NOTE ON BIAS IN SAMPLE STATISTICS

Sample statistics of certain census tracts may be subject to substantial bias as the result of (a) under- or overenumeration in the sample, or (b) inadequate reporting of information for sample items. Among tracts with 1,000 inhabitants or more, there were four cases where one or more component ED's (comprising more than 20 percent of the total population of the tract) had allocation rates of 50 percent or more for a majority of the sample items. In tract SM-48, 37 percent of the population was in such ED's; in tract HU-7, 69 percent; in tract IS-55, 95 percent; and in tract OTN-21, 42 percent. The extent to which cancellation and replication of sample items may have affected the quality of sample tract statistics, however, has not been determined. Further information on editing procedures is available in the section on editing in the text of this report and that of chapters C and D of 1960 Census of Population, Volume I, Characteristics of the Population.

NOTE ON VALUE DATA FOR OWNER-OCCUPIED UNITS

Evidence indicates that owner-occupied units in Manhattan are predominantly in "cooperative" apartments. Since it was not feasible to process the data to exclude these units, value data are not shown for Manhattan. In the New York SMSA and New York City totals, data include values for cooperatively owned units.
