Boundaries of statistical areas.—The boroughs of New York City have been divided into about 3,400 permanent units called tracts (or sanitary districts). These tracts have been combined into 64 groups termed statistical areas (or borough sections). It is believed that the census data for these areas will be more significant than would be the data for assembly districts, which are subject to rather frequent change. The boundaries of the statistical areas are indicated below, beginning in each case at the northwest corner of the area, and giving first the northern boundary, then the eastern, then the southern, and finally the western.
