

AGRICULTURE—GEORGIA.

INTRODUCTION.

In the following pages are presented all of the published results of the 1920 census of agriculture for this state and its counties, except certain detailed tabulations for the state which appear in Volume V of the Fourteenth Census Reports and a few minor items which have been published in special bulletins. The statistics of farms and farm property, including live stock, relate to January 1, 1920; those of live-stock

products, crops, and farm expenditures are for the calendar year 1919. In order to show the present tendency in agriculture, comparative figures for the census of 1910 are given throughout; and to show the general trend of the agricultural industry over a considerable period of time, all general farm information available is presented for the different censuses since 1850.

FARMS AND FARM PROPERTY.

TABLE 1.—SUMMARY: 1920 AND 1910.

ITEM.	1920 (January 1)	1910 (April 15)	INCREASE. ¹	
			Amount.	Per cent.

Live stock.....	6.09	2.98	3.11	104.4

¹ A minus sign (—) denotes decrease.

² Population residing outside of incorporated places having 2,500 inhabitants or over. The rate of increase in the rural population between the two censuses is affected somewhat by the fact that certain places classified as rural in 1910 had become urban by 1920. The population in 1910 of the territory classified as rural in 1920 was 2,039,497. For this territory, the increase in population between 1910 and 1920 was 6.3 per cent, which percentage indicates the rate of growth of the rural population, leaving out of consideration the changes in classification of territory.

GEORGIA

COUNTIES, PRINCIPAL CITIES, RIVERS, AND MOUNTAINS.

EXPLANATION OF TERMS.

To assist in securing comparability for its statistics of agriculture, the Bureau of the Census provided the enumerators with certain definitions and instructions, the more important of which were essentially as given below.

Farm.—A "farm" for census purposes is all the land which is directly farmed by one person managing and conducting agricultural operations, either by his own labor alone or with the assistance of members of his household or hired employees. The term "agricultural operations" is used as a general term, referring to the work of growing crops, producing other agricultural products, and raising domestic animals, poultry, and bees. A "farm" as thus defined may consist of a single tract of land or of a number of separate and distinct tracts, and these several tracts may be held under different tenures, as where one tract is owned by the farmer and another tract is hired by him. When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm."

In applying the foregoing definition of a "farm" for census purposes, enumerators were instructed to report as a "farm" any tract of 3 or more acres used for agricultural purposes, and also any tract containing less than 3 acres which produced at least \$250 worth of farm products in the year 1919, or required for its agricultural operations the continuous services of at least one person.

Farmer.—A "farmer" or "farm operator," according to the census definition, is a person who directs the operation of a farm. Hence owners of farms who do not themselves direct the farm operations are not reported as "farmers." Farmers are divided by the Bureau of the Census into three general classes according to the character of their tenure, namely, owners, managers, and tenants.

Farm owners include (1) farmers operating their own land only and (2) those operating both their own land and some land hired from others. The latter are sometimes referred to in the census reports as "part owners," the term "full owners" being then used for those owning all their land.

Managers are farmers who are conducting farm operations for the owner for wages or a salary.

Farm tenants are farmers who, as tenants, renters, or croppers, operate hired land only. They were reported in 1920 in five classes: (1) Share tenants—those who pay a certain share of the products, as one-half, one-third, or one-quarter, for the use of the farm but furnish their own farm equipment and animals; (2) croppers—share tenants who do not furnish their work animals; (3) share-cash tenants—those who pay a share of the products for part of the land rented by them and cash for part; (4) cash tenants—those who pay a cash rental, as \$7 per acre of crop land or \$500 for the use of the whole farm; (5) standing renters—those who pay a stated amount of farm products for the use of the farm, as 3 bales of cotton or 500 bushels of corn. In some cases the character of the tenancy was not ascertained by the enumerator; such tenants are designated "unspecified."

Farm land.—Farm land is divided into (1) improved land, (2) woodland, and (3) other unimproved land.

Improved land includes all land regularly tilled or mowed, land in pasture which has been cleared or tilled, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings.

Woodland includes all land covered with natural or planted forest trees which produce, or later may produce, firewood or other forest products.

All other unimproved land includes brush land, rough or stony land, swamp land, and any other land which is not improved or in forest.

The census classification of farm land as "improved land," "woodland," and "other unimproved land" is one not always easy for the farmers or enumerators to make, and the statistics, therefore, must be considered at best only a close approximation.

¹ Includes farmers with country of birth not reported, as follows: For 1920, 3,942; for 1910, 90.

TABLE 17.—NUMBER OF FARMERS, CLASSIFIED BY TENURE, COLOR, AND NATIVITY: 1920 AND 1910.

TENURE.	ALL FARMERS.		NATIVE WHITE. ¹		FOREIGN-BORN WHITE.		COLORED.	
	1920	1910	1920	1910	1920	1910	1920	1910
Total.....	310,732	291,027	180,217	168,083	328	385	130,187	122,559
Owners.....	102,123	98,628	85,336	82,634	245	296	16,042	15,098
Managers.....	1,655	1,419	1,432	1,282	16	14	207	123
Tenants.....	206,954	190,980	92,949	84,167	67	75	113,938	106,738

¹ Includes farmers with country of birth not reported.

FARM MORTGAGES.

TABLE 18.—MORTGAGED FARMS: 1920 AND 1910.

[Owned farms only; includes all farms owned in whole or in part by the operator.]

CLASS.	NUMBER OF OWNED FARMS.		INCREASE. ¹		PER CENT OF TOTAL.	
	1920	1910	Number.	Percent.	1920	1910
Total.....	102,123	98,628	3,495	3.5	100.0	100.0
Free from mortgage.....	64,061	78,004	-13,943	-17.9	62.7	79.1
Mortgaged.....	23,135	18,257	4,878	26.7	22.7	18.5
Unknown.....	14,927	2,367	12,560	530.6	14.6	2.4

¹ A minus sign (-) denotes decrease. The comparative figures shown for farms free from mortgage and mortgaged are affected somewhat by the fact that more farms were tabulated as "unknown" in 1920 than in 1910.

TABLE 19.—MORTGAGED FARMS (OR FARM HOMES): 1890 TO 1920.

CLASS.	OWNED FARMS.		OWNED FARM HOMES.		PER CENT OF TOTAL.			
	1920	1910	1900	1890	1920	1910	1900	1890
Total.....	102,123	98,628	88,343	73,607	100.0	100.0	100.0	100.0
Free from mortgage.....	64,061	78,004	70,222	71,116	62.7	79.1	79.5	96.6
Mortgaged.....	23,135	18,257	12,136	2,491	22.7	18.5	13.7	3.4
Unknown.....	14,927	2,367	5,985	14.6	2.4	6.8

TABLE 20.—MORTGAGE DEBT: 1920 AND 1910.

ITEM.	OWNED FARMS MORTGAGED. ¹		INCREASE.	
	1920	1910	Amount.	Per cent.
Number of farms reporting amount of debt.....	20,797	13,839	6,958	50.3
Value of land and buildings.....	\$124,579,125	\$37,526,424	\$87,052,701	232.0
Amount of mortgage debt.....	\$37,671,385	\$10,938,409	\$26,682,976	242.8
Ratio of debt to value, per cent.....	30.2	29.3
Average rate of interest paid, per cent.....	7.3
Average value per farm.....	\$5,990	\$2,712	\$3,278	120.9
Average debt per farm.....	\$1,811	\$794	\$1,017	128.1
Average equity per farm.....	\$4,179	\$1,918	\$2,261	117.9

¹ Includes only farms consisting wholly of owned land and reporting amount of debt. In considering the comparative figures, it should be borne in mind that the mortgage debt may have been more completely reported at one census than at the other.

FARM EXPENDITURES FOR LABOR, FERTILIZER, AND FEED.

TABLE 21.—FARMS REPORTING EXPENDITURES FOR LABOR, FERTILIZER, AND FEED: 1919 AND 1909.

ITEM.	NUMBER OF FARMS REPORTING.		INCREASE. ¹		PER CENT OF ALL FARMS.	
	1919	1909	Number.	Per cent.	1919	1909
Labor.....	83,444	113,782	-30,338	-26.7	26.9	39.1
Fertilizer.....	280,385	230,271	44,114	18.7	90.2	81.2
Feed.....	80,580	75,075	10,605	14.0	27.9	26.1

¹ A minus sign (-) denotes decrease.

TABLE 22.—AMOUNT OF EXPENDITURES FOR LABOR, FERTILIZER, AND FEED: 1919 AND 1909.

ITEM.	AMOUNT EXPENDED.		INCREASE.	
	1919	1909	Amount.	Per cent.
Labor, total.....	\$19,016,703	\$13,218,113	\$5,798,590	43.9
Amount in cash.....	10,705,234	11,185,852	5,510,382	49.2

LIVE STOCK ON FARMS AND ELSEWHERE.

(DOMESTIC ANIMALS, POULTRY, AND BEES.)

Domestic animals: 1920 and 1910.—The census of 1920 was taken as of January 1 and that of 1910 as of April 15. Since a great many domestic animals are born during the period between January 1 and April 15 and, on the other hand, a considerable number of older animals are slaughtered or die during the same period, the numbers of the different classes of animals for the two censuses are not fully comparable. In addition to the change in the date of enumeration, there have been certain changes in the age and sex classifications. The 1910 figures presented in the following tables are therefore restricted to those classes of domestic animals which are least affected by these changes and for which the figures are fairly comparable with the 1920 returns.

Dairy cows: 1920 and 1910.—In 1910 the census called for "cows and heifers kept for milk" and "cows and heifers not kept for milk." The instructions read: "Report as cows kept for milk those whose milk is used in some form for human food. Cows milked for three months during the year should be reported as *kept for milk*, although a part of the year they run with their calves."

In 1920 the census called for "dairy cattle" and "beef cattle." Dairy cattle were defined as those "kept mainly for milk production," and the following instructions were given the enumerators: "Classify all cattle as beef cattle or as dairy cattle according to the principal purpose for which they are kept." It is believed that under this rule the fully established dairy and beef breeds have been properly reported, with few errors, and that cattle of the dual-purpose breeds or of no definite breeding have been placed in one class or the other, according to the principal purpose for which they are kept.

In states where cattle are raised extensively for beef production the result of this new classification will be to reduce materially the proportion of cows classified as dairy cows, and even in states having few strictly beef cattle the 1920 classification may be expected to give a somewhat smaller proportion of dairy cows than the 1910 classification.

In Georgia the number of "dairy cows," including heifers 1 year old and over, reported for January 1, 1920, was 484,122, as compared with 405,710 "cows

kept for milk" reported for April 15, 1910. This represents an increase of 78,412, or 19.3 per cent. The number of "beef cows" reported for January 1, 1920, was 282,067, as compared with 245,303 "cows not kept for milk" reported for April 15, 1910, representing an increase of 36,764, or 15 per cent. The percentage of increase shown for dairy cows would have been even larger, except for the change in classification mentioned above, and the percentage of increase shown for beef cows correspondingly smaller.

Farms reporting domestic animals: 1910.—Horses were reported by 87,257 farms in Georgia in 1910, mules by 186,512 farms, cattle by 213,203, sheep by 5,167, and swine by 213,447. In comparing these figures with the 1920 figures given in the table below, due allowance should be made for the fact that the total number of farms in Georgia increased from 291,027 in 1910 to 310,732 in 1920.

LIVE-STOCK PRODUCTS.

Farm value of live-stock products: 1919 and 1909.—The Thirteenth Census schedule called for the total value as well as the total quantity of all live-stock products, whether sold or consumed on the farm. The 1909 values are therefore based directly on the reported figures. But in the Fourteenth Census schedule the question as to value in the case of dairy products, eggs, and chickens was restricted to the amounts sold. The 1919 value of butter made on farms has been computed on the basis of the average value received per pound for butter sold; the values of eggs produced and chickens raised have been computed in a similar way. The values of cheese made on farms and of honey and wax produced have been computed on the basis of average values per pound secured through the Bureau of Crop Estimates of the Department of Agriculture. The method of obtaining these average values was the same as that used for securing average values for the important crops, which is described in a later paragraph.

Dairy products.—It is difficult to secure reports of the total quantity of milk produced during a given year, especially from farmers who keep cows chiefly to supply milk and butter for family use. Since such farmers usually keep no records, they are able to make only rough estimates of the milk production and frequently underestimate the quantity of milk produced for home use. Many farmers, too, either because they are unwilling to make any estimates or for other reasons, fail to report their milk production, even though they report butter or other dairy products as well as dairy cows.

For several decades past the Bureau of the Census has made estimates for such incomplete reports, where the farmer reported "cows kept for milk" but failed to report the amount of milk produced, these estimates being based on the average production per cow as shown by the complete reports. Since farmers with first-class dairy herds and up-to-date methods are

more likely to make complete reports than those with cows of a lower grade, the estimates obtained in this way have probably been somewhat above the actual production. With the new basis of classification for dairy cows in use for 1920, however, as already noted, the estimates should be more satisfactory than heretofore, since milk will be estimated only for cows kept mainly for milk production.

In the table which follows, both the actual reported quantity of milk produced and the estimated total are given. The latter includes, in addition to the milk reported, an estimate of the amount of milk produced on farms which reported dairy cows but failed to report any milk. A certain quantity of milk, on the other hand, was reported from farms which reported no dairy cows. This is included in the total and may represent either milk produced by beef cows milked a part of the year on farms having no dairy cows or milk produced on farms which kept dairy cows some time during the year 1919 but had none on January 1, 1920.

CROPS.

Summary: 1919 and 1909.—This section summarizes the census data relative to all of the farm crops of 1919 and 1909, including the percentage of increase for the decade in acreage, production, and value.

In comparing one year with another it should be borne in mind that the acreage of crops (or the number of fruit trees) and the number of farms reporting are on the whole a better index of the general changes or tendencies in agriculture than either the quantity or the value of the crops, since variations in quantity may be due mainly to favorable or unfavorable seasons, and variations in the value of the crops may result largely from changes in prices.

The combined acreage of crops harvested in Georgia in 1919 for which the acreage was reported was 10,468,834, which represents 80.2 per cent of the total improved land in farms (13,055,209 acres). The total crop acreage reported for 1909 was 9,660,737, or 78.6 per cent of the improved land in farms (12,298,017 acres). Most of the remaining improved land doubtless consisted of improved pasture, land lying fallow, house and farm yards, and land occupied by orchards and vineyards, the acreage of which was not reported.

In addition to the crops regularly harvested in 1919, as shown in the tables, there were reported 500,672 acres of mature crops grazed or "hogged off" and 523,690 acres in velvet beans, the latter including the total acreage on which velvet beans were grown for any purpose, either alone or mixed with other crops.

Farm value of crops.—At the census of 1920 the farm schedule called for the value of all farm property, including live stock, and the value of live-stock products sold.

In the case of farm crops, however, wherever a unit value could be used, such as the value per bushel or per ton, the farmer was asked to report the acreage and production of each crop but not the value. To supplement the information obtained from the farmers, the Bureau of Crop Estimates of the United States Department of Agriculture secured by special schedule from its crop reporters average values for such crops. These special schedules were tabulated by the Bureau of the Census, and the resulting averages, approved by the Bureau of Crop Estimates as representing a fair average of the farm value per unit, were used in computing most of the crop values presented in the accompanying tables.

For some products it was not possible to find any satisfactory unit on which to base a computation of the total value. Values were therefore obtained on the 1920 census schedule for vegetables, other than potatoes and sweet potatoes, and for the farm garden.

TABLE 32.—SUMMARY FOR ALL CROPS: 1919 AND 1909.

CROP.	FARMS REPORTING.				ACRES HARVESTED.			PRODUCTION.

Other fruits and nuts.											10,801,050	3,143,114	243.6

¹ A minus sign (-) denotes decrease. Per cent not shown when base is less than 100 or when per cent is more than 1,000.

² Excluding 728,844 acres reported for corn cut for forage, which is practically all duplicated in the acreage shown for corn harvested as grain.

³ The 1909 figures include small quantities of summer and spelt and of kafir and milo.

⁴ Less than one-tenth of 1 per cent.

⁵ Principally oats and peas grown and harvested together.

⁶ Includes small quantities of sorghum seed (1919 and 1909) and of flaxseed and velvet beans (1909). A considerable part of the acreage in soy beans, peas, and possibly some other crops, is probably a duplication of other crop acreage.

⁷ Includes small quantities of flower and vegetable seeds (value only) and of millet seed. The entire acreage from which the grass and clover seeds were secured is believed to be included in the acreage given elsewhere for hay and forage.

⁸ Corn cut for forage was not reported to any extent in 1909; hence no fair comparison between 1919 and 1909 can be made, either for the hay and forage totals or for the bracketed group in which corn cut for forage appears.

⁹ Includes millet and Hungarian grass.

¹⁰ The 1919 figures represent vegetables raised for sale only.

¹¹ In 1909 the value of the farm garden was largely included in the value of "other vegetables."

¹² These crops comprise broom corn and chufas (1919 and 1909), and ginseng (value only, 1909).

TABLE 33.—ACREAGE OF IMPORTANT CROPS HARVESTED: 1879 TO 1919.

CROP.	1919	1909	1899	1889	1879
Corn.	4,209,455	3,383,061	3,477,684	2,582,316	2,538,733

Cotton.	4,720,498	4,883,304	3,513,839	3,345,104	2,617,138

¹ Includes 728,844 acres in corn cut for forage. This crop was not included to any extent in the hay and forage totals prior to 1919. If its acreage be deducted, to make the 1919 figures more closely comparable with those of earlier years, the remaining area in hay and forage will be 510,970 acres.

¹ Includes apricots, quinces, and (for 1910) mulberries. Since these fruits were not specifically called for by the 1920 schedule, the returns for that year are somewhat incomplete.

² The figures for 1910 and 1909 include lemons, grapefruit, pineapples, olives, and bananas (trees or plants and value of product).

³ Less than one-tenth of 1 per cent.

⁴ The figures for 1910 and 1909 include almonds, and also black walnuts and several other varieties of nuts not called for by the 1920 schedule.

Age of farmers.—A farmer or farm operator, as defined for census purposes, is a person who operates a farm. The number of farm operators, for which the age distribution is shown in the following table, is therefore the same as the number of farms.

TABLE 40.—FARM OPERATORS CLASSIFIED ACCORDING TO AGE, COLOR, AND TENURE: 1920 AND 1910.

Farmers classified by number of years on farm.—In the following table the farmers of the state are classified according to the number of years they had been on the farms which they were operating when the census was taken. The purpose of this classification is to show the relative stability of the different classes.

TABLE 41.—FARM OPERATORS CLASSIFIED ACCORDING TO NUMBER OF YEARS ON FARM, BY COLOR AND TENURE: 1920 AND 1910.

NOTE.—In 1920 the date of enumeration (January 1) came just before the period during which changes from one farm to another are commonly made in most localities, and hence at a time when many farmers had almost, but not quite, completed one, two, or more years on their farms. Considerable numbers of these farmers reported one, two, or more full years, in place of reporting the correct number of months (or years and months). In 1910, however, the enumeration date (April 15) was late enough so that, in localities where the common moving time was in the early part of the year, the number of years of occupancy was accurately reported. These differences seriously affect the comparability of the returns, especially for the first two years of occupancy. Hence these two years, which were tabulated separately and are so published in Volume V of the Fourteenth Census Reports, have been combined in the following table.

NUMBER OF YEARS ON FARM AND COLOR.	TOTAL.		OWNERS.		MAN-AGERS.		TENANTS.

Cooperative marketing and purchasing.—Cooperative marketing of farm products or cooperative purchasing of supplies through farmers' organizations in 1919 was reported by 586 farms in Georgia, including 35 farms which reported both sales and purchases, 175 farms which reported sales only, and 376 farms which reported purchases only.

TABLE 42.—COOPERATIVE MARKETING AND PURCHASING THROUGH FARMERS' ORGANIZATIONS: 1919.

Water piped into house.....	5,615	1.8
Gas or electric light.....	5,826	1.9

Pure-bred live stock on farms.—The inquiry relating to pure-bred live stock called for registered animals only, but it seems evident, from a study of the returns, that some animals merely eligible for registry (but not actually registered) were included in the reports.

The number of farms in Georgia in 1920 was 310,732, of which number 297,678 reported domestic animals of some kind, and 12,321 reported pure-bred live stock.

TABLE 44.—PURE-BRED LIVE STOCK CLASSIFIED ACCORDING TO BREED: 1920.

NOTE.—Pure-bred horses reported in Georgia represented 0.2 per cent of all horses on farms (see Table 23); pure-bred cattle, 1.1 per cent of the total; pure-bred sheep, 0.6 per cent; and pure-bred swine, 2.3 per cent.

Lambs.....	1,579	0.5	15,620	9.9

Domestic animals sold or slaughtered on farms.—The number of cattle, swine, and sheep slaughtered on farms was reported for both 1919 and 1909, but the farm schedule for 1919 carried no inquiry with regard to the value of the animals slaughtered, or with regard to the number or value of the animals sold by farmers. The total value of domestic animals sold or slaughtered on farms in Georgia in 1919 has been estimated, however, at \$39,000,000, as compared with \$15,869,720; the value reported for 1909.

⁶ Part of Franklin County taken to form part of Stephens County in 1905.

⁷ Part of Clayton County annexed to Fulton County in 1908, and part of Campbell County annexed to Fulton County in 1916.

⁸ The correction of errors discovered after the 1900 census reports were published would make this acreage 65,730.

COUNTY TABLE I.—FARMS AND FARM PROPERTY, 1920,

DRAINAGE—GEORGIA.

INTRODUCTION.

The following pages present the statistics of drainage for Georgia collected at the census of 1920. The figures relate to conditions on January 1, 1920, except where indicated otherwise. No census of drainage has been taken heretofore, so there are no comparable figures for previous years. The data relate to the artificial drainage of land in farms, and of other land that ultimately will be used for agricultural purposes. The organized drainage enterprises may include areas of unimproved land not yet in farms. The statistics

for drainage on farms were collected in the general census of agriculture, while the statistics for drainage enterprises were obtained in a special canvass of those enterprises. Since drainage on farms may be either inside or outside an organized enterprise, and the drains that each individual owner installs upon his own farm may be either supplemental to or entirely independent of the works installed by an enterprise, the figures for the two parts of the drainage census are presented separately.

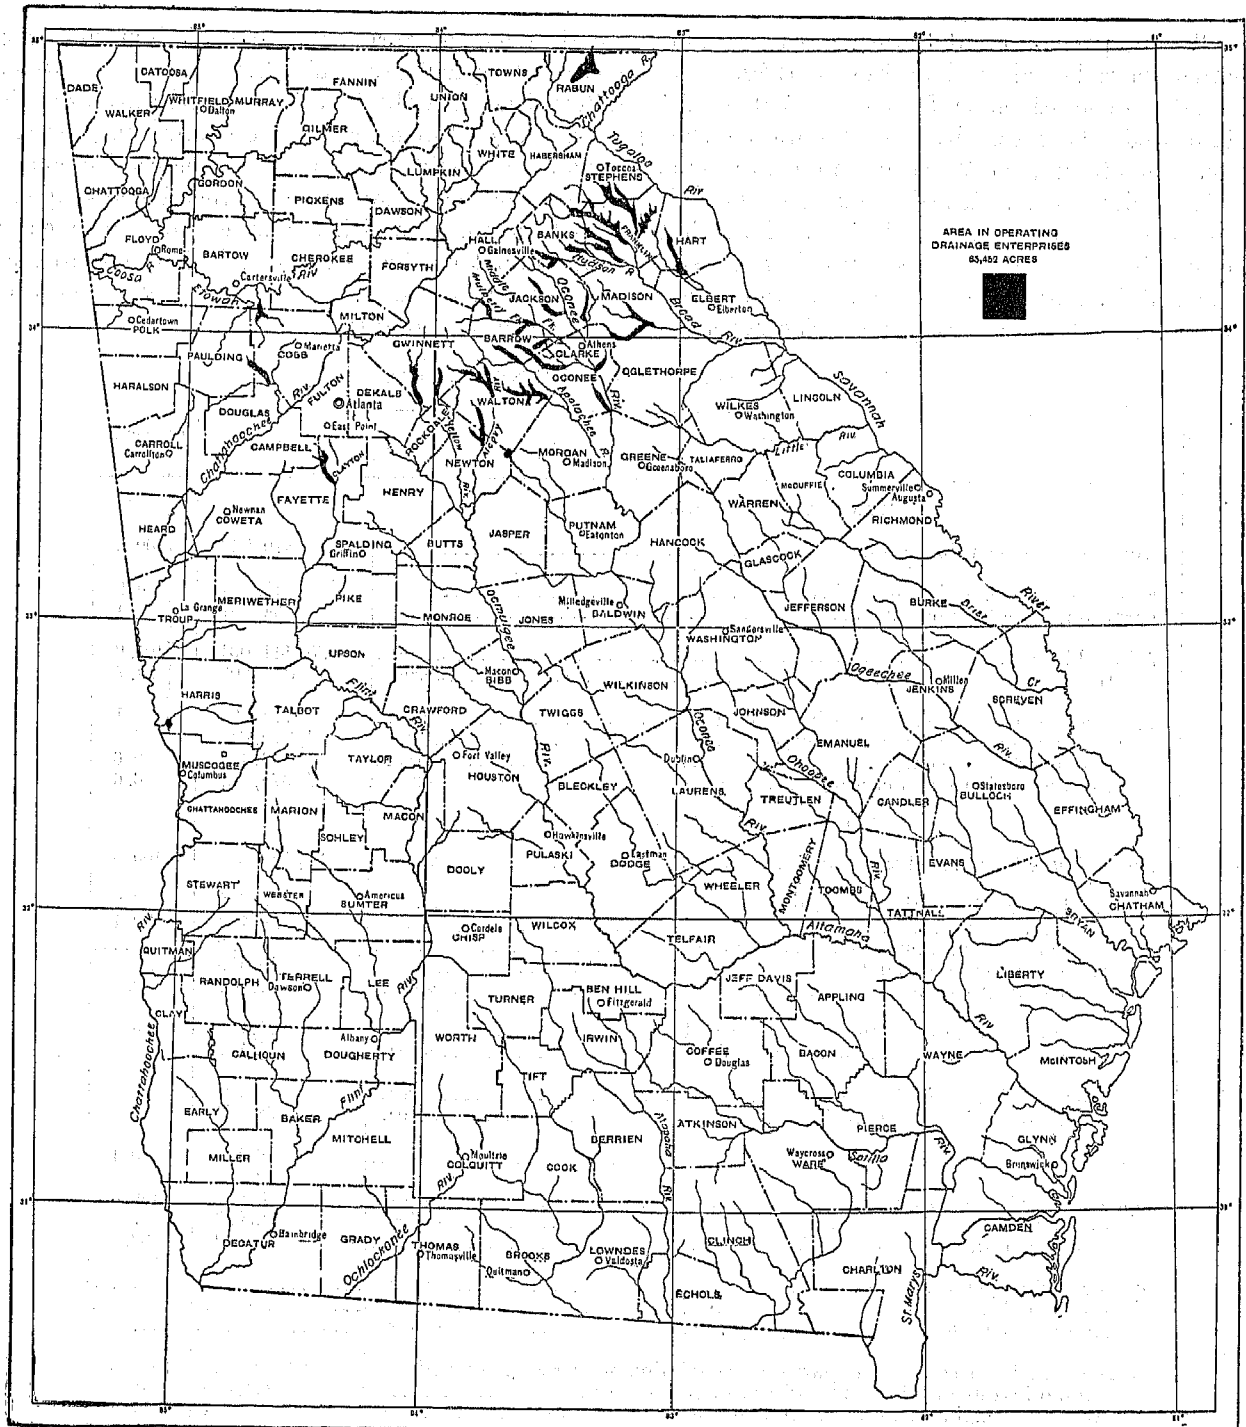

TABLE 1.—SUMMARY FOR THE STATE: 1920.

ITEM.	Amount.	Per cent of total.
DRAINAGE ON FARMS.		
Number of all farms in the state.....	310,732	100.0

GEORGIA

APPROXIMATE LOCATION AND AREA OF OPERATING DRAINAGE ENTERPRISES.

DRAINAGE ON FARMS.

Explanation of terms.—To secure uniformity in the returns relating to drainage on farms, the Bureau of the Census supplied its enumerators with certain definitions, which are substantially as follows:

Drainage of agricultural land was defined, for census purposes, as the act or process of drawing off an excess of water by underground conduits, pipes, or tiles, or by open or covered trenches in the surface of the ground, for the purpose of improving the condition of the soil and crops.

The area provided with drainage, in farms, is the acreage actually benefited or made of more value for agricultural purposes by artificial drainage, but does not include land on which only temporary work has been done, such as "bedding" the fields or laying out "dead furrows" to hasten the surface flow.

The area needing drainage, in farms, comprises the additional land not now suitable for crops which could be made available for cultivation (1) "by drainage only," which is the acreage needing no clearing or which is covered with grass, weeds, or other annual growth, and (2) "by drainage and clearing," which is the acreage covered with trees, stumps, or perennial woody shrubs.

Improved land in farms includes all land regularly tilled or mowed, land in pasture which has been cleared or tilled, land lying fallow, land in gardens, orchards, vineyards, and nurseries, and land occupied by farm buildings.

Woodland in farms includes all land covered with natural or planted forest trees which produce, or later may produce, firewood or other forest products.

Farms in drainage and levee districts are those for which the operators have answered affirmatively the question, "Has any part of this farm been afforded drainage or protection against overflow by a drainage or levee district, or by the state, the county, or a private company or individual." Levee districts, however, generally are not included in the enterprises for which data are given in this report (see definition of drainage enterprises, below).

Farms and farm land.—The acreage shown for drainage on farms represents land where drainage is actually in operation and which has actually become more fully available for growing crops by reason of the drainage. This is to be distinguished from the area merely provided with outlet facilities by organized drainage enterprises. Drainage on farms represents in most cases the result of work done by the farm owner, either independently or supplemental to the work done by a drainage enterprise, but the acreage would include also any farm land receiving similar benefits directly from the works of an enterprise.

DRAINAGE ENTERPRISES.

Explanation of terms.—The more important terms used in connection with the census of drainage enterprises were defined as follows:

Drainage enterprises comprise public corporations and local improvement districts formed under state laws, commercial enterprises draining swamp or overflowed land for sale, other organizations that may be engaged in extensive land-drainage work, and also tracts of 500 acres or more drained by individual owners. Enterprises such as levee districts that have not authorized the construction of open ditches or tile drains are not included.

Enterprises located in more than one county were divided, for tabulation, and the part in each county treated as a separate enterprise, though the capacities of drainage pumping plants are given only in the counties in which the plants are located.

Operating enterprises, as designated in this bulletin, are those that had completed the drainage works authorized, or had at any rate begun actual construction work, on or before January 1, 1920; enterprises that had been established but had not begun construction are termed "nonoperating."

Land in drainage enterprises comprises the area that has been benefited or is to be benefited by the improvement works constructed by the enterprises. In the case of overlapping enterprises, deduction has been made for the amount of duplication.

All land in drainage enterprises is divided, without regard to drainage condition, into (a) improved land; (b) timber and cut-over land, which would require clearing to be thoroughly fit for cultivation; and (c) all other unimproved land, which would not require expensive clearing before cultivation.

The assessed acreage for any single enterprise is the same as the area in that enterprise. However, the total assessed acreage may be considerably greater than the total land in enterprises, for in summing up the assessed acreage in the county or state, deduction was not made for acreage assessed in more than one enterprise.

Improved land in drainage enterprises consists very largely of improved farm land, though it may include some other improved land receiving benefit from the works of the enterprises.

Timber and cut-over land includes farm woodland of natural or planted forest trees as well as other timber land or areas that would need clearing of trees, stumps, or perennial woody shrubs.

Land designated as swampy or subject to overflow includes all land permanently or generally too wet for cultivation, land subject to periodical inundation by stream floods, seeped and alkali land in irrigated regions, and all other land unfit for cultivation by reason of insufficient drainage. This classification is without respect to the conditions as to improvement or timber.

The area suffering loss of crops is intended to include only land devoted to planted crops which suffer damage, either partial or complete, because of defective drainage. Land which would be cultivated if drained or protected against overflow is not included.

Capital invested, for the purpose of this investigation, was defined as cost, including charges for engineering, organization, rights of way, construction of drainage works, damages, land and buildings except those held for sale or farming, and any other expenditures properly chargeable to drainage and paid by the enterprise.

The drainage works of an enterprise include all varieties of underground conduits, pipes, or lines of tile, or drains of stone, wood, or other material; also open ditches and canals, together with accessory levees, dikes, dams, weirs, pumping machinery, gates, and other devices for the draining away or control of surface and soil waters.

Tile, as the term is here used, includes pipes of earthenware, concrete, or other material buried beneath the surface in such a way as to permit the excess water to flow away. The size, if circular, is expressed by the inside diameter in inches.

Ditches include all open artificial trenches, usually with sloping sides. The width is that of the bottom.

The type of drainage shows whether the drainage water from an enterprise is discharged by gravity or by pumping.

A pumping district is one where all or a part of the water from the drains collecting at a low point must be raised by some form of machinery in order that it may be removed from the area.

Drainage pumps include all kinds of machinery and devices for lifting the drainage water.

Pumping engines include all kinds of engines and motors for operating the drainage pumps.

Operating and nonoperating enterprises.—In most of the tables that follow, statistics are given for operating enterprises only. These enterprises, as already defined, include both those which have completed their drainage works and those with such works under construction; among the latter might be any that had completed the original plan of reclamation some years ago but were constructing extensions or enlargements on January 1, 1920. The nonoperating enterprises have a legal existence, though they have not yet accomplished any drainage. They may include districts that on the census date had completed their plans, sold bonds to cover the cost of the undertaking, and let contracts for the construction work, and also districts that had just been established by the drainage court and were still subject to considerable change in area, plan of drainage works, and cost.

TABLE 2.—LAND AND CAPITAL INVESTED IN ALL ENTERPRISES, CLASSIFIED AS BETWEEN OPERATING AND NONOPERATING ENTERPRISES: 1920.

CLASS.	LAND.		CAPITAL. ¹			
	Acreage.	Per cent of total.	To Dec. 31, 1919.		Additional required to complete.

All organized enterprises.....	104,006	100.0	\$828,681	100.0	\$1,231,176	
Operating enterprises.....	65,452	62.9	794,585	95.9	303,654	
With works completed.....	43,723	42.0	614,636	74.2		
With works under construction...	21,729	20.9	179,949	21.7	303,654	
Nonoperating enterprises.....	38,554	37.1	34,096	4.1	927,522	

¹ The inquiry asked for the "total cost of the enterprise to Dec. 31, 1919," and for an "estimate of additional investment to complete."

Location of enterprises.—All the drainage enterprises in Georgia, both operating and nonoperating, are situated in the northern part of the state. The map on page 134 shows the location of the operating enterprises; the nonoperating enterprises are in the same and adjoining counties.

TABLE 3.—LAND AND CAPITAL INVESTED IN ALL ENTERPRISES, CLASSIFIED BY DRAINAGE BASIN: 1920.

DRAINAGE BASIN.	LAND.		CAPITAL.			
	Acreage.	Per cent of total.	To Dec. 31, 1919.		Additional required to complete.	
			Amount.	Per cent of total.

Altamaha River.....	17,965	17.3	331,821	40.0	127,390	
Nonoperating enterprises.....	38,554	37.1	34,096	4.1	927,522	
Apalachicola River.....	2,582	2.5	3,700	0.4	71,524	
Savannah River.....	6,572	6.3	13,146	1.6	148,982	
Altamaha River.....	29,400	28.3	17,250	2.1	707,016	

Condition of land in enterprises.—The drainage enterprises are in the rolling and hilly section of the

state, and are for the drainage and protection of the land which is subject to overflow when floods occur in the streams. The areas to be drained usually are long and narrow, and the improvements generally are made by cleaning out or enlarging and straightening the natural watercourses.

The usual purpose of an organized enterprise is merely to provide adequate outlets into which the landowners of the district may drain their farms, and to afford relief from overflows for the district as a unit. Therefore the fact that an enterprise which has completed the construction of the drainage works authorized contains land still swampy or subject to overflow, or land that suffers damage to crops, does not show that the improvement works are inadequate.

TABLE 4.—LAND IN ALL ENTERPRISES, CLASSIFIED BY CONDITION: 1920.

CONDITION OF LAND.	OPERATING ENTERPRISES.				Non-operating enterprises (acres),
	Total.		Works completed (acres).	Works under construction (acres).	
	Acreage.	Per cent of all land.			
All land in enterprises.....	65,452	100.0	43,723	21,729	38,554
Improved land.....	29,753	45.5	25,699	4,054	9,622
Timber and cut-over land.....	10,155	15.5	3,805	6,350	9,426
Other unimproved land.....	25,544	39.0	14,419	11,125	19,506
Swampy or subject to overflow.....	21,951	33.5	3,322	18,629	23,232
Suffering a loss of crops.....	1,832	2.8	1,832		6,892

Size of enterprises.—Presentation of the statistics by counties requires that an enterprise located in more than one county be divided, and the part in each county be considered a separate enterprise. In this way, 46 operating and 27 nonoperating drainage enterprises are counted in Georgia. The average area of the operating enterprises is thus 1,423 acres. There is no overlapping of the enterprises in this state.

TABLE 5.—LAND IN OPERATING ENTERPRISES, CLASSIFIED BY SIZE OF AREA ASSESSED: 1920.

SIZE GROUP.	Land in enterprises (acres).	ASSESSED AREA.

10,000 to 49,999 acres.....	10,000	10,000	15.3

Character of enterprises.—With one exception all the drainage enterprises found in Georgia are drainage districts organized under a law approved August 19, 1911 (ch. 265). One enterprise of 10,000 acres was formed by mutual agreement among the landowners who would receive the benefit from the work, and each performed or paid for the excavation of the ditch across his own land.

Drainage districts are established by a special court in each county, comprised of the clerk of the superior court and the board of commissioners of roads and revenues or, if there be no such board, the ordinary of the county. A petition for establishment must be signed by a majority of the landowners resident in the proposed district or by the owners of three-fifths or more of the land. A preliminary investigation as to the practicability and utility of the undertaking is made, before the district is formally established, by a board of three viewers appointed by the drainage court. After the order establishing the district is made, the viewers prepare the plan of drainage improvements, assess the damages for which claims are filed, and divide the land into five classes according to the benefits each tract will receive. Public hearings are held by the court upon the viewers' preliminary report and again upon their final report presenting the plan for drainage and the assessments of damages and the classification of the land. Appeals from decisions of the drainage court may be taken to the superior court of the county. A board of three drainage commissioners, appointed by the court after election by the landowners in the district, lets contract for constructing the improvements and administers the other affairs of the district. The cost is apportioned according to the classification of the land, the assessments against the respective classes being, per acre, in the ratio 5:4:3:2:1. Bonds may be issued by the commissioners if the cost exceeds an average of 25 cents per acre on all the land in the district.

A law of August 27, 1879, authorized each county to establish and maintain a system of drainage, and other drainage laws were enacted in 1893 and 1909, but these seem to have been designed for the improvement of sanitary conditions. The drainage law of 1911 has been amended in 1913, 1917, and 1918, but without affecting the character of the enterprises as described.

Drainage works.—The total works completed by drainage enterprises to December 31, 1919, comprised 276.8 miles of open ditches, and the additional works under construction on that date were 79.9 miles of ditches. No tile drains were included in the plans of improvement undertaken by the operating enterprises. The figures given do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. There are no pumping districts for land drainage in Georgia.

The average depth of the main or outlet ditch was reported for each enterprise. The maximum depth of outlet reported for any enterprise in the state and the maximum in each county are shown in line 15 of County Table II. The maximum length, width, and depth of outlet shown in that table for any county may not refer to the same enterprise.

In County Table II, line 16 shows the mean depth of branch ditches, which is a very crude indication of

the depth of soil drainage that may be obtained in the enterprises, as determined by the depth of outlet provided for farm drains. The mean depth was computed by giving each separate depth a weight in proportion to the acreage it serves. As most enterprises reported depths in whole numbers only, the occasional decimals were omitted in making these computations.

TABLE 6.—LAND IN OPERATING ENTERPRISES, CLASSIFIED BY AVERAGE DEPTH OF BRANCH DITCHES: 1920.

DEPTH OF BRANCH DITCHES.	Acreage.	Per cent of total.
All operating enterprises.....	65,452	100.0
4.0 to 4.9 feet.....	10,950	16.7
5.0 to 5.9 feet.....	29,689	45.4

7.0 to 7.9 feet.....	2,602	4.0
8.0 to 8.9 feet.....	3,434	5.2
9.0 to 9.9 feet.....	700	1.1
Not reporting branches.....	15,004	22.9

Maintenance of works.—The drainage law of 1911 provides that it shall be the duty of the board of drainage commissioners of each district to keep the ditches and other drainage works in good repair, and for that purpose they may levy assessments against the land benefited by the construction of the works in the same manner and in the same proportion as the cost of original construction was apportioned. Individual landowners are liable for the cost of repair work made necessary by their negligence.

TABLE 7.—LAND AND CAPITAL INVESTED IN OPERATING ENTERPRISES, CLASSIFIED BY METHOD OF MAINTENANCE: 1920.

METHOD OF MAINTENANCE.	LAND.		CAPITAL.		
	Acreage.	Per cent of total.	To Dec. 31, 1919.		Additional required to complete.

Not reporting ¹	23,760	36.3	90,679	11.4	134,968

¹ Includes one enterprise maintained by landowners.

Date of organization.—The progress in drainage development is shown only roughly by the dates of the organization of the enterprises, which are the dates when the districts were established by the drainage court, since there may be a period of a year or more between the decree of establishment and the beginning of actual construction, and since the work of construction may occupy several years in a large district. It was not practicable, however, for the census to secure data as to the time of the beginning or the completion of the drainage works. Under the date of organization are tabulated the entire area, works, and capital of each enterprise, including extensions made after the original plan of reclamation was completed.

Crops.—The principal crop grown upon the drained land in drainage enterprises is corn; the crop of second importance is oats, for all enterprises reporting this item. Data were not secured to show the part of each enterprise planted to any crop, so the enterprises have been classified according to the principal crop, and the total area of improved land is shown thus classified in County Table II. No data were secured at the general census of agriculture to separate the crops grown upon land drained artificially from those produced upon land drained naturally.

MANUFACTURES—GEORGIA.

EXPLANATION OF TERMS.

Scope of census.—Census statistics of manufactures are compiled primarily for the purpose of showing the absolute and relative magnitude of the different branches of industry covered and their growth or decline. Incidentally, the effort is made to present data throwing light upon character of ownership, size of establishments, and similar subjects. When use is made of the statistics for these purposes it is imperative that due attention be given to their limitations, particularly in connection with any attempt to derive from them figures purporting to show average wages, cost of production, or profits.

The census did not cover establishments which were idle during the entire year or for which products were valued at less than \$500, or the manufacturing done in educational, eleemosynary, and penal institutions.

Period covered.—The returns relate to the calendar year 1919, or the business year which corresponded most nearly to that calendar year, and cover a year's operations, except for establishments which began or discontinued business during the year.

The establishment.—As a rule, the term "establishment" represents a single plant or factory, but in some cases it represents two or more plants which were operated under a common ownership or for which one set of books of account was kept. If, however, the plants constituting an establishment as thus defined were not all located within the same city, county, or state, separate reports were secured in order that the figures for each plant might be included in the statistics for the city, county, or state in which it was located. In some instances separate reports were secured for different industries carried on in the same establishment.

Classification by industries.—The establishments were assigned to the several classes of industries according to their products of chief value. The products reported for a given industry may thus, on the one hand, include minor products different from those covered by the class designation, and, on the other hand, may not represent the total product covered by this designation, because some of this class of product may be made in establishments in which it is not the product of chief value.

As a rule, the same designation is used for the industry wherever it appears, although all of the products indicated by this designation were not manufactured in the state or city for which these statistics are presented. In some instances the wording is changed so as to more correctly describe the products represented. For a number of industries subclasses are shown which indicate more definitely the kind of products.

Selected industries.—The general tables at the end of this section give the principal facts separately for the industries of the state. A selection has been made of certain leading industries of the state for more detailed consideration. Sometimes an industry of great importance has to be omitted because it comprises so few establishments that a detailed presentation would reveal the operations of individual concerns.

Comparisons with previous censuses.—Owing to changes in industrial conditions it is not always possible to classify establishments by industries in such a way as to permit accurate comparison with preceding censuses. At the census of 1909 the figures for kindred industries were combined. This practice has been followed in compiling the statistics for 1919 and 1914 when placed in com-

parison with those for 1909 and prior years. The comparative summary for 1919, 1914, and 1909, therefore, does not show separately all the industries given for 1919 in the detailed statement for the state.

Influence of increased prices.—In comparing figures for cost of materials, value of products, and value added by manufacture in 1919 with the corresponding figures for earlier censuses, account should be taken of the general increase in the prices of commodities during recent years. To the extent to which this factor has been influential the figures fail to afford an exact measure of the increase in the volume of business.

Persons engaged in the industry.—The following general classes of persons engaged in the manufacturing industries were distinguished: (1) Proprietors and firm members, (2) salaried officers of corporations, (3) superintendents and managers, (4) clerks (including other subordinate salaried employees), and (5) wage earners. In the reports for the censuses of 1904 and 1899 these five classes were shown according to the three main groups: (1) Proprietors and firm members, (2) salaried officials, clerks, etc., and (3) wage earners. In comparative tables covering the census of 1904 it is of course necessary to group the figures according to the classification that was employed at the earlier censuses.

The number of persons engaged in each industry, segregated by sex, and, in the case of wage earners, also by age (whether under 16 or 16 and over), was reported for a single representative day. The 15th of December was selected as representing for most industries normal conditions of employment, but where this date was not a representative day an earlier date was chosen.

In the case of employees other than wage earners the number thus reported for the representative date has been treated as equivalent to the average for the year, since the number of employees of this class does not ordinarily vary much from month to month. In the case of wage earners the average has been obtained in the manner explained in the next paragraph.

In addition to the more detailed report by sex and age of the number of wage earners on the representative date, a report was obtained of the number employed on the 15th of each month, by sex, without distinction of age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported for the several months by 12. The importance of the industry as an employer of labor is believed to be more accurately measured by this average than by the number employed at any one time or on a given day.

The number of wage earners reported for the representative day, though given in certain tables for each separate industry, is not totaled for all industries combined for any state, because, in view of the variations of date, such a total is not believed to be significant. It would involve more or less duplication of persons working in different industries at different times, would not represent the total number employed in all industries at any one time, and would give an undue weight to seasonal industries as compared with industries in continual operation. This total, however, is shown for the different cities, because the limited area and greater regularity of employment largely overcame the objection incident to its publication for the separate states or the United States.

In order to determine as nearly as possible the age distribution of the average number of wage earners for a given state as a whole, the per cent distribution by age of the wage earners in each industry for December 15, or the nearest representative day, has been calculated from the actual numbers reported for that date. The percentages thus obtained have been applied to the average number of wage earners for the year in that industry to determine the average numbers 16 years and over, and under 16, employed. These calculated averages for the several industries have been added to give the average distribution for each state as a whole and for the entire country.

Salaries and wages.—Under these heads are given the total payments during the year for salaries and wages, respectively. The Census Bureau has not undertaken to calculate the average annual earnings of either salaried employees or wage earners. Such averages would possess little real value, because they would be based on the earnings of employees of both sexes, of all ages, and of widely varying degrees of skill. Furthermore, so far as wage earners are concerned, it would be impossible to calculate accurately even so simple an average as this, since the number of wage earners fluctuates from month to month in every industry, and in some cases to a very great extent. The Census Bureau's figures for wage earners, as already explained, are averages based on the number employed on the 15th of each month, and while representing the number according to the pay rolls to whom wages were paid on that date, no doubt represent a larger number than would be required to perform the work in any industry if all were continuously employed during the year.

Prevailing hours of labor.—No attempt was made to ascertain the number of wage earners working a given number of hours per week. The inquiry called merely for the prevailing practice followed in each establishment. Occasional variations in hours in an establishment from one part of the year to another were disregarded, and no attention was paid to the fact that a few wage earners might have hours differing from those of the majority. All the wage earners of each establishment are therefore counted in the class within which the establishment itself falls. In most establishments, however, practically all the wage earners work the same number of hours, so that the figures give a substantially correct representation of the hours of labor.

Capital.—The instructions on the schedule for securing data relating to capital were as follows:

"The answer should show the total amount of capital, both owned and borrowed, on the last day of the business year reported. All the items of fixed and live capital may be taken at the amounts carried on the books. If land or buildings are rented, that fact should be stated and no value given. If a part of the land or buildings is owned, the remainder being rented, that fact should be so stated and only the value of the owned property given. Do not include securities and loans representing investments in other enterprises."

These instructions were identical with those employed at the censuses of 1914 and 1909. The data compiled in respect to capital, however, at both censuses, as well as at all preceding censuses of manufactures, have been so defective as to be of little value except

as indicating very general conditions. In fact, it has been repeatedly recommended by the census authorities that this inquiry be omitted from the schedule. While there are some establishments whose accounting systems are such that an accurate return for capital could be made, this is not true of the great majority, and the figures therefore do not show the actual amount of capital invested.

Materials.—The statistics as to cost of materials relate to the materials used during the year, which may be more or less than the materials purchased during the year. The term "materials" covers fuel, rent of power and heat, mill supplies, and containers, as well as materials which form a constituent part of the product.

Rent and taxes.—The taxes include certain Federal taxes and state, county, and local taxes. Under "Federal taxes" there are included the internal-revenue tax on manufactures (tobacco, beverages, etc.), excise taxes when included in values reported for products, corporation capital stock tax, and corporation income tax, but not the income tax for individuals and partners.

Value of products.—The amounts given under this heading represent the selling value or price at the factory of all products manufactured during the year, which may differ from the value of the products sold.

Value added by manufacture. The value of products is not always a satisfactory measure of either the absolute or the relative importance of a given industry, because only a part of this value is actually created by the manufacturing processes carried on in the industry itself. Another part, and often by far the larger one, represents the value of the materials used. For many purposes, therefore, the best measure of the importance of an industry, from a manufacturing standpoint, is the value created by the manufacturing operations carried on within the industry. This value is calculated by deducting the cost of the materials used from the value of the products. The figure thus obtained is termed in the census reports "value added by manufacture."

Cost of manufacture and profits.—The census data do not show the entire cost of manufacture, and consequently can not be used for the calculation of profits. No account has been taken of depreciation or interest, rent of offices and buildings other than factory or works, insurance, ordinary repairs, advertising, and other sundry expenses.

Primary horsepower.—This item represents the total primary power generated by the manufacturing establishments plus the amount of power, principally electric, rented from other concerns. It does not cover the power of electric motors taking their current from dynamos driven by primary power machines operated by the same establishment, because the inclusion of such power would obviously result in duplication. The figures for primary horsepower represent the rated capacity of the engines, motors, etc., and not the amount of power in actual daily use.

Fuel.—Statistics of the quantity of fuel used are shown only for anthracite and bituminous coal, coke, fuel oils, gasoline and other volatile oils, and gas—natural and manufactured—and represent the quantity used during the year. As only the principal kinds of fuel are shown, comparison as to the total cost of all fuel is impracticable. A comparison, however, of the total quantities of the several kinds of fuel used in 1919 and 1914 is given.

GENERAL STATISTICS.

General character of the state.—Georgia has a gross area of 59,265 square miles, of which 58,725 represent land surface. The inhabitants of the state in 1900 numbered 2,216,331; in 1910, 2,609,121; and in 1920, 2,895,832. In total population Georgia ranked twelfth among the states in 1920. The number of inhabitants per square mile in 1910 was 44.4, the corresponding figure for 1920 being 49.3.

In 1920 there were 12 cities in the state having more than 10,000 inhabitants. (See Table 6.) The combined population of these 12 cities in that year was 522,393, which formed 18 per cent of the total for Georgia, and in 1919 these cities reported 45.7 per cent of the value of the state's manufactured products.

Importance and growth of manufactures (Table 1).—The increases in wages, cost of materials, and value of products from 1914 to 1919, as presented in Table 1, are in a great measure due to the changes in industrial conditions brought about by the World War. The increases shown, however, in average number of wage earners and horsepower, are indicative of a considerable growth in the manufacturing activities of the state. The addition of the Federal income tax since 1914 accounts for the large increase in "Rent and taxes."

Statistics for the state, by counties (Table 2).—Figures are not available for comparison of county totals for 1919 with those for prior censuses. The value of products reported by 3 of the 155 counties in the state—Bibb, Chatham, and Fulton—amounted to 42.9 per cent of the total for the state.

Principal industries, ranked by value of products (Table 3).—The ranking of industries by value of products is not always conclusive as indicating their importance from a manufacturing standpoint. Their ranking would change materially if based upon the average number of wage earners or value added by manufacture.

Persons engaged in manufacturing industries (Table 4).—The age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms." The classification by sex, for 1919, was reported separately, but for 1914 and 1909 was obtained in the same manner as the distribution by age. Figures for individual industries will be found in Table 34.

Average number of wage earners for selected industries (Table 5).—The industries covered by this table are those which employed 900 or more wage earners in 1919, and for which statistics can be shown without

the possibility of disclosing the operations of individual establishments.

Average number of wage earners, by sex and age, and value of products for cities of 10,000 inhabitants or more (Table 6).—During the census period 1914 to 1919, all of the cities show increases in value of products, and all but one, Athens, in the average number of wage earners. The increases in value of products are largely due to the increased value of commodities at the latter year.

Wage earners, by months (Table 7).—The statistics for wage earners in this table are intended to show the steadiness of employment, or the reverse, in accordance with the industrial conditions existing during the several census years.

Wage earners, by months, for selected industries and for cities (Table 8).—In addition to the number of wage earners employed by months, similar data are given for males and females for all industries combined, and also for the 12 cities in the state having 10,000 inhabitants or more. The table shows a number of industries in the state in 1919 in which females formed a considerable proportion of the wage earners employed.

Prevailing hours of labor (Table 9).—Since 1914 there has been a shortening of the working day in Georgia. In that year, 8.4 per cent of the wage earners were reported in the group "48 and under" as against 19.8 per cent in 1919. In 1914 the "60" and "Over 60" groups constituted 69 per cent of the total number of wage earners, as compared with 37.8 per cent in 1919.

Size of establishments, by average number of wage earners, for selected industries and for cities (Table 10).—The predominance of the number of small establishments, when based on the number of wage earners employed, is evidenced in this table by the fact that of the total number of establishments in the state, 94.7 per cent was in the several classes having fewer than 101 wage earners, while such establishments employed 39.3 per cent of the total number of wage earners. On the other hand, the establishments employing an average of more than 100 wage earners represented only 5.3 per cent of the total manufacturing establishments in the state, but reported 60.7 per cent of the total number of wage earners.

Size of establishments, by value of products (Table 11).—At the censuses of 1909 and 1914 establishments with products valued at "\$100,000 to \$1,000,000" constituted one group, but at the census of 1919 this group was subdivided into "\$100,000 to \$500,000" and

"\$500,000 to \$1,000,000." Separate figures for the number of establishments and value of products have been compiled, however, from the returns for 1914. The table, therefore, gives combined figures for these two groups for all items for 1909, and in the case of average number of wage earners and value added by manufacture for 1914.

Size of establishments, by value of products, for selected industries (Table 12).—In the preparation of this table it was necessary in several instances to combine the establishments of one group of the industry with those of some other group of that industry to avoid the possibility of disclosing the operations of individual establishments.

Size of establishments, by value of products, for cities of 10,000 inhabitants or more (Table 13).—This table strikingly illustrates the fact that the number of establishments of itself is no real index of the extent of manufacturing activities.

Character of ownership (Table 14).—The predominance of corporate ownership is clearly brought out in this table. Although corporations owned but 28.6 per cent of the number of establishments in the state in 1919, they reported 81.6 per cent of the average number of wage earners and 89.8 per cent of the total value of products. During the five-year period 1914 to 1919 the average number of wage earners in corporations increased 20,517, or 25.6 per cent, and the value of products, \$401,450,452, or 181.8 per cent.

Manufactures, by population groups, in cities of 10,000 inhabitants or more (Table 15).—This table shows that the combined number of establishments in the 12 cities in 1919 represented 25.2 per cent of

the total in the state. They reported in that year 40.5 per cent of the average number of wage earners, 45.7 per cent of the value of products, and of value added by manufacture, also 45.7 per cent.

Principal industries in the four cities in the state having more than 50,000 inhabitants, with per cent of total for state (Table 16).—This table shows the principal industries in these four cities, the figures being given for those which can be shown without disclosing the operations of individual establishments.

Number and horsepower of types of prime movers (Table 17).—The total horsepower reported in 1919, as compared with that for 1914, shows an increase of 79,205 horsepower, or 22.2 per cent, due entirely to the increase in rented power, since there was a decrease in owned power of 4,521, while the rented increased 83,726 horsepower. The owned power decreased 1.6 per cent, but the rented power increased 109.1 per cent, during the five-year period.

Fuel consumed (Table 18).—This table shows the principal kinds of fuel used by the manufacturing plants in the state in 1919 and 1914, and gives separately for 1919 the amounts consumed by a number of important industries which use considerable quantities of fuel. Of the selected industries shown in this table, five industries combined—cotton goods; oil and cake, cottonseed; ice, manufactured; brick and tile, terra-cotta, and fire-clay products; and gas, illuminating and heating—consumed 66.3 per cent of the bituminous coal. Of the coke, 30.4 per cent was used in the manufacture of gas and brick and tile; and 87.8 per cent of the fuel oils was consumed by the manufactured-gas and the sugar-refining industries.

¹ Among the industries for which statistics can not be shown separately without the possibility of disclosing the operations of individual establishments are 10 having products in excess of some for which figures are shown in the table. These industries are as follows: "Automobiles"; "belting, leather"; "boots and shoes"; "cordials and flavoring syrups"; "iron and steel, steel works and rolling mills"; "paper and wood pulp"; "sugar, refining, not including beet sugar"; "tinware, not elsewhere specified"; "waste, cotton"; and "wood distillation."

¹ Not reported.

In 1919 the manufacture of cotton goods was the principal industry in Georgia, giving employment to

31 per cent of the total average number of wage earners, and contributing 27.7 per cent of the total value of products of all industries combined for the state.

The quantities of the principal materials used, of which raw cotton was the most important item, show substantial increases at each census period from 1909, except cotton waste from 1909 to 1914. During the five-year periods 1909 to 1914 and 1914 to 1919, the quantity of raw cotton consumed increased 15 per cent and 17.9 per cent, and purchased cotton yarn 383.8 per cent and 45.4 per cent, respectively, while purchased cotton waste decreased 15.4 per cent from 1909 to 1914, but increased 79.1 per cent from 1914 to 1919.

During the ten-year period 1909–1919 woven goods was the chief product of the cotton-goods industry in Georgia, and although a decrease of 7.1 per cent is shown in square yards of production from 1914 to 1919, there was an increase of 13.2 per cent from 1909 to 1919. Among the different kinds of woven goods produced, it will be seen that prior to the census of 1919 sheetings was the principal product in value, but the quantity produced has decreased, and in 1919 the value reported for the manufacture of duck exceeded that of sheetings, although the quantity of this product also decreased from 1914 to 1919. Yarns manufactured for sale continued to be important products of the industry, and at the census of 1919 constituted nearly one-fourth of the total value of products for the industry in the state.

Knit goods (Table 20).—This table shows the quantity and cost of materials used and the quantity and value of the most important products of the knit-goods industry in Georgia for the years 1919, 1914, and 1909.

The knitting mills in Georgia for the principal part of their materials use raw cotton and spin their own yarns. Raw cotton represented, in 1919, more than one-third of the total cost of all materials and, although the quantity used in 1919 shows a decrease of 9 per cent as compared with 1914, an increase of 96.6 per cent was reported for the ten-year period 1909 to 1919. Although purchased cotton yarn, a small part of which was mercerized, measured by number of pounds, was the second most important material used in 1914 and 1919, its cost exceeded that of raw cotton at each of the three censuses.

The knit-goods industry in Georgia is very largely confined to the production of cotton hosiery, the value of this product representing 78.2 per cent of the total for the industry in 1919 and 69.9 per cent in 1914. What little production of underwear there was formerly in the state was reduced until, in 1919, it had become almost negligible. The production of

hose shows an increase in volume since 1909, while, on the other hand, that of half hose has been decreasing. These two items, combined as hosiery, nevertheless show increases in quantity from census to census, 24.8 per cent from 1909 to 1914, and 7.6 per cent from 1914 to 1919.

Machinery used in textile mills (Table 21).—The size and growth of the textile industry in Georgia are clearly indicated by the machinery used, as shown in this table, for the census years 1919, 1914, and 1909.

TABLE 21.—MACHINERY USED IN TEXTILE MILLS: 1919, 1914, AND 1909.

MACHINE	Cen- sus year.	Total.	Cotton goods, including cotton small wares.	Knit goods.	Woolen, worsted, and felt goods, and wool- felt hats.
Producing spindles (not in- cluding twisting and doubling spindles).	1919 1914 1909	2,520,776 2,092,834 1,794,111	2,461,247 2,045,082 1,751,547	38,022 23,756 17,792	21,507 23,996 24,772
Looms.....	1919 1914 1909	146,940 42,499 36,034	146,330 41,881 35,358	610 618 676
Knitting machines.....	1919 1914 1909	26,287 4,699 3,530	26,287 4,699 3,530

¹ Includes 201 small-ware looms in the cotton-goods industry and 12 in the small wares industry.

² Includes 453 knitting machines idle entire year.

The machinery reported for the combined textile industries of the state shows relatively large and regular increases in spindles, looms, and knitting machines. In detail it is evident that a general expansion has taken place in all branches except for the group of industries designated as "woolen, worsted, and felt goods, and wool-felt hats," which has reported decreases in machinery at each census from 1909. The textile interests of Georgia are centered in the manufacture of cotton goods. In the cotton-goods industry, for which Georgia ranked fourth among the states in

value of products in 1919, the increase in cotton spindles for the fifteen-year period 1904 to 1919 (not shown in Table 21) was relatively greater than that of any other state reporting 1,000,000 spindles or over in 1919, except North Carolina.

Fertilizers (Table 22).—This table shows the quantities and values of the chief products of the fertilizer industry in Georgia in 1919, 1914, and 1909. Georgia is the ranking state in this industry. Although there was an increase in value of the fertilizer products of 67.8 per cent for the period 1914–1919, there was a material decrease in quantity production. The fertilizer tonnage shows a decrease of 16.3 per cent during this five-year period, but an increase of 53.3 per cent for the ten-year period. The average value per ton of fertilizers, which was \$18 in 1909 and \$17 in 1914, increased to \$34 per ton in 1919.

All other products, value.....	\$834,714	\$1,252,921	\$892,017

¹ In addition, there were produced in 1919, 50,003 tons of fertilizers, valued at \$2,151,851, by 13 cottonseed mills; in 1914, 119,567 tons, valued at \$2,607,293; and in 1909, 73,316 tons, valued at \$1,453,338.

Lumber and timber products (Table 23).—This table presents statistics pertaining to the chief products of the lumber industry for 1919, 1914, and 1909. In 1899 the state ranked seventh among the states in the production of lumber. In 1919 it ranked thirteenth. The largest cut, 1,342,249,000 feet, was reported for 1909, and 1919 shows a decrease of 33.4 per cent compared with the output for that year and of 12.9 per cent as compared with the output for 1914.

TABLE 23.—LUMBER, LATH, AND SHINGLES: 1919, 1914, AND 1909.

PRODUCT.	QUANTITY. ¹		
	1919	1914	1909
Lumber..... M feet b. m.	893,965	1,026,191	1,342,249
Lath..... thousands..	19,718	(2)	53,704
Shingles..... thousands..	114,808	(2)	443,260

¹ The output of custom mills is included in 1919 and 1909, but not in 1914.

² Not reported.

The lumber cut from the principal species in 1919 was reported as follows: Yellow pine 767,217,000 feet, or 85.8 per cent of the total cut from all species

in the state; cypress 43,440,000 feet, or 4.9 per cent; oak 34,537,000 feet, or 3.9 per cent; yellow poplar 18,575,000 feet, or 2.1 per cent; and gum 15,510,000 feet, or 1.7 per cent. Among other woods sawed into lumber in considerable quantities were ash, tupelo, and chestnut.

Turpentine and rosin (Table 24).—In 1899 Georgia was the leading state in the production of turpentine and rosin. Since that time it has occupied second place for all years for which records are available, Florida occupying first place. The quantities and values of turpentine and rosin produced by 441 establishments in 1919, 562 in 1914, and 592 in 1909 are shown in Table 24.

TABLE 24.—TURPENTINE AND ROSIN: 1919, 1914, AND 1909.

PRODUCT.	1919	1914	1909
Total value.....	\$10,874,714	\$4,607,500	\$6,938,957
Spirits of turpentine:			
Gallons.....	3,997,310	6,228,041	8,056,752
Value.....	\$4,544,679	\$2,489,145	\$3,556,965
Rosin:			
Barrels (280 pounds).....	419,090	621,306	904,103
Value.....	\$6,228,507	\$2,068,218	\$3,371,676
All other products, value.....	\$101,528	\$50,227	\$10,316

The production of turpentine and of rosin shows a decrease for the two five-year periods. The quantity of turpentine decreased 22.7 per cent in 1914 compared with 1909, and 35.8 per cent in 1919 compared with 1914. The output of rosin showed a decrease of 31.3 per cent in 1914 compared with 1909, and 32.5 per cent in 1919 compared with 1914. On account of the high prices prevailing in 1919 the total value of all products for the industry increased 136 per cent compared with the total value of products in 1914.

The working unit in the gathering of crude gum is called a "crop," which consists of 10,500 boxes or cups. In 1919 there were 3,165 crops worked in the state. Of these, 715 were from "virgin" trees, or trees worked the first year; 643 from "yearling," or trees worked the second year; and 1,807 from "pulling," or trees worked the third and subsequent years. Of the foregoing, 2,507 were worked from back-boxed timber—527 "virgin," 471 "yearling," and 1,509 "pulling."

Of the 3,165 crops worked in 1919, 75.7 per cent were gathered by the cup system and 24.3 per cent by the box system. In 1914 the number of crops worked was 5,044. Of these, 50.5 per cent were gathered by the cup system and 49.5 per cent by the box system. In 1909 the total number of crops was reported as 6,178, and only 7.4 per cent were gathered by the cup system.

Shipbuilding, including boat building (Tables 25 and 26).—This industry includes the building and repairing of steel and wooden vessels, as well as small craft, and the manufacture of masts, spars, oars, etc.

Comparisons of the 1919 figures for this industry, unlike those for any other for which totals are presented, are made with those of the special census for shipbuilding taken in 1916.

The number and tonnage of all vessels over 5 gross tons launched in 1919 and 1916 are shown, by classes, in Table 25.

TABLE 25.—SHIPBUILDING, INCLUDING BOAT BUILDING—NUMBER AND TONNAGE: 1919 AND 1916.

	1919		1916	
	Num-ber.	Gross tonnage.	Num-ber.	Gross tonnage.
Vessels, 5 gross tons and over, launched during the year.....	36	38,528	2	13
Steel, steam.....	25	25,249
Wooden.....	11	13,279	2	13
Steam.....	8	7,603
Motor.....	2	13
Sail without auxiliary power.....	2	2,176
Unrigged.....	1	3,500

With the exception of 2 small wooden motor vessels with an aggregate of 13 gross tons, no vessels of over 5 gross tons were launched in Georgia in 1916. Of the 7 establishments in the shipbuilding industry in 1916, only 1 was in existence in 1919, so that 9 of the 10 establishments reporting in 1919 were organized after 1916.

Of the 38,528 gross tonnage launched in 1919, 25,249 were steel and 13,279 wooden.

Twenty-three of the steel steam vessels launched in 1919 were mine sweepers of 820 displacement tons each. They were built for foreign governments, and were later turned into trawlers. Of the other two steel steam vessels launched, one, of 5,189 gross tons, was an oil tanker, and the other was a steam barge for freight service.

Twenty-four steel vessels with a total of 24,049 gross tons were launched at Savannah and one at Brunswick.

The value of work done upon vessels of all kinds during 1919 and 1916 is shown in Table 26.

TABLE 26.—SHIPBUILDING, INCLUDING BOAT BUILDING—VALUE: 1919 AND 1916.

	1919	1916
Total value of work.....	\$20,943,505	\$454,390

Boats of less than 5 tons.....	3,075
Sailboats, rowboats, etc.....	3,075
Repair work.....	444,009	136,438
Steel.....	410,868	70,000
Wood.....	33,051	66,438
All other products.....	23,898

Flour-mill and gristmill products (Table 27).—During the five-year period 1914 to 1919 there was an increase of \$5,907,669, or 97.1 per cent, in the total value of products for this industry in the state.

In 1919 wheat flour was the product of chief value, forming 48.1 per cent of the total, as compared with 35.4 per cent in 1914, at which census this product of the industry was second in importance. In 1914 corn meal and corn flour was the ranking product in value, with 49.5 per cent of the total, as compared with 33.8 per cent in 1919. All items for which figures appear in the table show increases in value much greater than in quantity; in fact, decreases in quantity are shown for corn meal and corn flour, and for feed and offal of 33.8 per cent and 27.8 per cent, respectively, in 1919, as compared with 1914.

TABLE 27.—FLOUR-MILL AND GRISTMILL PRODUCTS (MERCHANT MILLS): 1919, 1914, AND 1909.

Monthly.....	34	46	51	109,603	276,066	386,337
All other classes ²	3	3	28,300	2,200

¹ Includes 1 triweekly in 1919; 3 in 1914; and 3 in 1909.

² Includes 1 quarterly and 2 bimonthlies in 1919; and 1 quarterly, 1 bimonthly, and 1 semiannual in 1914.

The increase in the circulation of dailies during the five-year period from 1914 to 1919 was 12.6 per cent and for the decade 38.5 per cent. Of the dailies in 1919, 10 were published in the morning, their circulation being 121,177, an increase of 15.9 per cent, and 20 were published in the afternoon, their circulation being 177,551, an increase of 10.4 per cent for the five-year period. The circulation of the Sunday newspapers shows a gain of 29.6 per cent from 1914 to 1919 and of 95.2 per cent for the decade. A considerable decrease appears in the number and circulation

of both weekly and monthly publications devoted to politics, literature, and anticlericalism.

All publications were printed in the English language.

Laundries (Table 29).—Statistics for power laundries are not included in the general tables nor in the totals for manufacturing industries. Table 29, however, summarizes the statistics for such laundries in the state of Georgia for 1919 and 1914.

TABLE 29.—POWER LAUNDRIES: 1919 AND 1914.

Dyeing and cleaning (Table 30).—Statistics for dyeing and cleaning establishments that were operated by mechanical power in 1919 are presented in this table. Statistics for such establishments are not included in the general tables nor in the totals for manufacturing industries for censuses since 1900. This presentation is the first of its kind that has been made since the census statistics were confined to manufacturing industries as distinguished from the hand trades, household industries, etc.

GENERAL TABLES.

Table 33 gives, for 1919, 1914, and 1909, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products for selected industries in the state and in the cities of Atlanta and Savannah, and for Augusta and Macon and each of the cities in the state having from 10,000 to 50,000 inhabitants, for which comparative figures are available, similar data for all industries combined.

Table 34 presents, for 1919, for the state as a whole, and for Atlanta, Augusta, Macon, and Savannah, statistics in detail for each industry for which figures can be shown without disclosing the operations of individual establishments, and the statistics for all industries combined for each of the cities in the state having from 10,000 to 50,000 inhabitants.

TABLE 33.—COMPARATIVE SUMMARY FOR SELECTED INDUSTRIES AND FOR CITIES: 1919, 1914, AND 1909.

¹ Includes water wheels and turbines (irrespective of ownership of water supply), and water motors (operated by water from city mains).

² Chiefly electric motors operated by rented (or purchased) current; other power included (chiefly shaft-belt or transmitted power from neighboring power plants).

³ No figures given for reasons stated under "Explanation of terms."

COMBINED AND SPECIFIED INDUSTRIES: 1919.

EXPENSES.								Value of products.	Value added by manufacture.	POWER.					
Salaries and wages.			For contract work.	Rent and taxes.		For materials.				Primary horsepower.					Electric horsepower generated in establishments reporting.
Officials.	Clerks, etc.	Wage earners.		Rent of factory.	Taxes, Federal, state, county, and local.	Principal materials.	Fuel and rent of power.			Total.	Owned.				
										Steam engines (not turbines).	Steam turbines.	Internal-combustion engines.	Water power. ¹	Rent- ²

48	All other industries*.	130	6,635	80	327	359	167	5,702	30,114,762	

* All other industries embrace—
 Artists' materials. 2
 Automobiles. 2
 Awnings, tents, and sails. 4
 Babbitt metal. 1
 Baskets, and rattan and willow ware. 1
 Belting, leather. 3
 Boots and shoes. 3
 Brass, bronze, and copper products. 4
 Brushes. 1
 Carriage and wagon materials. 5
 Cars, steam-railroad, not including operations of railroad companies. 1

Cement. 1
 Charcoal, not including production in the lumber and wood distillation industries. 1
 Cheese. 1
 Coal-tar products. 1
 Coke, not including gas-house coke. 1
 Cordage and twine. 1
 Cordials and flavoring sirups. 4
 Cotton small wares. 1
 Dairyman's, poultryman's, and apiarists' supplies. 2
 Dyestuffs and extracts—natural. 1

Electrical machinery, apparatus, and supplies. 2
 Electroplating. 1
 Engraving, steel and copper plate, including plate printing. 1
 Envelopes. 1
 Fancy articles, not elsewhere specified. 1
 Files. 1
 Furnishing goods, men's. 2
 Glass, cutting, staining, and ornamenting. 2

Grease and tallow, not including lubricating greases. 2
 Hand stamps. 2
 Hats, wool-lent. 1
 House-furnishing goods, not elsewhere specified. 3
 Iron and steel, steel works and rolling mills. 1
 Iron and steel, bolts, nuts, washers, and rivets, not made in rolling mills. 1
 Iron and steel, cast-iron pipe. 1
 Jewelry. 1

1 Includes water wheels and turbines (irrespective of ownership of water supply), and water motors (operated by water from city mains).

2 Chiefly electric motors operated by rented (or purchased) current; other power included (chiefly shaft-belt or transmitted power from neighboring power plants).

MANUFACTURES—GEORGIA.

171

COMBINED AND SPECIFIED INDUSTRIES: 1919—Continued.

EXPENSES.										POWER.					
Salaries and wages.			For contract work.	Rent and taxes.		For materials.		Value of products.	Value added by manufacture.	Primary horsepower.					Electric horsepower generated in establishments reporting.
Officials.	Clerks, etc.	Wage earners.		Rent of factory.	Taxes, Federal, state, county, and local.	Principal materials.	Fuel and rent of power.			Total.	Owned.	Owned.	Owned.	Rent. ²	
											Steam engines (not turbines).	Steam turbines.	Internal-combustion engines.	Water power. ¹

*All other industries embrace—
 Agricultural implements..... 1
 Artificial stone products..... 2
 Artists' materials..... 1
 Automobiles..... 2
 Awnings, tents, and sails..... 2
 Babbitt metal..... 1
 Belting, leather..... 3
 Boots and shoes..... 2
 Boxes, paper and other, not elsewhere specified..... 8
 Boxes, wooden packing, except cigar boxes..... 2

Brass and bronze products..... 2
 Brushes..... 1
 Cars and general shop construction and repairs by electric-railroad companies..... 1
 Cars and general shop construction and repairs by steam-railroad companies..... 2
 Cars, steam-railroad, not including operations of railroad companies..... 1
 Chemicals..... 6
 Cleansing and polishing preparations..... 3

Clothing, women's..... 11
 Coffins, burial cases, and undertakers' goods..... 3
 Cordials and flavoring sirups..... 2
 Cotton goods..... 2
 Druggists' preparations..... 3
 Electroplating..... 1
 Engraving, steel and copper plate, including plate printing..... 1
 Envelopes..... 1
 Fertilizers..... 2
 Files..... 1

Flavoring extracts..... 5
 Flour-mill and gristmill products..... 3
 Furnishing goods, men's, neckwear..... 1
 Gas, illuminating and heating..... 2
 Glass, cutting, staining, and ornamenting..... 2
 Hand stamps..... 2
 House-furnishing goods, not elsewhere specified..... 2
 Iron and steel, bolts, nuts, washers, and rivets, not made in rolling mills..... 1

¹ Includes water wheels and turbines (irrespective of ownership of water supply), and water motors (operated by water from city mains).

² Chiefly electric motors operated by rented (or purchased) current; other power included (chiefly shaft-belt or transmitted power from neighboring power plants).

COMBINED AND SPECIFIED INDUSTRIES: 1919—Continued.

EXPENSES.								Value of products.	Value added by manufacture.	POWER.					
Salaries and wages.			For contract work.	Rent and taxes.		For materials.				Primary horsepower.					Electric horsepower generated in establishments reporting.
Officials.	Clerks, etc.	Wage earners.		Rent of factory.	Taxes, Federal, state, county, and local.	Principal materials.	Fuel and rent of power.			Total.	Owned.			Rent- ed. ²	
										Steam engines (not turbines).	Steam turbines.	Internal-combustion engines.	Water power. ¹

¹ Same number reported for one or more other months.

MINES AND QUARRIES—GEORGIA.

EXPLANATION OF TERMS.

Scope of census and period covered.—The census of mines, quarries, and petroleum or natural-gas wells does not cover enterprises which were idle; that is, in which neither productive nor development work was done during the entire year, or the products of which were valued at less than \$500; or in the case of bituminous coal mining, producing less than 1,000 tons, or, if not productive, in which development work amounting to less than \$5,000 was done. The returns relate to the calendar year 1919. When use is made of the statistics relating to character of ownership, size of enterprises, and similar subjects, it is imperative that due attention be given their limitations, particularly in connection with any attempt to show average wages, cost of production, or profits.

The enterprise.—The term "enterprise" represents one or more mines and quarries, wells or groups of wells, or natural-gas gasoline plants, all within the same state, operated under a common ownership or unified control, or for which only one set of books of account was kept, and for which a single report was secured. It may cover plants at several localities within the same state. If plants under unified control were not all located within the same state, separate reports were secured in order that statistics for the several enterprises thus defined might be included in statistics for the states in which they were located. The enterprise is further defined as being limited to a single industry.

Number of mines, quarries, wells, and plants.—Under these designations is given the number of mines, quarries, wells, and gasoline plants shown by the returns. As a rule each group of workings at a given locality in which operations were conducted as a unit or were unified by common management or joint handling of some part of the mining process, has been considered as a single mine or quarry. Many individual openings, therefore, are not counted as individual mines. The total number reported comprises those in operation or in the course of development during the year 1919. For petroleum and natural-gas wells the individual wells were counted and the total number productive December 31, 1919, is reported. The number of natural-gas gasoline plants is the total number reported in operation during the year.

Classification by industries.—The enterprises reported have been grouped by industries according to the kind of products.

Selected industries.—The detailed table gives the principal facts separately for the leading industries of the state.

Influence of increased prices.—In comparing figures for cost of supplies and materials and value of products with the corresponding figures for earlier censuses, account should be taken of the general increase in the prices of commodities during recent years.

Persons engaged in the industry.—The number of persons engaged in each industry, by occupation, sex, and, in the case of wage earners, also by age, was reported for a single representative day. In addition to the number of wage earners on the representative date, a report was obtained of the number employed on the 15th of each month, without distinction of sex or age. From these figures the average number of wage earners for the year has been calculated by dividing the sum of the numbers reported for the several months by 12.

Salaries and wages.—Under these heads are given the total payments during the year for salaries and wages, respectively.

Prevailing hours of labor.—This inquiry called merely for the prevailing practice followed in each enterprise. Occasional variations in hours from one part of the year to another were disregarded, and also where a few wage earners might have hours differing from the majority. All the wage earners of each enterprise are therefore counted in the class within which the enterprise falls.

Capital.—The instructions on the schedule relating to capital were as follows: "The answer should show the total amount of capital, owned and borrowed, invested by the operator in the enterprise on the last day of the business year reported. Do not include securities and loans representing investments in other enterprises." The reports received in respect to capital, however, have in so many cases been defective that the data compiled only indicate very general conditions.

Expenses.—The expenses reported in the census of 1919 include salaries and wages; the cost of supplies, materials, and fuels, including the freight on these; cost of power purchased; the cost of contract work; royalties and rents paid; and taxes paid or assessed. The census of 1909 reported in addition to the items of expenses covered by the present census all other items of expense incident to that year's business, except interest on indebtedness, dividends, and allowances for depreciation.

Supplies and materials, fuel, and power.—Statistics as to supplies and materials, fuel, and power, relate to the cost of these used during the year which may be more or less than the amount purchased during the year. The term "supplies and materials" covers mine, mill, quarry, and well supplies, and mineral purchased for treatment, resale, or distribution.

Royalties and rents.—The amounts given under this head represent the payment to fee holders or the value of share of product credited to fee holders for mineral output from leased land, and also rents paid for plants, equipment, and privileges or easements.

Taxes.—The taxes include Federal capital stock; corporation income, and excess profits tax; and also state, county, and local taxes. The data compiled in respect to Federal taxes are very defective as many mining corporations are engaged in other business and have sources of income other than from mining and do not pay taxes on mining separately.

Expenditures for development work.—In the statistics for producing enterprises that part of the expenses for salaries, wages, contract work, supplies and materials, fuel, and power credited to development work is shown as expenditures for development work. For nonproducing enterprises the total of these expenses is given as expenditure for development work.

Quantity of products.—In so far as the statistics on quantities of mineral products in 1919 are available for the states, they will be found in the reports of the United States Geological Survey.

Value of products.—The amounts given under this heading represent the selling value at point of production or f. o. b. at point of shipment, or such other value as may represent the net value or amount received for the 1919 product under the terms by which it was disposed of, and also includes the value at point of production of products used by the operating company.

Cost of mining and profits.—The data do not show entire cost of mining and well operations, and can not be used for the calculation of profits. No account was taken of depreciation or interest; rent of offices and buildings other than those for mines, quarries, and wells; insurance, selling, and other sundry expenses.

Lands controlled.—The inquiry on land tenure was confined to land pertaining to the operations covered by the report. In many of these, however, land held in reserve for future development and for other purposes not pertaining to mining was included and also a large number of more or less unsatisfactory estimates.

Power used.—The figures on power represent the rated capacity of the engines, motors, etc., and not the amount in actual daily use.

Fuel.—Statistics of fuel are shown only for anthracite and bituminous coal, coke, wood, oil, and gas. As only the principal varieties of fuel are shown, no comparison can be made with the total cost.

STATISTICS FOR THE STATE.

Georgia, which ranks twentieth among the states in size (land area 58,725 square miles) and twelfth in population (2,895,832 in 1920), ranked thirty-seventh in value of mineral products for the year 1919. The state ranked thirty-fifth in the total number of persons engaged in the mining industries and in the average number of wage earners employed.

The total value of products of all mines and quarries in Georgia in 1919 was \$4,082,152, an increase of 42 per cent over the corresponding value at the census of 1909. Decline of mining industries in Georgia is indicated by the decreases in the number of enterprises, mines and quarries operated, persons engaged in the industries, and in capital invested, as shown by Table 1. The increases in wages, cost of supplies and materials, fuel and power, and in the value of products are due to general price increases, and the impost of Federal income and excess profits taxes since 1909 accounts for the large increase in taxes shown.

The industries reported for 1919, ranked according to value of products, were the mining or quarrying of granite, barytes, clay, bauxite, iron ore, marble, pyrite, coal, limestone, feldspar, talc and soapstone, mineral pigments, fuller's earth, mica, asbestos, and gold ore. In addition to producing the materials as indicated by the industry designation, two enterprises classified as barytes also produced mineral pigments and one enterprise classified as mineral pigments produced a small amount of manganese. The value of these by-products and other unspecified mineral products and the sums received for power sold and for work or miscellaneous services for other enterprises amounted to \$31,621, which is included in the total value of products given above. The mining industries which can be shown without disclosure of individual operations are ranked by value of products in Table 2.

The leading mineral industry, granite, reported products valued at \$885,663, which was 21.7 per cent of the total value of mineral products of the state. Next in importance was barytes mining in Bartow

County, where products to the value of \$722,891 were produced in 1919. This amount was 17.7 per cent of the total value of mineral products for that year in Georgia and was the largest amount produced by any state, 45.4 per cent of the total value reported for the United States (\$1,592,245).

An unimportant amount of development work was reported for 1919 on nonproductive gold-mining property.

The preponderance of the corporate form of organization among the operators of mining enterprises is shown in Table 3. Corporations conducted 70.3 per cent of all the mining enterprises in the state in 1919, employed 84.2 per cent of the average number of wage earners, and reported 84.4 per cent of the total value of products.

The relatively large number of small enterprises as determined by the number of wage earners employed is shown in Table 4. Of the total number of enterprises in the state, 94.6 per cent were reported as having fewer than 101 wage earners and these enterprises employed 76.8 per cent of the total number of wage earners. Only four enterprises, or 5.4 per cent of the total number, had more than 100 wage earners each, and these employed 23.2 per cent of the total number of wage earners.

Table 5 shows that in about 40 per cent of the enterprises and for nearly half of the wage earners in all the mining industries in the state in 1919 the hours of labor were 44 to 53 per week. In a larger number of enterprises, but for a slightly smaller portion of the total number of wage earners, the hours per week were between 54 and 62.

The statistics for wage earners presented in Table 6, showing the changes in the number employed month by month, reflect conditions prevailing in the industries during the census year.

Table 7 presents for 1919 statistics in detail for the state as a whole and for each industry that can be shown without the disclosure of individual operations.

MINES AND QUARRIES—GEORGIA.

183

TABLE 7.—DETAILED STATISTICS FOR MINING INDUSTRIES: 1919.

	PRODUCING ENTERPRISES.							
	Total.	Granite.	Barytes.	Clay.	Bauxite.	Iron ore.	Limestone.	All other. ¹
Number of enterprises.....	74	20	7	11	4	9	5	18
Number of mines and quarries.....	82	20	10	11	0	9	5	18
Capital.....	\$6,184,470	\$882,638	\$278,014	\$1,075,074	\$315,757	\$215,518	\$303,980	\$3,113,491
Principal expenses:								
Salaries and wages—								
Officers.....	\$137,568	\$25,609	\$9,784	\$32,010	\$10,783	\$867	\$14,100	\$44,415
Superintendents and managers.....	\$127,848	\$15,000	\$18,437	\$33,047	\$17,000	\$10,140	\$8,218	\$26,008
Technical employees.....	\$18,519	\$8,600	\$2,500	\$600	\$2,020	\$743		\$4,050
Clerks, etc.....	\$73,078	\$8,883	\$22,561	\$8,810	\$3,642	\$3,605	\$1,655	\$23,916
Wage earners.....	\$2,017,460	\$530,599	\$227,871	\$399,155	\$144,125	\$131,282	\$59,337	\$519,091
Supplies and materials.....	\$591,266	\$84,311	\$147,675	\$181,286	\$14,075	\$38,741	\$23,056	\$102,122
Cost of ore purchased.....	\$17,500		\$17,500					
Fuel.....	\$296,647	\$65,909	\$19,516	\$86,821	\$17,429	\$39,183	\$8,294	\$59,495
Power.....	\$59,372	\$21,216	\$16,127				\$9,364	\$12,665
Royalties and rents.....	\$156,833	\$34,390	\$29,895	\$26,030	\$20,544	\$17,714	\$5,050	\$22,201
Taxes.....	\$54,380	\$5,317	\$6,722	\$9,756	\$4,063	\$21,178	\$381	\$7,943
Contract work.....	\$35,295		\$484				\$14,325	\$20,486
Expenditures for development (included in the above items) ..	\$77,759	\$9,383	\$2,906	\$9,445		\$3,000		\$53,025
Value of products.....	\$4,082,162	\$885,663	\$722,891	\$710,004	\$296,261	\$283,487	\$174,821	\$1,009,025
Persons engaged in industry.....	2,608	631	289	495	185	229	90	700
Proprietors and firm members (total).....	33	15	4	8	2	2	1	6
Number performing manual labor.....	4	3		7			7	1
Salaries officers.....	45	13	4	13	6	6	6	12
Superintendents and managers.....	63	9	9	1	1	1	1	14
Technical employees.....	8	3	1	6	4	5	5	1
Clerks, etc.....	62	11	6	6	4	5	5	25
Wage earners (average number).....	2,397	580	265	465	150	215	80	642
Wage earners by occupation (Dec. 15):								
Above ground (total).....	2,382	651	300	487	171	225	102	446
Below ground (total).....	273					22		261
Foremen, shift bosses, etc.—								
Above ground.....	81	24	10	11	10	7	3	16
Below ground.....	14					2		12
Engineers, hoistmen, electricians, mechanics, etc.—								
Above ground.....	285	45	53	43	10	36	8	90
Below ground.....	3							3
Miners, quarrymen, and drillmen, including their helpers—								
Above ground.....	673	296	13	142	93	34		95
Below ground.....	157					20		137
Timbermen, trackmen, and men engaged in hauling, tramming, etc.—								
Above ground.....	197	25	40	10	20	67	11	24
Below ground.....	44							44
Muckers, loaders, laborers, and others not classified—								
Above ground.....	761	124	143	233	25	34	80	122
Below ground.....	55							55
Wage earners employed in mills and beneficiating plants—								
Above ground.....	385	137	41	48	13	47		99
Number of females included in wage earners reported above—								
Above ground.....	15							15
Mineral land operated..... acres.....	37,736	5,072	1,296	3,298	2,062	2,770	242	22,096
Land controlled, total..... acres.....	55,808	5,090	1,373	3,313	12,376	3,170	242	30,044
Mineral land owned.....	22,695	385	644	1,031	253	2,160	120	17,497
Mineral land leased.....	15,561	4,697	652	2,267	1,804	610	122	5,499
Timber and other lands owned and leased.....	17,582	8	77	15	10,314	400		7,048
Power used: Aggregate horsepower.....	13,026	3,863	2,160	1,366	381	1,150	1,135	2,971
Prime movers (horsepower, total).....	9,502	2,534	1,295	1,366	381	1,150	435	2,341
Steam engines—								
Number.....	129	25	20	24	19	16	4	21
Horsepower.....	7,909	2,507	1,230	1,225	375	1,150	435	987
Steam turbines—								
Number.....	1			1				
Horsepower.....	100			100				
Internal-combustion engines—								
Number.....	25	4	1	10	2			8
Horsepower.....	393	27	15	41	6			304
Water wheels and turbines—								
Number.....	7		1					6
Horsepower.....	1,100		50					1,050
Purchased power (horsepower, total).....	3,524	1,329	865				700	630
Electric motors operated by purchased current—								
Number.....	62	18	23				4	17
Horsepower.....	3,494	1,299	865				700	630
Other equipment operated by purchased power—								
Horsepower.....	30	30						
Electric motors run by current generated by enterprise using:								
Number.....	31		6	8		1		16
Horsepower.....	3,797		225	170		50		3,352
Fuel used:								
Coal, bituminous..... tons, 2,000 pounds..	55,354	11,766	3,012	18,061	1,430	7,361	1,710	12,014
Wood..... cords.....	6,442	30		250	5,803			359
Fuel oils..... barrels.....	397		4	56				337
Gasoline and other volatile oils..... barrels..	322	178	200	156	100			188

¹ Includes enterprises as follows: Asbestos, 1; coal, bituminous, 1; feldspar, 1; fuller's earth, 1; gold and silver, lode mines, 1; marble, 1; mica, 5; mineral pigments, 2; pyrite, 3; talc and soapstone, 2.
