9. Year of immigration of the foreign-born white population of the United States, by country of birth, for urban, rural-farm, and rural-nonfarm areas: 1930		21. Year of immigration of foreign-born Negroes, Mexicans, Chinese, and Japanese, for selected cities:	

#### CHAPTER 9-YEAR OF IMMIGRATION OF THE FOREIGN BORN

#### INTRODUCTION

The inquiry as to the year of immigration of the foreign-born population has been made at each census beginning with that of 1910. Similar information was obtained in 1890 and 1900 through a question as to the number of years of residence in the United States, though the tabulation in 1890 was limited to alien (unnaturalized) males 21 years old and over. In 1910 the form of the inquiry on the census schedule was changed so as to obtain the actual calendar year of immigration into the United States. This form of inquiry has been retained in the censuses of 1920 and 1930. The statistics here presented relate to the foreign-born population of continental United States, and are presented by States and for cities of 25,000 or more. The year of immigration was not tabulated by counties nor for cities having less than 25,000 inhabitants. Statistics for Alaska, Hawaii, Puerto Rico, the Panama Canal Zone, and the Virgin Islands of the United States are given in the Fifteenth Census Report on Outlying Territories and Possessions.

The data on year of immigration for the total foreign-born and for the foreign-born white population are summarized in Table 1.

Table 1.—Year of Immigration of the Foreign-born Population of the United States: 1930

The tabulations for year of immigration have always been made for single years covering a period of four, five, or six years preceding the date of the census, and for groups of years for earlier dates. With this form of presentation, direct comparisons with the returns of preceding censuses are of little value. There is, for example, no significance in a comparison between the number of survivors in 1930 of the immigration of the five years 1920 to 1924 with the number of survivors in 1920 of the immigration of 1910 to 1914. Statistics from the censuses of 1920 and 1910

are therefore shown in Table 5, for the complete series of years as originally tabulated, only as a matter of record. In Table 6, however, the statistics from the censuses of 1930, 1920, and 1910 have been so arranged as to give a significant comparison for such groups of years as have been carried through two or more successive censuses. For example, this table shows, for the immigration of the 10 years from 1901 to 1910, the number of survivors in 1910, 1920, and 1930. The total foreign-born population as enumerated in 1900 has been included in this table to complete a comparison through four censuses of the foreign-born population which has survived from the immigration of the nineteenth century. In this table the foreign-born population for whom the year of arrival was not reported ("unknown") has been distributed on the assumption that the proportions arriving during each period of years were the same for the immigrants for whom the year was not reported as for those for whom the information was secured. This distribution, while arbitrary, is necessary for purposes of comparison, on account of the variation from census to census in the number for whom the year of immigration was not reported.

The decrease from one census to the next in the number returned as arriving in each group of years is due primarily to mortality, although it is affected to some extent by the emigration of foreign-born persons. It will be noted that the decrease in the number of persons arriving in 1900 and earlier is more rapid from census to census than the decrease for any other group of years. This is due to the fact that this group includes a large number of persons of advanced age among whom the death rate is high, while the immigrants who arrived after 1900 are for the most part still in middle life.

During the years 1914 to 1919 immigration to the United States was greatly reduced as a result of the World War, and from 1925 to 1930 immigration was restricted by law. Even in the years from 1920 to 1924 the number of immigrants was small as compared with that in any 5-year period between 1901 and 1914.

In 1930 the survivors of the immigration of the 14 years from 1901 to 1914 far outnumbered the survivors of the later immigration from 1915 to 1930. Under the present policy of immigration restriction, the net immigration in each year is not sufficient to replace the mortality in the foreign-born population.

Year of immigration by country of birth.—Statistics of year of immigration by country of birth, which have been tabulated for the first time from the returns of the Fifteenth Census, show clearly the changes which have taken place in 30 years in the nationality of the immigrants coming into the United States. Of the population living in the United States in 1930 who were born in Germany, Sweden, and Wales, more than 50 per cent had arrived in 1900 or earlier, while of the population born in Poland, Hungary, Yugoslavia, Italy, and Greece, less than 20 per cent had arrived in 1900 or earlier. Of the foreign born enumerated in 1930 who arrived in 1900 or earlier, 21.5 per cent were born in Germany, 11.6 per cent in Canada, 7.9 per cent in the Irish Free State, 7.6 per cent in England, and 7.1 per cent in Sweden. The heaviest immigration from Ireland was between 1840 and 1860 and many of the Irish born were already old in 1900 and subject to a high death rate. The German immigration was also early. Immigration from Canada and England was continuous from 1840 to 1890, while from Sweden the largest number of arrivals was between 1880 and

1890, and the average age of the survivors in 1900 must have been many years lower than that of the Irish-born population in that year.

The distribution by year of immigration is shown for the more important countries of birth in Table 2.

Urban, rural-farm, and rural-nonfarm population.—Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, towns (townships) are classified as urban if they have a population of 2,500 or more and certain urban characteristics; and a few large and densely populated townships in other States are likewise classified, even though not formally incorporated as municipalities.

In addition to the classification of the population as urban and rural, the rural population is subdivided into rural-farm and rural-nonfarm, on the basis of the replies to a question reading "Does this family live on a farm?" The rural-farm population includes all persons living on farms in the rural areas. The rural-nonfarm or "village" population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

In general, the tendency of the earlier immigrants was to settle on farms, while that of the recent immigrants is to settle in the cities. Considerable significance therefore attaches to the data on year of immigration as presented in Table 3 for urban, rural-farm, and rural-nonfarm areas.

<sup>1</sup> In 1920 and 1910 most of the persons who would have been classified as "Mexican" in 1930 were returned as white. The number of foreign-born Mexicans thus included has been estimated at 467,300 in 1920 (259,131 males and 198,229 females), and 211,233 in 1910 (129,865 males and 81,367 females), but there is no basis for distributing these estimates by year of immigration.

See footnote on Table 5.
Figures for periods ending with 1910 are "short" by approximately the net immigration between the census date, Apr. 15, and the end of the year. The total net immigration for 1910 was 817,619.
Figures are "short" by approximately the net immigration from June 1 to Dec. 31, 1900. The total net immigration in 1900 was estimated at 320,000.
