NOTE ON NONRESPONSE TO SAMPLE ITEMS

In a number of census tracts in this area, the proportion of persons and households for which sample items were not reported was unusually high. On items for which all missing cases were allocated, these omissions are not apparent in the regular tables. Table A gives information for each census tract in Chicago city on the sampling ratio and on nonresponse for persons. Specifically, the second column gives the percentage of persons for whom sample information was reported. Here "sample information" is defined as at least two sample items. Since sample data for population and housing were collected on the same form, the inadequacies of the data for persons are also indicative of those for housing units.

Outside the city, among tracts having 1,000 inhabitants or more, there were three in which the nonresponse rates were unusually high. Each of these tracts contained one or more ED's in which allocation rates were 50 percent or more for a majority of the sample items. In tract PRT-0118, 83 percent of the population was in such ED's; in tract BRT-0219, 93 percent; and in tract NPT-0088, 92 percent.

The extent to which cancellation and replication of sample items may have affected the quality of sample tract statistics, however, has not been determined. Further information on editing procedures is available in the section on editing in the text of this report and that of chapters C and D of 1960 Census of Population, Volume I, Characteristics of the Population.

Table P-1.—GENERAL CHARACTERISTICS OF THE POPULATION, BY CENSUS TRACTS: 1960

[Asterisk (*) denotes statistics based on 25-percent sample. Population per household not shown where less than 50 persons in households. Median not shown where base is less than 200]
