¹ General stores are included with general merchandise stores for cities of over 30,000 population when necessary to avoid disclosures. Such stores are, however, included in the general stores State total.
² This classification includes some motor-vehicle dealers engaged in sale of farm implements.
³ For combined figures for this city (town) see summary at the end of this table.
⁴ The sales figure includes a large proportion of country buying reported as sales by retailers.

BUTION, BY KINDS OF BUSINESS—Continued

disclosure of individual operations, but it is included in the totals]

thousands of dollars]

¹ Eight general stores are included with general merchandise stores in certain cities of over 30,000 population to avoid disclosure of individual operations, but are included as general stores in the State total.
² This classification includes some motor-vehicle dealers also engaged in the sale of farm implements.
³ For combined figures for this city (town) see summary at the end of this table.

UNITED STATES SUMMARY: 1929

935

TRIBUTION, BY KINDS OF BUSINESS

disclosure of individual operations, but it is included in the totals]

thousands of dollars]

Women's ready-to-wear specialty stores—apparel and accessories	Women's accessories stores	Other apparel stores	Shoe stores	Furniture stores	Floor coverings, draperies, curtains, and upholstery stores	Household appliances stores	Other home furnishings stores	Radio and music stores	Restaurants, cafeterias, and lunch rooms	Other eating places	Lumber and building material dealers	Electrical shops (with-out radio)	Heating and plumbing shops	Paint and glass stores	Hardware stores	Hardware and farm implements stores	Farmers' supplies stores (including feed and fertilizers)	Bookstores	Glar stores and cigar stands	Coal and yard hardware	Drug stores	Jewelry stores	All other stores

RETAIL DISTRIBUTION

NATIONAL COMMODITY ANALYSES

Reporting of commodity sales on a national basis is hazardous at best, and the general analyses shown below must be subject to many qualifications, principally because of the widely varying conditions under which retailing is conducted in different sections of the country, and the resulting disparity in retail practice.

Why retail practice varies nationally.—This disparity results from several ascertainable causes. One is the *density of population*, which influences the degree of specialization. The more specialized a store, the more likely is it to limit its commodity lines to one or more principal commodities and a few closely related secondary commodities. Specialized stores are more suited to the conditions found in the larger cities and sometimes in suburban areas surrounding large cities. In contrast, a sparsely settled community will be amply served by a few general stores, which may sell food, clothing, furniture, hardware, drugs, and even jewelry. In more settled communities a general store may limit itself to food and clothing, or food and dry goods lines. In cities there is further specialization, with separate stores for food, for apparel, and for dry goods. There may be specialization even within one of these fields; for example, men's clothing stores, women's apparel stores, millinery stores or fur stores. So density of population influences specialization, and specialization determines the variety of commodities sold and the proportion of each which may not agree at all with the general averages shown below.

Another cause is *consumer preference*, which is the result of habit induced by advertising, convenience of location, local reputation, religious or civic prejudice, length of store hours, and sometimes local legislative restrictions. Drug stores, for instance, vary considerably in different parts of the country in their proportion of the total retail business and in the commodities they sell, by reason of the time at which they are required to close at night, whether they may remain open on Sundays, the conditions under which they may fill prescriptions and sell certain classes of drugs and the character of their competition in related lines.

A third cause is the character and aggressiveness of *local competition* by stores in other business fields, such as that mentioned above. Such variation is usually local in effect and largely accidental. Also, it is largely temporary, changing gradually with changing business conditions. The growth of mushroom chains (in contrast to the orderly expansion of sound, established chains) in 1928 and 1929 introduced temporary readjustments in the proportion of business done by existing stores, much of which has since disappeared. However, aggressive competition in one kind of business almost always upsets the ratios which otherwise would exist between the various business groups in that city or section, largely because of the greater sale of related commodities in the more aggressive stores. Related commodities in one kind of store are usually primary commodities in other kinds of business. Hence national averages at best must be broad generalizations.

In two large cities within 500 miles of each other, for instance, drug stores and cigar stores are reversed in their respective proportions for no other reason than that in one city, induced by the aggressive leadership of a local chain, the drug stores have exerted themselves and have corralled a majority of the business in related lines (such as fountain-lunches, cigarettes, candy, books, toys, and small electrical appliances), whereas in the other city the cigar stores have been equally aggressive in attracting such business without a corresponding aggressiveness on the part of the local drug stores. In such cases of local application national commodity analyses may be misleading. Many similar instances exist in other kinds of business.

A fourth cause for disparity in retail practice, between stores of similar classification, is the *character of the community* which

they serve. The character might be incident to the industrial nature or the economic status or source of income of a majority of the population. An obvious example is the automobile dealer in a high-grade residential suburb in contrast to one in a mining or industrial town. Similarly, the hardware store or the furniture store or the grocery store is restricted in the quality of its merchandise, and particularly in its sale of related lines, by the character of the community in which it operates.

How the national averages are obtained.—With these qualifications and difficulties in mind, it is apparent that national averages obtained by accumulating the total dollars of sales of each commodity and dividing by the total sales of that kind of store would be meaningless. What is wanted is a predominating or "usual" percentage to represent the "usual" practice in the kind of store under review. To attain that objective, the Bureau has averaged the several State percentages in each geographic division (as reported in the individual State reports) and then has averaged the divisional averages to produce the national figures shown below. No workable weighting could be devised.

In arriving at *divisional* averages, many commodities are reported sold in all States (in the particular kind of store under analysis). Such commodities are listed as "consistently reported." Other commodities are reported in some States and not in others. Those reported in all States but one are still considered consistently reported, as far as that geographic division is concerned. If the commodity is omitted in more than one State, the item is listed as "variously reported" in the divisional tables, and the lowest percentage and the highest percentage reported in the States of that division are shown. This is for the purpose of giving some idea of the relative importance of the variously reported commodities, in stores in that part of the country.

Consistently reported.—A similar method of arriving at *national* averages has been used. If a commodity is listed as "consistently reported" in all nine of the geographic divisions, or in eight of the nine, it is listed as "consistently reported" nationally. The national figure is the average of the divisional averages, unweighted, plus the chain ratios,¹ weighted in the proportion which chain sales bear to independent store sales.

Variouly reported.—Commodities listed as "variously reported" nationally are those which are shown as consistently sold in some divisions but not in other divisions or sections of the country. The two figures shown opposite a variously reported commodity (in national tables) represent the lowest percentage and the highest percentage reported in the various geographic divisions in which that commodity is found to be consistently reported. Thus, many commodities are consistently reported in some sections of the country which are not consistently reported nationally. Likewise, other commodities may be consistently reported in some one division of the country that are not included in this list, so that it can not be assumed that the items listed herein as "variously reported" are all of the commodities that constitute the percentage shown as the total of "variously reported" commodities. Reference should be made to the State series of Retail Census reports for more detailed data.

When total of variously reported items is high.—In some kinds of stores the "variously reported" commodities differ greatly in different parts of the country, so that no one commodity is reported in more than one geographic division, and sometimes not even throughout a single geographic division in a particular

¹ Chain ratios are shown in the "Merchandising Series" of retail census reports, of which there are 13 covering 13 groups of chains, obtainable at 5 cents each from the Superintendent of Documents, U. S. Government Printing Office, Washington.

kind of business. In each division, however, the total of the "variously reported" items often is a considerable proportion of total sales even though the items vary in identity in the different divisions. In such cases it is impossible in a national list to show the commodities themselves because percentages could not apply to more than one division and there is no way to indicate the division. Therefore, if the total of "variously

reported" items in any classification is large it is an indication that the practice in that kind of store varies greatly in different parts of the country and that the State reports should be consulted as to any geographic division. No attempt has been made to list such commodities nationally, on account of the great variation between different parts of the country.

TABLE 15.—THE UNITED STATES—SUMMARY OF SALES BY COMMODITIES

[It is not the purpose of these national analyses to provide a simple means of arriving at national sales by commodities, the difficulty which is described on page 958. Their purpose is merely to answer in a general way the question as to the nature of the business done by each kind of store, what commodities are usually sold, and in about what proportion. Because of the widely varying conditions encountered in different sections of the country, some of which are suggested above, the State reports should be used in any detailed analysis of commodity sales. See page 958 for definitions of terms.]

Because in various parts of the country some highly developed urban communities are not incorporated, in some States a considerable proportion of the population and the retail business which is necessarily classified in this table as unincorporated (less than 1,000) is actually urban in character. Sanford, Me., and Weirton, W. Va., are included in this table in the under 1,000 group for their respective States. These exceptional situations are itemized below.

- ¹ Includes the incorporated places of Blue Mountain, Mignon, and Beville.
- ² Includes part of Junction City located in Arkansas.
- ³ Includes the unincorporated townships of Belvidere and Gardena.
- ⁴ Includes the towns of West Haven, East Hartford, Stratford, West Hartford, and the boroughs of Farmington and Litchfield.
- ⁵ Includes part of Delmar located in Delaware.
- ⁶ Includes part of West Harrison (Union City, Ohio) located in Indiana.
- ⁷ Includes the incorporated place of Van Lear.
- ⁸ Includes part of Junction City located in Louisiana.
- ⁹ Includes cities, villages, and towns in indicated size groups.
- ¹⁰ Includes the incorporated place of Brooklyn Center.
- ¹¹ Includes the incorporated places of Wakefield, Tilden, and Oxford.
- ¹² Includes the townships of Woodbridge, Cranford, Hillside, Lyndhurst, Maplewood, Neptune, Persauken, Teaneck, Union, Weehawken, North Bergen, and the incorporated place of Essex Fells.
- ¹³ Includes the town of Irondequoit.
- ¹⁴ Includes the part of Union City located in Ohio.
- ¹⁵ Includes the part of Texhoma located in Oklahoma.
- ¹⁶ Includes the townships of Abington, Cheltenham, Hanover, Harrison, Haverford, Mt. Lebanon, Plains, Stowe, Lower Merion, Upper Darby, and the incorporated places of North Charlevoix, North Apollo, South Newcastle, Courtdale, Printsboro, Cokesburg, East Washington, Ellsworth.
- ¹⁷ Includes the part of Texhoma located in Texas and the incorporated places of West University Place, Highland Park, East Mayfield, South Groveton, and Diboll.
