# CHAPTER VI.-MARITAL CONDITION OF OCCUPIED WOMEN.

#### INTRODUCTION.

This chapter presents statistics showing the marital condition of the gainfully occupied women of continental United States, as returned at the Fourteenth Census, with comparative statistics for preceding censuses.<sup>1</sup> The statistics are presented for the United States (Tables 1 to 16), for divisions and states (Tables 17 to 22), and for cities of 100,000 inhabitants or more (Tables 23 to 26).

The Fourteenth Census statistics presented in this chapter are the results of a special tabulation of occupation returns by marital condition. This special tabulation was limited, as to persons, to the returns for gainfully occupied women 15 years of age and over, and, as to areas, to states and to cities of 100,000 inhabitants or more. The marital condition of the persons of each sex 10 years of age and over engaged in each specified occupation was tabulated for cities of 25,000 and under 100,000 inhabitants as part of the regular tabulation of the occupation returns for those cities, and the statistics (limited to total workers, by sex) are presented in this report with other statistics for those cities. (See Table 14, Ch. III.)

Since statistics showing marital condition in relation to occupation are of so much greater importance in the case of female than in the case of male workers, the special tabulation of the Fourteenth Census occupation returns by marital condition was limited, as stated above, to the returns for females. And, since the employment of married women possesses special economic and sociological significance, in the case of each specified occupation included in the special tabulation the returns for this class of women were tabulated as a separate group, with a distribution by age periods, while the returns for all other marital classes were tabulated together and without age distribution. The age periods into which the returns for gainfully occupied married women were distributed are the same for ages 15 to 44 years as those in the Fourteenth Census marital condition statistics for the entire population; but in the special occupation tabulation, the returns for all gainfully occupied married women 45 years of age and over and the returns for gainfully occupied married women of unknown age were combined.

At the census of 1890, and again at the census of 1900, the tabulation of occupation returns by marital condition included the returns for all gainful workers 10 years of age and over. In the statistics presented for 1890 and 1900 in this chapter, however, it is assumed that at each of these censuses all married women engaged in gainful occupations were at least 15 years of age. That this assumption is substantially correct is evidenced by the fact that at the census of 1910 only 35 married women 15 years of age were tabulated as gainfully occupied.

Table 15 for Indian women, and Table 16 for Chinese, Japanese, and other nonwhite women (exclusive of Negro women) are restricted, as to the occupations included, to the 224 main occupations and occupation groups presented, with subdivisions, in Tables 10 to 14. In Tables 22 and 26, the occupations selected for presentation for each respective state or city are those shown for women of the same state or city in Table 1 or Table 2 of Chapter VII, as the case may be. In general, in Tables 22 and 26 of this chapter and Tables 1 and 2 of Chapter VII, the occupations selected for presentation in each state and city are those occupations of the 572 shown in Tables 15 and 19 of Chapter II which for that state or city are of most importance. Frequently, however, two or more closely allied occupations are combined; and, frequently, a main occupation group is shown, rather than the respective specific occupations which comprise it.

Because of changes made in the occupation classification at the Fourteenth Census it is impossible, in the cases of many important occupations pursued by women to make exact comparison of the Fourteenth Census with the Thirteenth Census statistics showing the marital condition of the women workers. But comparative statistics for the two censuses, showing the marital condition of the women workers in the respective occupations, are of so great importance that it was deemed advisable to include in this chapter a table (Table 9) presenting these comparative statistics for such of the important occupations pursued by women as the comparison could be made. And it was thought best to include in this table a few very important occupation groups for women, even though their inclusion necessitated, in the case of each such group, an estimate involving the distribution by marital

<sup>&</sup>lt;sup>1</sup> Occupation statistics for Alaska, Hawaii, and Porto Rico, first published as separate bulletins, are reprinted as Ch. VIII of this report.

condition of a part of the total women workers in 1910. Other very important occupation groups for women workers were reluctantly omitted from the table because, unfortunately, even with permissible estimates, approximately exact comparison between the statistics for the two censuses was not possible.

The occupation groups of Table 9 for each of which an estimate was made of the marital condition of a part of the women workers in 1910 are: "Semiskilled operatives in clothing industries," "Semiskilled operatives in textile industries," and "Laundry operatives." In the case of each of these three occupation groups an estimate was made of the marital condition of the women sewers in the industry, or industries, covered by the group at the Thirteenth Census. In the Thirteenth Census tabulation of occupation returns by marital condition, with a few exceptions, all women sewers in factories were grouped together. In the Fourteenth Census tabulation of occupation returns by marital condition, however, the women sewers in each respective industry were grouped with the other semiskilled workers of that industry. Because of this difference in classification, in order to make the Thirteenth Census marital condition statistics for the semiskilled group of an industry employing sewers comparable with the marital condition statistics for the Fourteenth Census semiskilled group for the same industry, it was necessary to add to the Thirteenth Census semiskilled group the number of sewers employed in the industry at the date of the Thirteenth Census and to distribute them by marital condition. The number of sewers in each important industry is shown in the detailed Thirteenth Census occupation statistics, but it was necessary to estimate their marital condition. In making the estimate, in the case of each of the three occupation groups named above, it was assumed that at the Thirteenth Census the women sewers in the group were distributed between the two marital condition classes shown in Table 9—(1) married, and (2) single, widowed, divorced, and unknown—in the same proportions as were the sewers in all industries combined. It is not believed that the error in the estimate for any of the three occupation groups named was large enough to affect materially the marital distribution for the group.

The reported decrease from 1910 to 1920 in the proportion of married women engaged in gainful occupations (see Table 1) is believed to be apparent only and due to the return by the census enumerators of too many such women in 1910 and of too few in 1920. At the Thirteenth Census (1910) it was thought that too many women were returned as engaged in gainful occupations (see Thirteenth Census report on Occupation Statistics, pp. 26 to 28). At the Fourteenth Census (1920), on the other hand, it is believed that too few women were returned as engaged in gainful occupations (see Ch. I, pp. 18 to 23). The probable causes resulting in the return as gainful workers of what is thought to have been too many women in 1910 and too few in 1920 are believed to have affected the number of married as well as the total number of women returned as gainful workers.

All other occupations. <sup>1</sup> Many of the "Clerks in stores" probably are "	639, 241 1, 257 143, 664 16, 629 20, 020	62, 153 553 10, 706 2, 252 1 978	9.7 44.0 7.5 13.5 9.9	577,088 704 132,958 14,377 18,044	90.3 56.0 92.5 86.5 90.1	477, 979 295 76, 501 4 8, 219 8, 719	1,402 80,533 153 5,412 614 991	16.3 6.4 51.9 7.1 7.5 11.4	7,432 447,446 142 71,089 7,605 7,728	83.7 93.6 48.1 92.9 92.5 88.6

Many of the "Clerks in stores" probably are "Saleswomen."
 Includes, also, managers and superintendents of retail stores.
 Includes 5 auctioneers.

Probably includes some teachers in schools below collegiate rank.
 Osteopaths were included with "Physicians and surgeons" in 1910.
 Not comparable with figures for 1920.

Includes age unknown—a total of 7 in the state.
 Many of the "Clerks in stores" probably are "Saleswomen."
 Includes, also, managers and superintendents of retail stores.

# TABLE 22.—WOMEN 15 YEARS OF AGE AND OVER ENGAGED IN EACH SELECTED OCCUPATION, CLASSIFIED BY MARITAL CONDITION, WITH A DISTRIBUTION OF THE MARRIED BY AGE PERIODS, FOR STATES: 1920—Contd.

[For a discussion of the figures for certain occupations of this table, see Ch. I, pp. 13-17.]

				MARI	HED.			Single, widowed,
STATE AND OCCUPATION.	Aggregate.	Total.	15 to 19 years.	20 to 24 years.	25 to 84 years.	85 to 44 years.	45 years and over.	divorced, and unknown.
