AGRICULTURE.

DEFINITIONS AND EXPLANATIONS OF TERMS.

Farm.—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term, referring to the work of growing crops, producing other agricultural products, and raising domestic animals, poultry, and bees. A "farm" as thus defined may consist of a single tract of land or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. When a landowner has one or more tenants, renters, croppers, or managers, *the land operated by each is considered a "farm."*

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least $250 worth of farm products in the year 1919, or required for its agricultural operations the continuous services of at least one person.

Farm population—definition.—The farm population, as the term is here used, includes all persons actually living on farms, without regard to occupation, and also those farm laborers (and their families) who, while not living on a farm, nevertheless live in strictly rural territory, outside the limits of any village or other incorporated place.

Farmer.—A "farmer" or "farm operator," according to the census definition, is a person who directs the operation of a farm. The number of farmers shown by the census of agriculture is, therefore, the same as the number of farms. Owners of farms who do not themselves direct the farm operations are not reported as farmers.

Tenure classification.—Farm operators are classified according to tenure as follows:

Farm owners include (1) farmers operating their own land only and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "full owners" being used for those owning all the land which they operate.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1920 in five classes: (1) Share tenants—those who pay a certain share of the products, as one-half, one-third, or one-quarter, for the use of the farm but furnish their own equipment and animals; (2) croppers—share tenants who do not furnish their work animals; (3) share-cash tenants—those who pay a share of the products for part of the land rented by them and cash for part; (4) cash tenants—those who pay a cash rental, as $7 per acre of crop land or $500 for the use of the whole farm; (5) standing renters—those who pay a stated amount of farm products for the use of the farm, as 3 bales of cotton or 500 bushels of corn. In some cases the character of the tenancy was not ascertained by the enumerator; such tenants are designated "unspecified."

Farm land.—Farm land is divided into (1) improved land, (2) woodland, and (3) other unimproved land.

Improved land includes all land regularly tilled or mowed, land in pasture which has been cleared or tilled, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings.

Woodland includes all land covered with natural or planted forest trees which produce, or later may produce, firewood or other forest products.

All other unimproved land includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest.

Farm mortgages.—Three points should be kept in mind in using the census statistics for farm mortgages. First, the statistics are limited to farms operated by their owners, and no figures whatever are given for farms operated by tenants or hired managers. Second, the mortgage debt represented by the figures is that debt secured by real-estate mortgage, not including indebtedness secured by chattel mortgage, crop mortgage, or collateral or personal security. Third, while the figures representing the number of mortgaged farms include farms whose owners hire and operate some land in addition to that which they own, the statistics for the amount of the mortgage debt cover only those farms which consist wholly of land owned by the operator.

Live stock on farms.—The term "live stock," as it is used in the census reports, includes not only the common domestic animals (horses, mules, asses and burros, cattle, sheep, goats, and swine) but also poultry and bees. The figures for the value of live stock which are given in a number of the tables in connection with the value of other classes of farm property represent the value of the whole group as above defined. Certain totals are also given for domestic animals alone.

The comparability of the figures for live stock as reported for 1920 and 1910 is seriously affected by the change in the date of enumeration from April 15 in 1910 to January 1 in 1920. The 1910 census, by reason of its later date of enumeration, gained the large numbers of domestic animals born between January 1 and April 15, which would not have been reported, of course, if the census had been taken as of January 1. On the other hand, a group of considerable importance was omitted from the 1910 enumeration on account of the later date, namely, those animals which were sold or slaughtered (or which died) during the first 3½ months of the year—animals which were on the farms on January 1, 1910, but not on April 15. In most cases the gain from the animals born would considerably exceed the loss from animals marketed or otherwise disposed of. Hence the 1910 totals are, in general, somewhat too large for fair comparison with 1920, while the 1910 figures, omitting those animals born subsequent to January 1, 1910, are too small. This question is discussed in detail in the general reports of the census of agriculture.

Dairy cows.—Dairy cows, as reported for 1920, included all cows and heifers 2 years old and over kept mainly for milk production. The figures obtained under this classification are not closely comparable with the figures reported at the census of 1910, particularly because the age limits employed in 1910 included all cows and heifers 15½ months old and over on April 15, 1910 (1 year old and over on Jan. 1). An estimate of the number of dairy cows 2 years old and over on January 1, 1910, has been made, however, and is given in the tables.

Gross value of farm products.—The "gross value of farm products" which is shown in Table 210 is obtained by adding together the value of live-stock products, domestic animals sold or slaughtered, farm crops, forest products of farms, and nursery and greenhouse products. This figure corresponds approximately with the gross value of products for a manufacturing industry, and for many purposes forms a fairly satisfactory index of the progress of agriculture or of the relative importance of the agricultural industry in different areas. It contains, however, two serious elements of duplication. First, when the value of all crops produced is added to the value of all live-stock products, the value of the crops which are fed to live stock is duplicated. Second, in the total value of live stock sold there is duplication, because animals are frequently sold by one farmer to another and again sold by the second farmer. The duplication is more serious in the states where live-stock products form a large part of the total gross value than in those states where crops are the principal product.

[1] North Dakota and South Dakota admitted as states in 1889. Figures for 1880 obtained by consolidating data for the counties which then occupied the areas now known as North and South Dakota, respectively.
[2] The 1870 and 1860 figures are for Dakota Territory.
