CHAPTER XII.—FRUITS AND NUTS

Introduction.—This chapter presents the statistics on acreage of small fruits, 1929; on the number of orchard and subtropical fruit and nut trees, and grapevines, 1930; and on the quantity harvested and value of all fruits and nuts, 1929, as compiled from the returns of the census of 1930, together with comparative data from prior censuses. All figures for acreage, number of trees or vines, and quantity harvested are based on returns obtained from inquiries on the farm schedules at the several censuses.

In comparing one year with another, it should be remembered that the acreage of crops or the number of trees and the number of farms reporting are generally a better index of progress or changes in the growing of fruit and nut crops than either the production or value, since variations in production may be due to favorable or unfavorable seasons, or to a tendency of fruit and nut trees in many localities to produce a crop only once in two years, and variations in values may result largely from changes in prices.

TABLE 1.—VALUE OF FRUITS AND NUTS AND PERCENTAGE THAT THE VALUE OF EACH SPECIFIED FRUIT AND NUT CROP IS OF THE TOTAL, FOR THE UNITED STATES: 1929 AND 1919

CROP	VALUE		PER CENT THAT VALUE OF EACH SPECIFIED FRUIT AND NUT CROPS OF TOTAL		CROP	VALUE		PER CENT THAT VALUE OF EACH SPECIFIED FRUIT AND NUT CROPS OF TOTAL

All other ⁵	214,727	141,143	(?)	(?)					

¹ Detailed figures for minor fruits and nuts are shown separately in Tables 5 to 9, 22, 24, 25, 29, 30, and 31 when practicable. ² Less than one-tenth of 1 per cent.
³ Includes tangerines, mandarins, etc. ⁴ Includes "Other subtropical fruits" valued at \$3,641, not shown separately in individual tables.

Small fruits.—The 1930 general farm schedule called for the acreage and quantity of each small fruit harvested in 1929. Figures were secured for strawberries, raspberries, loganberries, blackberries and dewberries,

cranberries, currants, blueberries, gooseberries, and "other berries" in 1930. Data for gooseberries and blueberries were included with "other berries," in Table 2, but shown separately for 1929 in Table 9.

¹ Reported in small fractions.

Orchard fruits.—The farm schedules called for the number of trees not of bearing age and the number of trees of bearing age, April 1, 1930, and the quantity harvested in 1929. Separate figures were obtained for apples, peaches, pears, plums and prunes, cherries, figs, apricots, nectarines, and quinces in 1930. Apricots were not listed on the "General Farm" schedule and nectarines and quinces were not listed on either the "General Farm" schedule or the "Special Fruits and Nuts" schedules, hence it was necessary for the enumerator to write in the name of the fruit. This may have affected the completeness of the returns.

Comparable data on orchard fruits for 1925 and 1920 are presented when available. In 1925, the questions relating to apples were the same as on the 1930 farm schedules. The 1925 farm schedule called for the number of trees of all ages for peaches, pears, and plums and prunes. No classification was made as to whether the trees were of bearing age or not of bearing age. In 1920, the orchard fruit inquiries, except for the inclusion of figs, were the same as on the 1930 general farm schedule. In 1920, the data for nectarines and quinces were included with "other orchard fruits."

TABLE 10.—ORCHARD FRUITS—NUMBER OF TREES, 1930, 1920, AND 1910; AND QUANTITY HARVESTED AND VALUE, 1929, 1919, AND 1909; FOR THE UNITED STATES

[Statistics for divisions and States in Tables 13, 14, 15, 16, 17, 18, 19, and 20]

¹ All fruits listed reported in bushels with exception of figs which are reported in pounds.

² Figures for number of trees, 1930, and for value, 1929, include nectarines, quinces, and "other orchard fruits." The quantity harvested, 1929, is for nectarines and quinces only. Figures for number of trees, 1920 and 1910, and quantity harvested and value, 1919 and 1909, include quinces and "other orchard fruits." Nectarines were included with "other orchard fruits" in 1920 and with peaches in 1910.

Grapes.—The farm schedules called for the number of vines of bearing age and number of vines not of bearing age on April 1, 1930, and the quantity harvested in 1929. In 1925, the schedule called for the number of vines of all ages. The inquiries relating to grapes in 1920 were the same as on the 1930 general farm schedule.

Subtropical fruits.—The statistics for citrus and noncitrus subtropical fruits are presented by States. The number of trees not of bearing age and the number of trees of bearing age were secured separately. The 1930 farm schedules called for the quantity har-

vested in 1929. For some subtropical fruits, (for example, oranges), if the enumerators were guided by the detailed instructions and by the inquiries on the farm schedules, the census secured part of the 1928 and part of the 1929 crop. That is, the harvest of the 1928 crop would not be complete by the end of 1928 but would extend into the calendar year 1929. Likewise, the harvest season of the 1929 crop would extend into 1930. It is not known whether the enumerators secured just the quantity harvested in the calendar year 1929 or whether the production secured was that of the harvest season of 1929. Statistics on jujubes, papayas, passion fruit, and pricklypears (cactus pears) were secured for the first time in 1930.

In California, Florida, and selected counties in eight other States, special fruit and nut schedules were used in the census of 1930. The statistics on fruits and nuts were secured in more detail where these special schedules were used than was possible where the general farm schedule was used. The number of trees and quantity harvested of specified varieties of oranges and grapefruit were obtained on these schedules. The data from these schedules for California and Florida are shown in Table 31. The quantity harvested of all fruits is given on a fresh basis.

Land in orchards.—The acreage in fruit orchards, vineyards, and planted nut trees was secured for the first time in 1930. This acreage does not include the acreage for wild pecans. The acreage in orchards, vineyards, and planted nut trees is the result of the tabulation of the acreage reported on the individual farm schedules. On many farms there were only a few fruit or nut trees and these were located in yards and pastures, hence did not occupy enough space to be given an acreage. The aggregate of the number of trees on such farms is considerable, but the acreage

recorded in Table 12 does not include acreage for these trees.

In California and Florida, the acreage occupied by each kind of orchard and subtropical fruit and nut was secured separately.

The number of farms reporting fruit trees, shown in Table 12, is the result of a tally of the farms showing any orchard or subtropical fruit trees. If there were nut trees or grapevines, but no orchard or subtropical fruit trees on a farm, that farm was not counted as a farm reporting fruit trees.

¹ Number of plants.

Nuts.—The number of trees, April 1, 1930, and the quantity harvested in 1929 were secured for almonds, pecans, English or Persian walnuts, chestnuts, hazelnuts, pistachio nuts, tung nuts, and coconuts. Statistics on filberts are included with hazelnuts. Coconuts were reported on 9 farms in Florida (167 trees not

of bearing age, 43 trees of bearing age, and 1,000 coconuts harvested).

Comparable statistics for 1920 are presented when available. Statistics on chestnuts, hazelnuts, pistachio nuts, and tung nuts were not secured at the Census of 1920.

TABLE 25.—NUTS—NUMBER OF TREES, 1930, 1920, AND 1910; AND QUANTITY HARVESTED AND VALUE, 1929, 1919, AND 1909; FOR THE UNITED STATES

(Statistics for divisions and States in Tables 26, 27, 28, 29, 30, and 31)

¹ Fresh basis.

² Yard trees or plants.

³ Number of plants.

⁴ Included in "All other oranges" in California.

Grapes.—In California the number of grapevines, April 1, 1930, and the quantity harvested in 1929 were obtained by specified varieties. The data are shown in Table 32.

Table varieties include Malaga, Tokay, Emperor, and other table varieties of grapes. Raisin varieties include Muscat, Thompson, Sultana, and other raisin varieties.
