Analytical Maps: Block statistics. A Series of bulletins, one for each city of 100,000 inhabitants or more, comprising sets of analytical maps presenting in graphic form various housing characteristics in different areas of the city. Includes maps for average rent, major repairs or bathing equipment, year built, nonwhite households, persons per room, owner occupancy, and mortgage status. Prepared by the New York City WPA War Services and the Bureau of the Census. Distributed by the Bureau of the Census on request. Because of limited supply, requests for complete files cannot be filled. Requests for a bulletin for any specific city will be filled until supply is exhausted.

In addition, photographic prints of similar maps are obtainable at cost showing 1940 data for cities having in 1930, 50,000 to 100,000 inhabitants. Inquiries concerning such prints should be directed to the Bureau of the Census.

PART 3

SUBJECT GUIDE

November, 1944—Experimental

Washington 25, D.C.

INTRODUCTION

The publications of the Bureau of the Census present for the use of administrators, business men, technicians and others, basic statistics on various subjects. With coverage in many fields, it has been growing increasingly difficult for specialists to become aware of all material issued by the Bureau. For the general librarian this task has been especially complex. The demand for statistical information for study of war problems and the anticipated need for postwar studies makes urgent the preparation of finding media to simplify the locating of information in these reports.

Census publications have usually been checked in the past by methods similar to those for checking government publications in general. Many persons have also used the source notes and the bibliography in the Statistical Abstract of the United States as guides to published statistical data. The Census Bureau has also issued a listing, Census Bureau Publications, semi-annually which included titles and brief statements on the content of recent publications and which supplemented the List of Available Publications of the Department of Commerce.

As a result of comments on the present form of Census Bureau Publications and of other needs expressed by users of census data, the Bureau has an expansion of this publication under consideration. The annual publication of finding media will consist of three parts. Part I will outline the publication program of the Bureau of the Census in various subject matter fields and will list all regular publications. This part will be revised annually. Part II will list, on a monthly basis, the special publications of the Bureau, those which are issued at irregular intervals and the regular publications which are issued less frequently than at quarterly intervals. Part III will consist of a Subject Guide to Census Publications issued during the month to which it applies.

The present publication is an experimental edition of the subject guide and covers publications issued by the Bureau of the Census for the month of November 1944. Each publication is classified under a main subject-heading, followed by a general description of the series, covering the kind and extent of the data to be found, and a specific description of the particular report being indexed. It is hoped that sufficient detail and adequate cross-references for making the subject guide a real aid in identifying and locating any of the Bureau's publications have been included. Full exploration of a particular subject will be greatly facilitated through use of the guide which brings together under a single subject heading, all related material or information on different phases of the same subject.

The final details of this program will depend upon reactions to this publication. Comments and suggestions are solicited and will receive full consideration. This publication was prepared in the Information and Publications Division of the Bureau of the Census with the assistance of Miss Adelaide R. Basse.

NOTES ON SPECIAL PUBLICATIONS

Attention is called to the following publications, issued during the month of November, which may be of special interest:

1. The 1943 edition of the Statistical Abstract of the United States summarizes statistics from governmental and non-governmental sources and is available from the Superintendent of Documents, Washington 25, D. C., for \$1.75.

2. The Annual Report of the Director of the Census, July 1, 1943-June 30, 1944, 22 pages, (mimeographed) is a summary of the work of the Bureau of the Census for the fiscal year. The sections of this report are: introduction; highlights of the

year's work; summary of the activities by subject division; and service divisions and operations.

3. State Documents - Elections Data in State Documents, 34 pages, by Dorothy W. Kaufman. In this report State documents containing statistical data on the elections of 1940 and subsequent years have been analyzed and their principal contents indicated in tabular form. The method of presentation makes for easy reference as to the State and the title of the document and as to the type of government to which the items are applicable. This report consists of five tables and two bibliographies. One bibliography fully identifies the documents and related elections data and the other gives citations to election laws of the 48 states.

4. A New Sample of the Population - Sampling Principles Introduced in the Bureau's Monthly Report on the Labor Force, 6 pages, by Morris H. Hansen and William M. Hurwitz. This report presents a description of the principles followed in designing the new sample for the Monthly Report on the Labor Force. The following sections are included: introduction; requirements of the new sample; the sampling principles introduced; and grouping the primary sampling units into strata. The material is intended to be useful both to persons using data from the sample and to those having problems of sample design, since the principles followed have broad applicability.

5. Effect of Changing Birth Rates upon Infant Mortality Rates, by Iwao M. Moriyama and Thomas N. E. Greville (Vital Statistics Special Reports, Vol. 19, No. 21, pp 399-412). This report enumerates the various factors that affect the interpretation of infant mortality rates and presents examples of the effect upon the rate of one of these - annual increase or decrease in the number of births. Technical discussions of the formulae for annual and monthly infant mortality rates, as well as a theoretical discussion of the infant mortality rate are included.

6. Summaries from the Census of Governments, 1942, are presented in Extracts from Governmental Finances in the United States: 1942, United States Summary, (3 pages) and Supplementary Extract from Governmental Finances in the United States: 1942, United States Summary, (2 pages). These reports consist of recapitulations of selected tables showing totals for all three levels of government by type. General revenue and expenditures, revenue by major source, general expenditures for debt service, gross and net debt outstanding at end of fiscal year for general government and for enterprises are included.

7. Two reports present material from the Census of Housing in groupings not shown in the earlier reports. These reports are Tenure of Homes and Vacancy for Groups of Urban Places Classified According to Size: 1940, (7 pages), and Type of Structure, Year Built, and Number of Rooms for Dwelling Units in Group of Urban Places Classified According to Size: 1940, (4 pages). These releases are the second and third of a series presenting summary data on characteristics of dwelling units in urban places by size of urban place. The first release was Characteristics of Dwelling Units for Groups of Places Classified According to Size, Urban and Rural: 1940.

8. The Wartime Marriage Surplus, 3 pages. This report discusses the high marriage rate for the years from 1940-1943. The discussion is accompanied by a table and chart showing the number of marriages which occurred each year between 1915 and 1944 and compares the data with the "normal" number of marriages that would have occurred in each year if the marriage rates had been the same as the average for the years 1920-1939.

FACTS FOR INDUSTRY

- Releases of November 1944.**

NOTE:

The "Facts for Industry" Series is the medium by which the policy of releasing significant statistical data to industry whenever such release does not interfere with the war effort is carried out by the War Production Board. Many of these releases are issued jointly with the Bureau of the Census and inquiries on any of those listed should be referred to this Bureau.

Each "Facts for Industry" Series is identified by three numbers: the first shows the Division within the War Production Board responsible for the series; the second, the number of the

FACTS FOR INDUSTRY—Continued

Releases of November 1944—Continued

NOTE—Continued

individual series among those for which that Division is responsible; and the third, the sequence of releases in a given individual series. In these reports, production is pretty uniformly reported; shipments, consumption machine activity, etc., less often. Frequency of issue and the unit of measurement, whether quantity or value is always shown. These details constitute the scope of the following listing. In addition each class is duplicated under its subject. Here the characteristics of the consecutive issues are described, such as long-time coverage, type coverage, etc. The heading under which the characteristics of the consecutive issues are described is indicated in the following listing.

CENSUS PUBLICATIONS

SUBJECT GUIDE

December, 1944—Experimental

Washington 25, D.C.

NOTICE

Future issues of CENSUS PUBLICATIONS will be sent only in response to specific requests for the various parts, which are outlined below. Requests should be addressed to the Director, Bureau of the Census, Washington 25, D.C.

This issue of the Subject Guide is the last of the experimental numbers. Many valuable suggestions were received in response to the November experimental edition of the guide, but it was not possible to take all suggestions into account in the preparation of this edition. However, such changes as are practical will be incorporated as rapidly as possible.

Announcement

Current guides to the publications of the Bureau of the Census will be issued periodically in three parts as follows:

Census Publications, Program for the Year, which will be issued annually, will outline the regular publication program of the Bureau of the Census, and indicate the publications which are planned. This part will contain a brief description of the program of each subject matter division of the Bureau, and an annotated list of all regular publications. Descriptions of major changes in program during the year will be announced in supplements to this part while minor changes will be noted in the second part.

Census Publications, List of Publications Issued, which will be prepared monthly, will list all publications of the Bureau issued during the month except for regular monthly and quarterly publications. All special publications, parts of series issued at irregular intervals, and all regular publications which are issued less frequently than quarterly, will be listed for the month they are issued. The exclusion of regular monthly and quarterly reports from this part will make the list much shorter and, it is believed, much easier to use for checking on current Census publications. This section will also contain annotations as to changes in the regular publications. The regular monthly and quarterly reports will be listed in the first part.

Census Publications, Subject Guide, which will be issued monthly, will be a guide to the contents of all Census publications issued during the month. Subject headings will be arranged alphabetically in this guide to facilitate reference. Numerous cross-references will be included.

This program of current guides is designed to meet the needs of librarians, businessmen, teachers, technicians, government officials, and others. It is subject to change as the reactions of the users indicate a more effective method of presentation. Plans also call for the consolidation of all parts into a final annual volume for reference purposes. From time to time a catalog of all publications available for distribution will also be issued.

Comments and suggestions from users will assist in the improvement of this index to publications of the Census Bureau.

Notes on Publications

Users of population data may be interested in a 20-page pamphlet issued by the Committee for Congested Production Areas in December 1944. This pamphlet, Observations on the Sample Censuses in Ten Congested Production Areas, was prepared by John Webb and includes eight maps showing the origin of out-of-town war workers in individual production areas.

Publications of the Bureau of the Census during December which may be of particular interest include the following:

1. In an address on The Work of the Census Bureau in 1945 and How It Will Help Marketers (14 pages), before the Wartime Conference of the American Marketing Association at Chicago, Illinois, December 1, 1944, Mr. J.C. Capt, Director of the Census Bureau, reviewed the Bureau's share in the war program since 1941 and outlined its role in 1945 in the enlarged statistical program of the Department of Commerce, required immediately to measure the effects of war on employment, incomes, and resources of the people and to develop basic information for use in planning for reconversion. Mr. Capt also presented for the lay

Prepared by the Information and Publications Division of the Bureau, with the cooperation of the Office of the Statistical Assistant to the Director. The assistance of Adelaide R. Hassel is gratefully acknowledged.

person the highlights of the new sample design used by the Bureau for its Monthly Report on the Labor Force.

2. The Population-Special Report, Estimated Population of the United States for Selected Dates: July 1, 1940 to July 1, 1944 (2 pages), presents revised estimates of population, both including and excluding the armed forces overseas, for dates prior to January 1, 1944, and preliminary data for dates in 1944. Estimates are based on the 1940 Census and on statistics of births, deaths, immigration and emigration after April 1, 1940, and are given by months for the period January 1, 1943 to July 1, 1944, and at 6-month intervals for the period July 1, 1940 to July 1, 1944. Figures for births and deaths have been adjusted for underregistration.

3. First issues of new "Facts for Industry" series include Metal Products, Part II (8 pages), Baby Carriages, Strollers and Walkers (2 pages), Fountain Pens (2 pages), Pen Holders and Pen Nibs (2 pages), Wood Cased Pencils (2 pages), Toothbrushes (2 pages), and Files and Rasps (2 pages). In the first report mentioned, the War Production Board makes available to the public for the first time, statistics on the use and inventories of the controlled materials—steel, copper, and aluminum—as reported by the metal-products industries. The data given represents a major part of the total consumption and inventories of steel, copper, and aluminum produced in the United States.

4. Labor Force Bulletin No. 5 (26 pages), presents a series of estimates of the age distribution of persons in the major labor force categories, the classification of persons not in the labor force and estimates of hours worked by employed persons based on the Bureau's cross-section survey, the Monthly Report on the Labor Force. The estimates in this bulletin are revisions of those published in previous

issues. The method of adjusting the original estimates is described in this number.

5. Governmental Units in the United States, 1942 (67 pages), enumerates and classifies the 155,116 governmental units, which include counties, townships (or towns), municipalities, school districts, and special districts. The enumeration is based, with the exception of school districts, on an individual identification of each unit.

Other reports included in the 1942 Census of Governments series which were issued in December are: Finances of Cities Having Populations Less than 25,000: 1942 (44 pages), and Finances of School Districts: 1942 (7 pages). In the former, both estimated totals and summaries of reported data are indicated. The latter report covers only the finances of independent school districts and excludes the finances of schools administered by counties, cities, towns and townships.

6. The fourth and fifth releases in the group presenting summary data on characteristics of dwelling units in urban places by size of place in the Housing Special Report series are: State of Repair and Plumbing Equipment of Dwelling Units for City-Size Groups and Rural Areas: 1940 (5 pages), and Size of Household and Persons per Room for Dwelling Units for City-Size Groups and Rural Areas: 1940 (3 pages). The material presented is based primarily on statistics published in Volume II of the Sixteenth Census Reports on Housing.

7. The annual index to the Vital Statistics monthly bulletin, The Registrar, Vol. 9, No. 13 (2 pages), covers the twelve preceding numbers of the Registrar in 1944 and provides a tool for using it. This publication is a monthly four-page news bulletin for use of field representatives of the federal Division of Vital Statistics and the state, county and city registration officials.

No. 51. Week ended December 23, 1944. 4 Pages. Released December 29, 1944.

Each issue consists of two tables, a chart and an analysis of features of the tables which should be considered for a proper interpretation of the tables. The major table "Deaths in major cities" is arranged by geographic divisions and cities under deaths at all ages, current and preceding week, 5-year average corresponding week 1941-45, cumulative total 1944, 1945. Deaths under 1 year same breakdown. The deaths in certain cities of Alabama, Florida, Kentucky, Louisiana, Maryland, North Carolina, Oklahoma, Tennessee, Texas, Virginia, and the District of Columbia are also broken down by race, viz. white and nonwhite. The final table is a summary of industrial life insurance policies in force, death claims, and claim rates per 1,000 policies in force in the current week, the corresponding week preceding year and the cumulative number, each factor, for current and preceding year. The chart shows total number of deaths, by weeks, the current year, and a 3 year average, by weeks, 1941-1943.

RETAIL TRADE: SALES

Independent Stores. Kinds of Business, By States and Cities. Monthly.

A separate release for each of 34 States is issued. Each release consists of an analysis of the data tabulated and of two tables and one chart (except in a few instances where tables are also given for individual cities. *See* States of Missouri and Washington below). Both the tables and the chart, in blank, are identical for all the states. Both tables indicate the number of firms reporting, the percentage change in sales of November 1944 versus November 1943, January-November 1944 versus 1943, November 1944 versus October 1944, as well as the dollar amount of sales reported for November 1944. In one table these captions are broken down for city-size groups, with, usually, reports of sales for selected cities shown separately. Names of cities so shown separately are stated below in the listing by States. The city-size groups range from places below 2,500 population to cities over 100,000, the number of groups in the States varies in accordance with the population volume of the States. The number of groups into which a State is divided is shown below by the figure in brackets. In the other table using the same captions, the break-down of reported data is by kinds of business and number of firms reporting. These vary, of course, for the different States. A complete listing of businesses tabulated for all States is shown below. The chart, using the same kinds of business as the table just cited, compares the percentage of sales by kinds of business in November, 1944, with November, 1943. Kinds of business included in the tables and the charts vary with different states and all are not shown separately. Those listed mainly are as follows:

Apparel Group:

1. Men's Clothing and Furnishings Stores
2. Family Clothing Stores
3. Women's Ready-To-Wear Stores
4. Shoe Stores

Food and Beverage Group:

5. Eating and Drinking Places
6. Restaurants, Cafeterias, Lunchrooms
7. Grocery Stores (Without Fresh Meats)
8. Liquor Stores (Packaged Goods)
9. Combination Stores (Groceries, Meats)
10. Drinking Places

CENSUS PUBLICATIONS

3. SUBJECT GUIDE

JANUARY 1945

Vol. 1.

Washington 25, D.C.

Pt. 3, No. 1.

Census Publications consists of the following parts issued separately:

1. Program for the Year (annually)—an outline of the regular publication program of the Bureau of the Census in the various subject matter fields.
2. List of Publications Issued (monthly)—a listing of special publications, reports issued in series at irregular intervals, and regular publications issued less frequently than quarterly.
3. Subject Guide (monthly)—a classified guide to contents of all publications issued during the month.

NOTES ON PUBLICATIONS

The following journal articles may be of interest to users of Census Bureau Publications:

Classification Changes in Export Statistics, by J. Edward Ely and Frederick W. Harrison, appeared in Foreign Commerce Weekly, January 6, 1945 issue. (Reprints are available from the Bureau of the Census.) Significant changes made in the 1945 edition of Schedule B, "Statistical Classification of Domestic and Foreign Commodities Exported from the United States," Parts I and II are described.

The January issue of the Annals of the American Academy of Political and Social Sciences, entitled "World Population in Transition," includes the following articles by members of the Census Bureau staff:

1. "The Changing Population of the United States" by Philip M. Hauser (Bureau of the Census) and Conrad Taeuber (Bureau of Agricultural Economics), which describes certain basic population trends and their relationships to one another. These trends are discernible through an analysis of the population changes which have occurred during the development of the United States from a small, primarily agricultural nation to a large, primarily urban, industrialized world power and are closely associated with the economic, political and social history of this country and especially with the impact of the Industrial Revolution. The most spectacular of the trends are the extremely rapid rate of population growth during the 19th Century and the equally rapid decline in the rate of population growth since the turn of the century.
2. "Demographic Status of South America," by Halbert L. Dunn, Hope Tisdale Eldridge, and Nora P. Powell, which states that at present South America is the fastest growing continent in the world, with indications that it is in an earlier phase of the growth cycle already experienced by the European, Asiatic and North American countries, with trends and pattern of population growth similar to those of other

nations. Prospects of future growth are good because of the high natural increase and with reduction of mortality a definite possibility, though progress will be slow until a more intensive public health movement and medical care program are instituted.

Analysis of the demographic statistics of South America is difficult because of the lack of regular censuses, and consequently comparable data, also the disruption in the continuity of birth and death statistics by changes in registration practice and regulations. Closer co-ordination between agencies collecting data and publishing statistics will help to solve many problems of vital statistics.

3. "The Demographic Heritage of the Japanese Empire" by Irene B. Taeuber (Bureau of the Census) and Edwin G. Beal (Library of Congress.) The demographic expansion which accompanied the economic and political development of the Japanese Empire during the last 75 years will have a direct and determining influence on the future development of both the Japanese home islands and the various parts of the colonial empire. Although the population redistribution during the industrialization of Japan was similar to that which occurred in Western countries, it was greatly accelerated. The general effect of combining forced industrialization with maintenance of an agrarian social structure was the retardation of the rate of decline of both mortality and fertility. Japan's desire to achieve and maintain an empire led to adoption of a population policy which would insure a population sufficient for overlordship of Eastern Asia. Even though war losses and post war conditions of Japan are unknown, it is unlikely that predictions of rapid increase in population will be invalidated.

The demographic situation and trends of both Japan and the conquered areas cannot be ignored if the peace in Eastern Asia is to be compatible with basic humanitarian sentiments of East and West and at the same time offer a reasonable possibility that Japan may not again emerge as the focal point of wars of conquest in the far Pacific.

Prepared by the Information and Publications Division of the Bureau, with the cooperation of the Office of the Statistical Assistant to the Director. The assistance of Adelaide R. Hesse is gratefully acknowledged.

4. "The Trend Toward an Older Population" by John D. Durand, which presents some of the economic, social and political, and military problems that may result from the tendency of the population of the Western world to grow older. This trend is a consequence of the falling birth rate which has been an outstanding characteristic of modern population history in this part of the world, and cannot be ignored in planning for the future.

Attention is also directed to the following Census Bureau Publications included in this guide which were issued in January 1945 and may be of particular interest:

1. Foreign Trade Bulletin, P.B. 68-A, Summary of Selected Changes Made in Schedule A, Statistical Classification of Imports into the United States January 1, 1943 Edition. Part I covers the new classifications established as a result of the Reciprocal Trade Agreements which have become effective since January 1, 1943, changes in commodity description to clarify import commodity classifications, and editorial changes necessary since publication. A revised Schedule C, Classification of Foreign Countries, effective January 1, 1945, is also included. (25 pages). Part II contains revisions in the foreword of Schedule A and a listing of the modified rates of duties resulting from the Reciprocal Trade Agreements, Treasury Custom Decisions, etc. (18 pages). This bulletin was issued because there will be no January 1, 1945, revision of Schedule A.
 Mimeographed copies of the 1945 Schedule C, Code Classification of Foreign Countries and United States Territories and Possessions, used in compiling foreign trade statistics, are available in arrangements both by numeric code number and alphabetic sequence of each country, adjacent province, territory, and island.
2. Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States consists of two parts: Part I is the Alphabetic Index, January 1, 1945 Edition. (423 pages). Price \$1.00. Part II is the Numbered Classification and Articles Included. January 1, 1945 Edition. (295 pages). Price \$.65. Both Parts I and II are

for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

3. Estimates of Farm Population and Farm Households: April 1944 and April 1940 (4 pages) is the first of a series of releases to be issued cooperatively by the Bureau of the Census and the Bureau of Agricultural Economics, giving estimates of farm population and related statistics. The estimates presented are based on 1940 Census data, the Monthly Report on the Labor Force and two cooperative studies made by the Census Bureau and the Bureau of Agricultural Economics, one of which was the matching of schedules for 7,000 households from the 1940 Census of Population, Agriculture, and Housing and the other a sample enumeration of about 4,000 farm households conducted in April 1944. From the tabulated results a picture of wartime shifts in the size and characteristics of the farm population is obtained.
4. The Cities Supplement to the Statistical Abstract of the United States (47 pages) was prepared in response to requests for a summary presentation of data for smaller areas than can be presented in the annual volume. Selected data on social, economic, and governmental subjects for each city in the United States having 25,000 or more inhabitants in 1940 are presented. The cities are arranged in the various tables according to their 1940 population rank. Copies may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D. C., for \$.15.
5. Estimates of the age, color, and sex distribution of the population of the United States, on July 1, 1944 and 1943, both including and excluding members of the armed forces overseas are presented in the Population Special Report (POP-P-45, No. 1) Estimated Population of the United States, by Age, Color, and Sex, 1944 and 1943 (3 pages).
6. First issues of new "Facts for Industry Series," issued jointly by the War Production Board and the Bureau of the Census include: (MF-5-19) Mechanical Pencils (2 pages); (MF-14-9) Industrial Power Trucks (1 page); (MF-14-11) High Pressure Blowers (1 page); (MF-14-12) Fans, Blowers and Exhausters (4 pages); (MF-14-13) Conveying Machinery and Mechanical Power Transmission Equipment (3 pages); and (MF-30-4) Steel Forgings (2 pages).

JUDICIAL CRIMINAL STATISTICS: 1942--Continued

State Series

No. 25. Ohio. 2 pages. 4 tables. Dated October 3, 1944.

In coverage tables 1 to 4 are identical for all States. Table 1 shows defendants disposed of and convicted for 11 named major offenses, number and rate per 100,000 population, for 1938, 1940-1942. Table 2 shows procedural outcome for defendants, disposed of for major offenses number, and percent, 1938, 1940-1942. Table 3 shows type of sentence imposed on defendants convicted of major offenses, 1938, 1940-1942. Table 4 shows disposition in superior courts of defendants for all i.e. 22 named offenses. In only one case, Minnesota, do the tables exceed four in number. Tables 5-10 for Minnesota are a detailed development of the preceding tables.

The 11 major offenses uniformly included in Table 1 are: murder, manslaughter, robbery, aggravated assault, burglary, larceny, auto theft, embezzlement and fraud, receiving stolen property, forgery and counterfeiting, rape. In the case of each State the tables are preceded by an analysis of the coverage.

No. 26. Summary. 7 pages. 8 tables. Dated January 5, 1945.

Introduction: Scope of report, limitations of the statistics, methods of collection. Table 1. Procedural outcome for defendants disposed of for major offenses by States: 1942. Table 2. Shipments. Orders. Value. Monthly. (Facts for Industry Series, MF 34-9.)

No. 4. 1944 November. 3 pages. 12 tables. 12 charts. Released January 27, 1945.

This is the fourth release combining data heretofore issued as Facts for Industry Series 34, divisions 1-7. The same 12 items formerly included in these 7 divisions are now combined in division 9. They are metal cutting tools, mechanics hand service tools, machine tools, heat treating furnaces, portable pneumatic and electric tools, foundry equipment and supplies; electric metal melting furnaces, precision measuring and testing machines, and instruments, gage blocks, micrometers, precision measuring tools, tool room specialties. Shipments and unfilled orders at end of periods are given for all items, adjusted new orders for only the first three, the fifth, sixth and seventh items named. Periods covered for each item are October, November 1943, September, October, November 1944. The 12 charts cover the same items as those listed above for the tables, the periods covered, however, vary. Shipments and unfilled orders for machine tools, portable pneumatic and electric tools mechanics' hand service tools and heat treating furnaces are charted by months from January 1942 to November 1944. Remaining items are charted by months from January 1943 to November 1944.

CENSUS PUBLICATIONS

3. SUBJECT GUIDE

FEBRUARY 1945

Vol. 1.

Washington 25, D.C.

Pt. 3, No. 2.

Census Publications consists of the following parts issued separately:

1. Program for the Year (annually)—an outline of the regular publication program of the Bureau of the Census in the various subject matter fields.
2. List of Publications Issued (monthly)—a listing of special publications, reports issued in series at irregular intervals, and regular publications issued less frequently than quarterly.
3. Subject Guide (monthly)—a classified guide to contents of all publications issued during the month.

Users of population data may be interested in the 2-page article by John Durand, "Population Gain Results from War" in the February issue of Domestic Commerce, Department of Commerce bulletin, which attributes to World War II our large net population increase since 1942 which far overbalances our military losses. Comparisons are made with other countries concerning birth rate trends and predictions are given of what these trends will be for the remaining period of the war, and the periods of demobilization and reconversion. Ultimate reversion to a declining birth rate, however, is expected following the temporary war-time gain. Single copies of this periodical may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., for 10 cents and remittances should be sent direct to that office.

Attention of users of Census data is also directed to the following Census publications, issued in February, which may be of particular interest:

1. The Quarterly Summary of Materials Consumption for New Construction in the United States (14 pages) introduces a new series in the Facts for Industry group, released jointly with the War Production Board. The quantities of materials required for construction activity, both public and private, are presented broken down in four main categories, namely (1) Military Construction; (2) Plant Expansion; (3) Housing; and (4) All Other Non-Military Construction. The effects of anticipated cancellation of conservation and limitation orders and the use of substitute materials have been taken into consideration.
Other new series in Facts for Industries include X-Ray Equipment (2 pages), covering quarterly shipments and Commercial Canning Supplies (2 pages), covering quarterly production.
2. Differential Fertility, 1940 and 1910: Women by Number of Children Under 5 Years Old (ix, 265 pages) presents statistics on the fertility of native white and Negro women, age 15-49, classified by social and economic characteristics of

women and their families. The report is based on tabulations of sample returns from the 1910 and 1940 Censuses and reflects the changes in fertility rates during this period, which in general have had a downward trend until just before the war. This report may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., for 65 cents, and remittances should be sent direct to that office.

3. United States Summary of Vital Statistics, 1943, Vital Statistics Special Report, Vol. 22, No. 1 (21 pages) contains data for both the United States and for individual States on birth, death, maternal and infant death rates, the leading causes of death, and stillbirth ratios. These rates are based on the latest population estimates available, but in making comparisons cognizance must be taken of variations among the States in such characteristics as age, sex, and race distribution, and especially the changing composition of the population due primarily to the wartime shifts to industrial areas, establishment of large military camps in certain areas, and the large movement of troops in and out of the country.
4. Evaluation of Provisional Vital Statistics from the Monthly Vital Statistics Bulletin 1937-1942, Vital Statistics Special Report, Vol. 19, (pp. 413-436) is a comparative study of the provisional birth, death, and infant death statistics and the corresponding final figures for the United States as a whole and the individual States for the years 1937-42. The primary objective of the report is to determine the accuracy of the figures received currently from a large proportion of the States as indices of final figures for the whole United States.
5. Balances in State General, Highway, and Postwar-Reserve Funds in 1944 Vol. 2, No. 3 of the State Finances: 1944 series (7 pages) is the second report to be issued on State "surpluses" in specified funds. This report is preliminary, however, and data are not yet available for all 48 States, but the statistics for the 36 States included

present a summary of the situation. General funds, highway funds, and postwar-reserve funds of the various States were chosen for this study since their status reveals the clearest overall picture of the financial condition of each State.

6. State Budgets for 1946 and 1947, Biennial and Annual Budgets Presented to State Legislatures Vol. 2, No. 1 (Preliminary) of the State Finances: 1945 series is a preliminary report presenting an

analysis of budget documents from 28 States, which indicates the responsibilities that State governments plan to assume, especially in planning for postwar economic adjustments. Knowledge of State financial plans in advance is essential from a national point of view, since they must be considered in conjunction with those being developed currently by Federal and local governments, as well as those of private enterprise.

POPULATION—Continued

Differential tabulations cover age, education, race, marital status, parentage, migration status, employment status, tenure of home status, rental value of home, occupation group of husband. Tabulations of education, employment and tenure of home are as of 1940 only. Migration status is as of 1940 compared with 1938. Differential tabulation comparisons are: urban, rural non-farm and rural farm. Definitions of terms as used in this report, such as urban, rural, race, tenure of home, family normal and sub-family are included in the Introduction preceding the tables. The detailed tables are arranged in two groups, viz. for the United States as a whole, pages 1-106, and for regions of the United States, pages 107-265. Regions as used in this report are shown on the map accompanying the report. The report was prepared by Wilson H. Grabill, under the supervision of Dr. Leon K. Truesdell, Chief of Population Division, Howard G. Brunsman, Assistant Chief, and Dr. Henry S. Shryock, Jr., Chief of General Population Statistics.

RETAIL TRADE: SALES

Independent Stores. 34 States. By Kind of Business.

Monthly. (BUS-RS/Pre-1/45)

1945. January. 1 page. 1 table. Released February 10, 1945.

Percent change vs. December 1944, January 1944.

Food stores, eating and drinking places, general stores, filling stations, drug stores, department stores, drygoods and general merchandise stores, apparel stores, jewelry stores, motor-vehicle dealers, furniture stores, hardware stores, lumber and building materials dealers.

Independent Stores. Kinds of Business, By States and Cities. Monthly. (BUS-RS-State-2/45)

The separate releases for States consist of an analysis of the data tabulated and of two tables and one chart. In a few exceptional cases an additional table is set up for individual cities, see such a table for Illinois and Missouri below, where an extra table is shown for Chicago and St. Louis. Both the tables and the chart, in blank, are identical for all the States. Both tables indicate the number of firms reporting, the percentage change of sales volume for three selected preceding periods, as well as the actual dollar volume of sales for the current month. One table breaks these captions down by city-size groups which vary, of course, with the different states.

RETAIL TRADE: SALES—Continued

Independent Stores, etc.—Con. (BUS-RS-State-2/45)

These groups range from places below 2,000 to cities of 100,000 and over. The other table, using the same captions, is by kinds of businesses, number of firms reporting for each, and the dollar volume of sales. This table is also converted into a chart, a feature of each release.

Kinds of business included in the tables and charts vary with different states, and are selections from the following over-all list.
