STATE OF BIRTH OF THE NATIVE POPULATION

INTRODUCTION

GENERAL

This report presents statistics on the State of birth of the native population of the United States, based on the returns of the 1940 Census of Population. The inquiry as to State of birth has been carried on the Population Schedule at each census beginning with that of 1850. The data in the present report relate to the population living in continental United States at the time of the 1940 census, with comparable data back to 1850 in some of the tables. Statistics are presented on the State of birth of the native population of States, urban and rural, and of cities of 100,000 or more.

The returns as to State of birth are of value mainly for the light they throw upon the historic movement of the native population from one place to another within the United States from the time of birth to the date of the census. Extreme care should be exercised in the use of these figures as representing or measuring migration, however, since in this connection they indicate only the net result of migration during the widely differing periods of life of the persons who were enumerated.

The census figures on State of birth take account, in the matter of migration, only of those persons who have moved from one State to another and are, on the census date, living in States other than those in which they were born. The statistics therefore afford no indication of the amount of migration within a given State from rural to urban communities or from one locality to another; nor do they take any account of intermediate moves between the time of a person's birth and the time of the census.

The statistics thus do not indicate the total number of persons who have moved from the State in which they were born to other States, or to any other specific State, during any given period of time. Some of those who have gone from one State to another have since died, others have returned to the State in which they were born, and still others have gone to still other States or to places outside the boundaries of continental United States.

Related reports. -- The present report gives statistics on the place of birth of the native population only. Statistics on the place of birth of the foreign-born white population are contained in Volume II of the 1940 Reports on Population.

A report entitled "Internal Migration --- Color and Sex of Migrants" presents statistics on the movement of the population 5 years old and over between States and between urban-rural parts of States, with figures on the movement into and out of large cities, between April 1, 1935, and April 1, 1940. The statistics presented in that report are subject to some of the same limitations as the statistics on State of birth. do not represent the total number of moves that were made during the five years, but rather represent the number of persons surviving through the five-year period, classified by place of residence at the beginning and end of the period. Statistics are presented on the internal migration of the population between 1935 and 1940 by origin and destination, for States, urban and rural, and for cities of 100,000 or more.

Arrangement of tables.—In general, the tables in this report are arranged in accordance with the areas for which the statistics are presented. Tables 1 to 3 present data for the United States as a whole. Tables 4 to 12 give statistics for regions and divisions, tables 13 to 24 for States, tables 25 to 32 for urban and rural parts of regions and States, and tables 33 to 35 for cities of 100,000 or more. The last five tables of this report, tables 36 to 40 present statistics for children under 5 years old (see section on "Age," below).

Availability of unpublished data.--Data on persons of all ages by color, sex, and State of birth, similar to those presented here for each State of residence in tables 21 to 24, have been tabulated separately according to residence in 1940 in the urban and rural areas of the State. Furthermore, data on persons of all ages by State of birth, similar to those presented in table 35 for each city of residence of 100,000

or more, have been tabulated by color and sex for each of these cities. Finally, data have been tabulated on persons under 5 years old similar to those for persons of all ages. It has not been possible, because of space limitations, to publish the data in full detail.

The unpublished statistics, however, can be made available upon request for the cost of transcribing or reproducing them. Requests for such statistics, addressed to the Director of the Census, Washington 25, D. C., will receive a prompt reply which will include an estimate of the cost of preparing the data.

DEFINITIONS OF TERMS AND EXPLANATIONS

Nativity. -- Practically all of the data in this report relate to the native population of the United States, although figures on the number of foreign born are presented in tables 1, 10, 13, 25, 33, and 34, in order to complete the distribution of the entire population of an area according to birthplace. In the classification by nativity, a person born in continental United States or in any of its territories or possessions is counted as native. Likewise, included as native is the small group of persons who, although born in a foreign country or at sea, were American citizens at birth because their parents were American citizens.

Thus the term "native population," when used in the tables presenting statistics by States, does not indicate that the persons are native to (that is, born in) the several States, but merely that they were born in the United States or its outlying territories or possessions (or are American citizens born abroad or at sea). The natives of individual States are designated in the table headings as "Population born in" the specified States. In some of the tables the statistics have been limited to persons in continental United States and with State of birth reported, excluding those born in the outlying possessions, abroad, or at sea, and those for whom State of birth was not reported. The native population is not here subdivided according to nativity of parents as has been done in previous reports on State of birth.

Contiguous and noncontiguous States.—Approximately 47 percent of the natives of continental United States who were enumerated in 1940 outside the States in which they were born were living in States contiguous to their State of birth. The proportion is even higher for the rural-farm population and somewhat lower for the urban population. In tables 19, 25, and 38, summary statistics are presented for persons born in States which are contiguous, and in States which are noncontiguous, to their State of resi-

dence. States have been defined as contiguous if their boundaries touch at any point. This classification of contiguous and noncontiguous States is the same as that used in the presentation of the returns on State of birth in the 1930 census, where the terminology "adjacent and nonadjacent States" was used.

Net gain or loss through interregional, interdivisional, or interstate movement .-- The net gain or loss through interregional movement (tables 7, 8, and 26), interdivisional movement (tables 9, 11, 12, 27, and 36), and interstate movement (tables 14 to 17, 28, 29, and 38 to 40) represents the difference on the census date between the total number of surviving native persons who had moved out of the specified area since they were born and the total number of surviving native persons who had moved into the specified area since they were born. Some of these persons are the survivors of groups who departed from, or arrived in, the area half a century or more before the census was taken. The figures, therefore, do not represent migration in the sense of the number of persons coming or going during the preceding census decade or during any other specific period of time. The "Change in net gain or loss as compared with preceding census," as shown in column I, table 9, represents the algebraic difference between the net gains or the net losses at the beginning and the end of the decade. Even this figure, however, does not represent exactly the difference between the number of native migrants out of the division and the number of native migrants into the division, since it is affected also by differences in mortality and by the movement of native population between the area in question and foreign countries.

Urban and rural areas. -- Because of the differences between urban and rural population with respect to the proportion of persons born in other States, separate statistics are given in tables 25 to 32 for the urban population, the rural-nonfarm population, and the rural-farm population. Statistics for urban and rural areas contained in this report relate to the place of residence of the population at the time of the census. No information is available on urban or rural residence at birth, since the census returns give only the State of birth (or the place of birth in corresponding terms for the native population born outside of continental United States).

Urban population, as defined by the Bureau of the Census, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more. In addition, certain densely populated townships or other civil divisions, not incorporated as municipalities, have been classified as urban under special rules. The remainder of the population is classified as rural and is subdivided into the rural-farm population, which comprises all rural residents living on farms, without regard to occupation, and the rural-nonfarm population, which comprises the remaining rural population. (For further details for each State, see Volume I of the Population Reports.)

Sex and color. The data in the present report are presented, by States, for the population classified by color and sex. Two color groups are distinguished in the tabulations, white and nonwhite, the latter including Negroes and other nonwhite races (Indians, Chinese, Japanese, Filipinos, etc.). The great majority of the nonwhite population consists of Negroes, except in the Pacific States, where there are many Chinese and Japanese, and in Oklahoma and certain Mountain States, where many of the nonwhites are Indians. Persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race were returned as white in

1940. Statistics for cities of 100,000 or more are presented for the total native population by sex, with statistics for nonwhites shown only for those cities which had 5,000 or more non-whites.

Age .-- All the tables in this report except the last five deal with persons of all ages combined. Tables 36 to 40 present data on State of birth by State of residence in 1940 for children under 5 years old on their last birthday before the date of the census. These figures indicate the extent of interstate movement among children under 5 years old between the time they were born and the date of the census. In this respect, the figures supplement the report on internal migration which, as indicated in the section above on "Related reports," presents statistics on the migration of persons 5 years old and over. Statistics on the State of birth of young children are also useful in the determination of the extent to which they are underenumerated and in the evaluation of the number of children under 5 years old as a measure of fertility for States.
