6. Per cent distribution, by division of residence, of the population born in each division: 1920 and 1910.....	614	
7. Native population with state of birth reported, by division of birth and division of residence, with net gain or loss through interdivisional migration: 1870-1920.....	615	
8. Total population and white population distributed as born in division of residence, in other divisions, or in foreign countries, by divisions, 1920, with percentages for 1920, 1910, and 1900.....	616	
9. Native population, native white population, and native Negro population, with state of birth reported, by division of birth and division of residence, 1920, with gain or loss through interdivisional migration, 1920 and 1910.	616	
10. Native white population of native parentage, of foreign parentage, and of mixed parentage, with state of birth reported, by division of birth and division of residence, 1920, with gain or loss through interdivisional migration, 1920 and 1910.....	617	
11. Per cent distribution, by division of birth, of the native population living in each state: 1920 and 1910.....	618	
12. Per cent distribution, by division of residence, of the population born in each state: 1920 and 1910.....	619	
13. Total population distributed as born in state of residence, in other states, or in foreign countries, by states, 1920, with percentages for 1920, 1910, and 1900.....	620	
14. White population distributed as born in state of residence, in other states, or in foreign countries, by states, 1920, with percentages for 1920, 1910, and 1900.....	621	
15. Native population, native white population, and native Negro population, with state of birth reported, by state of birth and state of residence, 1920, with gain or loss through interstate migration, 1920 and 1910.....	622	
16. Native white population of native parentage, of foreign parentage, and of mixed parentage, with state of birth reported, by state of birth and state of residence, 1920, with gain or loss through interstate migration, 1920 and 1910.....	624	
17. Native population of each division and each state by division and state of birth: 1920.....	626	
18. Native white population of each division and each state by division and state of birth: 1920.....	631	
19. Native Negro population of each division and each state by division and state of birth: 1920.....	636	
20. Native white population of native parentage in each division and each state by division and state of birth: 1920.....	641	
21. Native white population of foreign or mixed parentage in each division and each state by division and state of birth: 1920.....	646	
22. Native white population of foreign parentage in each division and each state by division and state of birth: 1920.	651	
23. Native white population of mixed parentage in each division and each state by division and state of birth: 1920.	656	
PRINCIPAL CITIES.		
24. Total population and white and Negro population, distributed as born in state of residence, in other states, or in foreign countries, for cities having 50,000 inhabitants or more, 1920, with percentages for 1920 and 1910.	661	
25. Native population by division and state of birth, for cities having 50,000 inhabitants or more: 1920.....	666	
URBAN AND RURAL.		
26. Per cent urban and rural in total and in white population born in division of residence, in other divisions, or in foreign countries, respectively, by divisions: 1920 and 1910.....	681	
27. Urban and rural population distributed as born in division of residence, in other divisions, or in foreign countries, by divisions: 1920.....	681	
28. Urban and rural white population distributed as born in division of residence, in other divisions, or in foreign countries, by divisions: 1920.....	681	
29. Per cent urban and rural in total and in white population born in state of residence, in other states, or in foreign countries, respectively, by states: 1920 and 1910.....	682	
30. Urban and rural population distributed as born in state of residence, in other states, or in foreign countries, by states: 1920.....	683	
31. Urban and rural white population distributed as born in state of residence, in other states, or in foreign countries, by states: 1920.....	684	

CHAPTER V.—STATE OF BIRTH OF THE NATIVE POPULATION.

INTRODUCTION.

The inquiry as to state of birth has been included at each census, beginning with that of 1850. At the censuses of 1850 and 1860, however, returns were made for the free population only. The statistics here presented relate to the resident population of continental United States. Statistics for Alaska, Hawaii, and Porto Rico are given in Volume III of the Fourteenth Census Reports.

The returns as to state of birth are valuable mainly for the light they throw on the migration of the native population within the United States. The term "native population" as ordinarily used by the Bureau of the Census comprises all persons born in continental United States or any of the outlying possessions, persons born at sea under the United States flag, and persons of native parentage born abroad and designated as "American citizens born abroad." Thus the term "native population," when used in the headings of tables presenting statistics by states, does not refer to the population native to (that is, born in) the particular states, but merely to the population born in the United States. The natives of individual states are designated in the table headings as persons born in those states.

Persons for whom the place of birth was not reported and for whom the returns gave no indication of foreign origin have been assumed to be natives of the United States and have been included with those for whom the place of birth was given as the United States without specification as to the particular state in which born. This practice has undoubtedly resulted in the inclusion of a few foreign-born persons, but it is certain that the great majority of those for whom the place of birth was not reported were born in the United States. In some of the tables the statistics for the population born in the United States relate only to persons for whom the state of birth was reported.

The fact that at each census since and including that of 1850 (excluding slaves in 1850 and 1860) more than one-fifth of the native Americans had migrated from the states of birth to other states indicates a rather high degree of mobility on the part of the population. (See Table 1.) It must be borne in mind that the census distinguishes as migrants only those persons who have migrated across state lines and are at the date of the census living in states other than those in which they were born. The statistics, therefore, afford no indication of the amount of migration within the same states from rural to urban communities or from one locality to another. There is no doubt that some of the intrastate migration involves greater changes of environment, and even

longer journeys, than some of the interstate migration. Much of the movement from country to city takes place within the confines of single states; and, on the other hand, some of the interstate migration is merely from one border county or city to another just across the state line. Computations made in connection with the census of 1900 indicated that nearly one-half of the natives of the United States who were enumerated outside the states in which born were living in adjoining states.

Furthermore, the census figures do not show the migration from state to state outside the state of birth. A person who at one or at several times has removed from one state to another and has later returned to the state in which he was born is not reported as a migrant; and if he had not returned he would be classified simply as an interstate migrant but no account would be taken of the number of his migrations.

The proportion of migrants in the adult population at each census undoubtedly has exceeded the percentages given in Table 1 and other tables, since these percentages are based upon the total population born in and living in the United States, including children, among whom it is safe to assume that the proportion of migrants is smaller than among adults.

It is obvious that the statistics as to interstate migration do not represent the total number of persons who migrated from the states in which born to other states during any given period of time. Some of those who migrated have since died, others have returned to the states in which born, and still others have migrated to outlying possessions or to foreign countries. The statistics show only those living at the time of enumeration in the United States, outside the states in which born, who may be described as surviving migrants.

It must be remembered that the number of persons reported as born in any division or state by no means indicates what the native population of that division or state would have been had there been no migration on the part of the present generation. If all persons now living who were born in New England, for example, had remained there, the living children and grandchildren of such persons would have been added to the population of that division; but in fact the children and grandchildren of the migrants appear as natives of other divisions. The converse is true regarding descendants of persons born in other divisions and now living in New England. Thus while the census makes it possible to measure what may be termed the direct effects of the migration of persons still living, it affords no means of measuring the indirect effects.

Nevertheless, the interstate-migration statistics, while supplying no definite information as to the total amount of migration from one locality to another within the United States or as to the total effect of such migration on the present population of the several divisions and states, do show in a general way the increase or decrease in the mobility of the native population from one decade to another and afford a good indication of the extent to which the population of certain states has been directly recruited from other states.

Migration east and west of the Mississippi River and between the North and the South.—In Tables 2 and 4, which give statistics as to migration between the sections of the country lying east and west of the line forming the eastern boundaries of Minnesota, Iowa, Missouri, Arkansas, and Louisiana, the terms "East of the Mississippi River," and "West of the Mississippi River" are employed for the sake of convenience, although portions of Minnesota and Louisiana lie east of the river.

In Tables 3 and 4, which present statistics as to migration between the North and South, the term "the North" is employed to designate the region comprising the New England, Middle Atlantic, East North Central, and West North Central divisions, while "the South" refers to the area embracing the South Atlantic, East South Central, and West South Central divisions. Except for the comparatively small part of Texas which lies south of New Mexico, the western boundaries of the two sections do not differ greatly in longitude. There has, of course, been a considerable amount of migration from both the North and the South to the West, and some of this migration—for example, from North Dakota to New Mexico or from Texas to Montana—has been more nearly northward or southward than eastward or westward. Nevertheless, the distinctly north-and-south migration can best be indicated by the presentation in Tables 3 and 4.

Gain or loss through interdivisional and interstate migration.—The net gain or loss through interdivisional migration (Table 7, column 8, and Table 9) and through interstate migration (Table 15) represents the difference, on the census date, between the total number of surviving native migrants out of the specified division or state and the total number of surviving native migrants into the specified division or state. Some of these migrants departed from or arrived in the division or state half a century or more before the census was taken.

The net gain or loss recorded for any division or state is, of course, no indication of the extent to which that division or state has participated in the total volume of migration, since on the one hand both the outward and inward migration may have been large but nearly evenly balanced, while on the other hand the opposing currents may have been relatively small but very different in volume. For example, Illinois

shows a net loss of only 358,780 in a total of 2,672,150 surviving inward and outward native migrants, while California shows a net gain of 1,222,727 in a total of 1,505,175.

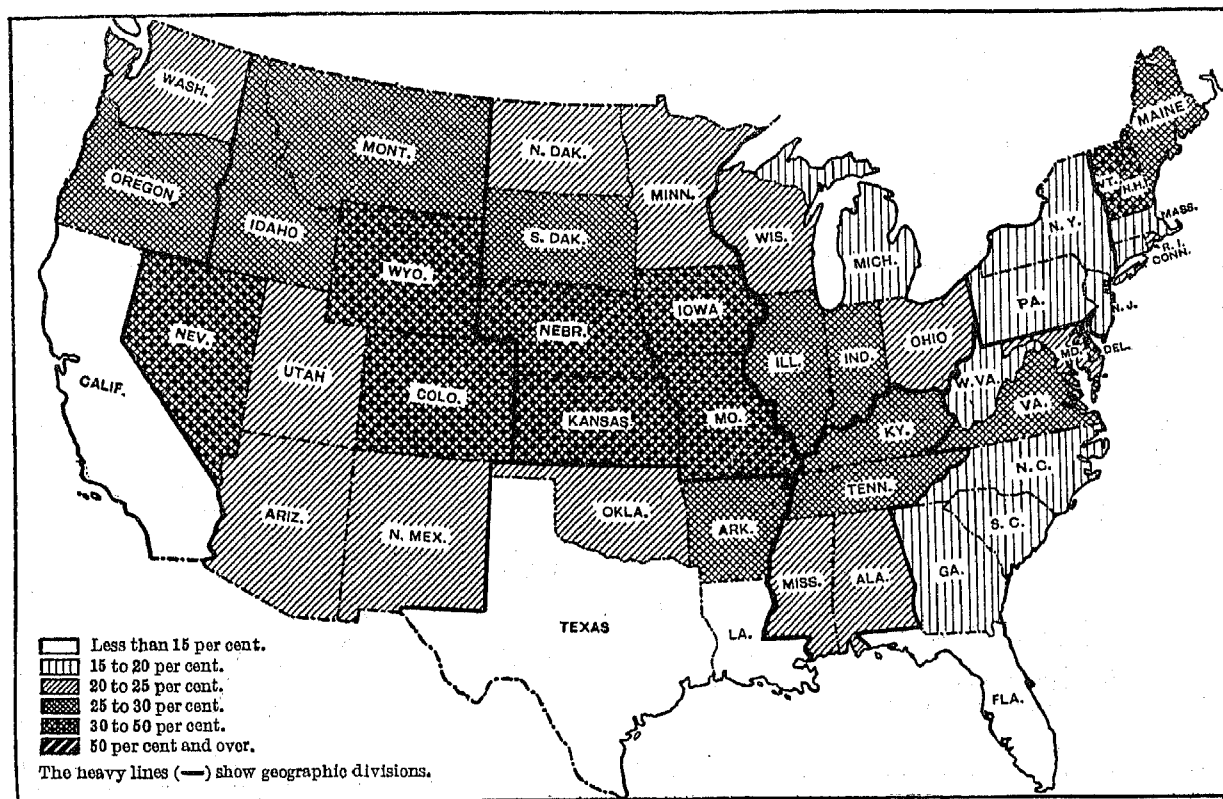

The net gain or loss during a particular decade, as shown in column 9 of Table 7, represents the difference between the net gains or the net losses at the beginning and end of the decade, or is the sum of a net loss at the beginning and a net gain at the end of the decade, or vice versa. The net gain or loss of a division during a decade does not, however, represent exactly the difference between the number of native migrants out of and the number of native migrants into the division, being influenced also to some extent by differences between the two classes of migrants in regard to mortality, by emigration to foreign countries on the part of natives who had previously migrated from one division to another, and by the return to the United States of natives who had emigrated to foreign countries after migrating from one division to another.

Urban and rural communities.—Because of the differences between urban and rural communities in regard to the proportions of interstate migrants in their population, as well as in other respects, separate statistics for the two classes of communities are given in Tables 26 to 31. The extent of the migration to the two classes of communities within the same states can not, of course, be shown, as the census returns relate only to migration across state lines.

In drawing the distinction between urban and rural population, all incorporated places (and all towns in Massachusetts, Rhode Island, and New Hampshire) having 2,500 inhabitants or more are treated as urban and the remainder of the country as rural. In Massachusetts and Rhode Island it is not the practice, as in practically all the other states, to incorporate, as separate municipalities, the relatively densely populated portions of "towns" (which are the primary divisions of the counties), and no town as a whole is incorporated as a municipality until it attains a population greatly in excess of 2,500; and in New Hampshire a similar condition exists, although the state contains two incorporated villages, each of which has fewer than 2,500 inhabitants. For this reason those towns having 2,500 or more inhabitants in the three states named are treated as urban, although portions of their areas are rural in character. The urban areas in the three states in question, as classified by the census, thus contain relatively small numbers of inhabitants who in other sections of the country would be segregated as rural. Nevertheless, in most of the towns having 2,500 inhabitants or more in Massachusetts, Rhode Island, and New Hampshire by far the greater part of the population resides within the more densely settled areas, so that the proportion classed as urban, considering each state as a whole, is not greatly exaggerated by the practice adopted.

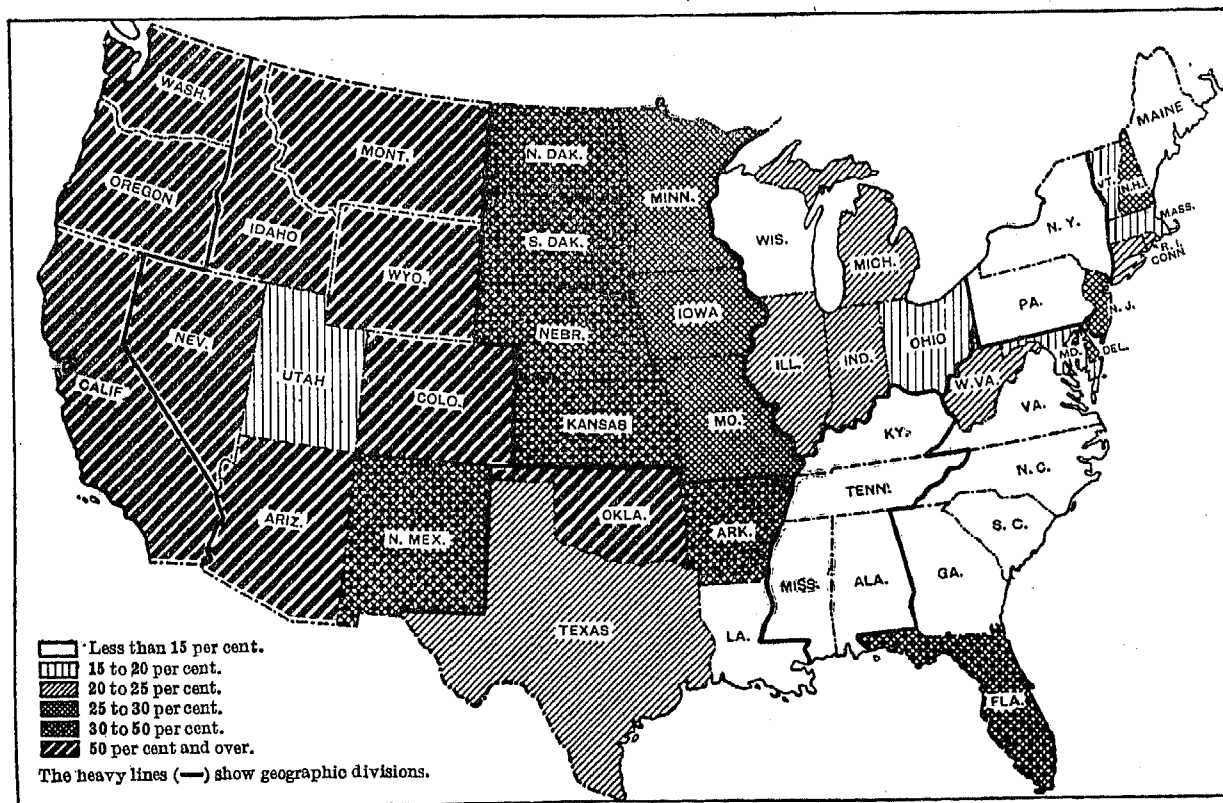

PER CENT WHICH POPULATION BORN IN EACH STATE AND LIVING IN OTHER STATES FORMED OF TOTAL BORN IN EACH STATE: 1920.

[District of Columbia, 29.2 per cent, not shown separately on the map.]

¹ Includes persons born in the United States, state of birth not reported; persons born in outlying possessions, or at sea under United States flag; and American citizens born abroad. The combined number of these classes in the United States in 1920 was 444,465, or four-tenths of 1 per cent of the total population.

² Includes white persons born in the United States, state of birth not reported; white persons born in outlying possessions, or at sea under United States flag; and white American citizens born abroad. The combined number of these classes in the United States in 1920 was 386,536, or four-tenths of 1 per cent of the total white population.

¹ Includes persons born in the United States, state of birth not reported; persons born in outlying possessions, or at sea under United States flag; and American citizens born abroad. The combined number of these classes in the United States in 1920 was as follows: Urban, 292,678, or five-tenths of 1 per cent of the total urban population; rural, 151,787, or three-tenths of 1 per cent of the total rural population.

² No rural population, as Washington city is coextensive with the District of Columbia.

POPULATION.

¹ Includes white persons born in the United States, state of birth not reported; white persons born in outlying possessions, or at sea under United States flag; and white American citizens born abroad. The combined number of these classes in the United States in 1920 was as follows: Urban, 255,409, or five-tenths of 1 per cent of the total urban white population; rural, 131,127, or three-tenths of 1 per cent of the total rural white population.

² No rural population, as Washington city is coextensive with the District of Columbia.
