

PER CENT OF LAND AREA IN FARMS, AND AVERAGE VALUE OF FARM LAND PER ACRE, IN RHODE ISLAND, BY COUNTIES: 1910.

(474)

## RHODE ISLAND.

## FARMS AND FARM PROPERTY.

Rhode Island ranks forty-eighth in area and thirtyeighth in population among the states and territories of continental United States. Wherever the soils are sufficiently retentive of moisture to permit it, trucking is replacing general farming, owing to the proximity of great manufacturing centers. Agriculturally the state may be divided into the Narragansett Basin, the Glaciated Highlands, and Block Island.

The Narragansett Basin consists of a gently rolling glacial plain from which rise low, rounded hills. It is nowhere more than 3 miles wide and forms, roughly, about one-third of the state. Its prevailing soils are silty or fine sandy loams, but sandy and gravelly loams also occur and include the chief trucking soils of the state. The Glaciated Highlands consist of rough, stony hills 100 to 800 feet above the sea level, broken with rivers which have no alluvial bottoms. It is on the summits of these hills that the agricultural soils of the northwestern and western twothirds of the state are principally found. The numerous lakes of this section are usually bordered by coarse sand or stony soils, though many of them are sufficiently filled by vegetable accumulations to constitute swamps. The soils of Block Island are almost entirely of glacial origin, but are somewhat finer in texture than those found in the hilly sections of the state.

The two maps on the opposite page show by counties the proportion of the total land area which is in farms and the average value of farm land per acre. Almost two-thirds of the total land area of the state is farm land. The first map shows that in every county of the state between 60 and 80 per cent of the land area is in farms. The proportion is lowest in the northern county, where 60.4 per cent of the area is farm land, and highest in the southern county, in which the proportion is 72.7 per cent. The average value of farm land per acre for the whole state is \$33.86, but that there is wide variation in values among the counties is evident from the second map. The average value per acre is highest in Bristol County, where it is \$97.21, and lowest in Washington County, where it is only \$15.63.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

	1910	1900	INCREAS	12. L
NUMBER, AREA, AND VALUE OF FARMS.	(April 15)	April 15) (June 1)		Percent.

<sup>1</sup> A minus sign (-) denotes decrease.

Between 1900 and 1910 there was an increase of 114,054, or 26.6 per cent, in the population of the state, a decrease of 206, or 3.7 per cent, in the number of farms, and a decrease of 12,294 acres, or 2.7 per cent, in the acreage of farm land. Since the relative decrease in number of farms was greater than that in the acreage of farm land, the average size of farms increased 0.9 acre.

Farm property, which includes land, buildings, implements and machinery, and live stock (domestic

animals, poultry, and bees), has increased in value during the decade over \$6,000,000, or 22.2 per cent. This increase is made up of increases of \$3,219,000 in the value of buildings, \$1,588,000 in the value of land, and \$1,194,000 in the value of farm equipment, including implements and machinery and live stock, of which amount over half represents the increase in the value of live stock. In considering these increases the general increase in the prices of all commodities in the last 10 years should be borne in mind.

(475)

The average value of a farm with its buildings and equipment is \$6,234, as compared with \$4,909 in 1900. The average value per acre of land alone rose during this period from \$29.46 to \$33.86, and this advance was accompanied by increases in the average values per farm of buildings, of implements and machinery, and of live stock.

Population, number of farms, and farm acreage: 1850 to 1910.—The following table presents, for the state as a whole for each census from 1850 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

		FARMS.		LAN		Per		
				All land.			Per cent of land area in farms.	cent of farm

<sup>1</sup> A minus sign (-) denotes decrease. <sup>2</sup> Less than one-tenth of i per cent.

In the 60 years since 1850 the population of the state has increased from 147,545 to 542,610; in other words, it has much more than trebled.

At each census, except that of 1880, the number of farms reported has been almost the same, varying only from 5,292 in 1910 to 5,500 in 1890. The census of 1880, however, showed a very much greater number, namely, 6,216.

The land surface of Rhode Island is approximately 682,880 acres. Of this area, 443,308 acres, or 64.9 per cent, are included in farms. Of the farm acreage, 178,344 acres, or 40.2 per cent, are reported as improved land, representing 26.1 per cent of the total land area of the state. The total acreage of farm land decreased 2.7 per cent during the last decade. The relative decrease in the reported acreage of improved land during the last decade was greater than that in the total acreage of farms, the percentage of farm land which is improved being somewhat lower at the present census than in 1900.

The proportion of the total land area of the state which was occupied by farms has decreased continuously since 1850, except for a slight increase reported in 1880. In 1850, 81.1 per cent of all land was in farms; in 1910 the percentage is only 64.9. The proportion of farm land which is improved decreased from 1850 to 1870, increased slightly from 1870 to 1890, decreased very considerably in the decade 1890 to 1900, and decreased slightly during the last decade. It is now less than two-thirds as great as in 1850.

Values of farm property: 1850 to 1910.—The agricultural changes in Rhode Island since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

		FARM PROPERTY.										
CEN- SUS YEAR.	Total.		Land and buildings.		Implem and machin	1	Domestic animals, poultr <b>y</b> , and bees,					
TEAR.	Value.	Per cent of in- crease, <sup>1</sup>	Value.	Per cent of in- crease.	Value.	Per cent of in- crease.	Value.	Per cent of in- crease,1				
1910 1900 1890 1880 1870 <sup>2</sup> 1860 1850	25, 179, 479 29, 039, 040 20, 397, 077	$\begin{array}{c} 22.2 \\ 7.2 \\ -13.3 \\ 42.4 \\ -8.0 \\ 16.1 \\ \end{array}$	\$27,932,860 23,125,260 21,873,470 25,882,079 17,259,974 19,550,553 17,070,802	20.8 5.7 -15.5 50.0 	\$1,781,407 1,270,270 941,030 902,825 628,997 586,791 497,201	40.2 35.0 4.2 43.5 7.2 18.0	\$3,276,472 2,593,659 2,364,970 2,254,142 2,508,106 2,042,044 1,532,637	26.3 9.7 4.9 10.1 22.8 33.2				

A minus sign (-) denotes decrease.
 Computed gold values, being 80 per cent of the currency values reported.

The total wealth in the form of farm property is about \$33,000,000, of which 84.7 per cent is represented by land and buildings, 5.4 per cent by implements and machinery, and 9.9 per cent by live stock. The relative gain in the total value of farm property from 1900 to 1910 is greater than for any other decade since 1850, with the exception of that ending in 1880. Of the total increase during the past decade, \$4,808,000 represents the increase in the value of land and buildings, \$511,000 the increase in the value of implements and machinery, and \$683,000 the increase in the value of live stock.

Average acreage and values per farm: 1850 to 1910.—The changes which have taken place during the past 60 years in the average acreage of Rhode Island farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

		AVE	RAGE VALU	JE PER FA	RM. <sup>1</sup>	Average
CENSUS YEAR.	Average acres per farm.	All farm property.	Land and buildings.		Domestic animals, poultry, and bees.	value of land and buildings per acre.
· · · · · · · · · · · · · · · · · · ·						
1910 1900 1890 1880 1870 * 1860 1850	83. 8 82. 9 85. 3 82. 8 93. 6 96. 4 102. 9		\$5,278 4,206 3,977 4,164 3,215 3,618 3,170	\$337 231 171 145 117 109 92	\$619 472 430 363 467 378 285	\$63.0 50.76 46.61 50.27 34.30 37.5 30.85

Averages are based on "all farms" in state.
 Computed gold values, being 80 per cent of the currency values reported.

In average size the Rhode Island farm is at present 19.1 acres smaller than in 1850. From 1850 to 1880 the average decreased from 102.9 to 82.8 acres, but since 1880 there have been slight fluctuations, and the average size at present is greater by 1 acre than in

476

1880. During the last decade there was an increase of 0.9 acre.

The average value of a Rhode Island farm, including its equipment, is \$6,234. Of this amount, \$5,278 is the value of land and buildings, \$619 that of live stock, and \$337 that of implements and machinery. In 1900 the average value of a farm with its equipment was only \$4,909. It will be seen that the increase in value in the last decade was almost as great as the increase during the preceding half century. During the last decade the average value of land and buildings increased \$12.25 per acre, or more than three-fifths as much as during the preceding half century. The value per farm of equipment, which includes implements and machinery and live stock, is more than two and onehalf times as great as 60 years ago.

Farm tenure: 1880 to 1910.—The following table shows the distribution of the farms of the state according to character of tenure at each census since 1880:

TENURE.	1910	1900	1890	1880
Number of all farms	5, 292	5,498	5, 500	6, 216
Farms operated by owners and managers. Farms consisting of owned land only Farms consisting of owned and hired land Farms operated by managers	<b>4,338</b> 3,831 250 251	<b>4,390</b> 3,970 212 208	4,470 (1) (1) (1)	4,980 (1) (1) (1)
Farms operated by tenants Share tenants Share-cash tenants <sup>2</sup> Cash tenants Tenure not specified <sup>5</sup>	<b>954</b> 27 8 738 181	<b>1,108</b> 63 } 1,045	<b>1,030</b> 118 912	<b>1,236</b> 247 989
Per cent of farms operated by— Owners and managers Tenants. Share and share-cash Cash and nonspecified	82.0 18.0 0.7 17.4	79.8 20.2 1.1 19.0	$81.3 \\ 18.7 \\ 2.1 \\ 16.6$	80. 1 19. 9 4. ( 15. 9

 Not reported separately.
 Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1880.
 Frior to 1910 nonspecified tenants were included with cash tenants.

Farms decreased 206 in number during the last decade, those operated by owners and managers decreasing only 52, and those operated by tenants decreasing 154.

The decrease in the number of farms apparent during the past 30 years has not been accompanied by any marked change in the general character of their tenure. In 1880 the percentage of farms operated by tenants was 19.9 and in 1910 it is 18.

There is, however, an increasing preference for the cash form of tenancy rather than for the share or share-cash form. In making comparisons of this sort with prior censuses it is necessary to include the sharecash tenants with the share tenants and the tenants whose tenure was not specified with the cash, but this probably has little effect on the soundness of the comparisons. The table shows that in 1880 share and share-cash tenants formed 20 per cent of all tenants, but in 1910 they form only 3.7 per cent.

The following table shows the acreage, improved acreage, and value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPER-	ALL LAND IN FARMS		IMPROVED		VALUE OF LAND AND		
ATED BY-	(ACRES).		FARMS (A		BUILDINGS.		
ATED NY-	1910	1900	1910	1900	1910	1900	
<b>Total</b>	<b>443,308</b>	<b>455, 602</b>	178,344	187, 354	<b>\$27, 932, 860</b>	\$23, 125, 260	
Owners	318,262	335, 354	127,964	135, 017	18, 137, 295	15, 169, 630	
Managers	44,430	28, 700	15,914	14, 138	5, 175, 000	2, 828, 610	
Tenants	80,610	91, 548	34,466	38, 199	4, 620, 565	5, 127, 020	

The following table shows the per cent distribution by tenure groups of the items in the preceding table, and also of the number of farms:

			PE	R CENT	OF TOT	AL.		
FARMS OPERATED BY-	Number of farms.		All I in fa		Impr land in	oved farms.	Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total Owners Managers Tenants	100.0 77.2 4.7 18.0	100.0 76.1 3.8 20.2	100.0 71.8 10.0 18.2	100. 0 73. 6 6. 3 20. 1	100.0 71.8 8.9 19.3	100.0 72.1 7.5 20.4	100.0 64.9 18.5 16.5	100. 65. 12. 22.

It will be seen that, in 1910, 71.8 per cent of all land in farms was in farms operated by their owners (including part owners), 10 per cent in farms operated by managers, and 18.2 per cent in farms operated by tenants, the percentage for owners and for tenants being lower and that for managers higher than in 1900.

As shown by the table below, the average size of farms operated by managers in 1910 (177 acres) was more than twice as great as that of farms operated by tenants (84.5 acres), which was in turn somewhat larger than that of farms operated by owners (77.9 acres). The average size of farms operated by managers and by tenants increased between 1900 and 1910, while that of farms operated by owners decreased. In 1910 the percentage of farm land improved was highest for farms operated by tenants and lowest for those operated by managers.

· .		E ACRES ARM.	PER CENT OF FARM		VALUE OF BUILDINGS.	
FARMS OPERATED BY-	All land.	Improved land.	TAND	Per farm.	Per acre.

Farm mortgages: 1890 to 1910.—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes "—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

	OWNED 1	ARMS,1	OWNED HOM		OWNED FARM HOMES. <sup>2</sup>	
CLASS.	1910		190	0	1890	
	Number.	Per cent. <sup>3</sup>	Number.	Per cent. <sup>3</sup>	Number.	Pør cent.
Total Free from mortgage Mortgaged Unknown	4,087 2,811 1,180 96	70.4 29.6	4,229 2,853 1,061 315	72.9 27.1	4,125 3,339 786	80.9 19.1

Includes all farms owned in whole or in part by the operator.
 The 78 "owned farm homes" for which no reports were secured were distributed between "free from mortgage" and "mortgaged" in 1890.
 Per cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 4,087. Of this number, 2,811 were reported as free from mortgage; 1,180 were reported as mortgaged; and for 96 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 29.6 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is only slightly larger than it was in 1900, which in turn was considerably greater than in 1890. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the numbers reported at the later censuses, because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that from 1890 to 1910 the number of farms free from mortgage decreased considerably while there was a large increase in the number of mortgaged farms.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 1,180 farms reported as mortgaged, 1,099 are wholly owned by the farmers, and for 1,001 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms,

the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FAR HOMES MC	MS OR FARM ORTGAGED.	INCRE	SE.1	
	19102	18903	Amount.	Per cent.	
Number Value—Land and buildings Amount of mortgage debt	1,001 \$4,087,933 \$1,350,326	786 \$2,814,715 \$1,198,726			
Per cent of debt to value Average value per farm Average debt per farm Average equity per farm	33, 2 \$4, 084 \$1, 355 \$2, 729	42. 6 \$3, 581 \$1, 525 \$2, 056	\$503 \$170 \$673	14.0 11.1 32.7	

<sup>1</sup> A minus sign (----) denotes decrease. <sup>3</sup> Includes only farms consisting wholly of owned land and reporting value of farm and amount of dobt. <sup>4</sup> Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms decreased in 20 years from \$1,525 to \$1,355, or 11.1 per cent, while the average value of such farms rose from \$3,581 to \$4.084, or 14 per cent. Thus the owner's equity increased from \$2,056 to \$2,729, or 32.7 per cent. As a result of the increase in farm value and the decrease in farm debt, the mortgage indebtedness, which represented 42.6 per cent of the value of the farm in 1890. had decreased to 33.2 per cent of this value in 1910.

Farms by size groups: 1910 and 1900 .- The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP,	NUMBER C	F FARMS.	INCRI	CASE. <sup>1</sup>	PER CENT OF TOTAL.		
	1910	1900	Number.	Per cent.	1910	1900	
Total	5,292	5,498	-206	-3.7	100.0	100.	
Under 3 acres 3 to 9 acres	145 585	327 507	-182	55.7 15.4	2.7 11.1	5. 9.	
10 to 19 acres 20 to 49 acres	647 1,144	578 1,169	69 25	$11.9 \\ -2.1$	$12.2 \\ 21.6$	10. 21.

1,000 acres and over	24]	17	7	41.2	0.5	0	

1 A minus sign (--) denotes decrease.

Not quite one-fourth, or 23.9 per cent, of the total number of farms in the state are between 50 and 99 acres in size. This is the largest group of farms shown in the above table. The next largest group consists of the 20 to 49 acre farms, which constitute 21.6 per cent of the total. Somewhat less numerous are the farms between 100 and 174 acres, constituting 17.9 per cent of the total. These three groups thus contain almost two-thirds of the total number of farms in the state. About 10 per cent of the total number of farms are 175 acres or over. The balance, about 26 per cent, are under 20 acres in size. A study of the distribution of farms by size groups discloses the fact that in the last decade there has in general been an increase in the number of farms comprising less than 100 acres and a decrease in the number of larger farms. The greatest gain in number from 1900 to 1910 was made in farms 3 to 9 acres in size. The number of places

A PARTY A PARTY A

"under 3 acres" reported as farms is less than half as great as 10 years ago. This decrease may be due to a different interpretation by the enumerators as to what to include as a small farm, or may represent an actual decrease in that type of farm. A decrease is shown for each group of farms falling between 100 and 499 acres, the aggregate decrease being 167, or 10.4 per cent. The increase in farms which exceed 500 acres in size is 13, or 21 per cent, but such farms constitute only 1.5 per cent of the total number.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 1,377), and also the farms of between 175 and 499 acres (numbering 487):

SIZE GROUM	ALL LA FARMS (		IMPROVI IN FARMS	ED LAND (ACRES).	VALUE OF LAND AND BUILDINGS.		
	1910	1900	1910 1900		1910	1900

Of the total farm acreage of the state in 1910, 26.4 per cent was in farms of 100 to 174 acres, and 27.5 per cent in farms of 175 to 499 acres, these two being from the standpoint of aggregate acreage the most important size groups. A considerable increase took place between 1900 and 1910 in the proportion of the total farm acreage comprised in farms of 1,000 acres and over, while the proportion in farms of from 100 to 499 acres decreased.

As shown by the table below, the percentage of farm land improved steadily diminishes as the size of the farms increases. For this reason, and also because buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land generally diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group. Many of the small farms in Rhode Island are primarily places of residence of wealthy persons, with expensive buildings, and many others are highly improved truck farms.

	PER CE FARM		AVERAGE VALUE OF LAND AND BUILDINGS.

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910:

	FARM OPERATORS.									
COLOR AND	Total.					Per cent of total.				
NATIVITY.		Per cent dis- tribu- tion.	Own- ers.	Ten- ants.	Man- agers.	Own- ers.	Ten- ants.	Man- agers,		
Total Native white Foreign-born white Negro and other non-	5, 292 4, 408 843	100, 0 83, 3 15, 9	<b>4, 087</b> 3, 466 592	<b>954</b> 743 199	251 199 52	<b>77. 2</b> 78. 6 70. 2	<b>18.0</b> 16.9 23.6	4.7 4.5 6.2		
white	41	0.8	29	12		70.7	29.3			

Of Rhode Island farmers, 83.3 per cent were native whites and 15.9 per cent foreign-born whites. Only 41, or 0.8 per cent of all farmers, were nonwhites, 40 being negroes and 1 an Indian. Of the native whites, 16.9 per cent were tenants and 4.5 per cent managers, as compared with 23.6 and 6.2 per cent, respectively, of the foreign-born whites. Of the 41 nonwhite farmers, 29 were owners and 12 were tenants.

Of the 843 foreign-born white farmers in Rhode Island in 1910, 161 were born in England, 150 in Canada, and 115 in Ireland. Other European countries were represented by a total of 414 farmers, and non-European countries, other than Canada, by 3.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15 and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this bulletin, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

The following table summarizes the statistics of domestic animals for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

	FAI REPOI	RMS RTING,		ANIMALS.

Goats	49	0.9	106	982	9.26

#### 1 Less than one-tenth of 1 per cent.

Of the total number of farms enumerated, 4,676, or 88.4 per cent, report domestic animals of some kind, the number without any domestic animals being only 616.

Of all the farms in the state, 75.6 per cent report cattle, 74.3 per cent report "dairy cows," and only 16 per cent report "other cows." Only 69 farms have cattle without having dairy cows. The total number of cows increased slightly during the decade, and the average value of dairy cows increased from \$39.61 to \$46.68, while that of other cows decreased from \$27.56 to \$26.43. The average number of dairy cows per farm reporting is 6.

The census of 1900 was taken as of June 1, after all the spring calves were born, while that of 1910 was taken as of April 15, before the close of the calving season and when the calves on hand were on the average younger than at the enumeration of 1900. As a result the calves enumerated were fewer in number and of lower average value in 1910 than in 1900, the number decreasing from 5,338 to 3,773, and the average value decreasing from \$8.53 to \$6.21.

Horses are reported from 77.7 per cent of all farms in the state, but only 1.3 per cent report colts born in 1909, and only 0.2 per cent report spring colts. The average value of mature horses is reported at \$149.59.

Less than 1 per cent of the farmers report mules, asses, or burros.

Of all farms, 31.5 per cent report swine, and show an average of over 8 per farm reporting. The average value of the swine reported as "hogs and pigs born before January 1, 1910," is \$12.07, while that of spring pigs is more than one-third as much.

Sheep and lambs are reported from 242 farms, or 4.6 per cent of all the farms in the state. Of these 242 farms, 81.8 per cent report spring lambs, the number of the latter being equal to 65.4 per cent of the number of ewes.

Poultry on farms: 1910 and 1900.—The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value, and the number of farms reporting each kind in 1910:

			<b>910</b> pril 15)		1900 (June1)
KIND.	Farms re	eporting.			
	Number.	Percent of all farms.	Number of fowls.	Value.	Number of fowls,
Total. Chickens. Turkeys. Ducks. Geese. Guinea fowis. Pigeons. Peafowis.	<b>4,341</b> 4,315 161 458 266 268 155 1	82.0 81.5 3.0 8.7 5.0 5.1 2.9 ( <sup>3</sup> )	<b>415,209</b> 392,704 1,109 4,519 2,725 4,277 9,873 2	<b>\$368,018</b> 344,452 4,189 4,505 5,340 2,677 6,845 10	<b>520,514</b> 500,618 4,604 8,957 6,335 (1) (2) (2) (2)

1 Included with chickens. 2 Not reported. 3 Less than one-tenth of 1 per cent.

A decrease of 20.2 per cent occurred in the number of fowls on Rhode Island farms during the last decade, but the value increased from \$305,000 to \$368,000, or 20.6 per cent. The number of farms reporting poultry decreased from 4,866 to 4,341, and the average number of fowls per farm reporting decreased from 107 to 96. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind, as in 1910.

Bees on farms: 1910 and 1900.—The number of farms reporting bees decreased from 370 in 1900 to 285 in 1910, or 23 per cent. The number of colonies of bees decreased from 1,681 to 1,267, or 24.6 per cent, and their value from \$6,795 to \$6,138, or 9.7 per cent. The average value of bees per farm reporting was \$18.36 in 1900 and \$21.54 in 1910. About one farm in twenty reports bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table below age groups are omitted for the sake of brevity, but it may be noted that in cities

## AGRICULTURE—RHODE ISLAND.

and villages a comparatively small proportion of the animals of each class are in the younger age groups.

Ø	Number of inclo-	ANIMALS.				
KIND.	sures reporting.	Number.	Value.	Average value.		
Total All cattle Dairy cows. Horses. Mules. Asses and burros. Swine. Sheep. Goats.	6,896 1,214 1,154 6,049 25 6 562 13 133	2,654 2,040 17,802 76 8 2,969 108 243	\$3,372,254 117,436 105,549 3,206,056 13,795 380 32,061 558 1,968	\$44.25 51.74 180.10 181.51 47.50 10.80 5.17 8.10		

As would be expected, horses are by far the most important class of domestic animals not on farms, both in number and in value; cattle, nearly four-fifths of which are dairy cows, rank next in value.

Domestic animals on farms and not on farms: 1910.— The following table gives the total number and value

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FAR REPOR				VALU	e.
÷	Num- ber.	Per cent of all farms.	Number or quantity.	Unit.	Total.	Aver- age per unit.

The total value of all domestic animals in the state in 1910 was \$6,275,000, of which the value of animals not on farms represented 53.7 per cent, this high proportion being attributable to the predominantly urban character of the population of Rhode Island.

## LIVE STOCK PRODUCTS.

The number of farms reporting dairy cows on April 15, 1910, was 3,932, but only 3,438 reported dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 3,185 (somewhat less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 20,011. The amount of milk reported was 10,442,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 522 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk, cream, and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$2,066,000, which may be defined as the total value of dairy products exclusive of milk and cream used on the farm producing.

About five-sixths of the milk produced in Rhode. Island in 1909 was sold as such. The amount of milk and cream sold on the butter fat basis was small. The butter made on farms in 1909 was valued at \$104,000. Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material decrease between 1899 and 1909 in the amount of butter made, and a still greater relative decrease in the production of cheese, which is unimportant.

Wool: 1909 and 1899.—The next table gives statistics as to the production of wool on farms, the figures being partly based on estimates:<sup>1</sup>

	Num-		WOOL PRODUCED.					
	ber of farms report- ing.	Sheep of shearing age.	Fleeces (num- ber).	Weight (pounds).	Value.			
Sheep of shearing age on farms, April 15, 1910. Wool produced, as reported, 1909 On farms reporting sheep, April 15, 1910. On other farms.	214 137 130 7	4, 206 3, 315	3,587 3,431 156	19, 738 18, 923 815	\$5,605 5,387 218			
Total production of wool (partly esti- nated): 1809 Decrease, 1899 to 1909 Per cent of decrease.		·····	4,353 6,828 2,475 36.2	24,009 35,180 11,171 31.8	6,835 8,741 1,906 21.8			

The total number of sheep of shearing age in Rhode Island on April 15, 1910, was 4,206, representing a decrease of 36.6 per cent as compared with the number on June 1, 1900 (6,629). The approximate production of wool during 1909 was 4,000 fleeces, weighing 24,000 pounds, and valued at \$7,000. Of these totals about one-sixth represents estimates. The number of fleeces produced in 1909 was 36.2 per cent less than in 1899. The average weight per fleece in 1909 was 5.5 pounds, as compared with 5.2 pounds in 1899, and the average value per pound was 28 cents, as compared with 25 cents in 1899.

Goat hair and mohair: 1909 and 1899.—Although 49 farmers reported 106 goats and kids on their farms April 15, 1910, only 1 reported the production of goat hair or mohair during 1909.

Poultry products: 1909 and 1899.—The next statement gives data relative to the production and sale of eggs and poultry:

	Num- ber of	Number	PRODU	ICT.
	farms report- ing.	of fowls on hand.	Quantity.	Value.
Fowls on farms, April 15, 1910 On farms reporting eggs produced in	4,341	415,209

<sup>1</sup> A minus sign (-) denotes decrease.

The total number of fowls on Rhode Island farms on April 15, 1910, was 415,000. Of the 4,341 farms reporting fowls, 485 did not report any eggs produced in 1909 and 648 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 2,729,000 dozens, valued at \$800,000. According to the Twelfth Census reports the production of eggs in 1899 was 3,217,000 dozens, the value being \$657,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 2,894,000 dozens, valued at \$849,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 602,000 fowls, valued at \$482,000.

Honey and wax: 1909.—Although, as noted elsewhere, 285 farms reported 1,267 colonies of bees on hand April 15, 1910, 110 of these farms, with 304 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 14,221 pounds of honey, valued at \$2,904, and 185 pounds of wax, valued at \$55; the true totals are doubtless somewhat above these figures.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The total value of domestic animals sold during 1909 was \$581,000, and that of animals slaughtered on

<sup>&</sup>lt;sup>1</sup> Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 84 farmers who reported the possession of 891 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

farms \$166,000, making an aggregate of \$747,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented about 80 per cent of the total value of animals sold.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the total value of those slaughtered during 1899, which amounted, respectively, to \$157,-000 and \$143,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

The following statement presents statistics relating to the sale or slaughter of domestic animals by

Summary: 1909 and 1899.—The following table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general Rhode Island farmers during the year 1909, with certain items for 1899:

	FAB REPOR		Number	VALU	E.
	Number.	Percent of all farms.	of animals.	Total.	A ver- age.
1909—All domestic animals: Sold Slaughtered Calves:				\$580,949 165,634

<sup>1</sup> A minus sign (--) denotes decrease. <sup>4</sup> Includes value of raisins and other dried fruits, wine, eider, vinegar, etc.

The total value of crops in 1909 was \$3,937,000. Of this amount 86.6 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of byproducts (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 84,207, representing 47.2 per cent of the total improved land in farms (178,344 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vinevards, the acreage for which was not reported.

The general character of Rhode Island agriculture is indicated by the fact that only 9.6 per cent of the total value of crops in 1909 was contributed by cereals, while one-third (33.3 per cent) was contributed by hay and forage, over one-fourth (26.6 per cent) by potatoes and other vegetables, and nearly one-sixth (16.1 per cent) by flowers and plants and nursery products. The remainder, representing in value about 14 per cent of the total, consisted mostly of forest products, and of fruits and nuts.

The total value of crops in 1909 was 29.5 per cent greater than that in 1899, this increase being due in large measure to higher prices. There was a decrease of 8.9 per cent in the total acreage of crops for which acreage was reported, this being due largely to the decrease in the acreage of hay and forage.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.-The following table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, and tobacco:

	Farms	Acres	QUAN	EITY.	
CROP.	report- ing.	har- vested.	Amount.	Unit.	Value.

<sup>1</sup> Includes small amounts of peanuts, dry peas and anise seed. <sup>2</sup> Includes small amounts of grass seeds. <sup>3</sup> The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage crops, flowers and near sete plants, etc. 4 Less than 1 acre.

The leading crops covered by the table, in the order of their importance as judged by value, are hay and forage, \$1,310,000; potatoes, \$408,000; and corn, \$336,000. It should be noted, however, that vegetables, other than potatoes and sweet potatoes and yams, statistics for which are reported in another table, are more important than potatoes or corn.

The value of the hay and forage crop is nearly three and one-half times the combined value of the cereals. The value of potatoes is over 8 per cent greater than that of the cereals. Corn is the only cereal of any importance. Among the hay and forage crops,

"timothy and clover mixed" ranks first, "timothy alone," second, and "other tame or cultivated grasses," third, in respect to acreage, quantity, and value. Of the miscellaneous or minor crops, none of those here reported are of consequence.

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

	ACRES HARVESTED.								
CROP YEAR.	Corn.	Oats.	Barley.	Ryc.	Hay and forage.	Potatoes.			
1909 1839 1889 1879	9, 679 8, 149 7, 819 11, 893	$1,726 \\ 1,530 \\ 3,648 \\ 5,575$	182 222 363 715	477 591 779 1,270	`61, 327 69, 770 94, 111 102, 894	4,649 5,810 5,595 5,796			

There has been a marked decline in the acreage of each crop included in the above table. The acreage of corn decreased 34.3 per cent during the first decade of the 30-year period, since which time it has increased. and is at the present time a little more than fourfifths as great as in 1879. Notwithstanding a slight increase in the acreage of oats during the last decade, the acreage in 1909 was less than a third that of 1879, The acreage of hay and forage has declined over 40 per cent, and the acreage of potatoes nearly 20 per cent, within the period covered by the table.

The following table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909.

CROP.	OFF	CENT ARMS RTING.		ENT OF OVED ND.	cent of increase in acres.	AVERAGE YIELD FER ACRE.	AVERAGE VALUE PER ACRE.

1 A minus sign (---) denotes decrease.

Fifty-five in every 100 Rhode Island farmers grow corn and 9 in every 100 grow oats, while only 3 in 100 grow rye, and only 1 in 100 grows barley. Seventyfive in every 100 raise potatoes and 86 in every 100 grow hay and forage. The acreage of corn is greatest in Washington County; that of oats in Newport County; and that of hay and forage in Providence County.

The average value per acre of the combined cereals is \$31.05, corn alone ranking above this figure, the other cereals below it. The average value per acre of hay and forage is a little more than two-thirds that of the cereals. The average value per acre of potatoes is nearly three times that of the cereals.

The reported production of corn is exaggerated to a slight extent, because some enumerators report baskets of ear corn as bushels of corn. On this account the figures here given may be revised in later census reports.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products:

	FARMS REPORTING, 1909		ACRES.		VALUE OF PRODUCTS,		
CROF.	Num- ber.	Per cent of all farms.	1909	1899	1909	1899	
Vegetables, other than pota- tees and sweet potatoes and yams, total: Farms reporting a prod- net of \$400 or over All other farms	1 4, 325 184 4, 141	81.7 3.5 78.3	5, 275 2, 105 3, 170	5, 165	\$636, 656 360, 995 275, 661	\$552,035	
Flowers and plants, total Farms reporting a prod- uct of \$250 or over All other farms	$146 \\ 120 \\ 26$	2.8 2.3 0.5	290	177	558, 543 554, 044 4, 499	314, 806	
Nursery products, total Farms reporting a prod- uct of \$250 or over All other farms	27 15 12	0.5 0.3 0.2	212	86 	75, 544 74, 137 1, 407	42, 295	

<sup>1</sup> Does not include 276 farms, which reported that they had vegetable gardens, but gave no information as to their products.

In 1909 the total acreage of potatoes and other vegetables was 9,924 and their value \$1,045,000. Excluding (so far as reported separately 1) potatoes and sweet potatoes and yams, the acreage of vegetables was 5,275 and their value \$637,000, both acreage and value being greater than in 1899. The table distinguishes between farms which make the raising of vegetables a business of some importance (having produced vegetables valued at \$500 or more in 1909) and other farms, on most of which vegetables are raised mainly for home consumption. While there were in 1909 only 184 farms in the first class, they reported about two-fifths of the total acreage of vegetables and considerably more than one-half of the total value, the average acreage of vegetables per farm for these farms being 11.4 and the average value of products per acre \$171.

The raising of flowers and plants and of nursery products is also relatively important in Rhode Island, 502 acres being devoted to them in 1909, and the output being valued at \$634,000. Most of the product was raised on a few farms where these branches of agriculture were carried on as an important business.

Small fruits: 1909 and 1899.—Strawberries were by far the most important of the small fruits grown in Rhode Island, with cranberries ranking next in quantity and raspberries and loganberries next in value. The total acreage of small fruits in 1909 was 281 and in 1899,581, a decrease of 51.6 per cent. The production in 1909 was 438,000 quarts, as compared with 790,000 quarts in 1899, and the value \$43,000, as compared with \$51,000.

The following table shows data with regard to small fruits on farms:

port- ing, 1909	1909	1899	1909	
11	1000	1000		
545 69	281 140 16	581 154 17	437,560 326,540 17,875	\$43,033 31,712 1,927

	69 154 130	$\begin{array}{c cccc} 69 & 16 \\ 154 & 34 \\ 130 & 12 \\ 43 & 8 \\ 127 & 70 \end{array}$	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$

Orchard fruits, grapes, nuts, and tropical fruits: 1909 and 1899.—The following table presents data with regard to orchard fruits, grapes, nuts, and tropical fruits. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

<sup>1</sup> Expressed in bushels for orchard fruits, and pounds for grapes, nuts, and tropical fruits. <sup>2</sup> Included with "unclassified."

 Included with "unclassified."
 Consists of products not separately named by the enumerator, but grouped under the designation "all other."
 Includes English or Persian walnuts, pecans, black walnuts, butternuts, chestnuts, and hickory nuts.

The total quantity of orchard fruits produced in 1909 was 246,000 bushels, valued at \$198,000. Apples contributed about seven-eighths of this quantity; peaches and nectarines and pears most of the remainder. The production of grapes amounted to 153,000 pounds, valued at \$10,000, while that of nuts and of tropical fruits was relatively unimportant.

The production of all orchard fruits together in 1909 was 31.8 per cent less in quantity than in 1899, and that of grapes also decreased. The value of

<sup>&</sup>lt;sup>1</sup> It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

SELECTED FARM EXPENSES AND RECEIPTS.

orchard fruits, however, increased from \$156,000 in 1899 to \$198,000 in 1909, and that of grapes from \$4,736 in 1899 to \$9,759 in 1909. It should be noted in this connection that the values for 1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

The following table shows the quantities of the more advanced products manufactured by farmers from orchard fruits and grapes. Values were not called for on the schedule.

PRODUCT.		LMS RTING, 09	QUANTITY FBODUCED.			
PRODUCI.	Num- ber.	Percent of all farms.	Unit.	1909	1899	
Cider. Vinegar. Wine and grape juice. Dried fruits.	830 151 56	15.7 2.9 1.1	Gals Gals Gals Lbs	147,645 19,003 2,856	244, 918 22, 460 3, 503 801	

Sugar crops: 1909 and 1899.—Almost no attention is paid to the production of sugar crops in Rhode Island. There was no record of maple sugar or sirup in 1899, and the report of 1909 shows that only two farmers reported maple trees, from which they secured maple sirup. These farmers reported 13 gallons of maple sirup with a value of \$14. No reports of sugar beets grown were secured for 1899 and in 1909 only two farmers reported sugar beets as a separate product. Only 3 acres from which were secured 3 tons valued at \$40 were reported. The sugar beets

Farm expenses: 1909 and 1899.—The following table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899:

		1909		1899	INCREASE.		
EXPENSE.	Farms reporting.						
	Num- ber.	Percent of all farms.	Amount,	Amount.	Amount.	Per cent.	
Labor Feed Fertilizer	3,521 4,358 3,318	66.5 82.4 62.7	\$1,761,594 1,678,183 335,103	\$1,032,360 ( <sup>1</sup> ) 264,140	\$729, 234 70, 963	70, 6 26, 9	

#### <sup>1</sup> Not reported at the census of 1900.

About two-thirds of the farmers of the state hired labor, the average amount expended by those hiring being about \$500 for the year. Approximately onefifth of the amount reported as expended is in the form of rent and board. During the decade the total expenditure for labor increased 70.6 per cent. At prior censuses no tabulation was made of the number of farmers reporting expenditures for labor.

Over four-fifths of all Rhode Island farmers report some expenditure for feed, while more than

produced in this state are probably entirely used as root forage.

Forest products: 1909 and 1899.-The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in 1909." There were 2,346 farms in Rhode Island (44.3 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$312,022, as compared with \$195,472 in 1899, an increase of 59.6 per cent. Of the value in 1909, \$79,548 was reported as that of products used or to be used on the farms themselves, \$182,790 as that of products sold or for sale, and \$49,684 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Miscellaneous crops: 1909.—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 45 farmers in Rhode Island sold, during 1909, 126 tons of straw, for which they received \$1,997, and that 79 farmers sold 317 tons of cornstalks and leaves, for which they received \$2,155.

three-fifths report the purchase of fertilizer. The amount paid for fertilizer is about \$71,000 in excess of the amount expended in 1899, an increase of 26.9 per cent. The average amount paid by those farmers who bought fertilizer is about \$100 per farm.

Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

CROP.	FAI REPOI	ams Ating.	QUANTITY	Amount	
CAOF.	, Num- ber.	Percent of all farms.	Amount.	Unit.	received.
Total Corn Oats Barley. Hay and coarse forage	144 7 3 604	2.7 0.1 0.1 11.4	17,076 840 145 5,565	Bu Bu Bu Tons	<b>\$116,079</b> 15,544 053 150 99,732

While the total amount expended by Rhode Island farmers for the purchase of feed in 1909 was \$1,678,-000, the total receipts from the sale of feed by those reporting sales only amounted to \$116,000.

#### 486

## COUNTY TABLES.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products

大学を行って

of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

## SOUTH CAROLINA.

#### FARMS AND FARM PROPERTY.

South Carolina ranks twenty-sixth in population and thirty-eighth in land area among the states and territories of continental United States. Its surface, of which fully three-fifths is included within the Coastal Plain, rises from sea level to altitudes of 2,000 feet in the extreme northwestern portion of the state. The coast line is bordered by a series of low islands and by a broad strip of the Flatwoods portion of the Coastal Plain, which has in this state a width of 50 or 60 miles. In the central part of the state the higher and more rolling portions of the Coastal Plain where it borders upon the Piedmont section rise to altitudes of 300 and 3! J feet. The Piedmont section occupies nearly all the remainder of the state, with the exception of a small portion of mountainous country in the Appalachian division in the extreme northwestern counties. This section is rolling and well drained and rises from altitudes of about 350 feet along its eastern border to altitudes of 1,100 and 1,200 feet in the extreme western portion. The mountains in the extreme western portion of the state rise from chains having an altitude of about 1,200 feet to peaks of 2,000 feet.

Within the Flatwoods portion of the Coastal Plain the drainage is poor. The country rises at the rate of about 2 feet per mile from the coast line inland. Within this section the higher lying soils are chiefly fine sandy loams, and the lower lying soils consist of mucky loams and sandy loams. The inner and more rolling portions of the Coastal Plain have soils which are prevalently sands, sandy loams, and fine sandy loams possessing either a yellow or red sandy clay subsoil. The Piedmont section is occupied principally by gray, sandy, surface soils with a stiff red clay subsoil or by stiff red clay soils.

The two maps on the opposite page show, for the different counties, the proportion of the total land area of the state in farms and the average value of farm land per acre. Of the state's entire land area, over two-thirds (69.2 per cent) is in farms, and, as shown by the first map, in no county is the proportion less than 20 per cent. In only 1 county, Beaufort, is the percentage of farm land less than 40, while in 5 counties in the northwestern part of the state it is over 90 per cent. The proportion is 40 to 60 per cent in 10 counties, 9 located northeast of Beaufort, on or near the eastern boundary, and 1, Richland, in the central part of the state. Well distributed over the state are 16 counties in which the proportion is 60 to 80 per cent. In 11 counties, of which 9 are in the northwestern part of the state, 1 in the south central, and 1 in the north central, the proportion is between 80 and 90 per cent.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

NUMBER, AREA, AND VALUE OF FARMS.	1910	1900	INCREASE	.1

1 A minus sign (-) denotes decrease.

The average value of farm land per acre for the state as a whole is \$19.89. As shown by the second map, there are 26 among the 43 counties of the state in which the average value is \$10 to \$25 per acre. The average is less than \$10 per acre in 6 counties, 2 of which lie in the north central part of the state, 3 in the eastern part, and 1 in the southern part. The

average is \$25 to \$50 per acre in 10 counties, 4 in the northwestern part of the state and 6 in the eastern part. In Marlboro County alone, in the eastern part of the state, does the average value exceed \$50 per acre.

Between 1900 and 1910 there was an increase of 13.6 per cent in the number of farms in South Carolina, as compared with an increase of 13.1 per cent in the population. During the decade the total reported farm acreage decreased 3.4 per cent, while the acreage reported as improved increased 5.6 per cent. The increase in the number of farms and the decrease in total farm acreage brought about a decrease in the average size of farms, which was 90 acres in 1900 and 76.6 acres in 1910.

The total value of farm property, which includes that of land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), is \$392,128,000, an increase of 155.3 per cent since 1900. Land alone increased in value 169.3 per cent, compared with an increase of 137.8 per cent in the value of buildings, of 123.4 per cent in that of live stock, and of 112.8 per cent in that of live stock, and of 112.8 per cent in that of implements and machinery. In considering the increase of values in agriculture the general increase in the prices of commodities in the last 10 years should be borne in mind.

The average value of a farm, including its equipment, is \$2,223, an increase of 124.8 per cent since 1900. During the decade the average value of land per acre increased by \$12.75, and is now more than two and a half times what it was in 1900.

Population, number of farms, and farm acreage: 1850 to 1910.—The table following presents, for the state as a whole for each census from 1850 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

1 A minus sign (--) denotes decrease.

In the 60 years since 1850 the population of the state has increased by 846,893, or 126.7 per cent. The increase was less during each of the two decades between 1850 and 1870 than during any later decade, and was especially small during the decade 1860–1870. There has been a continuous increase in the number of farms reported since 1850. For the entire 60 years the number of farms increased from 29,967 to 176,434, or at a rate of 2,441 per year. Between 1890 and 1900 the rate of increase was 4,035 per year, while during the last decade the number increased at the rate of 2,108 per year.

The land surface of South Carolina is approximately 19,516,800 acres. Of this area, 13,512,028

acres, or 69.2 per cent, are included in farms, and of the farm acreage, 6,097,999 acres, or 45.1 per cent. are reported as improved land. A decrease of 472,986 acres, or 3.4 per cent, during the last decade is reported in the total acreage of farm land. Most of this decrease is more apparent than real. An error has been discovered in the figures as published for 1900 whereby Spartanburg County and the state as a whole were overcredited by 115,624 acres. Eliminating this error there is still a decrease of 357,362 acres reported in the total farm acreage for the state. The decline is especially noticeable in the coast counties from Horry to Beaufort, the total farm acreage reported in these counties in 1910 being less by 210,424 acres than that reported in 1900. In 1900 much land was reported to be in farms, although as a matter of fact it was woodland and other unimproved land not used for farm purposes. This land was not reported as in farms in 1910.

In 1850, 83.1 per cent of the total land area was in farms, and in 1860, 83 per cent; but during the next decade the farm acreage decreased and in 1870 was only 62 per cent of the total land area. This decline was due to the disastrous effects of the Civil War. In 1880, 69 per cent of the land area of the state was included in farms, and since that year the total farm acreage has varied but comparatively little. By 1890 the total farm acreage had fallen to 67.6 per cent of the land area, but advanced during the next decade to 71.7 per cent in 1900. Since 1850, with the exception of the Civil War decade, the improved acreage increased at each census, the proportion rising continuously from 25.1 per cent to 45.1 per cent. Between 1860 and 1870 the improved acreage decreased, and at a greater rate than did the total farm acreage, the proportion falling from 28.2 per cent to 24.9 per cent.

Values of farm property: 1850 to 1910.—The agricultural changes in South Carolina since 1850, as reflected in the values of the several classes of farm property, are shown in the table which follows:

			FAI	AM PRO	PERTY.			
CENSUS YEAR.			Land at building		Implem and machine		Domestic animals, poultry, and bees.	
			Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase. <sup>1</sup>	Value.	Per cent of increase.1

# A minus sign (-) denotes decrease. Computed gold values, being 80 per cent of the currency values reported.

The total wealth in the form of farm property is \$392,128,000, of which 84.9 per cent is represented by land and buildings, 11.5 per cent by live stock, and 3.6 per cent by implements and machinery. The total value of farm property increased during the last

10 years by \$238,537,000. Of this total increase, \$206,127,000 was contributed by land and buildings, \$24,932,000 by live stock, and \$7,479,000 by implements and machinery. The total absolute gain was more than seven times as great and the percentage gain nearly six times as great between 1900 and 1910 as during the decade immediately preceding.

From 1850 to 1860 the value of farm property rose considerably, but in 1870 it fell back to a point of less than half the value of 1850. The remarkable decrease recorded between 1860 and 1870 was due to the destructive effects of the Civil War. The increase in the value of all farm property since 1870 amounts to \$344,500,000, of which \$36,452,000 took place in the first decade under consideration, \$35,770,000 in the second, 1880 to 1890, and \$33,742,000 in the third. All classes have shown continuous and important increases during each decade since 1870, the increase during the last decade being considerably larger than during the three decades immediately preceding.

Except for the census of 1870 the proportions which the separate classes of farm property have formed of the total value have varied but little during the period covered by the table. In 1870 the proportion formed by land and buildings (75.3 per cent) was considerably lower, and the proportion formed by live stock (20.9 per cent) considerably higher, than the corresponding proportions at the other years.

Average acreage and values per farm: 1850 to 1910.—The changes which have taken place during the past 60 years in the average acreage of South Carolina farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

		AVE	AVERAGE VALUE PER FARM. <sup>1</sup>						
CENSUS YEAR.	Average acres per farm.	All farm property.	Land and buildings.	Imple- ments and ma- chinery.	Donrestic animals, poultry, and bees.	value of land and buildings per acre.			
1910. 1900. 1890. 1880. 1870 <sup>2</sup> . 1860. 1860. 1850.	76.6 90.0 114.6 143.4 233.3 488.2 541.2	\$2,223 989 1,042 896 918 5,117 3,391	\$1,887 816 862 732 691 4,210 2,751	\$80 43 36 34 35 185 138	\$256 130 144 130 192 722 503	\$24. 64 9. 06 7. 52 5. 10 2. 96 8. 62 5. 08			

<sup>1</sup> Averages are based on "all farms" in state. <sup>2</sup> Computed gold values, being 80 per cent of the currency values reported.

The average size of a South Carolina farm decreased continuously from 541.2 acres in 1850 to 76.6 acres in 1910, a rate of about 7.7 acres per year. In 1850 the "plantation" was the common farm unit in a large part of the state, as it had been during the first half of the century. The plantation still existed as a common farm unit in 1860 and had not disappeared entirely even in 1870. The relatively high average size of farms at those three censuses is largely accounted for by the fact that each plantation was reported as one farm. During the last 40 years most plantations have been divided gradually into smaller parcels of

land, operated largely by tenants. Each of these tenant holdings is reported as a farm and each tenant as a farmer, whether or not the owner of the property lives on the plantation or directs the operations. This accounts in large measure for the fact that the number of farms reported increased 240 per cent during the last 40 years, while the net increase in the amount of land in farms was only 11.6 per cent.

In the case of many plantations, although most of the land is now worked by tenants, each of whom is reported as a farmer and the land operated by him as a farm, yet there is supervision by the owner, so that, in a sense, the entire plantation may be said to constitute a single farm. The Bureau of the Census has recently made an investigation of the extent to which the plantation unit of farm management still prevails, the results of which will appear in a later report.

Bearing in mind the definition of a farm as it applies to conditions in South Carolina, it is to be noted that the average value per farm is \$2,223, of which \$1,887 represents the average value of land and buildings, \$256 that of live stock, and \$80 that of implements and machinery. This is far below the average in 1860, when the plantation system was at its height. At that time the average value per farm was \$5,117, of which the value of land and buildings was \$4,210, that of live stock \$722, and that of implements and machinery \$185. Between 1860 and 1870 the average for all classes declined greatly. Although farm property in the state as a whole has been advancing in value since 1870, the average value per farm decreased between 1870 and 1880, and again between 1890 and 1900. These decreases were due largely to the division of plantations into subdivisions operated by tenants. But while farms are smaller in size in 1910 than they were in 1900, the average value per farm increased greatly during the last decade. The average value of land and buildings per acre increased from \$5.08 in 1850 to \$8.62 in 1860, dropped to \$2.96 in 1870, advanced continuously and quite regularly to \$9.06 in 1900, and during the last 10 years has risen to \$24.64, a gain greater absolutely and relatively than that of any other period covered by the table.

Farm tenure: 1880 to 1910.—The next table shows the distribution of the farms of the state according to character of tenure at each census since 1880.

The number of all farms, and therefore of all farm operators, is 176,434. Of the operators, 64,350 are classified as owners, 863 as managers, and 111,221 as tenants. Owners and managers control over one-third of the farms of the state, tenants slightly less than two-thirds. Of the owners, 55,523 operate exclusively land owned by them, while 8,827 operate land which they rent in addition to that which they own. The tenants are further distributed according to the character of their tenancy; thus, 52,640 are share tenants, 2,326 share-cash, 50,268 cash, and for 5,987 no report relative to character of tenure was secured.

While the total number of farm operators increased from 93,864 in 1880 to 176,434 in 1910, an increase of 88 per cent, the number of tenants increased from 47,219 in 1880 to 111,221 in 1910, or 135.5 per cent. The percentage of tenants has increased during each decade since 1880, having risen from 50.3 per cent of all farmers in 1880 to 63 per cent in 1910. For the sake of comparison with the earlier figures the share and share-cash tenants of 1910 have been grouped together, and likewise the cash tenants and those of nonspecified tenure. It may be noted that the share group was larger in 1880 than the cash group, but has been smaller since 1890. The two groups were nearly equal at the census of 1910 and were nearly so in 1890, but in 1900 the share group was considerably smaller than the cash group, the former representing 24.4 per cent of all operators and the latter 36.7 per cent.

TENURE.	1910	1900	1890	1880
Number of all farms.	176, 434	155, 355	115,008	93, 864

Not reported separately.
 Share-cash tenants were doubtless largely included with share tenants in 1900, 1890, and 1890.
 Prior to 1910 nonspecified tenants were included with cash tenants.

The next table shows for white and colored farmers combined and for each class separately the total and improved acreage and the value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED BY-			IN F	ED LAND ARMS RES).	VALUE OF LAND AND BUILDINGS.			
B1	1910	1900	1910	1900	1910	1900		
All farmers Owners Munagers Tenants		8,227,679	2,800,778 141,806	2,761,175 173,856	185,703,312 11,286,139	5,109,210		
White Owners Managers Tenants	6,953,459 504,958	10, <b>192, 938</b> 7, <b>2</b> 65, 012 619, 590 2, 308, 336	2,261,431 126,932	2,291,853 160,641	10,305,245	64,883,180 4,736,450		
Colored Owners Managers Tenants	<b>3,940,476</b> 1,098,044 42,454 2,799,978	46,170	539, 347 14, 874	2, 273, 824 469, 322 13, 215 1, 791, 287	22,112,291 980,894	8,713,900 372,760		

The next table shows for white and colored farmers combined and for each class separately the per cent distribution by tenure groups of the items in the preceding table, and also of the number of farms.

It will be seen that, in 1910, 59.6 per cent of all land in farms was in farms operated by their owners (including part owners), 4.1 per cent in farms operated by managers, and 36.4 per cent in farms operated by tenants, the percentage for owners being higher and that for managers lower than in 1900, while the percentage for tenants remained the same.

			PI	ER CEN	I OF TOT.	AL.		
FARMS OPERATED BY	Number of farms.				Improv in fa		Value of land and buildings	
	1910	1900	1910	1900	1910	1900	1910	1900

Owners Managers Tenants		57.8 1.2 40.9	72.6 5.3 22.1	$71.3 \\ 6.1 \\ 22.6$	64.6 3.6 31.8	65.4 4.6 30.0	69.9 4.4 25.7	71, 5, 23, 23, 23, 24, 25, 25, 25, 25, 25, 25, 25, 25, 25, 25
Colored		100.0 22.2	100.0 27.9	100,0 25,4	100.0 20.8	100,0 20,6	100.0	100 24
Managers Tenants		0.2 77.6	1.1 71.1	$1.2 \\ 73.4$	0.6 78.7	0.6 78.8	1.0 76.7	1 74

Of all land in farms operated by white farmers, 72.6 per cent was in farms operated by their owners and 22.1 per cent in tenant farms, while of that in farms operated by colored farmers, 27.9 per cent was in farms operated by owners, and 71.1 per cent in tenant farms. The proportion of land in farms operated by owners increased between 1900 and 1910 for each class of farmers.

As shown by the table below, the average size of farms operated by managers in 1910 (634.3 acres) was more than five times as great as that of farms operated by owners (125.1 acres), which was in turn nearly three times as great as that of farms operated by tenants (44.2 acres). The average size of farms operated by managers increased between 1900 and 1910, while that of farms operated by owners and by tenants decreased. In 1910 the percentage of farm land improved was highest for tenant farms, and lowest for farms operated by managers.

	AVE	ACRES MM.	PER CENT OF FARM LAND IMPROVED.		AVERAGE VALUE OF LAND AND BUILDINGS.

The average size of farms operated by white farmers (120.2 acres) was nearly three times as large as that of

farms of colored farmers (40.7 acres); both classes of farms have decreased in size between 1900 and 1910. The proportion of land improved was larger for farms of colored farmers than for those of white farmers, being, respectively, 65.9 and 36.6 per cent of the total acreage of each class of farms.

Farm mortgages: 1890 to 1910 .- The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

	OWNED F	ARMS.1	OWNED HOMI		OWNED FARM HOMES. <sup>2</sup> 1890		
CLASS-	191	0	190	0			
	Number.	Per cent.3	Number.	Per cent.³	Number.	Per cent.	
Total. Free from mortgage Mortgaged Unknown	64,350 47,535 15,020 1,795	76.0 24.0	<b>58,461</b> 43,060 11,181 4,220	79.4 20.6	45,218 41,601 3,617	92.0 8.0	

Includes all farms owned in whole or in part by the operator.
 The 76 "owned farm homes" for which no reports were secured were distributed between "free from mortgaged" and "mortgaged" in 1890.
 Per cent of combined total of "free from mortgaged" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 64,350. Of this number 47,535 were reported as free from mortgage; 15,020 were reported as mortgaged; and for 1,795 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 24 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The percentage is much higher than it was in 1890 and somewhat higher than in 1900. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the numbers reported at the later censuses because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that between 1890 and 1900 the mortgaged farms increased in absolute number more than the number free from mortgage, but that during the last decade

' 79758°—13—32

the greater absolute increase occurred in the number free from mortgage, increasing by 4,475 and the number mortgaged by 3,839.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 15,020 farms reported as mortgaged, 12,432 are wholly owned by the farmers, and for 11,189 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARM HOMES MOI		INCREASE. <sup>1</sup>	
	1910 *	1890 <sup>3</sup>	Amount.	Per cent.
Number. Value—Land and buildings Amount of mortgage debt. Per cent of debt to value. Average value per farm. Average equity per farm	11, 189 \$39, 593, 747 \$10, 109, 072 25. 5 \$3, 539 \$903 \$2, 636	3, 617 \$6, 095, 107 \$3, 363, 679 50, 2 \$1, 851 \$930 \$921	\$1,688 -\$27 \$1,715	91.2 2.9 186.2

1 A minus sign (-) denotes decrease.
 \* Includes only farms consisting wholly of owned land and reporting value of farm and amount of debt.
 \* Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms decreased in the 20 years from \$930 to \$903, or 2.9 per cent. The average value of such farms, however, increased, the increase being from \$1,851 to \$3,539, or 91.2 per cent. Thus the owner's equity rose from \$921 in 1890 to \$2,636 in 1910, or 186.2 per cent. As a result of the greater relative increase in the total farm value than in the total farm debt, the mortgage indebtedness, which was 50.2 per cent of the value of the mortgaged farms in 1890, was only 25.5 per cent of this value in 1910.

Farms by size groups: 1910 and 1900 .- The next table shows the distribution of farms by size groups at the censuses of 1910 and 1900.

Two-fifths (40 per cent) of the farms in South Carolina are from 20 to 49 acres in size, nearly one-fifth (18.8 per cent) from 50 to 99 acres, and slightly more than one-eighth (13.4 per cent) from 10 to 19 acres. These three groups, which include all farms between 10 and 99 acres in size, contain more than seven-tenths of all the farms in the state. Nearly one-twelfth are under 10 acres in size, while the farms of 100 acres and over constitute about one-fifth of the total. A comparison of the distribution of farms by size groups discloses the fact that the greatest absolute and relative increase, amounting to 16,198 farms, and 29.8 per cent, occurred in the 20 to 49 acres group. Large gains were also made in the other size groups between 3 and 100 acres, the total increase in these groups amounting to 9,232 farms. The greatest relative decrease occurred in the number of places reported as farms of under 3 acres; the number of these is now reported as less than one-twentieth as great as 10 years ago. This decrease may be due to a different interpretation by the enumerators as to what constitutes a small farm, or may represent an actual decrease in that type of farm. There were decreases in the different groups exceeding 100 acres, amounting in all to 3,211 farms. Farms of less than 10 acres and those of over 50 acres constitute a smaller proportion of all farms in 1910 than in 1900.

<sup>1</sup> A minus sign (-) denotes decrease. <sup>2</sup> Less than one-tenth of 1 per cent.

Farms of 20 to 49 acres constituted the most numerous size group among the farms both of white and of colored farmers, forming 29.6 per cent in the former instance and 48.6 per cent in the latter; in the case of white farmers, the farms of 50 to 99 acres, with 23.7 per cent of the total, ranked next in importance, while among the colored farmers, the farms of 10 to 19 acres, constituting 16.7 per cent of the total, ranked second. Of the farms operated by colored farmers, 28.4 per cent were farms of less than 20 acres, as compared with 13.1 per cent of the farms of white farmers.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 37,985), and also the farms of between 175 and 499 acres (numbering 12,539):

Of the total farm acreage of the state in 1910, 24.8 per cent was in farms of 175 to 499 acres, and 18 per cent in farms of 100 to 174 acres, these two being from the standpoint of aggregate acreage the most important size groups. Between 1900 and 1910 there was an increase in the proportion of the total acreage which was in farms of each size group under 100 acres, and a decrease in the proportion in those of each group over 100 acres.

As shown by the next table, the percentage of farm land improved diminishes as the average size of the farms increases. For this reason and also because buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land also diminishes with the increase in the size of the farms; it is higher for the farms under 20 acres in size than for those of any other group.

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made to secure information concerning the nativity of farmers. The next table shows the color and nativity of farm operators by character of tenure for 1910.

Of the farmers in South Carolina, 79,636, or 45.1 per cent, were whites, and 96,798, or 54.9 per cent, nonwhites. All but 212 of the white farmers were native born. Of the nonwhite farmers, nearly all, 96,772, were negroes, only 25 being Indians, and 1 Chinese. Among the native white farmers, 43.9 per cent were tenants, as compared with only 30.2 per cent among the very small number of foreign-born whites. Among nonwhite farmers the tenants constituted more than threefourths (78.8 per cent) of the total number.

**Domestic animals on farms: 1910.**—The census of of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and, on the other hand, a considerable number of older animals are slaughtered or die during the same period the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this bulletin, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

Of the total number of farms enumerated, 162,846, or 92.3 per cent, report domestic animals of some kind, 13,588 being without any domestic animals.

Cattle are reported by 68 per cent of all farms, "dairy cows" by 61.9 per cent, and "other cows" by 14.4 per cent. The farms reporting "dairy cows" show an average of less than two per farm, whereas the average number of "other cows" per farm reporting that class is about three. The number of cows and heifers increased materially during the decade.

The census of 1900 was taken as of June 1, after all the spring calves were born, while that of 1910 was taken as of April 15, before the close of the calving season and when the calves on hand were on the average younger than at the enumeration of 1900. As a result, the calves enumerated were fewer in number in 1910 than in 1900, dccreasing from 87,734 to 48,291. In spite of the younger age of calves, the average value per head is \$0.54 greater than in 1900.

Horses are reported by 33.2 per cent of all the farmers in the state, but only 1.1 per cent report colts born in 1909, and 0.4 per cent report spring colts. The average value of mature horses is more than double that reported in 1900. Mules are reported by 55.4 per cent of all farms, and are about twice as numerous as horses. Their average values are higher than those of horses

Of the 212 foreign-born white farmers in South Carolina in 1910, 101 were born in Germany. Other European countries were represented by a total of 99 farmers, and non-European countries by 12.

1910	and subscription in the				
Goats	3,175	1.8	24, 750	27,728	1. 12

<sup>1</sup> Less than one-tenth of 1 per cent.

Sheep are reported from only 1,731 farms, or 1 per cent of all the farms in the state. Of these 1,731 farms, 59.8 per cent report spring lambs, the number of the latter being equal to 43.1 per cent of the number of ewes. Ewes are reported on all but 127 of the farms reporting sheep, and for the farms reporting the average number is 14. The average flock in the state, including all classes, is 22 sheep.

Of all farms, 69.1 per cent report swine, the average number being over five per farm reporting. The average value of the swine reported as "hogs and pigs born before January 1, 1910," is \$5.11, while that of spring pigs is \$1.62.

Poultry on farms: 1910 and 1900.—The number of fowls on South Carolina farms increased from 2,908,000 to 2,946,000, or 1.3 per cent, during the last decade, while the value increased \$317,000, or 35.6 per cent. The number of farms reporting poultry show an increase of 14,454, or 10.9 per cent. Decreases in the numbers of turkeys, ducks, and geese are offset by the increase in chickens, which class represents over ninetenths of the number and 85.9 per cent of the value of all fowls. The value of poultry and number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value, and the number of farms reporting each kind in 1910:

-						
		1900 (June 1)				
KIND.	Farms rep	oorting.		-	Number of fowls.	
	Number.	Percent of all farms.	Number of fowls.	Value.

1 Included with chickens. \* Not reported. \* Less than one-tenth of 1 per cent.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has decreased from 16,272 in 1900 to 12,528 in 1910, or 23 per cent. The number of colonies of bees decreased from 93,958 to 75,422, or 19.7 per cent, and their value decreased from \$142,677 to

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not be calculated from the census returns. Even if this value could be ascertained and were added to

\$134,622, or 5.6 per cent. The average value per colony was \$1.78 in 1910, as against \$1.52 in 1900. The average value of bees per farm reporting was \$8.77 in 1900 and \$10.75 in 1910. About seven farms in every hundred report bees.

Domestic animals not on farms: 1910.—Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table below age groups are omitted for the sake of brevity.

	Number	ANIMALS.				
KIND.	of in- closures reporting.	Number.	Value.	Average value,		
Total	14, 414 13, 615 8, 645 1, 906 43 5, 914 36	$\begin{array}{r} 22,396\\ 16,231\\ 14,517\\ 5,474\\ 54\\ 13,017\\ 369\\ 1,044 \end{array}$	\$3,790,112 (57,490 (580,478 2,157,501 889,082 5,836 (75,953 1,100 3,144	$\begin{array}{c} \$29.36\\ 35.76\\ 148.62\\ 162.42\\ 108.07\\ 5.83\\ 2.98\\ 3.01\\ \end{array}$		

Horses are by far the most important class of domestic animals not on farms when value is considered, but the number of cattle (including dairy cows) and of dairy cows is greater than the number of horses.

Domestic animals on farms and not on farms: 1910.— The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

			DOMESTIC	ANIMALS,			
KIND.	Total. Num- ber. Value,		Total. On farms.			Not on farms.	
			Num- ber.	Value.	Num- ber.	Value.	
Total. All cattle. Dairy cows. Horses. Mules. Asses and burros Swine. Sheep. The total value of all domestic animals in the state in 1910 was \$47,580,000, of which the value of animals not on farms constituted 8 per cent. The value of mules constituted more than one-half of the total.

#### LIVE STOCK PRODUCTS.

the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to live stock.

Dairy products: 1909 and 1899.—The next tableshows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899.

The number of farms reporting dairy cows on April 15, 1910, was 109,179, but only 79,959 reported dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 78,779 (somewhat less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 134,000. The amount of milk reported was 37,362,000 gallons; assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 278 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

Butter sold			1,103,637	Lbs Lbs	195,939 50	0.18

<sup>1</sup> Less than one-tenth of 1 per cent.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented, comprising the reported value of milk and cream sold as such and sold as butter fat and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$2,801,000, which may be defined as the total value of dairy products exclusive of milk and cream used on the farm producing.

Only a small proportion of the milk reported as produced by South Carolina farmers in 1909 was sold as such. The butter made on farms in 1909 was valued at \$2,563,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material increase between 1899 and 1909 in the amount of butter made, and also a large relative increase in the production of cheese, which, however, is still unimportant.

Wool: 1909 and 1899.—The next table gives statistics as to the production of wool on farms, the figures being partly based on estimates:<sup>1</sup>

					Contract of the second second second		
	Num- ber of farms report- ing.			WOOL PRODUCED.			
		of shearing age.	Fleeces (num- ber).	Weight (pounds).	Value.

April 15, 1910 On other farms Total production of wool (partly estimated): 1909	1,669 849 813 30	27, 926  16, 676	17, 321 16, 820 501 28, 167	53, 439 51, 844 1, 595 86, 819	\$12, 581 12, 201 380 20, 432		
1899 Decrease, 1899 to 1909. Per cent of decrease			23, 107 55, 233 27, 066 49, 0	175,290 88,471 50.5	20, 432 31, 537 11, 105 35, 2		

The total number of sheep of shearing age in South Carolina on April 15, 1910, was 27,926, representing a decrease of 46.7 per cent as compared with the number on June 1, 1900 (52,436). The approximate production of wool during 1909 was 28,167 fleeces, weighing 86,819 pounds and valued at \$20,432. Of these totals, about two-fifths represent estimates. The number of fleeces produced in 1909 was 49 per cent less than in 1899. The average weight per fleece in 1909 was 3.1 pounds, as compared with 3.2 pounds in 1899, and the average value per pound was 24 cents, as compared with 18 cents in 1899.

Goat hair and mohair: 1909.—Although 3,175 farmers reported 24,750 goats and kids on April 15, 1910, only 11 reported the production of goat hair or mohair during 1909. These farmers reported 196 fleeces, weighing 486 pounds and valued at \$128.

<sup>&</sup>lt;sup>1</sup> Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 856 farmers who reported the possession of 11,250 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deliciency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

Foultry products: 1909 and 1899.—The statement below gives data relative to the production and sale of eggs and poultry:

	Number	Number	PROD	UCT.
	of farms reporting.	of fewls on hand.	Quantity.	Value.

rowis sour, as reported, 1908	00,000		1,004,100	1 201,000

The total number of fowls on South Carolina farms on April 15, 1910, was 2,946,000. Of the 146,855 farms reporting fowls, 24,534 did not report any eggs produced in 1909 and 23,756 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 9,722,000 dozens, valued at \$1,903,000. According to the Twelfth Census reports the production of eggs in 1899 was 9,008,000 dozens, the value being \$926,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 11,049,000 dozens, valued at \$2,163,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 8,811,000 fowls, valued at \$2,548,000.

Honey and wax: 1909.—Although, as noted elsewhere, 12,528 farms reported 75,422 colonies of bees on hand April 15, 1910, 5,326 of these farms, with 17,838 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 653,119 pounds of honey,

Summary: 1909 and 1899.—The next table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of

valued at \$75,941, and 12,440 pounds of wax, valued at \$2,995; the true totals are doubtless somewhat above these figures.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The following statement presents statistics relating to the sale or slaughter of domestic animals by South Carolina farmers during the year 1909, with certain items for 1899:

	FAR REPOR		Number	VALUI	e <b>.</b>
,	Num- ber.	Percent of all farms,	of animals.	Total.	A ver- age.

1899—All domestic animals: Sold <sup>2</sup>	 	 		823, 554 2, 730, 079	

Less than one-tenth of 1 per cent.
 Schedules called for receipts from sales of animals raised on the farms reporting.

The total value of domestic animals sold during 1909 was \$2,430,000 and that of animals slaughtered on farms \$4,360,000, making an aggregate of \$6,791,000. This total involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented somewhat less than one-half of the total value of animals sold, and the value of mules sold represented about one-fourth of the total.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting, and the total value of those slaughtered during 1899, which amounted, respectively, to \$824,000 and \$2,730,000. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting.

### CROPS.

the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.")

## A minus sign (-) denotes decrease. Per cent not calculated when base is less than 100.

Less than one-tenth of 1 per cent.
 Includes value of raisins and other dried fruits, wine, cider, vinegar, etc.

The total value of crops in 1909 was \$141,983,000. Of this amount, 96 per cent was contributed by crops for which the acreage, as well as the value, was reported, the remainder consisting of the value of byproducts (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 5,152,845, representing 84.5 per cent of the total improved land in farms (6,097,999 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

The general character of South Carolina agriculture is indicated by the fact that about two-thirds (67.9 per cent) of the total value of crops in 1909 was contributed by cotton, and more than one-sixth (17.9 per cent) by cereals. The remainder, representing 14.2 per cent of the total, consisted mostly of potatoes and other vegetables, forest products, and hay and forage.

The total value of crops in 1909 was 141.1 per cent greater than in 1899, this increase being no doubt due in part to higher prices. There was an increase of 9.1 per cent in the total acreage of crops for which acreage was reported, the greatest absolute increases being those in the acreage of cotton, grains and seeds, other than cereals, and hay and forage, while the acreage of cereals showed a material decrease.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The next table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, tobacco, cotton, and sundry minor crops.

The leading crops covered by the table, in the order of their importance as judged by value, are cotton, \$80,338,000; corn, \$20,683,000; cotton seed (estimated), \$16,043,000; oats, \$3,809,000; hay and forage, \$3,189,000; sweet potatoes and yams, \$2,607,000; and tobacco, \$2,124,000. It should be noted, however, that vegetables, other than potatoes and sweet potatoes and yams, are more important than hay and forage, sweet potatoes and yams, or tobacco; the statistics are given in another table.

<sup>1</sup> Includes small amounts of soy beaus, flaxsed, and sorghum cane seed. <sup>2</sup> A considerable part of this acreage is probably a duplication of other farm

acreage. \* The entire acreage from which these seeds were secured is believed to be included in the acreage given elsewhere for hay and forage crops, flowers and plants, etc. 4 Includes small amount of broom corn. In acreage the combined cereals are slightly more than three-fourths that of cotton, while in value they are less than one-third as great. The leading cereal is corn, which both in acreage and value forms about four-fifths of the total for the combined cereals. Of the cereals comprising the remaining fifth, oats, wheat, and rough rice are the most important, both in acreage and value.

Among the hay and forage crops "grains cut green" are of the most consequence, both in acreage and value. This crop constitutes about three-fourths of the acreage and value of the entire crop. Of the others, only "other tame or cultivated grasses" and "coarse forage" are worthy of mention.

From both an acreage and value viewpoint, cotton stands out most prominently among the crops of the state. In acreage it is considerably greater than the combined acreages of all other crops here reported, and in value it is almost two and one-half times as great as their combined values. In value only are sweet potatoes and yams, tobacco, and potatoes important, and together their value is only about onefifth as great as the combined cereals. In acreage and value dry peas are also worthy of notice.

The fluctuations in the acreages of some of the principal crops during the past 30 years are shown in the following table:

	ACRES HARVESTED.									
CROP YEAR.	Corn.	Oats,	Wheat.	Hay and forage.	Sweet potatoes and yams.	Cotton.				
1909 1899 1880 1879	1, 565, 832 1, 772, 057 1, 345, 990 1, 303, 404	324, 180 222, 544 308, 056 261, 445	43,028 174,245 115,510 170,902	209,767 106,124 29,132 2,837	48, 878 48, 831 46, 086 39, 059	2, 556, 467 2, 074, 081 1, 987, 469 1, 364, 249				

Cotton shows an uninterrupted increase throughout the period, having almost doubled in acreage since 1879. Corn increased its acreage somewhat from 1879 to 1899, but fell off slightly during the last decade. The acreage of oats shows a substantial increase for the first decade, 1879–1889, a corresponding decrease for the second, and a marked increase in the third. Hay and forage from an insignificant acreage in 1879 shows a marked and rapid increase for the period. Though sweet potatoes and yams show an increase for the period and for each decade, the increases have become smaller for each succeeding decade. Wheat, after falling in 1889, a little more than recovered in 1899, but has now decreased to an acreage only one-fourth as great.

The next table shows for 1909 and 1899 the percentage which the farms reporting specified crops represented of all farms, the percentage of improved land devoted to these crops, and the percentage of increase or decrease in the acreage of each crop during the decade, together with the average yields and average values per acre for 1909.

Out of every 100 farmers, cotton is reported by 90; corn, by 89; sweet potatoes and yams, by 50; oats, by 33; hay and forage, by 20; and wheat, by 6. Of the crops here named cotton and oats are the only ones reported from a larger percentage of the farms in 1909 than in 1899. In this connection it is worthy of note that the percentage of farms reporting hay and forage decreased during the decade from 56.5 per cent to 19.5 per cent. This decrease is more apparent than real and is due to the omission of "cornstalks" at the census of 1910. Hence the percentages for the periods 1899 and 1909 are not comparable.

CROP.	PER CENT OF FARMS REPORTING.		PER CE IMPRO LAI	OVED	Percent of in- crease in acres,	AVERAGE YIELD PER ACRE.	AVERAGE VALUE PER ACRE.
	1909	1899	1909	1899	1899 to 1909.1	1909	1909

1 A minus sign (-) denotes decrease.

The six crops included in the above table cover about 78 per cent of the improved land. Oats, hay and forage, and cotton show increases, corn and wheat decreases in the proportion of improved land occupied, as compared with the previous decade, while sweet potatoes and yams occupy the same percentage in 1909 as in 1899. The decrease in the acreage of the combined cereals is 295,355 acres, or 13.1 per cent; the increase in hay and forage, 103,643 acres, or 97.7 per cent.

The average value per acre of the combined cereals is \$13.01, corn being but slightly above this average, oats and wheat below it. The average value per acre of hay and forage exceeds that of the combined cereals by \$2.19, while that of cotton is almost two and a half times as great.

Cotton shows a marked increase in acreage throughout the state. All counties show increases with the exception of the adjacent counties (Laurens, Union, Chester, and Fairfield), forming a group to the northwest of the center of the state. With the exception of Orangeburg and Barnwell Counties in the lower part of the state, the leading counties in the acreage of cotton, Anderson, Laurens, Spartanburg, and Abbeville, are found in the western and northwestern portions. These four counties report more than one-sixth of the total acreage. In the acreage of corn but one county, Horry, shows an increase. As a rule the largest acreages are found in those counties lying along the Savannah River and two others situated in the northwestern portion of the state, although Orangeburg County, near the center, reports the largest acreage for a single county. Three counties, Orangeburg, Aiken, and Barnwell, forming a group just to the southwest of the center of the state, report almost one-seventh of the total corn acreage. In the acreage of oats, as if in contrast with that of corn, but

one county, Marlboro, shows a decrease. Except in Orangeburg and Sumter Counties the most important acreages are reported from those counties lying in the northwestern quarter of the state. Nearly one-fifth of the total acreage is reported from four counties, Edgefield, Saluda, Newberry, and Greenwood, lying mainly in the valley between the Saluda and Broad Rivers. In the acreage of hay and forage only two counties, Lancaster and Fairfield, show decreases. The increases are quite evenly distributed throughout the state, the largest actual increase being reported for Clarendon County. Nearly all of the important acreages of sweet potatoes and yams are reported from the coast counties, Beaufort, Colleton, Charleston, and Horry. These four counties together report almost one-fourth of the total acreage. Tobacco is reported almost wholly from the counties in the northeastern quarter of the state. For Horry County, in the extreme northeastern corner, the greatest acreage is reported--more than one-sixth of the total crop. Considerably more than one-fourth of the acreage of dry peas is recorded for a group of three counties, Barnwell, Aiken, and Orangeburg, to the southwest of the center of the state. In the case of potatoes, as with that of sweet potatoes and yams, the important acreages are reported for the counties along the Atlantic seaboard, almost one-half of the total acreage being reported for the coast counties, Beaufort, Colleton, and Charleston. In the acreage of rough rice there is an immense decrease throughout the entire state.

Vegetables, flowers and plants, and nursery products: 1909 and 1899.—The table which follows shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products.

In 1909 the total acreage of potatoes and other vegetables was 109,482 and their value \$6,922,021. Excluding (so far as separately reported<sup>1</sup>) potatoes and sweet potatoes and yams, the acreage of vegetables was 51,994 and their value \$3,706,000, both acreage and value being decidedly greater than in 1899. The table distinguishes between the farms which make the raising of vegetables a business of some importance (having produced vegetables valued at \$500 or more in 1909) and other farms, on most of which vegetables are raised mainly for home consumption. There were in 1909 only 327 farms in the first class representing nearly one-fifth of the total acreage of vegetables and more than one-fifth of the total value, the average acreage of vegetables per farm for these farms being 28.2 and the average value of product per acre \$86.43.

The raising of flowers and plants and of nursery products was comparatively unimportant in South Carolina, only 44 acres being devoted to them in 1909, and the total output being valued at \$56,503. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

<sup>1</sup> Does not include 19,697 farms which reported that they had vegetable gardens, but gave no information as to their products. <sup>2</sup> Less than one-tenth of 1 per cent.

Small fruits: 1909 and 1899.—The following table shows data with regard to small fruits on farms:

CBOB	Number of farms	ACRES.		Quantity	Voluo	
CROP.	report- ing, <b>1909</b>	1909	1899	(quarts), 1909	Value, 1 <b>909</b>	
Small fruits, total Strawberries and dewberries Blackberries and loganberries Currants Gooseberries Other berries	1,383 675 79 30 5	856 815 38 2 1 ( <sup>1</sup> )	591 499 39 4 2 (*) 47	1,408,099 1,337,208 64,754 4,955 999 183	\$113,254 108,938 3,710 477 102 27	
<sup>1</sup> Reported in small f	, ractions		1 T.ess	than 1 acre.		

Strawberries are by far the most important of the small fruits raised in South Carolina. The total acreage of small fruits in 1909 was 856, as compared with 591 in 1899, an increase of 44.8 per cent. The production in 1909 was 1,408,000 quarts, as compared with 959,000 quarts in 1899, and the value was \$113,254 in 1909, as compared with \$59,486 in 1899.

Orchard fruits, grapes, nuts, and tropical fruits: 1909 and 1899.—The next table presents data with regard to orchard fruits, grapes, nuts, and tropical fruits. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

The total quantity of orchard fruits produced in 1909 was 1,133,000 bushels, valued at \$956,000. Peaches and nectarines contributed considerably more than one-half of this quantity and apples most of the remainder. The production of grapes in 1909 amounted to 2,016,506 pounds, valued at \$SS,620; that of nuts

<sup>&</sup>lt;sup>1</sup> It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

to 376,013 pounds, valued at \$26,888; while the tropical fruits produced were valued at \$49,778.

<sup>1</sup> Expressed in bushels for orchard fruits and in pounds for grapes, nuts, and figs. <sup>2</sup> Included with "unclassified."

<sup>2</sup> Included with "unclassified."
 <sup>3</sup> Consists of products not separately named by the enumerator, but grouped under the designation "all other."
 <sup>4</sup> Includes hickory nuts, chinquapins, chestnuts, Japanese chestnuts, Japanese walnuts, hazelnuts, almonds, Brazil nuts, butternuts, and other nuts.
 <sup>5</sup> Includes oranges, lemons, pomeloes (grapefruit), pomegranates, and Japanese presimment.

persimmons.

The production of all orchard fruits together in 1909 was 162.1 per cent more in quantity than that in 1899, while the production of grapes decreased materially. The value of orchard fruits increased from \$273,000 in 1899 to \$956,000 in 1909, and that of grapes from \$82,706 in 1899 to \$88,620 in 1909. It should be noted in this connection that the values for 1899 include the value of more advanced products derived from orchardfruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

The following table shows the quantities of the more advanced products manufactured by farmers from orchard fruits and grapes, Values were not called for on the schedule.

	REPOR	ims ting, 09	QUANTITY PRODUCED.

\* Less than one-tenth of 1 per cent.

<sup>3</sup> Includes cane used as coarse forage. <sup>4</sup> Includes cane reserved for seed.

Forest products: 1909 and 1899.-The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount received from sale of standing timber in 1909." There were 76,738 farms in South Carolina (43.5 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$4,513,092, as compared with \$1,915,280 in 1899, an increase of 135.6 per cent. Of the value in 1909, \$3,092,453 was reported as that of products used or to be used on the farms themselves, \$1,060,644 as that of products sold or for sale, and \$359,995 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Miscellaneous crops: 1909.—Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 212 farmers in South Carolina sold, during 1909, 1,110 tons of straw, for which they received \$7,406, and that 1,607 farmers sold 1,725 tons of cornstalks and leaves, for which they received \$27,222.

## SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899.

		1909		1899	INCREASE.		
EXPENSE.	Farms reporting.						
	Number.	Per cent of all farms.	Amount.	Amount.	. Amount.	Per cent.	
Labor Feed Fertilizer	69, 491 40, 130 140, 303	39.4 22.7 79.5	\$10, 770, 758 1, 830, 815 15, 162, 017	\$6,107,100 ( <sup>1</sup> ) 4,494,410	\$4,663,658 10,667,607	76. 4 237. 3	

1 Not reported at the census of 1900.

Of the farmers in South Carolina, nearly two-fifths (39.4 per cent) hire labor, and the total expenditure is \$10,771,000, or an average of about \$155 per farmer hiring. Of the total amount reported expended, \$1,419,000, or more than one-eighth, is in the form of rent and board. During the decade 1899 to 1909 the total expenditure for labor increased \$4,664,000, or 76.4 per cent. For no census prior to 1910 were reports secured of the value of rent and board furnished, or tabulation made of the number of farmers reporting expenditure for labor.

Nearly four-fifths (79.5 per cent) of all the farmers report the purchase of fertilizer, while 22.7 per cent report some expenditure for feed. The total amount,

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair); also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the crop year 1909.

Table 5 gives statistics relating to selected farm ex-

\$15,162,000, reported as paid for fertilizer shows an increase of \$10,668,000, or 237.3 per cent, since 1899, and now averages \$108 per farm reporting. No tabulation was made of the number of farmers reporting expenditures for fertilizer at prior censuses. The expenditure for feed amounted to \$1,831,000, and averages \$45.62 per farm reporting.

Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

	FAR REPOR		QUANTIT			
CROP.	Number.	Per cent of all farms,	Amount	Unit.	Amount received.	
Total Corn Oats Barley Hay and coarse forage	11,434 3,575 9 3,595	6.5 2.0 ( <sup>1</sup> ) 2.0	689, 947 388, 213 434 12, 141	Bu Bu Bu Tons	\$1, 164, 874 086, 274 272, 054 519 206, 027	

<sup>1</sup> Less than one-tenth of 1 per cent.

While the total amount expended by South Carolina farmers for the purchase of feed in 1909 was \$1,831,000, the total receipts from the sale of feed by those reporting sales amounted to \$1,165,000.

## COUNTY TABLES.

penses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910.

Changes in 1900 figures.—After the volumes of the Twelfth Decennial United States Census (1900) had been printed a further detailed study and analysis of the data there presented brought to light certain errors in the total farm acreage of Spartanburg County. The corrected acreage is 435,525, and not 551,149 as shown in the county tables.

Change of boundaries.—In comparing the data secured in 1910 with those of 1900 the following changes in county boundaries should be considered: Calhoun was organized from parts of Lexington and Orangeburg in 1908; Dillon was organized from a part of Marion in 1910; Lee was organized from parts of Darlington, Kershaw, and Sumter in 1902; a part of Lexington was annexed to Newberry in 1901; a part of Berkeley was annexed to Orangeburg in 1910; and a part of Williamsburg was annexed to Florence in 1905.

# PER CENT OF LAND AREA IN FARMS, AND AVERAGE VALUE OF FARM LAND PER ACRE, IN SOUTH DAKOTA, BY COUNTIES: 1910.

#### PER CENT OF LAND AREA IN FARMS.

#### [Per cent for the state, 52.9.]

The per cent of land area in farms, when less than 20, is inserted under the county name.

(522)

# SOUTH DAKOTA.

#### FARMS AND FARM PROPERTY.

South Dakota ranks fourteenth in land area and thirty-sixth in population among the states and territories of continental United States. The state of South Dakota lies in the northwestern portion of the great Mississippi Basin. The lowest altitudes within the limits of the state are found in the extreme southwestern counties within the alluvial bottoms of the Missouri River. The eastern portion of the state consists of a high, rolling plateau which has been heavily glaciated, and whose elevations range from 1,200 to 1,800 feet above sea level. West of the Missouri River the surface of the state consists of the rolling and somewhat dissected area of the residual prairies, which attain to increasing altitudes toward the margin of the Black Hills. The latter constitute the highest elevations within the state, attaining to altitudes in excess of 7,000 feet. The Missouri River and its principal tributaries are bordered by narrow alluvial bottoms. Four-fifths of the entire area of the state lies between altitudes of 1,000 and 3,000 feet above sea level. The soils of the glaciated plateau region, comprising the eastern two-fifths of the state, are derived from a layer of glacial till, which varies in thickness from a few feet to more than 200 feet. These soils are largely brown

or yellow silt loams and loams well suited to the production of the grains and grasses. The surface is undulating to rolling and usually well drained.

In the extreme southeastern portion of the state a small portion of the glaciated upland has been covered by the soft silty deposit known as the loess, giving rise to brown silty loams, suited to general farming and to the raising of apples.

West of the Missouri River the soils consist of sandy loams, loams, clay loams, and heavy clays, derived through the weathering of the underlying shales and sandstones. The Black Hills region consists of a mountainous uplift within which only a few narrow valleys are suited to any agricultural purposes.

Throughout the state the precipitation is sufficient for growing grain crops without irrigation, the normal annual rainfall in the section west of the Missouri River being 15 to 20 inches. Irrigation is practiced to a considerable extent in the vicinity of the Black Hills.

Progress during the decade 1900 to 1910.—The following table summarizes for the state the more significant facts relating to population and land area, the number, value, and acreage of farms, and the value of all other farm property in 1910 and 1900:

	1910	1900	INCREASE	L <sup>1</sup>
NUMBER, AREA, AND VALUE OF FARMS.	(April 15)	(June 1)	Amount.	Per cent.
Population. Number of all farms. Approximate land area of the stateacres.	583, 888 77, 644 49, 195, 520	401, 570 52, 622 49, 195, 520	182, 318 25, 022	45. 4 47. 6

#### 1 A minus sign (--) denotes decrease.

NOTE.—Ranges or ranches using the public domain for grazing purposes, but not owning or leasing land, were counted as farms in 1910 and 1900. They were included as owned or managed, free from morigage, and under 3 acres in size. The counting of these ranges as farms affects all totals, averages, and percentages in which the number of farms is a factor. In 1910 there were 63 such ranges included as farms.

The two maps on the opposite page show, by counties, the proportion of the total land area which is in farms, and the average value of farm land per acre. In both of these respects the part of the state west of the Missouri River, which divides the state into two pearly equal sections, differs decidedly from the part east of that river. West of this river 9 counties have less than 20 per cent of their land in farms, 9 from 20 to 40 per cent, 4 from 40 to 60 per cent, and but 1, Gregory, bordering on the river, more (523) than 60 per cent. East of the river the proportion of land in farms averages much higher, rising in 4 counties to 95 per cent and over, and in 15 others to between 90 and 95 per cent.

The average value per acre of farm land in every county west of the river, except Gregory, is less than \$25, while east of the river the average value is below this amount in but 5 counties, and in 14 counties is between \$50 and \$75. Because of the essentially different types of land and the somewhat dissimilar types of agricultural operations carried on in these two parts of the state, the percentages and averages given in the several summary tables throughout this bulletin can not be relied upon as revealing a general condition or movement throughout the state. Statistics for separate portions of the state are shown by the county tables at the close of this bulletin.

Unlike the older states, South Dakota shows for the past decade a greater relative increase in number of farms than in population, the number of farms increasing 47.6 per cent, and the population 45.4 per cent. The acreage in farms increased 36.4 per cent, and the acreage of improved land 40.2 per cent. The average size of farms decreased from 362.4 to 335.1 acres.

Farm property, which includes land, buildings, implements and machinery, and live stock (domestic animals, poultry, and bees), had increased in value \$868,572,000, or 291.9 per cent. This increase was chiefly made up of increases of \$713,400,000 in the value of land and of \$71,548,000 in the value of buildings. There has also been an increase of \$83,-624,000 in the value of farm equipment, which includes implements and machinery and live stock, of which about three-fourths represents the gain in the value of live stock, although a greater relative gain occurred in the value of implements and machinery. In considering the increase of values in agriculture the general increase in the prices of all commodities in the last 10 years should be borne in mind.

The average value of a farm with its equipment in 1900 was \$5,654, while 10 years later it was \$15,018. The average value of land per acre more than trebled, rising from \$9.92 in 1900 to \$34.69 in 1910, this advance being accompanied by increases in the average value per farm of implements and machinery and of live stock.

Irrigation.—Of the 77,644 farms in the state, 500, or 0.6 per cent, were reported as irrigated in 1909. The acreage reported as irrigated in 1909 was 63,248 acres, or 0.4 per cent of the improved land in farms. The area to which enterprises existing in 1910 were capable of supplying water was 128,481 acres, and the total acreage included in irrigation projects, completed or under way, in 1910 was 201,625 acres.

Population, number of farms, and farm acreage: 1890 to 1910.—In the 20 years since 1890 the population of the state has increased 235,288, or 67.5 per cent. Over three-fourths of this increase occurred during the last decade. The number of farms increased very rapidly during the last decade, advancing from 52,622 in 1900 to 77,644 in 1910, an average of 2,502 a year, which is more than ten times as large as the average increase per year during the preceding decade.

The land surface of South Dakota is approximately 49,195,520 acres. Of this area, 26,016,892 acres, or 52.9 per cent, are included in farms, and of this farm acreage, 15,827,208 acres, or 60.8 per cent, are reported as improved land, representing 32.2 per cent of the total land area of the state. In both the last decade and that preceding the acreage of improved land increased at a rate about the same as that of the increase in the total farm acreage, so that the proportion improved has varied but little since 1890.

The table following presents, for the state as a whole for each census from 1890 to 1910, inclusive, a statement of the total population, the number of farms, and the acreage of farm land and of improved land in farms. It also gives the percentage of the land area in farms, the percentage of farm land improved, and the percentage of increase during each decade in the number of farms and in the land in farms.

		FARMS,		LAN	D IN FA	RMS,	Bor	Per
CENSUS	Popu-		Per	All land.			Per cent of land	cent of farm
YEAR.	lation.	Num- ce ber. of	cent of in- crease.	Acres.	Per cent of in- crease.	Improved land (acres).	area in farms.	land im- prov- ed.
1910 1900 1890 <sup>1</sup>	583, 888 401, 570 348, 600	77, 644 52, 622 50, 158	47.6 4.9	26,016,892 19,070,616 11,396,460	36.4 67.3	15,827,208 11,285,983 6,959,293	52.9 38.8 23.2	60.8 59.2 61.1

<sup>1</sup> Dakota territory prior to 1890. In 1880 the territory had 185,177 population; 17,435 farms; and 3,800,656 acres in farm land, of which 1,150,413 acres were reported as improved.

Values of farm property: 1890 to 1910.—The agricultural changes in South Dakota since 1890, as reflected in the values of the several classes of farm property, are shown in the table which follows:

		FARM PROPERTY.											
CENSUS YEAR.	Total.		Land ar building	Impleme and machine		Domestic animals, poultry, and bees.							
	Value.	Per cent of increase.	Value.	Per cent of increase.	Value.	Per cent of increase.	Value.	Per cent of increase.					
1910 1900 1890 <sup>1</sup>	\$1,166,096,980 297,525,302 2145,527,556	104. 4	\$1,005,080,80 220,133,19 107,466,33	1/104.8	\$33,786,973 12,218,680 8,371,712	46.0	\$127, 229, 200 65, 173, 435 2 29, 689, 509	119.5					

territory was reported as \$23,246,449, of which \$22,401,084 represented land and buildings; \$2,300,091 implements and machinery; and \$7,555,274 domestic animals, poultry, and bees (including estimated value of range animals). \*Includes estimated value of range animals.

The total wealth in the form of farm property is \$1,166,097,000, of which 86.2 per cent is represented by land and buildings, 2.9 per cent by implements and machinery, and 10.9 per cent by live stock. The total value of farm property was nearly four times as great as in 1900, having increased \$868,572,000.

The absolute and relative increase in the total value. and, with the exception of the relative increase in the value of live stock, in the value of each class of property was much greater in the last decade than in the decade preceding.

Average acreage and values per farm: 1890 to 1910.—The changes which have taken place during the past 20 years in the average acreage of South Dakota farms and in the average values of the various classes of farm property, as well as in the average value per acre of land and buildings, are shown in the following table:

		AVE	RAGE VAL	UE PER FA	RM. <sup>1</sup>	Average
CENSUS YEAR.	A verage acres per farm.		Land and buildings.		Domestic animals, poultry, and bees.	value of land and buildings per acre.
1910 1900 1890 <sup>2</sup>	$335.1 \\ 362.4 \\ 227.2$	\$15,018 5,654 2,901	\$12,945 4,183 2,143	\$435 232 167	\$1, 639 1, 238 * 592	\$38.63 11.54 9.43

<sup>1</sup> Averages are based on "all farms" in state, <sup>2</sup> Dakota territory prior to 1890. In 1880 the averages for the territory were as follows: Average acces per farm, 218; average value per farm of all farm property, \$1,855, of land and buildings; \$1,285, of implements and machinery, \$137; and of domestic animals, poultry, and bees, \$433; and average value of land and buildings per acce \$5.80 per acre, \$5.89. <sup>8</sup> Includes estimated value of range animals.

The average size of a South Dakota farm increased from 227.2 acres in 1890 to 362.4 acres in 1900, but during the last decade decreased to 335.1 acres. The increase occurring between 1890 and 1900 was due chiefly to the greatly increased number of reports secured from very large farms, the number of farms of over 1,000 acres reported increasing from 187 in 1890 to 2,041 in 1900. These farms consisted mainly of live stock farms lying outside the leading grain growing districts.

The average value of a South Dakota farm, including its equipment, is \$15,018, of which \$12,945 represents the value of land and buildings, \$1,639 the value of live stock, and \$435 the value of implements and machinery. The average value of land and buildings was \$38.63 per acre, or more than three and a third times as much as in 1900. This is a much greater actual and relative gain than occurred during the preceding decade. The value per farm of live stock has increased by about one-third, and that of implements and machinery has nearly doubled during the last decade.

Farm tenure: 1890 to 1910.-The next table shows the distribution of the farms of the state according to character of tenure at each census since 1890.

The proportion of farms operated by tenants for the state as a whole is about two-thirds the proportion for the entire country. This comparatively small proportion is partly due to the fact that west of the Missouri River a very small relative number of farms are operated by tenants, thus conforming to the usual conditions in newly settled districts. In that part of the state a large number of farms have been acquired within recent years from the Government in the form of homesteads, this, together with the

•

general low price of land, making ownership possible to the man of small means.

For purposes of comparison with previous years the four classes of tenants distinguished in the returns for 1910 are grouped in two classes, namely, (1) share, including share-cash, and (2) cash, including nonspecified. Throughout the 20-year period the number both of share and of cash tenants has been increasing at a somewhat more rapid rate than the number of farmers who own their farms. Share tenancy is, however, much more frequent than cash tenancy, although the latter form has become somewhat more common relatively during the last decade. Of the total number of farms, 19.1 per cent are now operated by share tenants and 5.7 per cent by cash tenants.

TENURE.	1910	1900	1890 1
Number of all farms	77, 644	52, 622	50, 158
Farms operated by owners and managers Farms consisting of owned land only Farms consisting of owned and hired land Farms operated by managers	58, 413 40, 405 17, 579 429	<b>41, 171</b> 25, 676 14, 964 531	43, 555 (2) (2) (2) (2)
Farms operated by tenants Share tenants Share-cash tenants <sup>3</sup> Cash tenants Tenure not specified <sup>4</sup>	11, 156 3, 668 2, <b>3</b> 01	11,451 9,676 } 1,775	6,603 5,309 1,294
Per cent of farms operated by— Owners and managers Tenants Share and share-cash Cash and nonspecified	24.8	78.2 21.8 18.4 3.4	86. 8 13. 2 10. 6 2. 6

<sup>1</sup> Dakota territory prior to 1890. Of the 17,435 farms in the territory in 1880, 16,757 were operated by owners and managers and 678 by tenants (606 share and share-cash and 72 cash and nonspecified). <sup>2</sup> Not reported separately. <sup>3</sup> Share-cash tenants were doubtless largely included with share tenants in 1900

and 1890. <sup>4</sup> Prior to 1910 nonspecified tenants were included with cash tenants.

The following table shows the acreage, improved acreage, and value of land and buildings for farms operated by owners (including part owners), managers, and tenants, respectively:

FARMS OPERATED	ALL LAND (ACE		IMPROVED FARMS (.		VALUE OF LAND AND BUILDINGS.			
вт—	1910	1900	1910	1900	1910	1900		
<b>Total.</b> Owners Managers Tenants	<b>26, 016, 892</b> 19, 314, 938 635, 199 6, 060, 755	15,168,804 476,141	$\begin{bmatrix} 10,779,500\\ 288,166 \end{bmatrix}$	8,730,724 144,07	13,918,757	167, 583, 680 4, 310, 720		

The following table shows the per cent distribution by tenure groups of the items in the preceding table, and also of the number of farms:

			PER	L CENT	OF TOTA	L.		
FARMS OPERATED BY-	Number of farms.		All lai fari		Impr land in	oved farms.	Value of land and buildings.	
	1910	1900	1910	1900	1910	1900	1910	1900
Total Owners Managers Tenants	100.0 74.7 0.6 24.8	100.0 77.2 1.0 21.8	100.0 74.2 2.4 23.3	100.0 79.5 2.5 18.0	100.0 68.1 1.8 30.1	100. 0 77. 4 1. 3 21. 4	100.0 69.1 1.4 29.5	100.0 76.1 2.0 21.9

It will be seen that, in 1910, 74.2 per cent of all land in farms was in farms operated by their owners (including part owners), 2.4 per cent in farms operated by managers, and 23.3 per cent in farms operated by tenants, the percentage for owners and for managers being lower and that for tenants higher than in 1900.

As shown by the next table, the average size of farms operated by managers in 1910 (1,480.7 acres) was nearly four and one-half times as great as that of farms operated by owners (333.1 acres), which was in turn larger than that of farms operated by tenants (315.5 acres). The average size of farms operated by managers and by tenants increased between 1900 and 1910, while that of farms operated by owners decreased. In 1910 the percentage of farm land improved was highest for tenant farms and lowest for farms operated by managers.

	AVERAGE ACRES PER FARM.				PER ( OF F		AVERAGE VALUE OF LAND AND BUILDINGS.

	1910	1900	1910	1900	1910	1900	1910	1900	1910	1900
<b>Total</b> Owners Managers Tenants	333.1	896.7	$185.9 \\ 671.7$	<b>214.5</b> 214.8 271.3 210.6	$55.8 \\ 45.4$	$57.6 \\ 30.3$		4,124 8,118	$35.96 \\ 21.91$	11.05 9.05

Farm mortgages: 1890 to 1910.—The Eleventh Census (1890) was the first to collect data relating to mortgage debt on farms. The basis of the returns was the "farm home" occupied by its owner. The same class of information was secured by the population schedules of the Twelfth Census (1900). The agricultural schedules of the Thirteenth Census (1910) secured practically the same information, except that the basis was "owned farms" instead of "owned farm homes"—a difference involving, however, no appreciable incomparability.

The following table relates to farms operated by persons owning all or part of the land, and shows for 1910 (1) the number of such farms reported as free from mortgage; (2) the number reported as mortgaged; and (3) the number for which no mortgage reports were secured. Comparable items are included for 1900 and 1890.

	OWNED I	ARMS.1	OWNED HOM		OWNED FARM HOMES. <sup>‡</sup>		
CLASS.	191	0	196	00			
	Number	Per cent.ª	Number.	Per cent.ª	Number.	Per cent.	
Total Free from mortgage Mortgaged Unknown	57, 984 35, 101 21, 691 1, 192	61.8 38.2	40, 115 24, 358 14, 148 1, 609	63. 3 36. 7	41,521 19,771 21,750	47.6 52.4	

Includes all farms owned in whole or in part by the operator.
 The 1,049 "owned farm homes" for which no reports were foured were distributed between "free from mortgage" and "mortgaged" in 1890.
 Fer cent of combined total of "free from mortgage" and "mortgaged."

In 1910 the total number of farms owned in whole or in part by the operators was 57,984. Of this number, 35,101 were reported as free from mortgage; 21,691 were reported as mortgaged; and for 1,192 no report relative to mortgage indebtedness was obtained. The number of mortgaged farms constituted 38.2 per cent of the total number of owned farms, exclusive of those for which no mortgage report was obtained. The corresponding percentage in 1900 was 36.7; in 1890 it was very much larger, namely, 52.4. It may be noted that the percentages given for the three censuses are comparable, but that the number of mortgaged and unmortgaged farms reported in 1890 is not entirely comparable with the number reported at the later censuses because at the census of 1890 the farms for which no reports were secured were distributed between the two classes of mortgaged and unmortgaged farms. It can be seen, however, that the number of mortgaged farms was approximately the same in 1910 and in 1890, but in 1900 was much less, while farms free from mortgage increased each decade.

The statement of mortgage debt and of the value of mortgaged farm property is restricted to the farms of those farmers who own all of their land and report the amount as well as the fact of indebtedness. Of the 21,691 farms reported as mortgaged, 11,866 are wholly owned by the farmers, and for 11,313 of these the amount of mortgage debt is reported. Only these last-mentioned farms are included for 1910 in the next table, which presents data relating to mortgaged farms for 1910 and 1890. In this connection it should be noted that in 1890 the amount of mortgage debt of farms with incomplete reports was estimated according to the percentages and averages obtained from farms with full reports, but that no such estimate is here made for 1910. The table gives a comparative statement of the value of mortgaged farms owned entirely by their operators and the amount of indebtedness, together with the average value of such farms, the average debt per farm, and the average equity per farm for 1910 and 1890. Data regarding the amount of mortgage debt were not obtained in 1900.

	OWNED FARM HOMES MO		INCRE	ASE.	
	1910 <sup>1</sup>	1890 <sup>2</sup>	Amount,	Per cent.	
Number. Value—Land and buildings Amount of mortgage debt. Per cent of debt to value Average value per farm Average debt per farm Average equity per farm	11,313 \$154,749,400 \$32,771,359 21,2 \$13,679 \$2,897 \$10,782	21,750 \$40,148,585 \$15,481,634 38,6 \$1,846 \$712 \$1,134	\$11,833 \$2,185 \$9,648	641.0 306.9 850.8	

Includes only farms consisting wholly of owned land and reporting value of farm and amount of dobt. Includes all owned farm homes, estimates being made of value of farms and amount of debt for all defective reports.

The average debt of mortgaged farms has increased in the last 20 years from \$712 to \$2,897, or 306.9 per cent, while the average value of such farms rose from \$1,846 to \$13,679, or 641 per cent. Thus the owner's

. .

equity increased on the average from \$1,134 to \$10,782, or 850.8 per cent. As a result of the greater relative increase in farm values than in farm debt, the mortgage indebtedness, which represented 38.6 per cent of the value of the farm in 1890, had decreased to 21.2 per cent of this value in 1910.

Farms by size groups: 1910 and 1900.—The following table shows the distribution of farms by size groups at the censuses of 1910 and 1900:

SIZE GROUP.	NUMBER OF FARMS.		INCRE	EASE.1	PER CENT OF TOTAL.	
	1910	1900	Number.	Per cent.	1910	1900
<b>Total</b> Under 3 acres 10 to 19 ucres 20 to 49 acres 50 to 90 acres 100 to 174 acres 175 to 259 acres 260 to 499 acres 500 to 909 acres 1,000 acres and over	$\begin{array}{r} 368\\ 1,121\\ 2,406\\ 28,396\\ 8,230\\ 24,811\\ 9,698\end{array}$	<b>52, 622</b> 308 231 268 967 2, 214 16, 144 5, 504 17, 871 7, 074 2, 041	$\begin{array}{c} \textbf{25,022} \\209 \\ 110 \\ 100 \\ 154 \\ 102 \\ 12,252 \\ 2,726 \\ 6,940 \\ 2,624 \\ 133 \end{array}$	<b>47. 6</b> 67. 9 47. 6 37. 3 15. 9 8. 7 75. 9 49. 5 38. 8 37. 1 6. 5	$\begin{array}{c} \textbf{100. 0} \\ 0.1 \\ 0.4 \\ 0.5 \\ 1.4 \\ 3.1 \\ 36.6 \\ 10.6 \\ 32.0 \\ 12.5 \\ 2.8 \end{array}$	$\begin{array}{c} \textbf{100.0} \\ 0.6 \\ 0.4 \\ 0.5 \\ 1.8 \\ 4.2 \\ 30.7 \\ 10.5 \\ 34.0 \\ 13.4 \\ 3.9 \end{array}$

1 A minus sign (-) denotes decrease.

The two groups, "100 to 174 acres" and "260 to 499 acres," contain more than two-thirds of all the South Dakota farms, thus emphasizing the frequency of the quarter and half section farms. Each of these two groups contains more than three times as many farms as does the intervening group. Only about 6 per cent of all the farms contain less than 100 acres each. The number of farms within each size group, except the smallest (those of under 3 acres), has increased during the last decade. The number of places under 3 acres reported as farms is only about one-third as large as 10 years ago, a difference which may, in large part, be due to a different interpretation by the enumerators as to what constitutes a small farm. Farms of 100 to 174 acres constituted a decidedly larger proportion of the total number of farms in 1910 than in 1900.

The following table shows the total and improved acreage and the value of land and buildings for farms of various size groups, consolidating into one group the farms of less than 20 acres (numbering in all 808), and also the farms of between 175 and 499 acres (numbering 33,041):

SIZE GROUP	ALL LAND (ACR		IMPROVED FARMS (		VALUE OF BUILD	
(ACRES).	1910	1900	1910 1900		1910	1900
<b>Total</b> Under 20 20 to 49 50 to 99 100 to 174 175 to 499 500 to 999 1,000 and over	$\begin{array}{c} 6,612\\ 30,475\\ 183,202\\ 4,458,036\\ 10,819,704\\ 6,583,127\end{array}$	5,080 36,346 168,923 2,382,021 8,019,437 5,005,021	$\begin{smallmatrix} & 5,685\\ & 30,001\\ & 134,340\\ & 2,113,308\\ & 8,064,822\\ & 3,880,801 \end{smallmatrix}$	3,599 25,806 132,177 1,786,535 5,491,318 2,718,560	$\begin{array}{c c} 10,407,857\\ 149,337,025\\ 504,518,418\\ 239,012,732\end{array}$	$\begin{array}{c} 5.20,800\\ 1,073,260\\ 4,004,540\\ 39,548,170\\ 110,306,090\\ 45,367,140\end{array}$

The next table shows the per cent distribution, by size groups, of the items presented in the preceding table, and also of the number of farms:

			PER	CENT 0.	F TOTAL	•

Less than one-tenth of 1 per cent.

Of the total farm acreage of the state in 1910, 41.6 per cent was in farms of 175 to 499 acres, and 25.3 per cent in farms of 500 to 999 acres, these two being from the standpoint of aggregate acreage the most important size groups. The most notable change between 1900 and 1910 was the increase in the proportion of the total acreage which was in farms of 100 to 174 acres, offset by decreases in the proportion for farms of every other size group, except that of 20 to 49 acres, in which the proportion remained the same.

In general, as shown by the next table, the percentage of farm land improved diminishes as the average size of the farms increases, the proportion in farms of 175 to 499 and of 500 to 999 acres forming exceptions to this rule. Owing to the higher proportion of improved land in smaller farms, and to the fact that buildings have normally a higher value in proportion to farm acreage on small than on large farms, the average value of land and buildings per acre of land generally diminishes with the increase in the size of the farms; it is very much higher for the farms under 20 acres in size than for those of any other group.

Color and nativity of farmers: 1910.—Prior to the Thirteenth Census no attempt was made to secure information on the farm schedules concerning the nativity of farmers. The table which follows shows the color and nativity of farm operators by character of tenure for 1910.

Of the South Dakota farmers 63.6 per cent were native whites and 32.8 per cent were foreign-born whites. Only 2,808, or 3.6 per cent of all farmers, were nonwhite, 2,740 being Indians; 67, negroes; and 1, a Chinaman. Of the native-white farmers 28.4 per cent were tenants, as compared with 20.2 per cent among the foreign-born whites.

Of the 25,476 foreign-born white farmers in South Dakota in 1910, 6,523 were born in Germany; 5,381 in Norway; 3,240 in Russia; 2,708 in Sweden; 1,811 in Denmark; 1,204 in Austria; 1,152 in Canada; 780 in Holland; 676 in England; and 619 in Ireland. Other European countries were represented by 1,332 farmers, and non-European countries, other than Canada, by 50.

# DOMESTIC ANIMALS, POULTRY, AND BEES.

Domestic animals on farms: 1910.—The census of 1910 was taken as of April 15, and that of 1900 as of June 1. Since a great many domestic animals are born during the six weeks between April 15 and June 1, and on the other hand a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not closely comparable, and the same is true in somewhat less degree of the values. For this reason the figures for 1900 are not presented in this bulletin, but in the general reports of the census the figures for the several states will be presented and the extent to which their comparability is affected by the change in the date of enumeration will be discussed.

The total value of live stock on farms, including domestic animals, poultry, and bees in 1910 was \$127,229,000, of which domestic animals contributed \$124,841,000. The value of cattle represented 28.5 per cent of the total value of live stock; that of horses and mules, 59 per cent; that of swine, 8.2 per cent; that of sheep and lambs, 2.4 per cent; and that of poultry, 1.9 per cent, the other classes being insignificant.

The next table summarizes the statistics of domestic animals on farms for the state, recorded as of April 15, 1910. Cattle and sheep are divided into age and sex groups, while horses, mules, and swine are presented by age groups only.

Of the total number of farms enumerated, 72,065, or 92.8 per cent, report domestic animals of some kind, the number without any domestic animals being only 5,579.

Of all the farms in the state, 83.8 per cent report cattle, 78.6 per cent reporting "dairy cows" and 40.2 per cent "other cows." The total number of cows, especially "dairy cows," increased materially during the decade, while the average values remained almost constant. The average number of "dairy cows" per farm reporting is about 6, while the average number of "other cows" per farm reporting is nearly 11.

Horses and colts are reported by 91.2 per cent of all the farms in the state, yearlings by 40.3 per cent, and in spite of the early date of enumeration, spring colts by 18.3 per cent. Mature horses are valued at nearly two and one-half times the average reported in 1900.

	FARM OPERATORS.

	•			4	1

Sheep and lambs are reported from 5,159 farms, or 6.6 per cent of all the farms in the state, whereas 12.1 per cent of all farms reported sheep in 1900. Of the farms reporting sheep and lambs in 1910, only 60.5 per

1

cent report spring lambs, the number of the latter being equal to 26.7 per cent of the number of ewes. This small proportion is doubtless due to the early date of enumeration. The average flock in the state, excluding spring lambs, consists of 97 sheep, while in 1900 it consisted of 79. The average number of ewes is over 84 per farm reporting that class, and the farms reporting rams and wethers show an average of about 35 per farm.

Of all farms, 61.9 per cent report swine, the average number being about 21 per farm reporting. On account of the early date of enumeration only 26.6 per cent report spring pigs. The average value of the swine reported as "hogs and pigs born before January 1, 1910, " is \$14.58.

Poultry on farms: 1910 and 1900.-The following table gives the numbers of the various kinds of poultry reported in 1910 and 1900, together with their value and the number of farms reporting each kind in 1910:

		1910 (April 15)							
KIND.	Farms rej	porting.		:					
	Number.	Percent of all farms.	Number of fowls.	Value.	Number of fowls.				
Total Chickens Turkeys Ducks Gesse Guinea fowls Pigeons Peafowls	61, 561 61, 492 10, 832 16, 281 13, 623 2, 801 3, 031 18	79, 3 79. 2 14. 0 21. 0 17. 5 3. 6 3. 9 ( <sup>8</sup> )	5,251,348 4,924,349 51,992 87,544 59,091 12,465 114,935 72	\$2,356,465 2,147,380 78,130 45,028 65,910 4,857 14,332 228	3, 178, 285 3, 028, 700 53, 740 62, 511 33, 334 ( <sup>1</sup> ) ( <sup>2</sup> ) ( <sup>2</sup> )				

<sup>1</sup> Included with chickens, <sup>2</sup> Not reported. <sup>3</sup> Less than one-tenth of 1 per cent.

The increase in the number of fowls on South Dakota farms during the last decade amounts to 65.2 per cent, while the value increased from \$857,000 to \$2,356,000, or 175 per cent. Chickens constituted over 90 per cent of the number and value of all poultry in 1910 and increased over 60 per cent in number since 1900. The number of farms reporting poultry increased 37.5 per cent, and the number of fowls per farm reporting increased from 71 to 85. The value of poultry and the number of farms reporting were obtained in 1900 for the total of all fowls only, and not for each kind as in 1910.

Bees on farms: 1910 and 1900.—The number of farms reporting bees has increased from 387 in 1900 to 1,355 in 1910, or 250.1 per cent. The number of colonies of

### LIVE STOCK PRODUCTS.

The returns for live stock products obtained at the census of 1910, like those for crops, relate to the activities of the calendar year 1909. It is impossible to give a total representing the annual production of live stock products, for the reason that, as shown elsewhere, the total value of products from the business of raising domestic animals for use, sale, or slaughter can not

79758°-13-34

bees increased from 2,063 to 6,565, or 218.2 per cent, and their value increased from \$10,088 to \$31,650, or 213.7 per cent. The average value of bees per farm reporting was \$26.07 in 1900 and \$23.36 in 1910. About two farms in every hundred report bees.

Domestic animals not on farms: 1910.-Most of the domestic animals not on farms are found in cities, towns, and villages. Statistics for such animals are shown below. No provision was made by law to secure data pertaining to poultry and bees not on farms. In the table below age groups are omitted for the sake of brevity.

	Number of inclo-		ANIMALS.			
KIND.	sures reporting.	Number.	Value.	Average value.		
Total All cattle. Dairy cows Horses. Asses and burros. Swine. Sheep. Goats.	8,940 8,759 11,969 210 50 1,218 40	17,033 12,275 34,622 794 65 7,426 884 105	\$4,942,544 534,208 453,157 4,157,070 127,465 18,563 99,652 5,023 563	$\begin{array}{c} \$31, 36\\ 36, 92\\ 120, 07\\ 160, 54\\ 285, 58\\ 13, 42\\ 5, 68\\ 5, 36\end{array}$		

As would be expected, horses are by far the most important class of domestic animals not on farms, both in number and in value; cattle, about three-fourths of which are dairy cows, rank next in importance.

Domestic animals on farms and not on farms: 1910.---The following table gives the total number and value of domestic animals, distinguishing those on farms from those not on farms:

		n	OMESTIC A	NIMALS.			
KIND.	Total.		On	farms.	Not on farms.		
	Number.	Value.	Number.	Value.	Num- ber.	Value.	
Total All cattle Dairy cows Horses Mules Asses and burros Swine Sheep. The total value of all domestic animals in the state in 1910 was \$129,784,000, of which the value of animals not on farms represented 3.8 per cent.

be calculated from the census returns. Even if this value could be ascertained and were added to the value of the crops the sum would not correctly represent the total value of farm products, because, as already more fully explained, duplication would result from the fact that part of the crops are fed to the live stock.

Dairy products: 1909 and 1899.—The following table shows the principal statistics relative to dairy products in 1909, with certain comparative statistics for 1899:

	FAR REPOR				VALUI	Е,
	Num- ber.	Per cent of all farms.		Unit.	Total.	Aver- age per unit.

<sup>1</sup> Less than one-tenth of 1 per cent.

The number of farms reporting dairy cows on April 15, 1910, was 61,046, but only 47,891 reported dairy products in 1909. That there should be this difference is not surprising. Doubtless some farmers who had dairy cows in 1910 had none in 1909, while other farmers neglected to give information for the preceding year, or were unable to do so, perhaps because the farm was then in other hands. Dairy products in general are somewhat less accurately reported than the principal crops. This is particularly the case as regards the quantity of milk produced. The number of farms which made any report of milk produced during 1909 was 40,216 (considerably less than the total number reporting dairy products), and the number of dairy cows on such farms on April 15, 1910, was 260,000. The amount of milk reported was 82,429,000 gallons: assuming that there were the same number of cows in 1909 as in 1910, this would represent an average of 317 gallons per cow. In considering this average, however, it should be borne in mind that the quantity of milk reported is probably deficient and that the distinction between dairy and other cows is not always strictly observed in the census returns.

By reason of the incompleteness of the returns for milk produced, the Census Bureau has made no attempt to determine the total value of dairy products for 1909. For convenience a partial total has been presented comprising the reported value of milk, cream, and butter fat sold and the reported value of butter and cheese made, whether for home consumption or for sale. The total thus obtained for 1909 is \$6,193,000, which may be defined as the total value of dairy products, exclusive of milk and cream used on the farm producing.

Only a very small proportion of the milk reported by South Dakota farmers in 1909 was sold as such, large quantities being sold as butter fat. The butter made on farms in 1909 was valued at \$3,025,000.

Comparisons are made between 1909 and 1899 for but few of the census items relating to dairy products, for the reason that in 1899 estimates were made for farms with incomplete reports, which was not done at the census of 1910. The figures for milk produced and milk sold are particularly affected, but those for butter and cheese are approximately comparable. The table shows a material decrease in the amount of butter made, and a still greater relative decrease in the production of cheese.

Wool: 1909 and 1899.—The table below gives statistics as to the production of wool on farms, the figures being partly based on estimates.<sup>1</sup>

	Num-		wo	OL PRODUCE	ED.
	ber of Sheep of farms shearing report-ing.	Fleeces (num- ber).	Weight (pounds).	Value.	
Sheep of shearing age on farms April 15, 1910	5,033	501,041		•••••	
1909 On farms reporting sheep	3,032	• • • • • • • • • • • •	406,883	2,767,705	\$652,249
April 15, 1910. On other farms. Total production of wool (partly estimated);	2, 824 208	360,603	380, 789 26, 094	2, 589, 685 178, 020	609, 601 42, 648
1909. 1899. Increase, 1899 to 1909 Per cent of increase.			529,088 520,219 8,869 1.7	3,598,246 3,246,945 351,301 10.8	847,012 525,652 321,360 61.1

The total number of sheep of shearing age in South Dakota on April 15, 1910, was 501,000, representing a decrease of 1.2 per cent as compared with the number on June 1, 1900 (507,000). The approximate production of wool during 1909 was 529,000 fleeces, weighing

<sup>&</sup>lt;sup>1</sup> Farmers should be able in general to report the production of wool more accurately than that of dairy products. There were, however, 2,209 farmers who reported the possession of 140,438 sheep of shearing age on April 15, 1910, without reporting any wool produced in 1909. Probably in a large proportion of cases this failure was due to the fact that they did not have these sheep, or did not occupy the same farm, during the preceding year. The returns of farms reporting wool in 1909 but no sheep of shearing age on April 15, 1910, would partially make up this deficiency, but it is believed that in many cases enumerators, having found that a farm had no sheep in 1910, omitted the inquiry as to wool produced in 1909 and thus missed more or less wool actually produced. It is a fairly safe assumption that the entire production of wool in 1909 bore the same relation to the entire number of sheep of shearing age on April 15, 1910, as the production of wool on those farms reporting both production and sheep bore to the number of sheep reported on such farms. Statistics for this group of farms are given in the table, and the total wool product, estimated on the basis of the above assumption, is also given.

3,598,000 pounds, and valued at \$847,000. Of these totals about one-fourth represents estimates. The number of fleeces produced in 1909 was 1.7 per cent greater than in 1899. The average weight per fleece in 1909 was 6.8 pounds, as compared with 6.2 pounds in 1899, and the average value per pound was 24 cents, as compared with 16 cents in 1899.

Goat hair and mohair: 1909.—Although 660 farmers reported 2,337 goats and kids on their farms April 15, 1910, only 54 reported the production of goat hair or mohair during 1909. These farmers reported 399 fleeces, weighing 1,538 pounds and valued at \$390.

Poultry products: 1909 and 1899.—The statement below gives data relative to the production and sale of eggs and poultry:

	Number of farms	Numper of	PROD	UCT.
	report- ing.	fowls on hand.	Quantity.	Value.

The total number of fowls on South Dakota farms on April 15, 1910, was 5,251,000. Of the 61,561 farms reporting fowls, 12,388 did not report any eggs produced in 1909, and 14,030 did not report any poultry raised in 1909. The production of eggs actually reported for the year 1909 was 22,396,000 dozens, valued at \$3,792,000. According to the Twelfth Census reports, the production of eggs in 1899 was 17,350,000 dozens, the value being \$1,727,000. The latter figures, however, are somewhat in excess of the actual returns at that census, because they include estimates made to cover those cases where the schedules reported fowls on hand without reporting the production of eggs. In order to make the returns for 1909 comparable with those published for 1899 similar estimates have been made, the method of estimate and the justification therefor being substantially the same as in the case of wool. The total production of eggs in 1909, including these estimates, was 25,067,000 dozens, valued at \$4,244,000. The total production of poultry in 1909, including estimates made on the same basis as for eggs, was 6.186,000 fowls, valued at \$2,356,000.

Sale or slaughter of domestic animals on farms: 1909 and 1899.—The following statement presents statistics relating to the sale or slaughter of domestic animals by South Dakota farmers during the year 1909, with certain items for 1899:

	FARMS RE	PORTING.		VALUE	2.
	Number.	Percent of all farms.	Number of animals.	Total.	Aver- age.
1909—All domestic animals: Sold Slaughtered Calves:				\$35, 722, 056 2, 637, 084	
Sold Slaughtered Other cattle:	8,970 4,326	11.6 5.6	48,862 7,034	526, 872 73, 506	\$10.78 10.45

Sold Slaughtered	58 28	0.1 ( <sup>2</sup> )	1,067 68	4, 436 274	4.16
1899—All domestic animals: Sold <sup>2</sup> Slaughtered				12,707,831 1,567,049	

<sup>1</sup> Less than one-tenth of 1 per cent. <sup>2</sup> Schedules called for receipts from sales of animals raised on the farms reporting.

The total value of domestic animals sold during 1909 was \$35,722,000, and that of animals slaughtered on farms \$2,637,000, making an aggregate of \$38,359,000. This total, however, involves considerable duplication, resulting from the resale or slaughter of animals which had been purchased by the farmers during the same year.

The value of the cattle (including calves) sold during 1909 represented more than one-half of the total value of animals sold, and the value of the swine sold represented somewhat less than one-third of the total.

The census of 1900 called for the receipts from the sale of all domestic animals raised on the farms reporting and the value of those slaughtered during 1899, which amounted, respectively, to \$12,708,000 and \$1,567,900. The item of sales is not closely comparable with that for 1909, when the inquiry covered all sales whether of animals raised on the farms reporting or elsewhere. It is believed, however, that in many cases the returns for 1899 also included receipts from sales of animals not actually raised on the farms reporting. Honey and wax: 1909.—Although, as noted elsewhere, 1,355 farms reported 6,565 colonies of bees on hand April 15, 1910, 572 of these farms, with 1,369 colonies on hand April 15, 1910, made no report of honey or wax produced in 1909. The actual returns show the production of 139,714 pounds of honey, valued at \$20,165, and 943 pounds of wax, valued at \$278; the true totals are doubtless somewhat above these figures.

#### CROPS.

Summary: 1909 and 1899.—The following table summarizes the census data relative to all of the farm crops of 1909 and 1899. It includes not only general farm crops, but also flowers and plants, nursery products, and forest products of farms. In comparing one year with the other it should be borne in mind that acreage is on the whole a better index of the general changes or tendencies of agriculture than either the quantity or the value of the crops, since variations in quantity may be due largely to temporarily favorable or unfavorable climatic conditions, and variations in the value of the crops are largely affected by changes in prices. (See also discussion of "Total value of farm products.") The total value of crops in 1909 was \$125,507,000. Of this amount, 99.1 per cent was contributed by crops for which the acreage as well as the value was reported, the remainder consisting of the value of by-products (straw, garden and grass seeds, etc.) derived from the same land as other crops reported, or of orchard fruits, nuts, forest products, and the like. The combined acreage of crops for which acreage was reported was 12,226,772, representing 77.2 per cent of the total improved land in farms (15,827,208 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage for which was not reported.

The general character of South Dakota agriculture is indicated by the fact that nearly four-fifths (78.8 per cent) of the total value of crops in 1909 was contributed by the cereals, 12.1 per cent by hay and forage, and 5.6 per cent by grains and seeds, other than cereals.

The total value of crops in 1909 was 184.1 per cent greater than in 1899, this increase being no doubt due in part to higher prices. There was an increase of 38.3 per cent in the total acreage of crops for which acreage was reported, the greatest absolute increases being those in the acreage of cereals and of hay and forage.

General farm crops, minor grains and seeds, and sundry minor crops: 1879 to 1909.—The next, table presents statistics for 1909 regarding cereals, other grains and seeds, hay and forage, potatoes, and sundry minor crops.

The leading crops of the state in the order of their importance as judged by total value, are wheat, \$42,878,000; corn, \$26,396,000; oats, \$16,045,000; hay and forage, \$15,244,000; barley, \$10,874,000; flaxseed, \$7,002,000; emmer and spelt, \$2,628,000; and potatoes, \$1,968,000.

From the standpoint of acreage, hay and forage is somewhat more important than wheat, though its value is only a little more than one-third as great. About one-third of the wheat produced is of the durum or macaroni variety. Oats ranks fourth in acreage and third in value. The acreage of flaxseed is nearly one-third that of oats, while its value is more than two-fifths that of the latter.

Among the hay and forage crops, "wild, salt, or prairie grasses" represent over five-sixths of the total acreage and two-thirds of the total value. "Timothy alone" ranks second, and "timothy and clover mixed," third in both respects. The acreage of hay and forage is a little over two-fifths as great as that of all cereals combined, but the value of the former crop is but little over one-seventh as great as that of the latter.

<sup>2</sup> Includes small amounts of sciences of sciences and plants of sciences and plants and plants of the science of

The fluctuations in the acreages of some of the principal crops of South Dakota during the past 20 years are shown in the next table.

The acreage of corn is more than two and two-thirds times as great as in 1889, both the absolute and the relative gain during the decade just ended being greater than during that preceding. The increase in the acreage of oats has been very similar to that of corn. The acreage of wheat increased from 2,259,846 in 1889 to 3,984,659 in 1899, representing an advance

of 76.3 per cent, but decreased during the last decade to 3,217,255, which represents a decline of 19.3 per cent. The acreage of barley has made important relative gains in each of the two decades, and increased during the 20 years over 1,000,000 acres. The acreage of flaxseed decreased between 1889 and 1899, but the loss was much more than offset by the increase of the last decade. Hay and forage has made important gains during each of the two decades and in 1910 had an acreage more than twice as great as in 1889.

<sup>1</sup> A minus sign (-) denotes decrease.

Out of every hundred farms, 71 report hay and forage, 64 report corn, 58 report oats, 58 report potatoes, 51 report wheat, 37 report barley, 19 report flaxseed, and 18 report emmer and spelt. Except in the case of barley the proportion of farmers reporting each of the specified crops for which complete data are given is smaller than it was 10 years ago.

The eight crops included in the above table cover about 77 per cent of the improved land of the state; in 1899 the percentage was about 78 percent. The most important relative increases in acreages were in barley, oats, flaxseed, and corn. The average value per acre of wheat and corn is above the average of all cereals, \$12.06, while that of the other cereals is below it. The average value per acre of hay and forage is less than two-fifths as great as that of the combined cereals. The average value of flaxseed is slightly greater and that of potatoes more than three times as great as the average value of the combined cereals.

The greater part of the grain in South Dakota is grown to the east of the Missouri River. Corn is reported from every county except 2, but almost half of the acreage is reported from 12 counties forming a group in the southeast corner of the state. One county only, McPherson, shows a decrease for the past decade in corn acreage. The acreage of oats is more evenly distributed over the eastern part of the state than is that of corn, the oats area in general extending farther to the north; 1 county, McPherson, shows a decrease for the past decade. The wheat area of the state corresponds very closely to the oats area, with, however, the greatest acreages still farther to the north. A group of 22 counties in the eastern and southeastern parts of the state shows a very marked decrease in wheat acreage, while farther to the northwest important increases are reported. The barley acreage is well distributed over the eastern part of the state, and, in general, the greatest gains are reported from the counties which show a falling off in the acreage of wheat. Though the acreage of flaxseed is distributed over the eastern part of the state, more than half of it is reported from 9 counties in the north central part of this section. Decreases are reported from a group of 9 counties in the southeast corner of the state, and from another group of 7 in the northeast corner. The acreage of hay and forage is more evenly distributed over the state than are those of the cereals, important acreages being reported from counties west as well as east of the Missouri.

Vegetables, flowers and plants, and nursery prodncts: 1909 and 1899.—The table which follows shows details with regard to vegetables (not including potatoes and sweet potatoes and yams, which appear elsewhere), and also with regard to flowers and plants and nursery products:

	FAB REPOI 19	TING,	ACR	ES.	VALUE OF PRODUCTS.		
CROP.	Num- ber.	Per cent of all farms.	1909	1899	1909	1899	
Vegetables, other than pota- toes and sweet potatoes and yams, total	1 31,616 91 31,525	40. 7 0. 1 40. 6	15,150 667 14,483	7,954	\$1,033,163 82,852 950,311	\$389,717	
Flowers and plants, total Farms reporting a prod- uct of \$250 or over All other farms	19 10 9	( <sup>2</sup> ) ( <sup>2</sup> ) ( <sup>2</sup> )	19	11	50,008 48,733 1,275	3,260	
Nursery products, total Farms reporting a prod- uct of \$250 or over All other farms	30 18 12	(2) (1) (2)	399	200	70,827 69,502 1,325	12,866	

 Does not include 15,715 farms which reported that they had vegetable gardens, but gave no information as to their products.
 Less than one-tenth of 1 per cent. In 1909 the total acreage of potatoes and other vegetables was 65,209 and their value \$3,001,574. Excluding (so far as separately reported <sup>1</sup>) potatoes and sweet potatoes and yams, the acreage of vegetables was 15,150 and their value \$1,033,000, both acreage and value being decidedly greater than in 1899.

While only 418 acres were devoted in 1909 to the raising of flowers and plants and of nursery products, their value aggregated \$120,835. Most of the product was raised on farms where these branches of agriculture were carried on as an important business.

Small fruits: 1909 and 1899.—The following table shows data with regard to small fruits on farms:

	Number of farms	ACRES.		Quantity	X7. 1	
CROP.	report- ing, <b>1909</b>	1909	1899	(quarts), 1909	Value, 1909	
Small fruits, total. Straw berries. Blackberries and dewberries. Raspberries and logan berries. Currants. Gooseberries. Cranberries. Other berries.	1,836 112 519 1,448 1,271 7 3	419 226 5 66 67 55 (1) (1)	161 62 5 21 38 25 1 9	<b>401, 295</b> 238, 164 6, 058 60, 285 52, 951 43, 408 288 141	\$47,263 26,764 809 8,703 6,021 4,926 25 15	

<sup>1</sup> Reported in small fractions.

Strawberries are by far the most important of the small fruits raised in South Dakota, with raspberries and loganberries ranking next. The production in 1909 was 401,000 quarts, as compared with 166,000 quarts in 1899, and the value \$47,263, as compared with \$16,629.

Orchard fruits, grapes, and nuts: 1909 and 1899.— The next table presents data with regard to orchard fruits, grapes, and nuts. The acreage devoted to these products was not ascertained. In comparing one year with the other the number of trees or vines of bearing age is on the whole a better index of the general changes or tendencies than the quantity of product, but the data for the censuses of 1910 and 1900 are not closely comparable, and the product is therefore compared, although variations may be due largely to temporarily favorable or unfavorable climatic conditions.

The total quantity of orchard fruits produced in 1909 was 230,000 bushels, valued at \$209,000. Apples contributed about five-sixths of this quantity, plums and prunes most of the remainder. The production of grapes in 1909 was 144,634 pounds, valued at \$4,789, and that of nuts 73,715 pounds, valued at \$1,511.

The production of all orchard fruits together in 1909 was nearly nine times as great in quantity as that in 1899, and the production of grapes also increased very rapidly. The total value of orchard fruits increased from \$29,568 in 1899 to \$209,339 in 1909, and that of grapes from \$2,158 in 1899 to \$4,789 in 1909. It should be noted in this connection that the values for

<sup>&</sup>lt;sup>1</sup> It is probable that some of the potatoes and sweet potatoes and yams raised in farm gardens were not reported separately by farmers, but were included in their returns for vegetables.

1899 include the value of more advanced products derived from orchard fruits or grapes, such as cider, vinegar, dried fruits, and the like, and may therefore involve some duplication, while the values shown for 1909 relate only to the products in their original condition.

<sup>1</sup> Less than one-tenth of 1 per cent.

Forest products: 1909 and 1899 .- The census schedules for 1910 called for the "value of all firewood, fencing material, logs, railroad ties, telegraph and telephone poles, materials for barrels, bark, naval stores, or other forest products cut or produced in 1909, whether used on farm, sold, or on hand April 15, 1910;" and also, in a separate item, for the "amount

SELECTED FARM EXPENSES AND RECEIPTS.

Farm expenses: 1909 and 1899.—The next table shows the number of farms reporting expenditures for labor, feed, and fertilizer at the census of 1910, as well as the sums expended in 1909 and 1899.  $\sim$ 

Over one-half of all farmers in the state (41,180) hire labor, and the total expenditure is \$12,832,000, or an average of \$312 per farm hiring. Of the total received from sale of standing timber in 1909." There were 2,612 farms in South Dakota (3.4 per cent of all farms in the state) which reported forest products in 1909, the total value of such products being \$257,126, as compared with \$106,284 in 1899, an increase of 141.9 per cent. Of the value in 1909, \$161,086 was reported as that of products used or to be used on the farms themselves, \$85,802 as that of products sold or for sale, and \$10,238 as the amount received for standing timber. It should be noted that forest products not produced on farms are not included in this report.

Sugar crops: 1909 and 1899.-The table below shows data with regard to maple trees and their products. and for sugar beets and sorghum cane. The total value of sorghum cane and sirup produced in 1909 was \$5,011, as compared with \$4,795 in 1899.

	FARMS REPORTING.			PRODUCT.			
PRODUCT.	Num- ber. of all farms.		Acres.	Amount.	Unit.	Value.	
Maple sugar and sirup: Total, 1909 Sugar made Sirup made Sugar beets, 1909 <sup>3</sup> Sorghum cane:	1 1 9	(1) (1) (1) (1) (1)	*8	5 2 28	Lbs Gals Tons	\$: 16-

\* Number of trees. 4 Includes cane used as coarse forage.

Miscellaneous crops: 1909.-Straw and cornstalks derived as by-products from the production of grain and corn have a considerable value for feed and other purposes. They are, however, mainly consumed on the farms producing them. The Census Bureau made no attempt to ascertain the total quantity or value of these products, but the schedules called for the quantity and value of those sold during the year 1909. The returns show that 241 farmers reported the sale of 3,489 tons of flax straw, valued at \$6,935. In addition, 215 farmers in South Dakota sold, during 1909, 2,521 tons of straw, for which they received \$3,847, and that 84 farmers sold 689 tons of cornstalks and leaves, for which they received \$2,305.

amount expended nearly one-fourth is in the form of rent and board. During the decade 1899 to 1909 the total expenditure for labor increased by \$7,304,000, or 132.1 per cent. For no census prior to 1910 were reports secured of the value of rent and board furnished or tabulation made of the number of farmers reporting expenditures for labor.

Of all farmers, 28 per cent report some expenditure for feed, while only two-tenths of 1 per cent report the purchase of fertilizer. The total amount, \$11,294, reported as paid for fertilizer shows a decrease of \$1,646, or 12.7 per cent, since 1899. The expenditure for fertilizer in 1910 averaged \$61 per farm reporting; that for feed, \$140. No tabulation was made at prior censuses of the number of farmers reporting expenditures for fertilizer.

1909				1899	INCREASE. <sup>1</sup>

A minus sign (-) denotes decrease.
 Not reported at the census of 1900.

Tables 1 to 6, which follow, present by counties the more important agricultural data collected at the Thirteenth Census, 1910.

Table 1 shows the population, number of farms, land and farm area, value of farm property, and number and value of domestic animals and of poultry and bees, as of April 15, 1910. Comparative data for June 1, 1900, are given in italics for certain items.

Table 2 gives the number of farms, the farm acreage, and the value of farm property operated by owners, tenants, and managers, collected as of April 15, 1910. Statistics of farm mortgages are included in this table. (See explanation in text.) Comparative data for June 1, 1900, are given in italics for certain items.

Table 3 gives statistics pertaining to the products of live stock on farms (dairy products, poultry and eggs, honey and wax, and wool and mohair), also the number and value of domestic animals sold or slaughtered on farms for the year 1909.

Table 4 shows the total value of farm crops and the principal classes thereof, together with the acreage (or trees of bearing age) and production of the principal crops for the year 1909.

Table 5 gives statistics relating to selected farm expenses for 1909 and also shows the receipts from the sale of feedable crops.

Table 6 shows the number and value of domestic animals in barns and inclosures not on farms, by classes, together with the number of dairy cows and mature horses and mules, on April 15, 1910. Receipts from sale of feedable crops: 1909.—An effort was made at the census of 1910 to secure as complete a statement as possible of the sales as well as of the production of the more important feedable crops (that is, crops ordinarily fed to live stock). The following table summarizes the data reported:

	FARMS REI	PORTING.	QUANTITY		
CROP.	Number.	Percent of all farms.	Amount.	Unit.	Amount received.
Total Corn. Oats Barley. Hay and coarse forage	16, 481 16, 733 18, 818 6, 831	$21.2 \\ 21.6 \\ 24.2 \\ 8.8$	11, 568, 861 9, 336, 813 12, 065, 163 152, 550	Bu Bu Bu Tons	\$16,373,129 5,795,348 3,532,362 6,280,599 755,820

While the total amount expended by South Dakota farmers for the purchase of feed in 1909 was \$3,049,000, the total receipts from the sale of feed by those reporting sales amounted to \$16,373,000.

### COUNTY TABLES.

Change of boundaries.—In comparing the data secured in 1910 with those for 1900, the following changes in county boundaries should be considered: Harding and Perkins Counties were organized from parts of Butte County in 1909; Corson County was organized from that part of Standing Rock Indian Reservation situated in South Dakota in 1909; and a small island, a part of Union County, was ceded to the state of Nebraska in 1908. The unorganized counties of Bennett, Mellette, Sterling, and Todd, located within the limits of Pine Ridge, Rosebud, and Cheyenne River Indian Reservations, have also been formed since 1900.

Counties not reported separately in 1900 or 1910.— Agricultural and population data for Indian reservations were returned separately in 1900, and no data are given for that year for the following counties, located wholly or in part within reservations: Armstrong County in Cheyenne River Reservation; Dewey and Schnasse Counties in Cheyenne River and Standing Rock Reservations; Washabaugh County in Pine Ridge and Rosebud Reservations; Tripp County in Rosebud Reservation; and Shannon and Washington Counties in Pine Ridge Reservation.

In 1910 the population of Pine Ridge Indian Reservation was returned separately with the statement, "Comprises unorganized counties of Shannon and Washington, and parts of Bennett and Washabaugh, for which the population was not returned separately." Separate return for population was made for that part of Bennett County outside of the reservation, but not for Washabaugh. The agricultural data for Indians on the Pine Ridge Reservation in 1910 were assigned to Washington, Shannon, and Washabaugh Counties by estimates.

In 1900 agricultural, but no population, data were returned for Meyer County, which was then located wholly within the Rosebud Indian Reservation. No agricultural data were returned for Meyer County in 1910, as Todd and Mellette Counties had been formed from it since 1900. The 1900 figures for this county have therefore been included in those for Indian reservations shown in the last column of Tables 1 and 2.

Changes in 1900 figures.—After the volumes of the Twelfth Decennial United States Census (1900) had been printed, a further detailed study and analysis of the data there presented brought to light certain errors in the total farm acreage of Hutchinson County. The corrected acreage is 513,493, and not 525,392 as shown in the county tables.

## 560

## SOUTH DAKOTA.

#### FARMS AND ACREAGE IRRIGATED.

South Dakota lies wholly within the Great Plains, except for a small area in the southwest corner of the state occupied by the Black Hills. Throughout the state the rainfall is sufficient in most seasons for the maturing of some crops without irrigation, the normal annual precipitation ranging from about 23 inches at the eastern boundary to about 15 inches at the western boundary. ary containing about 84 per cent of the total acreage of irrigated land reported. The following table shows for the state as a whole

the number of farms and acreage irrigated in 1909, in comparison with the total number of farms, the total land area, the total land in farms, and the total acreage of improved land in farms in 1910, together with the areas not yet irrigated for which water has been or is being made available. Comparative figures for the census of 1900 are included as far as possible.

Irrigation is confined almost wholly to the western part of the state, the counties along the western bound-

Number of farms irrigated.—According to the figures presented in the table, irrigation was practicedon less than 1 per cent (0.6 per cent) of the farms in the state in 1909. In 1899 the proportion of irrigated farms was higher, 1.2 per cent, while in 1889 it was only 0.4 per cent.

The only counties in which more than 5 per cent of the farms were irrigated in 1909 were Lawrence, Butte, and Custer, in which the proportions were 15.5, 9.3, and 9.2 per cent, respectively.

From 1899 to 1909 there was a decrease of 17.5 per cent in the number of farms irrigated.

Acreage irrigated.—The total acreage reported as irrigated in 1909 was 63,248, as against 43,676 in 1899, and 15,717 in 1889. The percentage of increase from 1889 to 1899 was 177.9, while that from 1899 to 1909 was 44.8. The absolute increase also was greater during the earlier decade, amounting to 27,959 acres, as against 19,572 acres during the later decade.

The fact that, coincident with the increase in acreage irrigated, there was a decrease in the number of farms irrigated, is explained by the abandonment of irrigation on scattered farms throughout the state where it was practiced on a small scale, and the increasing use of irrigation on a larger scale in the western part of the state. The average acreage irrigated per farm was 126.5 in 1909, as against 72.1 in 1899. During the same period the average size of farms in the state decreased from 362.4 acres to 335.1 acres.

Butte and Pennington Counties were the only counties in which the acreage irrigated in 1909 formed as much as 1 per cent of the total area or as much as 3 per cent of the total land in farms. In three counties, Butte, Custer, and Pennington, the irrigated acreage was equal to more than 10 per cent of the improved land in farms, the percentages being 29.5, 13.7, and 11.2, respectively.

In both 1909 and 1899 the county for which the largest acreage of irrigated land was reported was Pennington, with an irrigated acreage of 19,463 and 14,896 at the respective censuses. One other county, Butte, shows an irrigated acreage in excess of 10,000 in 1909, while in two counties, Custer and Meade, the irrigated area was between 5,000 and 10,000 acres.

Acreage included in projects.—The foregoing table shows that in 1910 existing enterprises were ready to supply water to 128,481 acres, or 65,233 acres more than were irrigated in 1909. It is probable that, (561)

79758°------------------36

after allowance is made for an increase in the area irrigated in 1910 over that irrigated in 1909, there remained at the close of 1910 under ditch but not irrigated about as much land as was irrig ted in the year 1909, and fully three times as much land as was brought under irrigation in the 10 years from 1899 to 1909. The acreage included in projects exceeds the acreage irrigated in 1909 by 138,377 acres, which is more than seven times the acreage brought under irrigation in the last decade and more than twice the acreage irrigated in 1909. This acreage represents the area which will be available for the extension of irrigation in the next few years upon the completion of existing enterprises and without new undertakings.

Acreage irrigated, classified by character of enterprise.—The following table gives the distribution of the acreage irrigated in 1909 according to the character of the enterprise controlling the irrigation works:

		ACREAGE IRRIGATED IN 1909.			
CHARACTER OF ENTERPRISE.	Amount.	Per cent distribu- tion.			
All classes U. S. Reclamation Service	<b>63,248</b> 5,613	100.0			
U. S. Reclamation Service U. S. Indian Service Cooperative enterprises	13.601	0.1 21.5			
Commercial enterprises. Individual and partnership enterprises	6,300 37,684	10.0 59.6			

There are no Carey Act enterprises or irrigation districts in South Dakota. Cooperative enterprises and individual and partnership enterprises supplied water to about 81 per cent of the acreage irrigated in 1909, while United States Reclamation Service enterprises which are eventually to be turned over to the water users, supplied 8.9 per cent of the acreage irrigated. Thus only 10 per cent of the irrigated land was supplied by enterprises which are not either controlled by the water users or to be turned over to them ultimately.

Acreage irrigated, classified by source of water supply.—The following table shows the distribution of the acreage irrigated in 1909 according to the source of water supply:

	ACREAGE IRRIGATED IN 1909.			
SOURCE OF WATER SUPPLY.	Amount.	Per cent distribu- tion,		
All sources. Streams Lakes. Wells Surmgs Reservoirs.	63,248 47,662 200 1,456 395 13,535	100. 75. 0. 2. 0. 21.		

Streams constituted the source of water supply for about three-fourths of the land irrigated in 1909 and reservoirs for slightly more than one-fifth of this total. Irrigation from reservoirs is practiced principally on the higher areas where for large parts of the land a water supply from streams is not available and the storage of storm waters affords the only means of irrigation.

The acreage irrigated from wells in 1909 was considerably smaller than that supplied from this source in 1899, the advance of dry farming and a heavier rainfall in 1909 than in some previous years having led to the abandonment of irrigation from some of the artesian wells in the eastern and central parts of the state. These wells, however, will be used again in dry years.

#### IRRIGATION WORKS.

The following table summarizes the data collected relating to works for supplying water for irrigation in 1910 and 1900. As only two of the items reported in 1910 were reported in 1900, there is little opportunity for comparisons between the two censuses.

IRRIGATION WORKS.	CENSUS OF-			
	1910	1900 1

a unit copacity	5,289	(²)		

<sup>1</sup> Figures relate only to systems obtaining water from streams by gravity diversion in 1899.
 <sup>2</sup> Not reported.

Assuming that the enterprises in operation in 1909 were identical with those reported in 1910, the average acreage irrigated per enterprise was 160.1, and the acreage irrigated per mile of main ditch was 100.2. For the enterprises represented by the figures from the preceding census, which include only systems receiving water from streams, the average acreage irrigated per mile of main ditch was 172.4.

There was at one time considerable utilization of underground water for irrigation in South Dakota, especially from flowing wells in the eastern part of the state, but, as already stated, wells were not so extensively used in 1909 as in 1899. Previous reports do not show the number of artesian wells used for irrigation, but the fact that the acreage irrigated from such wells has decreased greatly suggests a corresponding decrease in the number of wells used for irrigation.

Cost of construction, operation, and maintenance.—The next table presents statistics in regard to the cost of construction, operation, and maintenance of irrigation enterprises.

<sup>6</sup> Not reported. 7 For 1909.

<sup>8</sup> Figure relates only to systems obtaining water from streams.

The cost of irrigation systems shows an increase of 968.7 per cent. In the average cost per acre, as given in the table, there was also a large increase. The average cost per acre shown for the census of 1910 is based on the acreage under ditch in that year, but since the corresponding acreage for 1900 was not reported, the figure for the average cost at the earlier census is based on the acreage actually irrigated in 1899. If computed on the basis of the acreage irrigated in 1909, the average cost in 1910 would be \$48.11, representing an increase of 637.9 per cent over the figure for the average cost at the census of 1900. The high average cost per acre is due in part to the considerable expenditures made on a large project which was nearly completed, but which was not used to its full capacity, and was ready to supply water to only a part of the acreage the enterprise is intended to supply. The average, based on the estimated final cost and the acreage included in projects, \$18.85 per acre, probably represents the average cost per acre of irrigation in South Dakota more exactly than either of the averages referred to above.

Among the counties for which separate figures are given in the table, the lowest average cost per acre enterprises were capable of irrigating in 1910, \$5.09, is in Pennington, which contained a larger irrigated acreage in 1909 than any other county and a larger acreage that enterprises were capable of irrigating in 1910 than any other except one. The highest average cost per mere, \$42.81, is in Butte County, where large expenditures have been made on uncompleted projects. The estimated final cost per acre included in projects in Butte County, \$28.03, is likewise the highest reported for the counties of the state.

The acreage for which cost of operation and maintenance in 1909 was reported constitutes 40.3 per cent of the total acreage reported as irrigated in 1909 and

99.8 per cent of the acreage reported as irrigated by other than individual and partnership enterprises.

#### CROPS.

The following table shows the acreage, yield, and value of the principal crops grown under irrigation in 1909:

	IRRIGATED CROPS: 1909								
CROP.									
	Acreage.	Unit.	Amount.	Aver- age per acre.	Value.				
Cereals: Corn	1,166 2,526 1,329 317	Bu Bu Bu	91,045 25,590	21.8 36.0 19.3 19.2	\$17, 532 42, 035 21, 100 3, 143				
Other seed: Alfalfa seed	137	Bu	293	2.1	2, 196				
Hay and forage: Timothy alone. Timothy and clover mixed Alfalfa. Wild, salt, or prairie grusses	2,116 10.005	Tons. Tons. Tons. Tons.	3, 352 3, 189 28, 520 20, 334	1.74 1.51 2.85 1.15	25,290 21,229 160,414 145,667				
Sundry crops: Potatoes. Orchard fruits	439 327	Bu	35,666	81, 2	25, 049 17, 698				

Acreage.-While small quantities of crops other than those shown in the table are grown on irrigated land, the acreage reported for no one of these crops is as much as 100.

The irrigated acreage in alfalfa formed 15.1 per cent of the total acreage of that crop in the state in 1909, and the irrigated acreage in alfalfa seed 5.4 per cent of the total for that crop. The fact that these are the only crops in the state of which as much as 2 per cent of the total acreage was irrigated in 1909 shows that irrigation is a very small factor in South Dakota agriculture.

Of the crops shown in the table, "wild, salt, or prairie grasses" has the largest irrigated acreage, representing 46.5 per cent of the total irrigated acreage of the crops given. Alfalfa is next, with 26.4 per cent of this total, and is followed by oats, with 6.7 per cent, "timothy and clover mixed," with 5.6 per cent, and "timothy alone," with 5.1 per cent. No other single crop covered as much as 5 per cent of the total acreage of the irrigated crops presented in the table.

#### COUNTY TABLE.

The next table gives in detail, for the state and principal counties, the data summarized in this section, except those relating to crops.

Change of boundaries. In comparing the data secured in 1910 with those irons the census of 1900, it should be borne in mind that Harding and Perkins Counties were organized from parts of Butto-County in 1909.

<sup>1</sup> Change of boundary. (See explanation at close of text.) <sup>2</sup> Decrease. <sup>3</sup> Less than one-tenth of 1 per cent. <sup>4</sup> Not reported. <sup>6</sup> Figures relate only to systems obtaining water from streams by gravity diversion. <sup>4</sup> Not reported. <sup>6</sup> Total cost for state includes \$47,007, representing the cost of well systems, which was not shown by counties. County figures relate only to systems obtaining water from streams by gravity diversion.
