Per cent which population born in other States formed of total native population living in each State: 1930.....	137	23. Native Negro population of each division and State, by division and State of birth: 1930.....	163
Distribution of total population of each State as born in State of residence, in other States, or in foreign countries: 1930.....	138	24. Native white population of native parentage in each division and State, by division and State of birth: 1930.....	168
Distribution of population born in each State as living in State of birth or in other States: 1930.....	138	25. Native white population of foreign or mixed parentage in each division and State, by division and State of birth: 1930.....	172
<b>TABLES</b>			
<b>UNITED STATES</b>			
1. Number and per cent native and foreign born in the total population, with classification of native according to whether born in State of residence or elsewhere, for the United States: 1850 to 1930.....	139	26. Native male population in each division and State, by division and State of birth: 1930.....	176
2. Native population born east and living west of the Mississippi River, or vice versa: 1870 to 1930.....	139	27. Native female population in each division and State, by division and State of birth: 1930.....	180
3. Native population born in the North and living in the South, or vice versa: 1870 to 1930.....	139	<b>URBAN AND RURAL</b>	
4. Summary of data indicating results of migration of the native population east and west, and north and south, by color and nativity: 1930 and 1920.....	140	28. Number and per cent native and foreign born in the total urban, rural-farm, and rural-nonfarm population of the United States, with classification as to whether born in State of residence or elsewhere: 1930.....	184
<b>DIVISIONS AND STATES</b>			
5. Per cent distribution by division of birth, for the native population living in each division: 1930 and 1920....	140	29. Native urban, rural-farm, and rural-nonfarm population, by division of birth and division of residence, with gain or loss through interdivisional migration: 1930.....	184
6. Per cent distribution by division of residence, for the population born in each division: 1930 and 1920....	140	30. Native urban and rural population, by State of birth and State of residence, with gain or loss through interstate migration: 1930.....	185
7. Native population by division of birth and division of residence, with net gain or loss through interdivisional migration: 1870 to 1930.....	141	31. Native rural-farm and rural-nonfarm population, by State of birth and State of residence, with gain or loss through interstate migration: 1930.....	186
8. Total population distributed as born in division of residence, in other divisions, or in foreign countries, by divisions, 1930, with percentages, 1900 to 1930....	142	32. Native urban population in each division and State, by division and State of birth: 1930.....	187
9. White and Negro population distributed as born in division of residence, in other divisions, or in foreign countries, by divisions: 1930.....	142	33. Native rural-farm population in each division and State, by division and State of birth: 1930.....	191
10. Native population, white and Negro, by division of birth and division of residence, 1930, with gain or loss through interdivisional migration, 1930, 1920, and 1910.....	142	34. Native rural-nonfarm population in each division and State, by division and State of birth: 1930.....	195
11. Native white population of native parentage and of foreign or mixed parentage, by division of birth and division of residence, 1930, with gain or loss through interdivisional migration, 1930, 1920, and 1910.....	143	<b>PRINCIPAL CITIES</b>	
12. Native population, by sex, by division of birth and division of residence, with gain or loss through interdivisional migration: 1930.....	143	35. Total population distributed as born in State of residence, in other States, or in foreign countries, for cities of 50,000 or more, 1930, with percentages, 1910 to 1930.....	199
13. Per cent distribution by division of birth, for the native population living in each State: 1930 and 1920....	144	36. Negro population distributed as born in State of residence, in other States, or in foreign countries, for cities of 50,000 or more having at least 5,000 Negroes, 1930, with percentages for 1930, 1920, and 1910....	202
14. Per cent distribution by division of residence, for the population born in each State: 1930 and 1920....	145	37. Native population by division and State of birth, for cities of 50,000 or more: 1930.....	204
15. Total population distributed as born in State of residence, in other States, or in foreign countries, by States, 1930, with percentages, 1900 to 1930.....	146	38. Native Negro population by State of birth, for cities of 50,000 or more having at least 5,000 Negroes: 1930....	216
16. White and Negro population distributed as born in State of residence, in other States, or in foreign countries, by States: 1930.....	147		

## CHAPTER 4.—STATE OF BIRTH OF THE NATIVE POPULATION

### INTRODUCTION

The inquiry as to State of birth has been carried on the Population Schedule at each census beginning with that of 1850. In 1850 and 1860, however, State of birth was returned for the free population only. The statistics here presented relate to the population living in continental United States at the time of the census of 1930, with comparable statistics, so far as available, back to 1850. Corresponding statistics for Alaska, Hawaii, Puerto Rico, the Panama Canal Zone, and the Virgin Islands are presented in condensed form in a volume entitled "Outlying Territories and Possessions."

The returns as to State of birth are valuable mainly for the light they throw upon the movement of the native population from one place to another within the United States. "Native population," as the term is ordinarily used by the Bureau of the Census, comprises all persons born in continental United States or any of the outlying possessions, and persons of native parentage born abroad or at sea and designated, respectively, as "American citizens born abroad," and "American citizens born at sea." Thus the term "native population," when used in the headings of tables presenting statistics by States, does not indicate that the persons are native to (that is, born in) the several States, but merely that they are born in the United States. The natives of individual States are designated in the table headings as "Population born in" the specified States.

For a certain number of persons the enumerators returned the place of birth as "United States," without specifying the State. Persons for whom the place of birth was not returned at all, and for whom the returns give no indication of foreign origin, have also been assumed to be natives of the United States and included in the group designated "United States, State not reported."

In some of the tables the statistics have been limited to persons born in continental United States, with State of birth reported, excluding both those born in the outlying possessions and those for whom the State of birth was not reported.

The fact that each census from 1850 to 1930 has shown that more than one-fifth of the native Americans had migrated from the States of their birth and were living in other States indicates a rather high degree of mobility on the part of the population. In this connection it should be noted that the census figures take account only of those persons who have removed from one State to another and are, on the census date,

living in States other than those in which they were born. The statistics therefore afford no indication of the amount of migration within a given State from rural to urban communities or from one locality to another. Much of the movement from country to city takes place within the boundaries of some one State, while some of the migration from one State to another is merely from one border county or city to another just across the State line. In fact, nearly one-half of the natives of the United States who were enumerated in 1930 outside the States in which they were born were found living in adjoining States.

Furthermore, the census figures do not give any indication of the movement of population from one State to another outside the State of birth. A person who at one or more times has removed from one State to another and has later returned to the State in which he was born is counted in the census tables as a person born in and living in that particular State, just as if he had remained there continuously; and if he has not returned to the State of his birth he is counted in the tables as born in one State and living in another, just as if he had gone directly from the State of birth to the State of present residence.

While the census figures for State of birth form practically the only source of extensive information with regard to interstate movements of population, extreme care should be exercised in the use of these figures as representing or measuring migration. Obviously, the census statistics do not indicate the whole number of persons who have migrated (removed) from the States in which they were born to other States, or to any other specific State, during any given period of time. Some of those who have gone from one State to another, from Vermont to Iowa, for example, have since died; others have returned to the States in which they were born; and still others have gone to other States, or to places outside the boundaries of continental United States. The census figure for the number of persons living in Iowa who were born in Vermont does not, therefore, represent the number of persons who have migrated from Vermont to Iowa, but that number minus those who have died or removed from the State. Again, if 50,000 Negroes had gone from Georgia to Illinois in 1922 and returned to Georgia in 1929, their double migration would have left no record in the census statistics. It is therefore with some hesitancy that the term "migration" is used at all in the headings of the tables presented herewith; for what the census figures show is not the extent of interstate

migration (that is, the number of persons who go from one State to another) but the net, cumulative results of such migration in combination with mortality.

**Migration east and west of the Mississippi River, and between the North and the South.**—Statistics indicating some of the results of the migration of the native population between the sections of the country lying east and west, respectively, of the Mississippi River are presented in Tables 2 and 4. The "Net gain of the West," which is shown in Table 4, is obtained by subtracting from the number of native persons reported as born east of the Mississippi River and living west of it (5,145,922) the number born west of the river and living east of it (1,648,832).

The results of the exchange of population between the North and South are likewise presented in Tables 3 and 4. There has been, of course, a considerable amount of migration from both the North and the South to the West; that is, to the States comprising the Mountain and Pacific divisions. It is believed, however, that the main currents of the movement of the population northward and southward are best indicated by the figures as presented in Tables 3 and 4.

**Gain or loss through interdivisional or interstate migration.**—The net gain or loss through interdivisional migration (Tables 7 to 12) and through interstate migration (Tables 17 to 19) represents the difference on the census date between the total number of surviving native migrants out of the specified division or State and the total number of surviving native migrants into the specified division or State. Some of these migrants are the survivors of groups who departed from, or arrived in, the division or State half a century or more before the census was taken. The figures do not, therefore, represent the migration in the sense of the number of persons coming or going during the preceding census decade or during any other specific period of time. The "change in net gain or loss as compared with preceding census," as shown in column I, Table 7, represents the algebraic difference between the net gains or the net losses at the beginning and the end of the decade. Even this figure, however, does not represent exactly the difference between the number of native migrants out of the division and the number of native migrants into the division, since it is affected also by differences in mortality and by the movement of native population between the division in question and foreign countries.

**Urban and rural population.**—Because of the differences between urban and rural population in respect to the proportions of persons born in other States, separate statistics are given in Tables 28 to 34 for the urban population, the rural-farm population, and the rural-nonfarm population. The extent of migration between one and another of these classes of population within the same State can not be shown, of course, as the census returns relate only to movements of population across State lines.

Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that the compactly built portions of towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only cities were counted as urban the classification would be quite inadequate. In 1920 and 1910 all towns in these States which had a population of 2,500 or more were classified as urban. This resulted in the inclusion of a considerable number of places that were mainly rural in their general characteristics. In 1930 the special rule for these States has been modified so as to place in the urban classification, in addition to the regularly incorporated cities, only those towns in which there is a village or thickly settled area having more than 2,500 inhabitants, and comprising, either by itself or when combined with other villages in the same town, more than 50 percent of the total population of the town.

One other modification has been made in the definition of urban population for use in connection with the 1930 census. This modification extends the definition so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more, and a population density of 1,000 or more per square mile.

**Rural-farm and rural-nonfarm population.**—In addition to the classification of the population as urban and rural, which is based on the size (number of inhabitants) and the political status (municipal incorporation) of the geographic unit in which the persons live, the population, both urban and rural, is further classified as farm and nonfarm, on the basis of a question reading "Does this family live on a farm?"

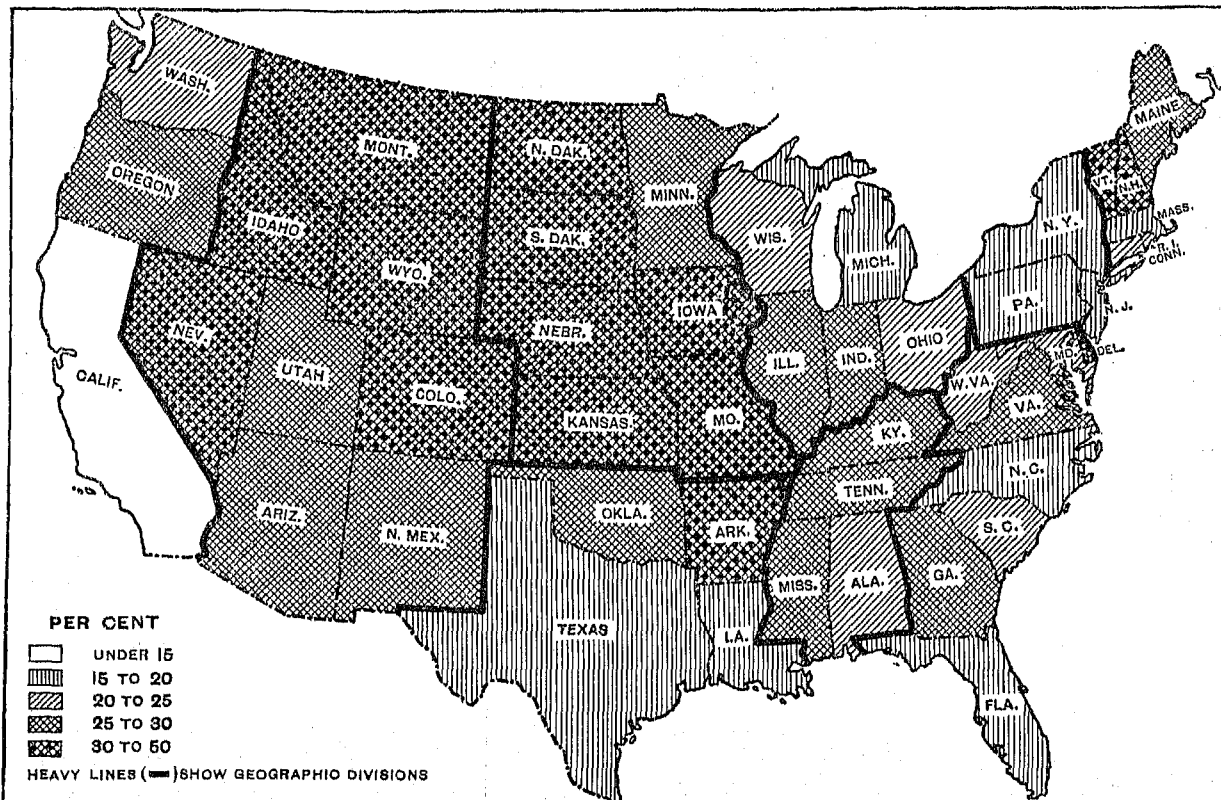

For the farm population living in urban territory, which forms less than 1 per cent of the total farm population, no detailed tabulations were made; hence the presentation of classified data for the farm population is limited to that part living in rural territory and designated as rural-farm population. This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm) and partly because it is felt that in general the farm families living within the corporate limits of cities or other incorporated places are living under conditions at least somewhat urban, rather than under typical farm conditions.

The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

# STATE OF BIRTH

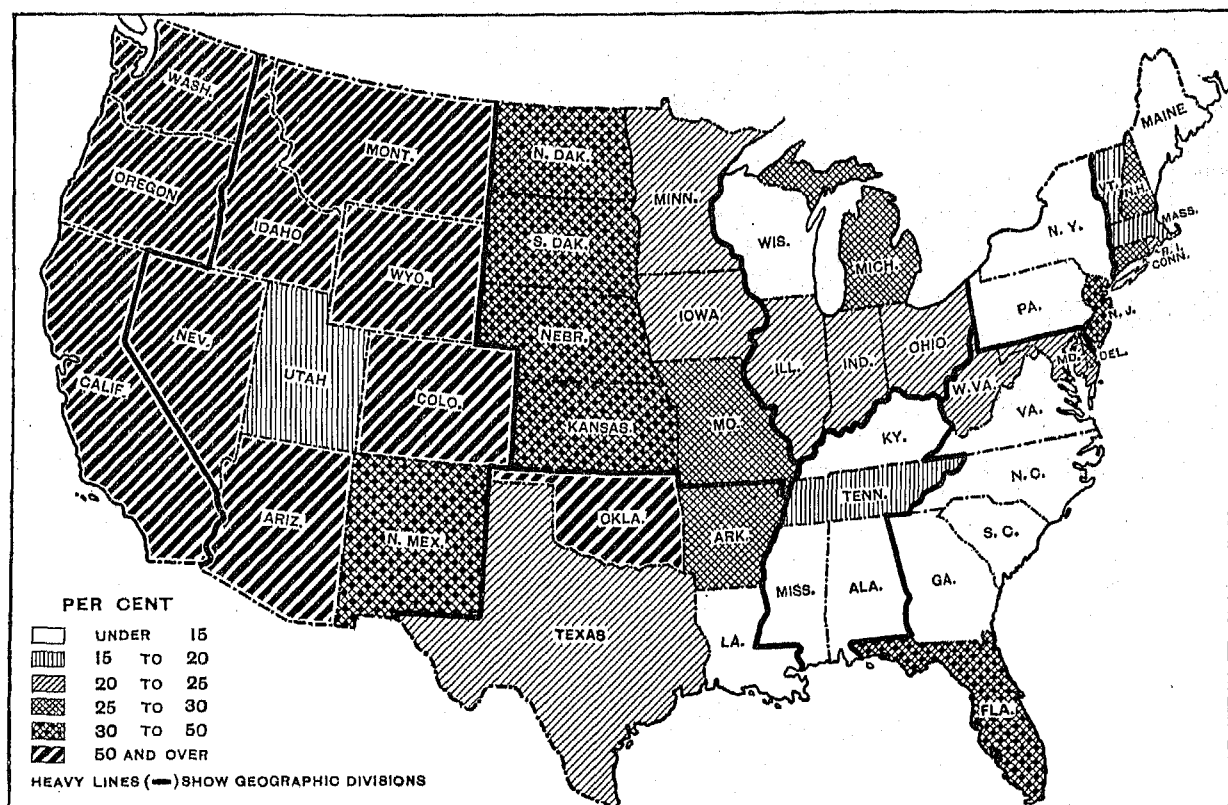

PER CENT WHICH POPULATION BORN IN EACH STATE AND LIVING IN OTHER STATES FORMED OF TOTAL BORN IN EACH STATE: 1930

[District of Columbia, 34 per cent, not shown separately on the map]

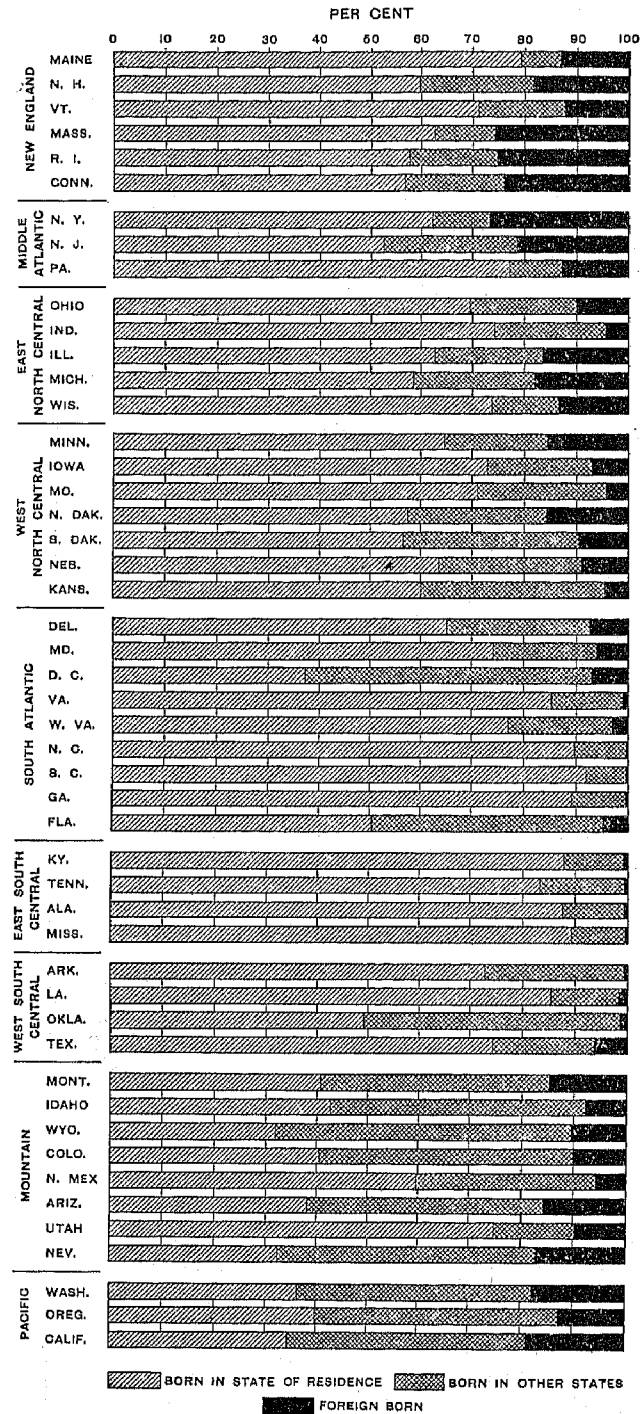

PER CENT WHICH POPULATION BORN IN OTHER STATES FORMED OF TOTAL NATIVE POPULATION LIVING IN EACH STATE: 1930

[District of Columbia, 60 per cent, not shown separately on the map]

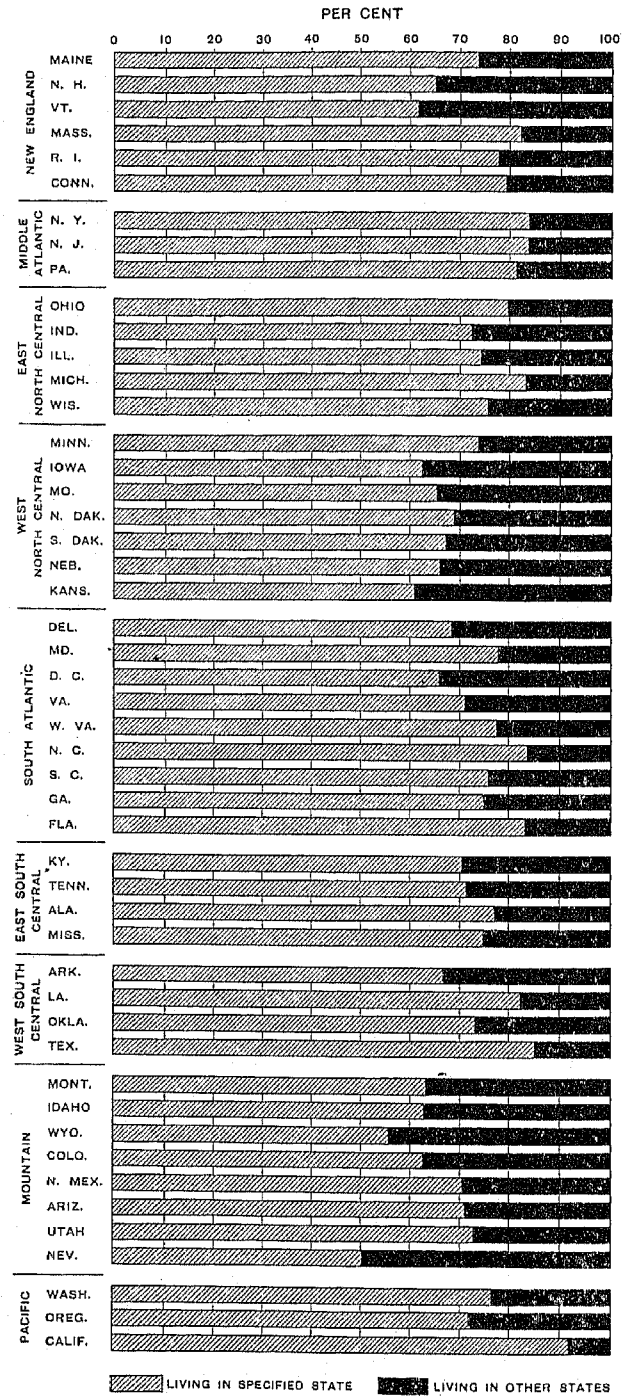

POPULATION

DISTRIBUTION OF TOTAL POPULATION OF EACH STATE AS BORN IN STATE OF RESIDENCE, IN OTHER STATES, OR IN FOREIGN COUNTRIES: 1930

DISTRIBUTION OF POPULATION BORN IN EACH STATE AS LIVING IN STATE OF BIRTH OR IN OTHER STATES: 1930
