<sup>1</sup> This "gross value of farm products" corresponds approximately with the gross value of products for a manufacturing industry, and for many purposes forms a fairly satisfactory index of the relative importance of agriculture in different areas. It contains, however, a large element of duplication on account of crops fed to live stock, and some further duplication where domestic animals are sold by one farmer to another and resold within the year. The duplication is most serious in states where live-stock products are most important.

\* The value of domestic animals sold or slaughtered was not called for by the 1920 farm schedule. The estimated value obtained for 1919 was based on the ratio between the animals sold or slaughtered in 1909 and those on hand in 1910, and the changes in the number and average value of comparable classes of animals from 1910 to 1920.
