DEPARTMENT OF COMMERCE

BUREAU OF THE CENSUS

SAM. L. ROGERS, DIRECTOR
RESIGNED APRIL 13, 1921

W. M. STEUART, DIRECTOR

APPOINTED APRIL 14, 1921

FOURTEENTH CENSUS OF THE UNITED STATES

# STATE COMPENDIUM MASSACHUSETTS

STATISTICS OF POPULATION, OCCUPATIONS, AGRICULTURE, MANUFACTURES, AND MINES AND QUARRIES FOR THE STATE, COUNTIES, AND CITIES

Bureau of the Census Library

PRICE, 30 CENTS

Sold only by the Superintendent of Documents, Government Printing Office
Washington, D. C.

Washington Goveenment priviling office 1924

## DEPARTMENT OF COMMERCE.

HERBERT HOOVER, SECRETARY OF COMMERCE.

#### BUREAU OF THE CENSUS.

Chief functions.

The taking of the decennial census covering population, agriculture, manufactures, mines and quarries, and forest products.

Decennial report on wealth, public debt, and taxation, including principal financial statistics on Federal, state, county, city, and township governments.

Annual financial statistics of state and municipal governments Sources of revenue, objects of payments, debt and tax levies.

Decennial statistics relating to inmates of institutions, including

paupers, insane, prisoners, and juvenile delinquents.

A census of agriculture in each middecennial year, a biennial

census of manufactures, a quinquennial census of electrical public utilities, statistics of marriage and divorce.

Annual statistics of births, deaths, causes of death, etc., in the registration area of the United States.

Quarterly statistics of leaf tobacco stocks and of production,

stocks, and consumption of fats and oils.

Monthly or semimonthly statistics of cotton ginning; cotton stocks and consumption; the production, stocks, and consumption of hides and leather; the production of shoes; and statistics of active textile machinery and of movements in an increasing number of other industries.

The compilation and publication, in the "Survey of Current Business," of monthly commercial and industrial statistics.

#### BUREAU OF FOREIGN AND DOMESTIC COMMERCE.

Chief functions.

The compilation of timely information concerning world market conditions and openings for American products in foreign countries secured through commercial attachés and trade commissioners of the Department of Commerce and the foreign service of the Department of State. The distribution of such information to American business through weekly "Commerce reports," special bulletins, confidential circulars, the news and trade press, correspondence, and personal contact.

and personal contact.

The maintenance of commodity, technical, and geographical divisions to afford special service to American export industries.

The compilation and distribution of names of possible buyers and agents for American products in all parts of the world and the publication of weekly lists of specific sales opportunities abroad. The maintenance of district and cooperative offices in many cities in the United States to expedite delivery of market information to business men and to keep the department advised as to the urgent requirements of American trades and industries.

The publication of official statistics on imports and exports.

The study of the processes of domestic trade and commerce, with a view to their improvement and the dissemination of information obtained for the benefit of the public, as well as of those directly concerned.

#### BUREAU OF STANDARDS.

Chief functions.

Custody of standards of measurement, quality, performance, or practice adopted or recognized by the Government. Development and construction of such standards when necessary. Testing and Testing and calibration of apparatus and comparison of standards used by scientific or other institutions with those in the custody of the bureau.

Determination of physical constants and properties of materials. The testing of materials and the establishment of standards and processes in cooperation with commercial firms or organizations.

Researches covering structural, engineering, and miscellaneous materials, radio, radium, mechanical appliances, sugar technology, leather, paper, rubber, and textiles, clay products, glass, and refractories, metals and metallurgy, and similar groups of subjects.

The collection and dissemination of information showing approved.

methods in building, planning, and construction, including building materials and codes and such other matters as may encourage, improve, and cheapen construction and housing.

Studies on simplified commercial practices and the establish ment of such practices through cooperative business organizations

The Bureau publishes six series of scientific and technical publishes cations, reporting the results of its researches and giving technical data fundamental to industry

The Director of the Bureau has supervision of the preparation of technical specifications through the Federal Specifications Board.

#### BUREAU OF FISHERIES.

Chief functions.

The propagation of useful food fishes, including lobsters, oysters, and other shellfish, and their distribution to suitable waters.

Investigations of fish culture, fish diseases, and for the conserva-tion of fishery resources and the development of commercial fisheries.

The study of the methods of the fisheries and fishery industries and the utilization of fishery products.

The collection of statistics of fisheries.

The administration of the Alaska salmon fisheries and the fur-seal herd on the Pribilof Islands.

The administration of the law for the protection of sponges off the coast of Florida.

#### BUREAU OF LIGHTHOUSES.

Chief functions.

The establishment and maintenance of lighthouses, lightships, buoys, and other aids to navigation on the sea and the lake coasts and on the rivers of the United States, including Alaska, Hawaiian

Islands, and Porto Rico.

The publication of Light Lists, Buoy Lists, and Notices to Mariners, including information regarding all aids to navigation maintained by the Lighthouse Service.

#### COAST AND GEODETIC SURVEY.

Chief functions.

The survey of the coasts of the United States and the publication of charts needed for the navigation of the adjacent waters, including Alaska, the Philippine Islands, Hawaii, Porto Rico, the Virgin Islands, and the Canal Zone.

A comprehensive geodetic system, extending into the interior, connects and coordinates the surveys of the coasts, and is designed to furnish accurately determined points and elevations in all parts of the country. These are available as a basis for Federal, state, and municipal surveys, and engineering projects of every kind. The magnetic declination has been determined at a large number of stations throughout the country and the results are available for the use of surveyors and engineers.

The technical operations include base measure, triangulation, traverse, precise leveling, the determination of latitude and azimuth, the determination of difference of longitude by telegraph or radio, magnetic observations and researches, the preparation of magnetic maps, the determination of the force of gravity, topography, hydrography, deep-sea soundings, water temperatures, tidal and current observations.

The results are published in the form of charts on various scales, annual reports, coast pilots, tide tables (published annually in advance), current tables, digests of geodetic publications, and special publications.

#### BUREAU OF NAVIGATION.

Chief functions.

General superintendence of commercial marine and merchant

Supervision of registering, enrolling, licensing, numbering, etc., of vessels under the United States flag and the annual publication of a list of such vessels.

The enforcement of the navigation and steamboat inspection laws and the laws governing radio communication, as well as duties connected with fees, fines, tonnage taxes, refunds, etc., originating under such laws.

#### STEAMBOAT INSPECTION SERVICE.

Chief functions.

The inspection of vessels, the licensing of the officers of vessels, and the administration of laws relating to such vessels and their

The certification of able seamen who form the crews of merchant essels.

The inspection of vessels, including the types of boilers; the testing of all materials subject to tensile strain in marine boilers; the inspection of hulls and of life-saving equipment.

Circulars listing the publications of the various aureaus will be mailed on application to the bureau.

# CONTENTS—MASSACHUSETTS.

The gross value of farm products, obtained by adding the value of crops, live-stock products, etc., contains a considerable amount of duplication, on account of crops fed to live stock. It is roughly analogous to the value of products in manufactures, with its duplication on account of the use of the products of one establishment as materials in another.

These include dairy products, wool and mohair, eggs and chickens, and honey and wax.

Estimated value of domestic animals sold by farmers and animals slaughtered on the farms, whether for sale or for home consumption.

These include forest products of farms valued (for the United States) at \$394,321,828, nursery products valued at \$20,434,389, and greenhouse products valued at \$77,380,230.

<sup>&</sup>lt;sup>5</sup> Includes 4881emales. <sup>6</sup> Less than one-tenth of 1 per cent.

<sup>&</sup>lt;sup>7</sup> Included with Louisiana to avoid disclosing individual operations.
<sup>8</sup> Includes 2 establishments in Mississippi.

<sup>\*</sup> These statistics relate to the calendar year 1919.

Norm....The centers for manufactures and for all crops except cotton are based on data for the year preceding the census year indicated on the map; for the centers of cotton production the exact dates are shown on the map.

# MASSACHUSETTS.

## NUMBER AND DISTRIBUTION OF INHABITANTS.

Population of the state.—According to the Fourteenth Census, taken as of January 1, 1920, the population of Massachusetts is 3,852,356, which represents an increase of 485,940, or 14.4 per cent, over the population in 1910. During the same period the population

of the United States increased 14.9 per cent. The following summary shows the population of Massachusetts from 1790, the first Federal census year, to 1920, inclusive, with the increase in each decade, in comparison with the per cent of increase for the United States:

POPULATION OF MASSACHUSETTS: 1790 TO 1920.

Counties.—Massachusetts has 14 counties, of which 3 (Barnstable, Dukes, and Nantucket) show decreases in population during the last decade. The same counties also showed decreases in the preceding decade, and 2 of them (Barnstable and Nantucket) in the decade from 1890 to 1900. (See Table 1.) There has been only one change in the territorial boundaries of the counties since 1910, Hyde Park town, in Norfolk County, having been annexed to Suffolk County and made a part of Boston city in 1912.

Density of population.—The total land area of the state is 8,039 square miles, and the average number of persons to the square mile in 1920 is 479.2 (see Table 1); in 1910 and 1900 the averages were 418.8 and 349, respectively.

Minor civil divisions.—The political units into which counties are divided are collectively termed "minor civil divisions." In Massachusetts the primary division of the county is the town or city, and in 1920 these number 316 and 38, respectively. (See

HISTORICAL NOTE.—Massachusetts takes its name from the Massachusetts Indians, a tribe which, at the time of the settlement of the colony, lived along the shores of Massachusetts Bay. The original significance of the word in the Indian tongue was probably "at the great hills," although other definitions have been suggested by different writers.

The region now constituting Massachusetts was included in the grants made in the patent of "Acadie" to the Sieur de Monts (French, 1603), the first charter of Virginia (English, 1606), and the charter of New England (1620). The English claim to this region was based on the discovery of the mainland of North America by the Cabots toward the close of the fifteenth century. The first permanent settlement was made by the Pilgrims, a band of about 100 Englishmen, who, landing at Plymouth in December, 1620, founded the Plymouth Colony. Between 1622 and 1628 several scattered settlements were made in and near Boston Harbor.

In 1628 the first permanent settlement in the colony of Massachusetts Bay was established, when a few settlers at Salem were found and joined by a party of English Puritans under the leadership of John Endicott, one of the proprietors of a land company which had obtained a grant extending from a line 3 miles north of the River Merrimac to a line 3 miles south of the River Charles, and from the Atlantic westward to the "South Sea." A charter for this territory was obtained from Charles I in the following year.

The charter of New England was surrendered to the Crown in 1635.

In 1684 the charter of Massachusetts Bay Colony was declared forfeited, and the government was later placed in the hands of a royal governor and council. A new charter was granted in 1691, by the terms of which Massachusetts Bay, the colony of New Plymouth, the province of Maine, and the territory called Acadia or Nova Scotia were united under the name of Massachusetts Bay. This charter went into effect in the following year.

An agreement between Massachusetts and New York regarding the eastern boundary of the latter colony was reached in 1773, but the line was not finally adjusted until 1787.

Massachusetts was one of the original thirteen states.

After the close of the Revolution (1783) Nova Scotia remained in the possession of England. In 1785 Massachusetts ceded to the United States all claims, based on its early charters, to territory west of New York. In 1820 Maine became a separate state. After these modifications the area of Massachusetts was substantially as at present, although minor changes in its boundaries have since been made.

According to consuses taken prior to the first Federal census, in 1790, the population of the colony of Massachusetts at different dates was as follows: 1764, 245,718; 1776, 291,147; 1784 (partly estimated), 346,653.

Table 2.) Villages are not incorporated as such in this state.

Cities.—Of the 38 cities in Massachusetts, 26 have a population in 1920 of 25,000 or more. Only 1 town (Brookline) has this amount of population. Boston, the capital of the state and the largest city, has a population of 748,060, while Worcester,

·系数图整(图14),1500年,1500年4月1日 - 1500年 - 1500年

Springfield, New Bedford, Fall River, Lowell, and Cambridge, in the order named, have over 100,000 inhabitants each. (See Tables 3 and 4.)

The following summary shows the population of all cities in Massachusetts having 25,000 inhabitants or more in 1920, together with Brookline town, at each census for which figures are available:

or ending of the person with the decidate some

Urban and rural population.—The Census Bureau defines urban population as that residing in cities and other incorporated places of 2,500 inhabitants or more. Since it is not the practice in Massachusetts, as in practically all the other states, to have municipal incorporations, such as villages, within the limits of the town, and since no town becomes a city until its population is greatly in excess of 2,500, it has been necessary to include as urban not only the population of cities but that of all towns having over 2,500 inhabitants. The result is that the "urban area" in Massachusetts contains some population which in other states would be classified as "rural," but on account of the density of population of the state as a whole, there is no likelihood that the proportion of urban population is materially overstated.

Urban population in Massachusetts being thus de-

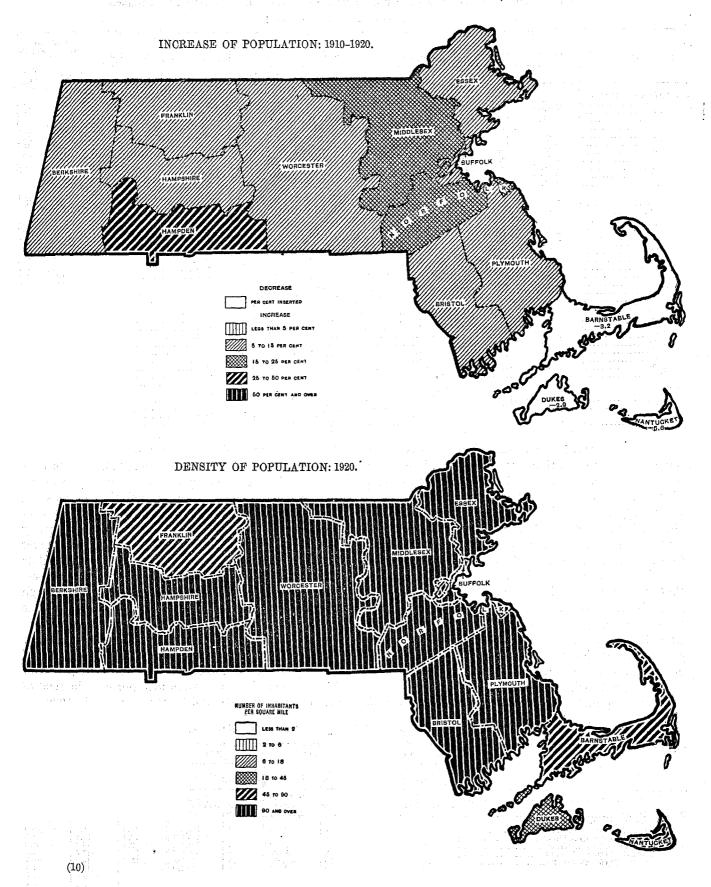

fined, the rural element, therefore, consists of the population of towns having less than 2,500 inhabitants.

The following summary presents, for the last three censuses, the urban and rural population of the state. The classification for each census is based, of course, upon the population of the various places as shown by the returns of that census. As the result, the figures for each census covered by the table do not relate exactly to the same urban and rural territory, respectively, as those for the other two censuses, since, through the growth or decline of its population, some territory which was rural at a certain census may have become urban at the next census, or the reverse of this change may have occurred. The proportion of the population of Massachusetts living in places of 2,500 or more increased from 91.5 per cent in 1900 to 92.8 per cent in 1910 and to 94.8 per cent in 1920.

1 CHANGES IN BOUNDARIES, ETC.

THE STATE.—Total for 1890 includes population (4) of Indian reservations, specially enumerated and not distributed by counties.

HAMPDEN,—Part of Hampshire annexed in 1909.

HAMPSHIRE.—Part annexed to Hampden in 1909.

MIDDLESEX.—Part of Suffolk annexed in 1872; part annexed to Suffolk in 1873 and part annexed to Norfolk in 1907. Boundary line between Cambridge city, Middlesex County, and Boston city, Suffolk County, changed in 1910.

NORFOLK.—Part of Suffolk annexed in 1872; parts annexed to Suffolk in 1872, 1873, 1874, and 1912; part of Middlesex annexed in 1907.
SUFFOLK.—Parts annexed to Middlesex and Norfolk in 1872; part of Middlesex annexed in 1873; parts of Norfolk annexed in 1872, 1874, and 1912. Boundary line between Cambridge city, Middlesex County, and Boston city, Suffolk County, changed in 1910.

TABLE 2.—POPULATION OF COUNTIES BY MINOR CIVIL DIVISIONS: 1920, 1910, AND 1900.

[For changes in boundaries, etc., between 1910 and 1920, see footnotes; for those between 1900 and 1910, see Reports of the Thirteenth Census: 1910, Vol. II, Table 1, p. 858.

For population of wards of cities, see Table 4.]

# COMPOSITION AND CHARACTERISTICS OF THE POPULATION.

This section gives detailed statistics as to the composition and characteristics of the population on January 1, 1920. It contains detailed tables which present statistics of color or race, nativity, parentage, sex, age, school attendance, citizenship, illiteracy, dwellings and families, and country of birth, for the state, and for its counties and cities. There are, besides, eight summary tables which reproduce from the detailed tables the more important state and city totals, and, also, tables which cover the following subjects, not included in the second series of state bulletins: Marital condition, state of birth, year of immigration, inability to speak English, country of origin. mother tongue, and ownership of homes. The full presentation of all these subjects is contained in Volume II of the Fourteenth Census Reports.

The principal occupations, as reported for persons 10 years of age and over, are given by sex, color or race, nativity, parentage, and age periods, followed by a summary, by marital condition and age groups, of women gainfully occupied.

Because of the wide differences in characteristics among the various classes of the population, the statistics on each subject are shown according to color or race, and for the white population according to nativity and parentage. Classification according to nativity and parentage has not been deemed necessary for the other races, since nearly all Negroes and Indians are natives of native parentage, while nearly all Chinese and Japanese are either foreign born or of foreign parentage.

The white population is divided into four groups:

(1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in certain tables; and in some cases all three native classes are combined.

The presentation of statistics on country of birth of the foreign-born white population is made on the basis of the postwar map. Because of the many political changes which have resulted from the war, comparative figures for 1910 for this class of the population by individual European countries are not presented here.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of their population, the two classes are shown separately in connection with several of the subjects. Urban population, as defined by the Census Bureau, is that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended school, college, or any kind of educational institution at any time between September 1, 1919, and the census date, January 1, 1920.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write in any language, not necessarily English, regardless of ability to read.

The statistics of marital condition relate only to persons 15 years of age and over, as the number of persons under 15 who are married, widowed, or divorced is naturally insignificant. The terms refer only to the marital status of the population on the census date.

The returns as to state of birth are valuable mainly for the light they throw on the migration of the native population within the United States; they show, for each state, the population residing there on January 1, 1920, distributed as born in the state or elsewhere.

Since the foreign-born population consists mainly of foreign-born whites, the statistics for citizenship relate to this class only. The classification embraces four groups, namely, persons reported as naturalized, persons reported as having taken out first papers, persons reported as aliens, and persons for whom citizenship was not reported.

The inquiry as to year of immigration supplies a means for determining what proportion of the immigrants who arrived during a given year or period of years were still alive and residing in this country on the census date.

The foreign white stock comprises the total of three classes, the foreign-born whites, the native whites of foreign parentage (both parents born abroad), and the native whites of mixed parentage (one parent native and the other foreign born). The term "country of origin," as used in this report, signifies the country of birth of the father of a foreign-born person or the foreign-born parent or parents of a native. The term "mother tongue" means the language of customary speech in the homes of immigrants before immigration.

<sup>1</sup> Many of the "Clerks in stores" probably are "Salesmen."
2 Includes, also, managers and superintendents of retail stores.

<sup>8</sup> Includes only those resident in continental United States at the date of the enumeration.
4 Probably includes some teachers in schools below collegiate rank.

# AGRICULTURE—MASSACHUSETTS.

## INTRODUCTION.

In the following pages are presented all of the published results of the 1920 census of agriculture for this state and its counties, except certain detailed tabulations for the state which appear in Volume V of the Fourteenth Census Reports and a few minor items which have been published in special bulletins. The statistics of farms and farm property, including live stock, relate to January 1, 1920; those of live-stock

products, crops, and farm expenditures are for the calendar year 1919. In order to show the present tendency in agriculture, comparative figures for the census of 1910 are given throughout; and to show the general trend of the agricultural industry over a considerable period of time, all general farm information available is presented for the different censuses since 1850.

<sup>&</sup>lt;sup>1</sup> A minus sign (—) denotes decrease.

<sup>2</sup> Population residing outside of incorporated places or towns having 2,500 inhabitants or over. The rate of increase (or decrease) in the rural population between the two consuses is affected somewhat by the fact that certain places classified as rural in 1910 had become urban by 1920. The population in 1910 of the territory classified as rural in 1920 was 205,738. For this territory, the population shows a decrease between 1910 and 1920 amounting to 1.8 per cent, which percentage indicates the rate of decline in the rural population, leaving out of consideration the changes in classification of territory.

COUNTIES, PRINCIPAL CITIES, RIVERS, AND MOUNTAINS.

## EXPLANATION OF TERMS.

To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

Farm.—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term, referring to the work of growing crops, producing other agricultural products, and raising domestic animals, poultry, and bees. A "farm" as thus defined may consist of a single tract of land or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1919, or required for its agricultural operations the continuous services of at least one person.

Farmer.—A "farmer" or "farm operator," according to the census definition, is a person who directs the operation of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, managers, and tenants.

Farm owners include (1) farmers operating their own land only and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "full owners" being then used for those owning all their land.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1920 in five classes: (1) Share tenants—those who pay a certain share of the products, as one-half, one-third, or one-quarter, for the use of the farm but furnish their own farm equipment and animals; (2) croppersshare tenants who do not furnish their work animals; (3) sharecash tenants-those who pay a share of the products for part of the land rented by them and cash for part; (4) cash tenants—those who pay a cash rental, as \$7 per acre of crop land or \$500 for the use of the whole farm; (5) standing renters—those who pay a stated amount of farm products for the use of the farm, as 3 bales of cotton or 500 bushels of corn. In some cases the character of the tenancy was not ascertained by the enumerator; such tenants are designated "unspecified."

Farm land.—Farm land is divided into (1) improved land, (2) woodland, and (3) other unimproved land.

Improved land includes all land regularly tilled or mowed, land in pasture which has been cleared or tilled, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings.

Woodland includes all land covered with natural or planted forest trees which produce, or later may produce, firewood or other forest products.

All other unimproved land includes brush land, rough or stony land, swamp land, and any other land which is not improved or

The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics, therefore, must be considered at best only a close approximation.

#### LIVE STOCK ON FARMS AND ELSEWHERE.

(Domestic Animals, Poultry, and Bees.)

Domestic animals: 1920 and 1910.—The census of 1920 was taken as of January 1 and that of 1910 as of April 15. Since a great many domestic animals are born during the period between January 1 and April 15 and, on the other hand, a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not fully comparable. In addition to the change in the date of enumeration, there have been certain changes in the age and sex classifications. The 1910 figures presented in the following tables are therefore restricted to those classes of domestic animals which are least affected by these changes and for which the figures are fairly comparable with the 1920 returns.

Dairy cows: 1920 and 1910.—In 1910 the census called for "cows and heifers kept for milk" and "cows and heifers not kept for milk." The instructions read: "Report as cows kept for milk those whose milk is used in some form for human food. Cows milked for three months during the year should be reported as kept for milk, although a part of the year they run with their calves."

In 1920 the census called for "dairy cattle" and "beef cattle." Dairy cattle were defined as those "kept mainly for milk production," and the following instructions were given the enumerators: "Classify all cattle as beef cattle or as dairy cattle according to the principal purpose for which they are kept." It is believed that under this rule the fully established dairy and beef breeds have been properly reported, with few errors, and that cattle of the dual-purpose breeds or of no definite breeding have been placed in one class or the other, according to the principal purpose for which they are kept.

In states where cattle are raised extensively for beef production the result of this new classification will be to reduce materially the proportion of cows classified as dairy cows, and even in states having few strictly beef cattle the 1920 classification may be expected to give a somewhat smaller proportion of dairy cows than the 1910 classification.

In Massachusetts the number of "dairy cows," including heifers 1 year old and over, reported for January 1, 1920, was 173,844, as compared with 171,936 "cows kept for milk" reported for April 15, 1910. This represents an increase of 1,908, or 1.1 per cent. The number of "beef cows" reported for

January 1, 1920, was 5,850, as compared with 20,100 "cows not kept for milk" reported for April 15, 1910, representing a decrease of 14,250, or 70.9 per cent.

Farms reporting domestic animals: 1910.—Horses were reported by 28,173 farms in Massachusetts in 1910, mules by 155 farms, cattle by 27,532, sheep by 1,028, and swine by 11,005. In comparing these figures with the 1920 figures given in the table below, due allowance should be made for the fact that the total number of farms in Massachusetts decreased from 36,917 in 1910 to 32,001 in 1920.

#### LIVE-STOCK PRODUCTS.

Farm value of live-stock products: 1919 and 1909.— The Thirteenth Census schedule called for the total value as well as the total quantity of all live-stock products, whether sold or consumed on the farm. The 1909 values are therefore based directly on the reported figures. But in the Fourteenth Census schedule the question as to value in the case of dairy products, eggs, and chickens was restricted to the amounts sold. The 1919 value of butter made on farms has been computed on the basis of the average value received per pound for butter sold; the values of eggs produced and chickens raised have been computed in a similar way. The values of cheese made on farms and of honey and wax produced have been computed on the basis of average values per pound secured through the Bureau of Crop Estimates of the Department of Agriculture. The method of obtaining these average values was the same as that used for securing average values for the important crops, which is described in a later paragraph.

Dairy products.—It is difficult to secure reports of the total quantity of milk produced during a given year, especially from farmers who keep cows chiefly to supply milk and butter for family use. Since such farmers usually keep no records, they are able to make only rough estimates of the milk production and frequently underestimate the quantity of milk produced for home use. Many farmers, too, either because they are unwilling to make any estimates or for other reasons, fail to report their milk production, even though they report butter or other dairy products as well as dairy cows.

For several decades past the Bureau of the Census has made estimates for such incomplete reports, where the farmer reported "cows kept for milk," but failed to report the amount of milk produced, these estimates being based on the average production per cow as shown by the complete reports. Since farmers with first-class dairy herds and up-to-date methods are more likely to make complete reports than those with cows of a lower grade, the estimates obtained in this way have probably been somewhat above the actual production. With the new basis of classification for dairy cows in

use for 1920, however, as already noted, the estimates should be more satisfactory than heretofore, since milk will be estimated only for cows kept mainly for milk production.

In the table which follows, both the actual reported quantity of milk produced and the estimated total are given. The latter includes, in addition to the milk reported, an estimate of the amount of milk produced on farms which reported dairy cows but failed to report milk. A certain quantity of milk, on the other hand, was reported from farms which reported no dairy cows. This is included in the total and may represent either milk produced by beef cows milked a part of the year on farms having no dairy cows or milk produced on farms which kept dairy cows some time during the year 1919, but had none on January 1, 1920. It may be safely assumed that the returns for butter and cheese made on farms and for milk, cream, butter fat, and butter sold, are much more nearly complete than in the case of milk produced. Hence no estimates have been made for these items.

¹ Based on the 1919 milk production as reported for dairy cows, and the number of dairy cows on hand Jan. 1, 1920.
² A minus sign (-) denotes decrease.
² This item represents the total farm value of dairy products, excluding milk and cream consumed as such on the farm where produced.
⁴ Figures for 1919 do not include "cheese sold," as that item was not reported for 1919. The value of cheese sold in 1909 was \$3,610.

<sup>&</sup>lt;sup>2</sup> A minus sign (--) denotes decrease.

#### CROPS.

Summary: 1919 and 1909.—This section summarizes the census data relative to all of the farm crops of 1919 and 1909, including the percentage of increase for the decade in acreage, production, and value.

In comparing one year with another it should be borne in mind that the acreage of crops (or the number of fruit trees) and the number of farms reporting are on the whole a better index of the general changes or tendencies in agriculture than either the quantity or the value of the crops, since variations in quantity may be due mainly to favorable or unfavorable seasons, and variations in the value of the crops may result largely from changes in prices between one census year and the next.

<sup>1</sup> A minus sign (-) denotes decrease. Per cent not shown when base is less than 100 or when per cent is more than 1,000.

2 Excluding 17,266 acres reported for corn cut for forage, which is practically all duplicated in the acreage shown for corn harvested as grain.

3 The 1909 figures include small quantities of emmer and spelt, and kafir and milo.

4 Principally oats and barley grown and harvested together.

5 The 1909 figures include a small quantity of broom-corn seed.

6 Less than one-tenth of 1 per cent.

7 Less than 1 acre.

<sup>7</sup> Less than I acre.

The total values include the value of small quantities of flower and vegetable

seeds. The entire acreage from which the grass and clover seeds were secured is believed to be included in the acreage given elsewhere for hay and forage.

9 Corn cut for forage was not reported to any extent in 1909; hence no close comparison between 1918 and 1909 can be made, either for the hay and forage totals or for the bracketed group in which corn cut for forage appears.

10 Includes millet and Hungarian grass.

11 The 1919 figures represent vegetables raised for sale only.

12 In 1909 the value of the farm garder was largely included in the value of "other vegetables."

13 These crops comprise broom corn, hops, and ginseng.

14 Includes the value of a small quantity of nuts.

The combined acreage of crops harvested in Massachusetts in 1919 for which the acreage was reported was 560,647, which represents 61.7 per cent of the total improved land in farms (908,834 acres). The total crop acreage reported for 1909 was 652,094, or 56 per cent of the improved land in farms (1,164,501 acres). Most of the improved land not in crops doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage of which was not reported.

In addition to the crops regularly harvested in 1919, as shown in the tables, there were reported 826 acres of mature crops grazed or "hogged off."

Farm value of crops.—At the census of 1920 the farm schedule called for the value of all farm property, including live stock, and the value of live-stock

In the case of farm crops, however, wherever a unit value could be used, such as the value per bushel or per ton, the farmer was asked to report the acreage and production of each crop but not the value. To supplement the information obtained from the farmers, the Bureau of Crop Estimates of the United States Department of Agriculture secured by special schedule from its crop reporters average values for such crops. These special schedules were tabulated by the Bureau of the Census, and the resulting averages, approved by the Bureau of Crop Estimates as representing a fair average of the farm value per unit, were used in computing most of the crop values presented in the accompanying tables.

For some products it was not possible to find any satisfactory unit on which to base a computation of the total value. Values were therefore obtained in the 1920 census schedule for vegetables, other than potatoes and sweet potatoes, and for the farm garden.

Age of farmers.—A farmer or farm operator, as defined for census purposes, is a person who operates a farm. The number of farm operators, for which the age distribution is shown in the following table, is therefore the same as the number of farms.

TABLE 40.—FARM OPERATORS CLASSIFIED ACCORDING TO AGE AND TENURE: 1920 AND 1910.

Farmers classified by number of years on farm.—In the following table the farmers of the state are classified according to the number of years they had been on the farms which they were operating when the census was taken. The purpose of this classification is to show the relative stability of the different classes.

In 1920 the date of enumeration (January 1) came just before the period during which changes from one farm to another are commonly made in most localities, and hence at a time when many farmers had almost, but not quite, completed one, two, or more years on their farms. Considerable numbers of these farmers reported one, two, or more full years, in place of reporting the correct number of months (or years and months). In 1910, however, the enumeration date (April 15) was late enough so that, in localities where the common moving time was in the early part of the year, the number of years of occupancy was accurately reported. These differences seriously affect the comparability of the returns, especially for the first two years of occupancy. Hence these two years, which were tabulated separately and are so published in Volume V of the Fourteenth Census Reports, have been combined in the following table.

Table 41.—Farm Operators Classified According to Number of Years on Farm, by Tenure: 1920 and 1910.

NUMBER OF YEARS ON	тот	AL.	own	ERS.	MA		TENA	NTS.

Cooperative marketing and purchasing.—Cooperative marketing of farm products or cooperative purchasing of supplies through farmers' organizations in 1919 was reported by 1,547 farms in Massachusetts, including 209 farms which reported both sales and purchases,

538 farms which reported sales only, and 800 farms which reported purchases only.

Table 42.—Cooperative Marketing and Purchasing Through Farmers' Organizations: 1919.

Pure-bred live stock on farms.—The inquiry relating to pure-bred live stock called for registered animals only, but it seems evident, from a study of the returns, that some animals merely eligible for registry (but not actually registered) were included in the reports.

The number of farms in Massachusetts in 1920 was 32,001, of which number 27,508 reported domestic animals of some kind, and 3,546 reported pure-bred live stock.

Table 44.—Pure-Bred Live Stock Classified According to Breed: 1920.

NOTE.—Pure-bred horses reported in Massachusetts represented 1 per cent of all horses on farms (see Table 23); pure-bred cattle, 9.3 per cent of the total; pure-bred sheep, 6.6 per cent; and pure-bred swine, 6.3 per cent.

Domestic animals sold or slaughtered on farms.—
The number of cattle, swine, and sheep slaughtered on farms was reported for both 1919 and 1909, but the farm schedule for 1919 carried no inquiry with regard to the value of the animals slaughtered, or with regard to the number or value of the animals sold by farmers. The total value of domestic animals sold or slaughtered on farms in Massachusetts in 1919 has been estimated, however, at \$10,900,000, as compared with \$6,020,530, the value reported for 1909.

#### EXPLANATION OF TERMS.

Scope of census.—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of ownership, size of establishments, and similar subjects. When use is made of the statistics for these purposes it is imperative that due attention be given to their limitations, particularly in connection with any attempt to derive from them figures purporting to show average wages, cost of production, or profits.

The census did not cover establishments which were idle during the entire year or for which products were valued at less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions.

Period covered.—The returns relate to the calendar year 1919, or the business year which corresponded most nearly to that calendar year, and cover a year's operations, except for establishments which began or discontinued business during the year.

The establishment.—As a rule, the term "establishment" represents a single plant or factory, but in some cases it represents two or more plants which were operated under a common ownership or for which one set of books of account was kept. If, however, the plants constituting an establishment as thus defined were not all located within the same city, county, or state, separate reports were secured in order that the figures for each plant might be included in the statistics for the city, county, or state in which it was located. In some instances separate reports were secured for different industries carried on in the same establishment.

Classification by industries.—The establishments were assigned to the several classes of industries according to their products of chief value. The products reported for a given industry may thus, on the one hand, include minor products different from those covered by the class designation, and, on the other hand, may not represent the total product covered by this designation, because some of this class of product may be made in establishments in which it is not the product of chief value.

As a rule, the same designation is used for the industry wherever it appears, although all of the products indicated by this designation were not manufactured in the state or city for which these statistics are presented. In some instances the wording is changed so as to more correctly describe the products represented. For a number of industries subclasses are shown which indicate more definitely the kind of products.

Selected industries.—The general tables at the end of this section give the principal facts separately for the industries of the state. A selection has been made of certain leading industries of the state for more detailed consideration. Sometimes an industry of great importance has to be omitted because it comprises so few establishments that a detailed presentation would reveal the operations of individual concerns.

Comparisons with previous censuses.—Owing to changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. At the census of 1909 the figures for kindred industries were combined. This practice has been followed in compiling the statistics for 1919 and 1914 when placed in com-

parison with those for 1909 and prior years. The comparative summary for 1919, 1914, and 1909, therefore, does not show separately all the industries given for 1919 in the detailed statement for the state.

Influence of increased prices.—In comparing figures for cost of materials, value of products, and value added by manufacture in 1919 with the corresponding figures for earlier censuses, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures fail to afford an exact measure of the increase in the volume of business.

Persons engaged in the industry.—The following general classes of persons engaged in the manufacturing industries were distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks (including other subordinate salaried employees), and (5) wage earners. In the reports for the censuses of 1904 and 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. In comparative tables covering the census of 1904 it is of course necessary to group the figures according to the classification that was employed at the earlier censuses.

The number of persons engaged in each industry, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for a single representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where this date was not a representative day an earlier date was chosen.

In the case of employees other than wage earners the number thus reported for the representative date has been treated as equivalent to the average for the year, since the number of employees of this class does not ordinarily vary much from month to month. In the case of wage earners the average has been obtained in the manner explained in the next paragraph.

In addition to the more detailed report by sex and age of the number of wage earners on the representative date, a report was obtained of the number employed on the 15th of each month, by sex, without distinction of age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported for the several months by 12. The importance of the industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given in certain tables for each separate industry, is not totaled for all industries combined for any state, because, in view of the variations of date, such a total is not believed to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation. This total, however, is shown for the different cities, because the limited area and greater regularity of employment largely overcame the objection incident to its publication for the separate states or the United States.

In order to determine as nearly as possible the age distribution of the average number of wage earners for a given state as a whole, the per cent distribution by age of the wage earners in each industry for December 15, or the nearest representative day, has been calculated from the actual numbers reported for that date. The percentages thus obtained have been applied to the average number of wage earners for the year in that industry to determine the average numbers 16 years and over, and under 16, employed. These calculated averages for the several industries have been added to give the average distribution for each state as a whole and for the entire country.

Salaries and wages. - Under these heads are given the total payments during the year for salaries and wages, respectively. The Census Bureau has not undertaken to calculate the average annual earnings of either salaried employees or wage earners. Such averages would possess little real value, because they would be based on the earnings of employees of both sexes, of all ages, and of widely varying degrees of skill. Furthermore, so far as wage earners are concerned, it would be impossible to calculate accurately even so simple an average as this, since the number of wage earners fluctuates from month to month in every industry, and in some cases to a very great extent. The Census Bureau's figures for wage earners, as already explained, are averages based on the number employed on the 15th of each month, and while representing the number according to the pay rolls to whom wages were paid on that date, no doubt represent a larger number than would be required to perform the work in any industry if all were continuously employed during the year.

Prevailing hours of labor.—No attempt was made to ascertain the number of wage earners working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one part of the year to another were disregarded, and no attention was paid to the fact that a few wage earners might have hours differing from those of the majority. All the wage earners of each establishment are therefore counted in the class within which the establishment itself falls. In most establishments, however, practically all the wage earners work the same number of hours, so that the figures give a substantially correct representation of the hours of labor.

Capital.—The instructions on the schedule for securing data relating to capital were as follows:

"The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises."

These instructions were identical with those employed at the censuses of 1914 and 1909. The data compiled in respect to capital, however, at both censuses, as well as at all preceding censuses of manufactures, have been so defective as to be of little value except

as indicating very general conditions. In fact, it has been repeatedly recommended by the census authorities that this inquiry be omitted from the schedule. While there are some establishments whose accounting systems are such that an accurate return for capital could be made, this is not true of the great majority, and the figures therefore do not show the actual amount of capital invested.

Materials.—The statistics as to cost of materials relate to the materials used during the year, which may be more or less than the materials purchased during the year. The term "materials" covers fuel, rent of power and heat, mill supplies, and containers, as well as materials which form a constituent part of the product.

Rent and taxes.—The taxes include certain Federal taxes and state, county, and local taxes. Under "Federal taxes" there are included the internal-revenue tax on manufactures (tobacco, beverages, etc.), excise taxes when included in values reported for products, corporation capital stock tax, and corporation income tax, but not the income tax for individuals and partners.

Value of products.—The amounts given under this heading represent the selling value or price at the factory of all products manufactured during the year, which may differ from the value of the products sold.

Value added by manufacture. The value of products is not always a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing processes carried on in the industry itself. Another part, and often by far the larger one, represents the value of the materials used. For many purposes, therefore, the best measure of the importance of an industry, from a manufacturing standpoint, is the value created by the manufacturing operations carried on within the industry. This value is calculated by deducting the cost of the materials used from the value of the products. The figure thus obtained is termed in the census reports "value added by manufacture."

Cost of manufacture and profits.—The census data do not show the entire cost of manufacture, and consequently can not be used for the calculation of profits. No account has been taken of depreciation or interest, rent of offices and buildings other than factory or works, insurance, ordinary repairs, advertising, and other sundry expenses.

Primary horsepower.—This item represents the total primary power generated by the manufacturing establishments plus the amount of power, principally electric, rented from other concerns. It does not cover the power of electric motors taking their current from dynamos driven by primary power machines operated by the same establishment, because the inclusion of such power would obviously result in duplication. The figures for primary horsepower represent the rated capacity of the engines, motors, etc., and not the amount of power in actual daily use.

Fuel.—Statistics of the quantity of fuel used are shown only for anthracite and bituminous coal, coke, fuel oils, gasoline and other volatile oils, and gas—natural and manufactured—and represent the quantity used during the year. As only the principal kinds of fuel are shown, comparison as to the total cost of all fuel is impracticable. A comparison, however, of the total quantities of the several kinds of fuel used in 1919 and 1914 is given.

<sup>1</sup> The figures represent the number employed on the 15th of each month or the nearest representative day. Maximum number indicated by bold-faced figures, minimum by ttalic figures.

Size of establishments, by value of products (Table 11).—At the censuses of 1909 and 1914 establishments with products valued at "\$100,000 to \$1,000,000" constituted one group, but at the census of 1919 this group was subdivided into "\$100,000 to \$500,000" and "\$500,000 to \$1,000,000." Separate figures for the number of establishments and value of products have been compiled, however, from the returns for 1914. The table, therefore, gives combined figures for these two groups for all items for 1909, and in the case of average number of wage earners and value added by manufacture for 1914.

Size of establishments, by value of products, for selected industries (Table 12).—In the preparation of this table it was necessary in some instances to combine the establishments of one group of the industry with those of some other group of that industry to avoid the possibility of disclosing the operations of individual establishments.

Size of establishments, by value of products, for cities of 10,000 inhabitants or more (Table 13).—This table strikingly illustrates the fact that the number of establishments of itself is no real index of the extent of manufacturing activities.

Character of ownership (Table 14).—The predominance of corporate ownership is clearly brought out in this table. Although corporations owned but 39.5 per cent of the number of establishments in the state in 1919, they reported 87.1 per cent of the average number of wage earners and 86.8 per cent of the total value of products. During the five-year period 1914 to 1919, the average number of wage earners in corporations increased 121,072, or 24.2 per cent, and the value of products, \$2,136,719,997, or 158.7 per cent.

Manufactures, by population groups, in cities of 10,000 inhabitants or more (Table 15).—This table

shows that the combined number of establishments in the 66 cities in 1919 represented 83.5 per cent of the total in the state. They reported in that year 85.4 per cent of the average number of wage earners, and 86.3 per cent of the value of products and also of the value added by manufacture.

Principal industries in each of the 13 cities in the state having more than 50,000 inhabitants, with per cent of total for state (Table 16).—This table presents the principal industries in these cities, the figures being given for those which can be shown without disclosing the operations of individual establishments.

Number and horsepower of types of prime movers (Table 17).—The total horsepower reported in 1919, as compared with that for 1914, shows an increase of 333,156 horsepower, or 23.9 per cent. This increase was wholly in rented power which increased 348,268 horsepower, or 161.1 per cent; while owned power decreased 15,112 horsepower, or 1.3 per cent, during the five-year period.

Fuel consumed (Table 18).—This table shows the principal kinds of fuel used by the manufacturing plants in the state in 1919 and 1914, and gives separately for 1919 the amounts consumed by a number of important industries which use considerable quantities of fuel. Of the anthracite coal, the largest quantity shown for any single industry was 116,577 tons, or 16.8 per cent, used in the manufacture of gas. This industry was also the largest consumer of fuel oils, with 1,785,175 barrels, or 48.7 per cent, and the second largest consumer of bituminous coal and of coke, with 10.2 per cent and 23.9 per cent, respectively. The largest consumption of bituminous coal was in the cotton-goods industry, 1,089,589 tons, or 19.3 per cent; while steam-railroad repair shops were the largest consumers of coke, with 200,271 tons, or 40 per cent.

\* Among the industries for which statistics can not be shown separately without the possibility of disclosing the operations of individual establishments are six having products in excess of some for which figures are shown in the table. These industries are as follows: "Cars, steam-railroad, not including operations of railroad companies"; "Jute goods"; "labels and tags"; "shipbuilding, steal"; "sugar, refining, not including beet sugar"; and "watches."

#### SPECIAL STATISTICS.

For a number of important industries the Census Bureau collects, by means of special schedules, certain details which do not appear on the general schedule. Data for 11 of these industries in Massachusetts are here presented.

Textiles (Table 19).—This table shows the total value of products relating to the manufacture of textiles in Massachusetts and the comparative importance of the different branches as measured by value of products for 1919, 1914, and 1909. Considered as a whole, this state is the most prominent textile manufacturing center in the United States, and in 1919 ranked first with 21.6 per cent of the total value of the several classes of textiles produced in all states. In 1919 the combined textile industry was the leading industry in Massachusetts, contributing 27.9 per cent to the total value of products for all industries in the state.

The proportions of the textile industry in this state have expanded in many directions until in 1919 the various kinds of textile industries combined, with 587 establishments, gave employment to an average of 209,489 wage earners; the value of their products amounted to \$1,120,543,711 and the value added by manufacture to \$438,098,778. In addition to leading in 1919 in the production of textiles in the aggregate, the state ranked first in 8 of the 17 distinctive branches, namely, cotton goods, worsted goods, woolen goods, cordage and twine, jute goods, oilcloth, enameled, wool shoddy, and linen goods; second in felt goods, and hats, wool-felt; and third in knit goods, carpets and rugs, other than rag, and cotton small wares.

The principal branches of the textile industry for the state are shown in detail in Tables 20, 21, 22, and 23.

1 Wool-felt hats included with "other textile industries" to avoid disclosure of

Cotton goods, including cotton small wares (Table 20).—This table shows the quantity and cost of the

principal materials used and the quantity and value of the chief products for the manufacture of cotton goods, including cotton small wares, for the census years 1919, 1914, and 1909.

Massachusetts, from an early period in the history of the cotton mill, has been the leading state in the consumption of raw cotton. Among the different kinds of materials used in this industry in the state during 1919, raw cotton was of first importance. In 1919 this raw material formed over one-half of the total cost of all materials used in the cotton industry in the state, and showed an increase of 6 per cent over the quantity used in 1914. The mills in the state usually consume about one-half of the total foreign cotton used in the United States. This special cotton, which is mostly Egyptian, is used chiefly in the manufacture of yarn for sale, tire fabrics, and sewing thread, and to a less extent in the manufacture of such fabrics as organdies, lawns, nainsooks, and shirtings. In 1919 Massachusetts was the principal cotton-yarn market of the United States and this material was the second item of cost in the list of component materials used in the manufacture of cotton goods in the state; while silk, in the form of raw silk and silk yarns, chiefly used for decorative purposes in cotton fabrics, was third.

Among the industries in Massachusetts at the census of 1919, cotton goods ranked first in value of products. There are many other large industries within the state. and, as a result, the value of products for this industry represented only 15.1 per cent of the total value of products for all industries. Massachusetts also ranked first among the states in the value of cotton goods, with 27.9 per cent of the total in the United States, or nearly double that of the second largest cotton manufacturing state. Woven goods was the chief outstanding product, with 64.5 per cent of the total value of products for the industry in the state, and 26.2 per cent of the total cotton woven goods in the United States. Yarn, manufactured for sale, was second in importance, with 24.1 per cent of the total value of cotton goods in the state, and 32 per cent of the total for cotton yarn, manufactured for sale, in the United States. The following will enumerate some of the different kinds of woven goods for which the state held first rank in the United States. They are arranged in their order of importance according to the value within the state, followed by the percentage that each bears to the total value of the respective product for the United States: Tire duck and other tire fabrics, 34.7 per cent; lawns, nainsooks, cambrics, and similar muslins, 55.1 per cent; shirtings, 36.9 per cent; ginghams, 32.2 per cent; twills, sateens, etc., 24.9 per cent; cotton blankets, 44.8 per cent; and tobacco, cheese, butter, bunting, and bandage cloths, 82.6 per cent.

<sup>\*</sup> Wool-felt hats included with "other textile industries" to avoid disclosure of individual operations.

\* Includes "jute goods," to avoid disclosure of individual operations.

\* Includes "hats, fur-felt"; "hats, wool-felt"; and "wool shoddy" for all years:
"jute goods" for 1919; and "oilcloth, enameled," for 1919 and 1909.

Wool manufactures (Table 21).—The following table shows in detail the quantity and cost of materials used in wool manufactures, and the quantity and value of the principal products in Massachusetts for 1919, 1914, and 1909.

Wool manufactures as presented in Table 21 includes five branches or types of textile manufacturing, the titles of which are descriptive of their product. These branches and the value of products for 1919 are as follows: Worsted goods, \$237,443,077; woolen goods, \$105,183,068; carpets and rugs, other than rag, \$13,593,990; felt goods, \$10,286,361, and wool-felt hats, which is included in "all other products" to avoid disclosure of individual operations. In 1919 woolen goods and worsted goods combined formed 93.5 per cent of the total value of wool manufactures in the state.

Massachusetts has ranked first in the manufacture of woolen and worsted goods in the United States since the first Federal census of manufactures. The value of woolen and worsted goods produced in this state during 1919 formed 32.2 per cent of the total for the United States, or nearly double that of the second state in rank. During a considerable part of the census year 1919, the operation of the wool manufactures industry for the United States was below normal, and according to the monthly reports of "Active and idle wool machinery," received by the Bureau of the Census. the per cent of idle machinery averaged for the year in sets of woolen cards, 18.3 per cent; combs, 18.5 per cent; woolen spindles, 18.8 per cent; worsted spindles. 23.2 per cent; looms wider than 50-inch reed space. 31.1 per cent; looms under 50-inch reed space, 29.1

<sup>&</sup>lt;sup>2</sup>Not reported in 1914 and 1909.

per cent; and carpet and rug looms, 46 per cent. Cards, combs, and spindles used in connection with the manufacture of knit goods were included in the "Active and idle wool machinery" reports, but with the comparatively small amount of such machinery in the knit-goods industry they would have little effect on the per cents as shown above.

Wool, forming 47.5 per cent of the total cost of materials, and yarns, forming 21.4 per cent, were the two chief materials used in wool manufactures. The cost of worsted yarn formed 67 per cent of the various kinds of yarns used. Fashion makes many demands upon this industry in the designing of its products, and the fluctuations in the different kinds of materials used, as reported from census to census, might be attributed principally to this cause.

 Figures not available.

The products reported for this industry were largely woven fabrics to be used in the manufacture of clothing, the value of such fabrics forming 70.5 per cent of the total for this industry in Massachusetts for 1919. The main divisions of woven fabrics show that in the value of products, all-wool goods was of chief importance; cotton-warp goods, second; and wool and cotton-mixed goods, third; forming 73.2 per cent, 22.3 per cent, and 4.5 per cent, respectively, of the total for this group in 1919.

The carpet and rug branch of the wool manufactures industry has had many interruptions, and has undergone many changes since the census of 1914. Of the total value of the products of the carpet and rug industry in the state in 1909 and 1914, carpets formed 85.2 per cent and 85.9 per cent, respectively. In 1919, however, the reverse condition existed, the value of rugs forming 79.8 per cent of the total for the industry. Large quantities of yarn are usually produced for sale, and in 1919 the value of such products represented 14.4 per cent of the total value of products for this industry in the state.

Knit goods (Table 22).—Cotton is the principal raw material used in the manufacture of knit goods in Massachusetts. According to cost, purchased yarns consist chiefly of cotton, worsted, and artificial silk. In addition to the manufacture of a considerable quantity of cotton yarn for consumption within establishments where it is made, a large amount is purchased.

Of the total value of the knit goods industry in the state in 1919, hosiery contributed 39.1 per cent. Underwear, exclusive of tights, was second, forming 36.4 per cent of the total value. In keeping with the general trend of the industry in the United States, the production of separate shirts and drawers has diminished with the increase in the production of union suits.

1 Not reported separately.

A general increase in the volume of production is shown, and the most noticeable change from 1914 to 1919 is the increase in the quantity of "silk and silk mixed," and "other hosiery"—largely wool and merino—with the decrease in cotton hosiery manufactured.

Silk manufactures (Table 23).—There were 21 establishments engaged in the silk-manufacturing industry in Massachusetts in 1919.

Table 23 shows the quantity and cost of the principal materials used and the quantity and value of the different products manufactured during 1919, 1914, and 1909.

Massachusetts ranked fifth, in value of products, in the manufacture of silk textiles in the United States during the year 1919. Raw silk, silk waste, and mercerized cotton yarn were among the most important materials used in 1919 and formed 47.9 per cent, 29 per cent, and 5.7 per cent, respectively, of the total cost of materials. Small quantities of silk yarns were purchased, but the weaving mills did the larger part of their own throwing.

<sup>1</sup> Figures not available.
2 Figures can not be shown separately without disclosing individual operations.

Broad-silk fabrics was the principal product of the industry reported for the last three census periods and formed over one-half of the total value of products at each census. It will be noted that these fabrics were chiefly all silk in 1919 and that silk-mixed goods predominated in 1914. In 1919 a large share of broad silks composed of all silk was yarn dyed. Next to broad silks in 1919, spun-silk yarn was the most important product of the industry, and the combined values of these two types of products formed 76.9 per cent

of the total. No pronounced variation in the industry has taken place during the last 10 years, except that from 1914 to 1919 broad silks made of all silk increased 81.8 per cent in quantity, while broad-silk mixtures decreased 29.9 per cent and, in common with all industries, inflated values prevailed in 1919.

Machinery used in textile mills (Table 24).—The different kinds of machines, which have been accepted by textile manufacturers as best indicating the trend of their industry, are shown in detail in Table 24, for several branches of textiles in Massachusetts for 1919, 1914, and 1909.

A considerable portion of the textile machinery of the United States is located in mills in Massachusetts. At the census of 1919 this state contributed to the total about one-third each of the producing cotton spindles, the producing spindles in wool manufactures, looms in cotton mills, looms in wool manufactures, sets of woolen cards, and wool-combing machines. In these types of machines and spindles Massachusetts is surpassed in number by no other state in the Union.

The number of spindles and looms shown within each industry are without consideration for the kind of fiber upon which they were operating. The total number of producing spindles used in the state in 1919 shows an increase of 6.1 per cent over those used in 1914; the knitting machines, an increase of 2.1 per cent; the sets of woolen cards an increase of 16.1 per cent; the number of looms a decrease of 1.1 per cent; and the number of wool-combing machines a decrease of 6.1 per cent.

<sup>2</sup> Includes 869 idle knitting machines.

The cotton industry in Massachusetts reported 86 per cent of the total number of active producing spindles for the state in 1919, and the woolen, worsted, and felt goods industries, 10.9 per cent. All of the industries show increases in active spindles for the

five-year period with the exception of the carpet and rug industry, which shows a decrease of 9.7 per cent.

Leather, tanned, curried, and finished (Tables 25 and 26).—Table 25 shows the quantity and cost of the principal materials used and the quantity and value of the chief products of the leather industry for 1919, 1914, and 1909.

The number of cattle hides treated in 1919, as compared with 1914, shows an increase of 869,902, or 113.8 per cent. The total number of skins treated, however, shows a decrease during this period of 8,820,778, or 31.9 per cent. The falling off was mainly in sheep and lamb skins, which decreased 7,905,408, or 46.7 per cent; there was also a decrease of 1,517,213, or 26.9 per cent, in the number of calf and kip skins. The number of goat and kid skins treated increased by 601,843, or 11.7 per cent. The total cost of hides and skins used in 1919 shows an increase of \$33,591,136, or 124.9 per cent over the cost for 1914, notwithstanding a decrease in the total number. Considering all kinds of hides and skins on a unit cost basis, the increase was from 95 cents in 1914 to \$2.95 in 1919.

The value of products for the industry in the state in 1919 formed 14 per cent of its total for the United States, a larger proportion than for any prior census. From 1914 to 1919 the total value of products increased \$84,329,528, or 186.3 per cent. While each of the four classes of leather shows decided increases

<sup>&</sup>lt;sup>8</sup> Includes shoddy cards.

in value during this period, the largest actual increase was in calf and kip skins, \$15,477,034, or 116.6 per cent; but the largest per cent of increase was for goat and kid skins, \$11,870,053, or 278.8 per cent. Most of the skins reported were used in the manufacture of upper leather, although fancy, bookbinders, glove, roller leather, etc., were manufactured to some extent. "All other leather" in Table 25 includes belting, patent, sole, case, bag and strap, finished splits, cabretta skins, etc.

The amount received for work on materials for others, which was 17 per cent greater in 1914 than 1909, was 282.2 per cent greater in 1919 than in 1914. This large increase was due not only to the higher charges for custom work, but also to a larger volume of business done. Of 239 establishments doing custom tanning in the United States, 82 were located in Massachusetts.

Table 26 gives for 1919 the quantity and value for some of the principal finished products of the leather industry. In the preceding Table these products are shown by kinds of skins.

Boots and shoes (Tables 27 and 28).—Table 27 shows, by classes, the number of pairs of footwear manufactured in the state for 1919, 1914, and 1909, and Table 28 shows for 1919 and 1914 this footwear by method of manufacture.

Massachusetts continues to rank first among the states in the manufacture of footwear. The state's proportion of the total quantity produced for the industry in the United States, however, was 35.3 per cent in 1919, as compared with 39.4 per cent in 1914, and 41.4 per cent in 1909. This proportionate decrease was due to large gains made by some of the other states, since there was an actual increase in Massachusetts of 1,768,529 pairs, or 1.5 per cent, for the period 1914–1919. In contrast to this slight gain in quantity, the aggregate value increased by \$241,936,-378, or 120.6 per cent, for the same period. The number of women's shoes increased by 12,955,602 pairs, or 40.1 per cent. All other classes, including slippers, show decreases. "All other footwear" includes moc-

casins, sandals, athletic, sporting, and canvas shoes, and footwear not strictly boots and shoes. Work done for others consists of the making of buttonholes in uppers, stitching, crimping, and general contract work.

<sup>1</sup> Includes "stitchdown" to avoid disclosure of individual operations.
2 Includes "welted" and "stitchdown."
3 Includes "welted."

Of the boots and shoes manufactured in Massachusetts, 50.4 per cent were of the welted type, 28.7 per cent McKay, and 20.8 per cent other types. The corresponding percentages in 1914 were 48, 33.3, and 18.8. The gain shown in number of pairs of welted shoes produced exceeded the total increase of all other types combined. The manufacture of the McKay, always a prominent type in the state, has steadily declined since 1909. In 1909, although not shown in this table, the McKay make formed 37.9 per cent of the total; while in 1919 the percentage was but 28.7 per cent. In 1919, 66.8 per cent of the welted type were men's and 27 per cent were women's. On the other hand, 63 per cent of the McKay were women's and only 7.3 per cent men's. The greater portion of men's boots and shoes, 87.1 per cent, were made by the welted method; while women's shoes were 41 per cent McKay, 30.9 per cent welted, and 27.7 per cent turned. Although boys' and youths' and misses' and children's shoes were principally of the McKay type, a considerable proportion of the misses' and children's were of the turned type.

Slaughtering and meat packing (Table 29).—This table presents for the census years 1919, 1914, and 1909, data for both materials and products in detail.

The cost of "All other materials" includes that for dressed meat purchased for curing, cottonseed oil, refrigeration, curing materials, seasoning, fuel, rent of power, containers, mill supplies, and freight; the value of "All other products" includes that for beef, pickled and other cured, canned pork, meat puddings, lard compounds, oleo and other oils, oleo stearin, hog and cattle hair, wool, wooden boxes, cooperage, and skins.

The growth of the industry, when measured by cost of materials and value of products, shows large increases from 1914 to 1919. That for total cost of materials was \$55,807,001, or 122.8 per cent; for cost of animals slaughtered, \$42,875,025, or 123.5 per cent; and for "All other materials," \$12,931,976, or 120.6 per cent. The growth as indicated by the increase in the total number of animals slaughtered, however, was very slight, this increase being only 113,896, or 6.2 per cent, during the five-year period. In fact, the number of beeves and sheep and lambs combined decreased 173,985, or 38.6 per cent, the increase being in calves and hogs, which was 287,881, or 20.9 per cent.

In 1919, compared with 1914, the total value of products for the industry in the state shows an increase of \$58,513,518, or 113.1 per cent. The total value for all fresh meats increased \$8,777,745, or 46.9 per cent, but the combined quantity of the several kinds of fresh meats decreased 27,312,379 pounds, or 18.5 per cent. During this five-year period the largest single product, pork, pickled and other cured, in-

creased 17,283,120 pounds in quantity, or 14.4 per cent, and \$24,542,929, or 148.4 per cent, in value.

Electrical machinery, apparatus, and supplies (Table 30).—This table presents details for the products of the industry in the state for 1919. Comparative statistics of this character are not available for prior censuses, but the total value of products for the industry in Massachusetts in 1919, as compared with that for 1914, shows an increase of \$48,069,444, or 109.6 per cent.

Not reported separately.

<sup>&</sup>lt;sup>1</sup> In addition, electrical machinery, apparatus, and supplies to the value of \$108,778 were reported in 1919 by establishments engaged primarily in other industries.

<sup>2</sup> Includes articles that can not be shown separately without disclosing individual operations, such as transformers, magneto-ignition apparatus, electric measuring instruments, carbons, are lamps, rectifying apparatus, insulators, wiring supplies, annunciators, X-ray tubes, etc.

Paper and wood pulp (Table 31).—This industry in Massachusetts consists almost entirely in the manufacture of paper, only one establishment producing wood pulp for sale and three manufacturing it for their own use. This table gives the quantity and cost of materials used, the quantity and value of the principal products, and detailed information regarding equipment, for 1919, 1914, and 1909.

<sup>1</sup> Not reported. <sup>2</sup> Reported in 1909 as "Other chemical fiber." <sup>3</sup> Not reported separately. <sup>4</sup> Reported as "Writing and other fine paper" in 1914 and 1909.

The item "All other materials" includes the cost of sizing, chemicals, sulphur, dyestuffs, freight, and mill supplies.

Fine paper, including writing paper, was the principal product of the industry in the state at each census, forming 39.9 per cent of the total value of all products in 1919. Book paper was the next in importance in this respect, representing 24.4 per cent at that census. In 1919 Massachusetts produced 28 per cent of the total quantity of fine paper manufactured in the United States. In 1914 the corresponding proportion was 35.1 per cent, and in 1909, 45.2 per cent. To avoid disclosing the data of individual establishments, it was necessary to include the value of tissue paper, tag stock, poster, novel, blotting paper, newspaper, hanging paper, etc., and wood pulp produced for sale in "All other products."

Textile machinery and parts (Table 32).—Separate statistics for the manufacture of textile machinery have not been shown at prior censuses, but were included in the general classification "Foundry and machine-shop products." Massachusetts led in 1919 in the manufacture of textile machinery, reporting 53.7 per cent of the total value of products for the United States. The details presented in Table 32 give only such items as can be shown without the possibility of disclosing the operations of individual establishments.

Printing and publishing (Tables 33 and 34).—Table 33 shows the number and aggregate circulation per issue of all the newspapers and periodicals published in Massachusetts as reported at the censuses of 1919, 1914, and 1909.

TABLE 33.—PRINTING AND PUBLISHING: 1919, 1914, AND 1909.

PERIOD OF ISSUE.		MBER LICATIO		AGGRE	ATION	
	1919	1914	1909	1919	1914	1909

<sup>1</sup> Includes 2 triweekly publications in 1919, and 3 in 1914 and 1909.
2 Includes 10 semimonthly publications in 1919; 12, in 1914; and 5, in 1909.
3 Includes 4 bimonthly and 1 four-times-a-week publications in 1919; 9 bimonthly publications, 2 semiannuals, and 1 semiquarterly in 1914; and 7 bimonthly and 7 "All other" publications in 1909.

The decrease in total circulation is due to the removal to New York City of one weekly of large circulation and to the reduction in reported circulation of several quarterly publications of religious and charitable type.

The circulation of daily newspapers increased 24,944, or 1.2 per cent, during the five years from 1914 to 1919 and 319,597, or 18.1 per cent, during the decade. The low rate of increase for the five-year period is due to the consolidation of certain leading dailies and to the extinction of others.

Of the daily circulation as reported for 1919, 1,231,070, or 59 per cent, is shown for the 66 afternoon newspapers. The Sunday circulation shows an increase of 173,393, or 13.6 per cent, from 1914 to 1919; and of 322,797, or 28.8 per cent, during the decade.

Table 34 shows the number and, so far as possible without disclosure of individual establishments, the

circulation of foreign-language newspapers and periodicals, compared with those in English, by period of issue, for the censuses of 1919, 1914, and 1909.

Table 34.—Printing and Publishing, by Languages: 1919, 1914, and 1909.

	1914	68	2,008,367	64	1,614,517	4	393,850
	1909	56	2,069,549	48	1,818,317	8	251,232

Includes in 1919, 2 triweeklies and 4 semiweeklies in English, and 1 triweekly and 1 semiweekly in foreign languages; in 1914, 3 semiweeklies and 2 triweeklies in English, and 4 semiweeklies and 1 triweekly in foreign languages; in 1909, 1 semiweekly and 2 triweeklies in English, and 4 semiweeklies and 1 triweekly in foreign languages.

weakly and 2 triweeklies in Engusii, and a seman consideration languages.

<sup>2</sup> Included in "all other classes" to avoid disclosure of individual operations.

<sup>3</sup> Includes in 1919, 9 semimonthly and 4 bimonthly publications, and 4 quarterlies in foreign languages; in 1914, 10 semimonthly and 9 bimonthly publications, 42 quarterlies, and 3 "all other" in English, and 2 semimonthly publications and 2 quarterlies, and in 1909, 5 semimonthly and 7 bimonthly publications, 30 quarterlies, and 6 "all other" in English, and 6 monthly publications, 1 quarterly, and 1 "all other" in foreign languages.

The decrease in the total circulation of foreign-language publications since 1914 was 247,944, or 41 per cent.

It is of interest to note that the French publications show the largest increase in circulation—75,973—which was due to the issuance of a quarterly religious and charitable publication formerly printed in English-and-French. German publications decreased by four, but the circulation as reported increased slightly. The other leading foreign-language publications were those in Portuguese, Lithuanian, Polish, Italian, and Finnish. Albanian, Dutch, Spanish, and Syrian were newcomers in census returns for Massachusetts, while Esperanto and Yiddish publications disappeared during the five-year period from 1914 to 1919.

The daily foreign-language newspapers were in Albanian, Armenian, Finnish, French, Italian, Polish, and Portuguese.

Laundries (Table 35).—Statistics for power laundries are not included in the general tables nor in the totals for manufacturing industries. Table 35, however, summarizes the statistics for such laundries in the state for 1919 and 1914.

TABLE 35.—Power Laundries: 1919 and 1914.

Dyeing and cleaning (Table 36).—Statistics for dyeing and cleaning establishments that were operated by mechanical power in 1919 are presented in this table. Statistics for such establishments are not included in the general tables nor in the totals for manufacturing industries for censuses since 1900. This presentation is the first of its kind that has been made since the census statistics were confined to manufacturing industries as distinguished from the hand trades, household industries, etc.

TABLE 36.—DYEING AND CLEANING: 1919.

Custom sawmills and gristmills (Tables 37 and 38).— Statistics for custom sawmills and custom gristmills are not included in the general tables nor in the totals for manufacturing industries. Data for custom mills were not collected in 1914. Tables 37 and 38, however, summarize the statistics for such mills for 1919 and 1909. The value of products for custom sawmills represents the amount charged for the work performed and that for custom gristmills the selling value of the grain milled.

#### GENERAL TABLES.

Table 39 gives, for 1919, 1914, and 1909 for selected industries in the state and in 12 cities having 50,000 inhabitants or more the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products, while for Haverhill and for cities of 10,000 to 50,000 inhabitants for which comparable figures are available, similar data for all industries combined.

Table 40 presents, for 1919, for the state as a whole and for the 13 cities having 50,000 inhabitants or more, statistics in detail for each industry for which figures can be shown without disclosing the operations of individual establishments; and for cities of 10,000 to 50,000 inhabitants, similar data for all industries combined.

Includes "automobile repairing"; "iron and steel, welding"; "pumps, steam"; "steam fittings and steam and hot-water heating apparatus" in all years; and "structural ironwork, not made in steel works or rolling mills," in 1914 and 1909.

Includes "bookbinding and blank-book making" in all years; and "engraving, steel and copper plate, including plate printing"; and "lithographing" in 1914 and 1909.

Includes "how and steel, welding"; "pumps, steam fittings and steam and hot-water heating apparatus"; and "textile machinery and parts" in all years; "automobile repairing" in 1919; and "structural ironwork, not made in steel works or rolling mills," in 1914 and 1909.

Includes "hoxes, wooden packing, except cigar boxes"; and "lumber, planing-mill products, not including planing mills connected with sawmills."

Excludes statistics for 1 establishment manufacturing woolen goods, to avoid disclosure of individual operations.

Includes "hoxes, wooden packing, oxcept cigar boxes," and "lumber, planing-mill products, not including planing mills connected with sawmills."

Includes "in 1919.

Includes "perfumery and cosmetics" in 1914.

Includes "perfumery and cosmetics" in 1914.

Includes "perfumery and cosmetics" in 1914.

Includes "bookbinding and blank-book making" in all years, and "engraving, steel and copper plate, including plate printing," in 1919.

Includes "automobile repairing" in all years, and "engraving, steel and copper plate, including plate printing," in 1919.

# MINES AND QUARRIES-MASSACHUSETTS.

# EXPLANATION OF TERMS.

Scope of census and period covered.—The census of mines, quarries, and petroleum or natural-gas wells does not cover enterprises which were idle; that is, in which neither productive nor development work was done during the entire year, or the products of which were valued at less than \$500; or in the case of bituminous coal mining, producing less than 1,000 tons, or, if not productive, in which development work amounting to less than \$5,000 was done. The returns relate to the calendar year 1919. When use is made of the statistics relating to character of ownership, size of enterprises, and similar subjects, it is imperative that due attention be given their limitations, particularly in connection with any attempt to show average wages, cost of production, or profits.

The enterprise.—The term "enterprise" represents one or more mines and quarries, wells or groups of wells, or natural-gas gasoline plants, all within the same state, operated under a common ownership or unified control, or for which only one set of books of account was kept, and for which a single report was secured. It may cover plants at several localities within the same state. If plants under unified control were not all located within the same state, separate reports were secured in order that statistics for the several enterprises thus defined might be included in statistics for the states in which they were located. The enterprise is further defined as being limited to a single industry.

Number of mines, quarries, wells, and plants.—Under these designations is given the number of mines, quarries, wells, and gasoline plants shown by the returns. As a rule each group of workings at a given locality in which operations were conducted as a unit or were unified by common management or joint handling of some part of the mining process, has been considered as a single mine or quarry. Many individual openings, therefore, are not counted as individual mines. The total number reported comprises those in operation or in the course of development during the year 1919. For petroleum and natural-gas wells the individual wells were counted and the total number productive December 31, 1919, is reported. The number of natural-gas gasoline plants is the total number reported in operation during the year.

Classification by industries.—The enterprises reported have been grouped by industries according to the kind of products.

Selected industries.—The detailed table gives the principal facts separately for the leading industries of the state.

Influence of increased prices.—In comparing figures for cost of supplies and materials and value of products with the corresponding figures for earlier censuses, account should be taken of the general increase in the prices of commodities during recent years.

Persons engaged in the industry.—The number of persons engaged in each industry, by occupation, sex, and, in the case of wage earners, also by age, was reported for a single representative day. In addition to the number of wage earners on the representative date, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported for the several months by 12.

Salaries and wages.—Under these heads are given the total payments during the year for salaries and wages, respectively.

Prevailing hours of labor.—This inquiry called merely for the prevailing practice followed in each enterprise. Occasional variations in hours from one part of the year to another were disregarded, and also where a few wage earners might have hours differing from the majority. All the wage earners of each enterprise are therefore counted in the class within which the enterprise falls.

Capital.—The instructions on the schedule relating to capital were as follows: "The answer should show the total amount of capital, owned and borrowed, invested by the operator in the enterprise on the last day of the business year reported. Do not include securities and loans representing investments in other enterprises." The reports received in respect to capital, however, have in so many cases been defective that the data compiled only indicate very general conditions.

Expenses.—The expenses reported in the census of 1919 include salaries and wages; the cost of supplies, materials, and fuels, including the freight on these; cost of power purchased; the cost of contract work; royalties and rents paid; and taxes paid or assessed. The census of 1909 reported in addition to the items of expenses covered by the present census all other items of expense incident to that year's business, except interest on indebtedness, dividends, and allowances for depreciation.

Supplies and materials, fuel, and power.—Statistics as to supplies and materials, fuel, and power, relate to the cost of these used during the year which may be more or less than the amount purchased during the year. The term "supplies and materials" covers mine, mill, quarry, and well supplies, and mineral purchased for treatment, resale, or distribution.

Royalties and rents.—The amounts given under this head represent the payment to fee holders or the value of share of product credited to fee holders for mineral output from leased land, and also rents paid for plants, equipment, and privileges or easements.

Taxes.—The taxes include Federal capital stock; corporation income, and excess profits tax; and also state, county, and local taxes. The data compiled in respect to Federal taxes are very defective as many mining corporations are engaged in other business and have sources of income other than from mining and do not pay taxes on mining separately.

Expenditures for development work.—In the statistics for producing enterprises that part of the expenses for salaries, wages, contract work, supplies and materials, fuel, and power credited to development work is shown as expenditures for development work. For nonproducing enterprises the total of these expenses is given as expenditure for development work.

Quantity of products.—In so far as the statistics on quantities of mineral products in 1919 are available for the states, they will be found in the reports of the United States Geological Survey.

Value of products.—The amounts given under this heading represent the selling value at point of production or f. o. b. at point of shipment, or such other value as may represent the net value or amount received for the 1919 product under the terms by which it was disposed of, and also includes the value at point of production of products used by the operating company.

Cost of mining and profits.—The data do not show entire cost of mining and well operations, and can not be used for the calculation of profits. No account was taken of depreciation or interest; rent of offices and buildings other than those for mines, quarries, and wells; insurance, selling, and other sundry expenses.

Lands controlled.—The inquiry on land tenure was confined to land pertaining to the operations covered by the report. In many of these, however, land held in reserve for future development and for other purposes not pertaining to mining was included and also a large number of more or less unsatisfactory estimates.

Power used.—The figures on power represent the rated capacity of the engines, motors, etc., and not the amount in actual daily use.

Fuel.—Statistics of fuel are shown only for anthracite and bituminous coal, coke, wood, oil, and gas. As only the principal varieties of fuel are shown, no comparison can be made with the total cost.

#### STATISTICS FOR THE STATE.

Massachusetts, which ranks forty-fourth among the states in size (land area 8,039 square miles) and sixth in population (3,852,356 in 1920), ranked thirty-sixth in value of mineral products for 1919. The state ranked thirty-sixth also in total number of persons engaged in the mining industries and thirty-eighth in the average number of wage earners employed.

The total value of products of all mines and quarries in Massachusetts in 1919 was \$4,175,699, which was an increase of 20.4 per cent over the value reported at the census of 1909. The total amount given as value of products includes the value of a small quantity of fuller's earth produced as a byproduct by an enterprise classified as a basalt-quarrying operation, and also includes small amounts received for power sold and for miscellaneous services performed for other enterprises.

Decreases in the number of enterprises, in the number of individual mines and quarries operated, in the number of persons engaged, and in the capital invested in the mining industries, as shown in Table 1, marked the decline of mining and quarrying in the state of Massachusetts. Increases in salaries, wages, cost of supplies and materials and fuel and power, and in the value of products are largely due to general price increases since 1909, and are not indicative of growth in the industries. The large increase shown in taxes is accounted for by impost of Federal income taxes since 1909.

The mining and quarrying industries reported for 1919, classified by principal products and listed in order of value of products, were granite, basalt, marble, iron ore, limestone, tale and soapstone, silica, sandstone, fuller's earth, and clay. The industries for which statistics can be shown without disclosure of individual operations are ranked by value of products in Table 2.

Granite quarrying, the leading mineral industry in Massachusetts, produced stone valued at \$2,405,165 in 1919, which amount is 57.6 per cent of the value of all mineral products in the state.

The industry next in importance, basalt quarrying, produced stone to the value of \$1,548,611, which is 37.1 per cent of the total value of products for the

state. All the stone quarrying industries combined, i. e., granite, basalt, marble, limestone, and sandstone, accounted for approximately 99 per cent of the value of all mineral products.

Table 3 shows that among the operators of mining enterprises in Massachusetts the corporation was the most common form of organization; 52.7 per cent of the total number of enterprises were corporations. They employed 78.8 per cent of all wage earners in the mining industries in the state and reported 77.2 per cent of the total value of all mineral products. The table also shows that in the granite industry ownership or control by individuals slightly exceeded that by corporations, but that the latter conducted larger and more important enterprises.

The relatively large number of small enterprises, as determined by the average number of wage earners employed, is brought out by Table 4. Of the total number of mining and quarrying enterprises, 93.2 per cent were in classes having less than 51 wage earners and such enterprises employed 62 per cent of the total number of wage earners. Enterprises employing more than 50 wage earners constituted 6.8 per cent of the total number of enterprises and employed 37.9 per cent of the total number of wage earners. Only one enterprise in this state in 1919 had more than 100 wage earners; this, in the granite industry, employed 343 wage earners, or 20.1 per cent of the total number.

Table 5 shows that in a majority of the enterprises and for approximately 60 per cent of the wage earners in all the mining industries in the state in 1919 the prevailing hours of labor were 44 to 53 per week. For more than two-thirds of the enterprises and for 86.3 per cent of the wage earners in the basalt industry the hours of labor per week were 54 to 62 and the 9-hour day was the rule.

The statistics for wage earners presented in Table 6, showing changes in the number employed month by month, reflect conditions prevailing in the industries during the census year.

Table 7 presents for 1919 statistics in detail for the state as a whole and for each industry that can be shown without disclosure of individual operations.
