PART III

TENURE OF FARM OPERATOR; SIZE AND TYPE OF FARM AND VALUE OF FARM PRODUCTS SOLD OR TRADED

TENURE OF FARM OPERATOR; SIZE AND TYPE OF FARM; AND VALUE OF FARM PRODUCTS SOLD OR TRADED

This part of the volume presents statistics for 19 States classifying irrigated farms according to the tenure of their operators; also by size and type, and by value of their products sold or traded.

TENURE OF FARM OPERATOR

The tables relating to tenure represent consolidations of statistics appearing in Table 2, page 49, and the State Table, page 64, of the Summary for the United States and the corresponding tables in the separate reports for the 19 irrigation States which follow this Summary in Part II of this volume. They show, by States, for (1) all farms, (2) all irrigated farms, (3) all wholly irrigated farms, and (4) all partly irrigated farms, the number and average size of the farms, and their value per acre as represented by land, buildings, and implements and machinery. In the tenure classification there are two groups of farm operators—(1) owners, part owners, and managers are shown in one group, and (2) tenants, including croppers, in another.

State Table 1, page 261, shows that tenant-operated farms comprise 47.9 per cent of all farms in the 19 irrigation States, but only 23.1 per cent of all irrigated farms, 23 per cent of all wholly irrigated farms, and 23.6 per cent of all partly irrigated farms. For the United States, tenant-operated farms are 42.4 per cent of all farms. For the States in which irrigation is an important factor in agriculture, the comparisons between all farms and irrigated farms are much closer than those for the 19 States as a group; for instance, the percentage for all farms in California is 18, and for all irrigated farms, 16.2. The percentage of tenantoperated farms is slightly higher for all irrigated farms than for all farms in Arizona, Colorado, Idaho, Montana, Oregon, Utah, Washington, and Wyoming, as well as in the States of Kansas and Nebraska where irrigation is merely of localized importance. Nebraska is the only State in which tenant-operated farms reporting irrigation exceed, in number, the irrigated farms operated by owners and managers; the excess in this case is only about 2 per cent.

Wholly irrigated farms number 225,271, or 85 per cent of the 265,147 farms reporting irrigation; hence the tenure percentages for the "irrigated" and "wholly irrigated" groups are consistently close for the States where irrigation is predominant. Wide differences are numerous in the comparisons by States between irrigated and partly irrigated farms, but are not of notable significance because of the relatively low proportions of such farms to the total numbers. Average size of farm.—State Table 2, page 262, shows the area of the average irrigated farm to be slightly larger than that of "All farms" in the 19 irrigation States, the respective averages being 295.5 and 275.7 acres. This is true in much greater degree of the average partly irrigated farm, which has an area of 637.7 acres; but the average wholly irrigated farm is smaller than the average for all farms, its area being 234.9 acres.

In all four groups, the average farm operated by owner or manager is larger than either the average farm or the average tenant-operated farm.

The smallest average farm (57.9 acres) in the "All farms" group is shown for Louisiana, while the largest (1,469.3 acres) is shown for Wyoming. Of "All farms reporting irrigation" the smallest (120.6 acres) is shown for Washington, while the largest (1,362.9 acres) is shown for Wyoming. Again Wyoming is represented by the largest average (1,297.2 acres) in the "Wholly irrigated" group, while Oklahoma is represented by the smallest (77.6 acres). Of the "Partly irrigated" group, the smallest average is reported for Louisiana (149.2 acres), while the largest (5,958.7 acres) is shown for Nevada.

Specified values of farms per acre.—State Table 3, page 263, shows average values per acre of all farms and of irrigated farms, as represented by combined values of land, buildings, and implements and machinery; while State Tables 4 to 6, inclusive, show for irrigated farms a comparison of the specified values in conformity with the tenure classifications used in the preceding tables of this chapter.

The average combined value shown for all irrigated farms is \$62.38 per acre, while that for all farms is \$37.67 per acre. The value of all wholly irrigated farms is \$71.52 per acre, and that for partly irrigated farms, \$43.37 per acre. The highest value in each classification is shown for California. The lowest value for all farms is shown by New Mexico; for all irrigated farms and all wholly irrigated farms, by Wyoming; and for all partly irrigated farms, by Nevada.

The values of tenant-operated farms, for the 19 irrigation States as a group, are higher than those of farms operated by owners and managers, but there are several exceptions applying to the comparisons by States. Notable among these, of the States where irrigation is most prevalent, are California and Washington, which show, for all irrigated farms and all wholly irrigated farms, the higher values in the "Owners and managers" classification.

106420-32-18

Values per acre of land and buildings, land alone, and implements and machinery are substantially higher for the wholly irrigated farms of the 19 States as a group than the corresponding values for all farms reporting irrigation or for partly irrigated farms. This is also true for all the States except Arkansas and Wyoming. Arkansas shows a slightly higher value of land and buildings on partly irrigated farms than on farms wholly irrigated or on all farms reporting irrigation, indicating buildings of the higher average value on partly irrigated farms. For Wyoming, the similar difference in the value, per acre, of land and buildings, is too small to be of significance when considered by itself; in this case, however, the land alone in partly irrigated farms, having the higher value per acre, is responsible for the reversal. In Wyoming, the partly irrigated farms constitute only 12.2 per cent of all farms reporting irrigation. The corresponding percentage for Arkansas is 68.2.

Irrigated farms operated by tenants have values per acre of land and buildings, land alone, and implements and machinery, which exceed the corresponding values for all farms reporting irrigation and for all irrigated farms operated by owners and managers. This is true for land and buildings for the 19 irrigation States except Arkansas, California, Louisiana, and Washington; it is true, also for land alone, for all except Arkansas and Louisiana; and for implements and machinery, for all except Arkansas, California, Louisiana, North Dakota, and Washington.

The comparisons made in the preceding paragraph, when applied to wholly irrigated farms, show higher values for land and buildings in tenant farms, for all States except Arkansas, California, Louisiana, North Dakota, Oklahoma, and Washington; for land alone, for all States except Arkansas, California, Louisiana, Oklahoma, and Washington; and for implements and machinery, for all States except California, Louisiana, Nevada, North Dakota, Oklahoma, and Washington. Similarly, for partly irrigated farms, the comparisons show higher values for land and buildings in tenant farms for all States except Arkansas and Louisiana; for land alone, for all States except Arkansas and Louisiana; and for implements and machinery, for all States except Arkansas, Louisiana, and Nevada.

SIZE OF FARM

State Table 2, page 262, shows that the average size of the farms for the 19 irrigation States is 275.7 acres, and that of the irrigated farms, 295.5 acres. State Table 7 shows, however, that both averages are distorted somewhat by the very large farms typifying a few States, and that by far the greater number of farms are much smaller than either 275 or 295 acres. Moreover, the farms in the irrigated group are characteristically smaller than those in the group comprising all farms. Thus nearly 85 per cent (84.8 per cent) of the irrigated farms have areas less than 260 acres; 79.2 per cent are smaller than 175 acres; 65.3 per cent are smaller than 100 acres; 49.1 per cent are smaller than 50 acres; and 26 per cent are smaller than 20 acres. Of "all farms," only 78.4 per cent are smaller than 260 acres; 70.7 per cent are smaller than 175 acres; 51.8 per cent are smaller than 100 acres; 35.3 per cent are smaller than 50 acres; and only 14.3 per cent are smaller than 20 acres. In both classifications, the group comprising farms from 20 to 49 acres shows more farms than any other group—21 and 23 per cent, respectively.

As regards the size of irrigated farms alone, considerable variety appears when the figures for the various States are examined separately. Thus, the 3 to 9 acres group is the predominant group in New Mexico; the 20 to 49 acres group is predominant in Arizona, California, Louisiana, Oregon, Texas, Utah, and Washington; the 50 to 99 acres group is predominant in Idaho: the 100 to 174 acres group is predominant in Colorado, Kansas, Montana, Nebraska, Nevada, North Dakota, Oklahoma, South Dakota, and Wyoming; and the 260 to 499 acres group is predominant in Arkansas. The predominance indicated for the irrigated farms is relatively identical with that for all farms in the following States: Arizona, California, Idaho, Kansas, Louisiana, Nebraska, Nevada, Oklahoma, Oregon, Utah, and Washington.

TYPE OF FARM

State Table 8 shows that for the 19 irrigation States as a group, cotton farms comprise more than 35 per cent of all farms; cash-grain farms are about 14 per cent; and general farms, about 12 per cent. The three classes comprise somewhat more than half (61.3 per cent) of the total, with no other group showing as much as 10 per cent. These comparisons are influenced in marked degree by the inclusion in the irrigation census of Arkansas, Louisiana, Oklahoma, and Texas, in which States cotton is a principal crop.

Of irrigated farms, fruit farms are the most numerous, representing 21.3 per cent of the total; cropspecialty farms are 17.2 per cent; general farms, 10.5 per cent; dairy farms, 9.4 per cent; and abnormal and unclassified farms, 8.9 per cent. No other class shows as much as 7 per cent.

These comparisons serve to indicate generally the lines of specialization characterizing irrigation farming, three groups (fruit, crop-specialty, and dairy) comprising approximately half (47.8 per cent) of the total. Of these, the crop-specialty farms represent very largely those on which sugar beets, ripe field peas and beans, hay, or white potatoes are the principal crops.

Although cotton farms as a group are relatively unimportant in the irrigation classification as compared with the all-farms classification, numerically they constitute the most important irrigation group in Arizona, New Mexico, and Texas.

Cash-grain farms are numerically predominant in the irrigation classification in Arkansas and Louisiana, the irrigated grain being rice. General farms are predominant in Oklahoma, Oregon, and Utah; cropspecialty farms, in Colorado, Idaho, Kansas, Montana, Nebraska, North Dakota, South Dakota, and Wyoming; fruit farms, in California and Washington; and stock ranches are predominant in Nevada. Only in the cases of California, Colorado, Idaho, Nevada, Texas, and Utah are the predominant irrigation groups the predominant all-farms groups.

WYOMING

303

VALUE OF FARM PRODUCTS SOLD OR TRADED

In State Table 9, which shows by groups the number of farms classified by value of farm products sold or traded in 1929, six groups appear in the classifications, both of all farms and of irrigated farms which account for approximately three-fourths of the farms in each, although 12 groups are listed. No group other than the six groups referred to includes as much as 7 per cent of the totals.

The six groups are not identical in the comparison. Thus in the all-farms classification they represent a range of values from \$250 to \$3,999 and constitute 77.7 per cent of the total; in the irrigated-farms classification, the total range of the six major groups is from \$600 to \$9,999, and they constitute 73.1 per cent of the total. In the all-farms classification, the group showing the greatest number of farms is the \$600 to \$999 group; for the irrigated farms, the predominant group has values ranging from \$1,500 to \$2,499.

Similar comparisons State by State disclose wide variations. In the irrigated-farms classification, the "under \$250" group is predominant in New Mexico; the \$600 to \$999 group in Arizona; the \$1,500 to \$2,499 group in California, Colorado, Louisiana, Nevada, Oklahoma, Oregon, Texas, Utah, Washington, and Wyoming; the \$2,500 to \$3,999 group in Idaho, Kansas, Montana, Nebraska, and South Dakota; the \$6,000 to \$9,999 group in Arkansas. In North Dakota the \$1,500 to \$2,499, the \$2,500 to \$3,999, and the \$4,000 to \$5,999 groups each have the same number of farms, which is the predominant number. In California, Colorado, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming, the predominant group in the irrigated-farms classification is likewise predominant in the all-farms classification.
