SUGGESTED CITATION

U.S. Bureau of the Census. *U.S. Census of Population: 1960. Subject Reports. Sources and Structure of Family Income.* Final Report PC(2)-4C. U.S. Government Printing Office, Washington, D.C., 1964.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402 or any of the Field Offices of the Department of Commerce - Price $2.00.

PREFACE

This report presents statistics from the 1960 Census of Population on the income in 1959 of families cross-classified by type and size, source of income, number of earners, and age and color of head. Data are also presented for individuals classified by similar characteristics. Legal provision for this census, which was conducted as of April 1, 1960, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 U.S. Code.

The major portion of the information compiled from the 1960 Census of Population appears in Volume I, Characteristics of the Population, which contains data for the United States, States and counties and their urban and rural parts, cities, minor civil divisions, etc. The present report is part of Volume II, Subject Reports, and is designated as PC(2)-4C. A list of the Volume II Subject Reports appears on the inside of the front cover. A summary description of all the final reports of the 1960 Population Census appears on page IV.

ACKNOWLEDGMENTS

A large number of persons participated in the various activities of the 1960 Census of Population. Primary responsibilities were exercised by many of the persons listed on the preceding page. Within the Population, Demographic Operations, Field, Geography, and Statistical Methods Divisions, most of the staff members worked on the program. Important contributions were also made by the staffs of the Administrative Service Division, Everett H. Burke, Chief; Budget and Finance Division, William E. Stiver, Chief; Data Processing Systems Division, Robert F. Drury, Chief; Jeffersonville Census Operations Office, Robert D. Krook, Chief; Personnel Division, James P. Taff, Chief; and Statistical Research Division, William N. Hurwitz, Chief.

The late Selma F. Goldsmith, Chief (to April 1962), Consumer Income and Expenditures Statistics Branch, Population Division had the major responsibility for planning this report and developing its content. The report was carried through publication by James C. Byrnes, current Chief of the Branch and Arno I. Winard, assisted by William Seltzer and Mary F. Henson. John C. Beresford provided liaison with the operations staff, Elizabeth A. Larmon assisted in the preparation of the introductory text, and Mildred M. Russell and Leah S. Anderson performed the technical editorial work. Many of the procedures for compiling the data were devised by Patience Lauriat, Catherine M. Neafsey, and Anthony B. Woodell of the Demographic Operations Division; the computer tabulation programs were developed by Broadus H. King and Carleton Ruthling of the Aries Corporation under contract with the Census Bureau. The sampling materials were prepared by Robert Hanson and Robert H. Finch, Jr. of the Statistical Methods Division.

The census program was designed in consultation with a number of advisory committees and many individuals in order to maximize the usefulness of the data. Among the groups organized for this purpose were the Technical Advisory Committee for the 1960 Population Census, the Council of Population and Housing Census Users, and the Federal Agency Population and Housing Census Council (sponsored by the U.S. Bureau of the Budget). The persons who served with these groups represented a wide range of interest in the census program; their affiliations included universities, private industry, research organizations, labor groups, Federal agencies, State and local governments, and professional associations.

Tabulation of the data in this report was supported, in part, by funds provided by the Welfare Administration, Department of Health, Education, and Welfare.

February 1964.

FINAL REPORTS OF THE 1960 CENSUS OF POPULATION

The final reports of the 1960 Population Census are arranged in three volumes and a joint Population-Housing series of census tract reports. The 1960 Population Census publication program also includes preliminary, advance, and supplementary reports, certain evaluation, procedural, and administrative reports, and graphic summaries. After publication, copies of all reports are available for examination or purchase at any U.S. Department of Commerce Field Office.

Certain types of unpublished statistics are available for the cost of preparing a copy of the data. Also, under certain conditions, special tabulations of the 1960 Census data can be prepared on a reimbursable basis. In addition, there are available for purchase magnetic tapes and punchcards containing 1960 Census information on the characteristics of a one-in-a-thousand and a one-in-ten-thousand sample of the population of the United States. Confidentiality of the information, as required by law, has been maintained by the omission of certain identification items. Further information about any of these materials can be obtained by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C., 20233.

Volume I. Characteristics of the Population. This volume consists of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. For each of these 57 areas, the data were first issued in four separate paper-bound "chapters," designated as PC(1)-A, B, C, and D. (For Guam, Virgin Islands, American Samoa, and Canal Zone, the material normally contained in chapters B, C, and D are included in chapter B.) For library and general reference use, the paper-bound reports have been assembled and reissued in buckram-bound books identified as Parts A and 1 to 57 of Volume I.

Series PC(1)-1A to 57A: Chapter A. Number of Inhabitants. These reports contain final population counts for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, all incorporated places, unincorporated places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1B to 57B: Chapter B. General Population Characteristics. These reports present statistics on sex, age, marital status, color or race, and relationship to head of household for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1C to 53C: Chapter C. General Social and Economic Characteristics. These reports cover the subjects of nativity and parentage, State of birth, country of origin of the foreign stock, mother tongue, place of residence in 1955, year moved into present house, school enrollment by level and type, years of school completed, families and their composition, fertility, veteran status, employment status, weeks worked in 1959, year last worked, occupation group, industry group, class of worker, place of work, means of transportation to work, and income of persons and families. Each subject is shown for some or all of the following areas: States and counties and their urban, rural-nonfarm, and rural-farm parts, standard metropolitan statistical areas, urbanized areas, and urban places.

Series PC(1)-1D to 53D: Chapter D. Detailed Characteristics. These reports present most of the subjects covered in chapter C, above, cross-classified by age, color, and other characteristics. There is also included additional information on families, as well as data on single years of age, detailed occupation, and detailed industry. Each subject is shown for some or all of the following areas: States and their urban, rural-nonfarm, and rural-farm parts; and large counties, cities, and standard metropolitan statistical areas.

Volume I, Part A: Number of Inhabitants. This is a compendium of the 57 chapter A reports, i.e., PC(1)-1A to 57A.

Volume I, Parts 1 to 57: Characteristics of the Population. The 57 parts relate respectively to the United States, each of the 50 States, District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. Each part contains the data previously published in the four chapters A, B, C, and D, and is in the form of a separate, buckram-bound book. Parts 54, 55, 56, and 57--for Guam, Virgin Islands, American Samoa, and Canal Zone, respectively--are bound in a single book.

Volume II (Series PC(2) reports). Subject Reports. Each report in this volume concentrates on a particular subject. Detailed information and cross-relationships are generally provided on a national and regional level; in a few reports data for States or standard metropolitan statistical areas are also shown. Among the characteristics covered are ethnic origin and race, fertility, families, migration, education, employment, unemployment, occupation, industry, and income. There is also a report on the geographic distribution and characteristics of inmates of institutions. A list of reports is given on the inside of the front cover.

Volume III (Series PC(3) reports). Selected Area Reports. Three of the reports in this volume present selected characteristics of the population (1) for State economic areas, (2) for standard metropolitan statistical areas, and (3) according to the size of place where the individual resided. A fourth report provides data on the social and economic characteristics of Americans overseas.

Series PHC(1). Census Tract Reports. These reports present information on both population and housing subjects. There is one report for each of 180 tracted areas in the United States and Puerto Rico. The population subjects include age, race, marital status, country of origin of the foreign stock, relationship to head of household, school enrollment, years of school completed, place of residence in 1955, employment status, occupation group, industry group, place of work, means of transportation to work, and income of families, as well as certain characteristics of the nonwhite population in selected tracts. The housing subjects include tenure, color of head of household, vacancy status, condition and plumbing facilities, number of rooms, number of bathrooms, number of housing units in structure, year structure built, basement, heating equipment, number of persons in unit, persons per room, year household head moved into unit, automobiles available, value of property, and gross and contract rent, as well as certain characteristics of housing units with nonwhite household head for selected tracts. In addition, for selected tracts these reports contain data on certain population and housing subjects for persons of Puerto Rican birth or parentage and for white persons with Spanish surname. (This series is the same as the tract reports listed in the publication program for the 1960 Census of Housing.)

6.--Characteristics of unrelated individuals--Income in 1959 of unrelated individuals, by type of income, and by work experience in 1959, occupation group, age, years of school completed, color, and sex, for the United States, by type of residence: 1960 111

7.--Source of family income--Families with specified types of income and mean income of each type, by total family income in 1959, by type of family and color of head, for the United States, urban and rural: 1960. 122

8.--Family wage or salary income by family self-employment income--Families with both types of earnings in 1959, by color of head, for the United States, urban and rural: 1960 134

9.--Family earnings in 1959 by other income of families--All families and families with head 65 years old and over, by color of head, for the United States, urban and rural: 1960 136

10.--Specified types of family income by total family income--Families by each type of income in 1959 and color of head, for the United States, urban and rural: 1960 138

11.--Married couples by type of income--Income in 1959 of all married couples and of married couples with husband 65 years old and over, by earner status of husband and wife and color of head, for the United States, urban and rural: 1960 142

12.--Persons in families by own income and family income in 1959--All family members and those 65 years old and over, by relationship to head, color, and sex, for the United States, urban and rural: 1960 145

13.--Percent of aggregate family income in 1959 received by family members at each income level--Family members by relationship to head, by type of family, and age and color of head, for the United States, urban and rural: 1960 155

14.--Percent of family income earned by wife--Husband-wife families with wife an earner, by work experience in 1959 of head, family income in 1959, and occupation group, age, and color of head, for the United States, by type of residence, and for regions: 1960 170

15.--Income of married couples by family income in 1959--All married couples with own household and those with head 65 years old and over, by color of head, for the United States, urban and rural: 1960 179

16.--Persons in families by combined income of head and wife--Family members by relationship to head, income in 1959 of family members other than head and wife, and color, for the United States: 1960 182

17.--Income in 1959 of husband by income of wife--Married couples, by age of wife and color of head, for the United States, urban and rural: 1960 184

18.--Wages or salary in 1959 of husband by wages or salary of wife--Married couples, by color of head, for the United States, urban and rural: 1960 189

19.--Presence and age of related children--Income in 1959 of families, by type of family, work experience in 1959 of family members, and color of head, for the United States, urban and rural: 1960 191

20.--Number of related children under 18 and under 6 years--Related children by family income in 1959, by type of family, work experience in 1959 of family members, and color of head, for the United States, urban and rural: 1960 197

21.--Earner status of family head--Earnings in 1959 of family heads, by type of family, number of earners, and age and color of head, for the United States, urban and rural: 1960 203

SELECTED CHARACTERISTICS OF PERSONS

22.--Elderly persons by work experience in 1959 and family status--Income in 1959 of persons 65 years old and over (except inmates of institutions), by age, color, and sex, for the United States, urban and rural: 1960 209

23.--Occupation by industry--Mean earnings in 1959 of all persons in the experienced civilian labor force with earnings in 1959, and of those who worked 50 to 52 weeks in 1959, by color and sex, for the United States: 1960 219

24.--Wage or salary income in 1959, 1949, and 1939--Persons in the experienced labor force, by sex, for conterminous United States, by regions: 1940 to 1960 223

25.--Wage or salary income in 1959--All persons with wage or salary income, and those who worked 50 to 52 weeks in 1959, by color and sex, for the United States, by type of residence: 1960 225

26.--Self-employment income in 1959--Persons with self-employment income, by selected occupation group, color, and sex, for the United States, by type of residence: 1960 227

APPENDIX

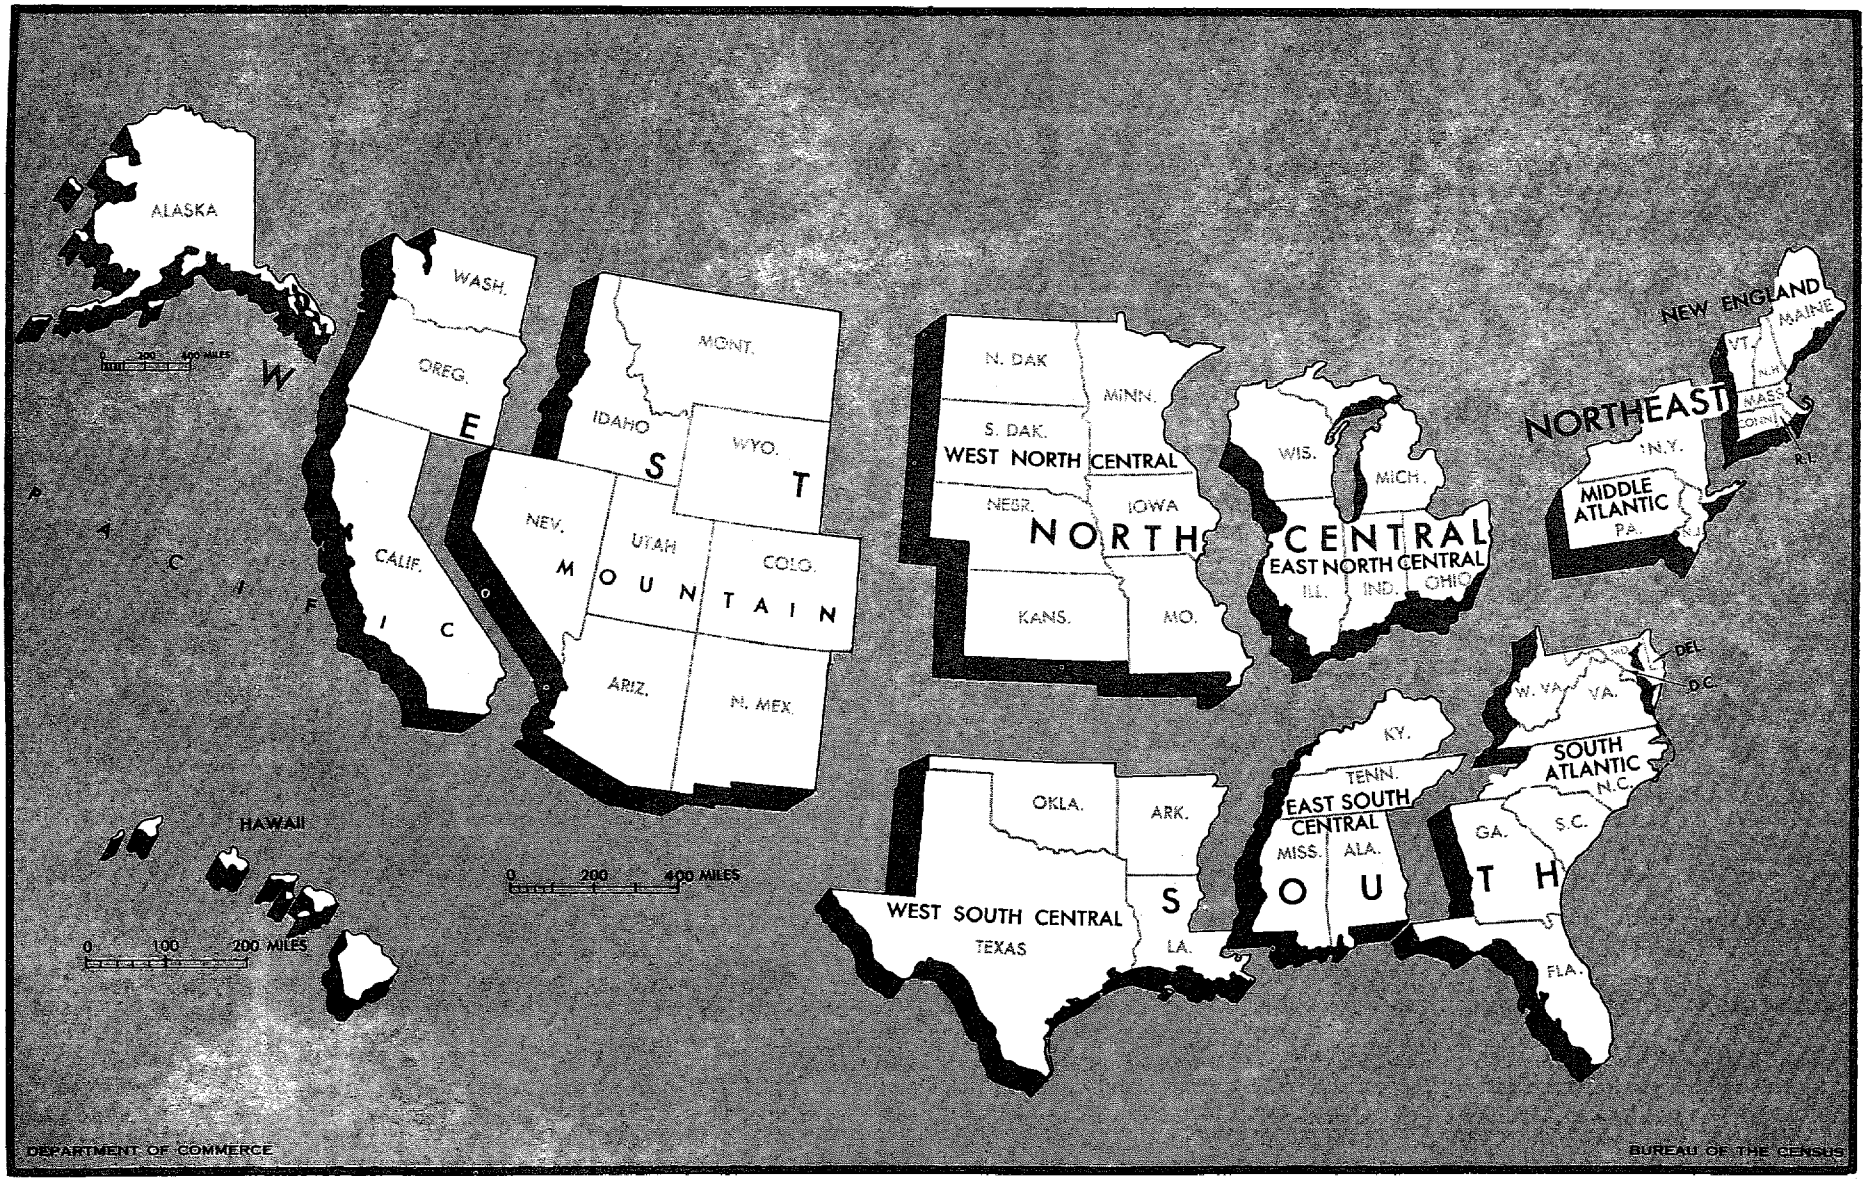
REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES



Sources and Structure of Family Income

GENERAL

This report provides detailed cross-classifications of data from the 1960 Census on the income in 1959 of families and persons by their social and economic characteristics, for the United States, regions, and type of residence. The statistics are based on a 5-percent sample of the population enumerated in the Eighteenth Decennial Census of Population, taken as of April 1, 1960. Major emphasis is placed on the composition of family income and the major sources of this income, i.e., wages and salaries, self-employment, and other income. The tables for persons present information on the contribution to family income of the head, wife, children, and older family members and show mean incomes for occupation groupings cross-classified by industry groupings, color, and sex. A table is included comparing wage or salary income distributions for 1939, 1949, and 1959.

RELATED REPORTS

1960 Census reports.--Basic distributions of income in 1959 of families, unrelated individuals, and persons 14 years old and over, from a 25-percent sample, for the United States, each of the States, the District of Columbia, counties, standard metropolitan statistical areas, urbanized areas, and urban places of 10,000 or more are presented in chapter C of Parts 1 through 52 of 1960 Census of Population, Volume I, Characteristics of the Population. Statistics on income in 1959 by detailed characteristics, including cross-classifications by age, weeks worked, education, type of family, etc., may be found in chapter D of Volume I for the United States, regions, divisions, States, and standard metropolitan statistical areas and counties of 250,000 or more. Similar statistics for the Commonwealth of Puerto Rico are presented in Part 53 of Volume I, and less detailed statistics for other outlying areas in Parts 54 through 57. Statistics on family income in 1959 for individual tracts appear in Series PHC(1), Census Tracts, for each of 180 tracted areas in the United States and Puerto Rico.

Data on the income of families in which the head or the wife was 65 years old and over, and on the income of persons 65 years old and over, classified by a number of characteristics, are presented for the United States, each of the States, the District of Columbia, and standard metropolitan statistical areas of 250,000 or more in Series PC(2)-8B, Income of the Elderly Population. Statistics on earnings in 1959 of males 18 to 64 years old, cross-classified by educational attainment and color, in selected occupations, for the United States, the South, and the other three regions combined, are published in Series PC(2)-7B, Occupation by Earnings and Education. Several of the other reports in Series PC(2) and PC(3) contain additional information on income of families and persons.

Statistics of income in 1959 of primary families or individuals by housing and household characteristics, such as tenure, household composition, condition and plumbing facilities, and gross rent and value, are presented in 1960 Census of Housing, Volume II, Metropolitan Housing, for the United States by geographic divisions and for each standard metropolitan statistical area and place of 100,000 inhabitants or more. Additional data on income cross-tabulated by housing and household subjects are presented in 1960 Census of Housing, Volume V, Part 1, Residential Finance--Homeowner Properties; Volume VI, Rural Housing; and Volume VII, Housing of Senior Citizens.

1950 Census reports.--No special 1950 Census report dealing exclusively with income data was published. Basic distributions of income in 1949 of families, unrelated individuals, and persons 14 years old and over, for the United States, each of the States, the District of Columbia, counties, standard metropolitan areas, urbanized areas, and urban places of 10,000 or more have been published in Volume II of the 1950 Census of Population. Data on the income of families, by family type and age of head, and of unrelated individuals, by type, age, and sex, for the United States, urban and rural, appear in the 1950 Census report, Volume IV, Special Reports, Part 2, chapter A, General Characteristics of Families. Additional information on income cross-classified by various subjects was presented in other reports in Volume IV.

1940 Census reports.--Data on wage and salary income in 1939 for families classified by a number of characteristics may be found in the 1940 Census report, Families: Family Wage or Salary Income in 1939, for the United States, regions, and cities of 1,000,000 or more. Data on wage or salary income for persons, by sex, appear in the report, The Labor Force: Wage or Salary Income in 1939, for the United States, regions, States, and cities of 250,000 or more. Additional wage or salary income statistics appear in a number of other 1940 Census reports.

Current Population Survey.--Each year since 1945, the Current Population Survey (CPS) conducted by the Bureau of the Census has provided national estimates of the income of families, unrelated individuals, and persons 14 years old and over cross-classified by a number of characteristics (see Current Population Reports, Series P-60). The income statistics provided

by the CPS are, in general, designed to be comparable with the decennial census statistics. The actual comparability of the statistics is discussed in the section below on "Income in 1959."

AVAILABILITY OF UNPUBLISHED DATA

The data shown in the present report represent the full detail printed out by the computer system. The detail shown here for the United States was tabulated separately for each State and was stored on magnetic tape but not printed out. Requests for these unpublished data, giving a specific description of the figures desired, may be made by writing to the Chief, Population Division, Bureau of the Census, Washington, D.C., 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS

Some of the definitions used in 1960 differ from those used in 1950. These changes were made after consultation with users of census data in order to improve the statistics, even though it was recognized that comparability would be affected. The definitions and explanations should be interpreted in the context of the 1960 Censuses, in which data were collected by a combination of self-enumeration, direct interview, and observation by the enumerator.

The definitions below are consistent with the instructions given to the enumerator. As in all surveys, there were some failures to execute the instructions exactly. Through the forms distributed to households, the respondents were given explanations of some of the questions more uniformly than would have been given in direct interviews. Nevertheless, it was not feasible to give the full instructions to the respondents, and some erroneous replies have undoubtedly gone undetected.

More complete discussions of the definitions of population and housing items are given in 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary, and each of the State parts; and in 1960 Census of Housing, Volume I, States and Small Areas.

INCOME IN 1959

Definitions

The data on income were derived from answers to questions P32 to P34 on the Household Questionnaire, shown in the next column.

Information on income for the calendar year 1959 was requested from all persons 14 years old and over in the sample. The figures represent the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc.

Receipts from the following sources were not included as income: Money received from the sale of property, unless the recipient was engaged in the business of selling such property; the value of income "in kind," such as free living quarters or food produced and consumed in the home; withdrawals of bank deposits; money borrowed; tax refunds; gifts and lump-sum inheritances or insurance benefits.

Wage or salary income.--This is defined as the total money earnings received for work performed as an employee. It includes wages, salary, pay from Armed Forces, commissions, tips, piece-rate payments, and cash bonuses earned.

P32. How much did this person earn in 1959 in wages, salary, commissions, or tips from all jobs?

Before deductions for taxes, bonds, dues, or other items. *(Enter amount or check "None." If exact figure not known, give best estimate.)*

$.....00 (Dollars only) OR None ☐

P33. How much did he earn in 1959 in profits or fees from working in his own business, professional practice, partnership, or farm?

Net income after business expenses. *(Enter amount or check "None." If exact figure not known, give best estimate. If business or farm lost money, write "Loss" after amount.)*

$.....00 (Dollars only) OR None ☐

P34. Last year (1959), did this person receive any income from:

Social security
Pensions
Veteran's payments
Rent (minus expenses)
Interest or dividends
Unemployment insurance
Welfare payments
Any other source not already entered

Yes ☐ No ☐

What is the amount he received from these sources in 1959? *(If exact figure not known, give best estimate)*

$.....00 (Dollars only)

Self-employment income.--This is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Gross receipts include the value of all goods sold and services rendered. Expenses include the costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes, etc.

Total money earnings.--These are defined as the algebraic sum of money wages or salary and net income from self-employment.

Income other than earnings.--This includes money income received from sources other than wages or salary and self-employment, such as net income (or loss) from rents or receipts from roomers or boarders; royalties; interest, dividends, and periodic income from estates and trust funds; Social Security benefits; pensions; veterans' payments, military allotments for dependents, unemployment insurance, and public

assistance or other governmental payments; and periodic contributions for support from persons who are not members of the household, alimony, and periodic receipts from insurance policies or annuities.

Total money income.--This is defined as the algebraic sum of money wages or salary, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

Median income.--The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. For families and unrelated individuals, the median income is based on the total number of families and unrelated individuals; whereas, for persons, the medians are based on the distributions of persons 14 years old and over with income. The medians for wage or salary income, self-employment income, and income other than earnings, are based on the distributions of families, unrelated individuals, or persons having these types of income.

Mean income.--The mean income is the amount obtained by dividing the total income of a group by the number of families, unrelated individuals, or persons in that group. For wage or salary income, self-employment income, and other income, the means are based on the number of income recipients having these types of income. In the derivation of aggregate amounts, persons in the open-end interval "$25,000 and over" were assigned an estimated mean of $50,000.

Number of earners.--This number includes all persons in the family with $1 or more in wages or salary, or $1 or more or a loss in net income from self-employment.

Principal earner.--A family head is considered the principal earner when the absolute amount of his earnings is equal to or greater than the earnings of any other family member.

Income recipient.--A person is considered an income recipient when he received $1 or more in wages or salary, or $1 or more or a loss in self-employment or other income.

Aggregate income.--The aggregate amounts needed in deriving the percentages shown in table 13 were computed from the detailed information coded for each person 14 years and over for the three types of income. For example, to obtain the aggregate income of the wife of head in families with incomes between $5,000 and $5,999, the three types of income were summed for all wives of heads who were in families whose family total income was between $5,000 and $5,999. Similarly, to obtain the aggregate income of families with incomes between $5,000 and $5,999, all the individual income amounts were summed (subtracting all losses) for all persons 14 years old and over who were in families whose total family income was between $5,000 and $5,999. In the derivation of aggregate amounts, persons in the open-end interval "$25,000 and over" were assigned an estimated mean of $50,000.

Adjusted Urban Family Income

Indices that measure the relative income required by families of different size and composition to maintain the same level of material well-being constitute an important tool in studies of family living. For example, other things being equal, a four-person family will require a larger amount of income to achieve a given level of well-being than a two-person family, and a four-person family with teenage children will require somewhat more income than a four-person family with younger children. A number of indices that measure the relative income required by families of different size and age to maintain equal levels of living are available. The most extensive index of this type is the scale of equivalent income for urban families prepared by the Bureau of Labor Statistics of the Department of Labor,[1] which is based on data obtained in the BLS Survey of Consumer Expenditures in 1950. This scale has been adapted for use in adjusting the income of urban families tabulated by selected family characteristics in table 4 of this report.

The left-hand pages of table 4 show urban families of selected types classified by the reported size of family income before adjustment. On facing pages, the same families of each type are classified by their adjusted family income. Each family's income was divided by the appropriate factor in table A, to obtain its adjusted income. The factors shown are the ratios of the average amount of income required for equivalent levels of living by a family of the specified type to the average amount required by a four-person family with its head 35 to 54 years of age.

Table A.--ADJUSTMENT FACTORS FOR URBAN FAMILY INCOME

Size of family	Age of head (years)			
	Under 35	35 to 54	55 to 64	65 and over
2 persons	0.59	0.62	0.63	0.56
3 persons	0.68	0.85	0.87	0.78
4 persons	0.82	1.00	1.08	0.97
5 persons	1.02	1.15	1.25	1.11
6 persons or more	1.18	1.31	1.40	1.20

Table A shows, for example, that on the average a two-person family with head under 35 years of age requires 59 percent of the income of the standard family to purchase the same level of material well-being. It follows from this that an income of $3,000 for the younger two-person family is equivalent to an income of $5,085 for the older four-person family. Thus, both types of families are included in the same adjusted income class ($5,000 to $5,999) in table 4, although their reported money incomes differ by $2,085.

The original BLS study resulted in adjustment factors for family income, after the payment of Federal income taxes, for some 70 different classes of urban families. The adaptation of these factors for

[1] Department of Labor, Monthly Labor Review, "Estimating Equivalent Incomes on Budget Costs by Family Type," November 1960, Volume 83, No. 11, pages 1197-1200.

use in this report involved reducing the number of family classes from 70 to 20 and converting the factors to a before-Federal-income-tax basis.

Limitations of the Data

The questionnaire entries for income are frequently based not on records but on memory; this circumstance probably produces underestimates, because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misunderstanding of the income questions or to misrepresentation.

A possible source of understatement in the income figures was the failure, on occasion, to obtain from the respondent any report on "other money income." For these cases the assumption was made in the editing process that no income other than earnings was received by a person who reported only the receipt of either wage or salary income or self-employment income. Similarly, when information was obtained on only one of the two types of earnings, it was assumed that a person who reported wage or salary income had no income from self-employment and a person who reported self-employment income had no wages or salary. Where no income information for a person 14 years old and over was reported, a more elaborate editing procedure was used. The general nature of this procedure is described below in the section on "Collection and processing of data."

The income tables for families and unrelated individuals include in the lowest income group (under $1,000) those that were classified as having no 1959 income, as defined in the census. Many of these were living on income "in kind," savings, or gifts, or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole breadwinner had recently died or had left the household. However, many of the families and unrelated individuals who reported no income probably had some money income which was not recorded in the census.

Although the time period covered by the income statistics is the calendar year 1959, the characteristics of persons and the composition of families refer to the time of enumeration. Thus, the income of the family does not include amounts received by persons who were members of the family during all or part of the calendar year 1959 if these persons no longer resided with the family at the time of the interview. On the other hand, family income includes amounts reported by related persons who did not reside with the family during 1959 but who were members of the family at the time of enumeration. For most of the families, however, the income reported was received by persons who were members of the family throughout 1959.

The income data in this report cover money income only. The fact that many farm families receive part of their income in the form of rent-free housing and of goods produced and consumed on the farm rather than as money should be taken into consideration in comparing the income of farm and nonfarm residents. In comparing income data for 1959 with earlier years, it should be noted that an increase or decrease in money income between two periods does not necessarily represent a comparable change in real income, because adjustments for changes in prices have not been made in this report.

Comparability

1950 and 1940 Censuses.--In 1950, information on income similar to that requested in 1960 was obtained from a 20-percent sample of persons 14 years old and over. If the sample person was the head of a family, the income questions were repeated for the other family members as a group in order to obtain the income of the whole family. In 1960, however, separate income data were requested for each person 14 years old and over in the sample.

In the tabulation of family income for the 1950 Census, when only the head's income was reported, the assumption was made that there was no other income in the family. In the 1960 Census, all nonrespondents on income (whether heads of families or other persons) were assigned the reported income of persons with similar demographic characteristics.

In 1940, all persons 14 years old and over were asked to report (a) the amount of money wages or salary received in 1939 and (b) whether income amounting to $50 or more received in 1939 was from sources other than money wages or salaries. Comparable wage or salary distributions for 1939, 1949, and 1959 are presented in table 24 of this report.

Current Population Survey.--A comparison of the family income distributions for the United States from the 1960 Census and from the March 1960 Current Population Survey is shown in table B. The CPS distribution excludes families for which complete income information was not reported, whereas the census distribution includes nonrespondents, with their income estimated on the basis of known social, demographic, and economic characteristics.

Table B.--PERCENT DISTRIBUTION OF FAMILIES BY FAMILY INCOME, ACCORDING TO 1960 CENSUS AND TO MARCH 1960 CURRENT POPULATION SURVEY

Family income	Census (25-percent sample)	CPS	Percentage point difference
Total	100.0	100.0	...
Under $1,000	5.6	5.1	-0.5
$1,000 to $1,999	7.5	8.3	0.8
$2,000 to $2,999	8.3	9.3	1.0
$3,000 to $3,999	9.5	10.1	0.6
$4,000 to $4,999	11.0	11.7	0.7
$5,000 to $5,999	12.3	13.2	0.9
$6,000 to $6,999	10.7	11.0	0.3
$7,000 to $7,999	8.6	8.4	-0.2
$8,000 to $9,999	11.5	10.6	-0.9
$10,000 to $14,999	10.5	9.1	-1.4
$15,000 to $24,999	3.3	2.4	-0.9
$25,000 and over	1.3	0.7	-0.6

If one considers the proportion of families above or below the median class ($5,000 to $5,999), the differences are larger than would be expected from the

standpoint of sampling variability. Studies are now being made or planned which may help in explaining these differences.[2]

Federal income tax data.--For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. Moreover, the coverage of income tax statistics is less inclusive because persons receiving less than $600 (less than $1,200, if 65 years old or over) are not required to file returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; and consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors, and Disability Insurance earnings record data.--For several reasons, the earnings data shown here are not directly comparable with those which may be obtained from the OASDI earnings records. The coverage of the OASDI earnings record data for 1959 is less inclusive than that of the 1960 Census data because of the exclusion of the earnings of self-employed physicians, many civilian government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some self-employed persons, some farm workers, and domestic servants. Furthermore, earnings received from any one employer in excess of $4,800 in 1959 are not covered by the earnings record data. Finally, as the Bureau of the Census data are obtained by household interviews, they will differ from the OASDI earnings record data, which are based upon employers' reports and the Federal income tax returns of self-employed persons.

Office of Business Economics State income series.--The Office of Business Economics (OBE) of the Department of Commerce publishes data on aggregate and per capita personal income received by the population in each State. If the aggregate total income were estimated from the income statistics shown in this report, it would be lower than that shown in the State income series for several reasons. The income statistics published by the Bureau of the Census are obtained from households, whereas the State income series published by OBE is estimated largely on the basis of data derived from business and governmental sources. Moreover, the definitions of income are different. The OBE income series includes some items not included in the income statistics shown in this report, such as income in kind, the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges, and the income of persons who died or emigrated prior to the time of enumeration. On the other hand, income statistics in publications of the Bureau of the Census include contributions for support received from persons not residing in the same household, and employee contributions for social insurance.

Although the primary purpose of the income questions in the 1960 Census was to provide distributions of families and of persons 14 years old and over by income levels, estimates of aggregate income can be obtained from these data. A comparison of aggregate income estimated from the 1960 Census returns with those prepared by OBE indicates that aggregate total money income of persons 14 years old and over derived from table 99 in Chapter C of Volume I of the 1960 Census of Population was about 94 percent of the OBE estimates for the United States after these estimates have been adjusted to make them as nearly comparable as possible with the income concept used by the Bureau of the Census. For wage and salary income alone, the ratio was over 99 percent. A similar comparison of 1950 Census data showed that the corresponding ratios in that year were 91 percent for total money income and 97 percent for wage or salary income.

The indicated improvement in income coverage in the 1960 Census was even greater for families and unrelated individuals than it was for persons 14 years old and over. In 1950, the aggregate derived from the distributions for families and unrelated individuals was only 81 percent of the comparable OBE total, as compared with 95 percent for 1960. Probably the primary reason for the improvement in coverage of income in 1960 was the use of a household questionnaire on which income was obtained separately for each family member, in contrast to the 1950 procedure under which family income was obtained for the head of the family and for all other family members as a group. This improvement in coverage, therefore, implies that the increase in the average family income between 1949 and 1959 may be somewhat overstated.

CONTERMINOUS UNITED STATES

The term "United States" refers to the 50 States and the District of Columbia. The term "conterminous United States" refers to the United States exclusive of Alaska and Hawaii.

URBAN-RURAL RESIDENCE

In general, the urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, according to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have

[2] For a detailed description of the 1960 Census evaluation studies relating to income, see "Trends in Income Distribution in the United States" by Herman P. Miller, to be published under the joint auspices of the Social Science Research Council and the Bureau of the Census.

either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

FARM-NONFARM RESIDENCE

The rural population is subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population. In the 1960 Census, the farm population consists of persons living in rural territory on places of 10 or more acres from which sales of farm products amounted to $50 or more in 1959 or on places of less than 10 acres from which sales of farm products amounted to $250 or more in 1959. All persons living in group quarters are classified as nonfarm except the relatively few living in workers' quarters (including quarters for migratory agricultural workers) that are located on a farm or ranch.

URBANIZED AREA

An urbanized area contains at least one city of 50,000 inhabitants or more in 1960 and the surrounding closely settled incorporated places and unincorporated areas that meet certain criteria relating to population density or land use. An urbanized area may be thought of as divided into the central city, or cities, and the remainder of the area, or the urban fringe. All persons residing in an urbanized area are included in the urban population.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1960, as determined from the reply to a question on month and year of birth.

COLOR

The term "color" refers to the division of population into two groups, white and nonwhite. The color group designated as "nonwhite" includes Negroes, American Indians, Japanese, Chinese, Filipinos, Koreans, Hawaiians, Asian Indians, Malayans, Eskimos, Aleuts, etc. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

YEARS OF SCHOOL COMPLETED

The data on years of school completed were derived from the answers to the two questions: (a) "What is the highest grade (or year) of regular school he has ever attended?" and (b) "Did he finish this grade (or year)?" Enumerators were instructed to obtain the approximate equivalent grade in the American school system for persons whose highest grade of attendance was in a foreign school system, whose highest level of attendance was in an ungraded school, whose highest level of schooling was measured by "readers," or whose training by a tutor was regarded as qualifying under the "regular" school definition. Persons were to answer "No" to the second question if they were attending school, had completed only part of a grade before they dropped out, or failed to pass the last grade attended.

The number in each category of highest grade of school completed represents the combination of (a) persons who reported that they had attended the indicated grade and finished it, and (b) those who had attended the next higher grade but had not finished it.

The questions on educational attainment applied only to progress in "regular" schools. Regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system. Schooling which is generally regarded as not regular includes that which is given in nursery schools, in specialized vocational, trade, or business schools; in on-the-job training; and through correspondence courses.

Elementary school, as defined here, includes grades 1 to 8, and high school includes grades 9 to 12. College includes junior or community colleges, regular 4-year colleges, and graduate or professional schools.

MARITAL STATUS

This classification refers to the marital status of the person at the time of enumeration. Persons classified as "married" comprise, therefore, both those who have been married only once and those who remarried after having been widowed or divorced. Persons reported as separated (either legally separated or otherwise absent from the spouse because of marital discord) are classified as a subcategory of married persons. The enumerators were instructed to report persons in common-law marriages as married and persons whose only marriages had been annulled as single.

A married person with "spouse present" is a man or woman whose spouse was enumerated as a member of the same household even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of enumeration.

HOUSEHOLD AND FAMILY

A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

All persons who are not members of households are regarded as living in group quarters, that is, in living quarters for institutional inmates or for other groups containing five or more persons unrelated to the person in charge. Most of the persons in group quarters live in rooming houses, college dormitories, military barracks, or institutions. With the exception of table 6 and tables 22 to 26, the present report excludes persons in group quarters.

A family consists of two or more persons in the same household who are related to each other by blood, marriage, or adoption; all persons living together in one household who are related to each other are regarded as one family. For example, if the son of the head of the household and the son's wife are members of the household, they are treated as part of the head's family. A lodger and his wife who are not related to the head of the household, or a resident employee and his wife living in, are considered as a separate family, however. Thus, a household may contain more than one family. A household head living alone or with nonrelatives only is not regarded as a family. Some households, therefore, do not contain a family.

A "primary family" comprises the head of a household and all (one or more) other persons in the household related to the head. All other families are "secondary families."

The delineation of families is based on the relationship reported among persons who were usual residents of a housing unit at the time of the enumeration. College students were enumerated at the place where they lived while attending college, and persons living in military establishments were enumerated where they were stationed. Such persons were not included in the statistics for their parental homes, even though they may have intended to return home on their completion of college or period of service.

A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents. Only those single sons and daughters under 18 years old of a subfamily head are regarded as children in the subfamily. Members of a subfamily are also members of a primary family. The number of subfamilies, therefore, is not included in the number of families.

An unrelated individual is (1) a member of a household who is living entirely alone or with one or more persons all of whom are not related to him, or (2) a person living in group quarters who is not an inmate of an institution. A head of a household living alone or with nonrelatives only is a primary individual. An unrelated individual who is not a household head is a secondary individual.

The classification by type of family or subfamily is based on the sex and marital status of the head. Families and subfamilies with a head and his wife present are termed "husband-wife" families or subfamilies. Families and subfamilies with no spouse of head present are termed "other male head" or "female head," depending on the sex of the head.

A married couple is defined as a husband and his wife enumerated as members of the same household. The number of married couples is the sum of the number of husband-wife families and husband-wife subfamilies. A "married couple with own household" is a married couple in which the husband is the household head.

The head of a household, family, or subfamily is generally the person so reported by the household respondent; however, in order to avoid establishing a separate category for the small number of families with the wife reported as the head, such families are edited to show the husband as the head. One person in each household is designated as the "head"; the number of heads of households is, therefore, equal to the number of households. The same principal applies to families and subfamilies.

The wife of a family head or subfamily head is a woman married to and living with the head. This category includes women in common-law marriages as well as women in formal marriages.

Own children in a family or subfamily comprise the head's sons and daughters, including stepchildren and adopted children, living in the home. The count of own children under 18 years old is limited to single (never married) children. "Child of head 18 and over" includes all own children of that age regardless of marital status.

Related children, as the term is used in this report, include all family members under 18 except the family head and his wife, regardless of marital status. Thus, the category includes, in addition to "own children," all ever-married children under 18 of the family head and all grandchildren, nephews, cousins, etc., of the family head who were enumerated as members of the household. Related children other than own children were identified in the coding operation only for those in primary families; such children, however, constitute well over 99 percent of all children in families.

An other relative of the head is a person related to the head of the household by blood, marriage, or adoption, but not included specifically in another category.

Mean size of family and number of children.--The mean size of family figures presented in tables 13 and 15 were obtained by dividing the total number of family members in a specified income group by the total number of families in that group. The mean number of own children under 18, under 12, or under 6 years presented in table 15 was obtained by dividing the number of children in a specified age and income category by the number of couples or subfamilies in that income interval.

EMPLOYMENT STATUS

The data on employment status relate to the calendar week prior to the date on which the respondents filled their Household Questionnaires or were interviewed by enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week.

Employed persons comprise all civilians 14 years old and over who were either (a) "at work"--those who did any work for pay or profit, or worked without pay

for 15 hours or more on a family farm or in a family business; or (b) were "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other personal reasons.

Persons are classified as unemployed if they were 14 years old and over and not "at work" but looking for work. A person is considered as looking for work not only if he actually tried to find work but also if he had made such efforts recently (i.e., within the past 60 days) and was awaiting the results of these efforts. Persons waiting to be called back to a job from which they had been laid off or furloughed are also counted as unemployed. Unemployed persons who have worked at any time in the past are classified as the "experienced unemployed."

The "experienced labor force" includes the employed, the experienced unemployed, and members of the Armed Forces. The "experienced civilian labor force" excludes the Armed Forces.

WORK EXPERIENCE IN 1959

A person who "worked in 1959" is one who did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Classification by number of weeks worked pertains to the number of different weeks during 1959 in which the person did such work as just described. Weeks of active service in the Armed Forces are also included.

OCCUPATION, INDUSTRY, AND CLASS OF WORKER

Information on occupation, industry, and class of worker was collected for persons in the experienced civilian labor force and for persons who were not in the current labor force but had worked at some time during the period 1950 to April 1960. For employed persons the data refer to the job held during the week for which employment status was reported. For persons employed at two or more jobs, the data refer to the job at which the person worked the greatest number of hours. For the experienced unemployed and for persons not in the labor force, the data refer to the last job held. The occupation and industry statistics presented here are based on the detailed systems developed for the 1960 Census; see 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960.

HOUSING CHARACTERISTICS

Occupied housing unit.--A housing unit is "occupied" if it is the usual place of residence of the person or group of persons living in it at the time of enumeration. Included are units occupied by persons who are only temporarily absent, such as persons on vacation. Units occupied by persons with no usual place of residence are also considered occupied.

Tenure.--A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. The head himself need not be the owner. All other occupied units are classified as "renter occupied," whether or not cash rent is paid. Examples of units for which no cash rent is paid include units occupied in exchange for services rendered, units owned by relatives and occupied without payment of rent, and units occupied by sharecroppers.

Value.--Value is the respondent's estimate of how much the property would sell for on the current market (April 1960). Value data are restricted to owner-occupied units having only one housing unit in the property and no business. Units in multiunit structures and trailers were excluded from the tabulations, and in rural territory, units on farms and all units on places of 10 acres or more (whether farm or nonfarm) also were excluded.

Gross rent.--Gross rent is based on the information reported for contract rent and the cost of utilities and fuel. Contract rent is the monthly rent agreed upon regardless of any furnishings, utilities, or services that may be included. The computed rent termed "gross rent" is the contract rent plus the average monthly cost of utilities (water, electricity, gas) and fuels such as wood, coal, and oil if these items are paid for by the renter. Thus, gross rent eliminates differentials which result from varying practices with respect to the inclusion of utilities and fuel as part of the rental payment. Rent data exclude rents for units in rural-farm territory.

Condition.--The enumerator determined the condition of the housing unit by observation, on the basis of specified criteria. Nevertheless, the application of these criteria involved some judgment on the part of the individual enumerator. The training program for enumerators was designed to minimize differences in judgment.

Sound housing is defined as that which has no defects, or only slight defects which are normally corrected during the course of regular maintenance.

Deteriorating housing needs more repair than would be provided in the course of regular maintenance. Such housing has one or more defects of an intermediate nature that must be corrected if the unit is to continue to provide safe and adequate shelter.

Dilapidated housing does not provide safe and adequate shelter and in its present condition endangers the health, safety, or well-being of the occupants. Such housing has one or more critical defects, or has a combination of intermediate defects in sufficient number or extent to require considerable repair or rebuilding, or is of inadequate original construction. Critical defects result from continued neglect or lack of repair, or indicate serious damage to the structure.

Direct access.--Living quarters are regarded as having direct access if the entrance is direct from the outside of the structure, or through a common hall, lobby, or vestibule used by the occupants of more than one unit. The hall, lobby, or vestibule must not be part of any unit, but must be clearly separate from all units in the structure. Living quarters do not have direct access when the only entrance to the room or rooms is through a room or hall which is part of another unit.

Kitchen or cooking equipment.--A kitchen is defined as a room used primarily for cooking and the preparation of meals. Cooking equipment is defined as (1) a range or stove, whether or not it is regularly used, or (2) other equipment such as a hotplate or electrical appliance if it is used for the regular preparation of meals. The category "with kitchen or cooking equipment" comprises units with facilities for exclusive use; the category "lacking kitchen or cooking equipment" comprises units with shared or no facilities. Equipment is for exclusive use if it is used only by the occupants of one unit.

Plumbing facilities.--The facilities referred to are water supply, toilet facilities, and bathing facilities. A unit has piped hot water even though the hot water is not supplied continuously; for example, it may be supplied only at certain times of the day, week, or year. A unit has a flush toilet if it is inside the structure and available for the use of the occupants of the unit. A unit has a bathtub or shower if either facility supplied with piped water (not necessarily hot water) is inside the structure and available for the use of the occupants of the unit.

Facilities are for exclusive use if they are used only by the occupants of the one housing unit, including lodgers or other unrelated persons living in the housing unit.

Persons per room.--The number of persons per room was computed for each housing unit by dividing the total number of household members by the number of rooms in the unit. The number of rooms is the count of whole rooms used for living purposes, such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, lodgers' rooms, and rooms used for offices by a person living in the unit. Not counted as rooms are bathrooms; halls, foyers, or vestibules; closets; alcoves; pantries; strip or pullman kitchens; laundry or furnace rooms; unfinished attics, basements, and other space used for storage.

COLLECTION AND PROCESSING OF DATA

COLLECTION OF DATA

Several enumeration forms were used to collect the information for the 1960 Census of Population. A few days before the census date, the Post Office Department delivered an Advance Census Report (ACR) to households on postal delivery routes. This form contained questions which were to be answered for every person and every housing unit. Household members were requested to fill the ACR and have it ready for the enumerator. The census enumerator recorded this information on a form specially designed for electronic data processing by FOSDIC (Film Optical Sensing Device for Input to Computer). The information was either transcribed from the ACR to the complete-count FOSDIC schedule or entered on this schedule during direct interview.

In the densely populated areas, the enumerator left a Household Questionnaire to be completed by each household (or person) in the sample and mailed to the local census office. The population and housing information was transcribed from the Household Questionnaire to a sample FOSDIC schedule. When the Household Questionnaire was not returned or was returned without having been completed, the enumerator collected the missing information by personal visit or by telephone and entered it directly on the sample FOSDIC schedule. In the remaining areas, when the enumerator picked up the ACR, he obtained all the information by direct interview and recorded it directly on the sample FOSDIC schedule.

Soon after the enumerator started work, his schedules were examined in a formal field review. This operation was designed to assure at an early stage of the work that the enumerator was performing his duties properly and had corrected any errors he had made.

More detailed descriptions of the 1960 Census procedures in the collection and processing of the data are given in reports entitled United States Censuses of Population and Housing, 1960: Principal Data Collection Forms and Procedures, 1961; and Processing the Data, 1962, U.S. Government Printing Office, Washington, D.C., 20402.

MANUAL EDITING AND CODING

After the FOSDIC forms had been checked for completeness in the field, they were sent to a central processing office for manual editing and coding and for microfilming. Except where some special problems arose, there was no manual coding of the FOSDIC forms for complete-count data. On the sample forms, the manual operation was limited to those items where coding required the reading of written entries and therefore could not be done effectively by machine. The coding clerks converted the written entries to codes by marking the appropriate circles on the FOSDIC schedules and at the same time were able to correct obviously wrong entries and sometimes supply missing information.

ELECTRONIC PROCESSING

After the enumerators and coders recorded the information by marking the appropriate circles, the schedules were microfilmed. The information on the microfilm was then read by FOSDIC, which converted the markings to signals on magnetic tape. The tape, in turn, was processed in an electronic computer, which was used extensively to edit and tabulate the data and to produce the publication tables.

EDITING

For a majority of items, nonresponses and inconsistencies were eliminated by using the computer to assign entries and correct inconsistencies. In general, few assignments or corrections were required, although the amount varied by subject and by enumerator.

The assignment of an acceptable entry by machine was based on related information reported for the person or on information reported for a similar person in the immediate neighborhood. For example, in the assignment of age in the complete-count tabulations, the computer stored reported ages of persons by sex, color or race, household relationship, and marital status; each stored age was retained in the computer only until a succeeding person having the same characteristics and having age reported was processed through the computer; this stored age was assigned to the next person whose age was unknown and who otherwise had the same characteristics. This procedure insured that the distribution of ages assigned by the computer for persons of a given set of characteristics would correspond closely to the reported age distribution of such persons as obtained in the current census.

The extent of the allocations for nonresponse or for inconsistency is shown for the United States and for States, places of 10,000 inhabitants or more, and other areas in appendix tables in chapters B, C, and D of 1960 Census of Population, Volume I, Characteristics of the Population. Appendix table A-1 of this report presents data on the number of families and number of family heads for whom income was allocated.

Specific tolerances were established for the number of computer allocations acceptable for a given area. If the number was beyond tolerance, the data were rejected and the original schedules were reexamined to determine the source of the error. Correction and reprocessing were undertaken as necessary and feasible.

ACCURACY OF THE DATA

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information from respondents, obtaining inconsistent information, recording information in the wrong place or incorrectly, or otherwise producing inconsistencies between entries on interrelated items on the field documents. Sampling biases occur because some of the enumerators fail to follow the sampling instructions. Clerical coding and editing errors occur, as well as errors in the electronic processing operation.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual coding and editing, checking of tabulated figures, and ratio estimation of sample data to control totals from the complete count reduce the effects of the errors in the census data.

Small differences between tables in this report or between corresponding data in this report and other 1960 Census reports based on the 5-percent sample result from minor differences in tabulation specifications. No attempt has been made to reconcile these minor discrepancies.

Some innovations in the 1960 Censuses reduced errors in processing and others produced a more consistent quality of editing. The elimination of the card-punching operation removed one important source of error. The extensive use of electronic equipment insured a more uniform and more flexible edit than could have been accomplished manually or by less intricate mechanical equipment. It is believed that the use of electronic equipment in the 1960 Censuses has improved the quality of the editing compared with that of earlier censuses but, at the same time, it has introduced an element of difference in the statistics.

A group of reports designated Evaluation and Research Program Series will deal with the methods, results, and interpretation of a group of evaluation and research studies of the 1960 Censuses of Population and Housing. A report entitled The Post-Enumeration Survey: 1950, Technical Paper No. 4, presents evaluative material on the 1950 Census.

SAMPLE DESIGN AND SAMPLING VARIABILITY

SAMPLE DESIGN

For persons in housing units at the time of the 1960 Census, *the sampling unit was the housing unit* and all its occupants; for persons in group quarters, it was the person. On the first visit to an address, the enumerator assigned a sample key letter (A, B, C, or D) to each housing unit sequentially in the order in which he first visited the units, whether or not he completed an interview. Each enumerator was given a random key letter to start his assignment, and the order of canvassing was indicated in advance, although these instructions allowed some latitude in the order of visiting addresses. Each housing unit which was assigned the key letter "A" was designated as a sample unit and all persons enumerated in the unit were included in the sample. In every group quarters, the sample consisted of every fourth person in the order listed. The 1960 statistics in this report are based on a 5-percent sample, which is a subsample of one-fifth of the original 25-percent sample schedules. The 5-percent sample was selected on the computer, using a stratified systematic sample design. The strata were made up as follows: For persons in regular housing units there were 36 strata, i.e., 9 household size groups by 2 tenure groups by 2 color groups; for persons in group quarters, there were 2 strata, i.e., the 2 color groups.

Although the sampling procedure did not automatically insure an exact 5-percent sample of persons, the sample design was unbiased if carried through according to instructions. Generally, for large areas, the deviation from the estimated sample size was found to be quite small. Biases may have arisen, however, when the enumerator failed to follow his listing and sampling instructions exactly.

Table C compares the 1959 income distribution of families and unrelated individuals by color of head, as presented in this report, based on the 5-percent sample with the corresponding statistics based on the 25-percent sample presented in Volume I of the 1960 Census of Population. Differences in this table reflect primarily sampling error. This is relatively small and should have little influence on the interpretation of the data.

Table C.--COMPARISON OF 25-PERCENT AND 5-PERCENT SAMPLE DATA ON INCOME IN 1959 OF FAMILIES AND UNRELATED INDIVIDUALS, BY COLOR OF HEAD, FOR THE UNITED STATES: 1960

Total money income	Total					Nonwhite

RATIO ESTIMATION

The statistics based on the 5-percent sample of the 1960 Census returns are estimates that have been developed through the use of a ratio estimation procedure. This procedure was carried out for each of the following 44 groups of persons in each of the sample weighting areas:[3]

Group	Sex, color, and age	Relationship and tenure
	Male white:	
1	Under 5	
2	5 to 13	
3	14 to 24	Head of owner household
4	14 to 24	Head of renter household
5	14 to 24	Not head of household
6-8	25 to 44	Same groups as age group 14 to 24
9-11	45 and over	Same groups as age group 14 to 24
	Male nonwhite:	
12-22	Same groups as male white	
	Female white:	
23-33	Same groups as male white	
	Female nonwhite:	
34-44	Same groups as male white	

The sample weighting areas were defined as those areas within a State consisting of central cities of urbanized areas, the remaining portion of urbanized areas not in central cities, urban places not in urbanized areas, or rural areas.[4]

For each of the 44 groups, the ratio of the complete count to the sample count of the population in the group was determined. Each specific sample person in the group was assigned an integral weight so that the sum of the weights would equal the complete count for the group. For example, if the ratio for a group was 20.1, one-tenth of the persons (selected at random) within the group were assigned a weight of 21, and the remaining nine-tenths a weight of 20. The use of such a combination of integral weights rather than a single fractional weight was adopted to avoid the complications involved in rounding in the final tables. In

[3] Estimates of characteristics from the sample for a given area are produced using the formula:

$$x' = \sum_{i=1}^{44} \frac{x_i}{y_i} Y_i$$

where x' is the estimate of the characteristic for the area obtained through the use of the ratio estimation procedure,
x_i is the count of sample persons with the characteristic for the area in one (i) of the 44 groups,
y_i is the count of all sample persons for the area in the same one of the 44 groups, and
Y_i is the count of persons in the complete count for the area in the same one of the 44 groups.

[4] For the definitions of urbanized area and urban place, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

order to increade the reliability, where there were fewer than 275 persons in the complete count in a group, or where the resulting weight was over 80, groups were combined in a specific order to satisfy both of these two conditions.

These ratio estimates reduce the component of sampling error arising from the variation in the size of household and achieve some of the gains of stratification in the selection of the sample, with the strata being the groups for which separate ratio estimates are computed. The net effect is a reduction in the sampling error and bias of most statistics below what would be obtained by weighting the results of the 5-percent sample by a uniform factor of 20. The reduction in sampling error will be trivial for some items and substantial for others. A by-product of this estimation procedure, in general, is that estimates for this sample are generally consistent with the complete count with respect to the total population and for the subdivisions used as groups in the estimation procedure. A more complete discussion of the technical aspects of these ratio estimates will be presented in another report.

SAMPLING VARIABILITY

The figures from the 5-percent sample tabulations are subject to sampling variability, which can be estimated roughly from the standard errors shown in tables D and E below. These tables[5] do not reflect the effect of response variance, processing variance, or bias arising in the collection, processing, and estimation steps. Estimates of the magnitude of some of these factors in the total error are being evaluated and will be published at a later date. The chances are about 2 out of 3 that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than $2\frac{1}{2}$ times the standard error. The amount by which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks.

Table D shows standard errors of estimated numbers up to 50,000. The relative sampling errors of larger estimated numbers are somewhat smaller than for 50,000. For estimated numbers above 50,000, however, the nonsampling errors, e.g., response errors and processing errors, may have an increasingly important effect on the total error. Table E shows rough standard errors of data in the form of percentages. Linear interpolation in tables D and E will provide approximate results that are satisfactory for most purposes.

For a discussion of the sampling variability of medians and means and of the method for obtaining standard errors of differences between two estimates, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

Illustration: Table 1 shows that for husband-wife families with head between 25 and 64 years of age there are a total of 66,742 three- and four-person families with 2 earners or more where the head is not an earner. Of this number 6,453 (or 9.7 percent) have family income in the range $6,000 to $6,999. Table D shows that the standard error of the 6,453 is about 313. This means that the chances are approximately two out of three that the results of a complete census would not differ by more than 313 from the estimated 6,453. It also follows that there is only about 1 chance in 100 that a complete census would differ by as much as 783, i.e., by about $2\frac{1}{2}$ times the number estimated from table D. Table E shows that the standard error of a 9.7 percent figure based on 66,742 is about 0.6 percent. This means that the chances are approximately two out of three that the results of a complete census would not differ by more than 0.6 percent from the estimated 9.7 percent. It also follows that there is only about 1 chance in 100 that a complete census would differ by as much as 1.5 percent, i.e., by about $2\frac{1}{2}$ times the number estimated in table E.

Table D.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED NUMBER

(Range of 2 chances out of 3)

Estimated number	Standard error	Estimated number	Standard error
50	30	5,000	280
100	40	10,000	390
250	60	15,000	480
500	90	25,000	620
1,000	120	50,000	880
2,500	200		

Table E.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED PERCENTAGE

(Range of 2 chances out of 3)

Estimated percentage	Base of percentage					
	500	1,000	2,500	10,000	25,000	100,000
2 or 98	3.3	2.3	1.3	0.8	0.3	0.3
5 or 95	5.0	4.0	2.3	1.0	0.5	0.3
10 or 90	7.0	5.0	3.0	1.5	0.8	0.5
25 or 75	10.0	6.8	3.8	1.8	1.0	0.5
50	11.0	7.8	4.0	2.0	1.3	0.8

[5] The estimates of sampling variability are based on calculations from a preliminary sample of the 1960 Census results. Further estimates are being calculated and will be available at a later date.
