UNITED STATES SUMMARY

COMPOSITION AND CHARACTERISTICS OF THE POPULATION

UNITED STATES SUMMARY

INTRODUCTION

This summary presents the more important classifications of the population of the United States as returned in the Fifteenth Census, taken as of April 1, 1930. These classifications include color or race; nativity and parentage of the white population; citizenship of the foreign-born white; sex; age; school attendance; illiteracy; marital condition; country of birth of the foreign-born white; country of birth of parents of the native white population of foreign or mixed parentage; and gainful workers classified by industry groups.

Four series of tables are presented, which summarize all the data tabulated by counties and for the smaller cities, and presented, State by State, in the Second Series of population bullctins. The first comprises a number of brief summary tables, giving the United States totals for the main classifications, with little detail in the way of correlation with other classifications. The second series of tables gives the United States totals in greater detail by sex, color, and nativity, for urban and rural areas, etc., and with more comparative figures for earlier censuses. The third series gives the main classifications by geographic divisions and States, and for the North, the South, and the West; and the fourth series gives similar data for the 93 cities having 100,000 or more inhabitants and for the 5 boroughs of New York City.

Additional classifications of the general population statistics, including State of birth of the native population; mother tongue of the foreign-born white; year of immigration; ability to speak English; nativity and parentage of the nonwhite groups; additional age detail; and many combinations of classifications not included in the tabulations for counties and other small areas, are presented by States and for cities of 25,000 or more, in Volume II of the Reports on Population—the General Report. The several chapters of this volume, each relating to a single subject, as State of birth or mother tongue, are also printed as separate bulletins.

Occupation statistics are presented for States and for cities of 25,000 or more in a series of State bulletins, which are bound together to form Volume IV of the Reports on Population, entitled Occupations, by States. Additional occupation statistics appear in Volume V, the General Report on Occupations. Family statistics, including homes classified by tenure and by value or monthly rental, families classified by size, number of children, employment status of home-makers, etc., are presented for States, counties, and incorporated places of 2,500 or more in a series of State bulletins on Families, which are bound together to make Volume VI of the Population Reports.¹

The results of the count of the population returned in the 1930 census were first published in a series of State bulletins (Population, First Series) which gave only the total population for the State and for all of its political subdivisions, including counties, townships or other minor civil divisions, cities, and other incorporated places. These bulletins have been bound together to form Volume I of the Fifteenth Census Reports on Population.

Geographic areas.—Statistics are presented in this summary for continental United States as a whole, for the several States, for nine groups of States designated "geographic divisions," for the three main sections of the country (the North, the South, and the West), for all cities having a population of 100,000 or more in 1930, for urban and rural areas, and for the two subdivisions of the latter, designated rural-farm and rural-nonfarm. Data for the outlying territories and possessions of the United States, except the Philippines, are presented in other publications—for the most part in a series of special bulletins, one for each of the principal areas.

Urban and rural areas.-Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that the compactly built portions of the towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only the cities were counted as urban the classification would be quite inadequate. In 1920 and 1910 all towns in these three States which had a population of 2,500 or more were classified as urban. This resulted in the inclusion of a considerable number of places that were mainly rural in their general characteristics. In 1930 the special rule for these New England States has been modified so as to place in the urban classification, in addition to the regularly incorporated cities, only those towns in which there is a village or thickly settled area having more than 2,500 inhabitants

¹ At the time this volume goes to press (early in 1932) only a part of the bulletins referred to in this paragraph have been printed, and all of the volumes mentioned (Volumes II, IV, V, and VI of the Population Reports) are still in various stages of completion.

and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town.²

One other modification has been made in the definition of urban population for use in connection with the 1930 census. This modification extends the classification so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more, and a population density of 1,000 or more per square mile.³

Since it has been found impracticable to go back and readjust to the new basis the 1920 urban and rural figures as they were tabulated by color, sex, age, etc., they are presented in all tables as established in 1920. The comparative figures for a few States therefore show differences which must be considered or interpreted as solely or mainly the result of the change in the method of classification. Percentages and rates, however, such as the percentage illiterate and the per cent distribution by age, are less seriously affected by the changed classification and are in most cases fairly comparable.

Table 1 shows the population of continental United States for each census from 1890 to 1930, inclusive, with separate figures for urban and rural areas. Farm population figures are presented for 1930 and 1920 only, since this classification of the population was made for the first time in 1920.

TABLE 1.—POPULATION OF THE UNITED STATES. URBAN AND RURAL: 1890 TO 1930

| CLASS OF POPULATION | 1930 (April 1) | 1920 (January 1) | 1910 (April 15) | 1900 (June 1) | 1890 (June 1) |

[Urban and rural population, by color and nativity, in Table 4]

Farm population.—The farm population as shown for 1930 comprises all persons living on farms, without

³ The result of this modification has been to transfer from the urban to the rural classification 12 towns in New Hampshire (population 35,389), 56 towns in Massachusetts (population 218,221), and 8 towns in Rhode Island (population 35,001) which would have been counted as urban if the 1920 rule had been followed in 1980. The aggregate population in 1980 of these towns which were in effect transferred from the urban to the rural classification is 283,021.

¹ This extension adds to the urban group 11 townships in New Jersey (population 208,722), 10 townships in Pennsylvania (population 210,605), 4 towns in Connecticut (population 87,668), 2 townships in California (population 48,902), and 1 town in New York (population 18,024). The aggregate population of these 28 places, which would have been classified as riral under the rules governing the urban-rural classification in 1920, is 573,329.

The net effect of the two changes in the basis of the urban-rural classification is, therefore, to increase the urban population by 284,708. In other words, if the classification had been made in 1930 on exactly the same basis as in 1920, the urban population would have been 68,670,115, instead of 68,954,823, and the percentage urban would have been 56.9 instead of 66.2. regard to occupation. The farm population figures for 1920 include, in addition, those farm laborers (and their families) who, while not living on farms, nevertheless lived in strictly rural territory outside the limits of any city or other incorporated place. Though the number of additional persons thus included is believed not to have been very great, some allowance should be made for this difference in definition when comparing the figures. Further allowance should be made for the fact that the 1920 census was taken in January, when considerable numbers of farm laborers and others usually living on farms were temporarily absent, while the 1930 census was taken in April, when by reason of the advancing season the number of persons on the farms was appreciably larger. Since these two factors operate in opposite directions, it may well be that one largely offsets the other. It seems probable, however, that the change in the date added more to the 1930 returns than were omitted through the use of the narrower definition.

While the urban-farm population, that is, the population living on farms within the limits of cities and other urban places, is shown in Table 1 for the United States and in Table 38 by States, it is not included in the detailed presentations by color, sex, age, etc. In other words, the analysis of the farm population is limited to that part living in rural territory, which is designated in every case as "rural-farm." This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, ruralfarm, and rural-nonfarm); partly because the urbanfarm group is so small, forming as it does less than 1 per cent of the total farm population; and partly because it is felt that the few farm families resident within the corporate limits of cities or towns are living under conditions that are at least somewhat urban. rather than under typical farm conditions.

Rural-nonfarm population.—The rural-nonfarm population, sometimes termed the "village" population, includes, in general, all persons living outside cities or other incorporated places having 2,500 inhabitants or more who do not live on farms. There were included in the rural areas of the United States in 1930, 13,433 incorporated places of less than 2,500 inhabitants, with an aggregate population of 9,183,453. While there are considerable numbers of farm families living in these villages, it may be assumed that well over nine-tenths of their population was counted as rural-nonfarm. These incorporated villages therefore contribute around two-fifths of the total rural-nonfarm population (which amounted to 23,662,710); and a considerable part of the remainder live in unincorporated villages.

The rural-nonfarm or village population is much less uniform in its make-up in the different parts of the United States than either the urban population or the rural-farm population. In some sections of the country it consists mainly of the inhabitants of small manufacturing villages or of suburban areas which are not incorporated. In other sections it is made up mainly of persons living in mining settlements. In still other parts of the country, where farming is the dominant industry, it is made up largely of the inhabitants of small commercial centers, including merchants, bankers, doctors, carpenters, automobile repair men, and other persons who are mainly occupied in supplying the wants of the farm population, together with retired farmers and their families.

Color or race.—In the main tabulations of the population by color or race, three groups are distinguished, namely, white, Negro, and "Other races." In some of the tables, however, the third group is subdivided into its constituent parts, the principal ones being Mexican, Indian, Chinese, and Japanese.

Table 2 summarizes the figures for the United States by color or race for 1930 and 1920.

TABLE 2.—POPULATION OF THE UNITED STATES BY COLOR OR RACE: 1930 AND 1920

¹ The white population as classified in 1920 included 700,541 persons (estimated) who would have been counted as Mexicans in 1930. In the adjusted figures these have been subtracted from the 1920 white population as reported. ² Estimated on the basis of the returns for country of birth and country of birth of parents.

Mexican population.-The Mexican element in the population has increased very rapidly in certain parts of the United States during the past 10 years. By reason of its growing importance, it was given a separate classification in the census returns for 1930, having been included for the most part with the white population at prior censuses. The instructions given to enumerators for making this classification were to the effect that "all persons born in Mexico, or having parents born in Mexico, who are not definitely white, Negro, Indian, Chinese, or Japanese, should be returned as Mexican." Under these instructions, 65,968 persons of Mexican birth or parentage were returned as white in 1930, and 1,422,533 as Mexican. Using as a basis the 1920 returns for persons born in Mexico and persons having one or both parents born in Mexico, it was estimated that there were in that year 700,541 persons who would have been classified as Mexican under the 1930 instructions.⁴

Increase in the white population.—The change in the classification of Mexicans introduces many complications into the process of comparing the 1930 figures for the white population and its various subdivisions with the corresponding figures for 1920. In order to provide a basis for more satisfactory comparisons the estimated number of Mexicans included in the white classification in 1920 has been deducted from the 1920 figures as published and the difference is presented in various tables as an "adjusted" figure for the 1920 white population. On the basis of the adjusted figures for 1920, the white population increased from 94,120,374 in 1920 to 108,864,207 in 1930, or 15.7 per cent.

Negro population.-The increase in the number of Negroes in the United States between January 1, 1920, and April 1, 1930, amounted to 1,428,012, or 13.6 per cent, as compared with an increase of 635,368. or 6.5 per cent, during the preceding census decade, April 15, 1910, to January 1, 1920. The increase in the number of Negroes between 1920 and 1930, as indicated by the 1930 census, is so much greater than the increase during the previous census decade that some question has been raised as to the completeness of the enumeration of persons of this race in 1920. A study of the figures for the Negro population as returned in 1910, 1920, and 1930, by age, in connection with available figures for Negro death rates, would indicate that while there may have been some shortage in the 1920 enumeration, as compared with that of 1910 or 1930, it would not appear to exceed 150,000.

Indian population.—The 1930 Indian population as returned represents an increase of 87,960, or 36.0 per cent, over the Indian population returned in 1920. This apparent increase is probably to be accounted for in part by the more complete enumeration in 1930 of Indians of mixed blood, that is, of persons part white and part Indian. In 1920 no special instructions were given to the enumerators with regard to the method of returning such persons, while in 1930 they were instructed to return as Indians all persons of mixed white and Indian blood, except where the percentage of Indian blood was very small, or where the person was regarded as white in the community where he lived.

Nativity and parentage.—The white population alone is classified in this summary by nativity and parentage, being divided primarily into three groups:

⁴ This estimate is based on the assumption that the ratio between white persons of Mexican birth or parentage and persons who should be classified as "Mexican" was the same in 1920 as in 1930, when the total number of persons of Mexican origin (1,488,601) comprised 1,422,563 Mexicans and 65,668 white persons of Mexican birth or parentage. The total number of persons of Mexican birth or parentage in 1920 was 731,559.

(1) Natives of native parentage—that is, having both parents born in the United States; (2) natives of foreign or mixed parentage-that is, having one or both parents born abroad; and (3) foreign born. In certain of the tables the second group is further divided into two parts, namely (a) natives of foreign parentage-that is, having both parents born abroad; and (b) natives of mixed parentage—that is, having one parent native and the other foreign born. The nativity and parentage classifications of the nonwhite groups have been omitted from these tables, as being of much less importance, since nearly all Negroes and Indians are natives, of native parentage, and nearly all Chinese and Japanese are either foreign born or of foreign parentage. The nativity and parentage of the nonwhite classes are presented in Volume II of the Reports on Population (and in the subject-bulletin on color and nativity).

The figures representing the white population classified by nativity and parentage are summarized for 1930 and 1920 in Table 3. To obtain the figures shown in the column headed "1920, adjusted," the estimated number of persons included in the white classification in 1920 who would have been counted as Mexican in 1930 has been subtracted from the 1920 white population as reported. (See discussion of the change in the classification of Mexicans above.) The increases shown in the table are computed on the basis of the adjusted figures.

TABLE 3.—WHITE POPULATION OF THE UNITED STATES BY NATIVITY AND PARENTAGE: 1930 AND 1920

Sex.—The distribution of the population by sex is a fundamental classification, essential to the proper interpretation of almost every other phase of population statistics. A classification by sex is therefore presented in connection with the other subjects wherever space will permit.

Table 5 shows the number of males and females in the population of the United States, by color and nativity, for 1930 and 1920, with the sex ratio, or number of males per 100 females.

TABLE 5.—POPULATION OF THE UNITED STATES BY SEX, COLOR, AND NATIVITY: 1930 AND 1920

[1910 figures for the United States in Table 17; figures for divisions and States in Tables 40 and 41; and for citles of 100,000 or more in Table 60. Ratio not shown where number of females is less than 100]

| COLOR AND NATIVITY | 19 | 30 | | | | S PER MALES |

Citizenship.—The foreign-born white population of the United States is distributed in Table 6 by citizenship. This classification comprises 4 groups: (1) Naturalized; (2) having first papers—that is, having made formal declaration of intention to become a citizen of the United States; (3) alien; and (4) unknown that is, with status as to citizenship not reported.

¹ The foreign-born white population as classified in 1920 included 457,360 persons (estimated) who would have been counted as Maxican in 1930. In the adjusted figures these have been subtracted from the 1920 foreign-born white population as reported.

In this table are presented adjusted figures for 1920, obtained by deducting from the 1920 foreign-born white as reported, the estimated number of Mexicans included. Using the adjusted figures, which obviously form a more satisfactory basis for comparison, we find that the number of foreign-born whites reported as naturalized increased by 1,401,767, or 21.7 per cent, between 1920 and 1930, and the number having first papers increased 30,322, or 2.5 per cent, while the number reported as alien decreased 1,022,631, or 21.3 per cent. The percentage naturalized increased from 48.7 in 1920 to 58.8 in 1930, while the percentage alien decreased in the same period from 36.3 to 28.3.

Table 43 presents the citizenship figures for the foreign-born white population by divisions and States. No adjusted figures for 1920 are presented in the body of this table, but such figures are given in a footnote for those States where the adjustment involves any appreciable change (for all States having as many as 2,000 Mexican-born in their 1920 population).

Age.—The age classification in the census returns is based on age at last birthday, that is, age in completed years. Age statistics are presented in this summary for the following groups: Under 1 year, 5-year periods up to 34 years, 10-year periods from 35 to 74 years, and 75 years and over. Except for certain irregular periods used in connection with school attendance, these age periods represent the full detail that was tabulated for counties and incorporated places having 2,500 inhabitants or more. In Volume II of the Reports on Population (and in the subject-bulletin relating to age) the population of the United States is classified by single years of age up to 100, and age is presented by 5-year periods running up to 100 for the States and the larger cities.

87769°-32-2

The age classification is presented for the United States, by sex, in Table 7.

Population of voting age.—Table 8 shows the population of the United States 21 years of age and over, classified by color, nativity, and sex, for 1930 and 1920. The foreign-born white are also classified by citizenship. "Age unknown" is included in the total for 21 years old and over, since most persons for whom age is not reported are adults. The figures in this table represent what may be termed the potential voting population, that is, the number of persons entitled to vote on the basis of age alone, without regard to other conditions which may be imposed by the laws of the various States.

School attendance.—The school attendance tabulation is based on the replies to the enumerators' inquiry as to whether the person had attended school or college of any kind since September 1, 1929. Since the inquiry was made for the most part in April, 1930, the returns should include all persons who had attended school for any part of the school year 1929–30. The whole number will therefore include some persons who attended school, perhaps for a short time only, in the fall of 1929 and who were not attending school at the time of the enumeration.

The figures for the United States are summarized, by age, for 1930 and 1920, in Table 10.

TABLE 10.-School Attendance for the Population of the United States, by Sex and Age: 1930 and 1920

| 21 years and over | | 1, 034, 782 | | | 344, 789 | | |

The returns indicate an increased percentage of the population attending school in all of the various age groups shown in the table, though the increase is most marked in the higher age groups. According to the returns, the number of persons 21 years old and over attending school increased from 344,789 in 1920 to 1,034,782 in 1930. This group is made up partly of young men and women attending college and partly of employed persons attending night schools. There are some indications that school attendance was more completely reported for this group in 1930 than in 1920, though even when all due allowance is made for this possibility, the increases are very marked, the United States total for 1930 being three times the 1920 figure.

Illiteracy.—The Census Bureau defines as illiterate any person 10 years of age or over who is not able to read and write, either in English or in some other language. The classification is based on the answers given to the enumerator in response to the question "Whether able to read and write."⁵ No specific test of ability to read and write was prescribed, but the enumerators were instructed *not* to return the answer "Yes" (which would classify the person as literate) simply because a person was able to write his or her name.

The statistics of illiteracy are summarized for the United States in Table 11.

[Figures for certain age groups, and for urban and rural areas, in Table 24; for divisions and States in Table 50; and for cities of 100,000 or more in Table 65]

A comparison of the percentages of illiteracy shown, respectively, for persons 10 to 20 years old and for persons 21 years old and over indicates that illiteracy is found, for the most part, among the older classes in the population. This is brought out even more effectively by the figures presented in Table 24 for the population classified by color, nativity, and parentage.

Marital condition.—The classification as to marital condition—that is, whether single, married, widowed, or divorced—is presented for the population 15 years of age and over in Table 12.

ale no elemente al esta de la seconda

⁴ In recent prior censuses two questions were asked, namely, "Whether able to read," and "Whether able to write," and illiteracy was defined as inability to write, "regardless of ability to read." As a matter of fact, the figures presented in most of the tables in the raports of the 1920 census, for example, represent persons not able both to read and to write since every person tabulated as able to write was also counted as able to read. The earlier statistics are therefore strictly comparable with the 1930 figures obtained through the use of the consolidated question.

Foreign white stock by country of origin.-The foreign white stock, as defined by the Census Bureau, is composed of two distinct elements, the foreign-born white and the native white of foreign or mixed parentage. The foreign-born white are classified according to country of birth; the native white of foreign or mixed parentage are classified according to country of birth of father, except where the father is native and the mother foreign born, and then according to country of birth of mother. All classifications of the 1930 population according to country of origin, so far as they relate to European stock, are based on the present political boundaries of European countries. Comparative figures are presented for the foreign born only, because the 1920 figures for natives of foreign parentage were classified according to pre-war rather than postwar geography, with the result that for many countries the data are not comparable with those tabulated for 1930.

The total number of persons making up the foreign white stock in the population of the United States is shown for 1930 and 1920 in Table 13. Statistics of the foreign white stock by country of origin are presented in Table 26.

Country of birth of the foreign-born white.—A summary of the data for the foreign-born white population by country of birth is presented in Table 14, with more detailed statistics in Tables 26 to 29. The countries shown in Tables 26 to 29 represent the full list for which the tabulation was made for counties and the smaller cities; additional countries, here included in the group designated "Other countries," will be shown for States and for cities of 25,000 or more in Volume II of the Reports on Population (and in the subjectbulletin on country of birth).

¹ Adjusted figures. The foreign-born white population as classified in 1920 included 457,360 persons (estimated) who would have been counted as Mexican in 1930. To obtain the adjusted figures these have been subtracted from the 1920 foreign-born white population as reported. ³ Estimated number of persons of Mexican birth returned in 1920 who would have been counted as foreign-born white even under the 1930 rules for classification.

Gainful workers by industry groups.—In order to provide some statistics of gainful workers at the earliest possible date, a condensed tabulation by industry groups was made. The results of this tabulation, which must be regarded as in some measure preliminary, are presented in detail for the United States in Tables 30 and 31, and in briefer form by States in Tables 55 and 56.⁶

The whole number of gainful workers in the United States, without regard to occupation or industry, is an item of considerable importance. The figures are summarized for the censuses from 1900 to 1930, inclusive, in Table 15. It may be noted that the figures represent all persons who usually work at a gainful occupation and include such persons temporarily unemployed at the time the census was taken.

⁶ Since it was not possible to make the usual check-up on the accuracy of the returns in the preliminary tabulation, by reason of the lack of detail as to age, etc., some changes appear; particularly in the sex classification, in the number of gainful workers as finally established in the occupation bulletins and the occupation volumes---Volumes IV and V of the Reports on Population.

TABLE 15.-GAINFUL WORKERS 10 YEARS OLD AND OVER IN THE UNITED STATES, BY SEX: 1900 TO 1930

The classification of gainful workers by *industry* groups which is presented in this summary differs in many respects from the classification by occupation which is presented in the occupation bulletins and in the final reports on occupations. Since this industry classification is a new one, it is not possible to make any very close comparisons with 1920 data, except for the agricultural group, which is practically the same in the two classifications. In this industrial classification all persons whose services are employed in a given industry are classified in that industry. In the occupational classification, on the other hand, all clerical workers are classified in a group by themselves, without regard to the industry in which they work; and certain other important occupations are likewise placed as a whole in that industry or general group where they are usually, or most frequently, found.

The number of gainful workers in the main industry groups, as shown by the industry classification, is presented by sex in Table 16.

TABLE 16.—GAINFUL WORKERS IN THE MAIN INDUSTRY GROUPS, BY SEX, FOR THE UNITED STATES: 1930

¹ Adjusted figures for the white population for 1920 are presented in Tables 2 and 3, and explained in the accompanying text. These figures should be used when the interest is primarily in a comparison between the 1930 and 1920 figures. For the same purpose, the 1920 figures for "Other races" may likewise be adjusted by adding the number of Maxicans estimated for 1920, namely, 700,541, making the adjusted total 1, 127, 115.

¹ Includes Mexican, Indian, Chinese, Japanese, etc.; see Table 35 for figures by States. ² The white population in 1920 included 700, 541 persons (estimated) who would have been counted as Mexican in 1930. In the adjusted figures these have been subtracted from the 1920 white population as reported.

DIVISIONS AND STATES

TABLE 33.—NATIVE WHITE POPULATION IN THE MAIN PARENTAGE CLASSES, BY DIVISIONS AND STATES: 1930 AND 1920

These figures are given in detail by nativity and parentage mainly for use in interpreting the 1920 adjusted figures for the white population, as presented in Tables 82, 33, and 34. The method of making the estimates is explained in the text on page 7;
 Comprises in 1930 the following races: Filipino, 45,208; Hindu, 8,130; Korean, 1,860; Hawaiian, 660; Malay, 96; Siamese, 18; Samoan, 6.
