according to the best estimates possible from all the information in the possession of the bureau. It is believed that these estimates are approximately correct.

Change of boundaries.—In comparing the data secured in 1910 with those of 1900, the following changes in county boundaries should be considered: (1) The organization of Hood River County from a part of Wasco County in 1908, and (2) the annexation of a part of Union County to Baker County in 1902.

IRRIGATION—OREGON.

¹ Not reported by counties.

⁶ Not reported.

PER CENT OF LAND AREA IN FARMS, AND AVERAGE VALUE OF FARM LAND PER ACRE, IN PENNSYLVANIA, BY COUNTIES: 1910.

PER CENT OF LAND AREA IN FARMS.

[Per cent for the state, 64.8.]

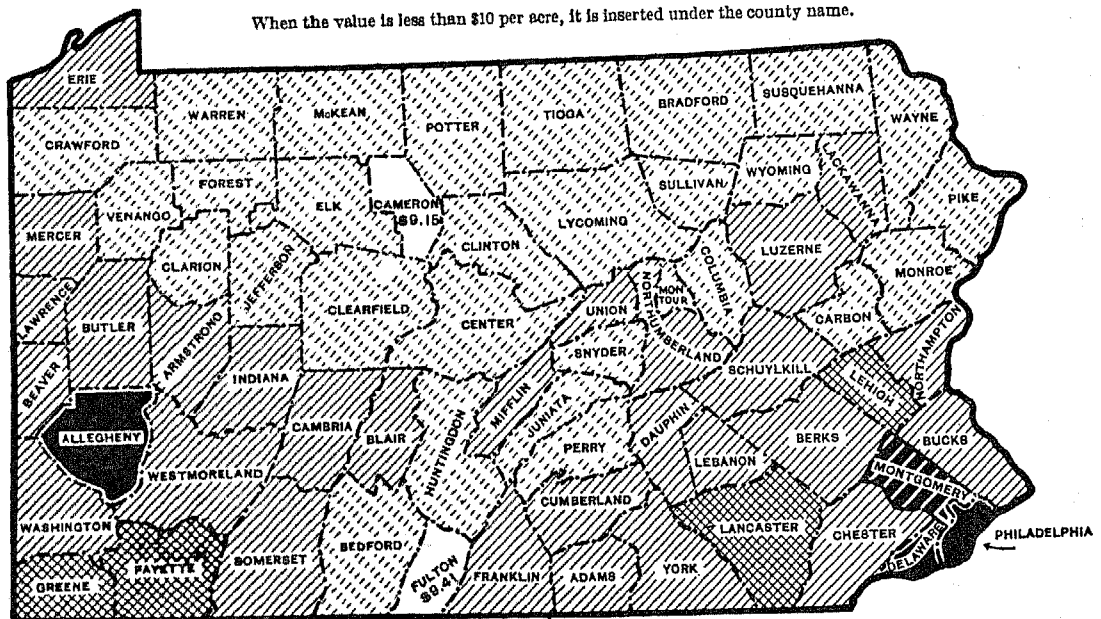

The per cent of land area in farms, when less than 20, is inserted under the county name.

AVERAGE VALUE OF FARM LAND PER ACRE.

[Average for the state, \$33.92.]

When the value is less than \$10 per acre, it is inserted under the county name.

PENNSYLVANIA.

FARMS AND FARM PROPERTY.

Pennsylvania ranks second in population and thirty-second in land area among the states and territories of continental United States. In physical features this state presents great diversity. It includes considerable areas of the Piedmont section, and a broad stretch of the great limestone valley region in the southeastern portion of the state; the entire width of the Appalachian Mountain system; a considerable portion of the Appalachian Plateau, both glaciated and unglaciated; and a small area of the glacial lake plains along Lake Erie. In altitude it ranges from sea level, in the southeastern portion, to approximately 3,000 feet in the mountain and plateau region, sinking again to about 600 feet above sea level along the Lake Erie shore. The state includes a portion of the northeastern extension of the Mississippi Basin.

The soils of southeastern Pennsylvania fall within several major groups. Along the extreme southeastern border there is a considerable variety of clays, silt loams, loams, and sandy loams derived through the weathering of the underlying crystalline rocks of that section. Adjacent to these are stony loams and loams similarly derived from the phyllites and slates. Immediately to the north and west of this area is a considerable belt of clays, clay loam, and shale loam produced through the weathering of the red sandstones and shales of the Triassic age. Associated with both the former and the latter soils are the fertile silt loams and loam of the great limestone valleys which extend through the southeastern portion of the state. The Blue Ridge Mountains also cross the border of Pennsylvania in the south central portion of the state, giving rise to other residual soils, stony loams, and loams derived from the crystalline and semicrystalline rocks of that mountain system.

The Appalachian Mountains stretch, in crescent form, from southwest to northeast through the central portion of the state, giving rise to stony loams, silt loams, sandy loams, and some clay soils within the mountains proper, and including considerable areas of fertile limestone soils in the larger valleys formed within the mountain system. The greater portion of the western part of the state is covered by somewhat similar soils derived from the weathering of the conglomerates, sandstones, shales, and thinly bedded limestones of the Appalachian Plateau. Large areas, both in northeastern and northwestern Pennsylvania, consist of soils formed through the glaciation of the Appalachian Mountains and plateau sections, where the soils are chiefly stony and shaly loams and silt loams with less extensive areas of clay.

The narrow glacial lake district along Lake Erie includes important clay, loam, sandy loam, and gravelly loam soils derived from the glaciated uplands and deposited beneath the water of a former extension of Lake Erie. It will thus be seen that the soils of Pennsylvania are extremely diverse in origin, physical characteristics, and present uses. The soils of the southeastern portion of the state are primarily devoted to the production of corn, wheat, and grass, with oats as a secondary crop. The soils of the limestone valleys are primarily corn, wheat, and grass soils, while those of the Triassic basin are slightly less valuable for these crops. The finer-textured soils of the Piedmont section are well suited to the production of general farm crops. Apples and peaches are grown with special advantage upon the more gentle slopes of the eastern ranges of the Appalachian system, while certain varieties of apples are also well suited to the soils of the Piedmont and limestone valley regions. Within the mountainous district only the valleys between the parallel ridges and the more gentle slopes are suited to agriculture. In the plateau region, the level areas upon the top of the plateau and the narrow bottoms of many streams are utilized for agriculture, while practically all of the plateau area in the southwestern counties is under cultivation because of its smoother and more gently rolling surface. In the glaciated plateau and mountain regions two varieties of surface are found, the steep sloping and rough areas not suited for agricultural purposes, and the more gently rolling areas which are usually farmed. The narrow glacial lake area in the extreme northwestern portion of the state is being rapidly developed for the culture of grapes, apples, peaches, and other fruits, together with market garden crops.

The two maps on the opposite page show, for the different counties, the proportion of the total land area which is in farms and the average value of farm land per acre. Of the state's entire land area, about two-thirds is in farms and the proportion is quite varied in the several counties, ranging from less than 20 per cent in Cameron, Elk, and Forest Counties to 96.5 per cent in Greene County. The variation in the proportion of land in farms is confined to no particular section of the state, except that in general the counties adjoining the boundaries of the state show a higher percentage of farms than do the counties in the central part of the state.

The average value of farm land per acre for the whole state is \$33.92, and in only 2 counties, Cameron and Fulton, are the average values less than \$10 per acre. In 29 contiguous counties, located mostly in the northern part of the state, the average values

AGRICULTURE—PENNSYLVANIA.

range from \$10 to \$25 per acre. Twenty-eight counties are in the \$25 to \$50 per acre class; and of these, 16 form a group lying in the eastern and southeastern part of the state, while a group of 11 lies in the western and southwestern part, and 1 county, Erie, in the extreme northwestern corner. In 4 counties, Greene and Fayette in the southwestern corner, and Lancaster and Lehigh in the southeastern portion of the state, the average value is from \$50 to \$75 per acre. The land represented as in farms in Philadelphia, Delaware, and Montgomery Counties in the southeastern part of the state, and in Allegheny County in the

southwestern part, is reported at values averaging \$795.33, \$160.85, \$109.74, and \$146.21 per acre, respectively, due primarily in each case to the proximity of a large city. It will therefore be noted that in general the more valuable agricultural land is located in the southeastern and southwestern sections of the state.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910 (April 15)	1900 (June 1)	INCREASE. ¹

Average value of all property per farm.....	\$5,715	\$4,690	\$1,025	21.9
Average value of land per acre.....	\$33.92	\$29.70	\$4.22	14.2

¹ A minus sign (-) denotes decrease.

Notwithstanding the fact that the population of Pennsylvania increased 21.6 per cent from 1900 to 1910, the number of farms decreased 2.2 per cent, the acreage of farm land 4 per cent, and the acreage of improved land 4.1 per cent, the decrease in farm acreage being greater in proportion than that in the number of farms. The average size of farms decreased 1.6 acres.

Farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), has increased in value during the decade \$201,646,000, or 19.2 per cent. This great increase was principally due to increases of \$87,759,000 in the value of buildings, of over \$55,000,000 in the value of land, and of \$58,850,000 in the value of farm equipment, including implements and machinery and live stock. Of the increase last mentioned, about two-thirds represents that in the value of live stock. In considering the increase of values in agriculture the general increase in the prices of all commodities in the last 10 years should be borne in mind.

The average value in 1900 of a farm with its equipment was \$4,690, while 10 years later it was \$5,715. The average value of land alone rose from \$29.70 per acre in 1900 to \$33.92 in 1910.

Population, number of farms, and farm acreage: 1850 to 1910.—The table following presents, for the state as a whole for each census from 1850 to 1910,

inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

CENSUS YEAR.	Population.	FARMS.		LAND IN FARMS.			Per cent of land area in farms.	Per cent of farm land improved.
		Number.	Per cent of increase. ¹	All land.		Improved land (acres).		
				Acres.	Per cent of increase. ¹			
1910.....	7,665,111	219,295	-2.2	18,586,832	-4.0	12,673,519	64.8	68.2
1900.....	6,302,115	224,248	6.0	19,371,015	5.5	13,209,183	67.6	68.2
1890.....	5,258,113	211,557	-0.9	18,364,370	-7.2	13,210,597	64.0	71.9
1880.....	4,282,891	213,642	22.7	19,791,341	10.0	13,423,007	69.0	67.3
1870.....	3,521,951	174,041	11.3	17,994,200	5.8	11,515,965	62.7	64.0
1860.....	2,906,215	156,357	22.6	17,012,140	14.0	10,463,296	59.3	61.5
1850.....	2,311,786	127,577	14,923,347	8,628,619	52.0	57.8

¹ A minus sign (-) denotes decrease.

During the 60 years covered by the foregoing table the population of the state increased continuously from 2,311,786 in 1850 to 7,665,111 in 1910, or more than trebled.

Between 1850 and 1880 the number of farms increased continuously, but since the latter year there has been some fluctuation. Although there has been a net increase in the number of farms during the last

30 years, yet the last decade shows a decrease of 4,953, or 2.2 per cent.

The land area of Pennsylvania is approximately 28,692,480 acres. Of this area, 18,586,832 acres, or 64.8 per cent, are included in farms. Of the farm acreage, 12,673,519 acres, or 68.2 per cent, are reported as improved land, representing 44.2 per cent of the total land area of the state. The total acreage of farm land decreased 784,183 acres, or 4 per cent, during the last decade, and the acreage of improved land decreased 535,664 acres, or 4.1 per cent. As the acreage of improved land and the total acreage of farm land showed practically the same relative decreases between 1900 and 1910, the percentage of improved land has remained stationary during the decade.

For the longer period covered by the table a gradual increase is shown between 1850 and 1880 in the total farm acreage and in the acreage of improved land. The proportion of the total land area of the state which was occupied by farms rose during this period from 52 per cent in 1850 to 69 per cent in 1880, while the percentage of farm land which was improved increased from 57.8 per cent to 67.8 per cent. In the year 1880 the percentage of land area in farms reached its maximum. Since that year the total acreage has fluctuated slightly, and on the whole decreased 1,204,509, or 6.1 per cent, while the improved acreage has decreased very slowly but continuously to the extent of 749,488, or 5.6 per cent. Thus the proportion of improved land has varied but little during the last 30 years.

Values of farm property: 1850 to 1910.—The agricultural changes in Pennsylvania since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

CENSUS YEAR.	FARM PROPERTY.							
	Total.		Land and buildings.		Implements and machinery.		Domestic animals, poultry, and bees.	
	Value.	Per cent of increase. ¹	Value.	Per cent of increase. ¹	Value.	Per cent of increase.	Value.	Per cent of increase. ¹
1910.....	\$1,253,274,862	19.2	\$1,041,068,755	15.9	\$70,726,055	38.9	\$141,480,052	38.1
1900.....	1,051,629,173	-1.1	898,272,750	-2.6	50,917,240	30.4	102,439,133	0.8
1890.....	1,062,939,846	-3.0	922,240,233	-5.5	39,040,855	10.1	101,652,758	-20.7
1880.....	1,095,405,324	14.6	975,089,410	16.9	35,473,037	24.4	84,242,877	-8.9
1870 ²	955,829,482	26.7	834,785,265	26.1	28,520,537	27.1	92,517,600	32.8
1860.....	754,166,275	62.5	662,050,707	62.3	22,442,842	52.4	69,672,726	67.9
1850.....	464,098,693		407,876,099		14,722,541		41,500,053	

¹ A minus sign (-) denotes decrease.

² Computed gold values, being 80 per cent of the currency values reported.

The total value of farm property increased steadily from 1850 to 1880, rising from \$464,099,000 to \$1,095,405,000, or more than 135 per cent. During the next 20 years there was a loss of nearly \$44,000,000, but from 1900 to 1910 there was a gain of \$201,646,000, or 19.2 per cent. The value of all property in 1910 was

14.4 per cent greater than in 1880, and about one and three-fourths times greater than in 1850.

In 1850 the value of land and buildings represented almost 88 per cent of the value of all farm property. This proportion changed very little during the next 30 years, being 89.1 per cent in 1880. Since 1880, however, the proportion has shown a constant decrease until at the present census it stands at 83.1 per cent. These proportions reflect the increasing importance of live stock and implements and machinery in the farming operations of the state. Moreover, the relative values of live stock as compared to implements and machinery have undergone a considerable change. For the early decades covered by the preceding table live stock was valued at about three times as much as implements and machinery; during the latter decades, with some fluctuations, the proportion has fallen until in 1910 live stock is valued at but twice as much as implements and machinery.

In absolute value, land and buildings shows important increases for each decade, except the two between 1880 and 1900, for which small decreases are recorded. Implements and machinery shows increases in value throughout, the rate of increase diminishing until 1890, since which time the rate has increased. The rate of increase in the value of live stock, while important and pronounced for the period, has shown considerable fluctuation, there being in fact a decrease during one decade, 1870 to 1880, and during one other, 1890 to 1900, almost no change.

Average acreage and values per farm: 1850 to 1910.—The changes which have taken place during the past 60 years in the average acreage of Pennsylvania farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

CENSUS YEAR.	Average acres per farm.	AVERAGE VALUE PER FARM. ¹				Average value of land and buildings per acre.
		All farm property.	Land and buildings.	Implements and machinery.	Domestic animals, poultry, and bees.	
1910.....	84.8	\$5,715	\$4,747	\$323	\$645	\$56.01
1900.....	86.4	4,690	4,006	227	457	46.37
1890.....	86.8	5,024	4,359	185	480	50.22
1880.....	92.7	5,130	4,569	160	395	49.30
1870 ²	103.4	5,492	4,786	164	532	46.39
1860.....	108.8	4,823	4,234	144	446	38.92
1850.....	116.9	3,638	3,197	115	325	27.33

¹ Averages are based on "all farms" in state.

² Computed gold values, being 80 per cent of the currency values reported.

In average size the Pennsylvania farm has decreased continuously throughout the 60 years since 1850. From 1850 to 1870 the average value of farm property increased \$1,854 per farm, while during the following 30 years it decreased \$802. The last 10 years, however, show an increase of \$1,025 per farm. Of the average value reported for 1910, \$4,747 represents the value of land and buildings, \$645 that of live stock, and \$323 that of implements and machinery. The

average value of land and buildings has increased \$9.64 per acre during the last decade, and the slight decrease in the decade immediately preceding marks the only exception to the otherwise continuous increase in average value since 1850.

Farm tenure: 1880 to 1910.—The following table shows the distribution of the farms of the state according to character of tenure at each census since 1880:

TENURE.	1910	1900	1890	1880
	Number of all farms.....	219,295	224,248	211,557
Farms operated by owners and managers	168,190	165,982	162,219	168,229
Farms consisting of owned land only.....	154,088	155,205	(1)	(1)
Farms consisting of owned and hired land.....	10,141	7,074	(1)	(1)
Farms operated by managers.....	3,961	3,703	(1)	(1)
Farms operated by tenants	51,105	58,266	49,338	45,322
Share tenants.....	27,951	34,529	31,298	28,273
Share-cash tenants ²	1,042			
Cash tenants.....	18,940	23,737	18,040	17,049
Tenure not specified ³	3,172			
Per cent of farms operated by—				
Owners and managers.....	76.7	74.0	76.7	78.8
Tenants.....	23.3	26.0	23.3	21.2
Share and share-cash.....	13.2	15.4	14.8	13.2
Cash and nonspecified.....	10.1	10.6	8.5	8.0

¹ Not reported separately.

² Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1880.

³ Prior to 1910 nonspecified tenants were included with cash tenants.

The number of all farms, and therefore of all farm operators, is 219,295. Of the operators, 164,229 are owners, 3,961 managers, and 51,105 tenants. Of the owners, 154,088 operate exclusively land owned by them, while 10,141 operate land which they rent in addition to that which they own. The 51,105 tenants are further classified according to the character of their tenancy; thus 27,951 are share tenants, 1,042 share-cash tenants, 18,940 cash tenants, and for 3,172 no report relative to character of tenure was secured.

The number of tenants constitutes 23.3 per cent of the total number of farm operators. This percentage is but a little above that of 1880, when 21.2 per cent of all farms were in the hands of tenants, and is exactly the same as that of 1890. The greatest absolute and relative number of tenants reported for any census year was for 1900, when 58,266, or 26 per cent of all farmers, were in this class. During the last 10 years the number has decreased 7,161, or 12.3 per cent. This decrease in the proportion of tenants in Pennsylvania corresponds with a similar movement in each of the North Atlantic states, but is in contrast to an increase, both absolute and relative, for the country as a whole.

The tenants who rent in whole or in part for a share of the products decreased 5,536 during the last decade, while those who rent for cash, including those for whom the form of tenure was unreported, decreased 1,625. In the 20 years prior to 1900 the numbers of

both classes continuously increased. The number of cash tenants has constituted a larger proportion of all tenants in 1900 and 1910 than in 1880 and 1890.

The following table shows the acreage, improved acreage, and the value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED BY—	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total	18,586,832	19,371,015	12,673,519	13,209,183	\$1,041,068,755	\$898,272,750
Owners.....	12,895,522	13,051,723	8,576,201	8,705,340	663,390,950	557,545,770
Managers.....	648,268	539,046	371,954	334,074	61,949,303	40,358,770
Tenants.....	5,043,042	5,750,240	3,725,274	4,169,763	315,728,496	300,368,210

The following table shows the per cent distribution by tenure groups of the items in the preceding table, and also of the number of farms:

FARMS OPERATED BY—	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Owners.....	74.9	72.4	69.4	67.5	67.7	65.9	63.7	62.1
Managers.....	1.8	1.7	3.5	2.8	2.9	2.5	6.0	4.5
Tenants.....	23.3	26.0	27.1	29.7	29.4	31.6	30.3	33.4

It will be seen that, in 1910, 69.4 per cent of all land in farms was in farms operated by their owners (including part owners), 3.5 per cent in farms operated by managers, and 27.1 per cent in farms operated by tenants, the percentage for owners and for managers being higher and that for tenants lower than in 1900.

As shown by the next table, the average size of farms operated by managers in 1910 (163.7 acres) was very much greater than that of farms operated by tenants (98.7 acres), which was in turn larger than that of farms operated by owners (78.5 acres). The average size of farms operated by managers increased between 1900 and 1910, while that of farms operated by owners decreased, and that of tenant farms remained the same. In 1910 the percentage of farm land improved was highest for farms operated by tenants and lowest for those operated by managers.

FARMS OPERATED BY—	AVERAGE ACRES PER FARM.				PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	All land.		Improved land.		PER CENT OF FARM LAND IMPROVED.		Per farm.		Per acre.	
	1910	1900	1910	1900	1910	1900	1910	1900	1910	1900
Total	84.8	86.4	57.8	58.9	68.2	68.2	\$4,747	\$4,006	\$56.01	\$46.37
Owners.....	78.5	80.6	52.2	53.6	66.5	66.5	4,039	3,436	51.44	42.62
Managers.....	163.7	145.8	93.9	90.2	57.4	62.0	15,690	10,899	95.50	74.87
Tenants.....	98.7	98.7	72.9	71.6	73.9	72.5	6,178	5,155	62.61	52.24

Farm mortgages: 1890 to 1910.—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

CLASS.	OWNED FARMS. ¹		OWNED FARM HOMES.		OWNED FARM HOMES. ²	
	1910		1900		1890	
	Number.	Per cent. ³	Number.	Per cent. ³	Number.	Per cent.
Total	164,229		164,092		156,928	
Free from mortgage.....	112,156	68.9	107,612	67.7	113,908	72.6
Mortgaged.....	50,699	31.1	51,271	32.3	43,020	27.4
Unknown.....	1,374		5,309			

¹ Includes all farms owned in whole or in part by the operator.

² The 2,631 "owned farm homes" for which no reports were secured were distributed between "free from mortgage" and "mortgaged" in 1890.

³ Per cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 164,229. Of this number, 112,156 were reported as free from mortgage; 50,699 were reported as mortgaged; and for 1,374 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 31.1 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is higher than it was in 1890, and only slightly lower than in 1900. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the numbers reported at the later censuses because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that the number of mortgaged farms increased between 1890 and 1900, but decreased during the last decade, while the number free from mortgage decreased between 1890 and 1900, but increased during the last decade.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of

the 50,699 farms reported as mortgaged, 47,411 are wholly owned by the farmers, and for 44,999 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included under 1910 in the next table; which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARMS OR FARM HOMES MORTGAGED.		INCREASE. ¹	
	1910 ²	1890 ³	Amount.	Per cent.
Number.....	44,999	43,020		
Value—Land and buildings.....	\$176,168,359	\$181,609,615		
Amount of mortgage debt.....	\$61,539,433	\$73,822,978		
Per cent of debt to value.....	34.9	40.7		
Average value per farm.....	\$3,915	\$4,222	-\$307	-7.3
Average debt per farm.....	\$1,368	\$1,716	-\$348	-20.3
Average equity per farm.....	\$2,547	\$2,506	\$41	1.6

¹ A minus sign (-) denotes decrease.

² Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.

³ Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms decreased in the last 20 years from \$1,716 to \$1,368, or 20.3 per cent, while the average value of such farms decreased from \$4,222 to \$3,915, or 7.3 per cent. Thus the owner's equity increased only from \$2,506 to \$2,547, or 1.6 per cent. As a result of the greater relative decrease in farm debt than in farm value, the mortgage indebtedness, which was 40.7 per cent of the value of the farm in 1890, has decreased to 34.9 per cent of this value in 1910.

Farms by size groups: 1910 and 1900.—Three-tenths of the farms in Pennsylvania are in the "50 to 99 acres" group, while more than one-fourth are in the "100 to 174 acres" group. Thus more than one-half of all the farms in the state range from 50 to 174 acres in size. The smaller farms of less than 50 acres represent slightly more than one-third of the total, and the larger farms of 175 or more acres less than one-tenth. A study of the distribution of farms by size groups discloses the fact that the only increases between 1900 and 1910 occurred in the two groups which include farms of from 3 to 19 acres, the number in the "3 to 9 acres" group increasing 4,711, or 32.7 per cent, and that in the "10 to 19 acres" group increasing 674, or 3.8 per cent. The number of places "under 3 acres" reported as farms is little more than one-third as great as 10 years ago. This decrease may be due to a

different interpretation by the enumerators as to what constitutes a small farm or may represent an actual decrease in that type of farm. The number of farms in the "1,000 acres and over" group has decreased 71, or 29.8 per cent. During the last decade each group has varied little in the percentage which it represents of the total of all farms.

The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP.	NUMBER OF FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1910	1900	Number.	Percent.	1910	1900
Total.....	219,295	224,248	-4,953	-2.2	100.0	100.0
Under 2 acres.....	972	2,737	-1,765	-64.5	0.4	1.2
3 to 9 acres.....	10,130	14,419	-4,289	-32.7	8.7	6.4
10 to 19 acres.....	18,556	17,882	674	3.8	8.5	8.0
20 to 49 acres.....	30,721	41,575	-11,854	-4.5	18.1	18.5
50 to 99 acres.....	65,487	69,670	-3,983	-5.7	30.0	31.1

¹ A minus sign (-) denotes decrease.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 38,658), and also the farms of between 175 and 499 acres (numbering 18,912):

SIZE GROUP (ACRES).	ALL LAND IN FARMS (ACRES).		IMPROVED LAND IN FARMS (ACRES).		VALUE OF LAND AND BUILDINGS.	
	1910	1900	1910	1900	1910	1900
Total.....	18,586,832	19,371,015	12,673,519	13,209,183	\$1,041,068,755	\$988,272,750
Under 20.....	366,449	339,786	1,612,671	295,399	96,008,746	71,477,740

1,000 and over.....	366,509	461,773	44,300	51,348	7,905,152	5,791,650

The following table shows the per cent distribution, by size groups, of the items presented in the preceding table, and also of the number of farms:

SIZE GROUP.	PER CENT OF TOTAL.							
	Number of farms.		All land in farms.		Improved land in farms.		Value of land and buildings	
	1910	1900	1910	1900	1910	1900	1910	1900
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Under 20 acres.....	17.6	15.6	2.0	1.8	2.5	2.2	9.2	8.0
20 to 49 acres.....	18.1	18.5	7.1	7.2	8.1	8.2	11.9	11.8
50 to 99 acres.....	30.0	31.1	25.2	25.4	27.7	28.1	27.1	27.4
100 to 174 acres.....	25.3	25.8	37.6	37.7	39.4	39.4	32.5	33.8
175 to 499 acres.....	8.6	8.6	24.0	23.4	20.8	20.6	17.1	17.0
500 to 999 acres.....	0.3	0.3	2.1	2.2	1.2	1.1	1.4	1.4
1,000 acres and over.....	0.1	0.1	2.0	2.4	0.3	0.4	0.5	0.6

Of the total farm acreage of the state in 1910, 37.6 per cent was in farms of 100 to 174 acres, and 25.2 per cent and 24 per cent in farms of 50 to 99 acres and 175 to 499 acres, respectively, these three being from

the standpoint of aggregate acreage the most important size groups. There were no marked changes between 1900 and 1910 in the per cent distribution of farm acreage by size groups.

As shown by the table below, the percentage of farm land improved diminishes as the average size of the farms increases. For this reason and also because buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land also diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group.

SIZE GROUP.	PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.			
	1910	1900	Per farm.		Per acre.	
			1910	1900	1910	1900
Total.....	68.2	68.2	\$4,747	\$4,008	\$56.01	\$46.37
Under 20 acres.....	85.3	86.9	2,485	2,040	262.17	210.36
20 to 49 acres.....	77.5	78.1	3,132	2,555	94.00	76.29
50 to 99 acres.....	75.1	75.5	4,291	3,535	60.21	50.08
100 to 174 acres.....	71.4	71.2	6,094	5,246	48.37	41.49
175 to 499 acres.....	59.2	60.0	9,431	7,933	40.03	33.70
500 to 999 acres.....	36.8	33.4	22,379	18,414	35.50	29.93
1,000 acres and over.....	12.1	11.1	47,336	24,335	21.57	12.54

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910:

COLOR AND NATIVITY.	FARM OPERATORS.							
	Total.		Owners.	Tenants.	Managers.	Per cent of total.		
	Number.	Per cent distribution.				Owners.	Tenants.	Managers.
Total.....	219,295	100.0	164,229	51,105	3,961	74.9	23.3	1.6
Native white.....	204,917	93.4	152,743	48,504	3,670	74.5	23.7	1.8
Foreign-born white.....	13,832	6.3	11,145	2,427	200	80.6	17.5	1.9
Negro and other nonwhite.....	546	0.2	341	174	31	62.5	31.9	5.7

Of the Pennsylvania farm operators, 93.4 per cent were native whites and 6.3 per cent foreign-born whites. Only 546, or two-tenths of 1 per cent, were nonwhites; 543 being negroes, and 3 Indians. Of the native white farmers 23.7 per cent were tenants, as compared with 17.5 per cent of the foreign-born whites.

Of the 13,832 foreign-born white farmers in Pennsylvania in 1910, 5,048 were born in Germany; 1,754 in Ireland; 1,400 in England; 1,369 in Sweden; 1,068 in Austria; 411 in Italy; 402 in Russia; 380 in Scotland; 335 in Switzerland; 319 in Hungary; 318 in Canada; 248 in France; and 230 in Wales. Other European countries were represented by 519 farmers, and non-European countries, other than Canada, by 31.

DOMESTIC ANIMALS, POULTRY, AND BEES.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this bulletin, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

The following table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

AGE AND SEX GROUP.	FARMS REPORTING.		ANIMALS.		
	Number.	Per cent of all farms.	Number.	Value.	Average value.
Total.....	207,384	94.6	\$133,327,286
Cattle	192,948	88.0	1,586,619	47,229,894	\$29.77
Dairy cows (cows and heifers kept for milk, born before Jan. 1, 1909).....	191,174	87.2	933,640	36,106,349	38.67
Other cows (cows and heifers not kept for milk, born before Jan. 1, 1909).....	41,984	19.1	99,220	2,284,686	23.03
Heifers born in 1909.....	70,706	35.0	167,093	2,548,604	15.20
Calves born after Jan. 1, 1910.....	93,850	42.8	235,656	1,673,291	7.10
Steers and bulls born in 1909.....	41,479	18.9	76,816	1,318,222	17.16
Steers and bulls born be- fore Jan. 1, 1909.....	28,281	12.9	73,494	3,298,742	44.88
Horses	184,363	84.1	549,756	68,055,489	123.79
Mares, stallions, and geld- ings born before Jan. 1, 1909.....	183,819	83.8	511,812	65,623,086	128.22
Colts born in 1909.....	24,288	11.1	30,981	2,182,754	70.45
Colts born after Jan. 1, 1910.....	6,111	2.8	6,963	249,649	35.85
Mules	17,896	8.2	44,323	6,424,039	144.94
Mules born before Jan. 1, 1909.....	17,515	8.0	42,923	6,309,197	146.99
Mule colts born in 1909.....	645	0.3	1,277	109,652	85.87
Mule colts born after Jan. 1, 1910.....	115	0.1	123	5,190	42.20
Asses and burros	210	0.1	348	43,438	124.82
Swine	142,655	65.1	977,837	7,624,494	7.80
Hogs and pigs born before Jan. 1, 1910.....	129,962	59.3	625,517	6,396,310	10.23
Pigs born after Jan. 1, 1910.....	52,322	23.9	352,120	1,228,184	3.49
Sheep	25,436	11.6	883,074	3,934,144	4.46
Ewes born before Jan. 1, 1910.....	24,632	11.3	473,354	2,553,803	5.40
Rams and wethers born before Jan. 1, 1910.....	10,229	4.7	164,187	814,771	4.96
Lambs born after Jan. 1, 1910.....	19,825	9.0	245,533	565,570	2.30
Goats	945	0.4	3,639	15,788	4.46

Of the total number of farms enumerated, 207,384, or 94.6 per cent, report domestic animals of some

kind, the number without any domestic animals being 11,911.

Of all the farms in the state, 88 per cent report cattle, 87.2 per cent reporting "dairy cows" and only 19.1 per cent "other cows." The total number of cows increased somewhat during the decade, and the average value of dairy cows increased from \$30.88 to \$38.67, while that of other cows decreased from \$25.02 to \$23.03. The average number of dairy cows per farm reporting is nearly 5. The census of 1900 was taken as of June 1, after all the spring calves were born, while that of 1910 was taken as of April 15, before the close of the calving season and when the calves on hand were on the average younger than at the enumeration of 1900. As a result, the calves enumerated were fewer in number and of slightly lower average value in 1910 than in 1900, the number decreasing from 421,323 to 235,656 and the average value from \$7.20 to \$7.10.

Horses are reported by 84.1 per cent of all the farmers in the state, but only 11.1 per cent report colts born in 1909, and 2.8 per cent report spring colts. The average value of mature horses, \$128.22, is over one and three-fourths that reported in 1900. About one farmer in every twelve reports mules. The average values of mules are somewhat higher than those of horses of the corresponding age groups.

Sheep and lambs are reported from 25,436 farms, or 11.6 per cent of all the farms in the state, whereas in 1900, 19.6 per cent of all farms reported sheep. Of the farms reporting sheep and lambs, 77.9 per cent report spring lambs, the number of the latter being 51.9 per cent of the number of ewes. This comparatively small proportion is doubtless due to the early date of enumeration. Ewes are reported on all but 754 of the farms reporting sheep, and for the farms reporting the average is over 19 per farm. Those reporting rams and wethers show an average of about 16 per farm. The average flock in the state, excluding spring lambs, is 25 sheep, while in 1900 it was 22.

Of all farms, 65.1 per cent report swine and show an average of nearly 7 per farm reporting. On account of the early date of enumeration, only 23.9 per cent report spring pigs. The average value of swine classed as "hogs and pigs born before January 1, 1910," is \$10.23.

Poultry on farms: 1910 and 1900.—The increase in the number of fowls on Pennsylvania farms during the last decade amounts to 15.2 per cent, while the value increased from \$4,483,000 to \$7,674,000, or 71.2 per cent. The number of farms reporting poultry decreased 2.2 per cent; thus the average number of fowls per farm reporting increased from 53 to 62. The increase in the number of chickens, which are by far the most important class of fowls in the state, was sufficient to offset a decrease in the number of turkeys, ducks, and geese. The value of poultry and number of farms

reporting were obtained in 1900 for the total of all fowls only, and not for each kind, as in 1910.

The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value, and the number of farms reporting each kind in 1910:

KIND.	1910 (April 15)				1900 (June 1)
	Farms reporting.		Number of fowls.	Value.	
	Number.	Percent of all farms.			
Total.....	205,158	93.6	12,728,341	\$7,674,387	11,044,981
Chickens.....	285,036	93.5	11,895,903	7,020,303	10,553,106
Turkeys.....	40,126	18.3	136,942	312,571	259,824
Ducks.....	23,502	10.7	163,777	114,282	171,271
Geese.....	13,400	6.1	46,318	66,509	60,780
Guinea fowls.....	24,025	11.0	111,715	48,208	(1)
Pigeons.....	16,161	7.4	373,304	111,365	(2)
All other ³	70	(4)	382	1,149	(3)

¹ Included with chickens.

² Not reported.

³ 62 farms report 158 peafowls, valued at \$504; 6 farms report 221 pheasants, valued at \$630; and 2 farms report 3 wild geese, valued at \$15.

⁴ Less than one-tenth of 1 per cent.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has decreased from 28,962 in 1900 to 22,297 in 1910, or 23 per cent. The number of colonies of bees decreased from 161,670 to 124,815, or 22.8 per cent, and their value decreased from \$531,578 to \$478,179, or 10 per cent. The average value of bees per farm reporting was \$18.35 in 1900 and \$21.45 in 1910. About ten farms in every one hundred report bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the next table age groups are omitted for the sake of brevity, but it may be noted that in cities and villages a comparatively small proportion of the animals of each class are in the younger age groups.

LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The number of farms reporting dairy cows on April 15, 1910, was 191,174, but only 177,662 reported dairy products in 1909. That there should be this difference is

KIND.	Number of inclosures reporting.	ANIMALS.		
		Number.	Value.	Average value.
Total.....	153,354		\$40,658,017	
All cattle.....	57,451	91,699	3,220,529	\$35.12
Dairy cows.....	56,055	71,879	2,966,376	41.27
Horses.....	95,300	227,350	33,576,752	147.69
Mules.....	3,198	20,118	2,923,933	145.34
Asses and burros.....	120	188	11,812	62.83
Swine.....	34,187	101,241	873,068	8.62
Sheep.....	250	4,577	26,467	5.78
Goats.....	2,515	4,298	25,456	5.92

As would be expected, horses are by far the most important class of domestic animals not on farms, both in number and in value; cattle, about three-fourths of which are dairy cows, rank next in value, followed closely by mules, while swine rank second in number.

Domestic animals on farms and not on farms: 1910.—The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

KIND.	DOMESTIC ANIMALS.					
	Total.		On farms.		Not on farms.	
	Number.	Value.	Number.	Value.	Number.	Value.
Total.....		\$173,985,303		\$133,327,286		\$40,658,017
All cattle.....	1,678,218	50,450,423	1,585,519	47,229,894	91,699	3,220,529
Dairy cows.....	1,005,519	39,072,725	933,640	36,106,349	71,879	2,966,376
Horses.....	777,100	101,632,241	649,758	68,055,489	227,350	33,576,752
Mules.....	64,441	9,347,972	44,323	6,424,039	20,118	2,923,933
Asses and burros.....	536	55,250	348	43,438	188	11,812
Swine.....	1,078,878	8,497,502	977,637	7,624,404	101,241	873,068
Sheep.....	887,651	3,960,611	883,074	3,934,144	4,577	26,467
Goats.....	7,837	41,244	3,539	15,788	4,298	25,456

The total value of all domestic animals in the state in 1910 was \$173,985,000, of which the value of animals not on farms constituted 23.4 per cent.

The number of horses not on farms was nearly one-half as great as the number on farms, but in the case of other classes of animals the proportion was much lower.

not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 156,000 (considerably less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 762,000. The amount of milk reported was 336,209,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 441 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably

deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FARMS REPORTING.		Number or quantity.	Unit.	VALUE.	
	Number.	Per cent of all farms.			Total.	Average per unit.
Dairy cows on farms April 15, 1910.....	191,174	87.2	933,640	Head
On farms reporting dairy products in 1909.....	177,662	81.0	891,186	Head
On farms reporting milk produced in 1909.....	155,765	71.0	762,495	Head
Specified dairy products, 1909:						
Milk reported.....			336,208,572	Gals
Butter made.....	137,104	62.5	61,158,115	Lbs	\$15,668,223	\$0.26
Cheese made.....	1,533	0.7	1,442,676	Lbs	152,000	0.11
Milk sold.....	50,204	22.9	109,420,361	Gals	24,113,790	0.14
Cream sold.....	2,687	1.2	1,160,037	Gals	733,078	0.63
Butter fat sold.....	7,075	3.2	7,524,454	Lbs	2,141,711	0.28
Butter sold.....	112,420	51.3	43,195,105	Lbs	11,228,914	0.26
Cheese sold.....	1,355	0.6	1,375,919	Lbs	146,389	0.11
Total receipts from sales, 1909.....					38,363,882
Total value of milk, cream, and butter fat sold and butter and cheese made, 1909.....					42,808,802
Specified dairy products, 1899:						
Butter made.....	159,857	71.3	74,221,085	Lbs
Cheese made.....	1,119	0.5	857,187	Lbs
Butter sold.....			51,309,833	Lbs	9,466,575	0.18
Cheese sold.....			812,528	Lbs	62,640	0.08

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk, cream, and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$42,809,000, which may be defined as the total value of dairy products exclusive of milk and cream used on the farm producing.

About one-half of the milk reported as produced in Pennsylvania in 1909 was sold as such. A comparatively large quantity of milk and cream was sold on the butter fat basis. The butter made on farms in 1909 was valued at \$15,668,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material decrease between 1899 and 1909 in the amount of butter made, and a considerable increase in the production of cheese.

Wool: 1909 and 1899.—The next table gives statistics as to the production of wool on farms, the figures being partly based on estimates:¹

	Number of farms reporting.	Sheep of shearing age.	WOOL PRODUCED.		
			Fleeces (number).	Weight (pounds).	Value.
Sheep of shearing age on farms April 15, 1910.....	25,202	637,541
Wool produced, as reported, 1909.....	21,477	610,798	3,869,977	\$1,201,887
On farms reporting sheep April 15, 1910.....	19,595	558,044	577,529	3,667,722	1,143,089
On other farms.....	1,882	33,269	202,255	58,466
Total production of wool (partly estimated):					
1909.....			659,802	4,190,213	1,305,929
1899.....			1,002,259	6,732,226	1,881,689
Decrease, 1899 to 1909.....			342,457	2,542,013	75,760
Per cent of decrease.....			34.2	37.8	5.5

The total number of sheep of shearing age in Pennsylvania on April 15, 1910, was 638,000, representing a decrease of 33.6 per cent as compared with the number on June 1, 1900 (959,000). The approximate production of wool during 1909 was 660,000 fleeces, weighing 4,190,000 pounds, and valued at \$1,306,000. Of these totals about 7 per cent represents estimates. The number of fleeces produced in 1909 was 34.2 per cent less than in 1899. The average weight per fleece in 1909 was 6.4 pounds, as compared with 6.7 pounds in 1899, and the average value per pound was 31 cents, as compared with 21 cents in 1899.

Goat hair and mohair: 1909 and 1899.—Although 945 farmers reported 3,539 goats and kids on their farms April 15, 1910, only 126 reported the production of goat hair or mohair during 1909. These farmers reported 1,017 fleeces, weighing 3,198 pounds and valued at \$1,036. Although the production is still unimportant, some increase is shown over that in 1899. Many farmers who have goats do not produce goat hair or mohair, but it is believed that the report is somewhat short of the actual production.

Poultry products: 1909 and 1899.—The total number of fowls on Pennsylvania farms on April 15, 1910, was 12,728,000. Of the 205,158 farms reporting fowls, 15,872 did not report any eggs produced in 1909 and 18,279 did not report any poultry raised in 1909. The

¹ Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 5,607 farmers who reported the possession of 79,497 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

production of eggs actually reported for the year 1909 was 70,903,000 dozens, valued at \$15,658,000. According to the Twelfth Census reports, the production of eggs in 1899 was 67,038,000 dozens, the value being \$9,081,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 74,730,000 dozens, valued at \$16,503,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 17,485,000 fowls, valued at \$9,278,000.

The statement below gives data relative to the production and sale of eggs and poultry.

	Number of farms reporting.	Number of fowls on hand.	PRODUCT.	
			Quantity.	Value.
Fowls on farms April 15, 1910.....	205,158	12,728,341		
On farms reporting eggs produced in 1909.....	189,286	12,119,149		
On other farms.....	15,872	609,192

1899.....			7,151,243	2,126,643
Increase, 1899 to 1909.....				29.7
Per cent of increase.....				29.7
Fowls sold, as reported, 1909.....	147,018		8,046,401	4,631,848

Honey and wax: 1909.—Although, as noted elsewhere, 22,297 farms reported 124,815 colonies of bees on hand April 15, 1910, 8,457 of these farms, with 23,456 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 1,840,360 pounds of honey, valued at \$256,428, and 21,823 pounds of wax, valued at \$6,376; the true totals are doubtless somewhat above these figures.

Summary: 1909 and 1899.—The next table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The following statement presents statistics relating to the sale and slaughter of domestic animals by Pennsylvania farmers during the year 1909, with certain items for 1899:

	FARMS REPORTING.		Number of animals.	VALUE.	
	Number.	Per cent of all farms.		Total.	Average.
1909—All domestic animals:					
Sold.....				\$29,592,251	
Slaughtered.....				15,712,856	
Calves:					
Sold.....	105,371	48.1	469,663	3,007,022	\$7.68
Slaughtered.....	14,398	6.0	68,936	547,121	7.94
Other cattle:					
Sold.....	80,961	36.9	368,687	12,557,677	34.06
Slaughtered.....	44,877	20.5	88,505	2,428,784	27.44

1899—All domestic animals:					
Sold.....				15,494,178	
Slaughtered.....				11,027,980	

¹ Less than one-tenth of 1 per cent.

² Schedules called for receipts from sales of animals raised on the farms reporting.

The total value of domestic animals sold during 1909 was \$29,592,000 and that of animals slaughtered on farms \$15,713,000, making an aggregate of \$45,305,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented somewhat over one-half of the total value of animals sold.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the total value of those slaughtered during 1899, which amounted, respectively, to \$15,494,000 and \$11,628,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

CROPS.

changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions; and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

¹ A minus sign (-) denotes decrease.

² Less than one-tenth of 1 per cent.

³ Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The total value of crops in 1909 was \$166,740,000. Of this amount, 88.7 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 7,826,562, representing 61.8 per cent of the total improved land in farms (12,673,519 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

The general character of Pennsylvania agriculture is indicated by the fact that 42.2 per cent of the total value of crops in 1909 was contributed by cereals, 27.4 per cent by hay and forage, and 13.2 per cent by potatoes and other vegetables. The remainder, representing in value about 17 per cent of the total, consisted mostly of fruits and nuts and of forest products.

The total value of crops in 1909 was 31.3 per cent greater than that in 1899. This increase was clearly due to higher prices. There was a decrease of 6.4 per cent in the total acreage of crops for which acreage was reported, this being largely due to decreases in the acreage of cereals and of hay and forage; the acreage of potatoes and other vegetables increased during the decade.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The leading crops of the state, in the order of their importance as judged by value, are hay and forage, \$45,624,000; corn, \$27,331,000; wheat, \$22,921,000; oats, \$14,422,000; potatoes, \$11,974,000; tobacco, \$3,926,000; buckwheat, \$2,896,000; and rye, \$2,674,000. It should be noted, however, that several crops, statistics for which are shown elsewhere, are more important than tobacco, buckwheat, or rye.

In total acreage and value the cereals exceed hay and forage, having slightly less than one and one-half times the acreage of the entire hay and forage crop, and showing more than one and one-half times its value.

The following table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, tobacco, and sundry minor crops:

CROP.	Farms reporting.	Acres harvested.	QUANTITY.		Value.
			Amount.	Unit.

Root forage.....	266	199	1,683	Tons.	14,736
Potatoes.....	193,749	262,013	21,740,611	Bu....	11,973,843
Sweet potatoes and yams.....	10,859	1,306	128,770	Bu....	104,434
Tobacco.....	11,666	41,742	46,164,800	Lbs..	3,926,116
Sundry minor crops, total ⁵		114			21,651
Broom corn.....	727	108	45,582	Lbs..	5,253
Ginseng.....	32	(⁶)			15,201

¹ Includes small amount of peanuts. ² Less than 1 acre.

³ Includes small amount of other tame grass seeds.

⁴ The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage, flowers and plants, etc.

⁵ Includes small amounts of hemp, hops, and willows.

⁶ Reported in small fractions.

Among the cereals, corn ranks first, representing about one-third of the total acreage and two-fifths of the total value of all cereals. Wheat ranks second in acreage and value, being in acreage slightly below corn, and in value about five-sixths as great. Oats stand a little below wheat in acreage and are reported at about three-fifths as great a value. Buckwheat and rye rank fourth and fifth, respectively, in both acreage and value.

Of hay and forage the combined crops of "timothy alone" and "timothy and clover mixed" constitute in both acreage and value about nine-tenths of the entire crop. The remaining tenth is made up principally of "other tame or cultivated grasses," "clover alone," and "coarse forage."

Of the sundry crops potatoes and tobacco are the most important. Although potatoes had in 1909 an acreage only slightly less than rye, the value of the crop was more than four times as great; while tobacco, with an acreage little more than one-seventh that of rye, shows a value almost one and one-half times as great.

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

CROP YEAR.	ACRES HARVESTED.					
	Corn.	Oats.	Wheat.	Buckwheat.	Rye.	Hay and forage.
1909.....	1,380,671	1,144,248	1,225,558	292,728	272,560	3,088,105
1899.....	1,480,833	1,173,847	1,514,043	249,840	310,048	3,269,441
1889.....	1,252,369	1,310,197	1,318,472	210,488	336,041	3,323,689
1879.....	1,373,270	1,237,593	1,446,384	246,199	398,465	2,714,909

During each decade since 1879 the fluctuations in the acreage of corn and wheat have been strikingly similar. Each shows a marked decrease for the first decade, a notable increase for the second, and a material decrease for the third. Oats, although decreasing steadily during the past 20 years, nevertheless show only a slightly smaller acreage than that of 1879. For the 30-year period buckwheat presents a slight increase in acreage, while rye shows a rapid decrease. The trend in hay and forage is marked by its similarity to that for oats. Both show an increase for the first decade, with decreases for each succeeding one. The acreage of hay and forage and of buckwheat was slightly greater in 1909 than in 1879, that of corn practically the same, but that of the other crops is less.

The next table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909.

Potatoes were reported by 88 out of every 100 farms in 1909, hay and forage by 87, corn by 78, oats by 68, wheat by 53, buckwheat by 28, rye by 24, and

tobacco by 5. Buckwheat and tobacco show larger percentages of farms reporting than in 1899, while for potatoes, hay and forage, corn, oats, wheat, and rye the percentages are smaller than 10 years ago. These 8 crops now occupy about 61 per cent of the improved land of the state, hay and forage alone representing 24.4 per cent. Corn, wheat, rye, and hay and forage show decreases from 1899 to 1909 in the per cent of improved land occupied. During the past decade there was a decrease of 414,137 acres, or 8.7 per cent, in the acreage of all cereals, and of 181,336 acres, or 5.5 per cent, in that of all hay and forage. Potatoes increased in acreage 34,146 acres, or 15 per cent, and tobacco 13,982 acres, or 50.4 per cent.

CROP.	PER CENT OF FARMS REPORTING.		PER CENT OF IMPROVED LAND.		Per cent of increase in acres, 1899 to 1909. ¹	AVERAGE YIELD PER ACRE.	AVERAGE VALUE PER ACRE.
	1909	1899	1909	1899			
Corn.....	77.8	84.4	10.9	11.2	-6.8	30.1 Bu.	\$19.80

Tobacco.....	5.3	4.3	0.3	0.2	50.4	1,106.0 Lbs.	94.06

¹ A minus sign (-) denotes decrease.

In average value per acre corn exceeds the other cereals, and wheat is a close second, while buckwheat and rye are less than one-half, and oats approximately two-thirds as great as corn in that respect. The average value per acre of hay and forage is about three-fourths that of corn, and less than one-third that of potatoes. Tobacco shows the highest average value per acre, being more than five times as great as wheat and over twice that of potatoes. The average value per acre of all cereals combined is \$16.27, which is slightly above the average of hay and forage, and less than that for either corn or wheat.

The leading counties in the acreage of hay and forage in the order of their importance are Bradford, Crawford, Lancaster, Susquehanna, and Tioga. Bradford, Susquehanna, and Tioga, together with Wayne County, forming a row of counties along the northern boundary, report nearly one-seventh of the total acreage for the state.

The decrease in the acreage of corn is confined to no particular section; there are, however, three groups of counties in which increases are shown—first, 10 mountainous counties in the east central part of the state; second, Somerset and Bedford Counties; and third, Armstrong, Butler, and Clarion Counties. The acreage of wheat shows heavy decreases throughout the counties of the state with the exception of a group of five counties in the southeastern section, which show slight increases. The seven counties of Franklin, Cumberland, Adams, York, Lancaster, Berks, and

Chester report more than one-third of the wheat acreage of the entire state. Decreases in the acreage of oats are shown in the northeastern, southeastern, and western portions of the state, the group in the southeastern section reporting, as a whole, the largest decreases. The increase in the acreage of buckwheat is due to its increased cultivation throughout the western three-fourths of the state, this increase being sufficient to offset the general decrease throughout the eastern quarter. The three counties of Bradford, Indiana, and Tioga report more than one-fifth of the total acreage of this crop. There are three general groups of counties which show an increase in the acreage of rye. The smallest of these groups comprises Franklin and Adams Counties on the extreme southern line; the second in importance is a group in the central part of the state consisting of Center, Union, and Mifflin Counties; the third and largest is made up of eight western and southwestern boundary counties. The remainder of the state, aside from a few scattered counties, shows marked decreases, especially in the northern and west central portions.

More than one-fifth of the potato acreage is reported from the five counties of Lehigh, Berks, Chester, Lancaster, and York. Lancaster County alone harvests nearly 80 per cent of the tobacco crop.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products:

CROP.	FARMS REPORTING, 1909		ACRES.		VALUE OF PRODUCTS.	
	Number.	Per cent of all farms.	1909	1899	1909	1899
Vegetables, other than potatoes and sweet potatoes and yams, total.....	186,119	84.9	94,111	79,126	\$10,013,920	\$6,304,860
Farms reporting a product of \$500 or over....	2,027	0.9	17,847	2,710,270
All other farms.....	184,092	83.9	76,264	7,303,650
Flowers and plants, total....	1,331	0.6	2,032	1,073	3,803,418	2,246,075
Farms reporting a product of \$250 or over....	814	0.4	3,760,644
All other farms.....	517	0.2	42,774
Nursery products, total....	175	0.1	2,828	3,201	922,569	541,032
Farms reporting a product of \$250 or over....	79	(²)	915,784
All other farms.....	96	(²)	6,785

¹ Does not include 11,311 farms which reported that they had vegetable gardens, but gave no information as to their products.
² Less than one-tenth of 1 per cent.

In 1909 the total acreage of potatoes and other vegetables was 357,430 acres and their value \$22,092,197. Excluding (so far as reported separately ¹) potatoes and sweet potatoes and yams, the acreage of vegetables was 94,111 and their value \$10,014,000, both

¹ It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

acreage and value being materially greater than in 1899. The table distinguishes between farms which make the raising of vegetables a business of some importance (having produced vegetables valued at \$500 or more in 1909) and other farms, on most of which vegetables are raised mainly for home consumption. There were in 1909, 2,027 farms in the first class, representing about one-fifth of the total acreage of vegetables and more than one-fourth of the total value, the average acreage of vegetables per farm for these farms being 8.8 and the average value of product per acre \$151.86.

The raising of flowers and plants and of nursery products is also relatively important in Pennsylvania, 4,860 acres being devoted to them in 1909, and the output being valued at \$4,725,987. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

Small fruits: 1909 and 1899.—The following table shows data with regard to small fruits on farms:

CROP.	Number of farms reporting, 1909	ACRES.		Quantity (quarts), 1909	Value, 1909
		1909	1899		
Small fruits, total.....		8,678	12,271	13,620,047	\$1,175,016
Strawberries.....	13,515	4,136	5,667	9,033,904	759,154
Blackberries and dewberries.....	4,892	1,235	1,383	1,063,257	91,007
Raspberries and loganberries.....	8,990	2,594	3,938	2,906,302	272,337
Currants.....	5,375	358	716	493,871	42,181
Gooseberries.....	1,999	139	267	109,104	9,047
Cranberries.....	55	4	5,728	503
Other berries.....	13	12	300	7,881	787

Strawberries are by far the most important of the small fruits grown in Pennsylvania, with raspberries and loganberries ranking next. The total acreage of small fruits in 1909 was 8,678 and in 1899, 12,271, a decrease of 29.3 per cent. The production in 1909 was 13,620,000 quarts, as compared with 19,261,000 quarts in 1899, and the value \$1,175,000, as compared with \$1,269,000.

Orchard fruits, grapes, nuts, and tropical fruits: 1909 and 1899.—The next table presents data with regard to orchard fruits, grapes, nuts, and tropical fruits. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

The total quantity of orchard fruits produced in 1909 was 13,286,000 bushels, valued at \$8,678,000. Apples contributed about five-sixths of this quantity; peaches and nectarines and cherries most of the remainder. The production of grapes in 1909 amounted to 34,020,000 pounds, valued at \$851,000, and that of nuts to 3,796,000 pounds, valued at \$90,000.

The production of all orchard fruits together in 1909 was 47.4 per cent less than in 1899, and the production of grapes also declined. The value of orchard fruits increased from \$7,976,000 in 1899 to \$8,678,000 in 1909, and that of grapes from \$640,000 in 1899 to \$851,000 in 1909.

It should be noted in this connection that the values for 1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

¹ Expressed in bushels for orchard fruits and persimmons, and pounds for grapes, nuts, and figs.
² Included with "unclassified."
³ Consists of products not separately named by the enumerator, but grouped under the designation "all other."
⁴ Total includes almonds, Japanese walnuts, hazelnuts, Japanese chestnuts, bechnuts, Italian chestnuts, Spanish chestnuts, filberts, white walnuts, and other nuts.

The following table shows the quantities of the more advanced products manufactured by farmers from orchard fruits and grapes. Values were not called for on the schedule.

PRODUCT.	FARMS REPORTING, 1909		QUANTITY PRODUCED.		
	Num- ber.	Percent of all farms.	Unit.	1909	1899
Cider.....	65,320	29.8	Gals....	8,090,914	15,890,868
Vinegar.....	23,012	10.5	Gals....	1,242,246	3,475,208

Dried fruits.....	9,701	4.4	Lbs....	285,297	938,810

Sugar crops: 1909 and 1899.—The table below shows data with regard to maple trees and their products, and also for sugar beets and sorghum cane, which in this state are unimportant. The total value of maple sugar and sirup produced in 1909 was \$471,000, as compared with \$240,000 in 1899.

PRODUCT.	FARMS REPORTING.		Acres.	PRODUCT.		
	Num- ber.	Per cent of all farms.		Amount.	Unit.	Value.
Maple sugar and sirup:						
Total, 1909.....	10,383	4.7	11,298,005			\$471,213
Sugar made.....	3,248	1.5		1,189,049	Lbs....	106,501
Sirup made.....	10,035	4.6		391,242	Gals....	364,712

Sirup made.....				6,514	Gals....	3,090

¹ Number of trees.
² Used as root forage.
³ Less than one-tenth of 1 per cent.
⁴ Includes cane used as coarse forage.

Forest products: 1909 and 1899.—The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in 1909." There were 78,045 farms in Pennsylvania (35.6 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$7,986,599, as compared with \$6,481,181 in 1899, an increase of 23.2 per cent. Of the value in 1909, \$2,786,992 was reported as that of products used or to be used on the farms themselves, \$3,859,489 as that of products sold or for sale, and \$1,340,118 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Miscellaneous crops: 1909.—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 10,663 farmers in Pennsylvania sold, during 1909, 53,873 tons of straw, for which they received \$470,895, and that 4,011 farmers sold 13,071 tons of cornstalks and leaves, for which they received \$84,323.

SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899.

EXPENSE.	1909		1899	INCREASE.		
	Farms reporting.			Amount.	Amount.	Per cent.
	Number.	Percent of all farms.	Amount.			
Labor.....	139,507	63.6	\$25,611,838	\$16,647,730	\$8,964,108	53.8
Feed.....	141,633	64.6	19,203,160	(¹)		
Fertilizer.....	129,769	59.2	6,801,605	4,685,920	2,115,685	45.1

¹ Not reported at the census of 1900.

Nearly two-thirds of the farmers hire labor, the average amount expended by the farmers hiring being \$184. During the decade the total expenditure for labor increased \$8,964,000, or 53.8 per cent, which is one of the greatest relative increases in Pennsylvania agriculture during the decade. About one-fourth of the amount reported as expended for labor is in the form of rent and board. At prior censuses no tabulation was made of the number of farmers reporting expenditures for labor.

Over six farmers out of every ten report some expenditure for feed, and about six out of every ten purchase fertilizer. The amount reported as paid for fertilizer has increased \$2,116,000, or 45.1 per cent, during the decade, the average per farm reporting being \$52.41.

Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as of the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

CROP.	FARMS REPORTING.		QUANTITY SOLD.		Amount received.
	Number.	Percent of all farms.	Amount.	Unit.	
Total.....	20,059	9.1	2,929,995	Bu.....	\$9,157,120
Corn.....	20,046	9.1	2,090,984	Bu.....	1,974,555
Oats.....	209	0.1	9,148	Bu.....	1,085,198
Barley.....	40,237	18.3	419,224	Bu.....	6,843
Hay and coarse forage.....				Tons...	6,090,524

While the total amount expended by Pennsylvania farms for the purchase of feed in 1909 was \$19,203,000, the total receipts from sales of feed by those reporting sales only amounted to \$9,157,000.

COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products

of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

TABLE 1.—FARMS AND FARM PROPERTY, BY COUNTIES: APRIL 15, 1910—Continued.

[Comparative data for June 1, 1900, in italics.]

	Union.	Venango.	Warren.	Washington.	Wayne.	Westmoreland.	Wyoming.	York.
1 Population.....	16,249	50,359	39,573	143,680	29,236	231,304	15,509	136,405
2 <i>Population in 1900.....</i>	<i>17,592</i>	<i>49,648</i>	<i>38,946</i>	<i>92,181</i>	<i>30,171</i>	<i>160,175</i>	<i>17,152</i>	<i>116,413</i>
3 Number of all farms.....	1,455	2,793	2,820	4,733	3,449	5,512	1,766	8,460
4 <i>Number of all farms in 1900.....</i>	<i>1,521</i>	<i>3,273</i>	<i>3,238</i>	<i>4,742</i>	<i>3,608</i>	<i>5,402</i>	<i>1,752</i>	<i>8,091</i>
5 Color and nativity of farmers:								
6 Native white.....	1,448	2,670	2,134	4,384	2,963	4,889	1,686	8,345
7 Foreign-born white.....	6	112	684	300	486	615	69	77
8 Negro and other nonwhite.....	1	2	2	49	8	1	38
9 Number of farms, classified by size:								
10 Under 3 acres.....	1	6	11	15	6	16	1	21
11 3 to 9 acres.....	130	114	132	427	174	448	121	932
12 10 to 19 acres.....	135	127	127	295	153	441	100	1,090
13 20 to 49 acres.....	302	490	599	554	486	892	236	2,134
14 50 to 99 acres.....	455	1,058	998	1,063	1,101	1,574	565	2,261
15 100 to 174 acres.....	358	750	678	1,582	1,023	1,633	510	1,662
16 175 to 259 acres.....	57	189	190	678	332	388	158	264
17 260 to 499 acres.....	14	51	64	202	147	106	60	48
18 500 to 999 acres.....	3	5	11	17	16	10	5
19 1,000 acres and over.....	6	6	11	4	2
LAND AND FARM AREA								
19 Approximate land area..... acres.	195,200	423,040	577,280	551,680	472,960	664,900	254,080	577,920
20 Land in farms..... acres.	108,790	246,367	254,321	503,923	375,557	493,491	169,631	532,017
21 <i>Land in farms in 1900.....</i>	<i>113,412</i>	<i>277,378</i>	<i>276,532</i>	<i>526,701</i>	<i>336,530</i>	<i>515,729</i>	<i>168,730</i>	<i>519,354</i>
22 Improved land in farms..... acres.	86,973	145,813	112,025	432,001	128,430	309,635	107,423	431,433
23 <i>Improved land in farms in 1900.....</i>	<i>88,177</i>	<i>169,810</i>	<i>151,645</i>	<i>451,706</i>	<i>145,505</i>	<i>327,335</i>	<i>109,434</i>	<i>437,337</i>
24 Woodland in farms..... acres.	18,848	73,261	95,182	47,251	123,304	61,013	43,733	84,415
25 Other unimproved land in farms..... acres.	2,969	27,293	47,114	24,671	126,767	32,838	17,875	14,119
26 Per cent of land area in farms.....	55.7	58.2	44.1	91.3	70.4	74.2	66.5	92.1
27 Per cent of farm land improved.....	79.9	59.2	44.0	85.7	32.0	74.0	63.6	81.5
28 Average acres per farm.....	74.8	88.2	96.2	106.5	108.9	89.5	96.3	92.9
29 Average improved acres per farm.....	59.8	52.2	39.7	91.3	35.8	67.1	61.2	51.2
VALUE OF FARM PROPERTY								
29 All farm property..... dollars.	7,725,296	10,264,622	8,773,529	41,650,379	11,537,272	37,591,905	6,870,065	38,488,570
