DELAWARE,

INDUSTRIES IN GENERAL.

General character of the state.—Delaware, with an area of 1,960 square miles, is, next to Rhode Island, the smallest state of the Union. Its population in 1910 was 202,322, as compared with 184,735 in 1900 and 168,493 in 1890. It ranked forty-seventh among the 49 states and territories as regards population in 1910 and forty-fifth in 1900. Though, as will be seen, its manufacturing interests are important, the state still preserves to a considerable extent its agricultural characteristics. About 82.7 per cent of its total area is returned as in farms, and of this, 68.7 per cent is reported as improved. Forty-eight per cent of the entire population of the state resided in cities and towns having a population of 2,500 inhabitants or over, as against 46.4 per cent in 1900.

The state has but one city having a population of over 10,000, Wilmington, with a population of 87,411. Eliminating this city, only 4.8 per cent of the population reside in towns of 2,500 inhabitants or over.

The density of population for the state in 1910 was 103 per square mile, the corresponding figure for 1900 being 94. The transportation facilities are excellent, as no part of the state is remote from navigable water, and its location gives it direct railroad connection with the large railway systems of the Eastern states.

Importance and growth of manufactures.—Though, as stated, Delaware is not preeminently a manufacturing community, at each census from 1849 to 1904 the manufactures of the state have represented about the same proportion of the total value of the production. This proportion in 1899 was four-tenths of 1 per cent; the proportion for 1909 is practically the same.

The following table gives the more important figures relative to all classes of manufactures combined for the state as returned at the censuses of 1909, 1904, and 1899, together with percentages of increase from census to census:

		NUMBER OR AMOUNT.		PER CENT OF INCREASE,1		
	1909	1904	1899	1904-1909	1899-1904	
Number of establishments. Persons engaged in manufactures. Proprietors and firm members. Salaried employees. Wage earners (average number). Primary horsepower. Capital. Expenses. Services. Salaries. Value of products less cost of materials).	23, 984 722 2, 024 21, 238 52, 779 \$60, 906, 000 46, 958, 000 12, 618, 000 2, 322, 000 10, 296, 000 30, 938, 000 3, 402, 000 52, 840, 000	631 20, 567 641 1, 451 18, 475 49, 490 \$50, 926, 000 37, 362, 000 9, 787, 000 1, 629, 000 8, 158, 000 24, 884, 000 2, 691, 000 41, 160, 000	633 (2) 1, 189 20, 562 40, 134 \$38, 791, 000 36, 439, 000 9, 794, 000 1, 337, 000 8, 457, 000 24, 725, 000 1, 920, 000 41, 321, 000 16, 596, 000	15. 1 16. 6 12. 6 39. 5 15. 0 6. 6 19. 6 25. 7 28. 9 42. 5 26. 2 24. 3 26. 4 28. 4	22. 0 -10. 1 23. 3 31. 3 2. 5 -0. 1 21. 8 -3. 5 0. 6 40. 2 -0. 4 -1. 9	

1 A minus sign (--) denotes decrease.

² Figures not available.

In 1909 the state of Delaware had 726 manufacturing establishments, which gave employment to an average of 23,984 persons during the year and paid out \$12,618,000 in salaries and wages. Of the persons employed, 21,238 were wage earners. These establishments turned out products to the value of \$52,840,000, to produce which materials costing \$30,938,000 were utilized. The value added by manufacture was thus \$21,902,000, which figure best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that the manufacturing industries of Delaware as a whole

showed little or no development during the five-year period, 1899–1904; indeed, in some respects a decrease is indicated. On the other hand, a very considerable increase is shown for the more recent period, 1904–1909. During this period the number of establishments increased 15.1 per cent and the average number of wage earners 15 per cent, while the value of products increased 28.4 per cent and the value added by manufacture 34.6 per cent. As pointed out in the Introduction, it would be improper to infer that manufactures increased in volume during the period 1904–1909 to the extent indicated by these figures regarding values, since the in-

crease shown is certainly due, in part, to the increase that has taken place in the price of commodities.

It is a matter of interest to note that the percentages of increase shown for wages value of products, and value added by manufacture are very much larger than those for the number of establishments and average number of wage earners.

The relative importance and growth of the leading manufacturing industries of the state are shown in the following table:

		WAGE EA	ENERS.	VALUE OF PR	oducts.	VALUE ADD MANUFACT		PER	CENT O	F INCRE	ASE.1

¹ Percentages are based on figures in Table I; a minus sign (--) denotes decrease. Where the percentages are omitted, comparable figures can not be given

The most important industries listed in this table, where they are arranged in the order of the value of products, call for brief consideration.

Leather, tanned, curried, and finished.—The statistics showing number of wage earners, amount paid in wages, and value of products all indicate a considerable growth of this industry.

Foundry and machine-shop products.—The number of establishments engaged in this industry and the degree of their activity in any community are usually a fair index of the extent and prosperity of its manufactures. The industry was really of greater importance in the state than is indicated by the statistics, as some machine shops manufactured a distinctive product and were assigned to other classifications.

Cars, steam-railroad, not including operations of railroad companies and Cars and general shop construction and repairs by steam-railroad companies.—These two branches of industry are allied closely. Combined they gave employment to an average of 3,204 wage earners during the year, and their products amounted to \$6,879,000.

Paper and wood pulp.—The establishments which produce pulp as a final product, as well as those which manufacture paper or pulp and paper, are included under this classification.

Canning and preserving.—This industry depends entirely upon the agricultural and fishery products for its raw material. It includes the canning and preserving of fruits, vegetables, fish, and oysters. Since 1850, when it was first known commercially, it has increased steadily in importance. Considering the short season during which it is carried on, the value of products, compared with that of other industries, is significant.

Measured by value added by manufacture, these industries held generally the same relative rank as when measured by value of products, though shipbuilding becomes fifth in order instead of paper and wood pulp, which, in turn, becomes sixth, while canning and preserving becomes ninth.

Flour-mill and gristmill products and Lumber and timber products.—While these industries do not rank among the most important industries, both are represented by a relatively large number of establishments. The mills are, as a rule, small and located in the rural districts. Owing to the comparatively simple processes involved and the extent to which these processes are carried on by machinery, the value added by manufacture is not commensurate with the gross value of products or the number of the establishments in either industry.

The table shows also the percentages of increase for these leading industries in respect to value of products and value added by manufacture. The leather industry showed a greater rate of increase from 1904 to 1909 in value added by manufacture than any

other of the specified industries, namely, 68 per cent. The steam-railroad repair shops and the canning and preserving industry also showed remarkable increases both in value of products and in value added by manufacture. There are some striking differences among the several industries specified as respects the relative increase from 1899 to 1904 and from 1904 to 1909, respectively. All but one of the specified industries showed an increase from 1904 to 1909 in value of products, and all but four an increase in value added by manufacture, while, on the other hand, a considerable proportion of the industries showed decreases in these respects from 1899 to 1904.

Persons engaged in manufacturing industries.—The following table shows the distribution of the average number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age in the manner already explained. (See Introduction.)

CLASS.		PERSONS ENGAGED IN MANUFACTURES.					
	Total.	Male,	Female.				
All classes	28,984	19,972	4,012				
Proprietors and officials	1,388	1,356	32				
Proprietors and firm members	722 240 426	701 235 420	. 21 5 6				
Clerks.	1,358	1,111	247				
Wage earners (average number)	21,238	17,505	3,733				
16 years of age and over	20,709 529	17,205 300	3, 504 220				

This table shows that there were 23,984 persons returned as the average number engaged in manufactures during 1909, of whom 21,238 were wage earners, the rest being about equally divided between proprietors and officials and clerks.

Corresponding figures for individual industries will be found in Table II. In considering this table it should be noted that the canning and preserving industry is a peculiarly seasonal one, so that the number employed during certain months is far greater than the average number for the entire year. During September 6,413 wage earners were employed in this industry, which was a much larger number than was employed at any time in any other industry.

The next table shows the percentage of proprietors and officials, clerks, and wage earners, respectively, in the total number of persons employed in manufactures. It covers all industries combined and 10 important industries individually.

Of the persons engaged in all manufacturing industries, 5.8 per cent were proprietors and officials, 5.7 per cent clerks, and 88.6 per cent wage earners. In the flour-mill and gristmill industry the majority of the establishments are small and the work is to a large extent done by the proprietors or their immediate representa-

tives. Therefore the proportion of persons engaged in the industry falling into the class of proprietors and officials is very much higher than for other industries or all industries combined. Similar conditions prevail to some extent in the manufacture of lumber and timber products, where the proprietors and officials form 13.4 per cent of the total persons engaged. The smallest proportion for this class is shown for the industry of cars and general shop construction and repairs by steam-railroad companies, and is due to the fact that general officials are not as a rule assigned to the supervision of this particular branch of work.

	PERSONS ENGAGED IN MANUFACTURES.

Per cent 10 Per und years of age and over. Wale. Fe-male. Male. Fe-male. Male. S1.8 18.2 81.0 16.5 1.4 83.7 16.3 32.5 53.3 5.3 100.0 99.8 0.2 95.7 4.3 99.1 0.8 0.1 81.8 18.2 99.3 0.7 0.7 93.5 20.5 70.0 0.7 93.5 20.5 70.0 23.6 0.4 79.5 20.5 70.0 23.6 0.4 77.1 22.9 85.7 14.3 1.3 1.8 2.9 3.0 0.9 3.3 2 16.8 90.4 0.6 0.6		

Of the clerks, 81.8 per cent were male and 18.2 per cent female. Of the wage earners, 82.4 per cent were male and 17.6 per cent female; 97.5 per cent were 16 years or over and but 2.5 per cent under 16 years.

It may be noted that the largest number of women and children are employed in canning and preserving. The average number of wage earners in that industry was 445 males and 730 females 16 years and over, and 73 males and 121 females under that age. Of the

total of 3,733 female wage earners in all industries combined, 851, or 22.8 per cent, were thus in this single industry, and of the total of 529 wage earners in all industries, under 16 years of age, 194, or 36.7 per cent, were in this industry. With this industry omitted the females over 16 in all other industries combined would be 14 per cent of the total number of wage earners, and persons of both sexes under 16 years of age, 1.7 per cent.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown in the census of 1904 it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

	PERSONS ENGAGED IN MANUFACTURES.									
CLASS.	190	9	190	Per						
	Number.	Per cent distri- bution.	Number,	Per cent distri- bution.	cent of in- crease, 1904- 1909.					
Total Proprietors and firm members Salaried employees Wage earners (average number)	23, 984 722 2, 024 21, 238	100.0 3.0 8.4 88.6	20, 567 641 1, 451 18, 475	100.0 3.1 7.1 89.8	16.6 12.6 39.5 15.0					

Comparable figures are not obtainable for 1899. The table shows a greater percentage of increase in the salaried employees than in the other two classes, but this may be due, in part, to changes in the interpretation of the line of distinction between that class and other wage earners.

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899:

	AVERAGE NUMBER OF WAGE EARNERS.										
CLASS.	190	9	190	4	1899						
	Number.	Per cent distri- bution.	Number.	Per cent distri- bution.	Number,	Per cent distri- bution.					
Total 16 years of age and over Male Female Under 16 years of age	21,238 20,709 17,205 3,504 529	100.0 97.5 81.0 16.5 2.5	18,475 17,826 14,866 2,960 649	100.0 96.5 80.5 16.0 3.5	20,562 19,726 16,416 3,310 836	100,0 95,9 79,8 16,1 4,1					

This table indicates that for all industries combined there has been a decrease during the 10 years in the employment of children under 16 years of age. There has not been much change in the proportion of male and female wage earners. In 1909 males 16 years of age and over formed 81 per cent of all wage earners, as compared with 80.5 per cent in 1904 and 79.8 per cent in 1899.

Wage earners employed, by months.—The following table gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined, for canning and preserving, and for all other industries; it also gives the percentage which the number each month is of the greatest number employed in any one month.

The single industry of canning and preserving. which is a seasonal industry, giving employment to a large number of persons in August and September. affects greatly the totals for all industries combined. It thus not only makes the month of September the month of greatest employment, but also increases the irregularity of employment throughout the year. From 85 wage earners in this industry in May the number increased to 972 in June, and dropped to 524 in July, but in August and September, when tomatoes and corn ripen, there was a very great increase-6,413 wage earners being employed in the latter month. Outside the canning industry the number of wage earners employed underwent but little change up to and including the month of August; but thereafter the numbers increased steadily month by month to the end of the year.

		NUM	BER OF W.	GE EARN	ers.

Prevailing hours of labor.—Establishments have been classified also according to the prevailing number of hours of labor of the bulk of their employees; that is to say, the wage earners of each establishment are all classified according to the prevailing hours of labor in the establishment, even though some may have to work a different number of hours. The table

Character of ownership.—The table that follows presents conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Com-

parative data for 1899 are not available. Figures for 1909 only are presented for several important industries. To avoid disclosing the operations of individual concerns it is necessary to omit several important industries from this table and the one following.

INDUSTRY AND CHARACTER OF OWNERSHIP.	Num- ber of estab- lish- ments.	A verage number of wage earners.	Value of products.	Value added by manu- facture.	INDUSTRY AND CHARACTER OF OWNERSHIP. ¹ Includes the group "Other," to avoid disclosure of individual operations.

2 This group included with "Corporations."

8 Less than one-tenth of 1 per cent.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 27.8 per cent of the total number of establishments had in 1909 a corporate form of organization, as against 72.2 per cent for all other forms. The corresponding figures for 1904 were 25.4 per cent and 74.6 per cent, respectively. Five years is too short a period to reveal any pronounced change in character of ownership. For all industries combined, as measured by value of products, and value added by manufacture, corporations lost ground to a slight extent, but this was due to the change in conditions in the one industry of leather, which is the largest in the state.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it the table on the following page groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for important industries separately as measured by number of wage earners, value of products, and value

added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

This table shows that, in 1909, of the 726 establishments only 7, or 1 per cent, had a value of product exceeding \$1,000,000. These establishments, however, notwithstanding their small number, had a total average number of wage earners of 6,994, or 32.9 per cent of the total number in all establishments; and the importance of their operations as measured by value of product was 32 per cent of the total, and by value added by manufacture 34.1 per cent of the total.

On the other hand, small establishments—that is, those having a value of products of less than \$5,000—constituted a very considerable proportion (29.3 per cent) of the total number of establishments, but the value of their products amounted to only 1.1 per cent of the total. The great bulk of the manufacturing was carried on in establishments having products valued at not less than \$100,000.

The five years from 1904 to 1909 was rather too short a period to show extensive changes, and no clear tendencies can be seen as to the relative importance of the classes.

Expenses.—As stated in the Introduction the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses going to make up the total.

The next table shows, in percentages, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II.

This table shows that, for all industries combined, 65.9 per cent of the total expense was for cost of materials, 26.8 per cent for services—that is, salaries and wages—and but 7.2 per cent for other purposes.

As would be expected, these proportions vary greatly in the different industries.

	PER CENT OF TOTAL EXPENSES REPORTED.

Engines and power.—The following table shows for all industries combined the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

POWER.	OF E	UMBER NGINES IOTORS	s or	HOI	RSEPOWE	R.	PER CENT DISTRIBUTION OF HORSEPOWER.

¹Includes the neighborhood industries and hand trades, omitted in 1904 and 1909.

²Not reported.

³Less than one-tenth of 1 per cent.

The table indicates that the increase in primary power was in power generated by steam and gas engines, water power showing a decrease. The more general use of gas engines is shown, the number of such engines being 78 in 1909, as against 41 in 1904

and 35 in 1899. The figures also show that the practice of renting power is on the increase, 8.6 per cent of the total power being rented in 1909, as against but 2.5 per cent in 1904 and 3.8 per cent in 1899. The use of electric motors for the purpose of applying the power generated within the establishments is also shown to be increasing rapidly, the horsepower of such motors increasing from 1,265 in 1899 to 4,672 in 1904 and 13,408 in 1909.

Fuel.—Closely related to the question of kind of power employed is that of the fuel used in generating this power, or otherwise as material in the manufacturing processes. The following table shows the quantity of each kind of fuel used by the establishments canvassed in 1909:

	INDUSTRY.	Anthra- cite coal (tons).	Bitumi- nous coal (tons).	Coke (tons).	Wood (cords).	Oil, includ- ing gaso- line (bar- rels).	Gas (1,000 feet).

Note.-In addition, there were 241 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and value of materials and products which do not appear on the general schedule. Data for the quantity and value of products for three important industries in Delaware are here presented.

Canning and preserving.—Canning and preserving as a factory industry is of comparatively recent origin. There has been a rapid development of it in Delaware since 1869.

The year 1904 seems to have been one of unfavorable conditions in the canning industry, and there was a general falling off in volume of business. In 1909, however, the industry had more than recovered what it lost in 1904.

The largest individual product is tomatoes, comprising, in 1909, 76.2 per cent of the aggregate value of all products. The number of cases of corn packed in 1909 was less than in 1904, but all other products increased.

Of the 77 establishments embraced within this classification in 1909, tomatoes were canned by 69, peas by 10, and corn by 8. Forty-nine establishments canned tomatoes exclusively. Tomato pulp and scraps, to be subsequently converted into fertilizer, were among the products of 20 of the 69 establishments canning or preserving tomatoes.

The quantity and value of products, by classes, for 1909, 1904, and 1899, are given below.

	QUANT	TITY (CAS	ES).	VALUE.							
PRODUCT.	1909	1904 1	1899 1	1909	1904 1	1899 1					
Total value				\$2,105,945	\$1,456,185	\$1,579,263					
Canned vegetables	1,585,360	971, 403	944,614	2,049,074	1,406,102	1,414,308					
Corn Peas Pumpkins Sweet potatoes Tomatoes All other canned vegetables	94,697 190,261 3,145 20,633 1,262,635	5,200	53,240 101,038 1,000 763,836 25,500	138,739 249,357 4,546 28,675 1,605,069 22,688	178,729 500 7,695	176, 578 990 1,121, 546					
All other products				56,871	50,083	164,955					

¹ Excluding one establishment, to avoid disclosure of individual operations.

Considerable quantities of canned and preserved fruits and vegetables were produced as by-products by establishments other than those classified within this industry, but as the total value of such by-products was less than \$70,000 it does not affect appreciably the aggregate value of products of canning and preserving for 1909.

As a result of the seasonal character of this industry, already referred to, the average number of wage

earners employed during the year was very much less than the number on the representative day, being only 1,369 as compared with 5,935 on a representative day.

Flour-mill and gristmill products.—Owing to the extensive development of large mills in the West, this industry in most Eastern states has shown little increase for several decades; and this is true of Delaware.

The following tabular statement gives the quantity and value of products for the last two census years:

		QUAI	NTITY.	VALUE.					
PRODUCT	•	1909	1904	1909	1904				
Total value Wheat flour: White	barrelsbarrelsbarrelsbarrels	174,177 47 70,727 6,672	168,944	\$1,751,588 1,011,305 206 219,690 20,082	\$1,586,604 865,794 225,966				
Rye flour Buckwheat flour Hominy Grits Feed Offal All other	pounds pounds tons tons	672,675 525,096 1,146,129 12,222 3,722	378,300 23,024,700 10,582 8,166	231 19, 272 9, 837 20, 449 356, 455 93, 806 200	9, 298 41, 848 233, 728 159, 878				

¹ Includes corn flour.

² Includes grits.

Leather, tanned, curried, and finished.—The industry of first importance in Delaware, both according to value of products and value added by manufacture, is the tanning, currying, and finishing of leather.

The following is a statement of products reported for the industry at the last three censuses:

-		NUMBER.		VALUE.							
PRODUCT.	1909	1904	1899	1909	1904	1899					
Total value Goatskins Black Colored Sheepskins All other leather All other products Work on materials for others	7,537,449	10, 928, 313 9, 396, 211 1, 532, 102 463, 404	7,803,193 1,560,576	6,801,452 3,431,011	9,102,297 7,640,780 1,461,517 281,754 484,785	8, 634, 806 7, 104, 736 1, 530, 064 61, 921 321, 255 201, 840					

The relative increase in the production of colored goatskins in 1909 is an interesting feature of this table. There has been a considerable increase in the amount received for tanning, currying, and finishing done for establishments other than those reporting.

Fifteen of the 16 establishments reported glue and glue stock as by-products, and 13 reported hair or wool, which have been included in "All other products" in the tabular statement above.

Laundries.—Statistics for steam laundries are not included in the general tables. In 1909 there were 15 such establishments in the state of Delaware, 11 of

which were in Wilmington. The following statement summarizes the statistics:

Number of establishments. Persons engaged in the industry. Proprietors and firm members. Salaried employees.	283 17
Wage earners (average number)	222
Primary horsepower	
Capital. Expenses. Services. Materials. Miscellaneous. Amount received for work done.	149, 365 97, 776

The most common form of organization was the individual, with nine establishments, the firm and corporate forms having three establishments each. Three establishments had receipts for the year's business of less than \$5,000; nine receipts of \$5,000 but less than \$20,000; and three receipts of \$20,000 but less than \$100,000.

The number of wage earners employed each month and the percentage which this number represented of the greatest number employed in any month were as follows:

	WAGE E	ARNERS.		WAGE EARNERS.				
MONTH.	Number.	Percent of maxi- mum.	Month.	Number.	Per cent of maxi- mum.			
January. February March April. May June	215	94.3 95.2 94.3 97.8 97.8 94.7	July August September October November December	228 228 223 223	100. 0 100. 0 100. 0 97. 8 98. 7 98. 7			

The different kinds of primary power, the number of engines or motors, and the horsepower used in 1909 are shown in the following tabular statement:

KIND,	Number of engines or motors.	Horse- power.
Primary power, total Owned—Steam Rented—Electric	15 10	235 215 20

The kind and amount of fuel used are shown below.

KIND.	Unit.	Quantity.
Anthracite coni. Bituminous coal. Oil. Coke. Gas.	Tons	2,536 260

Custom sawmills and gristmills.—Statistics for custom sawmills and gristmills are not included in the general tables, but are presented below.

	Custom sawmills.	Custom gristmills.
Number of establishments. Persons engaged in the industry. Proprietors and firm members Salaried employees Wage earners (average number). Primary horsepower.	21 93 26	6 8
	67 415	145
Capital. Expenses Services. Materials Miscellaneous. Value of products.	\$26,775 14,817 11,371 845 2,601 25,605	\$6,400 16,864 115,735 629 119,093

¹ Includes estimate of all grain ground. A similar estimate for value of lumber sawed by custom sawmills is impracticable.

DISTRICT OF COLUMBIA.

INDUSTRIES IN GENERAL.

General character.—The District of Columbia, which is coextensive with the city of Washington, contains 60 square miles. Its population in 1910 was 331,069, as compared with 278,718 in 1900 and 230,392 in 1890. It ranked forty-third among the states and territories in regard to population in 1910 and forty-first in 1900.

Importance and growth of manufactures.—Although Washington is not essentially a manufacturing city, the number and importance of its industries have been increasing steadily. The manufacturing operations

carried on in the District by the Federal Government are of considerable importance, but as they are conducted under conditions which in many respects differ from those prevailing in establishments operated under private ownership, statistics for them are presented separately.

The following table gives the more important figures relative to all classes of manufactures combined for the District as returned at the censuses of 1909, 1904, and 1899, together with percentages of increase from census to census:

		PER CENT O	F INCREASE.1		
	1909	1904	1899	1904-1909	1899-1904
Number of establishments Persons engaged in manufactures Proprietors and firm members Salaried employees Wage earners (average number) Primary horsepower Capital	475	482 7, 778 473 1, 006 6, 299 12, 592 \$20, 200, 000	491 (2) 957 6,155 10,255 \$17,960,000	7. 5 25. 5 0. 4 56. 7 22. 4 31. 5 51. 3	-1.8 5.1 2.3 22.8 12.5
Expenses. Services. Salaries. Wages. Materials. Miscellaneous. Value of products. 1 A minus sign (-) denotes decrease.

² Figures not available.

Exclusive of the establishments operated by the Federal Government in 1909, the District of Columbia had 518 manufacturing establishments, which gave employment to an average of 9,758 persons during the year, and paid out \$6,835,000 in salaries and wages. Of the persons employed, 7,707 were wage earners. These establishments turned out products to the value of \$25,289,000, to produce which materials costing \$10,246,000 were utilized. The value added by manufacture was thus \$15,043,000, which figure best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that the manufacturing industries of the District show a much greater increase for the period 1904–1909 than for the period 1899–1904. During the more recent period the number of establishments increased 7.5 per cent and the average number of wage earners 22.4, while the value of products increased 37.7 per cent and the value added by manufacture 41.6. As pointed out in the Introduction, it would be improper to infer that manufactures increased in volume during the period 1904–1909 to the extent indicated by these figures regarding values, since the increase shown is

certainly due, in part, to the increase that has taken place in the price of commodities.

It is a matter of interest to note that the percentages of increase shown for wages, value of products, and value added by manufacture are very much larger than those for the number of establishments and average number of wage earners.

The relative importance and growth of the leading manufacturing industries of the District are shown in the next table.

The most important industries listed in the table, in which they are arranged in the order of the value of products, call for brief consideration.

Printing and publishing.—The establishments classified under this head include those printing newspapers, books, and periodicals, job printing offices, establishments engaged in bookbinding and blank-book making, and lithographing and engraving establishments. The statistics show that there has been a constant and satisfactory increase in the industry.

Bread and other bakery products.—As measured by value of products and value added by manufacture, this industry, common to all cities, has shown, in the District, practically the same rate of increase during the two periods covered by the table.

(183)

Liquors, malt.—Four establishments were reported for the industry in 1904 and five in 1909. Measured both by value of products and by value added by manufacture, this industry decreased during the period 1899–1904, but increased substantially from 1904 to 1909.

Foundry and machine-shop products.—In any community the number of establishments engaged in this industry and the degree of their activity are usually

a fair index of the extent and prosperity of its manufactures. In the District, however, the industry was really of greater importance than is indicated by the statistics, as some machine shops manufactured a special product and were assigned to other classifications.

Measured by value added by manufacture, the four leading industries held the same relative rank as when measured by value of products.

¹ Percentages are based on figures in Table I; a minus sign (-) denotes decrease. Where the percentages are omitted, comparable figures can not be given.

This table shows also the percentages of increase for the leading industries in respect to value of products and value added by manufacture. There are some striking differences among the several industries specified in regard to the relative increase from 1899 to 1904 and from 1904 to 1909. Two industries show a decrease in value of products and three in value added by manufacture from 1899 to 1904. Only one, however, the flour-mill and gristmill industry, shows a decrease from 1904 to 1909.

In addition to the seven industries presented separately there were nine other industries which had a value of products in 1909 in excess of \$300,000. They are included in the group of "All other industries," because in some instances if they were shown separately the operations of individual establishments would be disclosed; in others, the returns do not present properly the true condition of the industry, it being more or less interwoven with one or more industries of similar character; and for others, comparable statistics for the different census years can not be presented on account of changes in classification. The nine industries omitted from this table are: Baking powders and yeast; cars and general shop construction and repairs by steam-railroad companies; coffee and spice, roasting and grinding; copper, tin, and sheet-iron products; gas, illuminating and heating; ice, manufactured; iron and steel, steel works and rolling mills; patent medicines and compounds and druggists' preparations; and slaughtering and meat packing. Of these industries, comparative figures for four-copper, tin, and sheet-iron products; ice, manufactured; patent medicines and compounds and

druggists' preparations; and slaughtering and meat packing—will be found in Table I, and in Table II totals for 1909 for gas, illuminating and heating.

Persons engaged in manufacturing industries.—The following table shows the distribution of the average number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age in the manner already explained. (See Introduction.)

	PERSONS ENGAGED IN MANUFACTURES.						
CLASS.	Total.	Male.	Female.				
All classes	9,758	8,598	1,160				
Proprietors and officials	809	866	33				
Proprietors and firm members	475 170 254	455 164 247	20 6 7				
Clerks	1,152	853	299				
Wage earners (average number)	7,707	6,879	828				
16 years of age and over	7,688	6,861 18	827				

This table shows that there were 9,758 persons returned as the average number engaged in manufactures during 1909, of whom 7,707 were wage earners, 899 proprietors and officials, and 1,152 clerks. Corresponding figures for individual industries will be found in Table II.

The table following shows the percentage of proprietors and officials, clerks, and wage earners, respectively, in the total number of persons employed in manufactures. It covers all industries combined and eight important industries individually.

	PERSONS ENGAGED IN MANUFACTURES.							
		Per cent of total.						
INDUSTRY	Total number.	Proprietors and officials.	Clerks.	Wage earners (average number).				
All industries. Printing and publishing Bread and other bakery products. Slaughtering and meat packing. Liquors, mait. Foundry and machine-shop products Lumber and timber products. Marble and stone work Flour-mill and gristmill products. All other industries.	578 339 299	9.2 12.0 8.4 6.5 3.1 7.3 4.4 10.0 22.0 8.8	11.8 23.1 9.1 30.4 10.5 4.7 4.4 1.3 2.0 7.8	79.0 64.9 82.4 63.1 86.4 88.1 91.2 88.6 76.0 83.3				

Of the persons engaged in all manufacturing industries, 9.2 per cent were officials, 11.8 per cent clerks, and 79 per cent wage earners. A number of the printing and publishing establishments are small, the work to a large extent being done by proprietors, and five of the seven flour mills and gristmills are operated under individual or firm form of ownership. Therefore the proportion of persons engaged in these industries falling into the class of proprietors and officials is higher than that for other industries or for all industries combined. The smallest proportion for this class is for the maltiquor industry, due to the fact that four of the five establishments reported are operated by corporations.

The following table shows, for all industries combined and for some of the important industries separately, the average number of wage earners; their percentage distribution by age periods, and for those 16 years of age and over by sex.

	WAGE EARNERS.							
· .		Per	cent of t	otal.				
industry.	Average number.1	16 year and	Under 16 years					
		Male.	Female.	- 2				
All industries Printing and publishing Bread and other bakery products Slaughtering and meat packing Liquors, mait. Foundry and machine-shop products Lumber and timber products Marble and stone work Flour-mill and gristmill products All other industries	975 135 248 509 309 265	89.0 81.4 93.9 100.0 100.0 99.8 99.7 100.0 100.0 86.5	10.7 18.1 6.1 0.2	0.2				

¹ For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.

Clerks are not shown in this table; of the 1,152 clerks employed in all industries, 853, or 74 per cent, were male and 299, or 26 per cent, female. Of the wage earners, 89.3 per cent were male and 10.7 per cent female; 99.8 per cent were 16 years of age or over, and but two-tenths of 1 per cent under 16 years.

It may be noted that the largest number of women are employed in printing and publishing. Of the average number of wage earners in that industry 1,281 were males and 284 females. Thus, of the 828 female wage earners in all industries combined, 284, or 34.3 per cent, were employed in this single industry. Of the 19 persons under 16 years of age reported as employed in the manufactures of the District, 7 were reported in this industry.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown in the census of 1904, it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

	PERSONS ENGAGED IN MANUFACTURES.								
CLASS.	190	9	190	Per					
GIAGO.	Amount.	Per cent distri- bution,	Amount.	Per cent distri- bution.	cent of in- erease, 1904- 1909.				
Total. Proprietors and firm members Salaried employees. Wage earners (average number)	9,758 475 1,576 7,707	100.0 4.9 16.2 79.0	7,778 473 1,006 6,299	100.0 6. 1 12. 9 81. 0	25.8 0.4 56.7 22,4				

Comparable figures are not obtainable for 1899. The table shows a greater percentage of increase in the salaried employees than in the other two classes, but this may be due, in part, to changes in the interpretation of the line of distinction between that class and other wage earners.

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899:

	AVERAGE NUMBER OF WAGE EARNERS.							
OT LEG	190	0	190	4	1899			
CLASS.	Number.	Per cent distri- bution.	Number.	Per cent distri- bution.	Number.	Per cent distri- bution.		
Total	7,707 7,688 6,861 827 19	100,0 99, 8 89, 0 10, 7 0, 2	6,299 6,225 5,614 611 74	100.0 98.8 89.1 9.7 1.2	6,155 6,082 5,360 722 73	100.0 98.8 87.1 11.7 1.2		

This table indicates that for all industries combined there has been a great decrease during the last 5 years in the employment of children under 16 years of age. There has, on the other hand, been little change in the proportion of male and female wage earners. In 1909 males 16 years of age and over formed 89 per cent of all wage earners, as compared with 89.1 per cent in 1904 and 87.1 per cent in 1899.

Wage earners employed, by months.—The following table gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined; it also gives the percentage which the number reported for each month is of the greatest number employed in any one month.

	WAGE E.	ARNERS.		WAGE EARNERS.		
MONTH.	Number.	Per cent of maxi- mum.	монтн.	Number.	Per cent of maxi- mum.	
JanuaryFebruaryMarchAprilMayJune	7,445	93. 4 93. 7 94. 8 95. 8 97. 8	July	7,840	97. 9 97. 5 98. 6 100. 0 98. 9 97. 5	

There are no important seasonal industries in the District. The table shows but little variation in the numbers reported for any of the months of the year. The greatest number, 7,949, is shown for October, and the smallest number, 7,421, for January, the minimum number thus representing 93.4 per cent of the maximum.

Prevailing hours of labor.—Establishments have been classified also according to the prevailing number

of hours of labor of the bulk of their employees; that is to say, the wage earners of each establishment are all classified according to the prevailing hours of labor in the establishment, even though some may have to work a different number of hours. The table that follows shows the result of this classification. It is based on the average number of wage earners employed during the year.

industry.		AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS GROUPED ACCORDING TO PREVAILING HOURS OF WORK PER WEEK.										
		48 and under.	Between 48 and 54.	54.	Between 54 and 60.	60.	Between 60 and 72.	72.	Over 72.			
All industries.	7,707	2,944	782	1,558	254	1,117	949	45	58			
Bread and other bakery products.	975 38	120	19	782	10	26 5	10 29	8 4

	1	168		97								
Printing and publishing. Slaughtering and meat packing. All other industries.	1,565 135 3,663	1,259 9 621	161 484	61 437	83 161	126 960		33	58			
Bread and other bakery products. Flour-mill and gristmill products. Foundry and machine-shop products. Liquors, malt. Lumber and timber products. Marble and stone work. Frinting and publishing. Slaughtering and meat packing. All other industries.	38 509 248 309	330 128 309 168 1,259	80 38 161	99 82 97 61	83	126	1					

It is evident from the figures that the great majority of wage earners employed in the manufacturing industries of the District of Columbia were in establishments where the prevailing hours of labor did not exceed 54 a week.

Of the total number of wage earners, 38.2 per cent were employed in establishments running 48 hours a week or less and 30.4 per cent in establishments running more than 48 hours, but not over 54 hours a week, while 31.4 per cent were in establishments operating more than 9 hours a day.

Character of ownership.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available.

INDUSTRY AND CHARACTER OF OWNERSHIP.	Num- ber of estab- lish- ments.	Average number of wage earners.	Value of products.	Value added by manu- facture.	INDUSTRY AND CHARACTER OF OWNERSHIP.	Num- ber of estab- lish- ments.	Average number of wage earners.	Value of products,	Value added by manu- facture,

Figures for 1909 only are presented for several important industries. In order to avoid disclosing the operations of individual concerns, it is necessary to

omit several important industries from this and other tables. The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 23.6 per cent of the total number of establishments had in 1909 a corporate form of organization, as against 76.5 per cent for all other forms. The corresponding figures for 1904 were 18.9 per cent and 81.1 per cent, respectively. Five years is too short a period to reveal any pronounced change in character of ownership. For all industries combined, as measured by value of products and value added by manufacture, firms lost ground to a considerable extent, while corporate ownership shows large increases.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it, the table in the next column groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for important industries separately, as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

This table shows that, in 1909, of the 518 establishments, only 49, or 9.5 per cent, had a value of products exceeding \$1,000,000 each. These 49 establishments, however, notwithstanding their small number, had a total average number of wage earners of 4,089, or 53.1 per cent, of the total number in all establishments, and the importance of their operations, as measured by value of products, was 67.5 per cent of the total, and by value added by manufacture 66.9 per cent.

On the other hand, small establishments—that is, those having a value of products of less than \$5,000—constituted a very considerable proportion (28.4 per cent) of the total number of establishments, but the value of their products amounted to only 1.5 per cent of the total. The great bulk of the manufacturing was carried on in establishments having a product valued at not less than \$100,000. The five years from 1904 to 1909 was rather too short a period to show extensive changes. The group of establishments reporting a value of products of less than \$5,000 shows a decrease in every item between 1904 and 1909. The table indicates, therefore, that the relative importance of the smaller establishments has decreased, while that of the large establishments has increased.

The fact that the average value of products per establishment increased from \$38,090 to \$48,821 and the value added by manufacture from \$22,048 to \$29,040 can scarcely be taken as an indication of a tendency toward concentration. The increased values shown may be, and probably are, due wholly or in part to the increase that has taken place in the prices of commodities. The average number of wage earners per establishment shows an increase from 13 in 1904 to 15 in 1909.

3 Includes the group "Less than \$5,000."

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed. The next table shows such a classification for all industries combined and for eight important industries | separately, and gives not only the number of establish-

ments falling into each group but also the average number of wage earners employed.

				F	STABLISH	MENTS EN	(PLOYING-	-		
. industry.	Total.	No wage earners.	1 to 5 wage earners.	6 to 20 wage earners.	21 to 50 wage earners.	51 to 100 wage earners.	101 to 250 wage earners.	251 to 500 wage earners,	501 to 1,000 wage earners.	Over 1,000 wage earners

This table shows classes in considerable detail. Consolidating these classes to a certain extent, it will be seen that 82.2 per cent of the establishments employed no wage earners at all or under 21 persons each. The most numerous single group consists of the 223 establishments employing less than 6 wage earners, and the next of the 128 establishments employing from 6 to 20 wage earners. There were but 3 establishments that employed over 250 wage earners, and 1 of these employed over 500.

The per cent distribution of the number of establishments is not shown in this table; of the 518 establishments reported for all industries, 14.5 per cent employed no wage earners; 43.1 per cent employed under 6 wage earners; 24.7 per cent, from 6 to 20 wage earners, leaving but 17.8 per cent for all of the remaining groups.

Of the total number of wage earners, 27.3 per cent were in establishments employing over 100 wage earners. The single group having the largest number of employees was the group employing from 21 to 50 wage earners. This group employed 1,915 wage earners, or 24.8 per cent of the total.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses going to make up the total.

The following table shows, in percentages, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II.

	PER CENT OF TOTAL EXPENSES REPORTED.					
industry.	Sala- ries.	Wages.	Ma- terials.	Miscel- laneous ex- penses.		
All industries Bread and other bakery products. Flour-nill and gristmill products. Flour-nill and gristmill products. Liquors, malt. Liquors, malt. Lumber and timber products. Marble and stone work. Printing and publishing. Slaughtering and meat packing. All other industries.	3. 2 1. 4 4. 9 6. 9 4. 2	24.4 21.5 3.4 35.9 14.4 38.9 38.6 28.3 5.0 28.0	50.0 67.5 93.6 53.9 30.3 52.3 53.6 28.2 82.0 46.5	16.6 7.7 1.6 5.4 48.5 4.6 3.4 21.8 8.9 17.4		

This table shows that, for all industries combined, 50 per cent of the total expenses were incurred for materials, 33.4 per cent for services—that is, salaries and wages—and but 16.6 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries.

Engines and power.—The following table shows for all industries combined the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current) and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

POWER.	OFE	NUMBER ENGINES OR HORSEPOWER, DISTRIBUTION HORSEPOWE					N OF

Includes the neighborhood industries and hand trades, omitted in 1904 and 1909. Not reported.

The table indicates a general increase from 1899 to 1909 in the primary power generated by steam and gas and oil engines and by water wheels, with the exception of a slight decrease in the amount generated by gas and oil engines between 1899 and 1904. Steam is still the predominant power, and although it furnished but 73.5 per cent of the total power in 1909, as compared with 84.2 per cent in 1899, the actual horsepower increased during this period from 8,630 to 12,169, or 41 per cent. The figures also show that the practice of renting power is on the increase, 15.1 per cent of the total power being rented in 1909, as against 8 per cent in 1904 and 7.5 per cent in 1899. The use of electric motors for the purpose of applying the power generated within the establishments is also shown to be increasing rapidly, the horsepower of such motors having increased from 248 in 1899 to 765 in 1904 and 2,094 in 1909.

Fuel.—Closely related to the question of kind of power employed is that of the fuel used in generating

this power, or otherwise as material in the manufacturing processes. The following table shows the quantity of each kind of fuel used in 1909:

industry.	Anthra- cite coal (tons).	Bitumi- nous coal (tons).	Coke (tons).	Wood (cords).	Oil, includ- ing gaso- line (bar- rels).	Gas (1,000 feet).

NOTE .- In addition, there were 45 tons of other varieties offuel reported.

Laundries.—Statistics for steam laundries are not included in the general tables. For 1909 there were 17 such establishments in the District of Columbia. The following statement summarizes the statistics:

Number of establishments.	17
Persons engaged in the industry	
Proprietors and firm members	
Salaried employees	
Wage earners (average number)	993
Primary horsepower	
Capital	\$699,007
Expenses:	·
Services	\$419,285
Materials	126, 256
Miscellaneous	140, 516
Amount received for work done	795, 999

The most common form of organization was the individual, with eight establishments, the firm and corporate forms having two and seven establishments, respectively. Six establishments had receipts for the year's business of less than \$20,000; nine, \$20,000 but less than \$100,000; while two establishments reported receipts of more than \$100,000.

The number of persons employed each month and the percentage which this number represented of the greatest number employed in any month were as follows:

	WAGEE	ARNERS.		WAGE EARNERS.				
MONTIL.	Number.	Per cent of maxi- mum.	Montii,	Number.	Per cent of maxi- mum.			
January February March April May June	1,020 1,000 1,013 1,017 1,013	95. 4 94. 4 94. 8 95. 1 04. 8 90. 3	July August September Ootober November December	935 1,001	86. 7 85. 7 87. 5 93. 6 96. 1 100. 0			

The kinds of primary power, number of engines or motors, and horsepower for 1909 were as follows:

KIND.	Number of engines or motors.	Horse- power.
Total primary power Owned—Steam	18	998 926
Rented: Electric. Other Electric motors run by current generated by establishments	70	32 40 222

The kind and amount of fuel used for all establishments reporting are shown in the following tabular statement:

KIND.	Unit.	Quantity.
Anthracite coal Bituminous coal. S. Coke. Oil. Gas.	Tons	1,500 7,003 961 4 1,253

ESTABLISHMENTS OPERATED BY FEDERAL GOVERNMENT.

A large proportion of the wage earners of the District of Columbia are employed by the Federal Government in operations similar to those carried on in manufacturing establishments conducted under private ownership. These operations, however, are carried on for the exclusive benefit of the Government, and as the products are not manufactured for sale and therefore have no commercial value, no value of products is shown. In order to avoid confusion the statistics for the Government establishments are presented separately from those for other establishments.

As shown by the following statement, which is exclusive of a number of manufacturing industries of minor importance common to most large governmental departments, there was little change in the extent of the manufactures carried on in connection with the operations of the Federal Government during 1909 as compared with 1904. There were reports from 11 establishments at each census, and the average number of employees increased only 196. The capital reported represented almost exclusively the value placed on the land, buildings, and materials. If, however, cash and other items similar to those reported for the establishments operated under private ownership had been included, it is estimated that it would about equal the \$30,552,623 reported as capital by such establishments. In 1909 the average number of wage earners, 10,657, was 325 less than the number reported for 1904, but exceeded by 2,950 the number reported for the establishments conducted under private ownership in 1909.

		Num- ber of estab- lish- ments.	PERSONS ENGAGED IN INDUSTRY.					expenses.

1 Includes the Bureau of Engraving and Printing and establishments operated in the Geodetic Survey, the Geological Survey, and the Department of State.

Includes the Government Printing Office and establishments operated in the Weather Bureau and the War Department.

Includes two reports from the Post Office Department in 1909, one for the mail-bag repair shop, and one for the mail-lock shop. In 1904 both of these shops were included in one report, but since then the operations of the lock shop have been increased and separated from those of the bag-repair shop.

There is a marked stability in the number of wage earners employed in the governmental establishments during the year. The greatest number, 11,030, was reported for January, and the smallest, 10,115, for September, a difference of 915, or 9.1 per cent. During the months of July, August, and September fewer wage earners were employed than during any

other period of the year, as will be seen from the following statement:

January 11,030	July
February 11,027	August 10, 416
March 10,998	
April 10,852	
May 10, 631	
June 10.517	

The different kinds of primary power, the number of engines or motors, and the horsepower used in the Government establishments during 1909 are given in the following statement:

KIND.	Number of engines or motors.	Horse- power.
Primary power, total		5,902
Owned: Steam	28	5,746 10
Gas. lented—Electric. Electric motors run by current generated by establishment	s 148 1,972	10,729

The kind and amount of fuel used are shown in the following statement:

KIND.	Unit.	Quantity.
Anthracite coal Bituminous coal Coke Wood Oll Gas	Tons	7, 731 715 136 9, 553

In the following table is given a comparative summary for the District, by selected industries, in 1909, 1904, and 1899:

TABLE I.—COMPARATIVE SUMMARY FOR DISTRICT OF COLUMBIA, BY SELECTED INDUSTRIES: 1909, 1904, AND 1899.

FLORIDA.

INDUSTRIES IN GENERAL.

General character of the state.—Florida, with a gross area of 58,666 square miles, of which 3,805 represent water surface, ranks twenty-first in size among the states and territories of continental United States. Its population in 1910 was 752,619, as compared with 528,542 in 1900 and 391,422 in 1890. It ranked thirty-third in population among the 49 states and territories both in 1910 and in 1900. The density of population for the entire state in 1910 was 13.7 persons per square mile, as compared with 9.6 in 1900.

Jacksonville, with a population of 57,699, was the only city in the state having over 50,000 inhabitants. There were 3 cities—Key West, Pensacola, and Tampa—each of which had a population of over 10,000 but less than 50,000. There are 19 cities and towns having between 2,500 and 10,000 inhabitants each. Only 29.1 per cent of the entire population of the state resided in incorporated cities and towns each having a population of 2,500 or over, as against 20.3 per cent in 1900.

A number of navigable streams and the extensive coast line of the state afford the manufacturing interests cheap transportation. All four of the cities having over 10,000 inhabitants have extensive docking facili-

ties. Railroad transportation in the state is good, except in the Everglades region of southern Florida.

Importance and growth of manufactures.—Although Florida is not primarily a manufacturing state, its manufactures have shown a steady growth during the last 60 years. In 1849, when the manufacturing establishments in the state numbered 103, with a value of products of \$668,335, employment was given to an average of 991 wage earners, representing 1.1 per cent of the total population of the state. In 1909 there were 2,159 establishments giving employment to an average of 57,473 wage earners, or 7.6 per cent of the total population. During this period the gross value of products per capita of the entire population of the state increased from \$8 to \$97.

From 1849 to 1909 the proportion which the manufactures of the state represent of the total value of products of manufacturing industries in the United States increased more than fourfold. This proportion was less than one-tenth of 1 per cent in 1849 and nearly four-tenths of 1 per cent in 1909.

The following table gives the most important figures relative to all classes of manufactures combined for the state as returned at the censuses of 1909, 1904, and 1899, together with the percentages of increase from census to census:

	Y	PER CENT O	F INCREASE.

Figures not available.

In 1909 the state of Florida had 2,159 manufacturing establishments, which gave employment to an average of 64,810 persons during the year and paid out \$27,937,000 in salaries and wages. Of the persons employed, 57,473 were wage earners. These establishments turned out products to the value of \$72,890,000, to produce which materials costing \$26,128,000 were used. The value added by manufacture was thus

\$46,762,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

In general, this table shows that there was a substantial development in the manufacturing industries of Florida during each of the intercensal periods, no decrease being shown in any item for either period. For the five-year period 1904–1909 greater percent-

ages of increase are shown for the number of establishments, average number of wage earners, and total wages paid than for the period 1899-1904. On the other hand, smaller percentages of increase are shown for the value of products and value added by manufacture. It is interesting to note that while the average number of wage earners increased only 36.5 per cent during the period 1904-1909, the amount paid in wages increased 45.8 per cent. During the same period the number of establishments increased 52.8 per cent, while the value of products and the value added by manufacture increased 44.9 per cent and 38.5 per cent.

There are two United States Government establishments in the state, the statistics for which are not included in any tables shown in this report. Both are naval stations doing general repair work. One. located at Pensacola, employed in 1909 an average of 229 wage earners and turned out products valued at \$240,814. The other, located at Key West, gave employment to 72 wage earners and reported a value of products of \$218,502. (See Introduction.)

The relative importance and growth of the leading manufacturing industries of the state are shown in the

following table:

 $^{^1}$ Percentages are based on figures in Table I; a minus sign (—) denotes decrease. 2 Less than one-tenth of 1 per cent. Where the percentages are omitted, comparable figures can not be given.

It should be borne in mind, in considering this table, that the value of products in some of the industries involves a certain amount of duplication due to the use of the product of one establishment in the industry as material for another establishment.

A few industries predominate greatly in importance, and, as will be seen from Table II, there is on the whole little diversity in the manufacturing activities of the state. Combined, the three leading industriestobacco manufacturing, lumber and timber, and the turpentine and rosin industries—gave employment in 1909 to an average of 49,650 wage earners, or 86.4 per cent of the total average number reported for all industries in the state. These three industries combined reported a value of products of \$54,376,000, or 74.6 per cent of the total for the state, and a value added by manufacture of \$37,483,000, or 80.2 per cent of the total. The most important industries listed in the table given above, in which they are arranged in the order of the value of products, call for brief consideration.

Tobacco manufactures.—This industry is confined practically in Florida to the manufacture of cigars and cigarettes, and in 1904, when this branch of tobacco manufactures was shown separately, Florida held third place in value of products among the states. It is the leading industry of the state when measured by value of products. Proximity to the tobacco-producing islands of the West Indies is chiefly responsible for the extent of the industry. The 229 establishments reported in 1909 gave employment to an average of 12,280 wage earners and manufactured products valued at \$21,575,000, representing 29.6 per cent of the total value of the manufactured products of the state. In 1909, of the total value of the manufactured products of the city of Key West, 93.7 per cent represents the value of tobacco manufactures, while the corresponding percentage for Tampa is 82.7.

Lumber and timber products.—This classification includes the operations of logging plants, sawmills, planing mills, and establishments manufacturing wooden packing boxes. In respect to average number of wage earners and value added by manufacture, this industry, employing an average of 19,227 wage earners and reporting a value of \$14,624,000 as added by manufacturing processes, ranked first in the state in 1909. In value of products it was second, with \$20,863,000.

Turpentine and rosin.—Florida reported 47.2 per cent of the total value of the turpentine and rosin produced in the United States in 1909 and 41.4 per cent in 1904, occupying first place among the states in this industry in both years. This industry was third in importance among the industries of the state in 1909 when measured by value of products, employing an average of 18,143 wage earners and reporting products valued at \$11,938,000. The number of establishments is relatively large, as compared with other industries in the state.

Fertilizers.—This industry has attained its greatest development in the South Atlantic states, due principally to the existence there of phosphate mines and of the cottonseed-oil mills. In Florida the industry, with 12 establishments, gave employment to an average of 589 wage earners in 1909, and products were reported valued at \$3,878,000.

Printing and publishing.—This industry in Florida includes book and job printing, and the printing and publishing of newspapers and periodicals. In 1909 it was fifth in importance among the manufacturing industries of the state when measured by value of products, reporting 174 establishments, which gave employment to an average of 905 wage earners and had products valued at \$1,866,000.

When measured by value added by manufacture instead of by value of products, the lumber industry displaces the tobacco industry from first place. The turpentine and rosin industry holds the same relative rank as when measured by value of products. Printing and publishing and railroad repair shops become fourth and fifth, respectively, and the fertilizer industry, which was fourth when measured by value of products, drops to sixth place.

In addition to the 22 industries presented separately in the table, there were 7 other industries which had a value of products in 1909 in excess of \$250,000. They are included under "All other industries," because in some cases the operations of individual establishments would be disclosed if they were shown separately, while in others the returns do not present properly the true condition of the industry, for the reason that it is more or less interwoven with one or more industries of similar character. These industries are: Coffee and spice, roasting and grinding; food preparations; liquors, distilled; liquors, malt; mineral and soda waters; oil, cottonseed, and cake; and slaughtering and meat packing. Statistics for 1909, for liquors, distilled, and slaughtering and meat packing, however, are presented in Table II.

This table shows also the percentages of increase for these leading industries in respect to value of products and value added by manufacture where these statistics are comparable. The fertilizer industry reported greater rates of increase from 1904 to 1909 both in value of products and in value added by manufacture than any other industry shown separately in the table, the respective figures being 143.9 per cent and 278.5 per cent. Among the other important industries marked increases were also shown; the lumber and timber industry, printing and publishing, the bakeries, and the manufactured-ice industry increasing more than 60 per cent both in value of products and in value added by manufacture.

Only three of the industries shown separately—patent medicines and compounds and druggists' preparations; copper, tin, and sheet-iron products; and confectionery—all of minor importance, reported decreases in value of products and in value added by manufacture.

Persons engaged in manufacturing industries.—The following table shows, for 1909, the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

CLASS.	PERSONS ENGAGED IN MANUFACTURES.						
	Total.	Male.	Female.				
All classes	64,810	61,500	3,310				
Proprietors and officials	4,614	4, 541	73				
Proprietors and firm members	2,712 469 1,433	2,652 462 1,427	60 7 8				
Clorks	2,723	2,539	184				
Waga earners (average number)	57,473	54,420	8,053				
16 years of age and over	56,532 941	53,520 900	3,012 41				

The average number of persons engaged in manufactures during 1909 was 64,810, of whom 57,473 were wage earners. Of the remainder, 4,614 were proprietors and officials and 2,723 were clerks. Corresponding figures for individual industries will be found in Table II.

The next table shows, for 1909, the percentage of proprietors and officials, clerks, and wage earners, respectively, among the total number of persons employed in manufactures. It covers all industries combined and 10 important industries individually.

Of the total number of persons engaged in all manufacturing industries, 7.1 per cent were proprietors and officials, 4.2 per cent clerks, and 88.7 per cent wage earners. The highest percentage of proprietors and officials shown for any individual industry, 27, is for the bakeries, which are usually very small establishments. The corresponding percentage for establish-

ments engaged in the manufacture of ice, where the processes are simple and require relatively little labor, is 22.6, and for those engaged in printing and publishing, where most of the establishments are small, it is 19. The railroad repair shops show the smallest percentage of proprietors and officials, this being due partly to the fact that the establishments in the industry were under corporate ownership, and so reported no proprietors; and partly to the fact that the higher officials of the railroad companies, who exercise general supervision over them, are not as a rule assigned to this particular branch of the work.

	PERSONS ENGAGED IN MANUFACTURES.							
		Per cent of total.						
INDUSTRY.	Total number.	Proprie- tors and officials.	Clerks.	Wage earners (average number).

The following table shows, for 1909, in percentages, for all industries combined, the distribution of the average number of wage earners, by age periods, and for those 16 years of age and over by sex, calculated in the manner described in the Introduction. It also shows, for some of the important industries separately, a similar distribution of wage earners as reported for December 15, or the nearest representative day. As a means of judging the importance of the several industries the average number employed for the year is also given in each case.

	WAGE EARNERS.

¹ For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.

For all industries combined, 93.1 per cent of the average number of wage earners were males 16 years

of age and over; 5.2 per cent, females 16 years of age and over; and 1.6 per cent, persons under the age of 16. More than four-fifths of the total average number of female wage earners 16 years of age and over were employed in the manufacture of cigars and cigarettes. Printing and publishing is another industry in which women formed a considerable percentage of all the wage earners, namely, 14.7 per cent. The brick and tile and the bakery industries show the largest percentages of wage earners under 16 years of age, 5.9 and 5.2, respectively.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904 it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

	PERSONS ENGAGED IN MANUFACTURES.								
	196	9	19	Per					
CLASS.	Number.	Per cent distri- bution.	Number.	Per cent distri- bution.	cent of in- crease, 1904- 1909.				
Total Proprietors and firm members Salaried employees Wage earners (average number)	64,810 2,712 4,625 57,473	100.0 4.2 7.1 88.7	46,985 1,769 3,125 42,091	100.0 3.8 6.7 89.6	87.9 53.3 48.0 36.5				

Comparable figures are not obtainable for 1899. The table shows a greater percentage of increase in the proprietors and firm members than in the other two classes. This increase is due to the increased number of small establishments shown in 1909. The group of proprietors and firm members and that of salaried employees both show increases in 1909 over 1904 in their proportions of the total number of persons engaged in manufactures.

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number reported for a single representative day. (See Introduction.)

	A,	VERAGE	NUMBER O	F WAGE	EARNERS.		
	190	9	190	4	1899		
CLASS.	Number.	Per cent distri- bution.	Number.	Per cent distri- bution.	Number.	Per cent distri- bution.	
Total 16 years of age and over Male Female Under 16 years of age	57,473 56,532 53,520 3,012 941	100.0 98.4 93.1 5.2 1.6	42,091 41,754 39,656 2,098 337	100.0 99.2 94.2 5.0 0.8	35,471 35,143 33,626 1,517 328	100.0 99.1 94.8 4.3 0.9	

This table indicates that for all industries combined there has been a marked increase during the 10 years in the employment of children under 16 years of age, although during the first half of the decade the proportion of children among the total number employed decreased slightly. Only slight changes have taken place in the proportions of adult male and female wage earners, although the actual number of women employed nearly doubled during the decade. In 1909 males 16 years of age and over formed 93.1 per cent of all wage earners, as compared with 94.2 per cent in 1904 and 94.8 per cent in 1899.

Wage earners employed, by months.—The table in the next column gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined, and gives also the precentage which the number reported for each month is of the greatest number reported for any month. In Table II, page 208, are shown for practically all of the important industries in the state the largest number and also the smallest number of wage earners reported for any month. The figures are for the 15th day, or the nearest representative day, of the month.

There are no seasonal industries of importance in Florida which give employment to a large number of persons at certain periods of the year. On the contrary, all of the more important industries show but little fluctuation in the number of wage earners employed. Canning and preserving; the manufacture of fertilizers; shipbuilding, including boat build-

ing; and wood distillation are more or less seasonal industries in the state, but they do not employ sufficiently large numbers of wage earners to influence greatly the stability of employment for all industries combined. For all industries combined, 56,016 wage earners were reported in January, the month of minimum employment, and 60,661 in November, the month of maximum employment.

	WAGE E	ARNERS.		WAGE EARNERS.				
MONTH.	Number, of maximum,	MONTH.	Number.	Per cent of maxi- mum,				
January February March April May June	56,414 56,596 56,371 56,858	92, 3 93, 0 93, 3 92, 9 93, 7 92, 6	July	58, 035 59, 487 60, 661	92. 6 92. 8 95. 7 98. 1 100. 0 99. 9			

Prevailing hours of labor.—In the following table wage earners have been classified according to the hours of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed during the year is used, and the number employed in each establishment is classified as a total according to the hours prevailing in that establishment, even though a few employees work a greater or less number of hours.

INDUSTRY	AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS GROUPED ACCORDING TO PREVAILING HOURS OF WORK PER WEEK.								
en an elektronische State (1997) in der State	Total.	48 and under.	Between 48 and 54.	54.	Between 54 and 60.	60.	Between 60 and 72.	72.	Over 72.
All industries	57,473	13,214	4,379	6,467	1,505	22,766	8,568	316	258
Artificial stone	124 370	7		103 370		14

Shipbuilding, including boat building. Tobacc manufactures Turpentine and rosin. Wood distillation, not including turpentine and rosin. All other industries.	18, 143	23 3, 466 8, 344	832 1,983	164 3,248 635 3 328	337 147	289 3,962 6,859 17 297	426 149 46 50	9 26 10 61	2

It is evident from these figures that for the wage earners employed in the manufacturing industries of Florida there was considerable diversity in the prevailing hours of labor. Of the total number employed, 53.5 per cent were in establishments where the prevailing hours were from 54 to 60 per week; 30.6 per cent, in establishments where they were less than 54 per week; and 15.9 per cent, in establishments where they were more than 60 per week. Two industries are largely responsible for this somewhat unusual distribution.

The lumber industry, in which 39.1 per cent of the total number of wage earners were reported from establishments where the prevailing hours were more than 60 per week, reports 82.2 per cent of the average number of wage earners in the state working where these hours prevail. In the turpentine and rosin industry 46 per cent of the total number were employed in establishments where the prevailing hours were 48 or less per week, and 10.9 per cent where they were between 48 and 54 per week. This industry gave

employment to 58.7 per cent of the average number of wage earners in the state working less than

54 hours per week.

Location of establishments.—The next table shows the extent to which the manufactures of Florida are centralized in cities of 10,000 population or over. (See Introduction.) The population in 1900 was used as the basis in making the classification for 1904, as well as for 1899, and the classification for 1909 was made on the basis of the population in 1910.

			LOCATI ESTABLIS		PER CENT OF TOTAL.			
ITEM.	Year,	Total.	In cities with popu- lation of 10,000 and over.	Outside districts.	In cities with popula- tion of 10,000 and over.	Outside dis- tricts.

Average number of wage earners.	1909	57,473	14,376	43,097	25, 0	75.0		
	1904	42,091	12,153	29,938	28, 9	71.1		
	1899	35,471	7,544	27,927	21, 3	78.7		
Value of products	1909	\$72,889,659	\$30, 303, 322	\$42,586,337	41. 6	58. 4		
	1904	50,298,290	22, 795, 162	27,503,128	45. 3	54. 7		
	1899	34,183,509	13, 022, 947	21,160,562	38. 1	61. 9		
Value added by manufacture.	1909	46,761,380	16,334,944	30,426,436	34.9	65. 1		
	1904	33,765,851	12,828,374	20,937,477	38.0	62. 0		
	1899	21,336,322	7,118,431	14,217,891	33.4	66. 6		

In 1909, with only 18.4 per cent of the total population of the state, the cities having over 10,000 inhabitants reported 41.6 per cent of the total value of manufactured products and 25 per cent of the total average number of wage earners engaged in manufacturing. The table shows that during the decade the manufactures of the cities made a more rapid growth in every respect than did those of the districts outside the cities. Although the relative importance of the manufactures outside of cities of 10,000 inhabitants was less in 1909 than it was in 1899, this group reported for the later year 79.4 per cent of the total number of establishments, 75 per cent of the average number of wage earners, and 58.4 per cent of the total value of products. The large percentages of the total shown for the industries located outside of cities of 10,000 inhabitants or over are the result, in part, of the development of such rural industries as lumbering, the production of turpentine and rosin, and canning and preserving.

The population, for 1910 and 1900, of the four cities which had 10,000 inhabitants or over in 1910, is given in the following statement:

CITY.	1910	1900
Jackson ville. Tampa Pensacola Key West.	37,782 22,982	28, 429 15, 839 17, 747 17, 114

The relative importance in manufactures of each of the four cities having a population of 10,000 or over in 1910 is shown in the following table, in which the value of products and average number of wage earners are shown separately for 1909, 1904, and 1899:

CITY	AVERA WAG	GE NUMI	BER OF ERS.	VALU	E OF PRODUC	DUCTS.

From 1899 to 1904 each city showed large increases in value of products and average number of wage earners. During the five-year period 1904–1909, however, the percentages of increase were either greatly reduced or changed to absolute decreases, except in the case of Tampa, for which city both the percentages of increase in question were larger for the later five-year period. Key West showed decreases from 1904 to 1909 in the value of its products and in the average number of wage earners, while Jacksonville and Pensacola showed decreases in the average number of wage earners.

Tampa, although ranking second in population, is easily first when measured either by the average number of wage earners or by value of products. The leading industry in this city is the manufacture of cigars and cigarettes, the value of which amounted to \$14,557,329 in 1909. In Key West also the manufacture of cigars and cigarettes is the leading industry, with a value of products of \$3,716,740. In Jacksonville the leading industry, when measured by value of products, is the manufacture of fertilizers, the value of products in 1909, \$2,511,356, forming 37.4 per cent of the total value of all products reported for that city. Pensacola, which has no single industry which contributes any great proportion of its total value of products, except lumber manufactures (25.4 per cent), shows, upon the whole, a considerable diversity of manufacturing industries.

Character of ownership.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available. Figures for 1909 only are presented for several important industries individually. In order to avoid disclosing the operations of individual concerns it is necessary to omit several important industries from this table and the one following.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 23.2 per cent of the total number of establishments were under corporate ownership, as against 76.7 per cent under all other forms in

1909. The corresponding figures for 1904 were 21.8 per cent and 78.2 per cent, respectively. In respect to value of products, the corresponding proportions are reversed. In 1909 the establishments operated by corporations reported 62.9 per cent of the total value of products, as against 37.2 per cent for those under all other forms of ownership, while in 1904 the corresponding figures were 54.2 per cent and 45.8 per cent, respec-

tively. The greatest decrease in relative importance from 1904 to 1909 is shown for establishments operated by firms, which represented 32.4 per cent of the total number of establishments in 1909, as compared with 35.1 per cent in 1904. Seven-tenths of the value of products in the tobacco and lumber industries was reported by corporations, while over one-half of the value of turpentine and rosin was reported by firms.

¹ Includes the group "Other," to avoid disclosure of individual operations.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it the next table groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for important industries separately as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

This table shows that, in 1909, of the 2,159 establishments only 138, or 6.4 per cent, had a value of products of \$100,000. The 138 establishments, however, employed an average of 26,080 wage earners, or 45.4 per cent of the total number in all establishments, and reported 55.9 per cent of the total

value of products and 52 per cent of the total value added by manufacture.

On the other hand, the very small establishmentsthat is, those having a value of products of less than \$5,000—constituted a considerable proportion (28.9 per cent) of the total number of establishments, but the value of their products amounted to only 2.1 per cent of the total.

It will be seen from the next table that during the five years from 1904 to 1909 there were decreases in the relative importance measured by value of products of the two groups made up of establishments having products valued at \$20,000 but less than \$100,000 and \$100,000 but less than \$1,000,000, and increases in the two groups made up of the smaller establishments. In 1904 there was no establishment with products exceeding \$1,000,000 in value, while in 1909 there were four such establishments, representing two-tenths of 1 per cent of the total number of establishments, and reporting 6.1 per cent of the total value of products.

¹ None reported.

8 Includes the group "\$1,000,000 and over."

From 1904 to 1909 the average number of wage earners per establishment decreased from 30 to 27; the average value of products from \$35,597 to \$33,761, a decrease of \$1,836; and the average value added by manufacture from \$23,897 to \$21,659, a decrease of \$2,238. In only two of the five industries shown separately in the table, the tobacco manufacturing industry and the lumber industry, is the bulk of the product manufactured in large establishments—that is, those having a value of product of \$100,000 or over.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed. The next table shows, for 1909, such a classification for all industries combined and for 10 important industries individually, and gives not only the number of establishments falling into each group, but also the average number of wage earners employed.

The per cent distribution of the number of establishments is not shown in the table. Of the 2,159 establishments reported for all industries, 5.2 per cent employed no wage earners; 35.8 per cent employed from 1 to 5; 28.4 per cent, from 6 to 20; and 19.7 per cent, from 21 to 50. There were 35 establishments that employed over 250 wage earners, and 8 of these,

3 lumber and timber establishments and 5 cigar factories, employed over 500 each.

Of the total number of wage earners, 45.2 per cent were in establishments employing over 100 wage earners. The single group having the largest number of employees was the group of establishments employing from 21 to 50 wage earners. This group employed 13,670 wage earners, or 23.8 per cent of the total. The group comprising the establishments employing from 101 to 250 wage earners ranked second in respect to the number of wage earners employed, with 12,111, or 21.1 per cent of the total. In the turpentine and rosin industry, which had an average of 31 wage earners per establishment, 50.3 per cent of the establishments employed from 21 to 50 wage earners each, these establishments reporting 53.2 per cent of the total average number of wage earners for the industry. In the railroad repair shops 97.7 per cent of the total average number of wage earners were employed in establishments reporting over 100 wage earners, while 80.9 per cent of the total average number employed in the tobacco factories and 61.2 per cent of those employed in the lumber establishments were reported for this class of establishments. In the bakeries 79.3 per cent of all the wage earners were employed in establishments employing less than 21 wage earners, and in the manufactured-ice industry 76.6 per cent were in such establishments.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses which make up the total.

The following table shows, in percentages, for 1909, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II.

	PER CENT OF TOTAL EXPENSES REPORTED.						
Industry,	Sala- ries.	Wages.	Ma- terials.	Miscel- laneous ex- penses.			
All industries. Bread and other bakery products. Brick and tile. Cars and general shop construction and repairs	11.9	36.4 18. 7 42, 2	41.8 70.6 34.3	14.5 7.8 11.6			
by steam-railroad companies. Foundry and machine-shop products. Lee, manufactured. Lumber and timber products. Frinting and multiples.	6.8	58. 4 39. 6 25. 0	34. 5 45. 7 43. 0	0.3 7.0 15.9			
Shipbuilding, including boat building. Tobacco manufactures	5.8	41. 9 36. 7 47. 6	34. 7 30. 1 38. 3 43. 2	16, 5 16, 3 8, 3 14, 0			
Turpentine and rosin. All other industries.		35. 7 47. 8 13. 7	21. 6 69. 5	20. 2 10. 1			

This table shows that, for all industries combined, 41.3 per cent of the total expense was incurred for materials, 44.2 per cent for services—that is, salaries and wages—and but 14.5 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries.

Engines and power.—The next table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

The table indicates a large general increase in the primary power generated, every form of which, except that developed by water motors, which is negligible in amount, showing marked increases for the five-year period 1904–1909. The number of steam engines and their horsepower more than doubled during this period, while during the earlier period the number of engines actually decreased and their horsepower increased at a much lower rate than during the later

period. The more general use of gas engines is shown, the number of such engines reported being 250 in 1909, as compared with 59 in 1904 and 34 in 1899. The figures also show that the practice of renting power is on the increase, 3.8 per cent of the total power being rented in 1909, as against 2.3 per cent in 1904 and four-tenths of 1 per cent in 1899.

POWER.	OF E	UMBE NGINE LOTORS	SOR	но	PER CENT DISTRIBUTION OF HORSEPOWER.				
	1909	1904	18991	1909	1904 18991		1909	1904	1899

Run by current generated by establishment Run by rented power	178 401	45 (2)	8 (2)	4,210 3,353	1,960 1,000	140 162	55.7 44.3	66.2 33.8	46. 4 53. 6

Includes the neighborhood industries and hand trades, omitted in 1904 and 1909.
 Not reported.
 Less than one-tenth of 1 per cent.

The table shows that the use of electric motors for the purpose of applying the power generated within the establishments is also becoming more general, the horsepower of such motors having increased from 140 in 1899 to 1,960 in 1904 and 4,210 in 1909.

Fuel.—Closely related to the question of kind of power employed is that of the fuel used in generating this power, or otherwise as material in the manufacturing processes.

The following table shows the quantity of each kind of fuel used in 1909, for all industries and for certain selected industries:

INDUSTRY.	An- thra- cite coal (tons).	Bitumi- nous coal (tons).	Coke (tons).	Wood (cords).	Oil, in- cluding gasoline (bar- rels).	Gas (1,000 feet).
All industries	6,582	64,623	4,999	180,197	49,333	87,291

		1	<u> </u>		1] -, -00

Note.—In addition, there were 125 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and value of materials and products which do not appear on the general schedule. Certain data of this character for four important industries in Florida are here presented.

Lumber and timber products.—The following table shows the quantity of rough lumber, lath, and shingles produced by the sawmills of the state in 1909 and 1899:

PRODUCT,	1909	1899
Rough lumber . M feet b, m. Lath . thousands . Shingles . thousands .	1,201,734 55,741 283,206	790,373 21,761 177,123

This statement shows the decided growth of this industry in the state during the decade, the production of rough lumber increasing 52 per cent, that of shingles 59.9 per cent, and that of lath 156.2 per cent. In 1909, of the total cut of rough lumber of 1,201,734 M feet board measure, the softwoods constituted 1,196,912 M feet. Of the softwoods cut, 1,110,840 M feet board measure, were yellow pine and 84,811 M feet were cypress. Florida ranked second in the production of cypress in 1909. The hardwood cut amounted to only 4,822 M feet board measure, most of which was oak, yellow poplar, and hickory.

Turpentine and rosin.—The table which follows shows the quantity and value of the turpentine and rosin produced in 1909 and 1904.

PRODUCT,	1909	1904
Total value	\$11,937,518	\$9,901,905
Gallons. Value	13,809,785 \$5,847,478	12, 872, 869 \$6, 425, 826
Barrels (280 pounds) Value Dross and other products.	1,555,749 \$6,057,524 \$32,516	1,445,902 \$3,447,418 \$28,661

From 1904 to 1909, notwithstanding an increase of 936,916 gallons in the quantity of turpentine produced, the value decreased \$578,348. During the same period there was an increase of 109,847 barrels in the quantity of rosin, with an increase in value of \$2,610,106. In 1909 the crops worked under the box system numbered 8,809, while 1,114 were reported under the cup system. The greatest number worked under the box system was on trees which had already been worked three years or more, while the greatest number worked under the cup system was on first-year trees.

Fertilizers.—Although more phosphate rock was mined in 1909 in Florida than in all other states combined, when measured by value of products, the state ranked eleventh in the production of fertilizers. The next table shows the quantities and values of products for 1909, 1904, and 1899.

· PRODUCT.	1909	1904	1899
Total value	\$3,878,296	\$1,590,371	\$500,239
etc.: Tons Value Ammoniated fertilizers:	37,787 \$293,315	12,800 \$194,000	9,394 \$93,940
Ammoniated fertilizers: Tous Value Concentrated phosphates:	10,946 \$205,538		
Concentrated phosphates. Yours. Value. Complete fertilizers:	8,783 \$99,987	(1)	
TonsValue	\$7,376 \$2,672,108	\$1,330,271	15,435 \$377,535
Tons Value	10,900 \$321,934 8,527	5, 233 \$65, 500	1,315 \$25,167
Tons. Value. Chemicals, not elsewhere specified.	\$38,373 \$176,509		\$623
All other products	\$70,582	\$600	\$2,974

¹ Included with other fertilizers.

This table shows marked increases throughout. Complete fertilizers, representing about two-thirds of the total value of products shown, increased in quantity 247 per cent from 1899 to 1904 and 63.1 per cent during the following five years. Superphosphates increased in quantity 36.3 per cent during the earlier period and 195.2 per cent during the later period, while the corresponding percentages for "Other fertilizers" were 297.9 and 109.4, respectively.

Printing and publishing.—The following statement shows the number of publications and their aggregate circulation, by period of issue, for the three most recent census years:

PERIOD OF ISSUE.		UMBER BLICATIO		AGGREG	ATION		
	1909	1904	1899	1909	1904	1899	
Total Daily Sunday Semiweekly Weekly Monthly	160 19 6 3 127 5	20 5 3 117 9	108 11 11 2 2 76 8	283,992 80,300 48,539 10,300 137,818 7,035	\$23,214 54,875 30,390 8,500 112,124 17,325	112,802 27,907 (1) 6,000 66,295 12,100	

¹ Included in circulation of dailies.

In 1909, as compared with 1904, a decrease is shown of 1 daily and 4 monthlies, but an increase of 10 weeklies and 1 Sunday. Each class, except monthlies, showed steady increases in circulation for the 10-year period. All of the publications were printed in the English language, except 1 daily and 2 weeklies in Spanish, 1 weekly in German, and 1 weekly in Italian.

Laundries.—Statistics for steam laundries are not included in the general tables or in the totals for manufacturing industries. There were 28 such establishments in the state, 6 in Jacksonville, 4 in Tampa, 3 in Pensacola, and 1 in Key West.

Thirteen of the 28 establishments were under individual ownership, 8 under corporate ownership, and 7 under firm ownership. Nine establishments had receipts for the year's business of less than \$5,000; 11, receipts of \$5,000 but less than \$20,000; and 8, receipts of \$20,000 but less than \$100,000.

The first statement in the next column summarizes the statistics.

Number of establishments	28
Persons engaged in the industry	638
Proprietors and firm members	28
Salaried employees	39
Wage earners (average number)	571
Primary horsepower	528
Capital	\$461,038
Expenses	371, 750
Services	232,639
Materials	77, 221
Miscellaneous	61,890
Miscellaneous	61, 890 474, 088

The number of wage earners employed each month and the per cent which this number represented of the greatest number employed in any month were as follows:

	WAGE EA	RNERS.		WAGE EARNERS.			
MONTH.	Number.	Per cent of max- imum.	MONTII.	Number.	Per cent of max- imum.		
January February March April May June	562	87.5 87.3 89.3 86.9 85.0 83.8	July August September October November December	570	84. 7 85. 5 85. 8 88. 1 95. 8 100. 0		

The different kinds of primary power, the number of engines or motors, and the horsepower used in 1909 are shown in the following tabular statement:

KIND.	Number of engines or motors.	Horse- power.
Primary power, total Owned	23 28 2	528 476 467 9 52
Rented. Electric. Other	3	43 9

The kind and amount of fuel used are shown in the following statement:

KIND.	Unit.	Quantity.
Bituminous coal	CordsBarrels	7,826 244

Custom sawmills and gristmills.—Statistics for custom sawmills and gristmills are not included in the general tables or in the totals for manufacturing industries, but are presented in the following summary:

	Custom sawmills.	Custom gristmills.
Number of establishments. Persons engaged in the industry. Proprietors and firm members. Salaried employees Wage earners (average number) Primary horsenower	24 10 1 13	88 144 127 2 15 1,830
Capital Expenses. Services Materials Miscellaneous Value of products.	\$7,028 4,229 3,524 252	\$98,947 244,672 4,417 1 237,351 2,904 1 273,928

¹ Includes estimate of all grain ground. A similar estimate for value of lumber sawed by custom sawmills is impracticable.

² Includes one triweekly publication.

GEORGIA.

INDUSTRIES IN GENERAL.

General character of the state.—Georgia, with a gross area of 59,265 square miles, of which 540 represent water surface, is the twentieth state of the Union in point of size. The state had a population of 2,609,121 in 1910, as compared with 2,216,331 in 1900 and 1,837,353 in 1890. It ranked tenth among the 49 states and territories of continental United States as regards population in 1910 and eleventh in 1900. The density of population for the entire state was 44.4 per square mile, the corresponding figure for 1900 being 37.7. Twenty and six-tenths per cent of the entire population of the state resided in incorporated cities and towns having a population of 2,500 inhabitants or over, as against 15.6 per cent in 1900.

Atlanta, with a population of 154,839, and Savannah, with 65,064, were the only cities in the state having a population of over 50,000. There were, however, seven other cities having a population of over 10,000. These cities, named in order of their population, were Augusta, Macon, Columbus, Athens, Waycross, Rome, and Brunswick. Apart from these nine cities, only 6.3 per cent of the population resided in incorporated places of 2,500 or over.

The superior transportation facilities of the state account in part for its rapid industrial growth during the past 50 years. It is traversed by the important railway systems of the South, from which numerous feeders afford easy access to all parts of the state, and it possesses also the advantages of excellent water communication. On the east the Savannah River is navigable as far as Augusta for light-draft vessels, and on the west the Chattahoochee River as far as Columbus, while other streams, such as the Ocmulgee, Altamaha, and Oconee Rivers, are navigable for considerable distances. Savannah is one of the most important seaports of the South, while Brunswick has an excellent harbor and is of growing commercial importance.

Importance and growth of manufactures.—Though Georgia is an agricultural rather than a manufacturing state, it has been for the past 60 years one of the leading and most progressive industrial states of the South. In 1849 the total value of the manufactured products of the state, including the products of neighborhood and hand industries, amounted to only \$7,082,000, while in 1899, exclusive of the value of the products of the neighborhood and hand industries, it was \$94,532,000, or more than thirteen times as great as 50 years previous. The increase during the past decade has been even more remarkable. The value of products of the factory industries of the state had

by 1909 increased to \$202,863,000, a gain of 114.6 per cent, which was far in excess of that in the population of the state. In 1849 an average of 8,368 wage earners, representing nine-tenths of 1 per cent of the total population, were employed in manufacturing industries, while in 1909 an average of 104,588 wage earners, or 4 per cent of the total population, were so engaged. During this period the gross value of products per capita of the total population of the state increased from \$8 to \$78. From 1849 to 1909, however, the proportion which the manufactures of the state represented of the total value of the products of manufacturing industries in the United States increased very little. This proportion was seven-tenths of 1 per cent in 1849, eight-tenths of 1 per cent in 1899, and 1 per cent in 1909. The relative rank of the state in respect to the value of its manufactures has also undergone little change during this period, being twenty-second in 1849 and twenty-fourth both in 1899 and 1909.

The table on the next page gives the most important figures relative to all classes of manufactures combined for 1909, 1904, and 1899, together with the percentages of increase from census to census.

In 1909 the state of Georgia had 4,792 manufacturing establishments, which gave employment to an average of 118,036 persons during the year and paid out \$43,867,000 in salaries and wages. Of the persons employed, 104,588 were wage earners. These establishments turned out products to the value of \$202,863,000, to produce which materials costing \$116,970,000 were used. The value added by manufacture was thus \$85,893,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that the manufacturing industries of Georgia as a whole showed great development during the 10-year period 1899–1909. Except in the number of establishments and average number of wage earners, the development during the more recent period, 1904–1909, was not as great relatively as during the earlier period, 1899–1904, although the actual increases were more nearly the same. During the later period the number of establishments increased 48.9 per cent and the average number of wage earners 12.8 per cent, while the value of products increased 34.3 per cent and the value added by manufacture 27.4 per cent. As pointed out in the Introduction, it would be improper to infer that

(213)

manufactures increased in volume to the full extent indicated by these figures regarding values, since the increase shown is certainly due, in part, to the increase that has taken place in the price of commodities.

More than half of the large increase in number of establishments from 1904 to 1909 was due to the increase in the number of establishments reported for the lumber industry.

1 Figures not available.

The relative importance and growth of the leading manufacturing industries of the state are shown in the following table.

It should be borne in mind, in considering this table,

that the value of products in some of the industries involves a certain amount of duplication due to the use of the product of one establishment in the industry as material for another establishment.

Percentages are based on figures in Table I; a minus sign (--) denotes decrease. Where the percentages are omitted, comparable figures can not be given.

In addition to the 32 industries presented separately, there are 6 other industries, each of which had a value of products in 1909 in excess of \$500,000. They are included under the head of "All other industries" in the table because in some cases the operations of individual establishments would be disclosed if they were shown separately; in others, the returns do not present properly the true condition of the industry for the reason that it is more or less interwoven with one or more industries of similar character; and for others, comparable statistics for the different census years can not be presented, because the data for prior censuses are not available. These industries are: Bags, other than paper; cordials and sirups; food preparations; iron and steel, steel works and rolling mills; mineral and soda waters; and waste. The 1909 statistics, however, for the manufacture of bags. other than paper, are presented in Table II.

Although a few industries predominate greatly in importance, it will be seen from Table II that there is considerable diversity in the manufacturing activities of the state. The most important industries listed in the table given above, in which they are arranged in order of the value of products, call for brief consideration.

Textiles .- The combined value of the textile manufactures, including cotton goods, hosiery and knit goods, and woolen and worsted goods, amounted to \$52,141,000, or 25.7 per cent of the total value of all manufactured products of the state in 1909. Two cordage and twine mills, one silk mill engaged in throwing raw silk into organzine and tram, and one establishment making shoddy were reported, but the statistics can not be shown separately without disclosing the operations of individual establishments. The textile industries of Georgia are confined almost entirely to the cotton-goods branch, which was first in importance among the individual industries of the state, with a value of products in 1909 almost double that of the lumber and timber industry, which ranked next. For a number of years Georgia has produced next to the largest cotton crop of any state, but it ranks only fifth among the states in the value of its cotton manufactures. It is interesting to note that while the percentage of increase in value of products from 1899 to 1904 was greater than that in value added by manufacture, from 1904 to 1909 the increase in the value added by manufacture was the greater. This variation was due partly to the rise in the price of raw cotton during the earlier five-year period. Only one establishment included under this classification was reported as engaged primarily in the manufacture of cotton small wares.

Closely allied to the cotton industry in this state is the manufacture of hosiery and knit goods, which are made almost entirely of cotton materials. Although the value of products of this industry is small when compared with that of the cotton-goods industry in 1909, it increased 89 per cent from 1899 to 1904 and 39 per cent from 1904 to 1909.

The establishments included under the classification "Woolen, worsted, and felt goods, and wool hats" were engaged primarily in the manufacture of woolen goods, which is a comparatively unimportant industry in this state.

Lumber and timber products.—This industry, which is among the oldest manufacturing industries of the state, embraces establishments engaged in logging and also sawmills, planing mills, and wooden packing-box factories. It does not include statistics of mills engaged exclusively in custom sawing for local consumption. The number of establishments reported in 1909 was more than three times as great as the number engaged in any other branch of manufacture in the state.

Oil, cottonseed, and cake.—The statistics presented include those for all establishments engaged primarily in extracting oil from the seed or in refining crude cottonseed oil. This industry, which is dependent upon the cotton crop for its raw materials, was not important among the manufactures of the state until after 1890, but since that date its growth has been rapid. The total value of the products increased \$15,577,000, or 193.2 per cent, during the decade 1899-1909.

Fertilizers.—All establishments engaged primarily in the manufacture of superphosphates from minerals, bones, etc., ammoniated fertilizers, concentrated phosphate, complete fertilizers, soda products, and other fertilizers are included in this classification. A number of other establishments, chiefly those engaged in the manufacture of cottonseed oil and cake, produce fertilizers as by-products, therefore the figures here given do not fully represent the extent of the fertilizer industry in the state. Georgia contributed about onesixth of the total value of products of the industry in the United States as reported in 1904 and in 1909. The increased production of fertilizers in the state, the value of which was about five times as great in 1909 as in 1899, was due to several causes, among which were the greater demand for fertilizers, the rapid increase in the manufacture of cottonseed oil in the state, and the increase in the amount of phosphate rock mined in adjoining states.

Flour-mill and gristmill products.—This classification includes statistics for all mills grinding wheat, rye, or buckwheat flour, or corn meal, hominy, grits, or feed. It does not, however, include statistics for factories making fancy cereals or other food preparations as a chief product, or for mills doing custom grinding

exclusively.

Turpentine and rosin.—The presence of extensive pine forests has made this industry one of importance in the state and has also made Georgia one of the leading states in the production of turpentine and rosin. The decreases shown for this industry are due in part to a depletion of the forests in certain localities of the state and in part to the unsatisfactory prices for turpentine, which tended to discourage its manufacture in 1909.

When measured by value added by manufacture instead of by value of products, a considerable change occurs in the rank of the first six industries in the preceding table. The lumber and timber industry displaces the cotton-goods industry from first place, and the fertilizer industry becomes third in order instead of the cottonseed-oil and cake, which drops to sixth place. The turpentine and rosin industry becomes fourth, while the flour-mill and gristmill industry drops to eleventh place. These changes are due more or less to the fact that in certain industries the manufacturing processes are simpler and carried on to a greater extent by machinery than in others, and for this reason the value added by manufacture is not commensurate with the gross value of products.

This table also shows the percentages of increase in value added by manufacture as well as in value of products for these leading industries where the statistics are comparable. The manufacture of fancy and paper boxes showed a greater rate of increase from 1904 to 1909 in both items than any other of the industries shown separately in the table, namely, 261.2 per cent in value added by manufacture and 516.2 per cent in value of products.

There are some striking differences among the several industries shown separately as regards increases and decreases from 1899 to 1904 and from 1904 to 1909. Six of the industries for which a separate presentation is made show a decrease from 1904 to 1909 in value of products, while five of these industries and one other show a decrease in value added by manufacture. Three industries show a decrease in value of products from 1899 to 1904, and two a decrease in value added by manufacture.

Persons engaged in manufacturing industries.—The next table shows, for 1909, the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

The average number of persons engaged in manufactures during 1909 was 118,036, of whom 104,588 were wage earners. Of the remainder, 8,793 were proprietors and officials, and 4,655 were clerks. Corresponding figures for individual industries will be found in Table II.

CLASS.	PERS MA	ONS ENGAGI LNUFACTURE	ED IN
	Total.	Male.	Female.
All classes	118,036	100, 245	17, 791
Proprietors and officials	8,793	8,655	138
Proprietors and firm members	5,141 1,385 2,267	5,026 1,372 2,257	115 13 10
Clerks	4,655	3,953	702
Wage earners (average number)	104, 588	87,637	16,951
16 years of age and over Under 16 years of age	98, 547 6, 041	83,998 3,639	14, 549 2, 402

The next table shows, for 1909, the percentage of proprietors and officials, clerks, and wage earners, respectively, among the total number of persons employed in manufactures. It covers all industries combined and 12 important industries individually.

	PERSONS	ENGAGED	IN MANU	FACTURES.
industry.		Per	cent of t	otal.
	Total number.	Proprie- tors and officials.	Clerks.	Wage earners (average number).
All industries. Carriages and wagons and materials. Cars and general shop construction and repairs by steam-railroad companies. Cotton goods, including cotton small wares Fertilizers. Foundry and machine-shop products. Foundry and machine-shop products. Hosiery and kinit goods. Lumber and fimber products. Marble and stone work. Oil, cottonseed, and cake. Printing and publishing. Turpentine and rosin. All other industries.	3, 609	7.4 10.4 1.6 1.4 7.9 29.2 7.7 1.9 11.0 10.4 18.4 9.1	3.9 5.0 4.1 1.1 9.5 6.3 2.8 1.2 9.6 19.4 0.9	88. 6 84. 6 94. 4 97. 6 82. 1 61. 3 86. 0 95. 2 87. 3 87. 3 87. 3 87. 3 87. 3 87. 3

Of the total number of persons engaged in all manufacturing industries, 7.4 per cent were proprietors and officials, 3.9 per cent clerks, and 88.6 per cent wage earners. The highest percentage of proprietors and officials shown for any individual industry, 29.2, is in the flour-mill and gristmill industry. In this industry and also in printing and publishing, the majority of the establishments are small and the work is to a large extent done by the proprietors or their immediate representatives, so that the proportion of persons engaged in these industries falling into the class of proprietors and officials is very much higher than for most other industries or for all industries combined. Similar conditions prevail in the lumber industry, but on account of a larger average number of wage earners to an individual establishment it shows a smaller proportion of proprietors and officials than either of the two industries mentioned, although as a matter of fact it has by far the largest number of proprietors and firm members reported for any industry.

The smallest proportions of proprietors and officials are shown for the cotton-goods industry and for steam-railroad repair shops. This condition results from the large number of wage earners to an establishment.

The following table shows, for 1909, in percentages, for all industries combined, the distribution of the average number of wage earners by age periods, and for those 16 years of age and over by sex, calculated in the manner described in the Introduction. It also shows, for some of the important industries separately, a similar distribution of wage earners as reported for December 15, or the nearest representative day. As a means of judging the importance of the several industries, the average number employed for the year is also given in each case.

¹ For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.

² Less than one-tenth of 1 per cent.

For all industries combined, 80.3 per cent of the average number of wage earners were males 16 years of age and over; 13.9 per cent, females 16 years of age and over; and 5.8 per cent, children under the age of 16. The larger part of the total number of female wage earners are employed in the cotton-goods industry, in which nearly one-third of the wage earners are women 16 years of age and over. In the hosiery and knitgoods industry the proportion of women is over one-half. These two industries also include the larger part of the total number of wage earners under 16 years of age.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See Introduction.) The table following makes this comparison according to occupational status.

Comparable figures are not obtainable for 1899. The table shows a greater percentage of increase in proprietors and firm members than in the other two classes.

	PERSO	ns enga	GED IN MA	NUFACTI	TRES.
CLASS.	196	9	190)4	Per
	Number.	Percent distri- butlon.	Number.	Percent distri- bution.	1904-

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number of wage earners reported for a single representative day. (See Introduction.)

	٨	AVERAGE NUMBER OF WAGE EARNERS.										
CLASS,	190	1909 1904 1		1904 1809		9						
	Number.	Percent distri- bution.	Number.	Percent distri- bution.	Number.	Percent distri- bution.						
Total 16 years of age and over Male Female Under 18 years of age	104,588 98,547 83,998 14,549 6,041	100.0 94, 2 80, 3 13, 9 5, 8	92,749 85,454 72,814 12,640 7,295	100.0 92.1 78.5 13.6 7.9	83,336 77,110 67,039 10,071 6,226	100.0 92.5 80.4 12.1 7.5						

This table indicates that for all industries combined there has not been much change in the proportion of male and female wage earners. There has been a small decrease during the 10 years in the employment of children under 16 years of age. In 1909 males 16 years of age and over formed 80.3 per cent of all wage earners, as compared with 78.5 per cent in 1904 and 80.4 per cent in 1899.

Wage earners employed, by months.—The next table gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined, for the brick and tile, fertilizer, and cottonseed-oil and cake industries, and for all other industries combined; it also gives the percentage which the number reported for each month is of the greatest number reported for any month. In Table II, page 234, are shown, for practically all of the important industries in the state, the largest number, and the smallest number, of employees reported for any month. The figures are those for the 15th day, or the nearest representative day, of the month.

The variation from month to month in the number of wage earners employed in all industries combined was not great. The highest number, 109,839, was reported for December, and the lowest, 98,622, for May.

Of the three industries shown separately in the table, the manufacture of fertilizers and the cottonseed-oil industry show the greatest variations. As comparatively little work is done during the summer months in the cottonseed-oil industry, the largest number of wage earners were employed from September to March. In the manufacture of fertilizers the bulk of the work is done in the first four months of the year; in the brick and tile industry, in the summer months. Exclusive of the three industries shown separately, the manufactures of the state show a steady increase from May to December in the number of employees.

Prevailing hours of labor.—In the following table wage earners have been classified according to the hours of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed

during the year is used, and the number employed in each establishment is classified as a total, according to the hours prevailing in that establishment, even though a few employees work a greater or less number of hours.

Patent medicines and compounds and druggists' preparations. Pottery, terra-cotta, and fire-clay products. Printing and publishing	592	88 3 793 3	16 226	11 664 15	14 87 302	81 270 390 24	232	1 17	19
Tobacco manufactures. Turpentine and rosin Woolen, worsted, and felt goods, and wool hats. All other industries.	660	28 2,764 305	12 428 209	39 139 526	70 109 15 990	206 9,032 306 2,764	5 241 339 580	74 705	264

It is evident from these figures that for the great majority of wage earners employed in the manufacuring industries of Georgia the prevailing hours of labor range from 60 to 72 a week. Twenty-three and two-tenths per cent of all wage earners were employed in establishments where the prevailing hours were less than 60 a week, and only 1.4 per cent in establishments where they were more than 72 a week.

It will be noted that among the more important in-

dustries the prevailing hours of labor for the lumber and the turpentine and rosin industries are mainly 60 per week, while in the cotton-goods industry the majority of the wage earners work between 60 and 72 hours per week. In the steam-railroad repair shops the prevailing hours were mainly 54 per week.

Location of establishments.—The following table shows the extent to which the manufactures of Georgia are centralized in cities of 10,000 population and over. (See Introduction.)

			 	CITI	ES HAVING A	POPULAT	ion of 10,000	O GEA	ER.		DISTRICTS OUT

Value added by manufacture	1909 1899	85, 893, 498 45, 176, 072	33, 256, 700 16, 425, 644	38.7 36.4	5,564,072 4,669,365	8.5 10.3	11,072,943 11,756,279	12.0 20.0	18, 619, 685	19.3	52, 636, 798 28, 750, 428	61.3 63.6

In 1909 establishments located outside of cities having 10,000 inhabitants or over reported 62.9 per cent of the total value of manufactured products for the state and employed 69.4 per cent of the total average number of wage earners. The figures indicate that while very little relative change took place during the 10 years, yet on the whole the industries of the districts outside have increased somewhat more rapidly in respect to value of products than the industries located in cities of 10,000 and over. This is due largely to the fact that three of the largest and most important industries of Georgiathe manufacture of cotton goods, the lumber, and the fertilizer industries—are, to a large extent, conducted outside of cities having a population of 10,000 or over, and a fourth, the turpentine and rosin industry, wholly outside of such cities, and that all these industries, except the turpentine and rosin industry, show considerable development during the decade.

The increase in the population of different cities has affected the grouping in the table. In 1900 Macon was in the group composed of cities of less than 25,000 inhabitants, but by 1910 its population had increased sufficiently to bring it into the group of cities having from 25,000 to 100,000 inhabitants. Atlanta also has increased in population since 1900, passing the 100,000 limit, so that it is no longer included in the group made up of cities having from 25,000 to 100,000 inhabitants. In 1900 Rome and Waycross had less than 10,000 inhabitants, and so

are not included in the presentation of cities for 1899. This fact makes the relative gains in value of products shown for the districts outside of cities even more conspicuous.

The population for 1910 and 1900 of the nine cities which had 10,000 inhabitants or over in 1910 is given in the following table:

CITY.	1910	1900
tlantaavannah	65,004	89,87 54,24
Lugusta Aacon Jojumbus	40,605 20,554	39, 44 23, 27 17, 61
thens. Yayuross Roma	14.485	10,24 5,91 7,29

The relative importance in manufactures of each of the nine cities having a population of 10,000 or over in 1910 is shown in the following table:

CITY.		GE NUMI JE DARN		YAL	E OF PRODUC	ots.

1 Figures not available.

Every city for which comparative figures are given shows an increase in value of products from 1904 to 1909, and also with the exception of Brunswick, from 1899 to 1904. Atlanta, the first city in population and in manufactures, had in 1909 a value of products 129.1 per cent in excess of the value reported for 1899. There is a great diversity in the manufacturing industries of this city. Printing and publishing is the principal industry and its growth has been rapid, as is shown in Table I. In addition to the industries presented separately in that table for Atlanta, the cotton-goods, flour-mill and gristmill, steam-railroad repair shop, cordial and sirup, and fancy and paper box industries are important, each reporting products in 1909 exceeding \$1,000,000 in value, but the statistics for these industries can not be shown separately without disclosing the operations of individual concerns. There were 27 other industries represented in the city, each of which had a value of products exceeding \$100,000, but which are omitted from Table I for the reason given above or for other reasons similar to those given in explanation of the failure to show certain important industries separately in the table on page 214 for the state.

Macon, Augusta, and Columbus, although smaller cities than Savannah, each exceeded that city in the total value of manufactured products. In each of these cities, with the exception of Macon, the manufacture of cotton goods and of cottonseed oil and cake were the predominating industries, together contributing about one-half of the total value of products reported for both Augusta and Columbus. Both of these industries are important in Macon, but they are outranked in that city by the manufacture of food preparations. Columbus has, in addition to the industries mentioned, extensive flour-mill and gristmill interests.

Savannah is more of a trading center than a manufacturing city, being the most important scaport of the state. Through this city a large part of the manufactured products of the state are exported or sent to other parts of the country. While there is a diversity in its manufacturing interests, none of its industries reach \$1,000,000 in value of products, and only three—steam-railroad repair shops, the manu-

facture of fertilizers, and printing and publishing—report products exceeding \$500,000 in value.

The leading manufactures of Athens are the production of cotton goods and of cottonseed products; those of Rome, the cottonseed-oil and the lumber industries; those of Waycross, steam-railroad repair shops and the construction of steam-railroad cars, by other than railroad companies; and those of Brunswick, tobacco manufactures and the lumber industry.

Character of ownership.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available. Figures for 1909 only are presented for several important industries individually. In order to avoid disclosing the operations of individual concerns it is necessary to omit several important industries from this table and the one following.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 26.1 per cent of the total number of establishments were in 1909 under corporate ownership, as against 73.9 per cent under all other forms. The corresponding figures for 1904 were 28.9 per cent and 71.1 per cent, respectively. The value of products for establishments under corporate ownership constituted about four-fifths of the total for the state in 1909, as compared with about three-fourths in 1904, indicating a considerable gain. As a general rule, the larger establishments were operated by corporations.

The form of ownership prevailing in the different industries varies considerably. In each industry shown separately in the table, except in the manufacture of turpentine and rosin, a far greater value of products was shown for establishments under corporate ownership than for those under any other form. Measured by number of establishments, however, the individual form of ownership was the most common form in 5 of the 10 industries shown separately in the table, the corporate in 4 and the firm in 1—the turpentine and rosin industry. The largest proportions of establishments under corporate ownership are found in the cottonseed-oil and cotton-goods industries.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it, the table which follows groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for important industries separately as measured by number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

In 1909, of the 4,792 establishments in the state only 18, or four-tenths of 1 per cent, had a value of products exceeding \$1,000,000 each. These establishments, however, notwithstanding their small number, gave employment to an average of 10,928 wage earners, or 10.4 per cent of the total number in all establishments, and reported 16.8 per cent of the total value of products and 11.7 per cent of the total value added by manufacture.

On the other hand, the very small establishments—that is, those having a value of products of less than \$5,000—constituted a very considerable proportion (40 per cent) of the total number of establishments, but the

value of their products amounted to only 2.1 per cent of the total. The great bulk of the manufacturing was carried on in establishments having products valued at not less than \$100,000.

¹ Includes the group "\$5,000 and less than \$20,000."

It will be seen from the above table that during the five years from 1904 to 1909 there was a considerable increase as measured by value of products in the relative importance of the largest establishments—those

reporting products of not less than \$1,000,000 in value—and in the relative numerical importance of the smallest establishments—those reporting products of less than \$5,000 in value.

² Includes the group "Less than \$5,000."

³ Includes the group "\$1,000,000 and over."

The average value of products per establishment decreased from \$46,922 in 1904 to \$42,334 in 1909, and the value added by manufacture from \$20,943 to \$17,924. The average number of wage earners per establishment also shows a decrease. These decreases were due mainly to the large increase in the relative number of small establishments reported. The table shows further that when the size of establishments is measured by the average value of products per establishment, the manufacture of cotton goods, cottonseed oil, and fertilizers is conducted chiefly in the larger establishments, while all the other industries shown

separately are conducted mainly in comparatively small establishments.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to the number of wage earners employed. The following table shows, for 1909, such a classification for all industries combined and for 12 important industries individually, and gives not only the number of establishments falling into each group but also the average number of wage earners employed:

1			ES	TABLISHN	ENTS EMI	PLOYING-	-	<u> </u>	
Total.	No wage earners,	1 to 5 wage carners.	6 to 20 wage earners.	21 to 50 wage earners.	51 to 100 wage earners.	101 to 250 wage earners.	251 to 500 wage earners.	501 to 1,000 wage earners.	Over 1,000 wage earners.

Wage Wag	Number of Establishments	NUMBER OF ESTABLISHMENTS.

Of the 4,792 establishments reported for all industries, 4.8 per cent employed no wage earners; 45.1 per cent, from 1 to 5; 29.8 per cent, 6 to 20; and 11.9 per cent, 21 to 50. The most numerous single group consists of the 2,163 establishments employing from 1 to 5 wage earners, and the next of the 1,426 establishments employing from 6 to 20 wage earners.

There were 60 establishments that employed over 250 wage earners, of which 36 were cotton mills and 9 were steam-railroad repair shops.

Of the total number of wage earners, 27.5 per cent were in establishments employing over 250 wage earners each. The single group having the largest number of employees was the group comprising the establishments employing from 101 to 250 wage earners. This group employed 20,223 wage earners, or 19.3 per cent of the total. The individual industries listed in this table but not in the preceding one, namely, steamrailroad repair shops and the manufacture of hosiery and knit goods, are both industries in which comparatively large establishments do most of the business, as appears from the classification according to the number of wage earners.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses which make up the total.

The following table shows, in percentages, for 1909, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II.

	PER CE	NT OF T		PENSES
industry.	Sala- ries.	Wages.	Ma- terials.	Miscel- laneous ex- penses.
All industries. Carriages and wagons and materials. Cars and general shop construction and repairs by steam-railroad companies. Cotton goods, including cotton small wares. Fortilizers. Foundry and machine-shop products. Hosiery and knit goods. Lumber and timber products. Marble and stone work. Oil, cottonseed, and cake. Printing and publishing. Turpentine and rosin. All other industries.	5.9 2.3 5.0 1.8 10.2 5.3 8.0 18.9 5.7	19. 8 22. 6 48. 4 17. 7 6. 5 5 2. 0 24. 22 38. 6 46. 1 3. 8 25. 0 57. 1 16. 6	66. 4 63. 2 45. 4 73. 5 77. 7 93. 6 51. 3 62. 9 44. 9 36. 6 88. 4 29. 5 24. 5 65. 7	10. 5 7. 7 11. 2 9. 3

This table shows that, for all industries combined, 66.4 per cent of the total expenses were incurred for materials, 24.9 per cent for services—that is, salaries and wages—and but 8.7 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries.

Engines and power.—The next table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horse-power at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

The table indicates that the total amount of primary power more than doubled during the decade 1899–1909. The increase was largely in power generated by steam engines, although every class of power shows a gain for the 10 years. The more general use of gas engines is shown, the number of such engines being 418, with an indicated capacity of 3,380 horsepower, in

1909, as against 118 engines, with 632 horsepower, in 1904, and 45 engines, with 365 horsepower, in 1899. The figures also show that the practice of renting electric power is increasing rapidly, 8 per cent of the total power being of this character in 1909, as against but 2.9 per cent in 1904, and 1.2 per cent in 1899. A still more marked increase is shown in the use of electric motors for the purpose of applying the power generated within the establishment, the horsepower of such motors having increased from 1,030 in 1899 to 9,092 in 1904 and 20,374 in 1909.

¹ Includes the neighborhood industries and hand trades, omitted in 1904 and 1909.

² Not reported.

³ Less than one-tenth of 1 per cent.

Fuel.—Closely related to the question of kind of power employed is that of the fuel used in generating this power, or otherwise consumed as material in the manufacturing processes. The following table shows the quantity of each kind of fuel used in 1909 for all industries combined and for certain selected industries:

industry.	An- thra- cite coal (tons).	Bitumi- nous coal (tons).	Coke. (tons).	Wood (cords).	Oil, includ- ing gaso- line (bar- rels).	Gas (1,000 feet):
All industries	10,762	1,304,445	34,628	251.917	53,722	40,568

Note.—In addition, there were 12,200 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills,)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and value of materials and products and the number and kinds of machines used in manufactures which do not appear on the general schedule. Certain data of this character for eight important industries in Georgia are here presented.

Textiles.—The progress of the textile industries is indicated by the increase in the number of spindles, looms, and knitting machines. The following table shows the number of these machines used in the combined industries and in each of the three branches during 1909, 1904, and 1899:

MACHINE.	Cen- sus.	Total.	Cotton goods, including cotton small wares.	Woolen, worsted, and felt goods, and wool hats.	Hosiery and knit goods.
Producing spindles	1909 1904 1899	1,704,111 1,344,889 828,353	1,751,547 1,318,573 817,345	24,772 19,004 11,008	17,702 6,352
Looms	1909 1904 1809	36,034 31,767 19,901	35,358 31,221 19,398	670 546 503	
Knitting machines	1909 1904 1890	3,530 1,077 1,078		**********	3,530 1,677 1,078

The increases from 1904 to 1909 in the total number of the three principal kinds of machines used during the three census years were as follows: 449,222, or 33.4 per cent, in producing spindles; 4,267, or 13.4 per cent, in looms; and 1,853, or 110.5 per cent, in knitting machines. During the preceding five years, 1899–1904, the gains in spindles and looms were considerably more pronounced, but the increase in knitting machines was much less. In addition to the number of spindles shown for the three industries presented separately in the table, there were 17,136 reported in 1909 by the one establishment engaged in the manufacture of silk and silk goods and 2,700 for the two establishments which produced cordage and twine.

For the five-year period from 1904 to 1909 the number of producing spindles in the cotton mills increased 432,974, or 32.8 per cent; in the knitting mills, 11,440, or 180.1 per cent; and in the woolen mills, 4,808, or 24.1 per cent. The gains shown in the number of looms were not so large in proportion as the increases shown for spindles in the cotton mills and in the woolen mills. The number of knitting machines used in 1909 was more than double the number reported for 1904 and over three times that shown for 1899.

Of the six branches of the textile industries represented in the state, detailed statistics regarding materials and products can be given only for the cotton-goods and the hosiery and knit-goods industries. Such data for the other four branches would disclose the operations of individual establishments.

Cotton goods, including cotton small wares.—The conditions for the growth of this industry have been favorable because of the proximity of the factories to the supply of raw cotton and an abundance of labor. While there is no direct connection between the cotton crop and the amount consumed in the mills, it is of interest to know that in 1909 the total crop of cotton in Georgia amounted to 885,389,000 pounds, or over three times the quantity of raw cotton used in the cotton factories of the state.

The following is a statement of the quantity and cost of the principal materials used in the manufacture of cotton goods, and the quantity and value of the chief products as reported for 1909, 1904, and 1899:

MATERIAL OR PRODUCT,	1909	1904 1	18991
Materials used, total cost	\$32, 048, 739	\$23, 832, 297	\$11,113,356
Pounds	250, 820, 180 \$27, 884, 458	197, 849, 598 \$21, 132, 744	145, 695, 324 \$0, 692, 464

¹ Does not include one establishment manufacturing cotton small wares. ² Figures can not be shown without disclosing individual operations. ⁸ Not reported separately.

Raw cotton represented about seven-eighths of the total cost of all materials used during each of the three census years. The quantity of this material increased 53,470,587 pounds, or 27.1 per cent, from 1904 to 1909 and 51,654,269 pounds, or 35.5 per cent, from 1899 to 1904, while the gains in cost were \$6,751,714, or 31.9

per cent, and \$11,440,280, or 118 per cent, for the respective five-year periods. The disproportionate increases from 1899 to 1904 in the quantity and cost of raw cotton were due to the decided increase in price during the five years. The fact that the quantity of yarns purchased for use in 1909 was less than that reported for 1904 indicates that yarns are being manufactured to an increasing extent within the establishment in which they are used.

Brown or bleached sheetings and shirtings, and yarns for sale were the most important products, each contributing about one-fourth of the total value. The value of the former class represented 27.8 per cent of the total value of products in 1899, 28.8 per cent in 1904, and 23.8 per cent in 1909, while that of yarns constituted 26.5 per cent of the total in 1899, 24.5 per cent in 1904, and 24.9 per cent in 1909. Duck and drills combined represented nearly one-half of the value of the remaining products in 1909. From 1904 to 1909 the largest absolute gain in quantity was 22,347,514 square yards for drills, and the largest increase in value was \$3,350,768 for yarns. The most noteworthy relative increases, however, are shown for the quantity and the value of twine. Cotton towels and toweling, napped fabrics, and fancy woven fabrics also show decided relative gains in both items during the same period. The only class of products showing a decrease in both quantity and value during the decade is ginghams, which shows a falling off of 18,300,316 square yards, or 72.3 per cent, in quantity and of \$636,683, or 57 per cent, in value. The partly manufactured products—yarns for sale, twine and cotton waste for sale—to a limited extent represent a duplication, because, although they are the products of one set of mills, they become the materials of other establishments within the industry.

Hosiery and knit goods.—The following statement shows the quantity and cost of the principal materials used, and the quantity and value of the different products, as reported at the last three censuses:

1909	1904	1899
\$1,872,436	\$1, 417, 411	\$757, 480
4,043,536 \$456,956	(1)

¹ Included under "All other materials," to avoid disclosure of individual operations.

Raw cotton as a material was not reported at any census prior to that of 1904, indicating that at the preceding censuses the establishments engaged in this industry purchased the cotton yarn which they used. In 1904, although most of the yarn used was purchased, some of it was manufactured in the mills, as is indicated by the fact that some raw cotton was used in that year. Since then the practice of making the yarn in the mills has increased largely, accompanied by a corresponding decrease in the amount of cotton yarn purchased.

Half hose and hose together contributed 73.9 per cent of the total value of products in this industry for the state in 1909, shirts and drawers forming a minor product and showing decreases in quantity and value since 1904. Large percentages of increase in both the quantity and value of cotton hose and of half hose are shown for each five-year period, and with the exception of the value of half hose, by far the greatest gains were from 1904 to 1909. The greatest absolute increases in both quantity and value during the decade as a whole were reported for half hose, which furnished 42.4 per cent of the total value of products for the industry in 1909.

Lumber and timber products.—Although Georgia cut a slightly greater amount of lumber in 1909 than in 1899, the rate of increase was considerably less than that shown for any other Southern state, and it dropped from seventh place among the states of the Union in the production of lumber in 1899 to fifteenth in 1909. The following is a statement of the quantities of the principal products reported for the sawmills at the censuses of 1909 and 1899:

		QUANTITY.	
PRODUCT	•	1909	1899
Rough lumberLathShingles		1,342,249 58,704 443,260	1,311,917 31,496 243,797

The production of rough lumber increased 2.3 per cent from 1899 to 1909; that of lath, 86.4 per cent; and that of shingles, 81.8 per cent. Of the total output of 1,342,249 M feet board measure, in 1909, 1,194,987 M feet, or 89 per cent, was yellow pine. Hardwoods formed but 6.2 per cent of the total production, the principal varieties being oak and yellow poplar.

Oil, cottonseed, and cake.—The table following shows the quantity of cotton seed crushed and the quantity of the different crude products for each of the last three census years.

The statistics in this table include the figures for all establishments which crushed any seed during the year, regardless of the extent to which these establishments were engaged in other lines of manufacture. Furthermore, the crude products reported represent the total products derived from crushed cotton seed, whether sold as such or used as intermediate products in further processes of manufacture, such as the refining of oil and the manufacture of fertilizer or feed.

	QUANTITY.			
MATERIAL OR PRODUCT.	1900	1904	1899	
Cotton seed, crushed	594,070 26,181,463 261,717 188,270 26,040,114	368, 096 15, 284, 303 151, 011 131, 521 13, 281, 489	271, 833 10, 606, 693 01, 637 132, 344 6, 398, 830	

The quantity of cotton seed crushed more than doubled in Georgia between 1899 and 1909. The average crush per mill has fallen off during the decade as a whole, but has increased since 1904, being 5,909 tons in 1899, 3,075 tons in 1904, and 4,097 tons in 1909. Of the 145 mills reported in 1909 as crushing seed, 13 crushed less than 1,000 tons of seed during the census year; 35 crushed 1,000 but less than 2,000 tons; 55 crushed 2,000 but less than 5,000 tons; 27 crushed 5,000 but less than 10,000 tons; 14 crushed 10,000 but less than 20,000 tons; and 1 crushed over 20,000 tons.

The advance of the industry in economical operation is reflected in the fact that the production of oil from the same quantity of seed has increased from census to census. Thirty-nine gallons of crude oil were obtained from 1 ton of seed in 1899, whereas this amount had risen to 42 gallons in 1904, and to 44 gallons in 1909. In 1899 the weight of meal and cake was over three-tenths of the seed crushed; in 1904 and 1909 it was about four-tenths of the weight of the seed. The amount of linters increased from 24 pounds to the ton in 1899 to 36 in 1904 and 44 in 1909. Hulls alone show a relative decrease, falling off from nearly five-tenths of the total weight of the seed crushed in 1899 to about three-tenths in 1909.

Fertilizers.—This industry in the state is related closely to the cottonseed-oil industry. Of the 110 establishments engaged primarily in the manufacture of fertilizers, practically all used some cottonseed meal as an ammoniate. The next table shows in detail the quantity and value of the different products for the years 1909, 1904, and 1899.

The table does not include fertilizers to the value of \$1,453,338 made in 55 establishments engaged primarily in the manufacture of cottonseed oil and cake. This value represented 73,315 tons of fertilizers, distributed as follows: 64,600 tons complete fertilizers; 5,300 tons ammoniated fertilizers; 195 tons superphosphates from minerals, bones, etc.; and 3,220 tons other fertilizers.

PRODUCT.	1909	1904	1899
Total value	\$16,800,301	\$9,461,415	\$3,367,353
Tons Value Ammoniated fertilizers:	196, 885 \$2, 384, 293	130,762 \$1,390,437	131,503 \$1,075,581
Tons Value. Concentrated phosphate:	102,573 \$2,071,728	217,085 \$3,629,488	14,603 \$229,271
Tons Value	20,700 \$212,342	8	(1) (1)
Tons Value Other fertilizers:	\$10,060,146	206, 280 \$3,588, 613	101, 219 \$1, 563, 653
Tons Value Sulphuric acid produced for sale:	75,438 \$1,229,775	75, 123 \$634, 298	26, 605 \$371, 709
Tons Value	49,794 \$293,521		856 \$5,430
All other products	\$598,496	\$218,579	\$121,61

I Figures not available.

The total quantity of all kinds of fertilizers shown in the above table was three and one-half times, and the value about five times, as great in 1909 as in 1899. Complete fertilizers constituted the chief product in 1909, representing more than one-half of the total quantity and about three-fifths of the total value. In 1904 the ammoniated fertilizers held first place both in the quantity and value of the product, while in 1899 superphosphates from minerals, bones, etc., were first in quantity and complete fertilizers first in value.

Flour-mill and gristmill products.—The following tabular statement gives the quantity and value of products for the last three census years:

PRODUCT.	1909	1904	1809
Total value	\$7,999,912	\$8, 178, 926	\$5,323,786
White— Barrels	414,694 \$2,631,398	671,654 \$3,746,681	596,020 \$2,622,708
Graham— Barrels Value	526 \$3,240	155 \$ 785	
Corn meal and corn flour: Barrels. Value.	1,369,971 \$4,609,764	1,217,141 \$3,193,061	884,211 \$2,099,918
Rye flour: Barrels. Value.	06 \$305	35 \$170	180
Hominy and grits:	1,800	300,000	\$889 5,280
Value Feed: Tons	\$54 10,761	\$5,000 23,210	\$110 18,600
ValueOffal;	\$305,864 16,509	\$601,137 28,681	\$324,890 13,468
Value	\$397,168 \$52,059	\$500,382 \$05,710	\$253,861 \$21,404

Corn meal and corn flour, which constituted 57.6 per cent of the total value of all products in 1909, compared with 39 per cent in 1904, shows an increase of 152,830 barrels, or 12.6 per cent, in quantity and of \$1,416,703, or 44.4 per cent, in value during the five years. This gain in value, however, was not sufficient to overcome the decreases shown for all of the other classes of products, with the exception of two—Graham flour and rye flour—which increased. The

largest decreases are shown for white flour, 256,960 barrels, or 38.3 per cent, in quantity and \$1,115,283, or 29.8 per cent, in value.

Turpentine and rosin.—This, like the lumber industry, is dependent upon the forests of the state for its raw materials. The quantity and value of products for the census years 1909, 1904, and 1899 are shown in the following tabular statement:

PRODUCT,	1909	1904	1899
Total value	\$8,938,957	\$7,705,643	\$8, 110, 468
Gallons. Value. Rosin:	8,056,752 \$3,556,965	9,542,316 \$4,795,331	1 15,595,341 \$6,024,054
BarrelsValue	904,103 \$3,371,676	1,104,968 \$2,901,583	1 1,612,594 \$2,055,550
Dross and other products	\$10,316	\$8,729	\$30,864

¹ Spirits of turpentine was reported in barrels of 51 gallons, and rosin in barrels of 475 pounds in the 1899 census. In this report turpentine is reported in gallons and rosin in barrels of 280 pounds.

The importance of the turpentine industry has decreased considerably since 1899, owing to the rapid depletion of the longleaf-pine forests of the state and the clearing of the land for agricultural purposes. In 1909 the production of spirits of turpentine was 15.6 per cent less than in 1904 and 48.3 per cent less than in 1899, while the output of rosin shows a decrease of 18.2 per cent in 1909 as compared with 1904, and of 43.9 per cent as compared with 1899.

The working unit in turpentine operations is called a crop, which consists of 10,500 boxes or cups. In 1909 there were 6,178 crops worked in the state, of which 1,146 were from virgin trees, 1,283 from yearling or second-year trees, 1,621 from third-year trees, and 2,128 from older trees. A rapidly increasing proportion of the trees in Georgia are being worked by the new cup system.

Printing and publishing.—The printing and publishing industry as a whole in Georgia not only shows a considerable growth during the last 10 years, as measured by the financial statistics, but the number of publications and the aggregate circulation have increased substantially during each of the two five-year periods, as shown by the following table:

PERIOD OF ISSUE.		MBER (AGGREGATE CIRCULATION - PER ISSUE.		
	1909	1904	1899	1909	1904	1899
Total Daily. Sunday. Semlweekly and triweekly Weekly. Monthly. All other classes.	357 27 13 17 246 51 8	318 26 14 11 233 29 5	278 27 13 9 205 17	1, 626, 562 215, 660 172, 039 285, 629 423, 897 386, 337 143, 000	924, 545 178, 904 143, 052 81, 613 371, 274 120, 927 28, 775	549, 493 102, 872 (1) 33, 941 331, 905 67, 425 13, 350

1 Included in circulation of dailies.

There was an increase of 79 in the number of publications of all kinds during the 10-year period, and of 196 per cent in their circulation. While the number

of daily papers was the same in 1909 as in 1899, the circulation more than doubled. During the more recent five-year period the circulation of the Sunday newspapers increased 20.3 per cent. The greatest relative increase in circulation reported for any class was in those included under the head of "All other classes." which was more than ten times as great in 1909 as in 1899. There was an increase of 20 per cent in the number of weekly publications, and of 27.7 per cent in their circulation during the same period. The number of monthly publications in 1909 was three times. and their circulation more than five times, as great as in 1899. All of the publications were in the English language, with the exception of three weeklies, one of which was in German, one in German and English, and one in Hebrew.

Laundries.—Statistics for steam laundries are not included in the general tables, or in the totals for manufacturing industries. There were 42 such establishments in the state of Georgia, 10 of which were in Atlanta, 4 in Savannah, and 3 in Macon.

The following statement summarizes the statistics:

Number of establishments	42
Persons engaged in the industry	1, 525
Proprietors and firm members	37
Salaried employees	156
Wage earners (average number)	1, 332
Primary horsepower	1,180
Capital	\$654,756
Expenses	832,036
Services	516,075
Materials	191,654
Miscellaneous	124, 307
Amount received for work done	1,006,724

Of the 42 establishments reported, 17 were operated by corporations, 15 by individuals, and 10 by firms. Seven establishments had receipts of less than \$5,000 for the year's business; 22, receipts of \$5,000 but less than \$20,000; 12, receipts of \$20,000 but less than \$100,000; and 1, receipts of \$100,000 but less than \$1,000,000.

The number of wage earners employed each month and the percentage which this number represented of the greatest number employed in any month were as follows:

	WAGE EARNERS.		to explain the	WAGE EARNERS.		
Monte.	Number.	Per cent of maxi- mum.	MONTH.	Number.	Per cent of maxi- mum.	
January February March April May June	1,285 1,303 1,318	94. 5 94. 0 95. 3 96. 4 96. 9 98. 2	July	1,367 1,366	99. 9 100. 0 99. 9 98. 8 98. 2 96. 8	

The different kinds of primary power, the number of engines or motors, and the amount of horsepower used in 1909 are shown in the tabular statement following.

EIND.	Number of engines or motors.	Horse- power.

Charcoal.
Coffee and spice, roasting and grinding...
Coke...
Cordage and twine and Jute and linen goods...
Cordials and sirups...
Corsets.
Cutlery and tools, not elsewhere specified.
Dyestuffs and extracts.
Electrical machinery, apparatus, and supplies...
Electroplating...
Flavoring extracts.
Food preparations...

Gas and electric fixtures and lamps and reflectors.
Glass.
Glass, cutting, staining, and ornamenting.
Grease and tallow.
Hats and caps, other than felt, straw, and wool.
Hats, straw.
House-furnishing goods, not elsewhere specified.
Iron and steel, blast furnaces.
Iron and steel, bleet works and rolling mills.
Iron and steel, bolts, nuts, washers, and rivets, not made in steel works or rolling mills.

THE STATE, BY INDUSTRIES: 1909.

IDAHO.

INDUSTRIES IN GENERAL.

General character of the state.—Idaho, containing 84,290 square miles of land area, is the tenth state of the Union in size. Its population in 1910 was 325,594, compared with 161,772 in 1900 and 88,548 in 1890. It ranked forty-fifth among the 49 states and territories as regards population in 1910 and forty-sixth in 1900.

The state has but one city having a population of over 10,000, Boise, which had 17,358 inhabitants in 1910. The density of population for the state was 3.9 per square mile, the corresponding figure for 1900 being 1.9. Railways traverse the northern and southern portions of the state, but the greater part of the

central portion is without railway facilities, while the rapid currents and shallow waters of the rivers make water transportation impracticable.

Importance and growth of manufactures.—Idaho was admitted to the Union as a state in 1890, and since that date its development in manufacturing has more than kept pace with its growth in population.

The following table gives the more important figures relative to all classes of manufactures combined for the state as returned at the censuses of 1909, 1904, and 1899, together with percentages of increase from census to census:

		NUMBER OR AMOUNT.		PER CENT O	F INCREASE.
	1909	1904	1899	1904-1909	1899-1904
Number of establishments Persons engaged in industry Proprietors and firm members Salaried employees Wage earners (average number) Primary horsepower Capital Expenses Services Salaries Wages Materials Miscellaneous Value of products Value added by manufacture (value of products	9,909 831 858 8,220 42,804 \$32,477,000 18,891,000 6,482,000 984,000 5,498,000 9,920,000 2,489,000	364 3,791 371 359 3,061 16,987 \$9,689,000 7,619,000 2,438,000 379,000 2,059,000 4,069,000 1,112,000 8,769,000	287 (1) 92 1,552 5,649 \$2,130,000 2,465,000 884,000 66,000 818,000 1,439,000 142,000 3,001,000	99. 2 161. 4 124. 0 139. 0 168. 5 152. 0 235. 2 147. 9 165. 9 159. 6 167. 0 143. 8 123. 8	26. 8 290. 2 97. 2 200. 7 354. 9 209. 1 175. 8 474. 2 151. 7 182. 8 683. 1 192. 2

1 Figures not available.

In 1909 the state of Idaho had 725 manufacturing establishments, which gave employment to an average of 9,909 persons during the year and paid out \$6,482,000 in salaries and wages. Of the persons employed, 8,220 were reported as wage earners. These establishments turned out products to the value of \$22,400,000, to produce which materials costing \$9,920,000 were utilized. The value added by manufacture was thus \$12,480,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

In general, this table brings out the fact that the manufacturing industries of Idaho as a whole showed an unusually large percentage of increase during each of the five-year periods 1899-1904 and 1904-1909. During the period 1904-1909 the number of establishments increased 99.2 per cent and the average number of wage earners 168.5 per cent, while the value of products increased 155.4 per cent and the

value added by manufacture 165.5 per cent. The increase is due primarily to the increase in lumber and timber products. As pointed out in the Introduction, it would be improper to infer that manufactures have increased in volume during the period 1904–1909 to the extent indicated by the figures regarding values, since the increase shown is certainly due, in part, to the increase that has taken place in the price of commodities.

The relative importance and growth of the leading manufacturing industries of the state are shown in the next table.

It should be borne in mind, in considering this table, that the value of products in some of the industries involves a certain amount of duplication due to the use of the product of one establishment in the industry as material for another establishment.

The most important industries listed in this table, in which they are arranged in the order of value of products, are briefly considered.

		WAGE EA	WAGE EARNERS.		VALUE OF PRODUCTS.		ED BY	PER CENT OF INCREASE.

¹ Percentages are based on figures in Table I. Where the percentages are omitted, comparable figures can not be given.

Lumber and timber products.—The statistics showing number of wage earners, amount paid in wages, and value of products all indicate a very large growth for this industry. At each of the three censuses for which the figures are shown in Table I it may be seen that lumber formed a considerable proportion of the total value of all manufactures for the state. The exact proportions at the three censuses were as follows: In 1899, 31.5 per cent; in 1904, 35.8 per cent; and in 1909, 47.7 per cent. These figures show a steady increase in the relative importance of this industry, as compared with the total manufactures in the state.

Flour-mill and gristmill products.—Although the totals for this industry show an increase of 56.6 per cent in value of products from 1904 to 1909, this was only about one-half the rate of gain for the period 1899–1904. The value of the flour-mill and gristmill products formed a smaller relative proportion of the total for all industries at each succeeding census, as follows: In 1899, 24.5 per cent; in 1904, 18.1 per cent; and in 1909, 11.1 per cent. Owing to the comparatively simple processes involved and the extent to which they are carried on by machinery, the value added by manufacture is not commensurate with the gross value of products or the number of establishments.

Cars and general shop construction and repairs by steam-railroad companies.—This industry is peculiar among the manufacturing industries of the country. It represents the work done in the car shops of steam-railroad companies, and practically is confined to repairs to the rolling stock and equipment of their own roads, although to a limited extent there may be some new construction of rolling stock. The statistics are exclusive of minor repairs in roundhouses. In 1909 employment was given to an average of 849 wage earners, or 10.3 per cent of the total for the state, and the value of products, \$1,366,000, formed 6.1 per cent of the corresponding total for all industries.

Printing and publishing.—The establishments classified under this head for 1909 include 115 publishing newspapers and periodicals, 16 book and job offices, and 1 bookbinding establishment.

Measured by value added by manufacture, the rank of these four industries is somewhat different, though lumber and timber products is still first. Printing and publishing becomes second; cars and general shop construction and repairs by steam-railroad companies remains third; while flour-mill and gristmill products becomes fifth, and liquors, malt, takes fourth place.

This table shows also the percentages of increase for the leading industries in respect to value of products and value added by manufacture. The butter, cheese, and condensed-milk industry showed greater rates of increase from 1904 to 1909 in both value of products and value added by manufacture than any other of the specified industries, namely, 414 per cent and 463.9 per cent, respectively. The brick and tile and the lumber industries also showed remarkable increases.

In addition to the seven industries presented separately, there are seven other important industries which are included in the group of "All other industries," for reasons as follows: For beet sugar the totals can not be shown, since to do so would disclose the operations of individual establishments, while for artificial stone; confectionery; copper, tin, and sheetiron products; gas, illuminating and heating; leather goods; and marble and stone work, although the 1909 totals will be found in Table I, comparative statistics for prior censuses are not available.

Persons engaged in manufacturing industries.—The table following shows the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

The average number of persons engaged in manufactures during 1909 was 9,909. Of these, 8,220 were wage earners, 1,187 proprietors and officials, and 502 clerks. Corresponding figures for separate industries will be found in Table II.

		NS ENGAG NUFACTUR	
CLASS.	Total.	Mule.	Female.
All classes	9,909	9,646	203
Proprietors and officials	1,187	1,163	24
Proprietors and firm members. Salaried officers of corporations. Superintendents and managers.	831 108 248	811 104 248	20 4
Olerks	502	418	84
Wage earners (average number)	8,220	8,065	155
16 years of age and over	8,190	8,035 30	155

The following table shows the percentage of proprietors and officials, clerks, and wage earners, respectively, and the total number of persons employed in manufactures. It covers all industries combined and seven important industries separately.

Of the total number of persons engaged in all manufacturing industries, 12 per cent were proprietors and officials, 5.1 per cent clerks, and 83 per cent wage earners. All of the wage earners under 16 years of age were males. In the flour mills and gristmills and the creameries a large number of the establishments are small and the work is, to a great extent, done by the proprietors or their immediate representatives. Therefore the proportion of persons engaged in these industries falling into the class of proprietors and officials is very much higher than for other industries or all industries combined. The smallest proportion for this class is shown for repair shops operated by steam-railroad companies, and is due to the fact that corporations which operate these establishments report no proprietors, in addition to which general officials are not, as a rule, assigned to the supervision of this particular branch of work.

The following table shows, in percentages, for all industries combined, the distribution of the average number of wage earners by age periods and sex, calculated in the manner described in the Introduction. It also shows, for some of the important industries separately, the percentage distribution, by age periods and sex, of wage earners as reported for December 15, or the nearest representative day. As a means of judging the importance of the several industries the average total number employed for the year is also given in each case. Of the 8,220 wage earners, 98.1 per cent were males and 1.9 per cent females; 99.6 per

cent were 16 years of age or over, and but four-tenths of 1 per cent were children under the age of 16.

¹ For method of estimating the distribution, by age periods and sex, of the average number in all industries combined, see Introduction.

The largest number of women and children were employed in the printing and publishing industry. The average number of wage earners in that industry was 399 males and 52 females 16 years of age and over and 17 males under that age.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

. В прости том при в продости в продости в прости в при в прости в прости в прости в при в п	PERSONS ENGAGED IN MANUFACTURES.										
CLASS.	190	9	190	·k	Per						
	Number.	Percent distri- bution.	Number.	l'orcent distri- bution,	of in- erease, 1904- 1909.						
Total. Proprietors and firm members. Salaried employees. Wage earners (average number)	9,900 831 858 8,220	100,0 8,4 8,7 83,0	3,791 371 350 3,081	100.0 9.8 9.5 80.7	161.4 124.0 139.0 168.5						

Comparable figures are not obtainable for 1899. The table shows a greater percentage of increase in the wage earners than in either of the other two classes, due chiefly to the great increase in the number of wage earners in the lumber industry.

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number reported for a single representative day. (See Introduction.)

But having every set of distance or a sharing that the second property of the Standard Standa	l l		NUMBER O			holisa san auromotivida (1996). E projekti gelejih nej meminingan		
CLARS.	190	1	190	ı.	1899

Total. 16 years of age and over. Male. Female. Under 16 years of age	8,220 8,190 8,035 155 30	100.0 09. 6 97. 7 1. 9 0. 4	3,061 3,021 2,931 90 40	100.0 98.7 95.8 2.9 1.3	1,552 1,530 1,498 32 22	100.0 98.6 98.5 2.1 1,4		

This table indicates that for all industries combined during the 10 years there has been an increase in the number of women and children employed, but the numbers are small and the percentages which they form of all wage earners have decreased.

Wage earners employed, by months.—The following table gives the number of wage earners employed on the 15th of each month during the year 1909, for all

industries combined, for the lumber industry, and for all other industries combined; it gives also the percentage which the number reported for each month is of the greatest number reported for any month. In Table II, page 246, are shown, for each industry in the state, the largest and the smallest number of employees reported for any month. The numbers relate to the 15th day, or the nearest representative day, of that month.

While the lumber industry in Idaho is carried on throughout the year, yet on account of climatic conditions it is to a certain extent a seasonal industry, giving employment to a larger number of persons during the summer months than during the winter. From 3,477 wage earners employed in this industry in January the number increased steadily until June, when it reached 5,873. It decreased during July, August, and September, but in October increased to 6,034, the largest number employed during any one month. Exclusive of the lumber industry, the number of wage earners varied from a minimum of 2,464 in February to a maximum of 3,491 in October.

Prevailing hours of labor.—In the following table wage earners have been classified according to the hours

of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed during the year is used, and the number employed in each establishment is classified as a total, according to the hours prevailing in that establishment, even though some few employees work a greater or less number of hours.

It is evident from the figures that for the majority of wage earners employed in the manufacturing industries of Idaho the prevailing hours of labor were 60 a week, 24.1 per cent of the total being employed in establishments where they worked less than that number of hours, and only 10 per cent being employed in establishments where they worked longer hours.

Location of establishments.—The next table shows a comparison of the totals for all industries in the city of Boise and the remainder of the state for 1909. (See Introduction.) The population of the city was less than 10,000 at prior censuses, and therefore compar-

able data are not available. The figures indicate that 6.9 per cent of the establishments of the state, 5 per cent of the average number of wage earners, and 7.4 per cent of the value of products were reported from this city.

1 Population figures are for 1910.

Character of ownership.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899

are not available. Figures for 1909 only are presented for several important industries. In order to avoid disclosing the operations of individual concerns, it is necessary to omit several important industries from this table and the one following.

The most important distinction shown is that between corporate and all other forms of ownership. For all industries combined, 27.6 per cent of the total number of establishments were in 1909 under corporate ownership, as against 72.4 per cent under all other forms. The corresponding figures for 1904 were 28.8 per cent and 71.2 per cent, respectively. For all industries combined, as measured by value of products and value added by manufacture, corporations gained ground, but the percentage of establishments operated under this form of ownership was slightly less in 1909 than in 1904.

Includes the group "Other," to avoid disclosure of individual operations.

Of the three separate industries given in the table, lumber and timber products show the largest proportion for corporations in average number of wage earners, value of products, and value added by manufacture, while for number of establishments the largest proportion for corporations is shown by flour mills and gristmills.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it, the table which follows groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for important industries separately, as measured by number of wage earners, value of prod-

ucts, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for certain important industries figures are given for 1909 only.

This table shows that, in 1909, of the 725 establishments only 36, or 5 per cent, had a value of products exceeding \$100,000. These establishments, however, notwithstanding their comparatively small number, had an average of 4,931 wage earners, or 60 per cent of the total number in all establishments; and the importance of their operations measured by value of products was 58.1 per cent of the total, and by value added by manufacture 59.5 per cent of the total.

On the other hand, small establishments—that is, those having a value of products of less than \$5,000—constituted a considerable proportion (38.5 per cent)

of the total number of establishments, but the value of their products amounted to only 3.3 per cent of the total. About one-fourth of the total value of products was reported by establishments whose products were between \$20,000 and \$100,000 in value.

During the period 1904-1909 there was a slight decrease in the percentage of establishments having products valued at less than \$5,000 and in those having products valued at \$20,000 but less than \$100,000. The percentage for each of the other groups shows a correspondingly slight increase.

The five years from 1904 to 1909 was rather too short a period to show extensive changes, although it is evident that the proportional importance of the small establishments has decreased and that of the large establishments increased.

The fact that the average value of products increased from \$24,090, to \$30,896, and the value added by manufacture from \$12,913 to \$17,214, can scarcely be taken as in itself indicating a tendency toward concentration. The increased values shown may be, and probably are, due in part to the increase that has taken place in the prices of commodities. The average number of wage earners per establishment increased by three. The table shows further that when the size of establishments is measured by value of products the largest establishments in the three industries specified are found in the lumber industry.

2 Includes the group "\$100,000 and less than \$1,000,000."

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of establishments to bring out the feature of size is a classification according to average number of wage earners employed. The next table shows such a classification for all industries combined and for seven important industries, and gives not only the number of establishments falling into each group but also the average number of wage earners employed.

The per cent distribution of the number of establishments is not shown in this table; of the 725 establishments reported for all industries, 92.8 per

cent employed under 21 persons each or no wage earners at all. The most numerous single group consists of the 494 establishments employing from 1 to 5 wage earners, the next being the group employing from 6 to 20 wage earners, with 123 establishments. There were 11 establishments employing over 100 wage earners each, of which 3 employed over 500 each.

Of the total average number of wage earners, 41 per cent were in establishments employing over 250 wage earners. The single group having the largest number of employees was the group employing from 501 to 1,000 wage earners. This group employed 2,418 wage earners, or 29.4 per cent of the total.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses going to make up the total.

The following table shows, in percentages, the distribution of expenses among the classes indicated for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II.

	PER CENT OF TOTAL EXPENSES REPORTED.					
INDUSTRY,	Sala- ries.	Wages.	Ma- terials.	Miscel- laneous ex- penses.		
All industries . Flour-mill and gristmill products . Lumber and timber products . Printing and publishing . All other industries .	5.2 2.1 5.2 16.1 4.0	29.1 4.1 38.2 43.1 23.8	52.5 90.7 37.8 28.1 62.1	18.8 3.1 18.8 12.8 0.3		

This table shows that, for all industries combined, 52.5 per cent of the total expenses were incurred for materials, 34.3 per cent for services—that is, salaries

and wages—and but 13.1 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries.

Engines and power.—The next table shows for all industries combined the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

From 1904 to 1909 the large percentage of increase in the amount of primary horsepower used is in proportion to the growth of manufacturing industries in the state—\$6.5 per cent of the actual increase being due to the increase in the amount of power used in the lumber industry alone. The largest actual increase was in steam power, which in 1909 represented 93.1 per cent of the owned primary power and 83 per cent of all primary power both owned and rented. The largest percentage of increase was for rented electrical power, which class also shows 15.5 per cent of the total actual increase in primary horsepower from 1904 to 1909.

 ¹ Includes the neighborhood industries and hand trades omitted in 1904 and 1909.
 ² Not reported.
 * Less than one-tenth of 1 per cent.

Fuel.—Closely related to the question of kind of power employed is that of the fuel used in generating this power, or otherwise as material in the manufacturing processes. The following table shows the quantity of each kind of fuel used in 1909:

ı							
	industry.	Anthra- cite coal (tons).	Bitumi- nous coal (tons).	Coke (tons).	Wood (cords).	Oil, including gasoline (barrels).	Gas (1,000 feet).
	All industries Brick and tile	451	64,590 8,279 11,788	8,066	22,825 13,620	2,790 4	615
	Steam-ranioad companies- Flour-mill and gristmill prod- ucts. Gas, illuminating and heat- ing. Liquors, malt. Printing and publishing. All other industries.	22 425	1,911 3,601 4,079 472 34,460	908	1,389 1,872 332 5,112	56 2,409 4 167 150	490 125

Note.-In addition, there were 3 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and value of materials and products which do not appear on the general schedule. Data for three important industries are here presented.

Lumber and timber products.—The lumber industry is of first importance in Idaho measured by value of products. The following is a statement of the quantity of the principal products reported for the sawmills at the censuses of 1909 and 1899:

	QUAN	QUANTITY.				
PRODUCT.	1909	1899				
Rough lumber M feet b. m. Lath thousands. Shingles thousands.	645,800 86,740 62,308	05, 303 3, 220 15, 806				

The annual cut of lumber has increased rapidly during recent years. The product of rough lumber in 1909 was nearly ten times as great as in 1899, that of lath was about twenty-seven times as great, and that of shingles almost four times as great. In 1909 the cut of rough lumber was practically all softwoods, but 5,446 M feet consisting of the hardwoods. Almost 40 per cent of the cut was western pine, and this with white pine, larch, and Douglas fir constituted 90.6 per cent of the total cut of rough lumber in 1909.

Flour-mill and gristmill products.—The following statement gives the quantity and value of products for this industry for the last two census years:

77 O 77 VOM	QUAN	TITY.	VALUE.		
PRODUCT.	1909	1904	1909	1901	
Total value Wheat flour barrels White barrels Graham barrels Corn meal barrels Rye flour barrels Barley meal pounds Grits pounds Feed tons Offal tons All other products	386,022 379,858 6,104 180 57 40,000 213,340 10,491 17,182	309, 476 308, 780 696 1 800 75 6, 586 14, 150	\$2,479,719 1,810,581 1,790,806 28,688 1,016 285 600 5,024 293,757 350,376 8,180	\$1,584,478 1,225,677 1,222,006 3,063 2,400 810 131,320 223,708	

1 Includes corn flour.

As shown in the table, the principal product for this industry both in 1909 and 1904 was white flour, forming 72.2 and 77.2 per cent, respectively, of the total value of all products of the industry. For the period 1904–1909 an increase is shown for each class of products except corn meal and rye flour.

Each of the two latter classes shows a decrease, but the figures are small and of comparatively little importance.

Printing and publishing.—That there has been a pronounced growth in the newspaper and periodical branch of this industry in the state of Idaho is shown in the following table:

PERIOD OF ISSUE.		UMBER C		AGGREGATE CIRCULATION PER ISSUE.			
	1909	1904	1899	1909	1904	1899	
Total Daily Sunday Semiweekly Weekly All other classes	130 13 3 26 108	95 6 3 10 74 2	73 5 1 5 5 59 3	140,781 28,508 13,864 7,185 91,134	86,965 13,675 7,675 11,850 51,265 2,500	48,798 15,100 (1) 4,645 36,300 2,750	

¹ Included in circulation of dailies. ² Includes one triweekly publication.

All of the publications included in the above table were in the English language. During the period 1904–1909 there was no increase in the number of Sunday publications, but a large increase in the aggregate circulation is shown; daily and weekly publications show an increase both in the number of publications and in circulation, while semiweeklies and all other classes show a decrease in number of publications and in circulation.

Laundries.—Statistics for steam laundries are not included in the general tables. In 1909 there were 24 such establishments in the state of Idaho, 3 of which were in Boise.

The following statement summarizes the statistics:

Number of establishments	24
Persons engaged in the industry	410
Proprietors and firm members	31
Salaried employees	22
Wage earners (average number)	357
Primary horsepower	489
Capital	
;	
Capital	\$252, 110
CapitalExpenses.	\$252, 110 327, 375
Capital. Expenses. Services.	\$252, 110 327, 375 201, 836

The most common form of organization was the individual, with 13 establishments. There were 9 firms and 2 incorporated companies. Five establishments had receipts for the year's business of less than \$5,000; 11, receipts of \$5,000 but less than \$20,000; and 8, receipts of \$20,000 but less than \$100,000.

The number of persons employed each month and the percentage which these numbers represented of the greatest number employed in any month were as follows:

	WAGEE	ARNERS,		WAGE EARNERS.		
MONTH,	Number.	Per cent of maxi- mum,	MONTH.	Number.	Per cent of maxi- mum.	
January. February. March. April. May. June	370 368	90. 9 94. 6 99. 5 98. 9 91. 4 94. 4	July	304	95. 7 100. 0 98. 7 97. 8 94. 6 97. 0	

The different kinds of primary power, the number of engines or motors, and the horsepower used in 1909, are shown in the following tabular statement:

RIND.	Number of engines or motors.	Horse- power.
Primary power, total Owned Steam Gas. Rented—Electric. Electric motors. Run by current generated by establishment. Run by rented power.	17 16 1 16	489 379 377 2 110 133 23 110

The kind and amount of fuel used are shown in the following statement:

KIND.	Unit.	Quantity.
	Barrels	

Custom sawmills and gristmills.—Statistics for custom sawmills and gristmills are not included in the general tables, but are presented in the following summary:

	Custom sawmills.	Custom gristmills.
Number of establishments Persons engaged in the industry. Proprietors and firm members. Wage earners (average number) Primary horsepower.	27 22 5 111	11 17 14 3 196
Capital. Expenses. Services. Materials Miscellaneous. Value of products.	3, 255 2, 392 150 713	\$55, 225 104, 143 1, 674 1101, 516 953 1118, 831

¹ Includes estimate of all grain ground. A similar estimate for value of lumber sawed by custom sawmills is impracticable.

ILLINOIS.

INDUSTRIES IN GENERAL.

General character of the state.—Illinois, with a gross area of 56,665 square miles, of which 622 represent water surface, ranks twenty-third in size among the states of the Union. Its population in 1910 was 5,638,591, as compared with 4,821,550 in 1900 and 3,826,352 in 1890. It ranked third among the 49 states and territories as regards population both in 1910 and in 1900. The density of population for the state in 1910 was 100.6 per square mile, the corresponding figures for 1900 and 1890 being 86.1 and 68.3, respectively. Sixty-one and seven-tenths per cent of the entire population of the state in 1910 resided in incorporated places having 2,500 inhabitants or over, as compared with 54.3 per cent in 1900.

There were 32 incorporated places in the state which had a population of over 10,000 in 1910. One of these, Chicago, had 2,185,283 inhabitants; 11 others had over 25,000 but less than 100,000; and the remaining 20 had between 10,000 and 25,000. A list of these places, with the population of each in 1910 and 1900, is given on page 264. These 32 places contained 52.3 per cent of the total population of the state and were credited in 1909 with 83.1 per cent of the total value of its manufactures. Apart from these places, only 9.3 per cent of the population resided in places of 2,500 inhabitants or over.

Illinois lies wholly within the great prairie region, and, with the exception of Louisiana and Delaware, is the most level state in the Union. On account of the situation of the state, many of the trunk lines both between the East and the West and between the North and the South enter or pass through it, and thus afford excellent transportation facilities. On June 30, 1909, there were 152 railroad companies having lines within the state, and nearly every county is traversed by one or more railroads, many of them trunk lines running into Chicago or St. Louis. The state has approximately 12,000 miles of main track of steam railroads 1—an average of over 21 miles for every 100 square miles of territory—and also over 2,700 miles of electric railroads. In addition to these ample railway facilities, the state has the advantages of cheap water transportation afforded by the Mississippi and its navigable tributaries, and by the Great Lakes.

Importance and growth of manufactures.—Illinois is the most important manufacturing state west of the Alleghenies. In 1849 an average of 11,559 wage earners, representing 1.4 per cent of the total population, were employed in manufactures, while in 1879 an average of 144,727 wage earners, or 4.7 per cent of the total, and in 1909 an average of 465,764 wage earners, or 8.3 per cent of the total population, were so engaged. The gross value of products per capita of the total population of the state increased from \$19.42 in 1849 to \$340.38 in 1909, and the proportion which the manufactures of the state represented of the total value of the products of manufacturing industries in the United States, from 1.6 per cent in 1849 to 9.3 per cent in 1909. In the value of its manufactures Illinois ranked fifteenth in 1849 and third in 1909.

The first table on the following page gives the most important figures relative to all classes of manufactures combined, for 1909, 1904, and 1899, together with the percentages of increase from census to census.

In 1909 the state of Illinois had 18,026 manufacturing establishments, which gave employment to an average of 561,044 persons during the year and paid out \$364,768,000 in salaries and wages. Of the persons employed, 465,764 were wage earners. These establishments turned out products to the value of \$1,919,277,000, in the manufacture of which materials costing \$1,160,927,000 were utilized. The value added by manufacture was thus \$758,350,000, which figure, as explained in the Introduction, best represents the net wealth created by manufacturing operations during the year.

The totals presented in the table do not include the statistics for an establishment operated by the Federal Government—the arsenal at Rock Island. In 1909 this plant employed an average of 1,698 wage earners, and the value of its products, which consisted of infantry, cavalry, and artillery equipment, was reported as \$3,114,338.

In general, the table brings out the fact that the manufacturing industries of Illinois as a whole developed more rapidly during the five-year period 1904–1909 than during the preceding five-year period, 1899–1904, the percentage of increase being greater for all items shown in the table except miscellaneous expenses. During the later five-year period the number of establishments increased 20.8 per cent and the average number of wage earners 22.8 per cent, while the value of products increased 36.1 per cent and the value added by manufacture 33 per cent. As

¹ Interstate Commerce Commission, Statistics of the Railways in the United States, 1909.

pointed out in the Introduction, it would be improper to infer that manufactures increased in volume to the full extent indicated by the figures representing values, since the increase shown is certainly due, in part, to the increase that has taken place in the price of commodities.

¹ Figures not available.

The relative importance and growth of the leading manufacturing industries of the state are shown in the following table.

It should be borne in mind, in considering this

table, that the value of products in some of the industries involves a certain amount of duplication due to the use of the products of one establishment in the industry as materials for other establishments.

¹ Percentages are based on figures in Table I; a minus sign (—) denotes decrease. Where the percentages are omitted, comparable figures can not be given.

² Less than one-tenth of 1 per cent.

The foregoing table gives separate statistics for 95 industries or industry groups for which products valued at more than \$500,000 were reported in 1909. These industries include 8 with products exceeding \$50,000,000 in value, 8 with products between \$25,000,000 and \$50,000,000 in value, and 15 with products between \$10,000,000 and \$25,000,000 in value, making an aggregate of 31 industries with

products in excess of \$10,000,000 in value. The other industries shown separately comprise 17 with products between \$5,000,000 and \$10,000,000 in value, 34 with products between \$1,000,000 and \$5,000,000 in value, and 13 with products between \$500,000 and \$1,000,000 in value.

In addition to the 95 industries presented separately in the foregoing table, there were 65 other industries

in the state which reported products in 1909 to the value of \$500,000 or over.1 These industries comprised 4 with products exceeding \$10,000,000 in value, 6 with products between \$5,000,000 and \$10,000,000 in value, 40 with products between \$1,000,000 and \$5,000,000 in value, and 15 with products between \$500,000 and \$1,000,000 in value. These industries are included under the head of "All other industries" in the table, in some cases because the operations of individual establishments would be disclosed if they were shown separately; in others, because the returns do not properly present the true condition of the industry, as it is more or less interwoven with other industries; and in still others, because comparative statistics for 1904 and 1899 can not be presented without disclosing the operations of individual establishments, or on account of changes in classification. The 1909 statistics, however, for three of these industries the manufacture of paper bags, cordage and twine and jute and linen goods, and signs and advertising novelties—are presented in Table II, page 292.

The most important industries listed in this table, in which they are arranged in the order of the value of products, call for brief consideration.

Slaughtering and meat packing.—This classification includes wholesale slaughtering and meat-packing establishments and those engaged in the manufacture of sausage only, but not the operations of the numerous slaughterhouses killing for the retail trade, which, in the aggregate, slaughter a large number of animals. Illinois continues to hold first place in this industry, the value of the output in 1909, \$389,595,000, forming 28.4 per cent of the total for the industry in the United States and representing an increase of 22.4 per cent as compared with 1904. In 1904 the state's proportion of the total value of products for this industry was 34.5 per cent, and in 1899, 36.6 per cent. Measured by value of products this is by far the most important

industry in Illinois, contributing a little over one-fifth of the state total for all manufacturing industries in 1909. Although greatly exceeding any other industry in the state in value of products, the industry ranked only fourth in average number of wage earners and in value added by manufacture.

Foundry and machine-shop products.—This industry includes all foundries and machine shops and similar establishments except those which manufacture a distinctive product covered by some other classification, such as cash registers, sewing machines, and electrical machinery and apparatus. Establishments engaged in the manufacture of bells, cast-iron and caststeel pipe, gas machines and gas and water meters, hardware, steam fittings and heating apparatus, and structural ironwork, some of which were classified separately at previous censuses, are all included under this general heading. This industry ranks second in value of products, with 7.2 per cent of the state total for all manufacturing industries, and shows a much greater growth for the five-year period 1904-1909 than for the preceding five-year period. In 1909 it was the leading industry in the state in average number of wage earners employed, having 52,266, or 11.2 per cent of the state total.

Clothing, men's, including shirts.—This classification includes the making of men's and boys' ready-made clothing and of overalls, butchers' aprons, bathing suits, and gymnasium clothing, and the manufacture of all kinds of shirts-cotton, linen, flannel, etc.-as well as of shirt bosoms, and of shirt waists for men and boys. Most of the establishments engaged in this industry in Illinois are located in Chicago. The number of establishments increased from 624 in 1904 to 715 in 1909, the average number of wage earners increased from 21,355 to 36,152, or 69.3 per cent, and the value of products from \$57,002,000 to \$89,473,000, or 57 per cent.

Printing and publishing.—This classification includes the printing and publishing of books, newspapers and periodicals, and music, job printing, bookbinding and blank-book making, steel and copper plate engraving, and lithographing. In this industry Illinois ranks second only to New York, with a value of products in 1909 forming 11.8 per cent of the total for the United States. There were 2,608 establishments reported in 1909, as against 2,414 in 1904 and 2,150 in 1899. The figures indicate a considerable growth in the industry throughout the decade. The leading items going to make up the total value of products in 1909 were as follows: Job printing, \$28,010,000; book and pamphlet printing and publishing, \$9,399,000; subscriptions and sales of newspapers, \$8,937,000; newspaper advertising, \$13,720,-000; subscriptions and sales of periodicals, \$5,722,000; periodical advertising, \$6,893,000; bookbinding and blank-book making, \$5,756,000; and electrotyping, engraving, and lithographing, \$5,456,000.

Iron and steel, steel works and rolling mills.—This industry embraces the manufacture of steel and the

Wool scouring.

¹ These industries are:

Awnings, tents, and sails.

Bags, paper. Belting and hose, woven and rubber.

Betting and nose, woven and rubber. Butter, reworking, Candles. Cars, street-railroad, not including oper-ations of railroad companies. Cash registers and calculating machines.

Cordage and twine and jute and linen

goods. Cordials and sirups.

Fertilizers.
Firearms and ammunition.
Flavoring extracts.

Food preparations.

Glass, cutting, staining, and ornament-ing. Glucose and starch.

Glue.
Gold and silver, reducing and refluing, not from the ore.
Hair work.
House-furnishing goods, not elsewhere

specified.
Ink, writing.
Instruments, professional and scientific.
Iron and steel, boits, nuts, washers, and rivets, not made in steel works or rolling mills.
Iron and steel, doors and shutters.

ing mills.

Iron and steel, doors and shutters.

Iron and steel forgings.

Iron and steel, nails and spikes, cut and wrought, including wire nails, not made in steel works or rolling mills.

Iron and steel pipe, wrought.

Labels and tags.

Lard, refined, not made in slaughtering and meat-packing establishments.

Lead, bar, pipe, and sheet. Looking-glass and picture frames. Malt. Mineral and soda waters. Mineral and soda waters.
Moving pictures.
Oil, cottonseed, and cake.
Oil, inseed.
Oil, not elsewhere specified.
Oilcloth and linoleum. Oleomargarine.
Optical goods.
Petroleum, refining.
Roofing materials. Saws.
Signs and advertising novelties.
Sijk and silk goods, including throwsters.
Smelting and refining, lead.
Soda-water apparatus.
Sporting and athletic goods.
Sporting the derivations Sporting and athletic goods.
Springs, steel, car and carriage.
Stationery goods, not elsewhere specified,
Statuary and art goods.
Statuary and art goods.
Sugar and molasses.
Sulphuric, nitric, and mixed acids.
Tin plate and terneplate.
Toys and games.
Typewriters and supplies.
Upholstering materials.
Vinegar and cider.
Window shades and fixtures.
Wire. Wirework, including wire rope and cable.
Wood preserving.
Wood, turned and carved.

hot rolling of iron and steel. It also includes the making of forgings and castings and the manufacture of rolled iron and steel into more highly finished forms when conducted as a part of the rolling-mill operations. It does not, however, include the making of cold-rolled products, nor of forgings, castings, and other manufactures of iron and steel by establishments not equipped with steel-making furnaces or hot trains of rolls. There were 24 establishments in Illinois in 1909 coming under this classification, or one more than in 1904. In 1909 this industry ranked fifth in the state in value of products, in 1904 it was fourth, and in 1899 third. From 1904 to 1909 the value of products for Illinois increased 44.3 per cent, as compared with an increase of 46.3 per cent for the entire country for the same period. Of the total value of products for the industry in the United States, Illinois contributed 8.8 per cent in 1909 and 8.9 per cent in 1904, holding third position among the states in each year.

Iron and steel, blast furnaces.—These establishments include those engaged in the manufacture of pig iron from the ore. The number of establishments in this industry increased from four in 1904 to six in 1909. In value of products there was an increase of \$10,969,000, or 40.1 per cent, from 1904 to 1909, as compared with an increase of \$12,177,000, or 80.4 per cent, from 1899 to 1904. Illinois contributed \$38,300,000, or 9.8 per cent of the total value of products for all blast furnaces in the United States, in 1909, as compared with \$27,331,000, or 11.8 per cent, in 1904, and \$15,154,000, or 7.3 per cent, in 1899. At the last three censuses Illinois has ranked third among the states in this industry.

The manufacture of wire is a very important branch of the iron and steel industry in Illinois, but the statistics can not be presented separately because of the possible disclosure of individual operations. Seven establishments manufacturing wire were reported in 1909 and four in 1904.

Agricultural implements.—This classification includes the manufacture of various kinds of seeders and planters, implements of cultivation, harvesting implements, seed separators, etc. There was an overproduction of agricultural implements in Illinois in 1903, followed by a curtailment of manufacture in 1904. The figures for 1904, the year covered by the census, are therefore below the normal. The value of the products of the industry shows a decrease of 8.6 per cent in 1904 as compared with 1899, but in 1909 it amounted to \$57,268,000, representing an increase of 49.1 per cent as compared with 1904, and of 36.2 per cent as compared with 1899. Illinois is the leading state in this industry, reporting 39.1 per cent of the total value of products for the United States in 1909, 34.3 per cent in 1904, and 41.5 per cent in 1899.

Liquors, distilled.—This industry was seventh in the state in 1909 and in 1899 as measured by value of products, and sixth in 1904. In 1909, as in 1904

and 1899, Illinois ranked first in this industry in the United States, reporting products in 1909 valued at \$55,200,000, or 27 per cent of the total for the United States. Of the total value of products of this industry in the state in 1909, more than three-fourths (\$42,758,000) represents the Federal internal-revenue tax. The greater part of the distilled liquors made in Illinois was corn whisky, the state ranking high in the production of corn.

Liquors, malt.—During the five-year period 1904-1909 the number of breweries decreased from 116 to 106, but there was an increase of 365, or 9.1 per cent, in the average number of wage earners and of \$4,662,000, or 19.6 per cent, in the value of products.

Flour-mill and gristmill products.—This classification includes mills grinding wheat, rye, barley, buckwheat, or corn, but it does not include mills doing custom grinding exclusively, or factories making fancy cereals or other food preparations as a chief product. Statistics for custom gristmills, however, are presented separately on page 280. The number of establishments reporting increased from 363 in 1904 to 461 in 1909, and during the same period there was a slight increase (54) in the average number of wage earners reported, and an increase of \$11,219,000, or 28.1 per cent, in value of products.

Lumber and timber products.—This industry embraces logging operations, sawmills, planing mills, and establishments engaged in the manufacture of wooden packing boxes. It does not include mills engaged exclusively or chiefly in custom sawing for local consumption, statistics for which are given on page 280. Over one-half of the 814 establishments reporting were sawmills, but the greater part of the total value of products was reported by the planing mills, which include establishments making sash, doors, blinds, stairwork, moldings, and interior woodwork. From 1904 to 1909 the value of products increased \$12,211,000, or 37.3 per cent.

Cars and general shop construction and repairs by steam-railroad companies.—Among the manufacturing industries this one is peculiar in that it is practically confined to repairs on the rolling stock and equipment of the railroad companies operating the plants, and that except to the very limited extent that repair work is done for other companies the amount shown as value of products represents only the cost of materials added to the expenditure for salaries and wages, etc. The industry does not include minor repairs made in round-houses. From 1904 to 1909 the number of establishments decreased from 99 to 73, while the average number of wage earners increased 4,036, or 21.1 per cent, and the value of products \$6,738,000, or 26.4 per cent.

Cars, steam-railroad, not including operations of railroad companies.—For this industry Illinois reported in 1909 more than one-fifth of the total value of products for the United States. While the number of establishments in the state increased from 16 in 1904 to 28 in 1909, and the average number of wage earners from 9,036 to 10,945, or 21.1 per cent, the value of products decreased \$3,925,000, or 12.7 per cent. Eighteen of the car construction shops reported in 1909 were in Chicago. The products of these plants include sleeping cars, dining cars, chair cars, mail, express, and baggage cars, and refrigerator cars, as well as ordinary passenger coaches and many kinds of freight cars. In 1904 Illinois held first place in value of products for this industry in the United States, but in 1909 it stood second.

Furniture and refrigerators.—This industry embraces the manufacture of wood and metal furniture of all kinds, refrigerators and ice boxes, and store and office fixtures, with the exception of products, such as show cases, which are provided for by a distinct classification. This industry shows increases from 1904 to 1909 of 29 per cent in number of establishments, 9.2 per cent in average number of wage earners, and 24.6 per cent in value of products.

Electrical machinery, apparatus, and supplies.—The most important products of the establishments in this industry in Illinois are insulated wires and cables and telephone apparatus. From 1904 to 1909 the number of establishments increased from 104 to 143, the average number of wage earners increased 3,510, or 57.2 per cent, and the value of products \$10,126,000, or 60.6 per cent. During the preceding five-year period the number of establishments increased from 82 to 104, the number of wage earners increased 1.4 per cent, and the value of products. 37.2 per cent.

the value of products, 37.2 per cent. Copper, tin, and sheet-iron products. This classification comprises the manufacture of all sheet-metal products of copper, tin, and sheet iron, including the preparation of copper, tin, or sheet-iron materials for building construction. Between 1904 and 1909 the number of establishments increased from 288 to 483, the average number of wage earners increased 1,828, or 32.4 per cent, and the value of products, \$7,438,000, or 48.3 per cent. In this industry Illinois held second place in the United States in 1909, with 11.4 per cent of the total value of products.

Gas, illuminating and heating.—The number of establishments in this industry increased from 64 in 1904 to 78 in 1909, and the total value of products increased \$5,044,000, or 31.5 per cent.

Musical instruments, pianos and organs and materials.—This classification covers, in general, the manufacture of pianos, organs, and piano-players, and materials used in their construction, such as piano cases, strings, keys, keyboards, pedal attachments, sounding boards, and back frames, organ reeds, pipes, and stops, and piano and organ hardware. It does not include the manufacture of band and orchestral instruments, such as horns, clarinets, flutes, drums, violins, and similar instruments, which are included under the head of "Musical instruments and materials, not specified." In 1909 there were 68 establish-

ments in the industry, as compared with 56 in 1904, and the number of wage earners increased 1,269, or 16.9 per cent, during the five-year period. The value of products shows an increase of 43.9 per cent, as against an increase of 63.4 per cent for the five-year period 1899–1904. Measured by value of products Illinois ranked second in this industry in the United States in 1909, 1904, and 1899, the value of its products forming 21.4 per cent of the total for the country in 1909, and practically 20 per cent in both 1904 and 1899.

Butter, cheese, and condensed milk.—The number of establishments in this industry shows a decrease of 110. or over one-fourth, from 1904 to 1909, and a decrease of 122 from 1899 to 1904. The average number of wage earners increased 17 per cent from 1899 to 1904. but in 1909 the number was practically the same as in 1904. The value of products increased only 3.1 per cent in the earlier five-year period, while in the later period it increased 34.1 per cent. The changes shown for the decade indicate the abandonment of many of the small factories and an increase in the output of the larger ones. Condensed milk is the most important of the products. The state ranked second in the value of condensed milk produced in 1909 (New York leading), seventh in the value of cheese, and eighth in the value of butter. In the total value of products for the industry the state held fifth place in 1909, as compared with fourth place in both 1904 and 1899.

Boots and shoes, including cut stock and findings.— Under this head are included factories making boots and shoes and those whose chief products are cut stock and findings, as well as shops specially engaged in stitching, crimping, fitting, and bottoming, or performing other special operations in connection with the manufacture of boots and shoes. The manufacture of footwear not coming strictly under the head of "Boots and shoes," such as overgaiters, moccasins, and leggings, is also covered by this designation. There were decreases from 1899 to 1904 in the number of establishments, average number of wage earners, and value of products, but there was a decided increase in the industry during the five-year period 1904–1909 and a net increase during the decade.

Clothing, women's.—In addition to the making of suits, dresses, skirts, and shirtwaists, this industry includes the manufacture of women's underwear and night robes, of infants' clothing, and of such articles as belts, dress shields, and hose supporters. From 1904 to 1909 there was an increase of 30, or 15.7 per cent, in the number of establishments in this industry; of 1,461, or 31.2 per cent, in the average number of wage earners; and of \$4,398,000, or 35.9 per cent, in the value of products.

Patent medicines and compounds and druggists' preparations.—Under this head are included establishments making so-called patent medicines and also some compounds that are not used for medicinal purposes, and those manufacturing capsules, extracts,

tinctures, and other pharmaceuticals, and perfumery and cosmetics. There was a decrease of 1.5 per cent in the value of products of this industry, and of 12 per cent in the value added by manufacture during the five-year period 1904–1909, while during the preceding five-year period there were increases of 103.6 per cent and 118.8 per cent, respectively. Measured by value of products, the state ranked third in this industry in the United States in 1909, with 9.2 per cent of the total for the country as a whole.

Automobiles, including bodies and parts.—There was a remarkable growth in the manufacture of automobiles during the five-year period 1904-1909. The number of establishments increased from 12 to 65; the average number of wage earners employed, from 167 to 2,382; and the value of products, from \$357,000 to

\$7,154,000.

The rank of the industries shown in the table on pages 254 and 255, on the basis of value added by manufacture is somewhat different from their rank as determined by value of products. Slaughtering and meat packing drops from first place to fourth, the men's clothing industry from third to fifth, and the steel works and rolling mills from fifth to seventh, while the foundry and machine-shop, printing and publishing, and distillery industries become first, second, and third, respectively. The manufacture of agricultural implements, the lumber industry, and the manufacture of paint and varnish are the only industries presented separately in the table which maintain the same rank in both cases, being sixth, ninth, and twentieth, respectively. In those industries in which the manufacturing processes are comparatively simple or are carried on largely by the aid of machinery, the value added by manufacture is not commensurate with the gross value of products and the rank on the basis of value added by manufacture is much lower than the rank on the basis of value of products. This is especially noticeable in the flour-mill and gristmill industry, which drops from eighth place in value of products to twenty-eighth in value added by manufacture; the blast furnaces, which drop from tenth place to twentysecond; the roasting and grinding of coffee and spice, which drops from twenty-second place to thirty-first; and the butter, cheese, and condensed-milk industry, which drops from twenty-fourth place to thirty-fifth. Of the 83 industries presented in this table for which comparative data can be given for both five-year periods, 34 show a greater rate of increase in value of products for the later than for the earlier period; 29 show a lower rate; and 10 show a decrease for the period 1904-1909, while 10 others show a decrease for the period 1899-1904.

As stated in the Introduction, each establishment, as a whole, has been assigned to a given classification according to its products of chief value, so that the figures for any given industry must not be taken either as fully covering or as representing exclusively the operations of that branch of manufacturing indi-

cated by the industry designation. Therefore, in considering the relative importance of the industries shown in the preceding table or in Table II, page 292, it should be noted that the figures for several of the industries listed fall short of being a complete presentation of the statistics for the branch of manufacturing covered by the industry designation. Some conspicuous examples of this kind in Illinois are the following industries, in each of which the value of the products reported in 1909 by establishments included under other classifications exceeded \$1,000,000: Canning and preserving, carriages and wagons and materials, chemicals, women's clothing, foundry and machine-shop products, and patent medicines and compounds and druggists' preparations.

Persons engaged in manufacturing industries.—The following table shows, for 1909, the distribution of the number of persons engaged in manufactures, the average number of wage earners being distributed by sex and age. It should be borne in mind, however, that the sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the Introduction.

CLASS.	PERSONS ENGAGED IN MANUFACTURES,				
	Total.	Male.	Female.		
All classes	561, 044	465, 139	95,905		
Proprietors and officials	33,611	32, 507	1,044		
Proprietors and firm members	17,357 6,704 9,490	16,725 6,548 0,294	632 218 196		
Clerks	61, 669	46, 390	15,279		
Wage earners (average number)	465,764	386, 182	79,582		
16 years of age and overUnder 16 years of age	458,847 0,917	382,091 3,491	76, 156 3, 426		

The average number of persons engaged in manufactures during 1909 was 561,044, of whom 465,764 were wage earners. Of the remainder, 33,611 were proprietors and officials and 61,669 were clerks. Corresponding figures for individual industries will be found in Table II, page 292.

The next table shows, for 1909, the percentage of proprietors and officials, clerks, and wage earners, respectively, among the total number of persons employed in manufactures. It covers all industries combined and 40 important industries individually.

Of the total number of persons engaged in all manufacturing industries, 6 per cent were proprietors and officials, 11 per cent clerks, and 83 per cent wage earners. The highest percentage of proprietors and officials shown for any individual industry, 34.3, is for the butter, cheese, and condensed-milk industry. Many of the establishments in this industry are carried on by cooperative associations, and from the information contained in the reports it was often impossible positively to distinguish such associations from partnerships. It is probable, therefore, that members of some of these cooperative associations have been

tabulated as partners. In the flour-mill and gristmill, tobacco, and bakery industries also the percentage of proprietors and officials is high. In these industries the majority of the establishments are small and the work is to a large extent done by the proprietors or their immediate representatives, so that the proportion of persons engaged in these industries falling into the class of proprietors and officials is very much higher than for most other industries or for all industries combined.

On account of the large average number of wage earners per establishment in certain industries, the proportion of proprietors and officials in the industry is small. The more important industries of this class are the manufacture of clocks and watches, slaughtering and meat packing, blast furnaces, steel works and rolling mills, steam-railroad repair shops, car construction shops, and the smelting and refining of zinc.

The following table shows, for 1909, in percentages, for all industries combined, the distribution of the average number of wage earners by age periods, and of those 16 years of age and over by sex, calculated in the manner described in the Introduction. It also shows, for some of the important industries separately, a similar distribution of wage earners as reported for

December 15, or the nearest representative day. As a means of judging the importance of the several industries the average number employed for the year is also given in each case.

 ¹ For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see Introduction.
 2 Less than one-tenth of 1 per cent.

In all manufacturing industries combined, 82.2 per cent of the average number of wage earners in 1909 were males 16 years of age and over; 16.3 per cent, females 16 years of age and over; and 1.5 per cent, children under the age of 16. The men's clothing industry employed more women than any other one industry, and together with the women's clothing and men's furnishing goods industries, employed nearly one-third of the total number of female wage earners 16 years of age and over reported for the state. Other industries employing large numbers of female wage earners were printing and publishing, slaughtering and meat packing, and the manufacture of clocks and watches, millinery and lace goods, electrical machinery, tobacco products, and fancy and paper boxes. Of the industries presented in the table above, those which show the highest proportion of female wage earners 16 years of age or over

are the men's furnishing goods industry, with 84.2 per cent; the millinery and lace goods industry, with 75.4 per cent; and the women's clothing industry, with 67.4 per cent. Statistics for a number of other less important industries in which the female wage earners predominate will be found in Table II, page 292. Of the wage earners under 16 years of age, 46.9 per cent were employed in the seven industries which reported an average of over 200 such wage earners each. These industries were the men's clothing industry, with an average of 995; printing and publishing, with 739; the manufacture of fancy and paper boxes, with 410; the boot and shoe industry, with 334; the manufacture of pianos and organs, with 309; the confectionery industry, with 255; and foundries and machine shops, with 202. The proportion of children in the total number of wage earners was highest (8.1 per cent) in the manufacture of patent medicines and compounds, but the average number employed was only 151.

In order to compare the distribution of persons engaged in manufactures in 1909 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See Introduction.) The following table makes this comparison according to occupational status:

	PERSONS ENGAGED IN MANUFACTURES.						
CLASS.	190	9	190	Por			
	Number.	Percent distri- bution,	Number,	Percent distri- bution.	of in-		
Total. Proprietors and firm members	561,044 17,357 77,923 405,704	100. 0 3. 1 13. 9 83. 0	447,947 13,990 54,521 379,436	100. 0 3. 1 12. 2 84. 7	25, 2 24, 1 42, 9 22, 8		

Comparable figures are not obtainable for 1899. Salaried employees show the greatest percentage of increase and constitute the only class forming a larger proportion of the total in 1909 than in 1904.

The following table shows the average number of wage earners, distributed according to age periods, and in the case of those 16 years of age and over according to sex, for 1909, 1904, and 1899. The averages for 1909 are estimated on the basis of the actual number reported for a single representative day. (See Introduction.)

	AVERAGE NUMBER OF WAGE EARNERS.								
CLASS.	190	9	190	14	1890				
	Number.	Percent distri- bution.	Number.	Percent distri- bution.	Number,	Percent distri- bution.			
Total. 16 years of age and over. Male. Female. Under 16 years of age		100. 0 98. 5 82. 2 16. 4 1. 5	379, 436 374, 490 314, 091 60, 399 4, 946	100. 0 98. 7 82. 8 15. 9 1. 3	332, 871 322, 928 275, 006 47, 922 0, 943	100. 0 97. 0 82. 6 14. 4 3. 0			

The proportion of wage earners under 16 years of age in all manufacturing industries combined was only one-half as great in 1909 as in 1899. There was a moderate increase during the decade, however, in the proportion of female wage earners 16 years of age or over, while the proportion of males 16 years of age or over shows a slight decrease.

Wage earners employed, by months.—The following tabular statement gives the number of wage earners employed on the 15th of each month during the year 1909 for all industries combined; it also gives the percentage which the number reported for each month is of the greatest number reported for any month. In Table II, page 292, are shown for practically all of the important industries in the state, the largest number and the smallest number of wage earners reported for any month. The figures are for the 15th day, or the nearest representative day, of the month.

	WAGE E	anners.		WAGE EARNERS.		
Month.	Number.	Per cent of maxi- mum.	MONTII.	Number.	Percent of maxi- mum,	
January. February. March April May. Juno.	442,881 452,563 455,145	88.0 88.8 90.8 91.3 91.2 92.1	July August September October November December	400,414 481,706 493,928	91, 1 92, 3 98, 6 90, 1 99, 6 100, 0	

In the number of wage earners employed in all industries combined there was an almost continuous increase throughout the year. This was no doubt due to general business conditions rather than to the employment of labor in the so-called seasonal industries. The maximum number was employed in December, and the minimum number, which was 88 per cent of the maximum, in January.

There are no very important seasonal industries in Illinois, but among the industries which show a considerable fluctuation in the number of wage earners employed throughout the year may be mentioned canning and preserving, with a maximum of 6,539 wage earners in September and a minimum of 1,013, or 15.5 per cent of the maximum, in January; the glass industry, with a maximum of 4,396 in April and May and a minimum of 1,441, or 32.8 per cent of the maximum, in September; the manufacture of artificial stone, with a maximum of 1,040 in June and a minimum of 369, or 35.5 per cent of the maximum, in January; the artificial-ice industry, with a maximum of 1,134 in August and a minimum of 479, or 42.2 per cent of the maximum, in January; and the brick and tile industry, with a maximum of 8,302 in June and a minimum of 3,795, or 45.7 per cent of the maximum, in January. While these five industries show considerable variations, the total number of wage earners employed in them was too small to affect materially the variation in employment for all industries combined.

Prevailing hours of labor.—In the following table wage earners have been classified according to the hours of labor prevailing in the establishments in which they are employed. In making this classification the average number of wage earners employed during the year is used, and the number employed in each establishment is classified as a total according to the hours prevailing in that establishment, even though a few employees work a greater or less number of hours.

Of the wage earners employed in the manufacturing industries of Illinois in 1909, 69.2 per cent worked in establishments where the prevailing hours of labor ranged from 54 to 60 a week. Only 8.1 per cent

worked in establishments where the prevailing hours exceeded 60 a week, and only 22.7 per cent in establishments where they were less than 54 a week. All of the wage earners in the blast-furnace industry and nearly all of those in the cement and gas industries worked in establishments where the prevailing hours exceeded 72 a week, while nearly three-fifths of those in the steel works and rolling mills were in establishments where the prevailing hours were at least 72 a week. In the breweries, printing and publishing establishments, and tobacco factories, on the other hand, the majority of the wage earners worked 48 hours or less per week.

Location of establishments.—The following table shows the extent to which the manufactures of Illinois are centralized in incorporated places of 10,000 inhabitants or over. (See Introduction.)

Owing to the fact that the statistics for Cicero were not tabulated separately for 1899, the figures shown in the table for 1899 fall short to that extent of a complete presentation of the manufactures statistics for the incorporated places having a population of over 10,000 in 1900. In 1909, however, Cicero and

Oak Park (which was organized from part of Cicero in 1902) employed an average of only 940 wage earners in manufacturing industries, while the combined value of their manufactured products was only \$2,578,861, figures which are in each case equivalent to less than one-half of 1 per cent of the corresponding totals for 1899 for incorporated places having a population of 10,000 or over, so that the effect of the omission upon the statistics is negligible.

In 1909, 83.1 per cent of the total value of products was reported from incorporated places having over 10,000 inhabitants, and 81.5 per cent of the average number of wage earners were employed in such places. The figures indicate that, except in number of establishments, the manufacturing interests in the territory

outside of such incorporated places gained somewhat, on the whole, during the last decade, in their proportions of the respective totals for the state, in spite of the greater increase in population in the cities.

The make-up of the several groups shown in the table has been affected by the increase in population

of certain of the cities. There were 19 incorporated places having between 10,000 and 25,000 inhabitants in 1900, 5 of which—Decatur, Aurora, Danville, Elgin, and Bloomington—had passed the 25,000 mark in population by 1910, while 1 city—Ottawa dropped out of the group through a decline in population. These losses were partially made up, however, by the addition in 1910 of the cities of Waukegan, Chicago Heights, Champaign, Mattoon, Lincoln, and Canton, as the result of increases in their population during the decade, while the number of places included in the group was further increased by the organization of Oak Park from part of Cicero in 1902. This group shows a decrease in its proportion of the total for every item presented in the table except value of products, for which it shows an increase from 5.3 per cent of the state total in 1899 to 5.8 per cent in 1909. The influence of the addition of the five cities named above to the group comprising the cities having between 25,000 and 100,000 inhabitants, which increased the number of cities included from 6 to 11, is reflected in the larger proportions which the group contributed to the various totals in 1909 as compared with 1899. Chicago, the only city having more than 100,000 inhabitants, shows a decrease in its proportions of the total for all items except number of establishments. Of the total number of wage earners employed in Illinois in 1909, 63.1 per cent were in Chicago, and 66.8 per cent of the total value of products was credited to this city. The corresponding figures for 1899 were 66.4 per cent and 71.2 per cent, respectively.

The following statement shows the principal statistics for 1909 and 1899 for Ottawa, which had a population in 1900 in excess of 10,000 but which fell below this figure in 1910:

		1909	1899
Number Average Value of	ion r of establishments. number of wage earners. f products. dded by manufacture.	52 1,071 \$2,467,985	10,588 57 1,020 \$1,737,884 \$986,632

In the decade 1899-1909 the value of manufactured products for Ottawa increased 42 per cent and the value added by manufacture 52.8 per cent. The leading industries in 1909 were the manufacture of glass, pottery, terra-cotta, and fire-clay products, agricultural implements, carriages and wagons, and pianos. Forty-six per cent of the total number of wage earners were employed in the first two industries named.

The population, in 1910 and 1900, of the 32 incorporated places which had 10,000 inhabitants or over in 1910, and of Ottawa, which had over 10,000 inhabitants in 1900 but less than that number in 1910, is given in the next tabular statement.

¹ Figures do not agree with those published in 1904, because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the city.

² Figures not available.

³ Not incorporated in 1900.

Every city for which comparative statistics can be given, except Bloomington and Lincoln, shows an increase in value of products from 1904 to 1909, and all but La Salle an increase from 1899 to 1904. The greatest gain, 151.2 per cent, was made by Freeport, and was due largely to the increased production of carriages and wagons, windmills, and patent medicines and compounds. A gain of 81.8 per cent was made by Waukegan, mainly on account of the increased production of glucose and of steel-works and rollingmill products. The next largest increase, 72.2 per cent,

is shown for East St. Louis, and was due principally to large increases in the output of the steam-railroad repair shops, flour mills and gristmills, chemical works, paint works, and foundries and machine shops.

Chicago, with manufactured products valued at \$1,281,171,181 and an average of 293,977 wage carners in manufacturing industries in 1909, is not only the most important manufacturing city in Illinois but ranks second only to New York City in the United States as a whole.

In fact, there were only four states besides Illinois (namely, New York, Pennsylvania, Massachusetts, and Ohio), which had a greater value of products in 1909 than the city of Chicago. The percentage of increase from 1904 to 1909 in average number of wage earners was 21.5 and in value of products, 34.1, as compared with corresponding percentages of 9.4 and 19.7, respectively, for the preceding five-year period. The rates of increase for Chicago from 1904 to 1909, however, were a little below those shown for the entire state.

The leading industries of Chicago for which statistics can be presented separately, arranged in the order of value of products, are shown in the following table, which gives the absolute and relative increase in this respect between 1904 and 1909, and also the percentage which the value of products for each industry represents of the corresponding total for the state:

¹ A minus sign (-) denotes decrease.

The great importance of the slaughtering and meatpacking industry in Chicago is apparent when it is noted that its value of products formed 25.4 per cent of the total for all manufacturing industries in the city

and 23.7 per cent of the United States total for the industry. Comparative statistics for 60 less important industries, in addition to the 22 shown in the preceding table, are presented for Chicago in Table I, page 281.

In addition to the 82 industries presented separately for Chicago in Table I, page 281, there were 49 others which, for various reasons, are included under the head of "All other industries." Some of these industries were among the most important in the city, 49 reporting products in 1909 exceeding \$1,000,000 in value.1 Of these, 4 reported products valued at \$10,000,000 or over; 7 reported products between \$5,000,000 and \$10,000,000 in value; and 38 reported products between \$1,000,000 and \$5,000,000 in value.

Peoria, the second city of the state in respect to manufactures, had products in 1909 valued at \$63,-061,155, an increase of 4.4 per cent over the figure for 1904. Though the total value of its manufactured products amounted to less than 5 per cent of that for Chicago, Peoria is known widely on account of its distilleries, the value of the products of which in 1909 formed 70.7 per cent of the total for all manufacturing industries of the city. The value of products reported by the four distilleries of Peoria formed a little more than four-fifths of the total for this industry in Illinois, and over one-fifth of the total for the entire country. Other important industries were: Slaughtering and meat packing, cooperage, and printing and publishing; the manufacture of agricultural implements, and of food preparations; and the broweries, foundries and machine shops, flour mills and gristmills, and bakeries.

Joliet holds third place among the manufacturing cities of Illinois. The value of its manufactured products increased 18 per cent and the average number of wage earners in the manufacturing industries. 10.2 per cent between 1904 and 1909. The most important industries of the city in 1909 were steel works and rolling mills, blast furnaces, and the manufacture of wire, and of coke, each of which was represented by one establishment. Over one-half of both the total

¹ These industries are: Agricultural implements. Babbitt metal and solder. Balbitt meta and sodie.

Belting and hose, weven and rubber.

Bicycles, motorcycles, and parts.

Biacking and cleansing and polishing preparations.

Butter, cheese, and condensed milk, Butter, reworking.

Cash registers and calculating machines. Cordage and twine and jute and linen goods. Cordials and strups.

Cordina and strops.
Fortilizers.
Flour-mill and gristmill products.
Food preparations.
Gas, illuminating and heating.
Glass, cutting, staining, and ornamenting.
Glue Glue.
Gold and silver, reducing and refining,
_not from the ore.

Hair work. House-furnishing goods, not elsewhere

specified.
Instruments, professional and scientific.
Instruments, professional and scientific.
Iron and steel, blast furnaces.
Iron and steel, bolts, nuts, washers, and rivets, not made in steel works or rolling mills.
Iron and steel forgings.

Iron and steel, nails and spikes, cut and wrought, including wire nails, not made in steel works or rolling mills. Lard, refined, not made in slughtering and most-packing establishments. Lead, bar, pipe, and sheet. Looking-glass and picture frames. Mait.
Millinery and lace goods. Millinery and soon waters. Moving pictures. Moving pictures.

Oil, linseed.

Oleomargarine.

Paper and wood pulp.

Pottery, terra-cotta, and fire-clay products.

Roofing materials.

Saws.
Signs and advertising neveitles.
Smelting and refining, lead.
Sode-water apparatus.
Sporting and athletic goods.
Stationery goods, not elsewhere speci-

fied.
Sulphuric, nitric, and mixed acids.
Upholstering materials.
Wall paper.
Windmills.

Window shades and fixtures. Wool scouring.

number of wage earners and the total value of products was credited to the steel works and rolling mills and the blast furnaces. The manufacture of coke is a comparatively new industry in Joliet.

Rockford has a great diversity of manufactures, but the furniture factories, knitting mills, agriculturalimplement shops, and foundries and machine shops were the most important in 1909. The city shows a gain of 28.6 per cent in average number of wage earners and 45.8 per cent in value of products for the five-year period 1904–1909.

Moline is well known on account of the large number of plows manufactured there. Four establishments manufacturing agricultural implements gave employment to more than one-half the total number of wage earners in 1909 and reported more than one-half the total value of products for the city. Other important industries were the manufacture of carriages and wagons, foundry and machine-shop products, steel works and rolling-mill products, and automobiles. The city shows an increase from 1904 to 1909 of 36.7 per cent in average number of wage earners and of 58.8 per cent in value of products.

The chief industries of Waukegan are the manufacture of glucose and the steel works and rolling mills; these two industries gave employment to about two-thirds of the wage earners in 1909 and reported over three-fourths of the total value of products for the city. This city, whose population was less than 10,000 in 1900, shows an increase of 36.4 per cent in average number of wage earners from 1904 to 1909, and of 81.8 per cent in value of products. It may be noted also that the value of products reported in 1909 was more than twenty-seven times that in 1899.

East St. Louis made a large increase (72.2 per cent) in value of products between 1904 and 1909. The most important industries in the city in 1909 were flour mills and gristmills, foundries and machine shops, steel works and rolling mills, the chemical industry, slaughtering and meat packing, and the manufacture of paints and of paper and wood pulp. Several very large slaughtering and meat-packing establishments are located at the National Stock Yards, just outside the city limits, but the statistics presented for cities are confined to establishments within the city limits.

In Quincy the principal industries in 1909 were the manufacture of stoves and furnaces, slaughtering and meat packing, the manufacture of food preparations, foundries and machine shops, and breweries. The increase in value of products from 1904 to 1909 was only 6.4 per cent, and there was a decrease in the average number of wage earners employed.

Elgin is well known for the manufacture of watch movements. The manufacture of clocks and watches, including cases and materials, of foundry and machineshop products and of condensed milk, and printing and publishing were the chief contributors to Elgin's manufacturing importance in 1909, the four industries

employing over three-fourths of the average number of wage earners and reporting more than one-half of the total value of products.

Aurora shows an increase of 24.9 per cent in number of wage earners and of 49.5 per cent in total value of products from 1904 to 1909. The leading industries were steam-railroad repair shops, foundries and machine shops, and the manufacture of bicycles, motorcycles, and parts, and of cotton goods.

The leading industries in Chicago Heights in 1909 were foundries and machine shops, steel works and rolling mills, and steam-railroad car construction shops. These three industries reported a majority of the average number of wage earners and more than one-half the total value of products for the city.

While Alton shows a decrease of 640, or 20.9 per cent, between 1904 and 1909 in the average number of wage earners in its manufacturing industries, there was an increase of 16.1 per cent in the value of its manufactured products. Flour mills and gristmills, glass works, and slaughtering and meat packing were the leading industries, and together contributed four-fifths of the total value of products. More than one-half of the average number of wage earners reported for the city were employed in the glass works.

The leading industries of the other incorporated places included in the preceding table are shown in the following statement:

CITY, TOWN, OR VILLAGE	Principal industries.	
Decatur	Flour-mill and gristmill products.	
Springfield	Foundry and machine-shop products. Agricultural implements. Boots and shoes.	
	Flour-mill and gristmill products.	
Freeport	Watches. Carriages and wagons and materials. Windmills.	
	Patent medicines and compounds. Foundry and machine-shop products.	
Rock Island	Agricultural implements. Lumber and timber products,	
La Salle	Oilcloth and linoleum. Smelting and refining, zinc.	
	Cement. Steam-railroad repair shops.	
Belleville	Boots and shoes.	
Cairo	Lumber and timber products.	
Evanston. Danville.	Steam-railroad repair shops.	
Canton	Steam-railroad repair shops.	
KankakeeJacksonville	Foundry and machine-shop products. Hosiery and knit goods. Man's clothing.	
Streator	Glass.	
	Wrought-iron and steel pipe. Steam-railroad repair shops.	
Oak Park Champaign	Gas, illuminating and heating.	
	Pianos. Printing and publishing.	
Lincoln	Coffins, burial cases, and undertakers' goods. Mattresses and spring beds.	

Character of ownership.—The table that follows has for its purpose the presentation of conditions in respect to the character of ownership or legal organization of manufacturing enterprises. For all industries combined comparative figures are given covering the censuses of 1909 and 1904. Comparative data for 1899 are not available. Figures for 1909

only are presented for several important industries industries industries industries from this table and the one following.

The most important point brought out by this table is the extent of corporate ownership. In all industries combined 28.9 per cent of the total number of establishments were under corporate ownership in 1909, as compared with 27.8 per cent in 1904. Establishments operated by corporations reported 85.8 per cent of the total value of products in 1909, however, and 83.6 per cent in 1904. Establishments under firm ownership represented only 16.5 per cent of the total number in 1909, as against 18 per cent in 1904, and both these establishments and those owned by individuals reported a smaller proportion of the total number of wage earners and the total value of products in 1909 than in 1904.

In 8 of the 20 individual industries for which figures are given in the table, namely, the manufacture of paint and varnish; the foundries and machine shops; the tanning, currying, and finishing of leather; the manufacture of furniture and refrigerators; the manufacture of boots and shoes; slaughtering and meat packing; the manufacture of patent medicines and compounds; and canning and preserving, there was a larger number of establishments under corporate management than under any other form of ownership, while in all except two of the industries shown—the men's clothing and the women's clothing industriesthe establishments operated by corporations contributed the greater part of the total value of products and of the total value added by manufacture. In three industries-foundries and machine shops, the manufacture of paint and varnish, and slaughtering and meat packing—over 90 per cent of the total value of products and total value added by manufacture was reported by establishments under corporate ownership. Firm ownership predominates in the men's clothing and women's clothing industries.

Size of establishment.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is a matter of interest from the standpoint of industrial organization. In order to throw some light upon it the next table groups the establishments according to the value of their products. The table also shows the average size of establishments for all industries combined and for certain important industries separately, as measured by average number of wage earners, value of products, and value added by manufacture. The totals for all industries are shown for the last two censuses, while for the industries presented separately figures are given for 1909 only.

The table shows that of the 18,026 manufacturing establishments in the state in 1909 only 273, or 1.5 per cent, had a value of products exceeding \$1,000,000. These establishments, however, employed an average of 179,787 wage earners, or 38.6 per cent of the total number in all establishments, and reported 56.2 per cent of the total value of products and 44.9 per cent of the total value added by manufacture.

On the other hand, the very small establishments—that is, those having a value of products of less than \$5,000—constituted a considerable proportion (34.3 per cent) of the total number of establishments, but the value of their products amounted to only eightenths of 1 per cent of the total. The great bulk of the manufacturing was done in establishments having products valued at not less than \$100,000.

It will be seen from the table that during the five years from 1904 to 1909 there was a considerable increase in the relative importance of the largest establishments—those reporting products valued at not less than \$1,000,000—as measured by number of wage earners, value of products, and value added by manufacture.

1 Includes the groups "Less than \$	5 000 21 22	ad ther oor				!			

¹ Includes the groups "Less than \$5,000" and "\$5,000 and less than \$20,000."

The fact that the average value of products per establishment increased between 1904 and 1909 from \$94,521 to \$106,473, and the value added by manufacture from \$38,220 to \$42,070, can not be taken as in itself indicating a tendency toward concentration. The increased values shown may be, and probably are, due in part to the increase that has taken place in the prices of commodities. The average number of wage earners per establishment increased from 25 to 26.

Of the individual industries for which figures are given in the table, those in which the average size of establishment as measured by value of products was smallest, were the manufacture of brick and tile; printing and publishing; the manufacture of patent

medicines and compounds and druggists' preparations; the manufacture of copper, tin, and sheet-iron products; and the manufacture of carriages and wagons. In each of these industries more than 70 per cent of the establishments reported products valued at less than \$20,000 for the year 1909. The industries in which the average value of products per establishment was the largest were slaughtering and meat packing, the tanning, currying, and finishing of leather, the manufacture of boots and shoes, and the paint and varnish industry, in which 61.5 per cent, 69 per cent, 49 per cent, and 48.6 per cent, respectively, of the establishments reported products valued at \$100,000 or over.

Includes the group "\$1,000,000 and over."

⁸ Less than one-tenth of 1 per cent.

In some respects, and especially from the standpoint of conditions under which persons engaged in manufactures work, the best classification of the establishments to bring out the feature of size is a classification according to the number of wage earners employed.

The following table shows, for 1909, such a classification for all industries combined and for certain important industries individually, and gives not only the number of establishments falling into each group but also the average number of wage earners employed.

				¥	STADLISH	MENTS EX	iploying-			
industry.	Total,	No wage earners.	1 to 5 wage earners.	6 to 20 wage carners,	21 to 50 wage earners.	51 to 100 wage carners.	101 to 250 wage earners.	251 to 500 wage carners,	501 to 1,000 wage earners.	Over 1,000 wage earners.

1 Less than one-tenth of 1 per cent.

Of the 18,026 establishments reported for all industries, 14 per cent employed no wage earners; 48.8 per cent, from 1 to 5; 19.7 per cent, from 6 to 20; 8.8 per cent, from 21 to 50; 3.9 per cent, from 51 to 100; and 4.8 per cent, over 100. The most numerous single group consists of the 8,801 establishments employing from 1 to 5 wage earners each, and the next of the 3,560 establishments employing from 6 to 20 wage earners each. There were 39 establishments that employed over 1,000 wage earners each, of which 9 were engaged in slaughtering and meat packing, 5 in the making of men's clothing, 5 were steel works and rolling mills, 4 were steam-railroad repair shops, and 4 were agricultural-implement factories. In some industries, such as the bakery industry, the manufacture of butter, cheese, and condensed milk, the flour-mill and gristmill, and the lumber industries, printing and publishing, and tobacco manufactures, the establishments are mostly small, employing no wage earners or less than 6.

Of the total number of wage earners, 95,905, or 20.6 per cent, were in establishments employing over 1,000 each. This group, which employed a larger number of wage earners than any other, was composed

mainly of slaughtering and meat-packing establishments, steel works and rolling mills, men's clothing factories, agricultural-implement factories, steam-rail-road repair shops, and foundries and machine shops.

Most of the industries listed in this table but not in the preceding one, namely, the manufacture of agricultural implements, railroad repair shops, steamrailroad car construction shops, the manufacture of clocks and watches and of electrical machinery, the gas and blast-furnace industries, steel works and rolling mills, the manufacture of pianos and organs, the smelting and refining of zinc, and the manufacture of soap, are industries in which comparatively large establishments do most of the business, as appears from the classification according to the number of wage earners.

Expenses.—As stated in the Introduction, the census does not purport to furnish figures that can be used for determining the cost of manufacture and profits. Facts of interest can, however, be brought out concerning the relative importance of the different classes of expenses which make up the total.

The next table shows, for 1909, in percentages, the distribution of expenses among the classes indicated

for all industries combined and for certain important industries separately. The figures on which the percentages are based appear in Table II, page 292.

This table shows that, for all industries combined, 67 per cent of the total expenses were incurred for materials, 21 per cent for services—that is, salaries and wages—and 12 per cent for other purposes. As would be expected, these proportions vary greatly in the different industries. The large percentages shown for "Miscellaneous expenses" for the distillery and brewery industries are due to the inclusion of internal-revenue taxes under this head.

Engines and power.—The next table shows, for all industries combined, the number of engines or other motors, according to their character, employed in generating power (including electric motors operated by purchased current), and their total horsepower at the censuses of 1909, 1904, and 1899. It also shows separately the number and horsepower of electric motors, including those operated by current generated in the manufacturing establishments.

The amount of primary power used in the manu-53063°-12-18 facturing industries of Illinois increased 32.6 per cent from 1899 to 1904, and 36.6 per cent from 1904 to 1909. The total increase during the decade was 453,724 horsepower, 72.9 per cent of which was in power generated by steam engines. Notwithstanding this large increase in the horsepower of steam engines, their proportion of the total primary power decreased from 90.7 per cent in 1899 to 82.7 per cent in 1909. Power generated by water wheels and the forms of power included under the head of "Other" show a decrease from 1904 to 1909. The more general use of gas engines is shown, the number of such engines reported being 1,755 in 1909, as compared with 1,447 in 1904 and 1,293 in 1899. Their indicated horsepower was 37,025 in 1909, as compared with 12,319 in 1904 and 8,758 in 1899, the increase during the five-year period 1904-1909 being 24,706 horsepower, or a little more than 200 per cent. Rented electric power represented 11.5 per cent of the total primary power in 1909, as compared with 2.2 per cent in 1899, and the amount reported in 1909 was more than nine times as great as in 1899.

1 Includes the neighborhood industries and hand trades, omitted in 1904 and 1909.
2 Not reported.
2 Less than one-tenth of 1 per cent.

The use of electric motors for the purpose of applying power by means of current generated within the establishment is also shown to be rapidly becoming more common, the horsepower of such motors having increased from 36,764 in 1899 to 123,287 in 1904 and 281,614 in 1909, representing an increase for the decade of over 650 per cent.

Fuel.—Closely related to the question of kind of power employed is that of the fuel consumed in generating this power, or otherwise used as material in the manufacturing processes. The next table shows, for 1909, the quantity of each kind of fuel used in all industries combined and in selected industries.

industry.	An- thra- cite coal (tons).	Bitumi- nous coal (tons).	Coke (tons).	Wood (cords)	Oil, in- cluding gasoline (bar- rels).	Gas (1,000 feet).	INDUSTRY.	An- thra- cite coal (tons).	Bitumi- nous coal (tons).	Coke (tons).	Wood (cords)	Oil, in- cluding gasoline (bar- rels).	Gas (1,000 feet).

Note.—In addition, there were 19,567 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and cost of materials and the quantity and value of products and other information for securing which no provision is made on the general schedule. Certain data of this character for 11 important industries in Illinois are here presented.

Slaughtering and meat packing.—This classification includes wholesale slaughtering and meat-packing establishments and establishments engaged in the manufacture of sausage only. The following table gives the quantity and cost of the different materials and the quantity and value of the various products reported at the censuses of 1909, 1904, and 1899:

MATERIAL OR PRODUCT.	1909	1904	1899	MATERIAL OR PRODUCT.	1909	1904	1899
Materials used, total cost	\$343,976,007	\$280, 591, 937	\$247, 215, 120	Products—Continued. All other meat sold fresh:

¹ Figures not available.

From 1904 to 1909 there was an increase of 257,926, or 7.1 per cent, in the number of sheep slaughtered and of 217,711, or 73.6 per cent, in the number of calves slaughtered, but a decrease of 461,829, or 17.5 per cent, in the number of beeves slaughtered, and of 560,826, or 7.1 per cent, in the number of hogs slaughtered. These decreases were due in a large measure to a movement of the industry toward the stockraising states of the West and Southwest, or nearer the source of supply.

The total cost of materials shows an increase in 1909 as compared with 1904 of 22.6 per cent, which was practically the same as the relative increase in total

value of products.

The output of fresh, salted, and cured beef decreased 258,337,313 pounds, or 17.8 per cent, from 1904 to 1909; that of fresh mutton, 2,895,998 pounds, or 1.8 per cent; and that of fresh and cured pork, 122,245,924 pounds, or 10.7 per cent; while that of fresh veal increased 21,011,055 pounds, or 69.2 per cent, and that of the meats included under the head of "All other meats sold fresh" shows an increase of 136,190,697 pounds, or 241.8 per cent. The production of lard in 1909 was 53,399,609 pounds, or 11.7 per cent, less than in 1904, although its value shows an increase of \$9,128,952, or 29 per cent. The decrease shown in the amount of oleo oil reported in 1909 as compared with 1904 was due to the fact that some slaughtering and meat-packing establishments, instead of selling the oleo oil which they make as a byproduct, now use it in the manufacture of oleomargarine. The increase in the quantity of the oils included under the head of "Other oils" results almost entirely from an increase in the output of lard oil.

Printing and publishing.—The progress of the newspaper and periodical branch of the printing and publishing industry is indicated in the following statement, which shows the number and aggregate circulation per issue of the different classes of publications for the years 1909, 1904, and 1899:

PERIOD OF ISSUE.		UMBER SLICATIO		AGGREGATE CIRCULATION PER ISSUE,

¹ Included in circulation of dailies

Illinois ranks second both in number and in circulation of all classes of publications combined; third in number and in circulation of dailies; second in number and in circulation of Sunday papers; first in number and third in circulation of weeklies; and second in number and circulation of monthlies.

The number of dailies and the number of monthlies both show an increase of 2 in 1909 as compared with 1904, and the number of publications included under the head of "All other classes" an increase of 9. The number of quarterlies was the same in both years. while the other three classes show decreases in number. A substantial increase in circulation, on the other hand, is shown for each class except the semiweeklies and triweeklies, while the aggregate circulation reported for all newspapers and periodicals published increased during this period from 16,542,740 to 20,823,166, a gain of 4,280,426, or 25.9 per cent. The increase in the circulation of the different classes of publications was as follows: Dailies, 369,584, or 18.9 per cent; Sunday publications, 173,785, or 12 per cent; weeklies, 416,547, or 9.1 per cent; monthlies, 3,147,308, or 49.6 per cent; and quarterlies, 69,558, or 3.7 per cent. In number and circulation of publications printed in foreign languages, Illinois is second among the states, being outranked only by New York, and it leads all the states in number and circulation of newspapers and periodicals printed in the Letto-Slavic languages, having 41, with a total circulation of 342,007.

The following tabular statement gives, for 1909 and 1904, the number and circulation of the different classes of newspapers and periodicals printed, respectively, in English and in a foreign language. Newspapers and periodicals which are printed partly in English and partly in a foreign language are included with those printed entirely in a foreign language.

The publications in foreign languages increased 24 in number between 1904 and 1909, while their circulation increased 273,012, or 23.1 per cent. The monthlies, which increased 6 in number, made the largest absolute and relative increases in circulation. The languages represented correspond more or less closely to the classes of immigrants that have settled in the North Central states. Sixty-three periodicals were published in German; 11 in German and English; 32 in Scandinavian languages, including 1 in Swedish

Note.—In addition, there were 19,567 tons of other varieties of fuel reported.

SUPPLEMENTARY DATA REGARDING IMPORTANT INDUSTRIES.

(With statistics for laundries and custom sawmills and gristmills.)

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and cost of materials and the quantity and value of products and other information for securing which no provision is made on the general schedule. Certain data of this character for 11 important industries in Illinois are here presented.

Slaughtering and meat packing.—This classification includes wholesale slaughtering and meat-packing establishments and establishments engaged in the manufacture of sausage only. The following table gives the quantity and cost of the different materials and the quantity and value of the various products reported at the censuses of 1909, 1904, and 1899:

MATERIAL OR PRODUCT.	1909	1904	1899	MATERIAL OR PRODUCT.	1909	1904	1899

¹ Figures not available,

From 1904 to 1909 there was an increase of 257,926, or 7.1 per cent, in the number of sheep slaughtered and of 217,711, or 73.6 per cent, in the number of calves slaughtered, but a decrease of 461,829, or 17.5 per cent, in the number of beeves slaughtered, and of 560,826, or 7.1 per cent, in the number of hogs slaughtered. These decreases were due in a large measure to a movement of the industry toward the stockraising states of the West and Southwest, or nearer the source of supply.

The total cost of materials shows an increase in 1909 as compared with 1904 of 22.6 per cent, which was practically the same as the relative increase in total

value of products.

The output of fresh, salted, and cured beef decreased 258,337,313 pounds, or 17.8 per cent, from 1904 to 1909; that of fresh mutton, 2,895,998 pounds, or 1.8 per cent; and that of fresh and cured pork, 122,245,924 pounds, or 10.7 per cent; while that of fresh veal increased 21,011,055 pounds, or 69.2 per cent, and that of the meats included under the head of "All other meats sold fresh" shows an increase of 136,190,697 pounds, or 241.8 per cent. The production of lard in 1909 was 53,399,609 pounds, or 11.7 per cent, less than in 1904, although its value shows an increase of \$9,128,952, or 29 per cent. The decrease shown in the amount of oleo oil reported in 1909 as compared with 1904 was due to the fact that some slaughtering and meat-packing establishments, instead of selling the oleo oil which they make as a byproduct, now use it in the manufacture of oleomargarine. The increase in the quantity of the oils included under the head of "Other oils" results almost entirely from an increase in the output of lard oil.

Printing and publishing.—The progress of the newspaper and periodical branch of the printing and publishing industry is indicated in the following statement, which shows the number and aggregate circulation per issue of the different classes of publications for the years 1909, 1904, and 1899:

PERIOD OF ISSUE.		UMBER LICATIO		AGGREGATE CIRCULATION PER ISSUE.

1 Included in circulation of dailies.

Illinois ranks second both in number and in circulation of all classes of publications combined; third in number and in circulation of dailies; second in number and in circulation of Sunday papers; first in number and third in circulation of weeklies; and second in number and circulation of monthlies.

The number of dailies and the number of monthlies both show an increase of 2 in 1909 as compared with 1904, and the number of publications included under the head of "All other classes" an increase of 9. The number of quarterlies was the same in both years. while the other three classes show decreases in number. A substantial increase in circulation, on the other hand, is shown for each class except the semiweeklies and triweeklies, while the aggregate circulation reported for all newspapers and periodicals published increased during this period from 16,542,740 to 20,823,166, a gain of 4,280,426, or 25.9 per cent. The increase in the circulation of the different classes of publications was as follows: Dailies, 369,584, or 18.9 per cent; Sunday publications, 173,785, or 12 per cent; weeklies, 416,547, or 9.1 per cent; monthlies, 3,147,308, or 49.6 per cent; and quarterlies, 69,558, or 3.7 per cent. In number and circulation of publications printed in foreign languages, Illinois is second among the states, being outranked only by New York, and it leads all the states in number and circulation of newspapers and periodicals printed in the Letto-Slavic languages, having 41, with a total circulation of 342,007.

The following tabular statement gives, for 1909 and 1904, the number and circulation of the different classes of newspapers and periodicals printed, respectively, in English and in a foreign language. Newspapers and periodicals which are printed partly in English and partly in a foreign language are included with those printed entirely in a foreign language.

The publications in foreign languages increased 24 in number between 1904 and 1909, while their circulation increased 273,012, or 23.1 per cent. The monthlies, which increased 6 in number, made the largest absolute and relative increases in circulation. The languages represented correspond more or less closely to the classes of immigrants that have settled in the North Central states. Sixty-three periodicals were published in German; 11 in German and English; 32 in Scandinavian languages, including 1 in Swedish

and English; 18 in Bohemian; 14 in Polish; 8 in Yiddish; 6 in Italian; 3 in Greek; 2 each in Dutch, French, Lithuanian, Slovenian, and Slovak; and 1 each in Bulgarian, Croatian, Servian, Spanish, Esperanto, Yiddish and English, English, German, and Italian, and English, German, and French.

Publications devoted to news, politics, and family reading formed the largest class, numbering 1,169, with a circulation of 5,893,427. Those devoted to general literature, consisting largely of monthly magazines, numbered 36, and had a circulation of 5,582,991; religious periodicals numbered 123, and had a circulation of 3,869,839; fraternal journals numbered 49, and had a circulation of 2,125,069; agricultural journals, 36, with a circulation of 1,115,493; trade journals, 102, with a circulation of 707,096; and scientific and mechanical journals, 26, with a circulation of 508,037. The remaining publications, relating chiefly to commerce, insurance, medicine and surgery, law, education and history, society, art, music, and fashion, numbered 141, and had an aggregate circulation of 1,021,214.

Iron and steel, steel works and rolling mills.—The quantity and cost of the principal materials used by the steel works and rolling mills and the quantity and value of their leading products are shown for 1909, 1904, and 1899 in the following table:

MATERIAL OR PRODUCT.	1909	1904	1899
Materials used, total cost Pig iron and ferroalloys:	\$56, 244, 463	\$38,649,762	\$30,021,296
Tons	2,433,805	1,446,299	1,410,721
Cost	\$36,686,448	\$19, 282, 069	\$14, 137, 074
Tons	278,874	499, 533	461,767
Cost Ingots, blooms, billets, slabs, muck and scrap bar, rerolling rails, and sheet and tin-plate bars: 1	\$3,996,891	\$6, 202, 392	\$7,312,159

Castings	74, 613	56,038	39,023

¹ Purchased, or transferred from other works of the company reporting; not including scrap and partially manufactured material consumed in plant where produced.

In using this table it should be borne in mind that the year 1904 was one of partial depression in the iron and steel industry, and hence neither comparatively small increases in quantity and value for 1904 as compared with 1899 nor comparatively large increases for 1909

as compared with 1904 are representative of the normal rate of growth for the industry.

The total cost of the materials consumed in the steel works and rolling mills of the state increased 87.3 per cent from 1899 to 1909. The principal increase was in the most important group of materials, pig iron and ferroalloys, the tonnage of which increased from 1,410,721 to 2,433,805, or 72.5 per cent, accompanied by an increase from \$14,137,074 to \$36,686,448, or 159.5 per cent, in cost. Ingots, blooms, billets, etc., also show a material increase in both tonnage and cost, while scrap shows a large decrease in both respects.

The total value of products increased 91.8 per cent from 1899 to 1909. The total steel production was 2,667,043 tons in 1909, as compared with 1,460,710 tons in 1899, the increase for the decade being 82.6 per cent. The output of all classes of steel increased between 1899 and 1909, but the actual increase in openhearth steel was particularly striking. Most of the increased steel production was in the form of ingots, the tonnage of which increased from 1,421,687 in 1899 to 2,592,430 in 1909, or 82.3 per cent, while the tonnage of castings increased from 39,023 to 74,613, or 91.2 per cent, during the same period. The leading rolling-mill products in 1909 in the order of total tonnage were rails, bars and rods, wire rods, structural shapes, plates and sheets, and rail fastenings.

Iron and steel, blast furnaces.—The tonnage and value of pig iron produced and the value of all other products in 1909, 1904, and 1899 are shown in the following table:

PRODUCT.	1909	1904	1899
Total value	\$38, 299, 897	\$27,330,836	\$15, 153, 646
Pig iron: Tons Value	2,468,772 \$38,299,897	1,660,610 \$25,508,271	1,469,530 \$15,033,696
All other products		\$1,822,565	\$119,950
Pig iron, classified by grades (tons): Bessemer. Basic Foundry. Forge or mill Malleable Bessemer. White, mottled, miscellaneous, and direct castings. Ferroalloys—splegeleisen, ferromanganese, etc.	1,805,718 352,381 60,151 2,633 173,871 9,893 64,125	1,424,030 52,658 105,835 1,411 31,588 680 44,408	1,320,287 94,008 7,500 47 47,688

The production of pig iron in the state increased 48.7 per cent in quantity and 50.1 per cent in value from 1904 to 1909, as compared with 13 per cent in quantity and 69.7 per cent in value during the five-year period 1899–1904. Bessemer pig iron formed only 73.1 per cent of the total production in 1909, whereas in 1904 and in 1899 it formed over 85 per cent. All the pig iron produced in Illinois was coke iron. The establishments operating the blast furnaces produced in 1909, 2,152,608 tons for their own use and 316,164 tons for sale.

Agricultural implements.—The following table shows the value of the different classes of agricultural implements manufactured in Illinois in 1909 and 1904 and the total value of products for 1899:

PRODUCT.	1909	1904	1899
Total value	\$57, 268, 325	\$38, 412, 452	\$42,033,796
Implements of cultivation Seeders and planters Harvesting implements Seed separators	14, 422, 970 5, 680, 681 22, 417, 070 1, 847, 026	12, 273, 939 2, 998, 075 16, 874, 413 915, 095	41,359,006
All other products Amount received for repair work	12,528,685 371,893	5,167,368 183,562	674,790

The value of agricultural implements manufactured was \$57,268,325 in 1909, as compared with \$38,412,452 in 1904, an increase for the five years of \$18,855,873, or 49.1 per cent. The production in 1904, however, was abnormally low, owing to an overproduction in 1903, and a comparison of the figures for 1909 with those for 1899, therefore, better indicates the true growth of the industry. Such a comparison shows an increase in value of products for the decade of \$15,234,529, or 36.2 per cent. In both 1909 and 1904 harvesting implements constituted the most important class of products, as measured by value.

Flour-mill and gristmill products.—The manufacture of flour-mill and gristmill products has long been one of the leading industries of Illinois. The following tabular statement gives the quantity and value of the products for 1909, 1904, and 1899:

PRODUCT.	1909	1904	1899

1 Not reported separately.

White flour, which is the leading product of the industry in the state, shows an increase between 1904 and 1909 of 420,935 barrels, or 7.1 per cent, in quantity, and of \$6,315,201, or 22.9 per cent, in value, while the output of feed, the second product in importance on the basis of value, increased 112,124 tons, or

76.1 per cent, in quantity, and \$3,619,310, or 137.3 per cent, in value. The output of hominy and grits shows an increase of \$673,075, or 26.4 per cent, in value in 1909 as compared with 1904, but a decrease of 18,550,303 pounds, or 7.7 per cent, in quantity, and that of offal, which consists mainly of bran and middlings, the by-products of the flour mills, an increase of \$165,420, or 3.8 per cent, in value, but a decrease of 42,683 tons, or 16.5 per cent, in quantity. The output of corn meal and corn flour decreased 329,422 barrels, or 30.8 per cent, in quantity, and \$150,280, or 6.5 per cent, in value. The value of products for the industry as a whole shows an increase from \$39,892,127 in 1904 to \$51,110,681 in 1909, or 28.1 per cent.

The following tabular statement classifies the flour mills reported in 1909 and 1904 according to their output for the year:

	NUMBER (OF MILLS.
output.	1909	1904
All classes. Less than 1,000 barrels. 1,000 barrels but less than 5,000. 5,000 barrels but less than 20,000. 20,000 barrels but less than 100,000. 100,000 barrels and over.	88 86 76	302 48 106 89 47 12

The flour mills and gristmills of the state reported in 1909, 3,477 pairs of rolls as compared with 4,008 pairs in 1904 and 3,008 pairs in 1899, and 416 runs of stone and steel burrs, as against 296 in 1904 and 307 in 1899. Fifty-nine establishments manufactured the barrels in which to ship their product in 1909, and 3 manufactured sacks.

Soap.—In the next table the quantity and cost of the principal materials used in making soap and the quantity and value of the chief products are shown.

The quantity of tallow, grease, and other fats used shows a decrease in 1909 as compared with 1904 of 31.1 per cent; that of cottonseed oil, a decrease of 81.3 per cent; and that of caustic soda, a decrease of 21.2 per cent. On the other hand, the quantity of coconnut and palm-kernel oil used increased 108.3 per cent; that of foots, 60.1 per cent; and that of soda ash, 61 per cent. The materials included under the head of "All other materials" show an increase of \$5,719,088, or 376.1 per cent, in cost, due largely to the fact that under this head are included the cost of the principal materials used in the manufacture of cottolene, of which a considerable amount was produced in Illinois as a secondary product in 1909 by establishments classified as engaged in the soap industry.

The output of hard soaps, which constitute the most important class of products of the industry, was 55,646,050 pounds, or 28.1 per cent, greater in 1909 than in 1904. Of the total increase of \$6,024,091, or 42.6 per cent, in the value of products for the industry, a little more than two-thirds represented the increase in

the value of hard soaps produced. The quantity of soft soap manufactured in 1909 was more than thirteen times that reported for 1904 and its value more than five times that reported for the earlier year. The quantity of glycerin manufactured in 1909 was nearly double that made in 1904, and its value shows an increase of 130.8 per cent.

MATERIAL OR PRODUCT.	1909	1904
Materials used, total cost	\$13,948,160	\$9,345,061

Increases occurred during the decade in both the number and the value of all kinds of pianos and organs manufactured except reed organs, which show decreases in both respects from 1904 to 1909. The player pianos, which increased in number from 25 in 1904 to 4,470 in 1909, are now being manufactured in far greater number than the detached piano players, which decreased in number from 2,647 in 1904 to 464 in 1909. The number of upright pianos manufactured without the player attachment was 73,874 in 1904 and 103,433 in 1909, an increase of 29,559, or 40 per cent, while the value of the output increased 37.7 per cent during this interval. From 1904 to 1909 the number of grand pianos manufactured increased from 238 to 380 and the number of pipe organs from 140 to 154.

Butter, cheese, and condensed milk.—The butter, cheese, and condensed-milk industry, although showing a decrease since 1904 of 110, or 27.2 per cent, in the number of establishments, shows an increase of \$4,521,745, or 34.1 per cent, in the total value of products.

In Illinois, as in most other states where dairying is carried on extensively, the total amount of milk used in this industry has decreased and the total amount of cream has increased. This is due to the fact that a large part of the cream used is now separated on the farms instead of at the factories, and only the cream is sold, instead of the whole milk, as formerly. This decrease in the amount of milk bought by the butter factories has been counteracted to some extent by the rapid growth in the demand on the part of the condensed-milk factories, which necessarily use whole milk. The net result has been a decrease of 12.7 per cent in the amount of milk bought.

The following table gives in detail the quantity and value of the products of the industry for 1909, 1904, and 1899:

PRODUCT.	1909	1904	1899
Total value	\$17,798,278	\$13, 276, 533	\$12,879,299

ucts	\$134,242		\$10,700
All other products	\$78,201	\$12,661	

¹ Includes skimmed milk sold and casein.

The quantity of butter produced in factories has shown a marked decrease at each of the last two censuses. In 1899 the quantity produced was 34,055,312 pounds, but by 1909 it had decreased to 24,570,976 pounds, a loss of 9,484,336 pounds, or 27.8 per cent. The value of the output, on the other hand, although it decreased a little between 1899 and 1904, increased during the next five-year period. In 1899 the total value was \$6,891,033, but in 1909 it was \$7,088,414, an increase of \$197,381, or 2.9 per cent, for the decade as a whole. A decrease of 27.8 per cent in quantity has thus been accompanied by an increase of 2.9 per cent in value.

The total value of the cheese-factory products decreased from \$643,681 in 1899 to \$429,187 in 1904 and increased during the following five years to \$527,287. The total output of all kinds of cheese in 1909 amounted to 4,799,235 pounds, representing a decrease of 47 per cent as compared with 1899, when it was

9,055,119 pounds.

There were 15 condensed-milk factories in Illinois in 1904 and 27 in 1909. In 1909 the total value of the condensed-milk product, including both sweetened and unsweetened, formed 48.2 per cent of the state total for the combined industry. For both kinds of condensed milk combined there was an increase from 1899 to 1904 of 31.1 per cent in quantity and of 55.1 per cent in value, while the corresponding gains for the five-year period 1904–1909 were 22.6 per cent and 26.4 per cent, respectively.

Boots and shoes, including cut stock and findings.— The following table shows the number of pairs of the various kinds of footwear manufactured in Illinois during 1909, 1904, and 1899:

	NUMBER OF PAIRS.						
KIND.	1909	1904	1899				
Boots and shoes. Men's. Boys' and youths'. Women's. Misses' and children's. Slippers. Mon's, boys,' and youths'. Women's, misses,' and children's. Infants' shoes and slippers. 1 Not reported separately.

The number of pairs of boots and shoes manufactured increased 1,157,534, or 20.2 per cent, between 1904 and 1909, and the number of pairs of slippers, exclusive of infants' slippers, increased 13,432, or 5.1 per cent. Increases in the production of men's and of boys' and youths' boots and shoes are shown for both five-year periods, while decreases are shown for the two five-year periods in the output of misses' and children's boots and shoes. A decrease in the output of women's boots and shoes occurred between 1899 and 1904, but an increase took place between 1904 and 1909. In the latter period there was a decrease of 56,369 pairs, or 25.8 per cent, in the production of women's, misses', and children's slippers, but an

increase of 69,801 pairs, or 162 per cent, in the production of men's, boys', and youths' slippers.

The following table classifies the number of pairs of the various kinds of footwear produced in 1909 according to the method of manufacture:

	NUMBER OF PAIRS, BY METHOD OF MANUFACTURE.							
KIND.	Total.	Machine or hand welt.	McKay.	All other methods.1				
Boots and shoes Men's. Boys' and youths' Women's, misses', and chil-	6,893,731	3,310,544	3,174,420	408,767				
	4,018,010	3,127,767	630,755	259,494

Infants' shoes and slippers	1,002,277	448,338	(2)	553,939				
All other kinds	125,100	(²)	(2)	125,100				

¹ Includes wire-serow or metal-fastened, turned, and wooden-pagged. ² Included in "All other methods."

Of the total output of boots and shoes, nearly one-half were made by the machine or hand-welt process and a slightly smaller proportion by the McKay process, the remainder being turned, wooden-pegged, or wire-screw or metal-fastened. The greater part of the men's boots and shoes (77.8 per cent) were made by the machine or hand-welt method, while most of the boys' and youths' boots and shoes (92.1 per cent) and the greater part of the women's, misses', and children's boots and shoes (85.5 per cent) were made by the McKay process.

Leather, tanned, curried, and finished.—The quantity and cost of the principal materials used and the quantity and value of the various products are shown, for 1909, 1904, and 1899, in the following table:

MATERIAL OR PRODUCT.	1909	1904	1899

All other products	\$577,608	\$752,482	\$518,359

¹ Cattle hides only.

² Includes horsehides.

This table shows an increase of 48.4 per cent from 1904 to 1909 in the total cost of materials used, as compared with an increase of 41.3 per cent from 1899 to 1904. There was a decrease during each of the five-year periods in the number of hides used, but an increase in their total cost. Large increases are shown for both five-year periods in the number and cost of calf and kip skins treated, while for sheepskins increases are shown for the earlier period only, although both the number and the value of the sheepskins used in 1909 were materially larger than in 1899.

The total value of products increased 38.6 per cent from 1904 to 1909 and 37.1 per cent from 1899 to 1904. Tanned and finished calf and kip skins were the leading products, on the basis of value, at each census, contributing 47.4 per cent of the total value of all the products of the industry in 1909. The value of grain. satin, pebble, and similar upper leathers, the class of products second in importance in this respect, formed only 20.5 per cent of the total value of products in 1909. The relative increase in value from 1904 to 1909 was greater for leather of this class, however, than for any other, amounting to 269.3 per cent. The output shows an increase of 155.5 per cent in 1909 as compared with 1904, although practically the same as in 1899. The greatest relative increase in output for the five-year period 1904-1909 (281.2 per cent), was reported for finished splits of upper leather, which, however, show a decrease of 37.1 per cent in 1909 as compared with 1899. Sheepskins and horsehides increased in number and value from 1899 to 1904 and decreased in both respects from 1904 to 1909, the output of sheepskins in 1909 being somewhat less than in 1899, while that of horsehides was slightly greater.

Laundries.—Statistics for steam laundries are not included in the general tables or in the totals for manufacturing industries. There were 448 such establishments in the state of Illinois, 226 of which were in Chicago, 8 in Rockford, 7 each in Evanston and Peoria, 6 each in Decatur and Springfield, and 5 each in Aurora, Moline, Quincy, and Rock Island. No other incorporated place of 10,000 inhabitants or over had as many as 5 steam laundries.

The following statement summarizes the statistics:

Number of establishments	448
Persons engaged in the industry	10,916
Proprietors and firm members	470
Salaried employees	741
Wage earners (average number)	9,705
Primary horsepower	10, 780
Capital	\$5,540,003
Expenses	
Services	5, 035, 652
Materials	1, 721, 845
Miscellaneous	
Amount received for work done	10,049,445

Of the total number of wage earners in the industry, 6,601, or 68 per cent, and of the total amount received for work done in the state, \$7,108,126, or 70.7 per cent,

were reported from Chicago. The most common form of ownership was the individual, with 250 establishments. The firm and the corporate forms of ownership were represented by 100 and 98 establishments, respectively. Ninety-nine establishments had receipts for the year's business of less than \$5,000; 209, receipts of \$5,000 but less than \$20,000; 130, receipts of \$20,000 but less than \$100,000; and 10, receipts of \$100,000 but less than \$1,000,000.

The average number of wage earners employed each month and the percentage which this number represented of the greatest number employed in any one month were as follows:

MONTH.	WAGE E	RNERS.		WAGE EARNERS.			
	Number.	Per cent of maxi- mum.	MONTH.	Number.	Per cent of maxi- mum.		
January. February. March. April. May. June.	9,369 9,425 9,522	91. 6 92. 4 92. 9 93. 9 96. 1 97. 2	July August September October November December	10,141 10,008 9,718	99. 0 100. 0 98. 7 95. 8 95. 2 95. 5		

The different kinds of primary power, the number of engines or motors, and the horsepower used in 1909 are shown in the following tabular statement:

KIND.	Number of engines or motors.	Horse- power,
Primary power, total.		10,780
Owned: Steam	304	9,49
Gas	23 1	171
ElectricOther	271	1,04

The kind and quantity of fuel used are shown in the following statement:

KIND.	Unit.	Quantity.
Anthracite coal Bifuminous coal Coke Wood Oil Gas	Tons Cords Barrels	551 39 2, 172

Custom sawmills and gristmills.—Statistics for custom sawmills and gristmills are not included in the general tables or in the totals for manufacturing industries, but are presented in the following summary:

	Custom sawmills.	Custom gristmilis.
Number of establishments, Persons engaged in the industry Proprietors and firm members, Sulvide employees	305 149	157 811 206
Salaried employees Wage earners (average number) Primary horsepower		101 5,577

¹ Figures do not agree with those published in 1904, because it was necessary to revise the totals in order to include data only for those establishments located within the corporate limits of the city.

2 Excluding statistics for one establishment, to avoid disclosure of individual operations.

3 Excluding statistics for two establishments, to avoid disclosure of individual operations.

4 Figures and not be shown without disclosing individual operations.
