# COMPARABILITY OF CENSUS TRACTS, 1960 AND 1950

The entire Philadelphia, Pa.--N.J., SMSA was tracted for 1950. The revisions in Philadelphia city are the result mainly of (1) combinations or splits of tracts due to population size, or (2) new wards. In the area outside Philadelphia, the revisions are due largely to (1) tract splits because of population, or (2) annexations. The tracts in Camden County, outside Camden city, have been completely renumbered since 1950. Shown below are the 1960 tracts that are not comparable to the 1950 tracts.

## NOTE ON BIAS IN SAMPLE STATISTICS

Sample statistics of certain census tracts may be subject to substantial bias as the result of (a) under- or overenumeration in the sample, or (b) inadequate reporting of information for sample items. Among tracts with 1,000 inhabitants or more, there were two in which the sample count varied by 5 or more percentage points from the expected level of 25 percent of the complete count. In tract GJ-22, a sample of 30 percent was obtained; and in tract C-49, a sample of 19 percent. Among tracts with 1,000 inhabitants or more, there were also two cases where one or more component ED's (comprising more than 20 percent of the total population of the tract) had allocation rates of 50 percent or more for a majority of the sample items. In tract 41-E, 62 percent of the population was in such ED's; and in tract 58-B, 100 percent. The extent to which cancellation and replication of sample items may have affected the quality of sample tract statistics, however, has not been determined. Further information on editing procedures is available in the section on editing in the text of this report and that of chapters C and D of 1960 Census of Population, Volume I, Characteristics of the Population.
