28. Marital condition of the population 15 to 34 years old, by sex and single years of age, for cities of 500,000 or more: 1930.....	970	
29. Marital condition of the population 15 years old and over, by sex, color, nativity, and age, for cities of 100,000 to 500,000: 1930.....	973	
30. Marital condition of the population 15 years old and over, by sex, color, nativity, and age, for cities of 25,000 to 100,000: 1930.....	1013	
MARITAL CONDITION AND COUNTRY OF ORIGIN		
31. Marital condition of the white population of foreign birth or parentage, by sex and country of origin, for the United States: 1930.....	1060	
32. Marital condition of the white population of foreign birth or parentage, by sex and country of origin, in urban, rural-farm, and rural-nonfarm areas: 1930.....	1061	
33. Marital condition of the white population of foreign birth or parentage, by sex and country of origin, by States: 1930.....	1063	
34. Marital condition of the white population of foreign birth or parentage, by sex and country of origin, for cities of 500,000 or more: 1930.....	1081	

CHAPTER 11.—MARITAL CONDITION

INTRODUCTION

This chapter presents statistics of the population classified according to marital condition as shown in the 1930 census, with comparative figures for each census back to 1890. Inquiry regarding marital condition was first made in the census of 1880, but the results were not tabulated; the earliest Federal census figures on marital condition therefore are those for 1890.

The terms "single," "married," "widowed," and "divorced," refer to the marital status at the time the census was taken. A person who has been widowed or divorced but has remarried is reported as married, so that the returns for widowed or divorced persons do not represent the total number of persons now living who have been widowed or divorced. Since it is probable that some divorced persons are reported as single, married, or widowed, the census returns doubtless understate somewhat the actual number of divorced persons who have not remarried.

The number of persons under 15 years of age who are married, widowed, or divorced, is naturally very small, comprising, in 1930, 824 males and 4,506 females. In most of the tables, therefore, the statistics on marital condition are presented only for persons 15 years of age and over, since the total population in this age group forms a more logical base for the computation of percentages single, married, etc., than would the aggregate population of all ages.¹ Statistics of marital condition for the total population, including persons under 15 years of age, are presented for the United States in Table 5, and the data for persons under 15 years of age are given by States in Table 19.

For a small number of persons marital condition was not reported. When under 18 years old such persons were classified as single, otherwise as "Unknown." Where space will conveniently permit, the "unknown" are shown separately in the tables; from other tables they are omitted, since they have no particular significance, and form only two-tenths of 1 per cent of the total male population 15 years old and over, and one-tenth of 1 per cent of the female. They are always included in the totals on which the percentages single, married, widowed, and divorced are computed. The percentages would be practically the same, however, if they were based on the number of persons for whom marital condition was reported.

¹ There would seem to be some argument in favor of using different basic age groups for males and females—perhaps 17 years and over for males, and 15 years and over for females—since the percentage married begins to be significant for females about two years earlier than for males. Because of the additional complications which this double set of age limits would bring into the statistics, however, it has not been adopted.

Statistics are presented in this chapter by State and for cities of 25,000 or more. Less detailed statistics are presented for counties and for incorporated places of 2,500 or more in Volume III of the Fifteenth Census Reports on Population; and statistics for the outlying areas enumerated at the Fifteenth Census are presented in the report on Outlying Territories and Possessions.

Marital condition and sex.—In the population 15 years old and over the excess of males over females amounted in 1930 to 1,043,872, or 2.4 per cent. Among single persons alone the males exceeded the females by 3,647,059, or 32.3 per cent. Aside from the excess of males over females in the total population, the principal reason for this disparity in the unmarried is found in the tendency of men to marry at later ages than women.

The excess of married men over married women in 1930 was 156,353, as compared with 530,333 in 1920. The excess of married men is due mainly to the fact that there is a large number of foreign-born married men present in the United States who have left their wives in their native countries. The rapid reduction of this excess is due to the restriction of immigration, and perhaps also to the fact that many of the wives came in as nonquota immigrants prior to the census of 1930.

The excess of widows over widowers is due primarily to the greater longevity of women than of men. This excess is made still greater by the fact that men usually marry at later ages than women, so that even aside from the greater longevity of women, the marriage is more likely to be broken by the death of the husband than by the death of the wife. The excess of widows over widowers is the natural correlative of the excess of single men over single women.

The marital condition of the population 15 years old and over in 1930 is shown in Table 1, with comparative figures for 1920 and 1910.

TABLE 1.—MARITAL CONDITION OF THE POPULATION OF THE UNITED STATES 15 YEARS OLD AND OVER, BY SEX: 1930, 1920, AND 1910

Unknown.....	52,385	0.1	5,751	0.1	68,172	0.2

Marital condition and age.—Age composition is an important factor in the statistics of marital condition. The prevailing age at marriage and the age distribution of the population govern, to a large extent, the proportion of the population who are or who have been married, because this proportion is smaller among the younger than among the older persons. In the early age groups, the ratio of married to single is larger for females than for males, but the excess of females gradually decreases with each advancing age period until in the older age periods the ratio is reversed and there are nearly twice as many married men as married women. Widows, on the other hand, outnumber widowers in all age groups. Single males greatly exceed single females in the earlier age groups, but in the older age periods, where the proportion single is approximately the same in both sexes, the excess of married males is counterbalanced by the excess of widows over widowers.

The marital condition of the population 15 years of age and over in specified age groups is given in Table 2.

The changes in marital status from year to year of age are so rapid in the younger ages that 5-year groups do not show these changes adequately. In the 15 to 19 year group, for example, there are very few persons

15 or 16 years of age married, but the number married increases rapidly in ages 18 and 19. Marital condition is therefore shown by single years of age from 15 to 34 years in Tables 8, 9, and 11. Above the age of 35, changes are less rapid and the presentation by 5-year periods is adequate.

From the tabulation by single years, it is possible to arrive at an approximation of the median age at first marriage. The true median age at first marriage could only be computed from a tabulation of the records of all first marriages in a given period. In earlier years, however, nearly all marriages are first marriages, and the percentage of persons who are or have been married increases rapidly with every year of age. In these ages also there are comparatively few deaths of persons who are or have been married. It may be assumed, therefore, that the age at which exactly 50 per cent of the persons enumerated are or have been married, and at which 50 per cent remain single, will practically coincide with the median age at first marriage. The median age at first marriage calculated in this manner is presented in Table 3 for the population of the United States classified by sex, color, and nativity.

TABLE 3.—MEDIAN AGE AT MARRIAGE, BY SEX, COLOR, AND NATIVITY, FOR THE UNITED STATES: 1930

COLOR AND NATIVITY	Male	Female
All classes.....	25.6	22.4
Native white.....	25.6	22.6
Native parentage.....	25.0	22.0
Foreign or mixed parentage.....	27.3	23.0
Foreign-born white.....	27.6	23.4
Negro.....	23.3	20.5

Color, nativity, and parentage.—Statistics of marital condition are shown separately for the main population classes—native white of native parentage, native white of foreign or mixed parentage, foreign-born white, Negro, and "Other races." Each of these classes presents its own characteristics with respect to marital condition, especially when tabulated by age. The foreign-born population in particular differs widely from the native classes because of its abnormal age composition and its greater excess of males over females. In the foreign-born population the excess of single men over single women is large, and there is also a large excess of married men over married women.

In the native white population of foreign or mixed parentage there is a considerable excess of married women over married men. This probably results from the fact that many native women of foreign white stock marry foreign-born men, usually of the same nationality. Because of the fact that there is thus a considerable amount of intermarriage between one of the white classes and another, it should not be expected that there would be an approximate equality between the number of married men and the number of married women within any one class.

In each class of the white population, and also among the Negroes, the number of widows is more than twice as large as the number of widowers for reasons already noted above; and in both white and Negro there is a considerable excess of divorced women over divorced men.

The relatively low proportion of married persons among the native white of foreign or mixed parentage—the children of immigrants—may be accounted for in part by the concentration of persons of this class in the lower age groups and by the large proportion that live in urban places (73.4 per cent in 1930), since the percentage of the population married is always smaller in urban than in rural communities.

Statistics on marital condition in the past have included Mexicans with the white population. Because of the large increase of Mexicans in certain States within the last 10 years, they were given a separate classification in the 1930 census and grouped in many of the tabulations with "Other races," which include also Indians, Chinese, Japanese, Filipinos, etc. The marital condition of the individual races is shown, for the United States in Table 7, for separate States in Table 16, and for the larger cities in Table 27.

Divisions, States, and cities.—Considerable differences in marital condition are found when one section of the country is compared with another, not only when the comparison is made with regard to the population as a whole, but also when particular classes are taken into consideration.

The marital condition of the total population or of any class may be affected by interstate migration, both directly, through differences between persons of different marital classes in regard to the disposition to migrate, and indirectly, through the influence of migration upon sex and age distribution. There are no statistics bearing specifically on this point, but it may be presumed that unattached persons—single men and women and widowed or divorced persons without children—are more likely to migrate than those with families. This being the case, and other things being equal, relatively fewer unmarried persons will be found in States and divisions which lose more than they gain through interstate migration than in those which gain more than they lose.

Another factor affecting marital condition in divisions and States as compared with one another is the relative importance of urban population. The sex and age distribution of the urban population differs from that of the rural population, and the proportion of unmarried persons is larger, as a rule, especially among women, in cities than in rural communities. A State in which the proportion of urban population is large is, therefore, likely to have a somewhat larger proportion of single persons in its adult population than a State which is predominantly rural.

Urban and rural population.—Urban population, as distinguished from rural, may in general be defined as that residing in cities or other incorporated places having 2,500 or more inhabitants, and the remainder of the country is classified as rural. In three of the New England States, New Hampshire, Massachusetts, and Rhode Island, conditions are exceptional in that compactly built portions of the towns (townships) are not separately incorporated or politically distinct in any way from the rural territory of the same town; nor is it the usual practice to incorporate even the larger places and cities until they attain a population in excess of 10,000. For these New England States, in 1930, the urban population included, in addition to regularly incorporated cities, those towns in which there is a village or thickly settled area having more than 2,500 inhabitants and comprising, either by itself or when combined with other villages in the same town, more than 50 per cent of the total population of the town. Furthermore, in other States, townships or other political subdivisions (not incorporated as municipalities nor containing any area so incorporated) which, in 1930, had a total population of 10,000 or more, and a population density of 1,000 or more per square mile, are classified as urban.

The rural population in 1930 is separated into the rural-farm and rural-nonfarm population. The *rural-farm* population comprises all persons in rural territory living on a farm, without regard to occupation. The *rural-nonfarm* population, sometimes termed the "village" population, includes in general all persons living outside of cities or other incorporated places having a population of 2,500 or more who do not live on farms. This rural-nonfarm population is not uniform in its make-up and varies in different parts of the country. In some sections it consists of inhabitants of small manufacturing villages or suburban areas which are not incorporated, in other parts it includes mining settlements, or in still other sections it is made up of inhabitants of small commercial centers who are mainly occupied in supplying the wants of the farm population.

Marital condition by country of origin.—The foreign-born white population has been classified for 1930 by marital condition in combination with country of birth; and the native white population of foreign or mixed parentage has been classified by marital condition in combination with country of birth of parents. This is the first attempt to show the marital condition of the population of foreign derivation by nationality or country of origin.

These figures are summarized for the United States, and for urban and rural areas, in Tables 31 and 32, and are presented by States and for the more important cities in Tables 33 and 34.

POPULATION

TABLE 22.—MARITAL CONDITION OF THE URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION 15 YEARS OLD AND OVER, BY SEX AND 5-YEAR AGE PERIODS, BY STATES: 1930—Continued

Table with columns for Area and Age, and sub-columns for Males and Females (15 years old and over) categorized by marital status (Total, Single, Married, Widowed or divorced) and percentage. Rows are grouped by state (Missouri, North Dakota, South Dakota, Nebraska) and further by Urban/Rural-Farm/Rural-Nonfarm categories and age groups (15 to 19 years to 75 and over).

MARITAL CONDITION

TABLE 22.—MARITAL CONDITION OF THE URBAN, RURAL-FARM, AND RURAL-NONFARM POPULATION 15 YEARS OLD AND OVER, BY SEX AND 5-YEAR AGE PERIODS, BY STATES: 1930—Continued

[The District of Columbia is omitted from this table, its entire population being classified as urban; see Table 15, p. 887]

AREA AND AGE	MALES 15 YEARS OLD AND OVER					FEMALES 15 YEARS OLD AND OVER					MALES 15 YEARS OLD AND OVER					FEMALES 15 YEARS OLD AND OVER
