¹ The number of whites and Negroes is less than total population, because of the inclusion in the total of other nonwhites (Indians, Chinese, Japanese, and "all other"). ² Continental United States only. The total population of the United States, including outlying possessions, is 117,523,165, as follows: Continental United States, (Dec. 31, 1918); Virgin Islands, 26,051 (Nov. 1, 1917); military and naval, etc., services abroad, 117,228.

STATE COMPENDIUM.

FOR POPULATION, AGRICULTURE, MANUFACTURES, AND MINES AND QUARRIES.

¹ The gross value of farm products, obtained by adding the value of crops, livestock products, etc., contains a considerable amount of duplication, on account of forops fed to live stock. It is roughly analogous to the value of products in manufactures, with its duplication on account of the use of the products of one establishment as materials in another. ³ These include dairy products, wool and mohair, eggs and chickens, and honey and wax. ⁴ Estimated value of forms sold by farmers and animals shaughtered on the farms, whether for sale or for home consumption. ⁴ These include forest products of farms valued (for the United States) at \$394, 321, 825, nursery products valued at \$20,434,389, and greenhouse products valued at \$77,380,230.

⁷ Included with Louisiana to avoid disclosing individual operations. ⁸ Includes 2 establishments in Mississippi.

SOUTH CAROLINA. NUMBER AND DISTRIBUTION OF INHABITANTS.

Population of the state.—According to the Fourteenth Census, taken as of January 1, 1920, the population of South Carolina is 1,683,724, which represents an increase of 168,324, or 11.1 per cent, over the 1910 figure. During the same period the population of the United States increased by 14.9 per cent. The following summary shows the population of South Carolina from 1790, the first Federal census year, to 1920, inclusive, together with the number and per cent of increase for each decade, in comparison with the per cent of increase for the United States as a whole:

| | CENSUS YEAR. | Population. | INCREASE OVER | | Per cent of increase for the |
|----------------------|---------------------------------------|---|--|---|--------------------------------------|

POPULATION OF SOUTH CAROLINA: 1790 TO 1920.

Counties.—South Carolina has 46 counties, of which 9 show decreases as compared with 1910. Five of these decreases, however, are due to reductions in area caused by the formation of new counties. Three new counties.—Allendale, Jasper, and McCormick.—have been organized from parts of six others since 1910. (See Table 1.) It has been necessary, therefore, in preparing the maps, showing increase or decrease in total and rural population of counties between 1910 and 1920, to combine Allendale, Jasper, Barnwell, Beaufort, and Hampton Counties and to combine McCormick, Abbeville, Edgefield, and Greenwood Counties.

Density of population.—The total land area of the state is 30,495 square miles. The average number of inhabitants to the square mile in 1920 is 55.2 (see Table 1), as against 49.7 in 1910 and 44 in 1900.

Minor civil divisions.—The political units into which the counties are divided are collectively termed "minor civil divisions." The counties of South Carolina are made up of 499 primary divisions, comprising 440 townships, 58 school districts, and the city of Charleston. The secondary divisions are 260 in number, comprising 14 cities and 246 towns. Each of 2 cities is coextensive with the township and 1

HISTORICAL NOTE.-The original province of Carolina was named in honor of Charles I of England.

The shores of the region now constituting South Carolina may have been seen by Cabot, an Italian in the service of England, at about the close of the fifteenth century, but no explorations were made until 1521, when an expedition sent out by De Ayllon, a Spaniard of San Domingo, visited the coast region. Five years later De Ayllon made an attempt at settlement, but no permanent settlement was made within the limits of the state until nearly a century and a half later. In 1670 asettlement was made on the Ashley River by the English, and in 1680 it was moved a few miles down the river to the present site of Charleston.

The present area of South Carolina was included in part in the grants made to Virgina by the charters of 1606, 1609, and 1612. In 1620 Charles I granted the territory between the thirty-first and thirty-sixth parallels, under the name Carolina, to Sir Robert Heath. No settlements were made under this grant, however, and the patent was vacated. In 1663 Carolina, extending from the thirty-first to the thirty-sixth parallels and from the Atlantic to the Pacific, was granted by King Charles II to eight "lords proprietors." Two years later the northern and southern limits were changed to latitudes 36° 30' and 29'', respectively, and settlement was begun soon afterward. At first there was no formal division of the province, but the northern portion gradually came to be known as North Carolina and the southern part as South Carolina, and each had its own separate government. In 1729 seven of the eight lords proprietors sold their shares to the English Crown, and Carolina was definitely and authoritatively divided into the royal provinces of North and South Carolina.

In 1732 the "Trustees for Establishing the Colony of Georgia in America" obtained a royal charter granting them all the lands between the Savannah and the Altamaha, and from the heads of these rivers to the Pacific Ocean.

In 1763 the St. Marys River was, by royal proclamation, made the southern boundary of Georgia, but South Carolina did not relinquish its claim to the tract between the Altamaha and St. Marys Rivers until 1787. In the same year South Carolina ceded to the United States a strip of land about 12 miles in width, extending westward to the Mississippi River, and the state was thus reduced to its present limits.

South Carolina was one of the original thirteen states.

city with the school district in which located, and each of 27 towns comprises parts of 2 or more townships. (See Table 2.)

Cities .- South Carolina has 15 cities, of which Charleston, with a population of 67,957, is the largest. (See Tables 3 and 4.)

The following summary shows, for each city having 9,000 or more inhabitants in 1920, the population at each census for which figures are available, together with the number and per cent of increase during the preceding decade:

1880.....

Urban and rural population .- The Census Bureau defines urban population as that residing in cities and other incorporated places having 2,500 inhabitants or more, and rural population as that residing outside such incorporated places.

The following summary presents, for the last three censuses, figures showing the urban and rural population of the state distributed among places grouped according to specified limits of population. The classification for each census is based upon the population of the various places as shown by the returns of that census. Consequently the territory comprised within any one class of cities or that designated as urban or as rural does not remain fixed, because any given place may, through the growth or the decline of its population, pass from one class to another at successive censuses. The proportion of the population of South Carolina living in places of 2,500 or more increased from 12.8 per cent in 1900 to 14.8 per cent in 1910 and to 17.5 per cent in 1920.

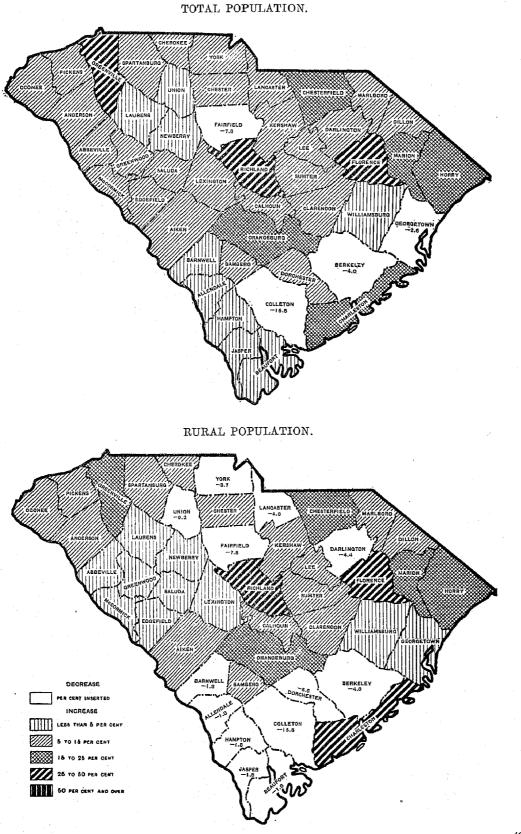

URBAN AND RURAL POPULATION: 1920, 1910, AND 1900.

| | | 1920 | | 1910 | * | 1900 | PER CENT | OF TOTAL P | OPULATION. |

1 CHANGES IN BOUNDARIES, ETC.

ABBEVILLE.—Parts taken to form part of Greenwood in 1897 and part of McCor-mick in 1917.

AIKEN-Organized from parts of Barnwell, Edgefield, Lexington, and Orange burg in 1871. ALLENDALE.-Organized from parts of Barnwell and Hampton in 1919. BAMBERG.-Organized from part of Barnwell in 1897; part of Colleton annexed in 1919.

BAMBERG.—Organized from part of Barnwell in 1897; part of Colleton annexed in 1919. BARNWELL.—Parts taken to form part of Aiken in 1871, Bamberg in 1807, and part of Ailendale in 1919. BEALFORT.—Parts taken to form Hampton in 1878 and part of Jasper in 1912. BEALFORT.—Parts taken to form IIampton in 1878 and part of Jasper in 1912. BEALFLEY.—Organized from part of Charleston between 1890 and 1900, and part of Dorchester in 1897, part annexed to Oharleston between 1890 and 1908. CALROUN.—Organized from parts of Lexington and Orangeburg in 1908. CHARLESTON.—Part taken to form Bertkoley in 1892; part of Berkeley annexed between 1890 and 1900; part of Colleton annexed in 1911. CHEROREE.—Organized from parts of Spartanburg, Union, and York in 1897. CLARENTON.—Part taken to form part of Florence in 1882; part annexed to Wil-Hamsburg in 1914. COLETON.—Part taken to form parts of Florence and Lee in 1888 and 1902, respectively, and part annexed to Florence between 1890 and 1900. DILLON.—Organized from part of Marion in 1919, but prior to Thirteenth Census date (Apr. 15). DORCHESTER.—Organized from part of Berkeley and Colleton in 1897, EDGEFIELD.—Parts taken to form part of Akeeley and Colleton in 1896, part of Greenwood in 1897, and part of Marion in 1910, but prior to Thirteenth Census date (Apr. 15).

IFARFIELD.—Part annexed to Richland in 1913.
IFARFIELD.—Part annexed to Richland in 1913.
IFADERECE.—Organized from parts of Clarendon, Darlington, Marion, and Williamsburg in 1888; part of Darlington annexed between 1890 and 1900, and parts of Williamsburg annexed in 1905 and 1911.
GREENWOOD.—Organized from parts of Abbeville and Edgefield in 1897; part taken to form part of McCormick in 1917.
HAMFON.—Organized from part of Beaufort in 1878; parts taken to form part of Jasper in 1912 and part of Allendale in 1919.
JASPER.—Organized from parts of Beaufort in 1878; parts taken to form part of Jasper in 1912 and part of Allendale in 1919.
LEE.—Organized from parts of Beaufort in 1902.
LEE.—Organized from parts of Darlington, Kershaw, and Sumter in 1902.
LEE.—Organized from parts of Allendale in 1910.
McCORMICK.—Organized from parts of Allendale in 1910.
McCORMICK.—Organized from parts of Allendale in 1910.
McCORMICK.—Organized from parts of Allendale in 1910.

MCOOMARCH.—Organized non part of Florence in 1888 and Dillon in 1910.
MEWBERLY.—Parts taken to form part of Florence in 1888 and Dillon in 1910.
ORANGEBURG.—Parts to IL excitigation annexed in 1901.
ORANGEBURG.—Parts taken to form part of Aiken in 1871 and part of Calhoun in 1908; part of Berkeley azimexed in 1901.
RICHLAND.—Parts of Fairfield and Lexington annexed in 1913.
SALUDA.—Organized from part of Edgefield in 1896.
SPARFANBURG.—Part taken to form part of Cherokee in 1897.
SUMTER.—Part taken to form part of Cherokee in 1897.
WINLAMSURG.—Part taken to form part of Cherokee in 1888; parts annexed to Florence in 1905 and 1911; part of Cherokee in 1897.
YORK.—Part taken to form part of Cherokee in 1904.

TABLE 2 .- POPULATION OF COUNTIES BY MINOR CIVIL DIVISIONS: 1920, 1910, AND 1900.

[Counties showing no totals for 1910 or 1900 have been organized at some time between the censuses. For chunges in boundaries, etc., between 1910 and 1920, see footnotes; for those between 1900 and 1910, see Reports of the Thirteenth Census: 1910, Vol. III, Table 1, p. 642. For population of incorporated places, see Table 3.]

¹ ALLENDALE.—Organized from parts of Barnwell and Hampton County in 1917. ² BALBERG.—Part of Colleton County annared to Fish Pond township in 1919. ⁴ BARNWELL.—County totals include population (10,185 in 1910; 11,072 in 1900) of Allendale, Baldoc, Bull Pond, and Sycamore townships, taken, with parts of Bennett Springs and Great Cypress townships, to form part of Allendale County in 1919.

^{townships, to form part of Jasper County in 1912. ^{Coundaries} between 1900 and 1910, ⁶BERKELEY.—Because of numerous changes in boundaries between 1900 and 1910, no comparison by townships can be made. Moneks Corner town returned as located wholly in First St. Johns Berkeley township in 1910. St. Stephens town returned in Second St. Stephens township in 1910. ⁷ CHARLESTON.—Part of Colleton County annexed in 1911 and organized as St. Pauls township.}

NUMBER AND DISTRIBUTION.

TABLE 2 .- POPULATION OF COUNTIES BY MINOR CIVIL DIVISIONS: 1920, 1910, AND 1900-Continued.

(Counties showing no totals for 1910 or 1900 have been organized at some time between the censuses. For changes in boundaries, etc., between 1910 and 1920, see footnotes; for those between 1900 and 1910, see Reports of the Thirteenth Census. 1910, Vol. III, Table 1, p. 642. For population of incorporated places, see Table 3.]

TABLE 3.-POPULATION OF INCORPORATED PLACES: 1920, 1910, AND 1900-Continued.

[The absence of population figures for 1910 or 1900 indicates that the place was incorporated at some date between the censuses, unless otherwise explained by footnote. Places which in 1910 were incorporated but, through surrender of charter or for other reasons, have no corporate existence in 1920 are not presented in this table.]

¹ Population of part of Batesburg town (see Table 3). ²Comprises all counties in which there were no incorporated places having 2,500 inhabitants or more in 1920. These counties are Allendale, Bamberg, Barnwell, Berkeley, Calhoun, Clarendon, Colleton, Dillon, Edgefield, Fairfield, Hampton, Horry, Jasper, Lee, McCormick, Oconee, and Williamsburg.

This section gives detailed statistics as to the composition and characteristics of the population on January 1, 1920. It contains detailed tables which present statistics of color or race, nativity, parentage, sex, age, school attendance, citizenship, illiteracy, dwellings and families, and country of birth, for the state, and for its counties and cities. There are, besides, eight summary tables which reproduce from the detailed tables the more important state and city totals, and, also, tables which cover the following subjects, not included in the second series of state bulletins: Marital condition, state of birth, year of immigration, inability to speak English, country of origin. mother tongue, and ownership of homes. The full presentation of all these subjects is contained in Volume II of the Fourteenth Census Reports.

The principal occupations, as reported for persons 10 years of age and over, are given by sex, color or race, nativity, parentage, and age periods, followed by a summary, by marital condition and age groups, of women gainfully occupied.

Because of the wide differences in characteristics among the various classes of the population, the statistics on each subject are shown according to color or race, and for the white population according to nativity and parentage. Classification according to nativity and parentage has not been deemed necessary for the other races, since nearly all Negroes and Indians are natives of native parentage, while nearly all Chinese and Japanese are either foreign born or of foreign parentage.

The white population is divided into four groups: (1) Native, native parentage—that is, having both parents born in the United States; (2) native, foreign parentage—having both parents born abroad; (3) native, mixed parentage—having one parent native and the other foreign born; (4) foreign born. As the second and third classes do not differ greatly in characteristics, they are combined in certain tables; and in some cases all three native classes are combined.

The presentation of statistics on country of birth of the foreign-born white population is made on the basis of the postwar map. Because of the many political changes which have resulted from the war, comparative figures for 1910 for this class of the population by individual European countries are not presented here.

Since marked differences often exist between urban and rural communities with respect to the composition and characteristics of their population, the two classes are shown separately in connection with several of the subjects. Urban population, as defined by the Census Bureau, is that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural.

The census inquiry as to school attendance was merely as to whether the person enumerated had attended school, college, or any kind of educational institution at any time between September 1, 1919, and the census date, January 1, 1920.

The Census Bureau classifies as illiterate any person 10 years of age or over who is unable to write in any language, not necessarily English, regardless of ability to read.

The statistics of marital condition relate only to persons 15 years of age and over, as the number of persons under 15 who are married, widowed, or divorced is naturally insignificant. The terms refer only to the marital status of the population on the census date.

The returns as to state of birth are valuable mainly for the light they throw on the migration of the native population within the United States; they show, for each state, the population residing there on January 1, 1920, distributed as born in the state or elsewhere.

Since the foreign-born population consists mainly of foreign-born whites, the statistics for citizenship relate to this class only. The classification embraces four groups, namely, persons reported as naturalized, persons reported as having taken out first papers, persons reported as aliens, and persons for whom citizenship was not reported.

The inquiry as to year of immigration supplies a means for determining what proportion of the immigrants who arrived during a given year or period of years were still alive and residing in this country on the census date.

The foreign white stock comprises the total of three classes, the foreign-born whites, the native whites of foreign parentage (both parents born abroad), and the native whites of mixed parentage (one parent native and the other foreign born). The term "country of origin," as used in this report, signifies the country of birth of the father of a foreign-born person or the foreign-born parent or parents of a native. The term "mother tongue" means the language of customary speech in the homes of immigrants before immigration.

INTRODUCTION.

In the following pages are presented all of the published results of the 1920 census of agriculture for this state and its counties, except certain detailed tabulations for the state which appear in Volume V of the Fourteenth Census Reports and a few minor items which have been published in special bulletins. The statistics of farms and farm property, including live stock, relate to January 1, 1920; those of live-stock products, crops, and farm expenditures are for the calendar year 1919. In order to show the present tendency in agriculture, comparative figures for the census of 1910 are given throughout; and to show the general trend of the agricultural industry over a considerable period of time, all general farm information available is presented for the different censuses since 1850.

¹ A minus sign (-) denotes decrease. ² Population residing outside of incorporated places having 2,500 inhabitants or over. The rate of increase in the rural population between the two censuss is affected somewhat by the fact that certain places classified as rural in 1910 had become urban by 1920. The population in 1910 of the territory classified as rural in 1920 was 1,274,914. For this territory, the increase in population between 1910 and 1920 was 9.0 per cent, which percentage indicates the rate of growth of the rural population, leaving out of consideration the changes in classification of territory.

SOUTH CAROLINA

EXPLANATION OF TERMS.

To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

Farm.—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term, referring to the work of growing crops, producing other agricultural products, and raising domestic animals, poultry, and bees. A "farm" as thus defined may consist of a single tract of land or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1919, or required for its agricultural operations the continuous services of at least one person.

Farmer.—A "farmer" or "farm operator," according to the census definition, is a person who directs the operation of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, managers, and tenants.

Farm owners include (1) farmers operating their own land only and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "full owners" being then used for those owning all their land.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1920 in five classes: (1) Share tenants—those who pay a certain share of the products, as one-half, one-third, or one-quarter, for the use of the farm but furnish their own farm equipment and animals; (2) croppers—share tenants who do not furnish their work animals; (3) share-cash tenants—those who pay a share of the products for part of the land rented by them and cash for part; (4) cash tenants those who pay a cash rental, as \$7 per acre of crop land or \$500 for the use of the whole farm; (5) standing renters—those who pay a stated amount of farm products for the use of the farm, as 3 bales of cotton or 500 bushels of corn. In some cases the character of the tenancy was not ascertained by the enumerator; such tenants are designated "unspecified."

Farm land.—Farm land is divided into (1) improved land, (2) woodland, and (3) other unimproved land.

Improved land includes all land regularly tilled or mowed, land in pasture which has been cleared or tilled, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings.

Woodland includes all land covered with natural or planted forest trees which produce, or later may produce, firewood or other forest products.

All other unimproved land includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest.

The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics, therefore, must be considered at best only a close approximation.

LIVE STOCK ON FARMS AND ELSEWHERE.

(DOMESTIC ANIMALS, POULTRY, AND BEES.)

Domestic animals: 1920 and 1910.—The census of 1920 was taken as of January 1 and that of 1910 as of April 15. Since a great many domestic animals are born during the period between January 1 and April 15 and, on the other hand, a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not fully comparable. In addition to the change in the date of enumeration, there have been certain changes in the age and sex classifications. The 1910 figures presented in the following tables are therefore restricted to those classes of domestic animals which are least affected by these changes and for which the figures are fairly comparable with the 1920 returns.

Dairy cows: 1920 and 1910.—In 1910 the census called for "cows and heifers kept for milk" and "cows and heifers *not* kept for milk." The instructions read: "Report as cows kept for milk those whose milk is used in some form for human food. Cows milked for three months during the year should be reported as *kept for milk*, although a part of the year they run with their calves."

In 1920 the census called for "dairy cattle" and "beef cattle." Dairy cattle were defined as those "kept mainly for milk production," and the following instructions were given the enumerators: "Classify all cattle as beef cattle or as dairy cattle according to the principal purpose for which they are kept." It is believed that under this rule the fully established dairy and beef breeds have been properly reported, with few errors, and that cattle of the dual-purpose breeds or of no definite breeding have been placed in one class or the other, according to the principal purpose for which they are kept.

In states where cattle are raised extensively for beef production the result of this new classification will be to reduce materially the proportion of cows classified as dairy cows, and even in states having few strictly beef cattle the 1920 classification may be expected to give a somewhat smaller proportion of dairy cows than the 1910 classification.

In South Carolina the number of "dairy cows," including heifers 1 year old and over, reported for January 1, 1920, was 228,569, as compared with 180,842 "cows kept for milk" reported for April 15, 1910. This represents an increase of 47,727, or 26.4 per cent. The number of "beef cows" reported for January 1, 1920, was 64,949, as compared with 65,319 "cows not kept for milk" reported for April 15, 1910, representing a decrease of 370, or 0.6 per cent.

Farms reporting domestic animals: 1910.-Horses were reported by 58,633 farms in South Carolina in 1910, mules by 97,799 farms, cattle by 120,034, sheep by 1,731, and swine by 121,870. In comparing these figures with the 1920 figures given in the table below, due allowance should be made for the fact that the total number of farms in South Carolina increased from 176,434 in 1910 to 192,693 in 1920.

LIVE-STOCK PRODUCTS.

Farm value of live-stock products: 1919 and 1909 .-The Thirteenth Census schedule called for the total value as well as the total quantity of all live-stock products, whether sold or consumed on the farm. The 1909 values are therefore based directly on the reported figures. But in the Fourteenth Census schedule the question as to value in the case of dairy products, eggs, and chickens was restricted to the amounts sold. The 1919 value of butter made on farms has been computed on the basis of the average value received per pound for butter sold; the values of eggs produced and chickens raised have been computed in a similar way. The values of cheese made on farms and of honey and wax produced have been computed on the basis of average values per pound secured through the Bureau of Crop Estimates of the Department of Agriculture. The method of obtaining these average values was the same as that used for securing average values for the important crops, which is described in a later paragraph.

Dairy products.-It is difficult to secure reports of the total quantity of milk produced during a given year, especially from farmers who keep cows chiefly to supply milk and butter for family use. Since such farmers usually keep no records, they are able to make only rough estimates of the milk production and frequently underestimate the quantity of milk produced for home use. Many farmers, too, either because they are unwilling to make any estimates or for other reasons, fail to report their milk production, even though they report butter or other dairy products as well as dairy cows.

For several decades past the Bureau of the Census has made estimates for such incomplete reports, where the farmer reported "cows kept for milk" but failed to report the amount of milk produced, these estimates being based on the average production per cow as shown by the complete reports. Since farmers with first-class dairy herds and up-to-date methods are more likely to make complete reports than those with cows of a lower grade, the estimates obtained in this way have probably been somewhat above the actual production. With the new basis of classification for dairy cows in use for 1920, however, as already noted, the estimates should be more satisfactory than here tofore, since milk will be estimated only for cows kept mainly for milk production.

In the table which follows, both the actual reported quantity of milk produced and the estimated total are given. The latter includes, in addition to the milk reported, an estimate of the amount of milk produced on farms which reported dairy cows but failed to report any milk. A certain quantity of milk, on the other hand, was reported from farms which reported no dairy cows. This is included in the total and may represent either milk produced by beef cows milked a part of the year on farms having no dairy cows or milk produced on farms which kept dairy cows some time during the year 1919 but had none on January 1, 1920.

Summary: 1919 and 1909.—This section summarizes the census data relative to all of the farm crops of 1919 and 1909, including the percentage of increase for the decade in acreage, production, and value.

In comparing one year with another it should be borne in mind that the acreage of crops (or the number of fruit trees) and the number of farms reporting are on the whole a better index of the general changes or tendencies in agriculture than either the quantity or the value of the crops, since variations in quantity may be due mainly to favorable or unfavorable seasons, and variations in the value of the crops may result largely from changes in prices.

The combined acreage of crops harvested in South Carolina in 1919 for which the acreage was reported was 5,396,660, which represents 87.3 per cent of the total improved land in farms (6,184,159 acres). The total crop acreage reported for 1909 was 5,152,801, or 84.5 per cent of the improved land in farms (6,097,999 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage of which was not reported.

In addition to the crops regularly harvested in 1919, as shown in the tables, there were reported 20,352 acres of mature crops grazed or "hogged off" and 26,893 acres in velvet beans, the latter including the total acreage on which velvet beans were grown for any purpose, either alone or mixed with other crops.

Farm value of crops.—At the census of 1920 the farm schedule called for the value of all farm property, including live stock, and the value of live-stock products sold.

In the case of farm crops, however, wherever a unit value could be used, such as the value per bushel or per ton, the farmer was asked to report the acreage and production of each crop but not the value. To supplement the information obtained from the farmers, the Bureau of Crop Estimates of the United States Department of Agriculture secured by special schedule from its crop reporters average values for such crops. These special schedules were tabulated by the Bureau of the Census, and the resulting averages, approved by the Bureau of Crop Estimates as representing a fair average of the farm value per unit, were used in computing most of the crop values presented in the accompanying tables.

For some products it was not possible to find any satisfactory unit on which to base a computation of the total value. Values were therefore obtained on the 1920 census schedule for vegetables, other than potatoes and sweet potatoes; and for the farm garden.

¹ A minus sign (-) denotes decrease. Per cent not shown when base is less than 100 or when per cent is more than 1,000.
² Excluding 315,969 acros reported for corn cut for forage, which is practically all duplicated in the acreage shown for corn harvested as grain.
³ The 1909 figures include small quantities of barley, buckwheat, and kafir and milo.
⁴ Principally oats and peas grown and harvested together.
⁵ Less than one-tenth of 1 per cent.
⁶ Includes small quantities of castor beans (1919) and of dry edible beans and flaxseed (1909). A considerable part of the acreage in soy beans, peas, and possibly some other crops is probably a duplication of other crop acreage.

⁷ The 1909 figures include small quantities of flower and vegetable seeds (value only), timothy seed, millet seed, and "other grass seed." The entire acreage from which the grass and clover seeds were secured is believed to be included in the acreage given elsewhere for hay and forage.
⁸ Corn cut for forage was not reported to a nry extent in 1909; hence no fair comparison between 1919 and 1909 can be made, either for the hay and forage totals or for the bracketed group in which corn cut for forage appears.
⁹ Includes millet and Hungarian grass.
¹⁰ The 1919 figures represent vegetables raised for sale only.
¹¹ In 1909 the value of the farm garden was largely included in the value of "other vegetables."
¹² These crops comprise broom corn (1919 and 1909) and chufas (1909).

¹ Includes 315,969 acress in corn cut for forage. This crop was not included to any extent in the hay and forage totals prior to 1919. If its acreage be deducted, to make the 1919 figures more closely comparable with those of earlier years, the remaining area in hay and forage will be 352,569 acres.

 ³ The figures for 1910 and 1909 include almonds and Persian or English walnuts, and also black walnuts and several other varieties of nuts not called for by the 1920 schedule.

Age of farmers.—A farmer or farm operator, as defined for census purposes, is a person who operates a farm. The number of farm operators, for which the age distribution is shown in the following table, is therefore the same as the number of farms.

TABLE 40.—FARM OPERATORS CLASSIFIED ACCORDING TO AGE, COLOR, AND TENURE: 1920 AND 1910.

Farmers classified by number of years on farm.—In the following table the farmers of the state are classified according to the number of years they had been on the farms which they were operating when the census was taken. The purpose of this classification is to show the relative stability of the different classes.

TABLE 41.—FARM OPERATORS CLASSIFIED ACCORDING TO NUMBER OF YEARS ON FARM, BY COLOR AND TENURE: 1920 AND 1910.

Note.—In 1920 the date of enumeration (January 1) came just before the period during which changes from one farm to another are commonly made in most localities, and hence at a time when many farmers had almost, but not quite, completed one, two, or more years on their farms. Considerable numbers of these farmers reported one, two, or more full years, in place of reporting the correct number of months (or years and months). In 1910, however, the enumeration date (April 15) was late enough so that, in localities where the common moving time was in the early part of the year, the number of years of occupancy was accurately reported. These differences seriously affect the comparability of the returns, especially for the first two years so docupancy. Hence these two years, which were tabulated separately and are so published in Volume V of the Fourteenth Census Reports, have been combined in the following table.

| NUMBER OF TEARS ON | тот | AL, | OWN | ERS. | MAN- AGERS, | | TENANTS. | |
|---|---|--|--|---|---|---|--|--|

Cooperative marketing and purchasing.—Cooperative marketing of farm products or cooperative purchasing of supplies through farmers' organizations in 1919 was reported by 338 farms in South Carolina, including 51 farms which reported both sales and purchases, 152 farms which reported sales only, and 135 farms which reported purchases only.

TABLE 42.—COOPERATIVE MARKETING AND PURCHASING THROUGH FARMERS' ORGANIZATIONS: 1919.

| | | FAR REPOR | | AMOUNT. | | | |

Pure-bred live stock on farms.—The inquiry relating to pure-bred live stock called for registered animals only, but it seems evident, from a study of the returns, that some animals merely eligible for registry (but not actually registered) were included in the reports.

The number of farms in South Carolina in 1920 was 192,693, of which number 181,452 reported domestic animals of some kind, and 6,188 reported pure-bred live stock.

TABLE 44.—PURE-BRED LIVE STOCK CLASSIFIED ACCORDING TO BREED: 1920.

NOTE.—Pure-bred horses reported in South Carolina represented 0.1 per cent of all horses on farms (see Table 23); pure-bred cattle, 1.6 per cent of the total; pure-bred swine, 2.5 per cent.

| BREED. | Number. | BREED. | Number. |

Domestic animals sold or slaughtered on farms.— The number of cattle, swine, and sheep slaughtered on farms was reported for both 1919 and 1909, but the farm schedule for 1919 carried no inquiry with regard to the value of the animals slaughtered, or with regard to the number or value of the animals sold by farmers. The total value of domestic animals sold or slaughtered on farms in South Carolina in 1919 has been estimated, however, at \$18,000,000, as compared with \$6,790,617, the value reported for 1909.

¹ Includes vinegar other than that made from cider.

Forest products of farms.—Forest products, as defined on the farm schedule, include firewood, fence posts, crossties, pulp wood, saw logs, poles, etc., and standing timber sold and cut during the years indicated. The figures cover only forest products of farms and do not represent by any means the total value of all forest products cut in the state during the census years.

TABLE 49.-FOREST PRODUCTS OF FARMS: 1919 AND 1909.

| ITEM. | 1919 | 1909 |
|---|---|---|
| Forest products of farms: Farms reporting. Per cent of all farms. Value. Average per farm reporting. | 57, 278 29, 7 \$14, 256, 764 \$249 | 76, 788 43, 5 \$4, 513, 092 \$59 |
| Forest products sold from farms (or cut and held for sale): Farms reporting | 11,306 \$5,849,318 \$517 | \$1,420,639 |
| Forest products used on farms (or cut and held for use): Farms reporting. Value Average per farm reporting. | 53, 175 \$8, 407, 440 \$158 | \$3,002,453 |

Nurseries and greenhouses.—The data presented for nurseries include the returns from all farms and establishments reporting receipts from the sale of nursery stock, and those for greenhouses include the returns from all farms and establishments reporting receipts from the sale of greenhouse products (whether grown in hothouses or in cold frames).

| · | ¹ Parts of Fairfield and Lexington Counties annexed to | | J. | <u> </u> | 1. 1. | <u>.</u> | 3 | <u> </u> | <u></u> |

Parts of Fairfield and Lexington Counties annexed to Richland County in 1913,
 Part of Sumter County taken to form part of Lee County in 1902.
 Parts of Williamsburg County annexed to Florence County in 1905 and 1911; part of Clarendon County annexed to Williamsburg County in 1914.
 The correction of errors discovered after the 1900 census reports were published would make this acreage for Spartanburg County 435,525.

DRAINAGE—SOUTH CAROLINA.

INTRODUCTION.

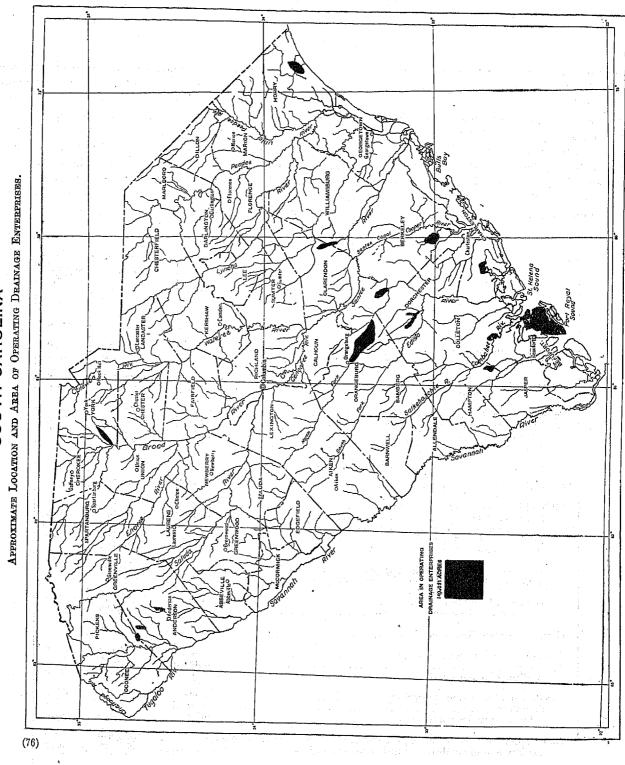

The following pages present the statistics of drainage for South Carolina collected at the census of 1920. The figures' relate to conditions on January 1, 1920, except where indicated otherwise. No census of drainage has been taken heretofore, so there are no comparable figures for previous years. The data relate to the artificial drainage of land in farms, and of other land that ultimately will be used for agricultural purposes. The organized drainage enterprises may include considerable areas of unimproved land not yet in farms. The statistics for drainage on farms were collected in the general census of agriculture, while the statistics for drainage enterprises were obtained in a special canvass of those enterprises. Since drainage on farms may be either inside or outside an organized enterprise, and the drains that each individual owner installs upon his own farm may be either supplemental to or entirely independent of the works installed by an enterprise, the figures for the two parts of the drainage census are presented separately.

SOUTH CAROLINA

DRAINAGE ON FARMS.

Explanation of terms.-To secure uniformity in the returns relating to drainage on farms, the Bureau of the Census supplied its enumerators with certain definitions, which are substantially as follows:

Drainage of agricultural land was defined, for census purposes, as the act or process of drawing off an excess of water by underground conduits, pipes, or tiles, or by open or covered trenches in the surface of the ground, for the purpose of improving the condition of the soil and crops.

The area provided with drainage, in farms, is the acreage actually benefited or made of more value for agricultural purposes by artificial drainage, but does not include land on which only temporary work has been done, such as "bedding" the fields or laying out "dead furrows" to hasten the surface flow.

The area needing drainage, in farms, comprises the additional land not now suitable for crops which could be made available for cultivation (1) "by drainage only," which is the acreage needing no clearing or which is covered with grass, weeds, or other annual growth, and (2) "by drainage and clearing," which is the acreage covered with trees, stumps, or perennial woody shrubs.

Improved land in farms includes all land regularly tilled or mowed. land in pasture which has been cleared or tilled, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings.

Woodland in farms includes all land covered with natural or planted forest trees which produce, or later may produce, firewood or other forest products.

Farms in drainage and levee districts are those for which the operators have answered affirmatively the question, "Has any part of this farm been afforded drainage or protection against overflow by a drainage or levee district, or by the state, the county, or a private company or individual." Levee districts, however, generally are not included in the enterprises for which data are given in this report (see definition of drainage enterprises, below).

Farms and farm land.-The acreage shown for drainage on farms represents land where drainage is actually in operation and which has actually become more fully available for growing crops by reason of the drainage. This is to be distinguished from the area merely provided with outlet facilities by organized drainage enterprises. Drainage on farms represents in most cases the result of work done by the farm owner, either independently or supplemental to the work done by a drainage enterprise, but the acreage would include also any farm land receiving similar benefits directly from the works of an enterprise.

DRAINAGE ENTERPRISES.

Explanation of terms.—The more important terms used in connection with the census of drainage enterprises were defined as follows:

Drainage enterprises comprise public corporations and local improvement districts formed under state laws, commercial enterprises draining swamp or overflowed land for sale, other organizations that may be engaged in extensive land-drainage work, and also tracts of 500 acres or more drained by individual owners. Enterprises such as levee districts that have not authorized the construction of open ditches or tile drains are not included.

Enterprises located in more than one county were divided, for tabulation, and the part in each county treated as a separate enterprise, though the capacities of drainage pumping plants are given only in the counties in which the plants are located.

Operating enterprises, as designated in this bulletin, are those that had completed the drainage works authorized, or had at any rate begun actual construction work, on or before January 1, 1920; enterprises that had been established but had not begun construction are termed "nonoperating."

Land in drainage enterprises comprises the area that has been benefited or is to be benefited by the improvement works constructed by the enterprises. In the case of overlapping enterprises, deduction has been made for the amount of duplication.

All land in drainage enterprises is divided, without regard to drainage condition, into (a) improved land; (b) timber and cutover land, which would require clearing to be thoroughly fit for cultivation; and (c) all other unimproved land, which would not require expensive clearing before cultivation.

The assessed acreage for any single enterprise is the same as the area in that enterprise. However, the total assessed acreage may be considerably greater than the total land in enterprises, for in summing up the assessed acreage in the county or state, deduction was not made for acreage assessed in more than one enterprise.

Improved land in drainage enterprises consists very largely of improved farm land, though it may include some other improved land receiving benefit from the works of the enterprises. or provide a spectrum in the description in the

.

Timber and cut-over land includes farm woodland of natural or planted forest trees as well as other timber land or areas that would need clearing of trees, stumps, or perennial woody shrubs.

Land designated as swampy or subject to overflow includes all land permanently or generally too wet for cultivation, land subject to periodical inundation by stream floods, seeped and alkali land in irrigated regions, and all other land unfit for cultivation by reason of insufficient drainage. This classification is without respect to the conditions as to improvement or timber.

The area suffering loss of crops is intended to include only land devoted to planted crops which suffer damage, either partial or complete, because of defective drainage. Land which would be cultivated if drained or protected against overflow is not included.

Capital invested, for the purpose of this investigation, was defined as cost, including charges for engineering, organization, rights of way, construction of drainage works, damages, land and buildings except those held for sale or farming, and any other expenditures properly chargeable to drainage and paid by the enterprise.

The drainage works of an enterprise include all varieties of underground conduits, pipes, or lines of tile, or drains of stone, wood, or other material; also open ditches and canals, together with accessory levees, dikes, dams, weirs, pumping machinery, gates, and other devices for the draining away or control of surface and soil waters.

Tile, as the term is here used, includes pipes of earthenware, concrete, or other material buried beneath the surface in such a way as to permit the excess water to flow away. The size, if circular, is expressed by the inside diameter in inches.

Ditches include all open artificial trenches, usually with sloping sides. The width is that of the bottom.

The type of drainage shows whether the drainage water from an enterprise is discharged by gravity or by pumping.

A pumping district is one where all or a part of the water from the drains collecting at a low point must be raised by some form of machinery in order that it may be removed from the area.

Drainage pumps include all kinds of machinery and devices for lifting the drainage water.

Pumping engines include all kinds of engines and motors for operating the drainage pumps.

Operating and nonoperating enterprises.-In most of the tables that follow, statistics are given for operating enterprises only. These enterprises, as already defined, include both those which have completed their drainage works and those with such works under construction; among the latter may be some that had completed the original plan of reclamation several years ago but were constructing extensions or enlargements on January 1, 1920. The nonoperating enterprises have a legal existence, though they have not yet accomplished any drainage. They may include districts that on the census date had completed their plans, sold bonds to cover the cost of the undertakings, and let contracts for the construction work, and also districts that had just been established and were still subject to considerable change in area, plan of drainage works, and cost.

TABLE 2.—LAND AND CAPITAL INVESTED IN ALL ENTERPRISES, CLASSIFIED AS BETWEEN OPERATING AND NONOPERATING ENTERPRISES: 1920.

| | LAND. | | C. | CAPITAL. 1 | | |

¹ The inquiry asked for the "total cost of the enterprise to Dec. 31, 1919," and for an "estimate of additional investment to complete."

Location of enterprises.—Most of the land in drainage enterprises in South Carolina is in the southeastern quarter of the state, though there are small areas in such enterprises in the northeastern and the northwestern parts.

Condition of land in enterprises.—The drainage enterprises in the Coastal Plain counties, comprising all but four of the counties in which operating enterprises are located, are mostly for the purpose of reclaiming swamp land or improving level areas that generally are too wet for farming with profit. In the **Piedmont** section the drainage enterprises are for the protection or drainage of land subject to overflow by stream floods.

The usual purpose of an organized enterprise is merely to provide adequate outlets into which the landowners of the district may drain their farms and to afford relief from overflow for the district as a unit. Therefore the fact that an enterprise which has completed the construction of the drainage works authorized contains lands still swampy or subject to overflow, or land that suffers damage to crops, does not show that the improvement works are inadequate.

Size of enterprises.—Presentation of the statistics by counties requires that an enterprise located in more than one county be divided, and the **part** in each county be considered a separate enterprise. In this way 17 operating drainage enterprises are counted in South Carolina, with an average area of 8,237 acres. There is no overlapping of the enterprises in this state.

Character of enterprises.—The drainage enterprises in South Carolina comprise districts formed in accordance with the drainage district laws of 1911 and 1912 and the sanitary and drainage district law of 1907, also undertakings by individual farm owners.

Drainage districts under the law of February 18, 1911 (act No. 54), are established by the clerk of the court of common pleas of the county in which all or a part of the proposed district is situated. A petition for establishment must be signed by a majority of the resident landowners or the owners of a major part of the land to be included. A preliminary investigation and report regarding the public utility of the undertaking are made by three viewers appointed by the clerk of the court. Public hearing is held upon the petition; then the boundaries of the district are fixed, or proceedings are dismissed at the cost of the county. The viewers prepare the plan of drainage, make awards of damages, and divide the land into five classes according to the benefits that the various tracts will receive; their report is reviewed by the clerk of the court at public hearing before it is confirmed. The cost of land taken for right of way is determined by jury trial. To secure construction of the drains and otherwise administer the affairs of the district, the clerk of the court appoints three drainage commissioners who previously have been elected by the landowners. The cost of the enterprise is assessed according to the classification of the land, the rates per acre being in the ratio 5:4:3:2:1. The district may issue bonds if the cost will exceed an average of 25 cents per acre on all the land. Originally, 22 counties were excepted from the operation of this law, but later the law was made applicable in all counties.

Each drainage district under act No.411 of 1912 is established by a board of three disinterested drainage commissioners, who are appointed by the board of county commissioners upon receipt of a petition signed by two-thirds of the owners of land adjacent to the creek, swamp, or branch that those owners desire to open or improve for drainage. The drainage commissioners make a preliminary survey and estimate of cost for the work deemed practicable, and hold hearings upon their report. If they find the project should be undertaken, and two-thirds of the landowners sign a second petition to have the works constructed, the drainage commissioners complete the plans and specifications for the improvements, secure construction of the works, and divide the land in the district into three classes according to the anticipated drainage benefits. The cost is assessed according to the classification of the land, the rates per acre being in the ratio 5:4:3. The drainage commissioners may levy annually not exceeding \$5 per acre until the cost of drainage has been paid. By act No. 120 of 1919, bonds of the district may be issued. Land may be condemned for right of way for the drains.

Sanitary and drainage districts are organized in accordance with act No. 247 approved February 13, 1907. The governor of the state, upon request and with the advice and consent of the senator and representatives from any county, or a majority of them, shall appoint a sanitary and drainage commission for that county with authority regarding sanitary, agricultural, and public utility drainage. The commission has control over all public drains outside of incorporated cities and towns, with power to make surveys, alterations, and improvements, to require persons to drain their land and to keep their drains in repair, and to do any and all work for drainage purposes. Each commission is required to report annually to the general assembly, and all money appropriated for the commission is required to be paid by the county treasurer from the proceeds of general county or township taxes authorized by the general assembly.

The first general drainage law of South Carolina was an act of December 20, 1856 (ch. 4307), which is still in effect, authorizing the formation of drainage corporations by two-thirds of the owners of the land to be drained, who must hold two-thirds of that acreage, signing articles of agreement to be filed in the office of the clerk of the county in which the land is situated. No enterprises were reported as organized under that law. There are also a number of other statutes providing for land drainage, each of which was made applicable in only one or a few counties, for which no enterprises were reported. A law enacted December 22, 1891, provides for securing a drainage outlet by one landowner across the property of an objecting owner, when necessary, the damages being determined by a board of referees.

TABLE 6.-LAND AND CAPITAL INVESTED IN ALL ENTERPRISES, CLASSIFIED BY CHARACTER OF ENTERPRISE: 1920.

Drainage works.—The total works completed by drainage enterprises to December 31, 1919, comprised 262.7 miles of open ditches, 101.5 miles of tile drains, and 12.0 miles of accessory levees; the additional lengths under construction were 87.7 miles of ditches, 161.0 miles of tile drains, and 30.0 miles of levees. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises, nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. However, all the tile drains shown are in drainage enterprises under individual ownership. TABLE 7.-LAND AND CAPITAL INVESTED IN OPERATING ENTER-PRISES, CLASSIFIED BY KIND OF DRAINAGE WORKS: 1920.

There are two drainage enterprises in South Carolina in which 2,940 acres are drained by pumping part of the time. The pumping plants operate four centrifugal pumps of 44,600 gallons per minute total capacity, the plants being capable of developing 40 horsepower by steam and 115 horsepower by internal-combustion engines.

The average depth of the main or outlet ditch was reported for each enterprise. The maximum depth of outlet reported for any enterprise in the state and the maximum in each county are shown in line 15 of County Table II. The maximum length, width, and depth of outlet shown in that table for any county may not refer to the same enterprise.

In County Table II, line 16 shows the mean depth of branch ditches (open ditches only), which is a very crude indication of the depth of soil drainage that may be obtained in the enterprises as determined by the depth of outlet provided for farm drains. The mean depth was computed by giving each separate depth a weight in proportion to the acreage it serves. As most enterprises reported depths in whole numbers only, the occasional decimals were omitted in making these computations. Depths less than 3 feet were omitted; to include this group, computed as 3 feet, would show the mean depth for the state 4.3 instead of 5.2 feet.

TABLE 8.—LAND IN OPERATING ENTERPRISES, CLASSIFIED BY AVERAGE DEPTH OF BRANCH DITCHES: 1920.

Maintenance of works.—The drainage district law of 1911 provides that it shall be the duty of the board of drainage commissioners to keep the works of the district in good repair, and for this purpose they may levy an assessment against the land benefited by the construction of the improvement in the same manner and in the same proportion as the original assessment was made. The drainage district law of 1912 does not provide for maintenance. Sanitary and drainage districts organized under the statute of 1907 are maintained by the commissioners appointed in accordance with that law, the cost of repairs being paid by taxation authorized by the general assembly the same as for original construction of improvements.

Date of organization.—The progress in drainage development is shown only roughly by the dates of the organization of the enterprises, which are the dates when the districts were established by the courts, the drainage commissioners, or the governor of the state, since there may be a period of a year or more between the decree of establishment and the beginning of actual construction, and since the work of construction may occupy several years in a large district. It was not practicable, however, for the census to secure data as to the time of the beginning or the completion of the drainage works. Under the date of organization are tabulated the entire area, works, and capital of each enterprise, even including extensions made after the original plan of reclamation was completed.

Crops.—The principal crops grown upon the drained land in drainage enterprises are cotton and corn. Data were not secured to show the part of each enterprise planted to any crop, so the enterprises have been classified according to the principal crop, and the total area of improved land is shown thus classified, in County Table II. No data were secured at the general census of agriculture to separate the crops grown upon land drained artificially from those produced upon land drained naturally.

EXPLANATION OF TERMS.

Scope of census.—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of ownership, size of establishments, and similar subjects. When use is made of the statistics for these purposes it is imperative that due attention be given to their limitations, particularly in connection with any attempt to derive from them figures purporting to show average wages, cost of production, or profits.

The census did not cover establishments which were idle during the entire year or for which products were valued at less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions.

Period covered.—The returns relate to the calendar year 1919, or the business year which corresponded most nearly to that calendar year, and cover a year's operations, except for establishments which began or discontinued business during the year.

The establishment.—As a rule, the term "establishment" represents a single plant or factory, but in some cases it represents two or more plants which were operated under a common ownership or for which one set of books of account was kept. If, however, the plants constituting an establishment as thus defined were not all located within the same city, county, or state, separate reports were secured in order that the figures for each plant might be included in the statistics for the city, county, or state in which it was located. In some instances separate reports were secured for different industries carried on in the same establishment.

Classification by industries.—The establishments were assigned to the several classes of industries according to their products of chief value. The products reported for a given industry may thus, on the one hand, include minor products different from those covered by the class designation, and, on the other hand, may not represent the total product covered by this designation, because some of this class of product may be made in establishments in which it is not the product of chief value.

As a rule, the same designation is used for the industry wherever it appears, although all of the products indicated by this designation were not manufactured in the state or city for which these statistics are presented. In some instances the wording is changed so as to more correctly describe the products represented. For a number of industries subclasses are shown which indicate more definitely the kind of products.

Selected industries.—The general tables at the end of this section give the principal facts separately for the industries of the state. A selection has been made of certain leading industries of the state for more detailed consideration. Sometimes an industry of great importance has to be omitted because it comprises so few establishments that a detailed presentation would reveal the operations of individual concerns.

Comparisons with previous censuses.—Owing to changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. At the census of 1909 the figures for kindred industries were combined. This practice has been followed in compiling the statistics for 1919 and 1914 when placed in comparison with those for 1909 and prior years. The comparative summary for 1919, 1914, and 1909, therefore, does not show separately all the industries given for 1919 in the detailed statement for the state.

Influence of increased prices.—In comparing figures for cost of materials, value of products, and value added by manufacture in 1919 with the corresponding figures for earlier censuses, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures fail to afford an exact measure of the increase in the volume of business.

Persons engaged in the industry.—The following general classes of persons engaged in the manufacturing industries were distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks (including other subordinate salaried employees), and (5) wage earners. In the reports for the censuses of 1904 and 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. In comparative tables covering the census of 1904 it is of course necessary to group the figures according to the classification that was employed at the earlier censuses.

The number of persons engaged in each industry, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for a single representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where this date was not a representative day an earlier date was chosen.

In the case of employees other than wage earners the number thus reported for the representative date has been treated as equivalent to the average for the year, since the number of employees of this class does not ordinarily vary much from month to month. In the case of wage earners the average has been obtained in the manner explained in the next paragraph.

In addition to the more detailed report by sex and age of the number of wage earners on the representative date, a report was obtained of the number employed on the 15th of each month, by sex, without distinction of age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported for the several months by 12. The importance of the industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given in certain tables for each separate industry, is not totaled for all industries combined for any state, because, in view of the variations of date, such a total is not believed to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation. This total, however, is shown for the different cities, because the limited area and greater regularity of employment largely overcame the objection incident to its publication for the separate states or the United States.

(83)

In order to determine as nearly as possible the age distribution of the average number of wage earners for a given state as a whole, the per cent distribution by age of the wage earners in each industry for December 15, or the nearest representative day, has been calculated from the actual numbers reported for that date. The percentages thus obtained have been applied to the average number of wage earners for the year in that industry to determine the average numbers 16 years and over, and under 16, employed. These calculated averages for the several industries have been added to give the average distribution for each state as a whole and for the entire country.

Salaries and wages.-Under these heads are given the total payments during the year for salaries and wages, respectively. The Census Bureau has not undertaken to calculate the average annual earnings of either salaried employees or wage earners. Such averages would possess little real value, because they would be based on the earnings of employees of both sexes, of all ages, and of widely varying degrees of skill. Furthermore, so far as wage earners are concerned, it would be impossible to calculate accurately even so simple an average as this, since the number of wage earners fluctuates from month to month in every industry, and in some cases to a very great extent. The Census Bureau's figures for wage earners, as already explained, are averages based on the number employed on the 15th of each month, and while representing the number according to the pay rolls to whom wages were paid on that date, no doubt represent a larger number than would be required to perform the work in any industry if all were continuously employed during the year.

Prevailing hours of labor.—No attempt was made to ascertain the number of wage earners working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one part of the year to another were disregarded, and no attention was paid to the fact that a few wage earners might have hours differing from those of the majority. All the wage earners of each establishment are therefore counted in the class within which the establishment itself falls. In most establishments, however, practically all the wage earners work the same number of hours, so that the figures give a substantially correct representation of the hours of labor.

Capital.—The instructions on the schedule for securing data relating to capital were as follows:

"The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises."

These instructions were identical with those employed at the censuses of 1914 and 1909. The data compiled in respect to capital, however, at both censuses, as well as at all preceding censuses of manufactures, have been so defective as to be of little value except as indicating very general conditions. In fact, it has been repeatedly recommended by the census authorities that this inquiry be omitted from the schedule. While there are some establishments whose accounting systems are such that an accurate return for capital could be made, this is not true of the great majority, and the figures therefore do not show the actual amount of capital invested.

Materials.—The statistics as to cost of materials relate to the materials used during the year, which may be more or less than the materials purchased during the year. The term "materials" covers fuel, rent of power and heat, mill supplies, and containers, as well as materials which form a constituent part of the product.

Rent and taxes.—The taxes include certain Federal taxes and state, county, and local taxes. Under "Federal taxes" there are included the internal-revenue tax on manufactures (tobacco, beverages, etc.), excise taxes when included in values reported for products, corporation capital stock tax, and corporation income tax, but not the income tax for individuals and partners.

Value of products.—The amounts given under this heading represent the selling value or price at the factory of all products manufactured during the year, which may differ from the value of the products sold.

Value added by manufacture. The value of products is not always a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing processes carried on in the industry itself. Another part, and often by far the larger one, represents the value of the materials used. For many purposes, therefore, the best measure of the importance of an industry, from a manufacturing standpoint, is the value created by the manufacturing operations carried on within the industry. This value is calculated by deducting the cost of the materials used from the value of the products. The figure thus obtained is termed in the census reports "value added by manufacture."

Cost of manufacture and profits.—The census data do not show the entire cost of manufacture, and consequently can not be used for the calculation of profits. No account has been taken of depreciation or interest, rent of offices and buildings other than factory or works, insurance, ordinary repairs, advertising, and other sundry expenses.

Primary horsepower.—This item represents the total primary power generated by the manufacturing establishments plus the amount of power, principally electric, rented from other concerns. It does not cover the power of electric motors taking their current from dynamos driven by primary power machines operated by the same establishment, because the inclusion of such power would obviously result in duplication. The figures for primary horsepower represent the rated capacity of the engines, motors, etc., and not the amount of power in actual daily use.

Fuel.—Statistics of the quantity of fuel used are shown only for anthracite and bituminous coal, coke, fuel oils, gasoline and other volatile oils, and gas—natural and manufactured—and represent the quantity used during the year. As only the principal kinds of fuel are shown, comparison as to the total cost of all fuel is impracticable. A comparison, however, of the total quantities of the several kinds of fuel used in 1919 and 1914 is given.

GENERAL STATISTICS.

General character of the state.—South Carolina is one of the original thirteen states. Its gross area is 30,989 square miles, of which 30,495 represent land surface. The inhabitants of the state in 1900 numbered 1,340,316; in 1910, 1,515,400; and in 1920, 1,683,724. South Carolina ranked twenty-sixth in population and thirty-ninth in area among the states in 1920 and, with 55.2 inhabitants per square mile, seventeenth in density of population.

The urban population in 1920, that is the population residing in incorporated places of 2,500 or more, was 293,987, or 17.5 per cent of the total as against 14.8 per cent in 1910.

There were within the state in 1920 six cities with a population of more than 10,000—Anderson, Charleston, Columbia, Florence, Greenville, and Spartanburg. The population of these cities in 1920 was 172,784, 10.3 per cent of the total population for the state; while 21.3 per cent of the value of manufactured products in 1919 was reported by these cities.

Importance and growth of manufactures (Table 1).— The abnormal increases in wages, cost of materials, and the value of products being to a great extent due to a change in industrial conditions produced by the World War, the statistics for these items presented in Table 1 can not be used to exactly measure the growth of manufactures between the industrial censuses of 1914 and 1919. However, a comparison of the number of establishments, persons engaged, and the horsepower used in 1919 and 1914 shows a considerable increase in the manufacturing activities of the state.

Statistics for the state, by counties (Table 2).— Figures are not available for a comparison of county totals for other censuses with those for 1919. The statistics for this census emphasize the importance from a manufacturing standpoint of the counties in which are located the cities of over 10,000 population. These counties reported 46.3 per cent of the total number of wage earners and 51 per cent of the total value of products for the state.

Principal industries, ranked by value of products (Table 3).—The ranking of industries by value of product does not always show their true importance from a manufacturing standpoint. Their rank might materially change if based upon the average number of wage earners or value added by manufacture.

Persons engaged in manufacturing industries (Table 4).—The age classification of the average number of wage earners in this and other tables is an estimate

obtained by the method described in the "Explanation of terms." The classification by sex for 1919 was reported separately, but for 1914 and 1909 was obtained in the same manner as the distribution by age. Figures for individual industries for 1919 will be found in Table 28.

Average number of wage earners for selected industries (Table 5).—The industries covered by this table are those which employed more than 400 wage earners in 1919 and for which statistics can be shown without disclosing the operations of individual establishments.

Average number of wage earners, by sex and age, and value of products for cities of 10,000 inhabitants or more (Table 6).—Comparative figures for Florence are not available, since the city had less than 10,000 inhabitants at censuses prior to 1919.

Wage earners, by months (Table 7).—The statistics for wage earners in this table are intended to show the steadiness of employment, or the reverse, in accordance with the industrial conditions existing in the several census years.

Wage earners, by months, for selected industries and for cities (Table 8).—In addition to the number of wage earners employed by months, this table gives similar data for males and females for all industries combined for the state and for cities of 10,000 inhabitants or more and also the number of females for industries in which a large number of females were employed.

Prevailing hours of labor (Table 9).—Since 1914 there has been a marked shortening of the working day in South Carolina. In that year, 89.2 per cent of the wage earners were included in the groups "60" and "over 60," as compared with 27.5 per cent in 1919.

Size of establishments, by average number of wage earners, for selected industries and for cities (Table 10).—The predominance of the number of small establishments, when based on the number of wage earners employed, is evidenced in this table by the fact that of the total number of establishments in the state 57.1 per cent were in the classes having less than 6 wage earners, while such establishments employed but 2.8 per cent of the total number of wage earners.

Size of establishments, by value of products (Table 11).—At the censuses of 1909 and 1914 establishments with products valued at \$100,000 to \$1,000,000 constituted one group, but at the census of 1919 this group was subdivided into "\$100,000 to \$500,000" and "\$500,000 to \$1,000,000." Separate figures for

the number of establishments and value of products have been compiled, however, from the returns for 1914. The table, therefore, gives combined figures for these two groups in the case of all items for 1909, and in the case of average number of wage earners and value added by manufacture for 1914.

Size of establishments, by value of products, for selected industries (Table 12).—In the preparation of this table it was necessary in some instances to combine the establishments of one group with those of another group to avoid the possibility of disclosing the operations of individual establishments.

Size of establishments, by value of products, for cities of 10,000 inhabitants or more (Table 13).—This table shows, for the six cities of the state having 10,000 inhabitants or more, the establishments grouped by value of products. It was necessary in some instances in this table as in Table 12 to combine the establishments of one group with those of some other group to avoid the possibility of disclosing individual operations.

Character of ownership (Table 14).—Although in the state the individual form of ownership decreased from 1914, the corporate and all other forms increased by a much larger number. The tendency both in the state outside and in the cities is for increased proportions which the average number of wage earners and value of products reported by the corporate group form of the total.

Manufactures, by population groups, in cities of **10**,000 inhabitants or more (Table 15).—This table shows that the number of cities over 10,000 in the state increased by one from the previous census, and it shows also the increased importance of the manufactures in the cities.

Principal industries in Charleston, with per cent of total for the state (Table 16).—All industries in Charleston having products over \$200,000, for which figures can be shown without disclosing the operations of individual establishments are presented in this table.

Number and horsepower of types of prime movers (Table 17).—A small decrease in the proportion of owned horsepower and a nearly similar increase in that of rented (electric) power is noticeable. The largest increase shown was in rented power, both electric and other.

Fuel consumed (Table 18).—This table shows the total quantities of the principal kinds of fuel used by manufacturing plants in the state in 1919 and 1914 and in the cities over 10,000 population in 1919. It also gives separately for 1919 the amounts consumed by a number of important industries which use considerable quantities of fuel.

TABLE 1.-COMPARATIVE SUMMARY: 1919, 1914, 1909, 1904, AND 1899.

SPECIAL STATISTICS.

For a number of important industries the Census Bureau collects, by means of special or supplemental schedules, certain details which do not appear on the general schedule. Data for five of these industries for South Carolina are here presented.

Cotton goods (Table 19) .- The materials and products of the cotton-goods industry are shown by kind, quantity, cost, and value for the census years 1919, 1914, and 1909.

¹ Figures not available.

- regulation available. ² Designated at the consus of 1914 as "muslins." ³ Designated at the consus of 1909 as "plain cloths for printing or converting" ad "brown or bleached sheetings and shirtings." and

The quantity of raw cotton consumed showed a slight increase from 1914 to 1919, but the industry showed a considerable increase in the quantity of cotton yarn purchased for further manufacture.

Strictly comparable figures for each type of cloth in the group comprising sheetings, muslins, and shirtings are not available for the reason that since 1914 certain changes have been effected in the method of reporting.

Fertilizers (Table 20).-The principal fertilizer products are shown in the following table. for 1919, 1914, and 1909:

| TABLE | 20.—FERTILIZERS: | 1919, | 1914, | AND | 1909. |

¹ In addition cottonseed-oil mills and establishments in other lines of manufac-ture produced in 1919 49,761 tons of fertilizers valued at \$2,222,841; and in 1914 55,716 tons valued at \$1,273,063.

The materials consumed in 1919 included 221,885 tons of phosphate rock, 122,033 tons of purchased superphosphates, 53,759 tons of 50° sulphuric acid, 31,605 tons of pyrites, and 31,755 tons of sulphur, from which was manufactured 164,835 tons of sulphuric acid; giving a total of 218,594 tons of acid. Also, 20,565 tons of ammonium sulphate and cyanamid or lime of nitrogen, and 109,917 tons of tankage, cottonseed meal, and fish.

There were 50 establishments in 1919 primarily engaged in the manufacture of fertilizers. The total output of fertilizers by all establishments, primary and subsidiary, was 845,802 tons, an increase of 15.3 per cent over the production by all mills in 1914. The state ranked third in this industry in 1919, 1914, and 1909.

Lumber and timber products (Table 21).-This table presents statistics pertaining to the chief products of the lumber industry for 1919, 1914, and 1909. Lumbering is one of the oldest manufacturing industries in South Carolina. The period of greatest development in this industry, however, has been since 1890. The lumber reported cut for 1909 was the largest of record and the output for 1919 compared with that for 1909 decreased 30.7 per cent. The relative rank of this state in the production of lumber has remained practically the same for the last three quinquennial censuses. In 1909 and 1919 it ranked twentieth and in 1914 twenty-first.

Yellow pine is by far the most important species cut into lumber and in 1919 this wood contributed 544,475,000 feet, or 87.6 per cent of the total cut. Cypress contributed 27,482,000 feet, or 4.4 per cent; gum 21,917,000 feet, or 3.5 per cent; and oak 11,321,000 feet, or 1.8 per cent. Among other woods sawed into lumber in considerable quantities were tupelo, yellow poplar, ash, maple, and cedar.

TABLE 21.—PRODUCTION OF LUMBER, LATH, AND SHINGLES: 1919, 1914, AND 1909.

| | | QUANTITY. 1 | 14.14 |
|----------|----------------------------|-------------------------------|---------------------------|

¹ Includes three triweeklies in 1919, and one triweekly in 1914 and 1909. ² Includes two semimonthlies and three quarterlies in 1919, and one semimonthly and one quarterly in 1909.

Of the daily papers, 10 with a circulation of 51,546 were published in the afternoon. This circulation has increased 64.4 per cent from 1914 to 1919, and 178.4 per cent for the decade.

The seven morning papers had the larger circulation-65,176—an increase of 24 per cent from 1914 to 1919, and 96.8 per cent for the decade.

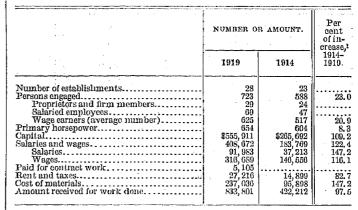

The increase in the circulation of all publications for the five-year period from 1914 to 1919 is 30.9 per cent and for the decade, 58 per cent. All publications were printed in the English language.

Laundries (Table 23).—Statistics for power laundries are not included in the general tables nor in the

112353°-24-s c-7

totals for manufacturing industries. This table, however, summarizes the statistics for such laundries in South Carolina for 1919 and 1914.

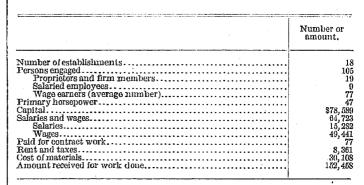

| TABLE | 23Power | LAUNDRIES: | 1919 | AND | 1914. |
|-------|---------|------------|------|-----|-------|
| | | | | | |

¹ Percentages are omitted where base is less than 100.

Dyeing and cleaning (Table 24).—Statistics for dyeing and cleaning establishments that were operated by mechanical power in 1919 are presented in this table. Statistics for such establishments are not included in the general tables nor in the totals for manufacturing industries for censuses since 1900. This presentation is the first that has been made since the census statistics were confined to manufacturing industries as distinguished from the hand trades, household industries, etc.

TABLE 24.-DYEING AND CLEANING: 1919.

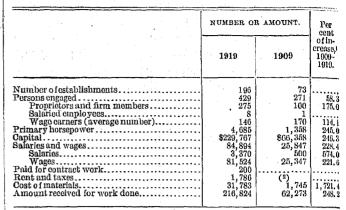

Custom gristmills and custom sawmills (Tables 25 and 26).—Summaries of the more important data for custom gristmills and custom sawmills are presented in these tables. These statistics are not included in the general tables nor in the totals for manufacturing industries. TABLE 25.-CUSTOM GRISTMILLS: 1919 AND 1909.

GENERAL TABLES.

Table 27 gives for 1919, 1914, and 1909, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products for all industries combined and for selected industries in the state and in Charleston; and, for cities having from 10,000 to 50,000 inhabitants, similar data for all industries combined. Table 28 presents, for 1919, for the state as a whole and for Charleston, statistics in detail for each industry for which figures can be shown without disclosing individual operations; and for the five cities having from 10,000 to 50,000 inhabitants, similar data for all industries combined.

TABLE 27.-COMPARATIVE SUMMARY FOR SELECTED INDUSTRIES AND FOR CITIES: 1919, 1914, AND 1909.

+ Same number reported for one or more other months.

MINES AND QUARRIES-SOUTH CAROLINA.

EXPLANATION OF TERMS.

Scope of census and period covered.—The census of mines, quarries, and petroleum or natural-gas wells does not cover enterprises which were idle; that is, in which neither productive nor development work was done during the entire year, or the products of which were valued at less than \$500; or in the case of bituminous coal mining, producing less than 1,000 tons, or, if not productive, in which development work amounting to less than \$5,000 was done. The returns relate to the calendar year 1919. When use is made of the statistics relating to character of ownership, size of enterprises, and similar subjects, it is imperative that due attention be given their limitations, particularly in connection with any attempt to show average wages, cost of production, or profits.

The enterprise.—The term "enterprise" represents one or more mines and quarries, wells or groups of wells, or natural-gas gasoline plants, all within the same state, operated under a common ownership or unified control, or for which only one set of books of account was kept, and for which a single report was secured. It may cover plants at several localities within the same state. If plants under unified control were not all located within the same state, separate reports were secured in order that statistics for the several enterprises thus defined might be included in statistics for the states in which they were located. The enterprise is further defined as being limited to a single industry.

Number of mines, quarries, wells, and plants.—Under these designations is given the number of mines, quarries, wells, and gasoline plants shown by the returns. As a rule each group of workings at a given locality in which operations were conducted as a unit or were unified by common management or joint handling of some part of the mining process, has been considered as a single mine or quarry. Many individual openings, therefore, are not counted as individual mines. The total number reported comprises those in operation or in the course of development during the year 1919. For petroleum and natural-gas wells the individual wells were counted and the total number productive December 31, 1919, is reported. The number of natural-gas gasoline plants is the total number reported in operation during the year.

Classification by industries.—The enterprises reported have been grouped by industries according to the kind of products.

Selected industries.—The detailed table gives the principal facts separately for the leading industries of the state.

Influence of increased prices.—In comparing figures for cost of supplies and materials and value of products with the corresponding figures for earlier censuses, account should be taken of the general increase in the prices of commodities during recent years.

Persons engaged in the industry.—The number of persons engaged in each industry, by occupation, sex, and, in the case of wage earners, also by age, was reported for a single representative day. In addition to the number of wage earners on the representative date, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported for the several months by 12.

Salaries and wages.—Under these heads are given the total payments during the year for salaries and wages, respectively.

Prevailing hours of labor.—This inquiry called merely for the prevailing practice followed in each enterprise. Occasional variations in hours from one part of the year to another were disregarded, and also where a few wage earners might have hours differing from the majority. All the wage earners of each enterprise are therefore counted in the class within which the enterprise falls. Capital.—The instructions on the schedule relating to capital were as follows: "The answer should show the total amount of capital, owned and borrowed, invested by the operator in the enterprise on the last day of the business year reported. Do not include securities and loans representing investments in other enterprises." The reports received in respect to capital, however, have in so many cases been defective that the data compiled only indicate very general conditions.

Expenses.—The expenses reported in the census of 1919 include salaries and wages; the cost of supplies, materials, and fuels, including the freight on these; cost of power purchased; the cost of contract work; royalties and rents paid; and taxes paid or assessed. The census of 1909 reported in addition to the items of expenses covered by the present census all other items of expense incident to that year's business, except interest on indebtedness, dividends, and allowances for depreciation.

Supplies and materials, fuel, and power.—Statistics as to supplies and materials, fuel, and power, relate to the cost of these used during the year which may be more or less than the amount purchased during the year. The term "supplies and materials" covers mine, mill, quarry, and well supplies, and mineral purchased for treatment, resale, or distribution.

Royalties and rents.—The amounts given under this head represent the payment to fee holders or the value of share of product credited to fee holders for mineral output from leased land, and also rents paid for plants, equipment, and privileges or easements.

Taxes.—The taxes include Federal capital stock; corporation income, and excess profits tax; and also state, county, and local taxes. The data compiled in respect to Federal taxes are very defective as many mining corporations are engaged in other business and have sources of income other than from mining and do not pay taxes on mining separately.

Expenditures for development work.—In the statistics for producing enterprises that part of the expenses for salaries, wages, contract work, supplies and materials, fuel, and power credited to development work is shown as expenditures for development work. For nonproducing enterprises the total of these expenses is given as expenditure for development work.

Quantity of products.—In so far as the statistics on quantities of mineral products in 1919 are available for the states, they will be found in the reports of the United States Geological Survey.

Value of products.—The amounts given under this heading represent the selling value at point of production or f. o. b. at point of shipment, or such other value as may represent the net value or amount received for the 1919 product under the terms by which it was disposed of, and also includes the value at point of production of products used by the operating company.

Cost of mining and profits.—The data do not show entire cost of mining and well operations, and can not be used for the calculation of profits. No account was taken of depreciation or interest; rent of offices and buildings other than those for mines, quarries, and wells; insurance, selling, and other sundry expenses. Lands controlled.—The inquiry on land tenure was confined to

Lands controlled.—The inquiry on land tenure was confined to land pertaining to the operations covered by the report. In many of these, however, land held in reserve for future development and for other purposes not pertaining to mining was included and also a large number of more or less unsatisfactory estimates.

Power used.—The figures on power represent the rated capacity of the engines, motors, etc., and not the amount in actual daily use.

Fuel.—Statistics of fuel are shown only for anthracite and bituminous coal, coke, wood, oil, and gas. As only the principal varieties of fuel are shown, no comparison can be made with the total cost.

(105)

STATISTICS FOR THE STATE.

South Carolina, which ranks thirty-ninth among the states in size (land area 30,495 square miles) and twenty-sixth in population (1,683,724 in 1920), ranked forty-fourth in value of mineral products in 1919. The state ranked fortieth in the total number of persons engaged in the mining industries and in the average number of wage earners employed.

The total value of products of all mines and quarries in South Carolina in 1919 was \$1,350,747, an increase of 7.8 per cent as compared with the amount reported at the census of 1909. This increase and the increases in capital, wages, cost of supplies and materials and fuel and power, as shown in Table 1, were largely affected by general price increases during the census interval and are therefore not a measure of progress in mining. Decline of the mining industries is indicated by decrease in the number of enterprises and individual mines and quarries operated and in the average number of wage earners employed.

The mineral industries reported in South Carolina in 1919 were the quarrying of granite and the mining of phosphate rock, clay, and barytes.

The leading industry, and the only one for which statistics can be shown without disclosure of individual operations, was the quarrying of granite. This industry included one-half the enterprises reported, employed 34.5 per cent of the total number of wage earners, and reported products valued at \$747,976 or 55.4 per cent of the total value of products.

The mining enterprises in South Carolina in 1919 are classified according to form of operating organization in Table 2, which shows that corporations were most numerous and conducted the largest enterprises.

In Table 3 the mining enterprises are grouped by size according to number of wage earners employed. All enterprises were small, that is, employed fewer than 101 wage earners, except two which were in the phosphate-rock-mining industry.

Table 4 shows that in four-fifths of the enterprises and for nearly three-fourths of the wage earners the hours of labor were 54 to 62 per week in the mining industries. The 10-hour workday and 6-day week prevailed.

The statistics for wage earners presented in Table 5, showing changes in the number employed month by month, reflect conditions prevailing in the industries during the census year.

Table 6 presents for 1919 statistics in detail for the state as a whole and for each industry that can be shown without disclosure of individual operations.
