NOTE ON BIAS IN SAMPLE STATISTICS

Sample statistics of certain census tracts may be subject to substantial bias as the result of (a) under- or overenumeration in the sample, or (b) inadequate reporting of information for sample items. In the Harrisburg tracted area, tract 19 included one ED in which the allocation rate was 50-percent or more for a majority of items. The population of this ED comprised 59.4 percent of that of the tract. The extent to which cancellation and replication of sample persons may have affected the quality of sample tract statistics, however, has not been determined. Further information on editing procedures is given on page 8 of this report.
