## CHAPTER IX.—COUNTRY OF ORIGIN OF THE FOREIGN WHITE STOCK.

#### INTRODUCTION.

The inquiry as to birthplace of foreign parents was first made at the census of 1880, but only a part of the data secured was tabulated. The earliest complete statistics pertaining to this inquiry are those for 1890. As the number of nonwhites in the United States who were born abroad or whose parents were born abroad is proportionally very small, statistics as to country of origin are presented for white persons only.

#### FOREIGN WHITE STOCK.

For brevity, the term "foreign white stock" is used to indicate the combined total of three classes, namely, the foreign-born whites, the native whites of foreign parentage (both parents born abroad), and the native whites of mixed parentage (one parent native and the other foreign born).

#### COUNTRY OF ORIGIN.

Because of the many changes in the map of Europe which have resulted from the World War, the classification of the white population of foreign birth or foreign parentage according to country of origin was made peculiarly difficult. Many natives of foreign or mixed parentage knew the countries, according to the prewar map, but not the provinces or cities, in which their parents were born. For this reason it was impossible to make a proper classification of the foreign parents of natives with reference to European countries as now constituted, and therefore the statistics for this class have been compiled on the prewar basis. As the country of birth of foreign-born white persons was tabulated according to postwar areas, it was necessary to make a new tabulation of this class according to prewar areas in order to secure comparability with natives of foreign or mixed parentage. This was done by tabulating the foreign-born whites by birthplace of father,<sup>1</sup> classified on the prewar basis.

The term "country of origin," therefore, as used in the reports of the Fourteenth Census, signifies the country of birth of the father of a foreign-born person or of the foreign parent or parents of a native. At previous censuses the distribution of the foreign born themselves was made according to their own countries

<sup>1</sup> For 29,025 foreign-born white persons reported as having native fathers, the birthplace of the foreign-born mother was used.

of birth. The distribution of the foreign born according to country of birth is given in Chapter VI and of the foreign-born white in Chapter VIII.

#### FOREIGN WHITE STOCK FROM SPECIFIC COUNTRIES.

The foreign white stock from any specific country of origin represents the total of three classes, namely, native whites having both parents born in that country, or one parent so born the other being native, and foreign-born whites having fathers born in that country. Native white persons having one parent born in a specified country and the other in some other foreign country are designated as "of mixed foreign parentage," and while included in the foreign white stock as a whole, are not included in that for any specific country (see Table 1). The term "mixed foreign parentage" must not be confused with "mixed parentage," the latter representing persons having one parent foreign born and the other native. For the distribution of persons of mixed foreign parentage by birthplace of father with reference to birthplace of mother, for the United States, see Table 4 (page 900).

No totals are given for continents or groups of countries, for the reason that in the case of the native whites of foreign parentage the true total is not the same as the sum of the figures for the separate countries, there being some persons having one parent born in one country and the other in another country of the same continent or group. For instance, a person of mixed foreign parentage may have a father born in England, and mother born in France, but both parents born in Northwestern Europe. It is very evident that the number of persons of mixed foreign parentage would be considerably diminished if considered with reference to continents or groups of countries.

The proportions of the foreign white stock originating in certain countries are shown graphically by the diagrams, and, as in the tables, the distribution relates to countries as constituted prior to the World War. In the series of bar diagrams for states, the countries and groups of countries are those represented by more than 1,000,000 persons of foreign white stock as enumerated in the United States in 1920; and only those states are shown in which there were enumerated more than 10,000 persons belonging to the stock originating in the specified country or group of countries. The following statement shows the numerical distribution of the white population of the United States in 1920 according to nativity and parentage, together with the per cent distribution for 1920, 1910, 1900, and 1890:

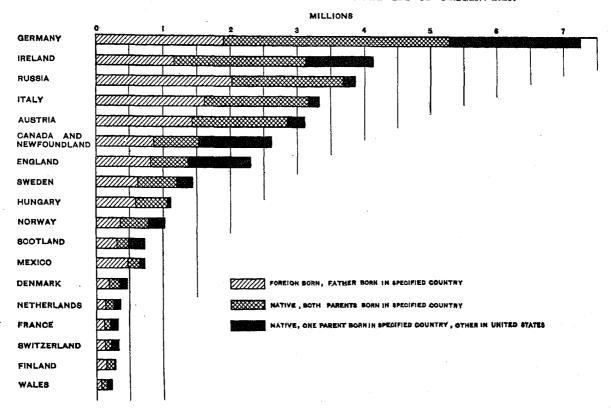

CLASS OF POPULATION.	Number: 1920			OF T				OF TO PULAT

#### URBAN AND RURAL COMMUNITIES.

Since marked differences exist between urban and rural communities in regard to the distribution of the foreign white stock by country of origin, separate statistics are given for the two classes of communities in Tables 13 and 14.

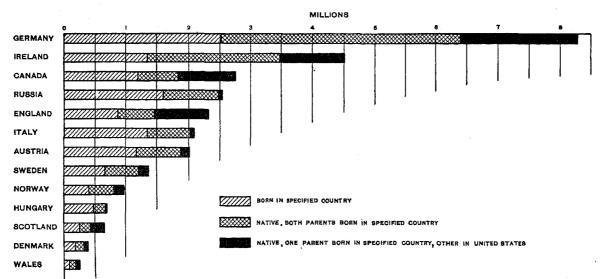

In drawing the distinction between urban and rural population, all incorporated places (and all towns in Massachusetts, Rhode Island, and New Hampshire) having 2,500 inhabitants or more are treated as urban and the remainder of the country as rural.

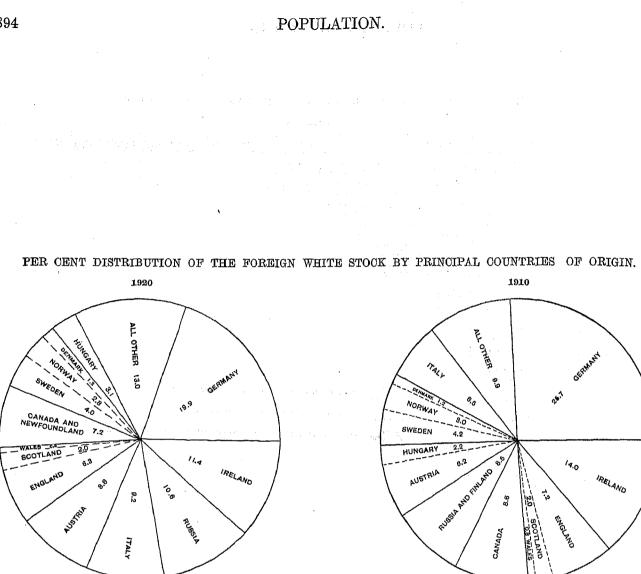

In Massachusetts and Rhode Island it is not the practice, as in practically all the other states, to incorporate, as separate municipalities, the relatively densely populated portions of "towns" (which are the primary divisions of the counties), and no town as a whole is incorporated as a municipality until it attains a population greatly in excess of 2,500; and in New Hampshire a similar condition exists, although the state contains two incorporated villages, each of which has fewer than 2,500 inhabitants. For this reason those towns having 2,500 or more inhabitants in the three states named are treated as urban, although portions of their areas are rural in character. The urban areas in the three states in question, as classified by the census, thus contain relatively small numbers of inhabitants who in other sections of the country would be segregated as rural. Nevertheless. in most of the towns having 2,500 inhabitants or more in Massachusetts, Rhode Island, and New Hampshire by far the greater part of the population resides within the more densely settled areas, so that the proportion classed as urban, considering each state as a whole, is not greatly exaggerated by the practice adopted.

[Figures for 1920 relate to countries as constituted prior to the World War (see text, p. 891).]

<sup>1</sup> For 1920, according to birthplace of father; for 1910, 1900, and 1890, according to birthplace of person. (See p. 891.) <sup>2</sup> Except possessions of the United States. <sup>a</sup> The report for 1890 classified the foreign born by country of birth without distinction as to color or nece. For the purposes of this table it is assumed that, with the exception of "Canada—Other" (see note 5), the number reported for each specified country represented white persons out; "The number for "All other countries" has been obtained by deducting the sum of the items for the specified country entry represented white persons our. The number for "All other countries" has been obtained by deducting the sum of the items for the specified country entry entry
