NUMBER OF INHABITANTS

INTRODUCTION

This bulletin summarizes the statistics relating to the number of inhabitants of the United States as returned in the 1940 census, presenting the total population of the various areas, without classification by race, sex, age, or any other characteristics, such classification being reserved for other series of bulletins and other volumes of the census reports. The population is shown for States, counties, cities, and other urban places arranged in groups according to size, for metropolitan districts, and for incorporated places having from 1,000 to 2,500 inhabitants. Comparative figures are presented for the States and for cities of 100,000 or more for all censuses, beginning with the first in which the area was separately enumerated. For counties, smaller cities, and metropolitan districts, comparative figures are given for at least one earlier census wherever available. This bulletin and the individual State bulletins described in the following paragraph will be combined and published as volume I of the Sixteenth Census Reports.

State bulletins.—The results of the count of the population covered by the Sixteenth Census, taken as of April 1, 1940, were first published in a series of State bulletins, each entitled "Population, First Series, Number of Inhabitants." The bulletin for each State gives the population by counties and minor civil divisions (townships, districts, precincts, etc.), with separate figures for cities, towns, villages, and other incorporated places, for wards of incorporated places of 5,000 or more, and for metropolitan districts and census tracts. Similar bulletins were issued for the territories and possessions, except the Philippine Islands, where an enumeration was conducted by the Commonwealth of the Philippines in 1939. Each State bulletin gives, for the State to which it relates, the 1940 population of all geographic areas and subdivisions for which official figures are available. Volume I, which will contain all the bulletins, will present the number of inhabitants for all the populated geographic subdivisions officially recognized by the Census Bureau.

Unincorporated places.—The Census Bureau often receives requests for the population of villages or small towns that are not incorporated and therefore have no legally established boundaries. The publication of official population figures is necessarily limited to those places that have definite and well recognized bounda-

ries—that is, to places incorporated as cities, boroughs, towns, or villages. Informal population counts are sometimes provided, however, for unincorporated places, where the enumerators have indicated the beginning and the ending of these places on their schedules. Record is made of all requests for the population of unincorporated places, and approximate figures will be sent, if and when available, to those who have made such request.

Enumeration at usual place of residence.—For the country as a whole, and for every State and every political subdivision within the State, the population reported is the resident or de jure population. The enumerators under the census law have been instructed to enumerate persons at their "usual place of residence" or "usual place of abode"—that is, at their permanent homes or regular lodging places. Hence persons were not in all cases counted in the places where they happened to be found by the enumerators; in particular, they were not always counted in the places where they worked or carried on their daily occupations. Thus it happens that the business or industrial population of any large city includes a considerable number of persons who are not counted as a part of the census population of the city. These persons carry on their business or perform their daily tasks, spend a considerable portion of their incomes, and perhaps eat all or part of their meals, in the city, but have their residences or lodging places outside the municipal limits.

Persons temporarily absent from their usual places of residence—for example, persons away from home on a visit or on business, traveling for pleasure, attending school or college, or sick in a hospital—were enumerated at their homes or the places where they usually live, information regarding them being obtained from some other member of their family or from relatives or acquaintances. Entire households away from home were enumerated where found, and the returns were allocated to their usual place of residence. Persons having no regular place of residence anywhere, however, were enumerated where they were found at the time of the enumeration and were counted as residents of that area.

Persons in the military service in the United States were enumerated as residents of the States, counties, and minor civil divisions in which their posts of duty were located, and members of their families were

enumerated where they actually resided. The crews of vessels in the American merchant marine were enumerated as such and counted as a part of the population of the port from which the vessel operated.

United States and possessions.—Table 1 shows the population of the United States and its territories and possessions for 1940, 1930, and 1920. In the other tables of this bulletin the figures are limited to the 48 States and the District of Columbia.

Population of continental United States from 1790.-The areas now forming the 48 States and the District of Columbia were first completely enumerated in 1890, and all areas, except what is now the State of Oklahoma, were included also in the censuses of 1860, 1870, and The gradual increase in the territory covered by the census is indicated below.

The first census, taken in 1790, covered the area now occupied by the District of Columbia and the following States: Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Kentucky, Tennessee, and part of Georgia.

In 1800 the enumerated territory was extended to include the areas of the present States of Ohio. Indiana, Illinois, Michigan, Wisconsin, and all but the extreme northern and southern parts of Alabama and Mississippi.

In 1810 there were further additions, comprising the territory now forming the present State of Arkansas, all but the northwestern corner of Missouri, and all but the southwestern part of Louisiana. The extreme northern parts of Alabama and Mississippi were also first canvassed at this census.

In 1820 the southern tips of Alabama and Mississippi. the northwestern part of Georgia, and the southwestern part of Louisiana were covered. The territory was extended in 1830 to include Florida, and in 1840 to include Iowa, northeastern Minnesota, and the remaining part of Missouri.

In 1850 very sizable additions were made, comprising the territory that now forms Texas, Utah, Washington, Oregon, and California, and most of New Mexico.

In 1860 the area covered was brought up to its present extent, except for Oklahoma, which was first enumerated in 1890.

Table 2 shows the population of continental United States from 1790 to 1940, with the decennial increase. the land area included in the legal boundaries at each census, and the population per square mile.

TABLE 2.—POPULATION AND AREA OF CONTINENTAL UNITED STATES: 1790 TO 1940

CENSUS DATE	Population	INCREASE O		Land area	Popula- tion per
		Number	Percent	miles 2	square mile
1940 (Apr. 1)	131, 669, 275	8, 894, 229	7.2	2,977,128	44. 2
1930 (Apr. 1)	122, 775, 046	17,064,426	16.1	2, 973, 776	41.3
1920 (Jan. 1)	105, 710, 620	13,738,354	14.9	2, 973, 776	35.5

¹ Percentage increases are computed on basis of change in population since preceding

Data corresponding to those in table 2 are given in tables 3 to 5, which deal with population, decennial rates of increase, and population density, respectively, for individual regions, divisions, and States.

Urban and rural areas.—In the course of its history the census has employed several definitions of urban population. The current definition was adopted in sub-

¹ Revised. Differs from figure published in 1930 census reports; revised figure for the Philippines is an estimate derived by interpolation between censuses of Dec. 31, 1918 (10,314,310), and Jan. 1, 1939 (16,000,303).

¹ Revised. Differs from figure published in 1930 census reports; revised figure for Virgin Islands is an estimate derived by interpolation between censuses of Nov. 1, 1917 (25,051), and April 1, 1930; revised figure for the Philippines estimated by interpolation between censuses of 1918 and 1939.

¹ Census taken as of Oct. 1 of the preceding year.

⁴ Includes Baker, Canton, Enderbury, Howland, Jarvis, Johnson, and Midway Islands.

Islands.

8 Estimate derived by extrapolation from censuses of 1918 and 1939.

¹ The sum of the areas enumerated was not always identical with the area included within the legal boundaries of the United States at the respective dates, nor was it always possible to indicate the exact boundaries of the enumerated areas. In the earlier censuses not all of a State or territory was covered by the enumerators but only that part up to the "frontier line" and any large isolated settlements beyond. For example, Iowa Territory in 1840 included all of what is now Iowa and most of what is now Minnesota, but within the Territory the only substantial settlements were in the southeastern corner of what is now Iowa, and hence only this part was covered by the census of 1840. It is not feasible to make a more exact statement than that the area of what is now Iowa was added to the area of enumeration in 1840. The western part of what is now Minnesota, however, was not included until later.

¹ Percentage increases are computed on basis of change in population since preceding census date, and period covered therefore is not always exactly 10 years. Adjustments for differences in census date must be made if strictly comparable figures are desired for each decade.
² The figures given for the various census years represent the area of all the land within the present boundaries of continental United States which was under the jurisdiction of the United States on the date in question, including in some cases considerable areas of land not then organized or settled and not covered by the census.
³ A revised figure of 39,818,449 for the 1870 population includes adjustments for under enumeration in the Southern States. Unadjusted data are used in this and subsequent tables because revised figures for States, urban-rural residence, etc., are not available.

stantially its present form at the time of the 1910 census and was slightly modified in 1920 and again in 1930. The present compilation, which has been extended back to 1790, is made on the basis of the definition of urban population employed in 1930 and 1940.

The urban area is made up for the most part of cities and other incorporated places having 2,500 inhabitants or more, places of this type constituting about 96 percent of the urban places in the United States. A second type is limited to the States of New Hampshire, Massachusetts, and Rhode Island, in which States it is not the practice to incorporate as municipalities places of less than 10,000. This type is made up of towns (townships) in which there is a village or thickly settled area having more than 2,500 inhabitants and comprising, either by itself or when combined with other villages within the same town, more than 50 percent of the total population of the town. This type of urban places comprised, in 1940, 7 towns in New Hampshire, 83 towns in Massachusetts, and 12 towns in Rhode Island. A third type of urban places is made up of townships and other political subdivisions (not incorporated as municipalities, nor containing any areas so incorporated) with a total population of 10,000 or more and a population density of 1,000 or more per square mile. Under the special rule establishing this type, urban classification was given in 1940 to places distributed as follows: 4 towns in Connecticut, 1 town in New York, 12 townships in New Jersey, 11 townships in Pennsylvania, 2 election districts in Maryland, 1 county (which had no minor civil divisions) in Virginia, 1 militia district in Georgia, and 1 township in California.

The individual places of types 2 and 3 that have been brought into the urban classification are included in the tables presenting the population of the various groups of urban places (tables 12 to 15) and marked with an asterisk (*).

The rural population is by no means identical with the farm population, that is, the population living on farms. (The rural-nonfarm population of the United States is now nearly as large as the rural-farm population.) Practically all of the farm population is rural, however. Statistics of the farm population are presented in the second and later series of Population bulletins, and in the volumes devoted to the detailed classification of the population data.

The total, urban, and rural population, and the decennial increase in each, are presented for all the census years from 1790 to 1940 for the United States as a whole in table 6, for regions, divisions, and States for 1940 and 1930 in some detail in table 7, and in less detail from 1790 to 1940 in table 8. The urban and rural population of the United States at each census is also shown graphically in the following chart.

Places grouped according to size.—For the convenience of those who are interested in places of various

sizes, statistics are presented in tables 12 to 16 for the urban places arranged in groups according to size. In table 12 is presented the population of cities having 100,000 inhabitants or more in 1940, with comparative figures running back to the first census in which the city appears. Table 13 shows the population of urban places having 25,000 inhabitants or more in 1940, with comparative figures from 1910; table 14 shows the population for 1940, 1930, and 1920 of urban places having from 5,000 to 25,000 inhabitants; and table 15 presents similar figures for urban places having from 2,500 to 5,000 inhabitants. The places listed in these tables, taken together, comprise the urban classification in 1940.

URBAN AND RURAL POPULATION OF THE UNITED STATES: 1790 TO 1940

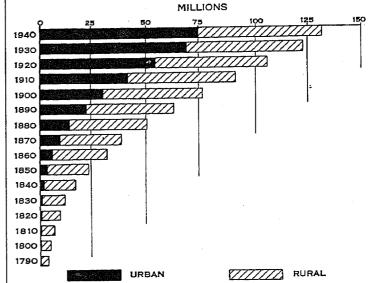

Table 16 shows the population of the larger incorporated places which are included in the rural classification, namely, those having from 1,000 to 2,500 inhabitants.²

The total population in each of the various size groups is summarized for the United States for 1940 and 1930 in table 9, which also indicates the changes in the number of places of each size between 1930 and 1940. Table 10 shows the total population in each of the groups for all the censuses from 1790 to 1940. Table 11 gives the number of places in each of the size groups, with their population, by regions, divisions, and States, for 1940 and 1930.

Counties.—The population is shown by counties, for 1940 and 1930, in table 17, together with the land area and the number of persons per square mile for 1940. The land areas for 1940 and 1930 given here are the results of the first complete remeasurement of the

¹ The population of incorporated places having fewer than 1,000 inhabitants in any State is shown in table 5 in the first series bulletin (or in the section for that State in volume I).

United States since 1881, rendered possible by greatly improved maps prepared during the last decade. These land areas, of course, differ somewhat from those published in earlier census reports. The urban and rural population of the counties is shown in table 3 of the respective State bulletins.

Maps.—The population density and the percentage change in population are shown graphically, by counties, on the maps on pages IV, V, and VI, respectively.

The dot map, in which each dot represents 2,000 inhabitants, gives the most accurate picture of the distribution of population, since each dot has been placed with extreme care, using large scale county maps and State minor civil division outline maps for reference. In placing these dots, consideration was given to the location of cities and the course followed by railroads, highways, and rivers. On this map population densities are suggested by the variation in spacing between dots. The dots are piled up to form black patches for cities, and in the sparsely settled lands of the West, a population thinly distributed over a large area may be represented by a single dot at one central point.

The shaded density map shows population per square mile by counties. Of necessity, it generalizes the material shown, for individual county densities give way to class intervals, and individual variations of density cannot be distinguished within the county average.

The population increase-decrease map shows an important aspect of population change. Care should be exercised in the use of this map, for, in addition to the data being necessarily generalized by county units, the percentage of increase or decrease in population is a relative measure which obscures absolute population changes. A 2 percent increase for a New York county may result from a much greater absolute change in the total population than a 25 percent increase in a county in the sparsely settled West.

Institutions.—The population of institutions and military posts is included as a part of the population of the city, township, or other political area in which the institution or post is located. This institutional population in some cases forms an appreciable fraction of the total population of the city or town; and sometimes it seriously affects the distribution of the total by sex, age, or other characteristics. It has not been found practicable, however, to make any general provision for showing separately the population of the institutions. Usually, the population of the institutions. Usually, so that due allowance may be made for its inclusion. In fact, the Census Bureau is in a

position to furnish the 1940 census population of many of the larger institutions on request.

Metropolitan districts .-- A metropolitan district has been set up for use in the 1940 census of population in connection with each city of 50,000 or more, two or more such cities sometimes being in one district. The general plan is to include in the district, in addition to the central city or cities, all adjacent and contiguous minor civil divisions or incorporated places having a population of 150 or more per square mile. In some metropolitan districts, a few less densely populated contiguous divisions are included on the basis of special qualifications. Occasionally only a portion of a minor civil division is included if the minor civil division has a large area and the principal concentration of population is in a small section in or near the central city, with the more remote sections being sparsely settled. In such cases, the unit considered is not the minor civil division but component enumeration districts. A metropolitan district is thus not a political unit but rather an area including all of the thickly settled territory in and around a city or group of cities. It tends to be a more or less integrated area with common economic, social, and, often, administrative interests.

Table 18 presents the population of the metropolitan districts in 1940 (see map on page 5) and, for all but the seven districts where comparable figures are not available, it presents also the population in 1930, together with the increase or decrease during the decade. For each district the population inside the central city (or cities) and that in the outside area are shown separately.

Census tracts.—Census tracts are small areas into which certain large cities and sometimes their adjacent areas are subdivided for statistical and local administrative purposes, through cooperation with a local committee in each case. In most cases the tracts are permanently established, so that comparisons may be made from census to census. The boundaries of tracts are established so as to include for the most part approximately equal numbers of inhabitants or equal areas; and each tract is designed to include an area fairly homogeneous in population characteristics. There are now 10,461 census tracts, in or adjacent to 60 cities, the list including all cities of 250,000 or more and a few smaller ones.

In table 19 is presented a list of the areas for which 1940 census tract statistics are available, together with an indication as to the availability of comparable 1930 figures. Table 8 of the first series bulletin gives, by tracts, the population for the tracted areas in the State.

¹ Percent of Increase in population from 1860 to 1870 is for Dakota Territory; percents from 1870 to 1880 and from 1880 to 1890 are for the parts of Dakota Territory that later constituted the States of North and South Dakota.
¹ Decrease due to loss of territory. West Virginia having been detached from Virginia and admitted as a separate State in 1863, and two additional countles having been annexed to West Virginia in 1866.

POPULATION OF THE UNITED STATES AND REGIONS: 1790 TO 1940

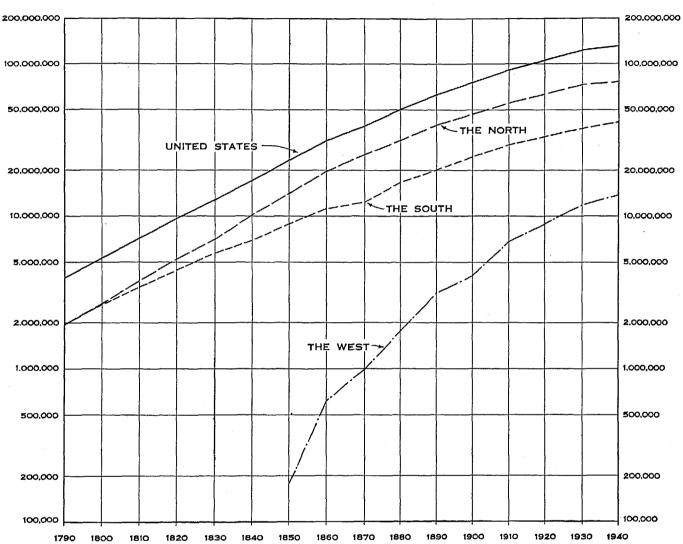

TABLE 5.—POPULATION PER SQUARE MILE, BY DIVISIONS AND STATES: 1910 TO 1940

(The 1940 and 1930 densities are based on new measurements of land area, but the figures shown for 1920 and 1910 are based on the accepted land area figures of those dates]

In 1940 Bluefield, Va., and Bluefield, W. Va.; Bristol, Tenn., and Bristol, Va.; Delmar, Del., and Delmar, Md.; Harrison, Ohio, and West Harrison, Ind.; Junction City, Ark., and Junction City, La.; Texarkana, Ark., and Texarkana, Tex.; Texhoma, Okla., and Texhoma, Tex.; and Union City, Ind., and Union City, Ohio, were counted as places (two fewer in each of the groups 2,500 to 5,000 and 10,000 to 25,000, and one more in the group 25,000 to 50,000). There would also have been five fewer rural incorporated places (all in the group of less than 1,000 population).

In 1940 Bluefield, Va., and Bluefield, W. Va.; Bristol, Tenn., and Bristol, Va.; Delmar, Del., and Delmar, Md.; Harrison, Ohio, and West Harrison, Ind.; Junction City, Ark., and Junction City, La.; Texarkana, Ark., and Texarkana, Tex.; Texhoma, Okla., and Texhoma, Tex.; and Union City, Ind., and Union City, Ohio, were counted as separate incorporated places, whereas in 1930 each pair was counted as a single place. If the 1930 treatment had been applied in 1940 there would have been three fewer

Presque Isle town incorporated as a city Jan. 1, 1940. As the information concerning this incorporation was received subsequent to the urban tabulations, the population of the village alone (5,450), rather than that of the whole town, has been included in urban totals and in totals for urban places of 5,000 to 25,000.

Table 14.—POPULATION OF URBAN PLACES HAVING, IN 1940, FROM 5,000 TO 25,000 INHABITANTS: 1920 TO 1940—Continued

¹ Corrected figure.

¹ Population for 1940 was originally reported as 2,549, a figure based on an erroneous inclusion of an area outside the village. This figure was later corrected to 1,409, the figure shown in table 16; but the original figure is included in urban totals and in totals for urban places of 2,500 to 5,000 shown in other tables.

⁸ Information as to incorporation in 1939 received too late for inclusion of figures in urban totals and in totals for urban places of 2,500 to 5,000 shown in other tables.

Table 15.—POPULATION OF URBAN PLACES HAVING, IN 1940, FROM 2,500 TO 5,000 INHABITANTS: 1920 TO 1940—Continued

Corrected figure.

7 Population for 1940 originally reported as 2,549 because of the erroneous inclusion of an area outside the village. Corrected figures were compiled too late to permit inclusion in totals for incorporated places of 1,000 to 2,500 in other tables. Original figure is included in urban totals and in totals for urban places of 2,500 to 5,000.

¹ Not divided into counties.
2 Organized in 1921.
3 Organized in 1923.
4 Organized in 1926.
5 Organized in 1925.
5 Organized in 1925.
5 Includes population (9,903) of Campbell County, and population (6,730) of Milton County, annexed to Fulton County in 1932.

Organized in 1923, Yellowstone National Park geographically located within limits of Idaho, Montana, and Wyoming. Total population: 459 in 1940, 258 in 1930, and 165 in 1920; reported in 1920 and prior years as in Wyoming only.

TABLE 18.—POPULATION OF METROPOLITAN DISTRICTS: 1940 AND 1930

[In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. For the areas included within each metropolitan district, see the reports for the individual States. A minus sign (--) denotes decrease]

TABLE 18 .- POPULATION OF METROPOLITAN DISTRICTS: 1940 AND 1930-Continued

In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. For the areas included within each metropolitan district, see the reports for the individual States. A minus sign (—) denotes decrease]

TABLE 18.-POPULATION OF METROPOLITAN DISTRICTS: 1940 AND 1930-Continued

[In the case of metropolitan districts defined in 1930, comparative figures for 1930 represent the population of the area as defined in 1930. Comparative figures are also shown for the metropolitan districts defined for the first time in 1940 if 1930 figures can be secured for exactly the same area. Such figures are obtainable for all but seven of the new metropolitan districts. For the areas included within each metropolitan district, see the reports for the individual States. A minus sign (—) denotes decrease]
