#### UNITED STATES SUMMARY

#### GENERAL CHARACTERISTICS OF HOUSING

#### INTRODUCTION

#### GENERAL

This summary, constituting Part 1 of Volume II of the Reports on Housing, presents basic statistics relating to practically all subjects for which information was collected in the Census of Housing, taken as of April 1, 1940, as part of the Sixteenth Decennial Census of Population. Subjects presented include occupancy and tenure status, value of home or monthly rent, size of household and race of head, type of structure, exterior material, year built, conversion, state of repair, number of rooms, housing facilities and equipment, and mortgage status. The more significant items are shown separately for the various occupancy, tenure, and color groups. Statistics on these subjects are presented here for the United States and for broad regions, and brief summary data for most subjects are shown by States, by cities of 50,000 or more, and by metropolitan districts.

All of the subjects covered in this summary are presented for each State, urban and rural, for each city of 50,000 or more, and for metropolitan districts, in the State sections which comprise the remaining parts of this volume. These State sections also present less detailed figures for counties, for rural-nonfarm and rural-farm parts of counties, and for urban places of less than 50,000. The material was first published in a series of State bulletins, each entitled "Housing, Second Series, General Characteristics." These bulletins, with minor corrections, have been assembled and bound together as sections of the present volume.

Related reports.— Limited tabulations of housing data are presented in volume I of the Reports on Housing, entitled "Data for Small Areas" and comprising the first series of Housing bulletins for States. Statistics are shown for the State, for urban, rural-nonfarm, and rural-farm areas of the State, for counties and rural-farm parts of counties, for incorporated places of 1,000 inhabitants or more, for minor civil divisions, and for metropolitan districts.

Supplements to the first series of Housing bulletins, entitled "Block Statistics," include a separate bulletin for each of the 191 cities which had 50,000 inhabitants or more in 1930. Tabulations of the type presented in the first series of State bulletins (volume I) are shown in these supplements by blocks and summarized by census tracts or wards. More detailed statistics for census tracts are presented in a series of special bulletins on population and housing - one for each tracted area.

Oross-classifications of other housing characteristics with monthly rent or value of home are given in volume III of the Reports on Housing, entitled "Characteristics by Monthly Rent or Value" and comprising the third series of Housing bulletins for States. Volume IV, entitled "Mortgages on Owner-Occupied Nonfarm Homes" and comprising the fourth series of Housing bulletins for States, presents statistics on the mortgage characteristics of residential properties.

Volume I of the Reports on Population, entitled "Number of Inhabitants" shows the total population for the State and counties, urban and rural areas in the State and in counties, minor civil divisions, incorporated places, wards of places of 5,000 inhabitants or more, census tracts, and metropolitan districts. Volume II of the Reports on Population, entitled "Characteristics of the Population" presents, for areas similar to those shown in volume II of the Reports on Housing, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born, by citizenship and country of birth; and for the labor force, by employment status, broad occupation groups, and selected industries.

Arrangement of tables.— The more significant comparative statistics available for each census from 1890 to 1940 are presented for continental United States in text tables I, II, and III. Detailed housing data for 1940 are shown in this summary for the United States and the three major regions in tables 1 to 21, which correspond to tables bearing the same numbers in State sections of this volume. Summary statistics for geographic divisions and States are shown in summary tables 22 to 71; for cities of 50,000 inhabitants or more in tables 72 to 88; and for metropolitan districts in tables 89 to 104. The figures for States, cities, and metropolitan districts, also presented in the remaining parts of this volume, are brought together in this summary to facilitate comparisons of the more important statistics for the various types of areas.

Data from previous censuses.—Historical comparisons of many of the subjects covered in the Housing census may be made on the basis of statistics presented in the publications of earlier censuses. The number of "occupied dwelling units" in 1940 is roughly comparable with the number of "private families" or "homes" shown in the 1930 census report on Families. The number of families, on a slightly broader basis (including what were termed quasi-family groups in 1930) but still reasonably comparable, has been presented for each census since 1850. The trend of the figures on family size is indicated by comparisons of the "population per occupied dwelling unit" in 1940 with the "population per family" as shown for prior censuses. The term "dwelling" as used in 1930 (and earlier) is comparable with the term "residential structure," as used in the 1940 census, though the number of structures shown in 1940 includes structures entirely vacant, which were not included in the earlier censuses.

The classification of homes by tenure has been shown for each census since 1890. The number of owned homes that were encumbered was included in the censuses from 1890 to 1920. Comparable statistics of families classified by color of head are available for each census year from 1890 to the present, except for 1910. The value or monthly rent of nonfarm homes and the number of families having a radio were included for the first time in the 1930 report on Families.

The reports of the Census of Agriculture for 1920 and 1930 indicate the number of farm operators' dwellings that were lighted by electricity, the number with water piped into the dwelling, and (for 1930 only) the number with water piped into the dwelling, and (for 1930 only) the number with water piped into the data constant of the Farm census. These statistics in 1930 also was obtained in the Farm census. These statistics are only roughly comparable with the statistics for corresponding items as presented for rural-farm dwelling units in 1940 because the data from the Farm census represents the homes of farm operators only, whereas the 1940 figures include all dwelling units on farms, that is, the homes of farm laborers and persons engaged in nonfarm occupations, as well as those of farm operators. On the other hand, the statistics obtained in the Farm census include urban-farm dwelling units, while the 1940 data are limited to rural-farm dwelling units.

Schedules and instructions to enumerators. The schedules used in enumerating occupied dwelling units and vacant dwelling units in the 1940 census are reproduced as an appendix to this summary.

The census enumerators were supplied with printed instructions as to the method of filling out the schedule and as to the method of determining what dwelling units should be enumerated. These instructions, which contain operational definitions of the classifications presented in the census reports, are presented in the appendix following the schedule.

#### DEFINITIONS OF TERMS AND EXPLANATIONS

<u>Urban and rural areas.</u>—The housing statistics are presented separately for the urban, rural-nonfarm, and rural-farm areas which have been established for the 1940 Census of Population. The urban area is made up in general of cities and other incorporated places having 2,500 inhabitants or more, and all territory outside these places is classified as rural.

Rural-nonfarm dwelling units. — Rural-nonfarm dwelling units are those located outside the boundaries of urban places but not on farms. This group is composed of dwelling units in a wide variety of locations, ranging from isolated nonfarm homes in the open country to homes in small unincorporated areas adjacent to a large city.

Rural-farm dwelling units. — Rural-farm dwelling units are those located on farms outside urban places. Dwelling units on farms within the boundaries of urban places are included in the totals for the urban places. Although the rural-farm dwelling units represent about 99 percent of all farm dwelling units, there are a few States with a considerable number of urban-farm units, that is, dwelling units on farms located in urban places

(see table 4 for the United States by regions).

Metropolitan districts .- A metropolitan district has been set up for use in the 1940 Censuses of Population and Housing in connection with each city of 50,000 or more, two or more such cities sometimes being in one district. The general plan is to include in the district, in addition to the central city or cities, all adjacent and contiguous minor civil divisions or incorporated places having a population of 150 or more per square mile. In some metropolitan districts a few less densely populated contiguous divisions are included on the basis of special qualifications. Only a portion of a minor civil division is included if the minor civil division has a large area and the principal concentration of population is in a small section near the central city with the more remote sections being sparsely settled. A metropolitan district is thus not a political unit but rather an area including all the thickly settled territory in and around a city or group of cities. tends to be a more or less integrated area with common economic, social, and, often, administrative interests. A map of the United States showing the 140 metropolitan districts is presented on page 6.

The definition of a metropolitan district used in 1930 was similar to the one used in 1940 except that in 1930 a district was established only for those areas with a total population of at least 100,000. The number of metropolitan districts has been increased from 96 in 1930 to 140 in 1940, principally because of this change in the definition of the metropolitan district.

In table 89, the population and number of families in 1930 are shown for 135 metropolitan districts. In the case of the 96 metropolitan districts defined in 1930, the figures for 1930 represent the population and number of families of the area as there defined. Figures for 1930 are also shown for the metropolitan districts defined for the first time in 1940, if 1930 figures can be secured for exactly the same area. Figures for 1930 were not obtainable for the area within 1940 boundaries of seven of these new metropolitan districts because of changes since 1930 in minor civil division boundaries.

The table given below (table I) presents the increase in population and number of families between 1930 and 1940 for the 133 metropolitan districts for which data are available for both census years.

Table I. OCCUPIED DWELLING UNITS OR PRIVATE FAMILIES, AND POPULATION, FOR 133 METROPOLITAN DISTRICTS: 1940 AND 1930

[Includes the 133 metropolitan districts for which statistics for both 1930 and 1940 are available. The 7 districts for which 1930 data are unobtainable are: Amarrillo, Terms; Austin, Texas; Columbus, Georgia; Mobile, Alabama; Phoenix, Arizona; Pueblo, Colorado; and Waco, Texas. In 1940 these districts contained a total of 622,021 inhabitants and 165,355 occupied dwelling units. See headnote on table II]

NumberPercent	4,740,887 8,2		

Dwelling unit. — A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units, and all vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests. and similar places maintained by the Y. M. C. A., or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers! homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common bar-These special types of dwelling places were considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on Families. Dwelling units occupied by the families of officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons classified as part In the case of Governmentof the institutional population. owned dwelling units on United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

Occupancy status. — Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though they were not actually offered in the housing market at the time of enumeration. Vacant dwelling units in buildings under construction are excluded; those in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units that were vacant and for sale or rent on April 1, 1940, as shown for the United States by regions in table 2a, represents what is commonly referred to as the vacancy ratio.

The relatively small group classified as "vacant, not for sale or rent" includes dwelling units neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households, and also dwelling units occupied temporarily by nonresident households. A nonresident household is one enumerated in the Population census at a place other than its usual place of residence and reallocated to the home district. If a dwelling unit was maintained by such a household at the usual place of residence, it is classified in the Housing census as "held for absent household." In most States, however, the majority of dwelling units returned as "held for absent household by such a household or occasional use only.

Occupied units and families.—Since a dwelling unit, as the term is used in the census, consists of the living quarters occupied by one household, the number of occupied dwelling units corresponds closely to the number of families or homes, for which a few subjects related to housing were enumerated in previous censuses (see page 1). The most significant comparative statistics available from 1890 are summarized in the text tables below. More detailed figures, which are available for 1930 only, are included in the standard series of tables.

Table II shows the number of families, the total population, and the trend of the figures on family size from 1890 to 1940 as indicated by the population per occupied unit or family. Since 1890 the average size of family in the United States has decreased by about two-tenths of a person per decade and, consequently, the number of families has increased more rapidly than the total population. The interrelationship of family trends and population trends is especially significant to the housing market, as the trend in families largely determines the demand for dwelling units.

Table II. OCCUPIED DWELLING UNITS OR FAMILIES AND POPULATION PER UNIT, NONFARM AND FARM, FOR THE UNITED STATES: 1890 TO 1940

[The number of occupied dwelling units in 1940 is not exactly the same as the number of private families but the differences are so small as to be negligible. The count of families for 1930 and 1900 represents private families only; that for 1920, 1910, and 1890 includes the small number of quasi-family groups which were counted as families in those years. Population figures by farm residence not available for years prior to 1920. A minus sign (-) denotes decrease

1890	4,767,179	-	-	-	-

The decline in average size of family in the last fifty years is attributable mainly to the decline in the birth rate. The number of small families also has been augmented because of the longer life span and the growing tendency of older parents and their adult children to maintain separate households when economic circumstances permit. As a result, families without children have comprised an increasingly large part of the housing market.

The divergence of family and population trends has been greater in nonfarm than farm areas because of the more rapid decrease in the average size of nonfarm families. The farm figures illustrate the fact than a stationary population, or one slowly declining, can still have an increase in the number of families. While urban farm figures are included under the heading "Farm" in Tables II and III for the United States and are shown separately in Tables 4 and 28 for regions and for States, in all detailed presentations they are included under the heading "Urban".

The population per occupied unit or family is slightly larger than the average size of private families because it is obtained by dividing the number of occupied dwelling units (or families) into the total population, which includes an appreciable number of persons who are not members of private families. Persons in private families represent so large a fraction of the total, however, that the trend of the figures from one census to another, as indicated by the population per unit or family, is practically the same as for the average size of private families alone.

The number of occupied dwelling units is not identical with the number of private families because the living quarters of families that were enumerated at other than their usual place of residence were not classified as occupied; and a small number of lodging places were counted as occupied units even though they were not occupied by private families. Moreover, the count of families, as shown for 1920, 1910, and 1890 includes institutions, hotels, boarding houses, and other quasifamily groups, which were excluded from the count of private families in 1930. These differences are numerically minor and will not affect comparisons of data for larger areas.

Tenure.—The basis of the classification of occupied dwelling units by tenure in the Housing census is the same as that used in the Population census for the classification of families by tenure. A dwelling unit is classified as owner-occupied if it was owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent was actually paid for the living quarters. Rent-free quarters and living accommodations which were received in payment for services performed are thus included with the tenant-occupied units.

The proportion of owner-occupied homes in the United States declined slowly from 1890 to 1920, increased in the 1920's, and then fell rather sharply between 1930 and 1940. Although the actual number of home owners increased in each decade, they represented a smaller percentage of the total in 1940 than in any previous year for which data are available (table III).

Color of occupants. — Occupied dwelling units are classified by race of head of household in accordance with the definition used in the 1940 Census of Population. Three major race classifications are distinguished in the statistics for tenure, namely, white, Negro, and "other races." Persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race were returned as white in 1940. Such persons were designated Mexican in 1930 (but not in prior censuses) and were included in the general class of "other races." Figures for 1930, as presented in this bulletin, have been revised in accordance with the 1940 definition. The accompanying table presents data on dwelling units or families, by race of head, for census years 1890, 1900, and from 1920 to 1940.

Table IV. OCCUPIED DWELLING UNITS OR FAMILIES, BY RACE OF HEAD, FOR THE UNITED STATES: 1890 TO 1940

[Statistics for 1910 not available. Figures for white families in 1930 revised to include Mexicans in accordance with the definition for other years. See headnote on table II]

		WHI	EE.		NOM	HITE	
CENSUS YEAR	TOTAL	Number	Percent	Tota	rJ	Negro	Other
		14001001	2010000	Number	Percent		00001
1940		31,561,126		3,293,406		3,156,545	
1930		26,982,994		2,921,669		2,803,756	
1920		21,825,654		2,526,022		2,490,828	
1890		11,255,169		1,434,988		1,410,769	

The tenure status of the three racial groups shown above is presented for 1940 in tables 1 and 2 for the United States by regions. In the tabulations of housing characteristics other than tenure by color of occupant, only two groups are distinguished, white and nonwhite (Negroes and other nonwhite races combined).

Note that for purposes of comparison with the 1940 population per occupied dwelling unit the total population per private family in 1930 and 1900 is used and not the "population per private family" as published in the 1930 census reports. The latter is obtained by dividing the population in private families, excluding persons in institutions and other quasi-family groups, by the number of private families. Since the population in private families was not tabulated separately except in 1930 and 1900, the total population per private family is used because of its closer comparability with statistics for the other years.

Value and monthly rent. - The enumerator was instructed to obtain for each owner-occupied dwelling unit the estimated current market value of the home and, if not on a farm, its estimated monthly rental value; for each tenant-occupied dwelling unit the monthly contract rent, or if no cash rent was paid. the estimated monthly rental value, based on rents for similar dwelling units in the neighborhood; and for each vacant dwelling unit the rent asked or the estimated rental value. value of an owner-occupied nonfarm home represents the amount for which the dwelling unit, including such land as belongs with it, would sell under ordinary circumstances -- not at forced sale. If the owner-occupied unit is in a structure that contains more than one dwelling unit, or if a part of the structure is used for business purposes, the value reported represents only that portion occupied by the owner and his household. The rental reported for a vacant seasonal dwelling unit is the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied; in resort areas the average rent may be comparatively high for this

The statistics obtained for farm homes are probably somewhat less satisfactory than those for nonfarm homes because of the obvious difficulty of trying to determine what fraction the farm dwelling unit represents of the total farm value, which latter may be estimated on the basis of current market value. Although the estimated monthly rental value was not included in the returns made for owner-occupied farm homes, an estimate based on 1 percent of their reported value (less 50 cents to adjust to rental intervals), is presented for the rural-farm area of each division and State.

Gross rent. — Gross monthly rent, computed for tenant-occupied nonfarm dwelling units only, is contract rent plus the reported average monthly cost of water, electricity, gas, and other fuel paid for by the tenant. If furniture is included in the contract rent, the reported estimated rent of the dwelling unit without furniture is used for the computation instead of the contract rent. Rent differentials which result from varying practices with respect to the inclusion of heat, utilities, and furniture as a part of the contract rent, are thus eliminated from the gross rent figures.

Residential structure. — A residential structure is a building which contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, although a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential use was not enumerated unless it contained one or more dwelling units.

Type of structure. - Statistics are presented both for residential structures by type and for dwelling units classified according to the type of structure in which they are located. A "one-family detached" structure has open space on all four sides and contains only one dwelling unit. A "one-family attached" structure has one or both sides built directly against an adjoining structure or structures, and contains only one dwelling unit extending from ground to roof. Each dwelling unit in a group of three or more row houses is a "one-family attached" structure, but two attached dwelling units by themselves constitute a "two-family side-by-side" structure. Dwelling units in one- to four-family structures with business are shown as a separate group, but dwelling units in five-family or larger structures with business are not separated in the tabulations from those without business. "Other dwelling places," such as trailers, tourist cabins, boats, etc., were enumerated only when occupied by persons having no other place of residence.

Exterior material. — The classification by exterior material is presented for residential structures but not for dwelling units. Combination finishes, such as brick and stone, or wood and brick, are classified according to the material that covers the greater part of the exterior wall area. Brick veneer is classified as "brick." "Other" includes such materials as stone, concrete, einder block, tile, metal, adobe, and composition shingles.

Year built. — Dwelling units are classified according to the calendar year in which the building was completed. This refers to the original construction, not to any later remodeling, additions, reconstruction, or conversion.

Conversion. — Dwelling units are classified according to the conversion status of the structure in which they are located. "Nonconverted structures" are those originally built for residential purposes which contain the same number of dwelling units as when first built; a structure with space for business purposes is included in this category if the number of dwelling units has remained unchanged. "Structures converted to a

different number of units" are those originally built for residential purposes which contain either more or fewer dwelling units than when first built. These are chiefly structures that were designed for one household and later subdivided to provide living quarters for two or more households. "Structures converted from nonresidential to residential" are buildings designed for nonresidential purposes, such as a factory, garage, barn, or storage shed, which are used as the living quarters of one or more households. The classification is made on the basis of the use of the structure on the census date; the change from the original use may or may not have involved structural alterations.

State of repair. — Instructions to enumerators specified that a structure was to be reported as "needing major repairs" when parts of the structure such as floors, roof, plaster, walls, or foundations required repairs or replacements, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The data on state of repair are presented in combination with data for selected types of plumbing equipment and are therefore limited to dwelling units for which all of the various items in the combination were reported.

Water supply. The statistics for water supply relate to the principal source of water supply available for household purposes (not necessarily drinking water). "Running water" may be piped from either a pressure or a gravity system. "Other" may include any source of water supply except running water.

Toilet facilities. — A flush toilet (with running water) located in the structure and for the exclusive use of one household is differentiated in the tabulations from one that is shared with one or more other households.

Bathtub or shower. — A dwelling unit is reported as having a bathtub or shower if either type of equipment, supplied with running water (not necessarily hot water), is available in the structure for the use of the household. Bathing equipment for the exclusive use of one household and equipment that is shared with one or more other households are reported separately.

Number of rooms. — All rooms that are used or available for use as living quarters for the household are counted in determining the number of rooms in each dwelling unit. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement or attic are not counted as rooms. A kitchen is a separate room if it is partitioned off from floor to ceiling; a kitchenette and a dinette separated only by shelves or cabinets are counted as one room. Rooms used for office purposes by a person, such as a doctor or a lawyer, who lives in the dwelling unit are included, but rooms used as a store or shop for business are excluded.

Lighting equipment. — "Electric lighting" includes lights that are wired to a power line or a home plant, even though service may be temporarily suspended. "Gas" includes equipment for gas lighting connected to a gas main or tank.

Size of household.—All persons enumerated in the Population census as members of the household (including lodgers, servants, and other unrelated persons having no other usual place of residence) are counted in determining the number of persons who occupy each dwelling unit. Students away from home at school or college and other members temporarily absent are included as members of the household. The statistics on size of household, as presented in this report, should be distinguished from the 1930 statistics on size of family, because only related persons were included in the 1930 tabulation of families by size.

Persons per room. — The number of persons per room, used as an index of crowding, was obtained by dividing the number of persons in the household by the number of rooms in the dwelling unit. This figure was computed for each occupied dwelling unit.

Radio. — A dwelling unit was enumerated as having a radio if it contained a usable radio set or one only temporarily out of repair.

Refrigeration equipment. — Occupied dwelling units are classified according to the principal equipment available for the refrigeration of food for the household during the summer months. 'Mechanical' refrigeration includes any type of mechanical refrigerator operated by electricity, gas, or kerosene, or by a gasoline engine or other source of power. "Ice" refrigeration includes a refrigerator, box, or chest cooled by ice. "Other" refrigeration includes devices such as a well cooler, or an evaporative cooler consisting of a framework covered with cloth which is kept wet by the application of water. The category "none" includes dwelling units that have no device for keeping food cool or only a box in which food is placed on a window ledge.

Cooking fuel. — The data reported for cooking fuel are based on the principal type of cooking fuel used in each occupied dwelling unit.

Heating equipment and fuel. — A "pipel(3s warm air furnace" is a furnace located in the basement or utility room, with no warm air outlet other than one grille directly above or adjacent to the furnace. The category "heating stove" includes regular heating stoves, circulator heaters with flues, and non-portable electric or gas heaters. Dwelling units that have no heating equipment other than portable heaters, fireplaces, or kitchen stoves are included in the category "other or none."

The statistics for heating fuel are presented separately for dwelling units with and without central heating equipment. Steam or hot water systems, piped warm air systems, and pipeless warm air furnaces are included as central heating equipment.

Mortgage status. — The mortgage data presented relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by one property of which it is a part. Statistics relating to mortgaged farm properties are presented in publications of the Census of Agriculture.

Inclusion of furniture in rent. — A tenant-occupied nonfarm dwelling unit is reported as having furniture included in contract rent if the monthly payment includes the rental of important pieces of furniture, such as tables, chairs, and beds.

Medians.—The median value of the dwelling units in a given area is the value of the dwelling unit which would stand in the middle of the series if the units reporting value were arranged in order according to value; in other words, it is the value which divides the series into two equal parts, one having values higher than the median and the other having values lower than the median. The median monthly rental may be defined in a similar manner. All medians were computed on the basis of the tabulation groups in full detail, as shown in the tables for larger areas. In rare instances where the median is located in

the highest tabulation group, the median rent is indicated as \$100+ or \$200+ (whichever is the highest group segregated in the tabulation), and the median value is indicated as \$20,000+.

Values were reported to the nearest dollar, both in 1940 and 1930; and in computing the median values the class intervals shown in the tables were used.

Rents, as reported for 1940, were rounded to the nearest dollar; and in computing the 1940 medians the limits of the class intervals were assumed to stand at the midpoint of the 1-dollar interval between the end of one of the rent groups and the beginning of the next. For example, the limits of the interval designated, in round dollars \$10 to \$14, were assumed to be \$9.50 to \$14.49.

Rents were reported in 1930 in dollars and cents and the cents were taken into account in assigning individual units to the tabulated classes. In computing the medians for 1930, therefore, the limits of the intervals were assumed to stand at the lower limits of the intervals shown in the table. For example, the limits of the \$10 to \$14 interval were assumed to be \$10 to \$14.99.

Since the definition of intervals used in the computation of median values and rents conforms with the manner in which the data were reported in the respective censuses, the medians are, of course, statistically comparable.

In computing the median size of household, it is necessary to assume a continuous distribution within each size group. For example, when the median is in the three-person group, the lower and upper limits of the group are assumed to be two and one-half and three and one-half, respectively. A similar method was used in computing the median number of rooms.

The median age of dwelling units was computed from the data on year built by translating the intervals expressed in calendar years to the ages represented, as of April 1, 1940. Fractions of a year were rounded to tenths.

[Names of principal metropolitan districts shown in capitals, as DENVER; names of secondary metropolitan districts shown in lower case, as Pueblo.] MAP OF THE UNITED STATES SHOWING PRINCIPAL AND SECONDARY METROPOLITAN DISTRICTS: 1940 COUNCIL BLUFFS

Table 14.—AVERAGE AND MEDIAN VALUE AND MONTHLY RENT FOR OCCUPIED UNITS, BY COLOR OF OCCUPANTS, FOR THE UNITED STATES, BY REGIONS, URBAN AND RURAL: 1940

[For urban and rurel-nonferm units, value includes value of land, whereas for farm units value of land is excluded. Monthly rent of owner-occupied rural-farm units is an estimate based on one percent of reported value]

Table 66.—MEDIAN CONTRACT OR ESTIMATED MONTHLY RENT FOR URBAN AND RURAL DWELLING UNITS, BY OCCUPANCY AND TENURE, BY DIVISIONS AND STATES: 1940

Medians for "All dwelling units" based on total units including vacant units, not for sale or rent. For urban and rural-nonfarm units, monthly rent includes land, whereas for farm units land is excluded. Monthly rent of owner-occupied rural-farm units is an estimate based on one percent of reported value

## Table 89.—OCCUPIED DWELLING UNITS BY TENURE AND POPULATION PER UNIT, FOR METROPOLITAN DISTRICTS: 1940 AND 1930

[1930 figures by tenure not available. In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population and number of families of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. A minus sign (-) denotes decrease

## Table 89.—OCCUPIED DWELLING UNITS BY TENURE AND POPULATION PER UNIT, FOR METROPOLITAN DISTRICTS: 1940 AND 1930—Con.

[1930 figures by tenure not available. In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population and number of families of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. A minus sign (-) denotes decrease

#### UNITED STATES SUMMARY—DIVISIONS AND STATES

## Table 64.—VALUE FOR OWNER-OCCUPIED URBAN AND RURAL-NONFARM UNITS, BY DIVISIONS AND STATES: 1940

For urban and rural-nonfarm units, value includes value of land, whereas for farm units, shown in table 65, value of land is excluded

RECION, DIVISION,	Total units	Reporting value	Less than \$500	\$500 to \$999	\$1,000 to \$1,499	\$1,500 to \$1,999	\$2,000 to \$2,499	\$2,500 to \$2,999	\$3,000 to \$3,999	\$4,000 to \$4,999	\$5,000 to \$5,999	\$6,000 to \$7,499	\$7,500 to \$9,999	\$10,000 or more	Not re- porting value
