CHAPTER 10

—

AGE DISTRIBUTION

## CONTENTS

TEXT	Page		Page
Introduction.....	565	21. Age by single years, by color, nativity, and sex, for the United States: 1930.....	595
Distribution by single years of age.....	565	22. Per cent distribution by single years of age, by color, nativity, and sex, and for the urban, rural-farm, and rural-nonfarm population of the United States: 1930.....	597
Distribution by 5-year age periods.....	566	23. Age by single years, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population of the United States: 1930.....	598
Age distribution by color and nativity.....	567		
Age distribution by sex.....	567		
Median age.....	568		
Divisions and States.....	569		
Urban, rural-farm, and rural-nonfarm population.....	569		
Age by country of origin.....	570		
DIAGRAMS			
Distribution by single years of age, for the total population, by sex: 1930.....	571	24. Age by 5-year periods, by color, nativity, and sex, by divisions and States: 1930 and 1920.....	602
Distribution by age periods, for the total population and for the principal color and nativity classes, by sex: 1930.....	572	25. Per cent distribution by 5-year age periods, by sex, by States: 1880 to 1930.....	660
Distribution by age periods, for the principal color and nativity classes, by sex, for urban, rural-farm, and rural-nonfarm areas: 1930.....	574	25a. Native white children under 5 years old of mixed parentage, by nativity of mother, for urban, rural-farm, and rural-nonfarm areas, by States: 1930.....	668
TABLES			
UNITED STATES			
1. Age by 5-year periods for the United States, 1930, with per cent distribution by age, 1880 to 1930.....	566	26. Age by 5 and 10-year periods for the minor races, by States: 1930.....	669
2. Per cent distribution by age for the population of the United States, by color and nativity: 1930.....	567	27. Age by single years for the total population, by States: 1930.....	671
3. Age by 5-year periods, by sex, for the United States: 1930.....	567	28. Age by single years up to 29, by color, nativity, and sex, and for urban, rural-farm, and rural-nonfarm population, by States: 1930.....	674
4. Median ages by color, nativity, and sex, for the United States: 1930 and 1920.....	568	29. Age by single years from 60 to 79, for the white population, by sex, by States: 1930.....	691
5. Median ages, by color and sex, for the United States: 1790 to 1930.....	568	30. Age by single years from 60 to 79, for the Negro population, by sex, for States having at least 100,000 Negroes: 1930.....	693
6. Age distribution and sex ratios, for the urban, rural-farm, and rural-nonfarm population of the United States: 1930.....	570	31. Age by 5-year periods, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population, by States: 1930 and 1920.....	694
7. Age by 5-year periods, by sex, for the United States: 1850 to 1930.....	576	32. Per cent distribution by 5-year age periods, for the urban, rural-farm, and rural-nonfarm population, by sex, by States: 1930 and 1920.....	718
8. Age by 5-year periods, by color, nativity, and sex, for the United States: 1930 and 1920.....	577		
9. Age by 5-year periods, by color, nativity, and sex, for the United States: 1880 to 1930.....	578	PRINCIPAL CITIES	
10. Per cent distribution by 5-year age periods, by color, nativity, and sex, for the United States: 1880 to 1930.....	581	33. Age by 5-year periods, by color, nativity, and sex, for cities of 500,000 or more: 1930 and 1920.....	724
11. Age by 5-year periods, for the native white population of foreign parentage and of mixed parentage, by sex, for the United States: 1930, 1920, and 1910.....	583	34. Age by single years up to 29, by color, nativity, and sex, for cities of 500,000 or more: 1930.....	742
12. Males per 100 females by 5-year age periods, by color and nativity, for the United States: 1930 and 1920.....	583	35. Age by single years from 60 to 79, for the white population, by sex, for cities of 500,000 or more: 1930.....	748
13. Cumulative age groups, by color, nativity, and sex, for the United States: 1930.....	584	36. Age by single years from 60 to 79, for the Negro population, by sex, for cities of 500,000 or more having at least 50,000 Negroes: 1930.....	748
14. Per cent distribution by cumulative age groups, by color, nativity, and sex, for the United States: 1890 to 1930.....	585	37. Age by 5 and 10-year periods for the minor races, for cities of 100,000 or more: 1930.....	749
15. Age by 5 and 10-year periods for the minor races, by sex, for the United States, urban and rural: 1930.....	586	38. Age by 5-year periods, with single years under 5, by color, nativity, and sex, for cities of 50,000 to 500,000: 1930.....	751
16. Age by 5-year periods, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population of the United States: 1930 and 1920.....	587	39. Age by 5-year periods, by sex, for cities of 25,000 to 50,000: 1930.....	796
17. Per cent distribution by 5-year age periods, by color, nativity, and sex, for the urban, rural-farm, and rural-nonfarm population: 1930 and 1920.....	591	AGE DISTRIBUTION AND COUNTRY OF ORIGIN	
18. Age by single years up to 4, by color, nativity, and sex, for the urban and rural population: 1930 and 1920.....	592	40. Age of the white population of foreign birth or parentage, by sex and country of origin, for the United States: 1930.....	806
19. Age by single years up to 4, by color, nativity, and sex, for the rural-farm and rural-nonfarm population: 1930.....	592	41. Age of the white population of foreign birth or parentage, by sex and country of origin, in urban, rural-farm, and rural-nonfarm areas: 1930.....	808
20. Age by single years, for the total population of the United States, 1880 to 1930, and for the white and Negro population, 1910 to 1930.....	593	42. Age of the white population of foreign birth or parentage, by country of origin, by States: 1930.....	811
		43. Age of the white population of foreign birth or parentage, by country of origin, for cities of 500,000 or more: 1930.....	826

## CHAPTER 10—AGE DISTRIBUTION

### INTRODUCTION

At every census some attempt has been made to distribute the population by age. At the first census in 1790, white males 16 years old and over were shown separately from those under 16. In 1800 and 1810 white males and white females were distributed into five age groups—under 10, 10 to 15, 16 to 25, 26 to 44, and 45 and over. In 1820 the same distribution was maintained, and, in addition, white males 16 and 17 were shown as a separate subgroup. At this census the slave and free colored population were first distributed by age (four groups). In 1830 and 1840 the white population under 20 was shown by 5-year periods, and that 20 years old and over by 10-year periods, while the slave and the free colored population were distributed into six age groups. In 1850 the census returns were made on a new basis, the schedule providing a line for each person, in place of a line for each family; and the exact age of each person was reported. In 1850 and 1860, ages were tabulated for whites, slaves, and free colored in 5-year periods under age 20, with children under 1 shown as a separate group, and in 10-year periods from 20 years to 100 and over. In 1860 the Chinese and the civilized Indians were distributed in the same way. In 1870 the native, foreign-born, native white, foreign-born white, colored, Chinese, and civilized Indian populations were distributed by single years up to 4, then by 5-year periods. In addition, ages 18 and 19 were shown separately as one group, to make it possible to obtain the total of militia age (18 to 44), and the age group 20–24 was divided into age 20, and ages 21–24, thus making it possible for the first time to obtain the population 21 years old and over. In 1880, and at each subsequent census, the population, classified by color, nativity, and sex, has been tabulated by single years of age, though by reason of the limitations of space, publication of the figures for areas smaller than the United States as a whole (States, cities, etc.) has been limited rather largely to 5-year periods or broader age groups. Beginning with 1890, the same tabulation by age and sex was made for the native white population classified according to parentage. In 1930, for the first time, age data by single years, by color, nativity, parentage, and sex, are published for the urban, rural-farm, and rural-non-farm population of the United States, and age statistics by 5-year periods are published for these three areas or types of population in each State.

For various uses to which census material is put, statistics in regard to age are of great importance. Mortality rates attain their full value only when the

population can be distributed according to sex and age. Satisfactory birth rates and marriage rates can be computed only when statistics with regard to age, sex, and marital condition are available. The voting strength depends upon the age distribution, and the military strength on the distribution according to age and sex. The differences in the age distribution of the native and the foreign-born population are important in their bearing on the economic, social, and political effects of immigration. Statistics of school attendance and illiteracy would have much less value without the distribution by age. In fact, there are very few questions in vital statistics or sociology which can not be studied with greater profit when the age distribution of the population is taken into consideration.

The age classification is based on age at last birthday, that is, age in completed years.

The statistics of age distribution for continental United States are given in detail in this chapter by States and for cities of 25,000 or more. Age statistics for counties and smaller cities are published in Volume III of the Fifteenth Census Reports on Population, and in the Second Series State Bulletins which are consolidated to make up that volume. For the outlying possessions enumerated in the Fifteenth Census, the age data are presented in a series of bulletins giving population statistics for these areas and in the special report entitled "Outlying Territories and Possessions."

**Distribution by single years of age.**—In a population unaffected by immigration, the age distribution would be determined wholly by births and deaths. Such a population would be continually replenished by births and depleted by deaths, and the number of survivors at any age would normally be less than the number at any younger age, although some irregularities might result from unusual increases or decreases in the number of births from year to year, or from an excessive number of deaths among the persons born in any particular year or group of years. In the United States the native white population of native parentage most nearly approximates the age distribution of an isolated community. The extreme departure from the conditions of an isolated community is a foreign-born population which is replenished only by immigration. Since a large proportion of migrants are in the early years of adult life, in a foreign-born population the number of persons at any given age below a definite mode will tend to be greater than the number at any younger age, while above the mode the conditions will be reversed.

The age distribution of the population of the United States is that of a combination of native and foreign-born elements. Since approximately seven-eighths of the population is native, the distribution resembles that of a native population, but in the middle age periods the increase in the number of the foreign born at successive ages tends to balance the deaths among the native population. This condition results in a population with an age distribution abnormally weighted in the middle-age period, which includes not only the productive but the reproductive ages. This abnormality of age distribution has been further accentuated by the rapid fall in the birth rate in the past 30 years or more. Since there were relatively more births a generation ago than there are in the present generation, the number of survivors of those births is relatively high as compared with the expected survival from the births of the present generation. Since the middle years of life are not only the reproductive years but also years of relatively low death rates, the age distribution of the present population of the United States is favorable to a high birth rate and a low death rate. With the cessation of immigration the foreign-born population will be 10 years older in each decade and will soon pass the reproductive years and reach the years of high death rate. The inevitable result will be an increase in the (crude) death rate and a further decline in the birth rate. With no change in fertility or in health conditions, the aging of the population will in another generation bring about a balance of births and deaths, and in the absence of further immigration, a stationary or declining population.

Apart from the abnormalities in age distribution due to immigration, there are some irregularities in the age distribution by single years (see Table 21) which are due to errors in the census returns. Ages may be misstated, either intentionally or through ignorance of the true age on the part of the person giving the information. Where the age is not accurately known, there is a tendency to report it as a multiple of 2 or 5, or even, in the case of ages above 20, as a multiple of 10. There is also a tendency to concentrate on age 21 for men. In general, the degree of inaccuracy is greater for adults than for children. The errors at all ages are greatest for those classes of the population in which the proportion of illiterates is greatest. The returns also exaggerate the number of centenarians, particularly among Negroes and Indians.

At every census the enumeration of children under 5, and particularly of infants under 1, has been incomplete. This is evident from the fact that the number of children in the age group 10 to 14, in six out of the last eight censuses, was greater than the number in the age group under 5 years old at the census taken 10 years earlier. At the censuses of 1870 and 1910 the reverse was true, but in neither case was the difference great enough to allow for the deaths which must have

occurred in the 10-year period. In the Negro population, it is probable that the underenumeration of children under 5 has usually amounted to 10 per cent or more. There is also a definite shortage in the enumeration of young children classed as native white of native parentage. On the other hand, the enumeration of native white children of foreign parentage appears to be practically complete. The underenumeration of children is not peculiar to the United States census. It has been noted by a comparison of ages as reported by the British census and in the census returns from some of the countries of continental Europe.

Tables 20 and 21, which relate to the United States as a whole, present the age distribution by single years up to 100, and Table 27 presents a similar distribution for the total population of each State. In Tables 28 and 34, the single-year distribution for persons under 30 is given for States and for cities of 500,000 or more. In Tables 29, 30, 35, and 36 the age distribution by single years is presented for persons 60 to 79 years of age. These tables, which are a new feature in the 1930 reports, are presented for the convenience of those who are studying the problem of old-age dependency.

**Distribution by 5-year age periods.**—In order to neutralize the effect of the concentration of multiples of 2 and 5, as well as to economize on space (or to make possible the presentation of age statistics for many classes of population in many areas), the age statistics are presented in most of the tables by 5-year periods. For many purposes these statistics are more useful, as well as more compact, because they avoid some of the irregularities of the single-year series and at the same time present the age distribution with a sufficient degree of detail to serve most purposes.

The distribution of the 1930 population of the United States by 5-year age periods is shown in Table 1, with percentages representing the distribution at each census from 1880 to 1930.

TABLE 1.—AGE BY 5-YEAR PERIODS FOR THE UNITED STATES, 1930, WITH PER CENT DISTRIBUTION BY AGE, 1880 TO 1930

AGE	Population, 1930	PER CENT DISTRIBUTION					
		1930	1920	1910	1900	1890	1880

85 years and over.....	0.2	0.2	0.2	0.1	0.1	0.6	0.2
Unknown.....	0.1	0.1	0.1	-----	-----	0.1	0.1

The age distribution of the main color and nativity classes is shown graphically by sex in the eight diagrams on pages 572 and 573. The diagram representing the native white of native parentage is the most symmetrical and represents most nearly the age distribution in a stationary population. That for the foreign born not only shows the peculiarities of age characteristics of a group which is replenished only by immigration, but it shows also the predominance of males in the immigration of the years before 1914. The diagram for the native white of foreign parentage shows clearly the effect of successive variations in the volume of immigration. With the continuance of immigration restriction, the age distribution of this group will in time come to resemble that of the foreign born, but with the modal group from 25 to 30 years younger. The diagram for the native white of mixed parentage is more regular in form than that for the native born of foreign parentage. The apex is narrow because in the earlier years of heavy immigration there were comparatively few marriages between foreign born and natives. Such marriages probably did not become frequent until the native children of foreign parents reached maturity. The restriction of immigration has also begun to modify the age distribution of this class, but the modal age group is 35 years younger than the modal age group of the foreign born and 10 years younger than the modal group of the native white of foreign parentage.

The age distribution of Negroes, if ages were accurately reported, would approximate that of the native

whites of native parentage, except that the younger groups would be relatively larger and the older groups smaller, because the life span of Negroes is shorter than that of whites. The age group under 5, as compared with that of 5 to 9, shows roughly the extent of the underenumeration of young Negro children, while the irregularities in older age groups are the result of the tendency to report ages in multiples of 10, 5, and 2. The irregularity of the diagram as between males and females is probably the result of understatement of age by Negro females.

Among the Indians (see Table 15) the proportion of children is larger and that of persons in the middle age groups is smaller than in the case of either the native whites or the Negroes. The chief, and perhaps the sole, explanation of this fact is to be found in the effect of intermixture of white and Indian blood. The children born of marriages between whites and Indians are all classified as Indians, while only one of the parents in each such marriage is thus classified. Since these intermarriages are becoming increasingly frequent, the number of persons of Indian-white mixed blood is increasing and is relatively greater among children than among older persons. The inclusion of these children with the Indian population, together with the exclusion of one parent in each case, increases the proportion of children and diminishes the proportion of adults in the Indian population.

Age distribution by sex.—The distribution of the 1930 population of the United States by sex and 5-year age periods is shown in Table 3, which gives also the sex ratio (the number of males per 100 females) for each age period.

TABLE 3.—AGE BY 5-YEAR PERIODS, BY SEX, FOR THE UNITED STATES: 1930

AGE	Total population	Male	Female	PER CENT DISTRIBUTION		Males per 100 females
				Male	Female	
All ages.....	122,775,046	62,137,080	60,637,966	100.0	100.0	102.5
Under 5 years.....	11,444,390	5,806,174	5,638,216	0.3	9.3	103.0
5 to 9 years.....	12,007,009	6,381,108	6,226,501	10.3	10.3	102.5
10 to 14 years.....	12,004,877	6,068,777	5,936,100	9.8	9.8	102.2
15 to 19 years.....	11,582,115	5,767,826	5,704,290	9.3	9.0	99.4
20 to 24 years.....	10,870,378	5,336,815	5,533,563	8.6	9.1	96.4
25 to 29 years.....	9,833,008	4,860,180	4,973,428	7.8	8.2	97.7
30 to 34 years.....	9,120,421	4,561,786	4,558,635	7.3	7.5	100.1
35 to 39 years.....	9,208,045	4,679,860	4,528,785	7.5	7.5	103.3
40 to 44 years.....	7,990,195	4,136,459	3,853,736	6.7	6.4	107.3
45 to 49 years.....	7,042,270	3,671,924	3,370,345	5.9	5.0	108.9
50 to 54 years.....	5,975,804	3,131,645	2,844,159	5.0	4.7	110.1
55 to 59 years.....	4,645,677	2,425,992	2,219,685	3.9	3.7	109.3

Separate figures are given for each sex in most of the detailed tables in this chapter. In addition, the age distribution for each sex in the total population and in each class of the population is shown by 5-year periods in the diagrams on pages 572 and 573. In

order to permit ready comparison of the proportions of males and females in each age period, the percentages shown for the sexes in connection with each diagram are based on the total population in the group or class to which the diagram relates, and not on the totals for the sexes separately. For example, the diagram relating to the native white population of native parentage shows that men in the age period 25 to 29 formed 3.9 per cent of the total native white population of native parentage, of both sexes, whereas Table 8 shows that men in this age period formed 7.7 per cent of the total native white males of native parentage.

Differences in age distribution as between males and females in the total population of the country are to be expected, by reason of the fact that the foreign born, whose age distribution is abnormal, include many more males than females.

This condition explains in part the fact that in the total population a larger proportion of the males than of the females are in the ages 35 to 69, inclusive, while the proportion under 35 years of age is greater among females than among males. (See Table 7.)

This difference in age distribution as between the sexes in the total population, however, is not wholly attributable to the presence of the foreign born, there being also considerable differences among the native classes. Starting with a moderate excess of males over females in the three age periods under 15 years, the returns for the native whites of native parentage show a practical equality of the sexes in the 15 to 19 year period, an excess of females in the 20 to 29 year periods, an excess of males in the 30 to 74 year periods, and an excess of females in the periods above 74 years. Among the native whites of foreign parentage and of mixed parentage, however, the females outnumber the males in most of the age groups, especially in the foreign-parentage class. (See Table 8.)

In general, the age distribution for males is more symmetrical and appears to be more accurate than that for females. In each native population class the number of females in the age group 20 to 24 years is larger than the expected survivorship from the age group 10 to 14 years as returned in 1920. This excess is undoubtedly due to understatement of age, and is not at all peculiar to this census. Prior censuses and the censuses of other countries show similar age discrepancies that can only be accounted for by erroneous returns. The knowledge that these inaccuracies exist does not, however, destroy the value of the returns. On the whole, the returns present a reasonably accurate age distribution, and when greater accuracy is necessary, it is always possible to make adjustments for obvious inaccuracies.

**Median age.**—The median may be defined in a general way as that item which stands at the midpoint of a series arranged in order of size or value. The me-

dian age in a group of persons would be, therefore, the age of the person standing in the middle of the series if the whole number of persons were arranged in order of age. Or the median age may be defined as that age which divides the population into two equal groups, one-half being older, and one-half younger, than the median. Table 4 shows the median age of the population of the United States in 1930 and 1920 by color, nativity, and sex, disregarding persons of unknown age.

TABLE 4.—MEDIAN AGES BY COLOR, NATIVITY, AND SEX, FOR THE UNITED STATES: 1930 AND 1920

COLOR AND NATIVITY	TOTAL		MALE		FEMALE	
	1930	1920	1930	1920	1930	1920
All classes.....	28.4	25.2	26.7	25.8	26.1	24.7
White.....	23.9	25.9	27.2	26.1	23.7	25.1
Native white.....	23.8	25.4	23.7	22.4	23.9	22.3
Native parentage.....	23.3	22.7	23.4	22.8	23.3	22.5
Foreign parentage.....	25.2	21.8	24.9	21.4	25.4	21.7
Mixed parentage.....	24.9	21.8	24.3	21.3	25.5	22.2
Foreign-born white.....	44.4	40.0	44.6	40.1	44.0	39.9
Negro.....	23.4	22.3	23.7	22.8	23.2	22.0
Mexican.....	20.2	19.6	21.6	20.4	18.7	18.7
Indian.....	19.6	19.7	20.0	20.4	19.1	19.0
Chinese.....	32.3	40.2	35.1	42.7	17.3	19.4
Japanese.....	24.5	30.2	29.7	34.1	15.9	24.0

The difference between the median ages of the two sexes for all classes combined is due in part to the fact that among the foreign born, whose median age is much higher than that of the natives, the males are considerably in excess of the females.

The median ages of the total population and of the white population show uninterrupted increases since 1820. These increases have been due to two causes; first, an increase in average length of life; second, a reduction in the birth rate, which has resulted in a decrease in the proportion of young persons in the total population. Table 5 shows for the total population and for the white and colored population separately, disregarding persons of unknown age, the median age at each census from 1790 to 1930.

TABLE 5.—MEDIAN AGES, BY COLOR AND SEX, FOR THE UNITED STATES: 1790 TO 1930

CENSUS YEAR	ALL CLASSES			WHITE			NEGRO AND OTHER RACES <sup>1</sup>		
	Both sexes	Male	Female	Both sexes	Male	Female	Both sexes	Male	Female

<sup>1</sup> For 1930 includes Mexicans, who were classified as white at earlier censuses.

**Divisions and States.**—Very considerable differences exist among the nine geographic divisions of the country and among the individual States in regard to the age distribution of the total population and of specific classes of the population. The differences in regard to the total population are in part attributable to variations in the composition according to color, nativity, and parentage. Thus a large proportion foreign born tends to produce a relatively large proportion of adults in the total population.

The differences among the divisions and States with regard to the age distribution of specific classes of the population are due to various factors. Interstate migration has a great influence upon age distribution. Adults, particularly the younger adults, are relatively much more numerous among migrants than in the total population, and therefore a division or State which has lost extensively through interstate migration is likely to have a smaller proportion of persons in the younger and middle ages of adult life in its native population than one which has gained by such migration. The distribution of ages in the urban population is usually decidedly different from that in the rural population, partly by reason of migration from country to city, and consequently the age constitution of the total population of a given class in a State or division is much affected by the proportions urban and rural. Again, the age composition of the several native classes is affected by differences in birth rates and in death rates and by differences in the extent to which changes have taken place in these rates from one time to another. Finally, the age distribution of the foreign born and of the natives of foreign or mixed parentage in any given State or section of the country depends in considerable measure upon the period of time during which immigration to that State or section was most rapid.

**Urban, rural-farm, and rural-nonfarm population.**—Since there are important differences between urban and rural areas and between the farm and nonfarm population in rural areas, separate figures are given in considerable detail for these three classes or subdivisions of the population. Urban population, as defined by the Census Bureau, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more, the remainder being classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that the compactly built portions of the towns (townships) are not separately incorporated or politically distinct in any way from the rural territory within the same town; nor is it the usual practice to incorporate even the larger places as cities until they attain a population in excess of 10,000. Consequently, if only the cities were counted as urban the classification would be quite inadequate. In 1920

and 1910 all towns in these three States which had a population of 2,500 or more were classified as urban. This resulted in the inclusion of a considerable number of places that were mainly rural in their general characteristics. In 1930 the special rule for these New England States has been modified so as to place in the urban classification, in addition to the regularly incorporated cities, only those towns in which there is a village or thickly settled area having more than 2,500 inhabitants and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town.

One other modification has been made in the definition of urban population for use in connection with the 1930 census. This modification extends the classification so as to include townships and other political subdivisions (not incorporated as municipalities, nor containing any area so incorporated) which had a total population of 10,000 or more and a population density of 1,000 or more per square mile.

Since it has been found impracticable to go back and readjust to the new basis the 1920 urban and rural figures as they were tabulated by color, sex, age, etc., they are presented in all tables as established in 1920.

In addition to the classification of the population as urban and rural, which is based on the size and political status (municipal incorporation) of the geographic unit in which the persons live, the population, both urban and rural, is further classified as farm and nonfarm on the basis of a question reading "Does this family live on a farm?"

For the farm population living in urban territory, which forms less than 1 per cent of the total farm population, no detailed tabulations were made; hence the presentation of classified data for the farm population is limited to that part living in rural territory and designated as rural-farm population. This is done partly to simplify the classification (dividing the total population into three groups, namely, urban, rural-farm, and rural-nonfarm) and partly because it is felt that in general the farm families living within the corporate limits of cities or other incorporated places are living under conditions at least somewhat urban, rather than under typical farm conditions.

The rural-nonfarm, or "village," population is made up largely of persons living in small towns or villages, both incorporated and unincorporated, though in many areas there are considerable numbers of families living in the open country but not on farms.

The per cent distribution by 5-year age periods of the urban, rural-farm, and rural-nonfarm population is presented in Table 6, which shows also the number of males per 100 females for the three areas. The population figures on which these percentages and ratios are based appear in Table 16.

TABLE 6.—AGE DISTRIBUTION AND SEX RATIOS, FOR THE URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION OF THE UNITED STATES: 1930  
[Per cent not shown where less than 0.1]

AGE	PER CENT DISTRIBUTION BY AGE			MALES PER 100 FEMALES

Unknown.....	0.1	-----	0.1	119.9	137.2	126.7

The pronounced differences between urban and rural communities and between rural-farm and rural-non-farm communities in regard to the age distribution of their population are in part attributable to differences in the color or race, nativity, and parentage composition of their population, but there are also pronounced differences between them in regard to the age composition of any one population class. The opportunities to be found in urban communities have attracted large numbers of persons in the more active ages, and, because of the effect of this cityward migration on age distribution, it is impossible to draw directly from the statistics any trustworthy conclusions as to the relative fecundity or the relative longevity of the native whites of native parentage in urban and rural areas.

The age distribution of the foreign-born whites and of the native whites of foreign or mixed parentage in

urban and in rural areas, respectively, has been influenced to a very considerable extent by the period—whether recent or remote—during which immigration into these areas has been most rapid. A large proportion of the earlier immigration went to the rural districts, but most of the recent immigration has gone to the cities.

The age distribution of the Negroes in urban and in rural areas is affected by the very considerable country-to-city migration of persons of this race in the active age periods, and probably also by differences in birth and death rates between the two classes of communities.

With respect to the sex distribution, it will be seen that females, particularly in the adult ages, form a much larger proportion of the population in the urban areas than in the rural areas, notwithstanding the fact that the foreign-born whites—a class in which males are considerably in the majority—are centered mainly in cities.

Age by country of origin.—The foreign-born white population has been classified for 1930 by age in combination with country of birth, and the native white population of foreign or mixed parentage has been classified by age in combination with country of birth of parents. Except for a tabulation of the foreign-born white by age and country of birth made in 1910 but not published,<sup>1</sup> this is the first attempt to show the age distribution of the population of foreign derivation by nationality or country of origin.

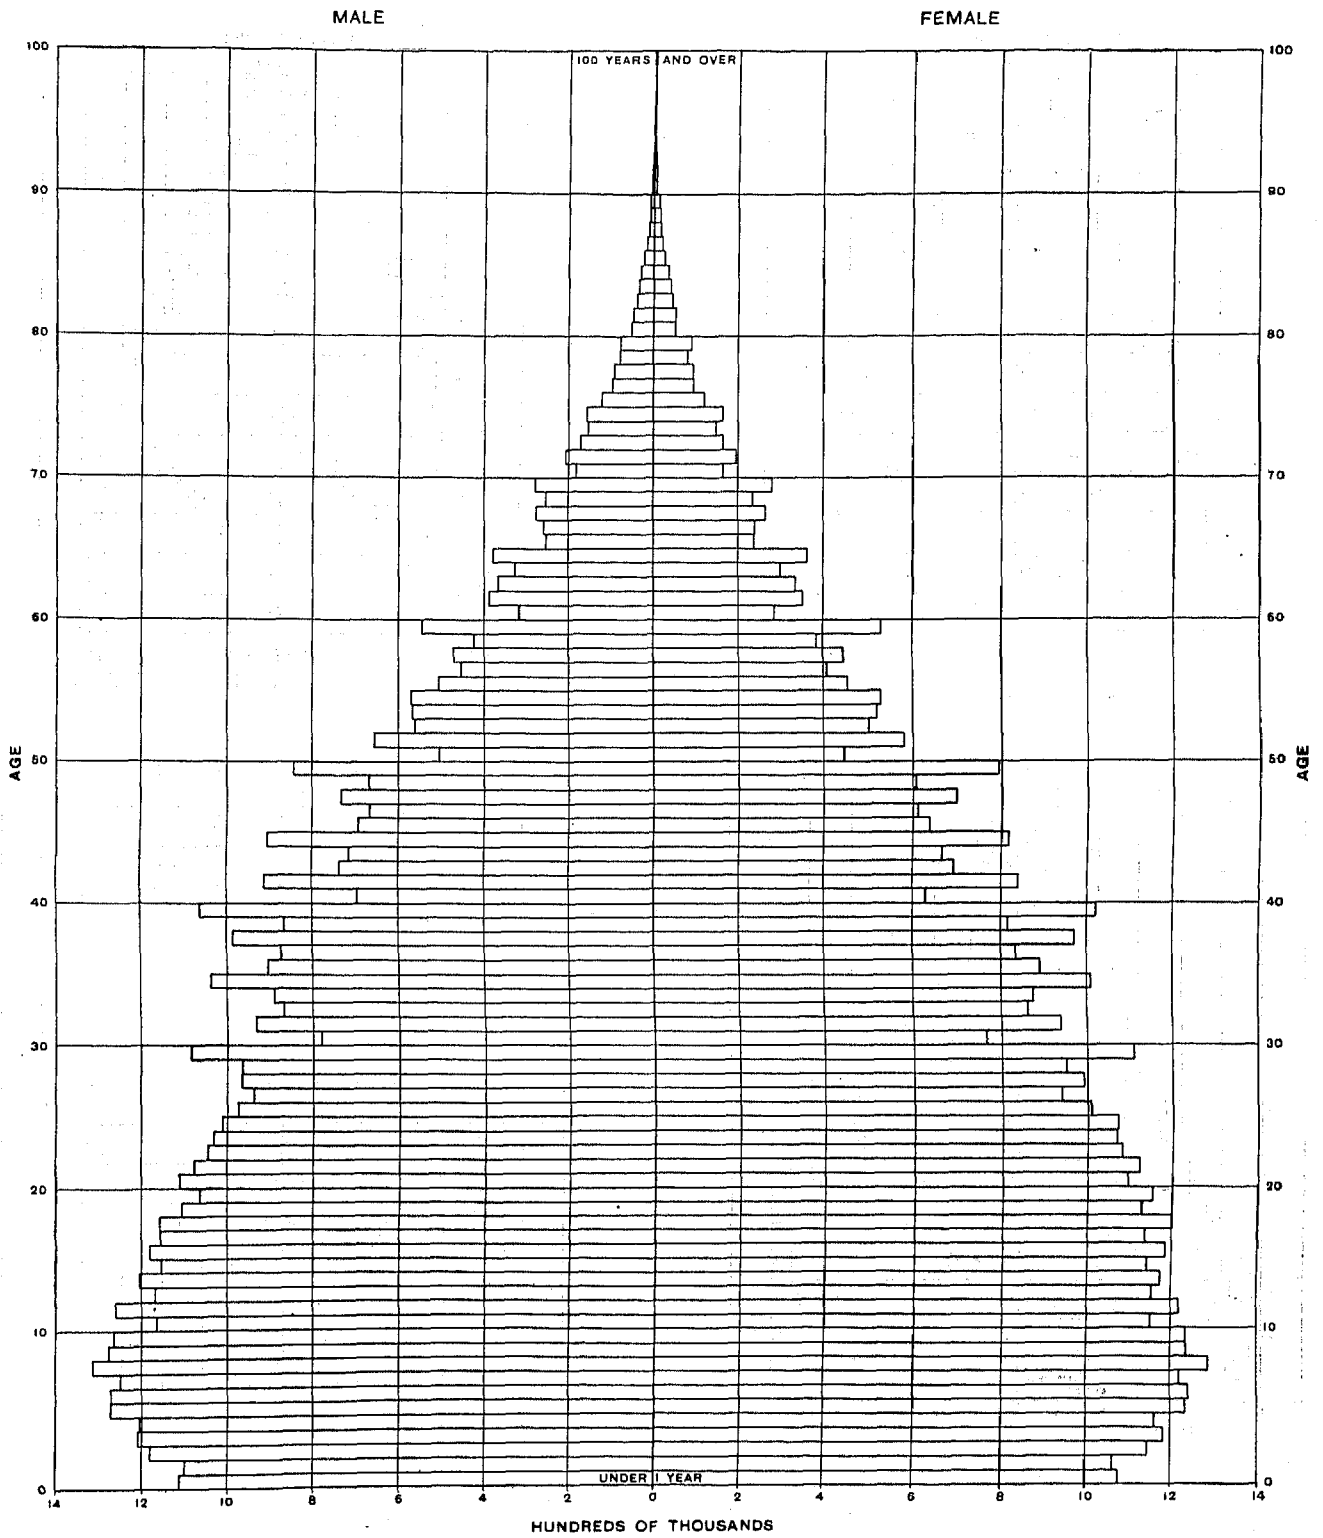

These figures are summarized for the United States, and for urban and rural areas, in Tables 40 and 41, and are presented by States and for the more important cities in Tables 42 and 43.

<sup>1</sup> It is planned to publish these 1910 figures, together with additional details tabulated for 1930, in a special bulletin on the age distribution of the foreign-born white population.

POPULATION

TABLE 15.—AGE BY 5 AND 10 YEAR PERIODS FOR THE MINOR RACES, BY SEX, FOR THE UNITED STATES, URBAN AND RURAL: 1930

[Per cent not shown where less than 0.1]

Table with columns for Area and Age, Mexican (Total, Native, Foreign-born), Indian, Chinese, Japanese, Filipino, Hindu, and Korean. Rows include Total, All ages, and age groups (5 to 9, 10 to 14, 15 to 19, 20 to 24, 25 to 29, 30 to 34, 35 to 44, 45 to 54, 55 to 64, 65 to 74, 75 and over, Unknown) for both Urban and Rural areas.

TABLE 16.—AGE BY 5-YEAR PERIODS, BY COLOR, NATIVITY, AND SEX, FOR THE URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION OF THE UNITED STATES: 1930 AND 1920

Table with columns for Age Group, Sex, and Race (All Classes, Native White-Native Parentage, Foreign-Born White, Negro, Other Races). Rows include Urban and Rural populations, split by sex and age group (e.g., 5 to 9 years, 10 to 14 years, etc.).

POPULATION

TABLE 24.—AGE BY 5-YEAR PERIODS, BY COLOR, NATIVITY, AND SEX, BY DIVISIONS AND STATES: 1930 AND 1920—Continued

Table with columns for Division or State and Age, All Classes (1930, 1920), Native White—Foreign or Mixed Parentage (Total, Foreign parentage, Mixed parentage), Foreign-born White, Negro, and Other Races (1930, 1920). Rows include W. S. Central and Mountain divisions, with age groups from 5 to 9 years up to 85 and over, and per cent values for each category.

POPULATION

TABLE 24.—AGE BY 5-YEAR PERIODS, BY COLOR, NATIVITY, AND SEX, BY DIVISIONS AND STATES: 1930 AND 1920—Continued

Table with columns for Division or State and Age, All Classes, Native White-Native Parentage, Total, Foreign parentage, Mixed parentage, Foreign-born White, Negro, and Other Races. Rows include New Jersey and Pennsylvania, with sub-rows for All ages, Under 5 years, 5 to 9 years, 10 to 14 years, 15 to 19 years, 20 to 24 years, 25 to 29 years, 30 to 34 years, 35 to 39 years, 40 to 44 years, 45 to 49 years, 50 to 54 years, 55 to 59 years, 60 to 64 years, 65 to 69 years, 70 to 74 years, 75 to 79 years, 80 to 84 years, and 85 and over. Each row contains population counts for 1930 and 1920, and percentages for 1930 and 1920.

POPULATION

TABLE 24.—AGE BY 5-YEAR PERIODS, BY COLOR, NATIVITY, AND SEX, BY DIVISIONS AND STATES: 1930 AND 1920—Continued

Table with columns for Division or State and Age, All Classes (1930, 1920), Native White-Native Parentage (Total, Foreign parentage, Mixed parentage) (1930, 1920), Foreign-Born White (1930, 1920), Negro (1930, 1920), and Other Races (1930, 1920). Rows are listed for Ohio and Indiana, including age groups and percentages.

POPULATION

TABLE 24.—AGE BY 5-YEAR PERIODS, BY COLOR, NATIVITY, AND SEX, BY DIVISIONS AND STATES: 1930 AND 1920—Continued

Table with columns for Division or State and Age, All Classes (1930, 1920), Native White-Native Parentage (Total, Foreign parent-age, Mixed parent-age), Foreign-Born White, Negro, and Other Races (1930, 1920). Rows include Illinois and Michigan with data for various age groups and percentages.

POPULATION

TABLE 24.—AGE BY 5-YEAR PERIODS, BY COLOR, NATIVITY, AND SEX, BY DIVISIONS AND STATES: 1930 AND 1920—Continued

Table with columns for Division or State and Age, All Classes, Native White-Native Parentage, Native White-Foreign or Mixed Parentage (Total, Foreign parentage, Mixed parentage), Foreign-Born White, Negro, and Other Races. Rows include Wisconsin and Minnesota with data for 1930 and 1920 across various age groups and percentages.

AGE DISTRIBUTION

625

TABLE 24.—AGE BY 5-YEAR PERIODS, BY COLOR, NATIVITY, AND SEX, BY DIVISIONS AND STATES: 1930 AND 1920—Continued

Table with columns for Division or State and Age, All Classes, Native White-Native Parentage, Native White-Foreign or Mixed Parentage (Total, Foreign parentage, Mixed parentage), Foreign-born White, Negro, and Other Races. Rows are listed for Wisconsin and Minnesota, detailing population counts for various age groups and percentages. The table is organized into two main sections, one for Wisconsin and one for Minnesota, with similar sub-headers for each. Each sub-section includes counts for males and females across different racial and ethnic categories, along with percentage distributions for each age group.
