# NEW HAMPSHIRE.

### ation oblation de suitate de membre and oblation for the latificações to govern objete en proposición besentan A character de incluir materios de bigary da **GENERAL STATISTICS.** To por la proposición de la proposición de la

General character of the state.—New Hampshire has a gross area of 9,341 square miles, of which 9,031 represent land surface. The inhabitants of the state in 1900 numbered 411,588; in 1910, 430,572; and in 1920, 443,083. In total population New Hampshire ranked forty-first among the states in 1920. The number of inhabitants per square mile in 1910 was 47.7, the corresponding figure for 1920 being 49.1.

and the second control of the control of the

In 1920 there were eight cities in the state—Berlin, Concord, Dover, Keene, Laconia, Manchester, Nashua, and Portsmouth—having more than 10,000 inhabitants. The combined population of these eight cities in that year was 193,739, and formed 43.7 per cent of the total population for New Hampshire, and in 1919 they reported 63.3 per cent of the value of the state's manufactured products.

Importance and growth of manufactures (Table 1).—
The increases in wages, cost of materials, and the value of products, from 1914 to 1919, as presented in Table 1, are in a great measure due to the changes in industrial conditions brought about by the World War. The addition of the Federal income tax since 1914 accounts for the large increase in "Rent and taxes."

Statistics for the state, by counties (Table 2).—Figures are not available for comparison of county totals for 1919 with those for prior censuses. Hillsborough County, which includes the cities of Manchester and Nashua, is the most important, reporting 44.6 per cent of the average number of wage earners in the state and 45.1 per cent of the value of products.

Principal industries, ranked by value of products (Table 3).—The ranking of industries by value of products is not always conclusive as indicating their importance from a manufacturing standpoint. In some instances their ranking would change materially if based upon the average number of wage earners or value added by manufacture.

Persons engaged in manufacturing industries (Table 4).—The age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms." The classification by sex for 1919 was reported separately, but for 1914 and 1909 was obtained in the same manner as the distribution by age. Figures for individual industries will be found in Table 31.

Average number of wage earners for selected industries (Table 5).—The industries covered by this table are those which employed 200 or more wage earners in 1919, and for which statistics can be shown without the possibility of disclosing the operations of individual establishments.

<u>. B</u>irk telephological and one for declaration his

Average number of wage earners, by sex and age, and value of products for cities of 10,000 inhabitants or more (Table 6).—During the census period 1914–1919 all cities show increases in value of products, due largely to the increased value of commodities at the later period. The city of Portsmouth shows the most noticeable increase during this five-year period in the average number of wage earners, 192.8 per cent, owing to exceptional activity in the shipbuilding industry.

Wage earners, by months (Table 7).—The statistics for wage earners in this table are intended to show the steadiness of employment, or the reverse, in accordance with the industrial conditions existing during the several census years.

Wage earners, by months, for selected industries and for cities (Table 8).—In addition to the number of wage earners employed by months, similar data are given for males and females for all industries combined for the state and for cities of 10,000 inhabitants or more, and also the number of females for industries in which a large number of females were employed. There were a number of industries in the state in 1919 in which the number of female wage earners predominated.

Prevailing hours of labor (Table 9).—Since 1914 there has been a marked shortening of the working day in New Hampshire. In that year only 5.7 per cent of the wage earners were reported in the group "48 and under" as against 65.6 per cent in 1919. In 1914 the "60" and "Over 60" groups constituted 7.8 per cent of the total wage earners, as compared with 1.6 per cent in 1919.

Size of establishments, by average number of wage earners, for selected industries and for cities (Table 10).—The predominance of the number of small establishments, when based on the number of wage earners employed, is evidenced in this table by the fact that of the total number of establishments in the state, 90.3 per cent were in the several classes having fewer than 101 wage earners, while such establishments employed but 19.6 per cent of the total number of wage earners. On the other hand, the establishments employing an average of more than 100 wage earners represented only 9.7 per cent of the total manufacturing establishments in the state, but reported 80.4 per cent of the total number of wage earners.

Size of establishments, by value of products (Table 11).—At the censuses of 1909 and 1914 establishments with products valued at "\$100,000 to \$1,000,000" constituted one group, but at the census of 1919 this group was subdivided into "\$100,000 to \$500,000" and "\$500,000 to \$1,000,000." Separate figures for the number of establishments and value of products have been compiled, however, from the returns for 1914. The table, therefore, gives combined figures for these two groups for all items for 1909, and for average number of wage earners and value added by manufacture for 1914.

Size of establishments, by value of products, for selected industries (Table 12).—In the preparation of this table it was necessary in several instances to combine the establishments of one group of the industry with those of some other group of that industry to avoid the possibility of disclosing the operations of individual establishments.

Size of establishments, by value of products, for cities of 10,000 inhabitants or more (Table 13).—This table strikingly illustrates the fact that the number of establishments of itself is no real index of the extent of manufacturing activities.

Character of ownership (Table 14).—The predominance of corporate ownership is clearly brought out in this table. Although corporations owned but 30.8 per cent of the number of establishments in the state in 1919, they reported 86.4 per cent of the average number of wage earners and 88.1 per cent of the total value of products. During the five-year period 1914 to 1919 the average number of wage earners in corporations

increased 6,032, or 9.2 per cent, and the value of products \$207,642,533, or 137.3 per cent.

Manufactures, by population groups, in cities of 10,000 inhabitants or more (Table 15).—This table shows that the combined number of establishments in the eight cities in 1919 represented 35.5 per cent of the total in the state. They reported in that year 61.1 per cent of the average number of wage earners and 63.3 per cent of the value of products.

Principal industries in Manchester, with per cent of total for state (Table 16).—This table includes all industries in the city of Manchester having products of \$500,000 and over for which figures can be shown without disclosing the operations of individual estab-

Number and horsepower of types of prime movers (Table 17).—The total horsepower reported in 1919 as compared with that for 1914 shows an increase of 5.045 horsepower, or 1.5 per cent. This increase was wholly confined to rented power, which increased 32,188 horsepower, or 61.1 per cent, during the fiveyear period. Owned power decreased 27,143 horsepower, or 9.3 per cent.

Fuel consumed (Table 18).—This table shows the principal kinds of fuel used by the manufacturing plants in the state in 1919 and 1914, and gives separately for 1919 the amounts consumed by a number of important industries which use considerable quantities of fuel. The paper and wood-pulp industry was a large consumer of fuel in 1919, using 62.5 per cent of the anthracite coal, 29.4 per cent of the bituminous coal and 90.2 per cent of the fuel oils reported by manufacturing establishments.

Less than one-tenth of 1 per cent.

Among the industries for which statistics can not be shown separately without the possibility of disclosing the operations of individual establishments are a number having products in excess of some for which figures are shown in the table. Of these industries the most important are the following: "Asbestos products, not including steam packing"; "belting, leather"; "cars and general shop construction and repairs by steam-railroad companies"; "cars, steam-railroad, not including operations of railroad companies"; "paper goods, not elsewhere specified"; "pulp goods"; "shipbuilding, steal"; "silk goods"; and "silversmithing and silverware."

## SPECIAL STATISTICS.

For a number of important industries the Census Bureau collects, by means of special schedules, certain details which do not appear on the general schedule. Data for six of these industries are here presented.

Cotton goods (Table 19).—This table gives the quantity and cost of materials and the quantity and value of products of the cotton-goods industry in New Hampshire for the census years 1919, 1914, and 1909.

and "brown or pleached says Not reported separately.

142

In 1919 raw cotton constituted a large proportion of the total cost of materials (79.7 per cent). From 1909 to 1914 there was an increase of 2.1 per cent in the quantity of raw cotton used as material, but a decrease of 8.2 per cent from 1914 to 1919, which results in a decrease of 6.3 per cent for the ten-year period 1909-1919. There has been little trading of

yarn in the state during the decade 1909-1919. In 1919 the cost of yarn purchased and consumed represented only 2.7 per cent of the total cost of materials. and that produced for sale 3.2 per cent of the value of products for the industry. Since the value of woven goods represented 93.4 per cent of the total value of products for the industry in the state in 1919. 93.9 per cent in 1914, and 92.2 per cent in 1909, the condition of the cotton-goods industry for the state may best be measured by the decrease in the number of square yards of such manufactures. The figures in the table show a decrease of 11.9 per cent in the number of square yards of woven goods from 1909 to 1914, and 24.9 per cent from 1914 to 1919, or 33.8 per cent during the ten years from 1909 to 1919.

Woolen and worsted goods (Table 20).-This table gives a detailed account of the industry with reference to the quantity and cost of materials used and the quantity and value of products for the census years 1919, 1914, and 1909.

Manufacturers of woolen and worsted goods in this state generally produce a large share of their own varn for the manufacture of woven goods. Wool was the principal raw material used, being 56.1 per cent of the total cost of materials in 1919, 48.2 per cent in 1914, and 63.2 per cent in 1909.

1 Not reported separately.
2 Includes both producing and doubling and twisting spindles.
3 Includes shoddy cards. Woolen cards were reported in sets.

Woven goods greatly predominated as the principal product of the industry in the state, with 92.3 per cent of the total value of products in 1919, 94.4 per cent in 1914, and 91.7 per cent in 1909. Within the three divisions of woven goods (all-wool, wool-and-cotton mixed, and cotton-warp) the largest value was reported as all-wool woven goods, which represented 76.4, 71, and 76.8 per cent, respectively, of the total value of woven goods for the three census periods 1919, 1914, and 1909.

Knit goods (Table 21).—This table gives the quantity and cost of materials and the quantity and value of products for the knit-goods industry in New Hampshire for the census years 1919, 1914, and 1909.

"Yarn purchased" was the principal item used as materials and represented 64.3 per cent of the cost of all materials in 1919, 52.5 per cent in 1914, and 57.2 per cent in 1909; a sandagence rall scaled will intuition

Hosiery was the chief product, representing 72 per cent of the total value in 1919, 74.6 in 1914, and 66.4 per cent in 1909. The character of hosiery manufactured in New Hampshire has been constantly changing from cotton to merino. This is partly due to the reduction in the manufacture of all-wool hosiery. Thus, while the production of cotton hosiery decreased from 44.3 per cent to 31.5 per cent of the total quantity of all hosiery during the last ten years, and all-wool hosiery from 37 to 7.3 per cent, merino hosiery increased from 18.8 to 60 per cent.

Underwear was the second item of importance produced in the knit-goods industry for New Hampshire and in 1919 was 25.9 per cent of the total value of products as compared with 12 per cent in 1914, and 25.2 per cent in 1909. The figures for underwear are principally for separate shirts and drawers, together with small amounts and values for union suits, which could not be shown separately without disclosing the operations of individual establishments.

Boots and shoes (Tables 22 and 23).—Table 22 shows the number of pairs and value of the various kinds of footwear produced in 1919, 1914, and 1909. New Hampshire ranked fifth among the states in the actual production of all kinds of boots and shoes in 1919 as compared with third in 1914, while the state ranked fourth in value at both censuses. Measured by value of products, the boot and shoe industry ranked second in the state in 1919 and first in 1914. Of the totals for the four classes of boots and shoes shown in the table, "women's" is the only kind showing an increased output in 1919 as compared with 1914, the increase being 718,106 pairs, or 19 per cent. During this five-year period, "men's" decreased 462,329 pairs, or 4.2 per cent; "boys' and youths'" 358,451 pairs, or 8.9 per cent; "misses' and children's" 732,046 pairs, or 18.9 per cent; and "slippers and infants' shoes," 1,436,265 pairs, or 73.6 per cent.

Table 23 shows that more welted boots and shoes were manufactured in New Hampshire in 1919 than any other type. The number of welted boots and shoes increased from 38.3 per cent in 1914 to 48 per cent in 1919, while the number manufactured by the McKay method decreased from 56 per cent in 1914 to 41 per cent in 1919. Men's shoes were principally of the welted type, while women's, misses', and children's were McKay

Paper and wood pulp (Table 24).—This table shows the quantity and cost of the principal materials used and the quantity and value of the various products of the paper and pulp mills of New Hampshire as reported at the censuses of 1919, 1914, and 1909. The table also gives the number and daily capacity of the paper machines used and the yearly capacity of both pulp and paper mills.

The statistics for the paper and wood-pulp industry include establishments making both paper and pulp, those making paper only, and those making pulp only. In determining the cost of materials for the entire industry the cost of materials as reported by the three classes are combined. Similarly, the value of products for the industry as a whole is obtained by combining the totals for the three classes of establishments. There is, therefore, considerable duplication, as undoubtedly a large part of the wood pulp purchased is duplicated in the cost of pulp wood; while wood pulp produced for sale is again included to a consider-

manufactured. Of the total quantity of pulp wood consumed in 1919, spruce represented 70 per cent; balsam fir, 24.6 per cent; and other woods including slabs and other mill waste, 5.4 per cent. The item "All other materials" includes cost of fuel and rent of power to the amount of \$2,734,049, and in addition, the cost of all paper stocks other than wood pulp, sizing, and chemicals, other than sulphur.

able extent as a finished product in the value of paper

Company of the most of the section of

The predominating item included in "All other products," in 1919 and 1914, is wood pulp produced for sale or for use in establishments other than where manufactured. The value of hanging, poster, novel, tablet, and lining paper is also included in this item, as these figures could not be published separately without disclosing the operations of individual establishments.

Lumber and timber products (Table 25).—This table shows the principal products of the sawmills in the state for 1919, 1914, and 1909. This industry is one of the oldest as well as one of the most important in the state. The production of lumber, the chief forest product, apparently reached the peak in 1907, the reported cut for that year being 754,023,000 feet board measure. The cut for 1919 showed a decrease from that of 1907 of 415,246,000 feet, or 55.1 per cent.

White pine was the principal kind of wood cut into lumber in this state in 1919; the cut from this species being 176,012,000 feet board measure, or 52 per cent of the total. Spruce was next with 75,811,000 feet,

or 22.4 per cent, hemlock following with 31,404,000 feet, or 9.3 per cent. The cut of balsam-fir lumber represented 4.7 per cent of the total and birch 3.6 per cent. Other important woods were maple, beech, and chestnut in the order of the quantity cut.

### GENERAL TABLES.

Table 30 gives, for 1919, 1914, and 1909, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products for selected industries in the state and in Manchester, and for the seven cities having from 10,000 to 50,000 inhabitants similar data for all industries combined.

Table 31 presents, for 1919, for the state and for Manchester, statistics in detail for each industry for which figures can be shown without disclosing the operations of individual establishments, and the statistics for all industries combined for each of the seven cities in the state having from 10,000 to 50,000 inhabitants.

### GENERAL TABLES.

Table 30 gives, for 1919, 1914, and 1909, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products for selected industries in the state and in Manchester, and for the seven cities having from 10,000 to 50,000 inhabitants similar data for all industries combined.

Table 31 presents, for 1919, for the state and for Manchester, statistics in detail for each industry for which figures can be shown without disclosing the operations of individual establishments, and the statistics for all industries combined for each of the seven cities in the state having from 10,000 to 50,000 inhabitants.

### NEW JERSEY.

#### GENERAL STATISTICS.

General character of the state.—New Jersey has a gross area of 8,224 square miles, of which 7,514 represent land surface. The inhabitants of the state in 1900 numbered 1,883,669; in 1910, 2,537,167; and in 1920, 3,155,900. In total population New Jersey ranked tenth among the states in 1920. The number of inhabitants per square mile in 1910 was 337.7, the corresponding figure for 1920 being 420.

In 1920 there were 39 cities in the state having more than 10,000 inhabitants. The combined population of these cities in that year was 2,070,129, which formed 65.6 per cent of the total for New Jersey. Of the total value of the state's manufactured products, 76.4 per cent was reported from these 39 cities.

Importance and growth of manufactures (Table 1).— The large increases in salaries and wages, cost of materials, and value of products, from 1914 to 1919, as presented in Table 1, are largely due to the change in industrial conditions brought about by the World War, and therefore can not properly be used to measure the growth of manufactures during the census period 1914 to 1919. The increases shown, however, in number of wage earners and horsepower are indicative of a decided growth in the manufacturing activities of the state. The addition of the Federal income tax since 1914 will account for the exceptional increase in "Rent and taxes."

Statistics for the state, by counties (Table 2).—Figures are not available for comparison of county totals for 1919 with those for prior censuses. Of the 21 counties in the state, Essex and Hudson Counties reported 45.9 per cent of the total value of products for the state in 1919 and 43.6 per cent of the average number of wage earners.

Principal industries, ranked by value of products (Table 3).—The ranking of industries by value of products is not always satisfactory as indicating their importance from a manufacturing standpoint. Their ranking in many instances would change materially if based upon the average number of wage earners or value added by manufacture.

Persons engaged in manufacturing industries (Table 4.)—The age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms." The classification by sex for 1919 was reported separately, but for 1914 and 1909 was obtained in the same manner as the distribution by age. Figures for individual industries will be found in Table 42.

Average number of wage earners for selected industries (Table 5).—The industries covered by this table are those which employed more than 1,500 wage earners in 1919, and for which statistics can be shown without the possibility of disclosing the operations of individual establishments.

Average number of wage earners, by sex and age, and value of products for cities of 10,000 inhabitants or more (Table 6).—For the census period 1914 to 1919 all of the cities, for which comparative figures are available, show increases in value of products, but for 5 of the 36 cities for which figures are shown separately in the table there were decreases in the average number of wage earners. Statistics for 3 of the cities could not be shown separately without disclosing the operations of individual establishments, and the totals for them have been combined as "All other cities."

Wage earners, by months (Table 7).—The statistics for wage earners in this table are intended to show the steadiness of employment, or the reverse, in accordance with the industrial conditions existing during the several census years.

Wage earners, by months, for selected industries and for cities (Table 8).—In addition to the number of wage earners employed by months for selected industries and cities, similar data are given for males and females for all industries combined for the state and for cities of 10,000 inhabitants or more. The table also shows a number of industries in the state in 1919 which employed a large number of female wage earners. Of the total number of female wage earners in the state, 82.9 per cent were in the 39 cities, although of the male wage earners, only 77.9 per cent were reported by the cities.

Prevailing hours of labor (Table 9).—Since 1914 there has been a marked shortening of the working day in New Jersey. In that year 7.6 per cent of the wage earners were included in the group "48 and under," as against 59.5 per cent in 1919. In 1914 the "60" and "Over 60" groups constituted 12.1 per cent of the total wage earners, as compared with 3.7 per cent in 1919.

Size of establishments, by average number of wage earners, for selected industries and for cities (Table 10).—The predominance of the number of small establishments, when based on the number of wage earners employed, is evidenced in this table by the fact that of the total number of establishments in the state, 92.1 per cent were in the several classes having

fewer than 101 wage earners, although such establishments employed but 24.2 per cent of the total number of wage earners. On the other hand, the establishments employing an average of more than 100 wage earners represented only 7.9 per cent of the total number of manufacturing establishments in the state, but reported 75.8 per cent of the total number of wage

Size of establishments, by value of products (Table 11).—At the censuses of 1909 and 1914 establishments with products valued at "\$100,000 to \$1,000,000" constituted one group, but at the census of 1919 this group was subdivided into "\$100,000 to \$500,000" and "\$500,000 to \$1,000,000." Separate figures for the number of establishments and value of products have been compiled, however, from the returns for 1914. The table, therefore, gives combined figures for these two groups for all items for 1909, and for the average number of wage earners and value added by manufacture for 1914.

Size of establishments, by value of products, for selected industries (Table 12).—In the preparation of this table it was necessary in several instances to combine the establishments of one group of the industry with those of some other group of that industry to avoid the possibility of disclosing the operations of individual establishments.

Size of establishments, by value of products, for cities of 10,000 inhabitants or more (Table 13).—This table strikingly illustrates the fact that the number of establishments of itself is no real index of the extent of manufacturing activities.

Character of ownership (Table 14).—The preponderance of corporate ownership is clearly brought out in this table. Although corporations owned but 35.7 per cent of the number of establishments in the state in 1919, they reported 89.4 per cent of the average number of wage earners and 91.7 per cent of the total value of products. During the five-year period 1914 to 1919 the average number of wage earners in corporations increased 141,689, or 45.2 per cent, and the value of products, \$2,117,061,522, or 169.3 per cent.

greated to seek for early about the track to be a set to

Manufactures, by population groups, in cities of 10,000 inhabitants or more (Table 15).—This table shows that the combined number of establishments in the 39 cities in 1919 represented 72.2 per cent of the total in the state. They reported in that year 79.1 per cent of the average number of wage earners and 76.4 per cent of the total value of products.

Principal industries in cities of 50,000 inhabitants or more, with per cent of total for state (Table 16). This table presents the principal industries in each of the 11 cities in the state having 50,000 inhabitants or more in 1920, the figures being given for those which can be shown without disclosing the operations of individual establishments.

Number and horsepower of types of prime movers (Table 17).—The total horsepower reported in 1919, as compared with that for 1914, shows an increase of 353,681 horsepower, or 44.6 per cent. This increase, however, is chiefly due to the gain of 207,990 horsepower, or 200 per cent, in rented power. The owned power increased 145,691 horsepower, or 21.1 per cent. during the five-year period. Of the total horsepower in 1914, 86.9 per cent was owned power and 13.1 per cent rented. The corresponding proportions for 1919 were 72.8 per cent and 27.2 per cent, respectively.

Fuel consumed (Table 18).—This table shows the principal kinds of fuel used by the manufacturing plants in the state in 1919 and 1914, and gives separately for 1919 the amounts consumed by a number of important industries which use considerable quantities of fuel, and by the cities of 10,000 inhabitants or more. There were increases in each kind of fuel used in 1919 as compared with 1914, except in anthracite coal, which decreased. In 1919, of the total anthracite coal consumed, 33.4 per cent was used in three industries-chemicals; dyeing and finishing textiles; and petroleum, refining; 26.1 per cent of the bituminous coal was used in six industries—cement; chemicals; coal-tar products; explosives; iron and steel rolling mills; and smelting and refining, copper; and two industries—gas and petroleum refining—used 33.8 per cent of the coke and 72.1 per cent of the fuel oils.

Less than one-tenth of 1 per cent.

2 Among the industries for which statistics can not be shown separately without the possibility of disclosing the operations of individual establishments are 10 having products in excess of some for which figures are shown in the table. These industries are as follows: "Babbitt metal and soldor"; "coke, not including gas-house coke"; "drug grinding"; "explosives"; "glucose and starch"; "oil and cake, cottonseed"; "oil, linseed"; "sewing machines"; "smelting and refining, metals, not elsewhere specified"; and "sugar, refining, not including beet sugar."

#### SPECIAL STATISTICS.

For a number of important industries the Census Bureau collects, by means of special schedules, certain details which do not appear on the general schedule. Data for 15 of these industries in New Jersey are here presented.

Textiles (Table 19).—The following table shows for New Jersey the total value of products of all textiles combined, and the different important branches of manufacture, with value of products for each in 1919, 1914, and 1909:

TABLE 19.—TEXTILES: 1919, 1914, AND 1909.

	VALUE OF PRODUCTS.

<sup>&</sup>lt;sup>1</sup> Exclusive of wool shoddy, to avoid disclosing individual operations; 2 establishments, 1919; 3 establishments, 1914; and 5 establishments, 1909.

In 1919 there were 917 textile establishments in New Jersey, giving employment to an average of 71,447 wage earners for the year. The manufacture of textiles was of primary importance among the industries of the state, as measured by value of products, and New Jersey ranked fourth among the states in the value of textile products, reporting 9 per cent of the total. Separate statistics covering each of the important branches of textile manufactures for the state are shown in detail on the following pages.

Machinery used in textile mills (Table 20).—The different kinds of machines, the use of which is considered by the textile industries as best indicating the trend of manufacturing, are shown in detail for several branches of textile manufactures in New Jersey for 1919, 1914, and 1909.

The increase of 26.1 per cent in looms used in cotton manufactures, in spite of the 4.4 per cent decrease in spindles during the ten-year period 1909 to 1919, is due chiefly to developments in the manufacture of tire duck, for which New Jersey purchases large quantities of yarns for weaving. There was a general increase in the total number of spindles and of machines used in the woolen, worsted, and felt goods, and wool-felt hat industries; for the decade the producing spindles increased 28.4 per cent,

looms 15.1 per cent, sets of woolen cards 22.9 per cent, and wool-combing machines 38.9 per cent in number. The silk-goods industry, including throwsters, made increases during the same period in both spindles and looms, amounting to 21.7 and 32.6 per cent, respectively. For the knit-goods industry the number of knitting machines showed a notable increase for the ten-year period presented in the table—228.3 per cent—and the few spindles and cards that were used at prior censuses became obsolete.

Table 20.—Machinery Used in Textile Mills: 1919, 1914, and 1909.

<sup>2</sup> Includes 275 knitting machines idle entire year.

Silk manufactures (Table 21).—The statistics presented for this industry were compiled from returns received from textile mills engaged in the manufacture of cloth and other finished textile products, and from independent establishments doing throwing and winding, either on their own account or for others on a commission basis.

At the census of 1919 New Jersey ranked second among the states in the value of silk textile manufactures. With 686 establishments, over one-half the total for the United States, the silk mills in this state gave employment to an average of 32,326 wage earners in 1919.

Raw silk was the principal item of cost among the materials used, and in 1919 formed 52.4 per cent of the total. From 1909 to 1919 the quantity of raw silk used increased 30.3 per cent, while thrown silk yarns, the material second in importance in cost, showed an increase of 206.4 per cent in quantity.

The following table relates to the quantity and cost of the principal materials and the quantity and value of the most important products of the industry in New Jersey in 1919, 1914, and 1909:

Broad silks were the principal product of the silk mills in New Jersey, and in 1919 constituted 68.6 per cent of the total value of products for this industry in the state. The total quantity of broad silks increased 67.5 per cent from 1909 to 1919, due to the increase of 89.8 per cent in all-silk broad goods, since

the quantity of silk-mixed broad goods decreased 26.8 per cent during this period. Ribbons was the item second in importance for the industry in New Jersey, according to value, although this product represented only 14.1 per cent of the total value of all products. There has been a continued increase in the quantity of yarns thrown for sale from purchased raw silk, which amounted to 580.5 per cent for the decade; the quantity of varns thrown on commission, however, shows a slight decrease for the same period-15.4 per cent.

Wool manufactures (Table 22).—The following table shows in detail for New Jersey the quantity and cost of the materials used in wool manufactures, together with the quantity and value of the principal products for the census years 1919, 1914, and 1909.

Wool manufactures comprise a group of industries using wool as a basic material in the manufacture of woolen, worsted, and felt goods, carpets and rugs, and wool-felt hats.

Raw wool formed 52.9 per cent of the total cost of all materials. In 1919 the raw wool consumed in the mills of New Jersey was largely for the production of fabrics to be used in the manufacture of clothing. During the ten years shown in the table there was a notable tendency toward the use of foreign wools rather than domestic; the quantity of foreign wool used increased 73.5 per cent, while domestic decreased 9.4 per cent. Purchased yarns, which consisted principally of worsted, formed an important part of the materials, although the quantity of worsted yarn purchased and used in 1919 was less than in either 1909 or 1914. Woolen varn made an appreciable gain in quantity, 230.9 per cent, during the decade.

In the group of wool manufactures referred to, the worsted-goods industry reported products (see Table 42) to the value of \$95,115,024, or 87.9 per cent of the value of products for the entire group for the state in 1919. Woven goods, not including carpets and rugs, represented the principal product of wool manufactures, with worsted fabrics leading at each census shown in the table. The trend of the industry is toward the manufacture of woolens instead of worsteds. In 1909 the production in square yards of woolens was approximately one-fifth that of worsteds, increasing to nearly one-fourth in 1914 and more than one-half in 1919.

Worsted varn, for sale, was second in importance among the products of wool manufactures, and for the year 1919 represented 22.6 per cent of the total value of products. The quantity for this item was less in 1919 than at either of the two previous census years, showing a decrease of 19.8 per cent for the decade.

Not reported separately.
 Includes some gray goods.
 Included in "All other products."

Cotton manufactures (Table 23).—Cotton manufactures embraces a group of industries using cotton as a basic material in the manufacture of cotton goods, cotton lace, and cotton small wares.

The quantity and cost of the principal materials and the quantity and value of the chief products of the three industries combined are shown for New Jersey in the following table for 1919, 1914, and 1909:

Not reported in 1914 and 1909.
 Figures for 1914 and 1909 include all types of duck.
 Not reported separately.

The increased production of tire duck has influenced the purchase of large quantities of cotton yarn. More than one-half of the total cost of materials in 1919 was expended for cotton yarn, and for the 10 years, 1909 to 1919, an increase of 174.1 per cent in quantity is shown for this material.

In 1919 a large share of the value of products, or 68.2 per cent, consisted of woven goods, 80.8 per cent of which was the value of tire duck. Yarns, for sale, showed a decrease of 42.5 per cent from 1909 to 1919 in the number of pounds produced, and cotton waste, for sale, increased 48.5 per cent in quantity during the same period.

Knit goods (Table 24).—The following table gives the quantity and cost of materials and the quantity and value of products for the knit-goods industry for New Jersey for the census years 1919, 1914, and

<sup>&</sup>lt;sup>1</sup> Includes 42,000 pounds of woolen and 25,818 pounds of worsted merino yarn.
<sup>2</sup> Included in "All other products," to avoid disclosure of individual operations.

There has been considerable progress made in the knit-goods industry in New Jersey since 1909. The number of establishments increased from 37 in 1909 to 62 in 1914 and to 90 in 1919. Purchased yarn was the principal material used in the manufacture of knit goods, and in 1919 formed 81.4 per cent of the total cost of materials. The quantity of such yarns showed an increase of 93.2 per cent during the ten-year period 1909 to 1919.

Over two-thirds of the total value of products in 1919 consisted of hosiery, 82 per cent of which was composed of silk, and silk mixed with wool or other yarns. In 1919 the production of cotton hosiery ranked second in number of dozen pairs, although the value was only 16.5 per cent of the total value for all kinds of hosiery. Small amounts of underwear and of fancy knit goods—sweaters, jerseys, etc.—were a part of the products of the industry and in 1919 formed 5.2 and 8.6 per cent, respectively, of the total value of products.

Hats, fur-felt (Table 25).—The following table gives the quantity and cost of the principal materials used and the quantity and value of fur-felt hats produced by the fur-felt hat industry of New Jersey during the census years 1919, 1914, and 1909:

All other products, including contract work, value	\$795, 727	\$819,628	\$704,012

In 1919 New Jersey ranked fourth among the states in the production of fur-felt hats, the value of this product being 20.1 per cent of the total value for the fur-felt hat industry of the United States.

The principal material of the industry, hatters' fur, and the product, fur-felt hats, have diminished in quantity at each succeeding census from 1909, the decreases for the decade being 35.6 and 20.5 per cent, respectively.

Shipbuilding, including boat building (Tables 26 and 27).—This classification includes the building and repairing of steel and wooden vessels and small craft, and the manufacture of masts, spars, oars, and rigging. The number and tonnage of all vessels launched in 1919, 1916, and 1914 are shown, by classes, in the following table:

Power boats of less than 5 gross tons.	130		187		477	

While there was a slight increase in the number of vessels launched during the two-year period from 1914 to 1916, there was a decrease in the gross tonnage. The three-year period from 1916 to 1919 presents an entirely new condition. It shows such an abnormal increase in number of vessels and gross tonnage launched as to render comparisons of little value.

The 608,843 gross tonnage launched in 1919 was 575,091 greater than was launched in 1916 and 550,979 greater than that reported for 1914. There were launched at Newark in 1919, 107 steel vessels aggregating 450,574 gross tons, which is the largest tonnage launched at any one place in the United States for that year. At Camden and Elizabeth there were launched 41 steel vessels aggregating 98,457 gross tonnage, as compared with 11 vessels and 26,047 gross tonnage in 1916. At Gloucester 8 steel vessels were launched with an average tonnage of 6,751 each. Over 86 per cent of the entire number of vessels launched during 1919 were of iron and steel, propelled by steam, and, for the most part equipped with oil burners. One hundred and sixteen of these vessels were for freight service; 20 were ocean-going tugs, most of them built for the Emergency Fleet Corporation. There were also launched 4 oil tankers and 13 destroyers, the latter built for the Navy Department, and 3 freight and passenger steamers, each of 13,500 gross tonnage.

The value of work done upon vessels of all kinds during 1919, 1916, and 1914 is shown in the following table:

Table 27.—Shipbuilding—Value of Work Done: 1919, 1916, and 1914.

The chemical industries (Table 28).—This table gives the statistics for chemicals for 1919, 1914, and 1909. The production comprises all products reported by 131 establishments engaged primarily in the manufacture of chemicals, including 48 establishments producing products chiefly of coal-tar origin, and 5 establishments making sulphuric, nitric, and mixed acids as their chief products, aggregating in value \$131,578,413; and also chemicals to the value of \$10,816,201 manufactured by establishments included under other industry classifications.

In 1914 there were 70 establishments in the industrial group, and in 1909, 56 establishments. There was an increase of 278 per cent in the value of all products for the period 1914 to 1919 and 42 per cent for the period 1909 to 1914.

Development of the coal-tar industry is a matter of special interest. In 1909 the production of coal-tar

products amounted to \$852,059; in 1914 there were 5 establishments reporting products to the value of \$1,563,937; whereas in 1919 there were 48 establishments manufacturing coal-tar chemicals as their products of chief value, which reported products aggregating \$44,740,496.

The classified industry, "coal-tar products," for the United States embraces 182 establishments with products valued at \$135,482,161, and New Jersey ranked second in the industry with 26 per cent of the number of establishments and 33 per cent of the total value of products, being exceeded only by New York, with 46 establishments and products valued at \$45,792,118.

Electrical machinery, apparatus, and supplies (Table 29).—This table gives the value of the various kinds of electrical machinery, apparatus, and supplies for New Jersey. Certain classes, although of greater value than some of those shown, could not be reported separately without disclosing individual operations; among these were electrical measuring instruments and switchboards. The state ranked fourth in the industry, the value of products being 12.1 per cent of that for the United States. In the production of incandescent lamps it led the other states, the output being 34.7 per cent of the total for the United States.

TABLE 29.—ELECTRICAL MACHINERY, APPARATUS, AND SUPPLIES: 1919.

	Amount,

<sup>&</sup>lt;sup>1</sup> In addition, electrical machinery, apparatus, and supplies to the value of \$716,634 were reported by establishments engaged primarily in other industries.

Slaughtering and meat packing (Table 30).—This table presents for the last three census years, 1919, 1914, and 1909, the number and cost of the most important kinds of animals slaughtered; the cost of dressed meat purchased for curing, cottonseed oil for making lard compounds and substitutes, whole milk and butter for making oleomargarine, curing materials, seasoning, refrigeration, containers, fuel, rent of power, mill supplies, freight, and contract work; and the quantity and value of the leading products that can be presented without disclosing individual operations. The item "All other products" includes beef, pickled and other cured, canned beef and pork, canned sausage, lard compounds and substitutes, oleo oil, other oils, oleo stearin, oleomargarine, glue, hog and cattle hair, wool, stock feed, and manufactured bone.

The growth of the industry in the period from 1914 to 1919 is attributable to the increase in the number of beeves and calves slaughtered and in the curing and rendering activities of the industry, as there was a decrease in the number of hogs and sheep and lambs slaughtered. The number of beeves and calves increased 105,646, or 99.3 per cent, and the production of fresh beef and veal, 47,830,256 pounds, or 155.5 per cent. Fresh pork, the leading product in 1919 and 1914, declined 15,997,508 pounds, while the cured pork increased 24,319,929 pounds and lard 12,968,067 pounds.

The cost of materials and value of products for all classes show abnormal increases, due to conditions which affected the values of all commodities during the World War.

<sup>&</sup>lt;sup>1</sup> In addition, rubber goods to the value of \$479,115 were reported in 1919 by establishments engaged primarily in other industries.

<sup>2</sup> Excludes statistics for 2 establishments, to avoid disclosure of individual merations.

New Jersey ranked third in the United States in value of products of the industry as a whole, and held first place among the states in production of rubber

operations.

Not reported separately.

Included in automobile casings and inner tubes.
Includes heels and soles manufactured and sold as such.

belting. An increase of \$60,191,718, or 159.4 per cent, in the value of products was shown during the fiveyear period. Automobile tires showed an increase of \$29,110,543, or 207.9 per cent, and belting showed an increase of \$6,595,278, or 205.6 per cent.

Leather, tanned, curried, and finished (Table 32).— The following table shows, for 1919, 1914, and 1909, the quantity and cost of materials used and the quantity and value of products for this industry.

From 1914 to 1919 the total cost of materials increased \$30,505,890, or 138.2 per cent. Cattle hides, forming 38.6 per cent of the total cost, were the principal materials used. The number of hides treated increased by 590,087, or 84.4 per cent, and their cost by \$12,517,180, or 160.3 per cent. The cost of goat and kid skins and all other raw stock, consisting of horse and buffalo hides, calf, kip, sheep, cabretta, kangaroo. wallaby, deer, elk, pig and hog skins, skivers, fleshers, etc., also shows a large increase.

The total value of the leather produced in 1919 was 146.5 per cent greater than in 1914. Upper leather made from goat, kid, and cabretta skins was the leading product. Upholstery leather for automobiles. furniture, and carriages was next in importance. Sole leather, principally oak tanned, patent, and cattle side upper were other important leathers produced in New Jersey. All other leather includes fancy, horse, bookbinders', kangaroo, wallaby, case, bag, and strap. and lace leather, also finished splits, skivers, fleshers, etc.

Paint and varnish (Table 33).—This table presents the statistics for the paint and varnish industries for 1919, 1914, and 1909. They represent 63 establishments in 1919, 33 engaged primarily in the manufacture of paints and 30 in the manufacture of varnishes, as compared with 60 (31 paint and 29 varnish) in 1914, and 63 in 1909. In addition, there was a large production of these products by establishments engaged primarily in the manufacture of other commodities. The detail figures for specific products represent total production irrespective of the industry classification.

Brick, tile, pottery, and other clay products (Table 34).—This table presents the statistics for the clayworking industries—brick and tile, terra-cotta, and fire-clay products, and pottery—for 1919. The detailed figures for quantities and values are taken from the reports of the United States Geological Survey and represent sales during the year.

Pottery is the predominating group, the specified pottery products as listed constituting 57.6 per cent of the value of all products. In 1914 the value of all products for the industry was \$16,693,447; in 1909, \$17,212,000; and in 1904, \$13,547,000. Although the value of all products in 1919 was 57.8 per cent greater than in 1914, this increase was due to increase in unit values, and not to a commodity increase, for the average number of wage earners in this industrial group in 1919, viz, 9,261, was a decrease of 28.8 per cent from the average number reported in 1914.

Not reported separately.
 Included in "All other leather" to avoid disclosure of individual operations.
 Includes "Calf and kip" skins to avoid disclosure.

Value	\$1, 246, 604 \$1, 555, 796	\$550,00 \$1,202,16	2

<sup>&</sup>lt;sup>1</sup>In addition, there were produced 35,648 tons of fertilizers, valued at \$1,023,136 by establishments engaged primarily in other lines of manufacture.

There was a decrease in quantity production in 1919 as compared with 1914, accompanied by a large increase in values, the average ton value for the product of the state being \$38 in 1919 as compared with \$22 in 1914 and \$19 in 1909.

Printing and publishing (Table 36).—This table shows the number and aggregate circulation per issue of the newspapers and periodicals published in New Jersey as reported in 1919, 1914, and 1909.

The increase in aggregate circulation of all publications was 242,556, or 16.1 per cent, for the fiveyear period from 1914 to 1919, and 680,237, or 63.5 per cent, for the decade.

Of the circulation of daily newspapers, 485,851, or 83.5 per cent, was reported for those published in the afternoon, an increase of 122,639, or 33.8 per cent, for the five-year period and of 158,363, or 48.4 per cent, for the decade.

An increase of 62,718, or 74.7 per cent, in the circulation of the Sunday papers is reported for the five-year period from 1914 to 1919, 2 being added. During the ten years 1909 to 1919 the circulation increased 76,043, or 107.6 per cent.

The foreign-language publications numbered 26, with an aggregate circulation of 59,195 per issue. In German there were 7-1 morning newspaper, 1 Sunday, 3 weeklies, 1 semimonthly, and 1 quarterly. Six publications were in Hungarian, 3 in Italian, 2 in Polish, and 2 in Dutch; all were weeklies. In Slovak there were 2, 1 weekly and 1 semiweekly; in Ukranian, 1 triweekly; in Yiddish, 1 weekly; in German-English 1 weekly; and in Italian-English, 1 weekly.

Laundries (Table 37).—Statistics for power laundries are not included in the general tables nor in the totals for manufacturing industries. Table 37, however, summarizes the statistics for such laundries in the state of New Jersey for 1919 and 1914.

Includes in 1919 and 1909, 1 triweekly.
 Includes in 1919, 7, in 1914, 6, and in 1909, 2, semimonthlies.
 Includes in 1919, I bimonthly; in 1914, 1 bimonthly and 2 semiannual publications; and in 1909, 1 bimonthly and 1 "All other."

Dyeing and cleaning (Table 38).—Statistics for dyeing and cleaning establishments that were operated by mechanical power in 1919 are presented in this table. Statistics for such establishments are not included in the general tables nor in the totals for manufacturing industries for censuses since 1900. This presentation is the first of its kind that has been made since the census statistics were confined to manufacturing industries as distinguished from the hand trades, household industries, etc.

Custom sawmills and custom gristmills (Tables 39 and 40).—Statistics for custom sawmills and custom gristmills are not included in the general tables nor in the totals for manufacturing industries. Data for these custom mills were not collected in 1914.

Tables 39 and 40, however, summarize the statistics for such mills in 1919 and 1909. The value of products for custom sawmills represents the amount charged for the work performed, and that for custom gristmills, the selling value of the grain milled.

#### GENERAL TABLES.

Table 41 gives, for 1919, 1914, and 1909, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products for selected industries in the state and in the cities having 50,000 inhabitants or more, and for the cities in the state having from 10,000 to 50,000 inhabitants, for which comparative figures are available, similar data for all industries combined.

Table 42 presents, for 1919, for the state as a whole and for cities having 50,000 inhabitants or more, statistics in detail for each industry for which figures can be shown without disclosing the operations of individual establishments, and for the cities in the state having from 10,000 to 50,000 inhabitants, the statistics for all industries combined.

### NEW MEXICO.

#### GENERAL STATISTICS.

General character of the state.—New Mexico has a gross area of 122,634 square miles, of which 122,503 represent land surface. The inhabitants of the state in 1900 numbered 195,310; in 1910, 327,301; and in 1920, 360,350. In total population New Mexico ranked forty-third among the states in 1920, and in density of population forty-fifth. The number of inhabitants per square mile in 1910 was 2.7, the corresponding figure for 1920 being 2.9.

Albuquerque was the only city in the state in 1920 having more than 10,000 inhabitants. This city, with a population of 15,157, formed 4.2 per cent of the total population for New Mexico and reported 19.3 per cent of the value of the state's manufactured products for 1919.

Importance and growth of manufactures (Table 1).— The large increases in wages, cost of materials, and the value of products, as presented in Table 1, are largely due to the change in industrial conditions brought about by the World War, and therefore can not properly be used to measure the growth of manufactures during the census period 1914 to 1919. However, the increases in average number of wage earners and horse-power are evidences of the growth of the manufacturing activities of the state. The addition of the Federal income tax since 1914 will account for the large increase in "Rent and taxes."

Statistics for the state, by counties (Table 2).—Figures are not available for comparison of county totals for other censuses with those for 1919. Statistics in this table, however, show that two counties, Bernalillo and Colfax, reported 35.1 per cent of the total number of wage earners and 37.9 per cent of the total value of products for the state in 1919.

Principal industries, ranked by value of products (Table 3).—The ranking of industries by value of products is often misleading as to their real importance from a manufacturing standpoint. The ranking might change materially if based upon the average number of wage earners or value added by manufacture.

Persons engaged in manufacturing industries (Table 4).—The age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms." The classification by sex for 1919 was reported separately, but for 1914 and 1909 was obtained in the same manner as the distribution by age. Figures for individual industries will be found in Table 20.

Average number of wage earners for selected industries (Table 5).—The industries covered by this table

are those which employed 65 or more wage earners in 1919, and for which statistics can be shown without the possibility of disclosing the operations of individual establishments.

Average number of wage earners, by sex and age, and value of products for Albuquerque (Table 6).—This table shows the growth of manufactures in Albuquerque between the censuses 1909 and 1919 and the small proportion the "females" and "under 16 years of age" wage earners formed of the total at each industrial census, 1919, 1914, and 1909.

Wage earners, by months (Table 7).—The statistics for wage earners in this table are intended to show the steadiness of employment, or the reverse, in accordance with the industrial conditions existing during the several census years.

Wage earners, by months, for selected industries and for Albuquerque (Table 8).—In addition to the number of wage earners employed by months, similar data are given for males and females for all industries combined and for the city of Albuquerque. There was no important industry in the state in 1919 where the number of female wage earners predominated.

Prevailing hours of labor (Table 9).—The figures presented in this table show a decided shortening of the hours of labor since the census of 1914. In that year 9.7 per cent of the wage earners were included in the group "48 and under," as against 19.8 per cent in 1919. On the other hand, in 1914 the "60" and "over 60" groups constituted 68.5 per cent of the total wage earners, as compared with 17.8 per cent in 1919.

Size of establishments, by average number of wage earners, for selected industries (Table 10).—The predominance of the number of small establishments, when based on the number of wage earners employed, is evidenced in this table by the fact that of the total number of establishments in the state, 79.3 percent were in the classes having less than six wage earners, while such establishments employed but 10.3 per cent of the total number of wage earners.

Size of establishments, by value of products (Table 11).—In order to avoid the possibility of disclosing the operations of individual establishments it was found necessary to omit the separate showing of groups of over \$500,000 and combine them as a whole in one class, "\$500,000 and over."

Size of establishments, by value of products, for Albuquerque (Table 12).—This table very strikingly illustrates the fact that the number of establishments of itself is no real index of manufacturing activities.

Character of ownership (Table 13).—It will be noted

that while the number of establishments under corporate ownership gained only 9.8 per cent in 1919 over 1914, this group shows an increase of 60.5 per cent in number of wage earners and 103.3 per cent in value of products during the five-year period.

Number and horsepower of types of prime movers (Table 14).—Although both the owned and rented power increased from 1914 to 1919, the proportionate

increase in rented power was the greater, being 157 per cent, as compared with 24.5 per cent for owned power.

Fuel consumed (Table 15).—This table shows the principal kinds of fuel used by the manufacturing plants in the state in 1919 and 1914, and gives separately for 1919 the amounts consumed by a number of important industries which use considerable quantities of fuel.

#### SPECIAL STATISTICS.

Laundries (Table 16).—Statistics for power laundries are not included in the general tables nor in the totals for manufacturing industries. Table 16, however, summarizes the statistics for such laundries in the state for 1919 and 1914.

TABLE 16.—Power Laundries: 1919 and 1914.

<sup>1</sup> A minus sign (-) denotes decrease; percentages are omitted where base is less than 100.

Dyeing and cleaning (Table 17).—Statistics for dyeing and cleaning establishments that were operated by mechanical power in 1919 are presented in this table. Statistics for such establishments are not included in the general tables nor in the totals for manufacturing industries for censuses since 1900. This presentation is the first of its kind that has been made since the census statistics were confined to manufacturing industries as distinguished from the hand trades, household industries, etc.

GENERAL TABLES.

Table 19 gives the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products for all industries combined and for selected industries in the state, and for Albuquerque, similar data for all industries combined, 1919, 1914, and 1909. Certain

 $<sup>^1\,\</sup>mathrm{A}$  minus sign (-) denotes decrease; percentages are omitted where base's less than 100.  $^2$  Includes estimate of all grain ground.

kindred industries are combined in some instances for comparison with 1909.

Table 20 presents, for 1919, statistics in detail for the state as a whole and for each industry that can be shown without the disclosure of individual operations, and for Albuquerque for all industries combined.
