PREFACE

This report presents statistics from the 1960 Census of Population on years of school completed by the population 14 years old and over, in relation to age, ethnic status, occupation, income, and other characteristics, for the United States, regions, and types of residence areas. Legal provision for this census, which was conducted as of April 1, 1960, was made in the Act of Congress of August 31, 1954 (amended August 1957), which codified Title 13 United States Code.

The major portion of the information compiled from the 1960 Census of Population appears in Volume I, Characteristics of the Population, which contains data for the United States, States and counties and their urban and rural parts, cities, minor civil divisions, etc. The present report is part of Volume II, Subject Reports, and is designated as PC(2)-5B. A summary description of all the final reports of the 1960 Population Census appears on page IV.

ACKNOWLEDGMENTS

A large number of persons participated in the various activities of the 1960 Census of Population. Primary responsibilities were exercised by many of the persons listed on the preceding page. Within the Population, Demographic Operations, Field, Geography, and Statistical Methods Divisions, most of the staff members worked on the program. Important contributions were also made by the staffs of the Administrative Service Division, Everett H. Burke, Chief; Budget and Management Division, Charles H. Alexander, Chief; Data Processing Systems Division, Robert F. Drury, Chief; Jeffersonville Census Operations Office, Robert D. Krook, Chief; Personnel Division, James P. Taff, Chief; and Statistical Research Division, William N. Hurwitz, Chief.

Charles B. Nam, Chief, Education and Social Stratification Branch, Population Division, assisted by Lois F. Ivey, had the major responsibility for planning this report and developing its content. John C. Beresford provided liaison with the operations staff, Elizabeth A. Larmon assisted in the preparation of the introductory text, and Mildred M. Russell and Leah S. Anderson performed the technical editorial work. The procedures for compiling the data were devised by Patience Lauriat, Catherine M. Neafsey, Bernadette H. Marlow, George E. Turner, and Anthony B. Woodell of the Demographic Operations Division. The sampling materials were prepared by Robert Hanson, Stanley M. Edelstein, and Anthony G. Turner of the Statistical Methods Division.

The census program was designed in consultation with a number of advisory committees and many individuals in order to maximize the usefulness of the data. Among the groups organized for this purpose were the Technical Advisory Committee for the 1960 Population Census, the Council of Population and Housing Census Users, and the Federal Agency Population and Housing Census Council (sponsored by the U.S. Bureau of the Budget). The persons who served with these groups represented a wide range of interest in the census program; their affiliations included universities, private industry, research organizations, labor groups, Federal agencies, State and local governments, and professional associations.

Tabulation of the data in this report was made possible by funds provided by the Cooperative Research Program of the U.S. Office of Education to Florida State University in connection with a research project which will contribute to the 1960 Census Monograph on education. The monograph, which is being prepared by John K. Folger of the University and Charles B. Nam of the Census Bureau, is one in the series sponsored by the Social Science Research Council and the Bureau of the Census.

August 1963.

FINAL REPORTS OF THE 1960 CENSUS OF POPULATION

The final reports of the 1960 Population Census are arranged in three volumes and a joint Population-Housing series of census tract reports. The 1960 Population Census publication program also includes preliminary, advance, and supplementary reports, certain evaluation, procedural, and administrative reports, and graphic summaries. After publication, copies of all reports are available for examination or purchase at any U.S. Department of Commerce Field Office.

Certain types of unpublished statistics are available for the cost of preparing a copy of the data. Also, under certain conditions, special tabulations of the 1960 Census data can be prepared on a reimbursable basis. In addition, there are available for purchase magnetic tapes and punchcards containing 1960 Census information on the characteristics of a one-in-a-thousand and a one-in-ten-thousand sample of the population of the United States. Confidentiality of the information, as required by law, has been maintained by the omission of certain identification items. Further information about any of these materials can be obtained by writing to the Chief, Population Division, Bureau of the Census, Washington D.C., 20233.

Volume I. Characteristics of the Population. This volume consists of separate reports for the United States, each of the 50 States, the District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. For each of these 57 areas, the data were first issued in four separate paper-bound "chapters," designated as PC(1)-A, B, C, and D. (For Guam, Virgin Islands, American Samoa, and Canal Zone, the material normally contained in chapters B, C, and D are included in chapter B.) For library and general reference use, the paper-bound reports have been assembled and reissued in buckram-bound books identified as Parts A and 1 to 57 of Volume I.

Series PC(1)-1A to 57A: Chapter A. Number of Inhabitants. These reports contain final population counts for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, all incorporated places, unincorporated places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1B to 57B: Chapter B. General Population Characteristics. These reports present statistics on sex, age, marital status, color or race, and relationship to head of household for States and counties and their urban and rural parts, and for standard metropolitan statistical areas, urbanized areas, places of 1,000 inhabitants or more, and minor civil divisions.

Series PC(1)-1C to 53C: Chapter C. General Social and Economic Characteristics. These reports cover the subjects of nativity and parentage, State of birth, country of origin of the foreign stock, mother tongue, place of residence in 1955, year moved into present house, school enrollment by level and type, years of school completed, families and their composition, fertility, veteran status, employment status, weeks worked in 1959, year last worked, occupation group, industry group, class of worker, place of work, means of transportation to work, and income of persons and families. Each subject is shown for some or all of the following areas: States and counties and their urban, rural-nonfarm, and rural-farm parts, standard metropolitan statistical areas, urbanized areas, and urban places.

Series PC(1)-1D to 53D: Chapter D. Detailed Characteristics. These reports present most of the subjects covered in chapter C, above, cross-classified by age, color, and other characteristics. There is also included additional information on families, as well as data on single years of age, detailed occupation, and detailed industry. Each subject is shown for some or all of the following areas: States and their urban, rural-nonfarm, and rural-farm parts; and large counties, cities, and standard metropolitan statistical areas.

Volume I, Part A: Number of Inhabitants. This is a compendium of the 57 chapter A reports, i.e., PC(1)-1A to 57A.

Volume I, Parts 1 to 57: Characteristics of the Population. The 57 parts relate respectively to the United States, each of the 50 States, District of Columbia, Puerto Rico, Guam, Virgin Islands, American Samoa, and Canal Zone. Each part contains the data previously published in the four chapters A, B, C, and D, and is in the form of a separate, buckram-bound book. Parts 54, 55, 56, and 57--for Guam, Virgin Islands, American Samoa, and Canal Zone, respectively--are bound in a single book.

Volume II (Series PC(2) reports). Subject Reports. Each report in this volume concentrates on a particular subject. Detailed information and cross-relationships are generally provided on a national and regional level; in a few reports data for States or standard metropolitan statistical areas are also shown. Among the characteristics covered are ethnic origin and race, fertility, families, migration, education, employment, unemployment, occupation, industry, and income. There is also a report on the geographic distribution and characteristics of inmates of institutions.

Volume III (Series PC(3) reports). Selected Area Reports. Three of the reports in this volume present selected characteristics of the population (1) for State economic areas, (2) for standard metropolitan statistical areas, and (3) according to the size of place where the individual resided. A fourth report provides data on the social and economic characteristics of Americans overseas.

Series PHC(1). Census Tract Reports. These reports present information on both population and housing subjects. There is one report for each of 180 tracted areas in the United States and Puerto Rico. The population subjects include age, race, marital status, country of origin of the foreign stock, relationship to head of household, school enrollment, years of school completed, place of residence in 1955, employment status, occupation group, industry group, place of work, means of transportation to work, and income of families, as well as certain characteristics of the nonwhite population in selected tracts. The housing subjects include tenure, color of head of household, vacancy status, condition and plumbing facilities, number of rooms, number of bathrooms, number of housing units in structure, year structure built, basement, heating equipment, number of persons in unit, persons per room, year household head moved into unit, automobiles available, value of property, and gross and contract rent, as well as certain characteristics of housing units with nonwhite household head for selected tracts. In addition, for selected tracts these reports contain data on certain population and housing subjects for persons of Puerto Rican birth or parentage and for white persons with Spanish surname. (This series is the same as the tract reports listed in the publication program for the 1960 Census of Housing.)

1.--Ethnic origin--Persons 14 years old and over, by years of school completed, age, and sex, for the United States, by type of residence: 1960.....	1
2.--Urban and rural residence--Persons 14 years old and over, by years of school completed, age, and sex, for the United States, by regions (with nonwhite for the United States and the South): 1960.....	15
3.--Region of birth--Persons 14 years old and over, by years of school completed, age, and sex, for the United States, by regions (with nonwhite for the United States and the South): 1960.....	41
4.--Labor force status and marital status--Males 14 years old and over, by years of school completed, age, and color, for the United States, by type of residence: 1960.....	54
5.--Labor force status, marital status, and presence of own children under 6--Females 14 years old and over, by years of school completed, age, and color, for the United States, by type of residence: 1960.....	71
6.--Total income--Males 14 years old and over with income in 1959, by years of school completed, age, and color, for the United States, by type of residence, and by regions: 1960.....	88
7.--Total income--Females 14 years old and over with income in 1959, by years of school completed, age, and color, for the United States, by type of residence, and by regions: 1960.....	112
8.--Major occupation group--Persons 14 years old and over in the experienced civilian labor force, by years of school completed, age, color, and sex, for the United States, by type of residence, and by regions: 1960.....	136
9.--Occupation and earnings--Persons 18 to 64 years old in the experienced civilian labor force with earnings in 1959, by years of school completed, age, and sex, for the United States: 1960.....	169
10.--Occupation and earnings--Nonwhite males 18 to 64 years old in the experienced civilian labor force, by years of school completed and age, for the United States: 1960.....	187

REGIONS AND GEOGRAPHIC DIVISIONS OF THE UNITED STATES

Educational Attainment

GENERAL

This report presents detailed national statistics on the educational attainment of the population 14 years old and over, in terms of years of school completed, in relation to various demographic, social, and economic characteristics. The statistics in this report are based on a 5-percent sample of the population enumerated in the Eighteenth Decennial Census of Population, taken as of April 1, 1960.

Data are included on years of school completed by age and sex cross-classified by ethnic origin and type of residence; and on years of school completed by age, color, and sex, cross-classified by region of birth, labor force status by marital status, income, major occupation group, and occupation by earnings. National figures are shown in all of the tables, and statistics for regions and for urban and rural residence areas are included in many of the tables.

RELATED MATERIALS

1960 Census reports.--Statistics on years of school completed by the population 25 years old and over, based on a 25-percent sample tabulation, for the United States, regions, divisions, States, standard metropolitan statistical areas, urbanized areas, urban places, and counties have been published in chapter C of the 57 parts of 1960 Census of Population, Volume I, Characteristics of the Population. More detailed data on years of school completed by age from the same sample, for persons 14 years old and over, for the United States, regions, divisions, States, and standard metropolitan statistical areas and counties of 250,000 or more have been published in chapter D of 1960 Census of Population, Volume I, Characteristics of the Population. Part 1 of Volume I includes these two chapters for the United States as a whole; the remaining parts of Volume I are for each State and for outlying areas. The chapters C and D were originally published as paper-bound Series PC(1)-C reports, "General Social and Economic Characteristics," and Series PC(1)-D reports, "Detailed Characteristics."

Statistics on educational attainment of the population 25 years old and over are also shown in the reports for census tracts of large cities and adjacent areas. These data are presented, for 180 areas, in 1960 Censuses of Population and Housing, Census Tracts, Series PHC(1).

Additional statistics on educational attainment are included in virtually all other 1960 Census of Population Subject Reports, Series PC(2), which either have already been published or are being planned for publication.

Additional statistics on educational attainment are also presented in the 1960 Census of Population Selected Area Reports, Series PC(3), on State economic areas; size of place; standard metropolitan statistical areas; and Americans overseas.

1950 Census reports.--Data on years of school completed, based on a 20-percent sample of the population, for regions, divisions, States, standard metropolitan areas, urbanized areas, cities, and counties were published in 1950 Census of Population, Volume II, Characteristics of the Population, and for census tracts in Volume III, Census Tract Statistics. Data on educational attainment from a 3 1/3-percent sample, cross-classified by many of the characteristics shown in this report, were published in a report entitled "Education," which was Part 5B of Volume IV, Special Reports, of the 1950 Census of Population reports; additional data on educational attainment, cross-classified by various subjects, were part of other special reports in Volume IV.

Current Population Survey.--Data on educational attainment for the United States as a whole are collected regularly and published periodically by the Bureau of the Census through its Current Population Survey (CPS). The CPS is a nationwide survey, covering a sample of about 35,000 interviewed households. These data are published in Current Population Reports, Series P-20. Statistics on educational attainment by income are shown in the Series P-60 reports, and those on the educational attainment of the labor force are published in Special Labor Force Reports issued by the Bureau of Labor Statistics, U.S. Department of Labor. (For a statement on the comparability of CPS and census data on years of school completed, see the paragraphs on "Comparability" in the section on "Definitions and explanations" below.)

Data on illiteracy, in terms of inability to read and write in any language, are collected occasionally through the CPS and are published in the Series P-20 reports. Estimates of illiteracy for States as of 1960 are shown in Series P-23, No. 8.

Projections to future years of the educational attainment of the population are prepared at intervals by the Bureau staff and are published in the Series P-20 reports.

AVAILABILITY OF UNPUBLISHED DATA

Data shown in this report are also available for States and their urban and rural parts. These data

can be made available on a reimbursable basis. Requests for unpublished data, giving a specific description of the figures desired, may be made in writing to the Chief, Population Division, Bureau of

the Census, Washington, D.C., 20233. Inquiries concerning unpublished data should be transmitted to the Bureau as soon as possible because tape files are not maintained indefinitely.

DEFINITIONS AND EXPLANATIONS

Some of the definitions used in 1960 differ from those used in 1950. These changes were made after consultation with users of census data in order to improve the statistics, even though it was recognized that comparability would be affected. The definitions and explanations should be interpreted in the context of the 1960 Censuses, in which data were collected by a combination of self-enumeration, direct interview, and observation by the enumerator.

The definitions below are consistent with the instructions given to the enumerator. As in all surveys, there were some failures to execute the instructions exactly. Through the forms distributed to households, the respondents were given explanations of some of the questions more uniformly than would have been given in direct interviews. Nevertheless, it was not feasible to give the full instructions to the respondents, and some erroneous replies have undoubtedly gone undetected.

More complete discussions of the definitions of population items are given in 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary, and in each of the State parts.

YEARS OF SCHOOL COMPLETED

Definitions

The data on years of school completed were derived from the answers to the two questions: (a) "What is the highest grade (or year) of regular school he has ever attended?" and (b) "Did he finish this grade (or year)?" These questions on educational attainment applied only to progress in "regular" schools, as defined below. Both questions were asked of all persons 5 years of age and over. In the present report, these data are shown for persons 14 years old and over.

"Regular" schooling.---According to the census definition, "regular" schooling refers to formal education obtained in public and private (denominational and nondenominational) kindergartens, elementary schools, high schools, colleges, universities, or professional schools, whether day or night school, and whether attendance was full time or part time; that is, "regular" schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was not obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferable to a school in the regular school system.

Highest grade of school attended.---The first question called for the highest grade attended, regardless of "skipped" or "repeated" grades, rather than

the number of full school years which the person had spent in school. If the highest grade of school attended was in a junior high school, the instructions were to determine the equivalent in elementary grades 1 to 8 or high school grades 1 to 4.

In some areas in the United States, the school system has, or formerly had, 11 years of school (7 years of elementary school and 4 years of high school), rather than the more conventional 12 years (8 years of elementary school and 4 years of high school, or equivalent years in the elementary-junior high-senior high school system). Persons who had progressed beyond the 7th grade in this type of school system were treated as though they had progressed beyond the 8th grade of elementary school.

Enumerators were instructed to obtain the approximate equivalent grade in the American school system for persons whose highest grade of attendance was in a foreign school system, whose highest level of attendance was in an ungraded school, whose highest level of schooling was measured by "readers," or whose training by a tutor was regarded as qualifying under the "regular" school definition.

Completion of grade.---The second question on educational attainment asked whether or not the highest grade attended had been finished. It was to be answered "Yes" if the person had successfully completed the entire grade or year indicated in response to the previous question on the highest grade ever attended. If the person was still attending school in that grade, had completed only a half grade or semester, or had dropped out of or failed to pass the last grade attended, the question was to be answered "No."

Highest grade of school completed.---The number in each category of highest grade of school completed represents the combination of (a) persons who reported that they had attended the indicated grade and finished it, and (b) those who reported attending the next higher grade but who had not finished it.

Uses and Limitations of the Data

The data in this report may be used to study educational differences among groups classified by race, national origin, marital status, and economic status. One may analyze the association of education with occupational placement, the money value of education and the extent to which this value relates to the type of work performed, the educational distribution of unemployed persons as compared with the employed, the relative educational progress of white and nonwhite persons and its relation to economic status, and the like.

The data on educational attainment refer only to that obtained through "regular" schooling, as defined above. Many types of "nonregular" (formal and informal) schooling and training may contribute substantially

to an individual's knowledge and skills. The statistics on educational attainment in the census are restricted to progress in "regular" schools for several reasons: (1) Nearly all persons in the country are required to attend "regular" schools and pursue fairly standardized courses of basic study. (2) "Regular" schools tend to be graded schools, with the result that a grade continuum for years of school completed can be shown and statistical comparisons can be effected. (3) "Nonregular" types of schooling are varied and are difficult to define and to classify in enumeration.

The quality associated with and the benefits accruing from a given amount of schooling have probably varied over time and no doubt vary among areas of the country and among subgroups of the population. These differences can be accounted for partly by the relative adequacy of the school systems which persons have attended and the level of training they gave, and partly by the cultural, social, and psychological conditions under which persons in the different groups have lived.

Comparability

1950 and 1940 Censuses.---In the 1940 Census, a single question was asked on highest grade of school completed. Analysis of the 1940 returns and those of other surveys conducted by the Census Bureau using wording similar to that used in 1940 indicated that respondents frequently reported the grade or year in which they were enrolled, or had last been enrolled, instead of the one completed. The two-question approach used in the 1950 and 1960 Censuses was designed to reduce this kind of error.

Analysis of the consistency of reported education data for age cohorts among the three censuses, 1940, 1950, and 1960, provides information on the relative net overreporting of educational attainment at the three dates. The data show that, in general, the statistics for 1960 are distributed more like those for 1940 than like those for 1950. Thus, although there was net overreporting at all three censuses, it appears to have been greatest in 1950 and generally of about the same order in 1940 and 1960. One implication of this finding is that the reported census data overstate the increase in years of schooling completed between 1940 and 1950 and understate the increase between 1950 and 1960.

In the 1950 Census, persons for whom highest grade attended was reported but for whom no report was made on finishing the grade were assumed not to have finished the grade if they were at the compulsory school ages but to have finished the grade if they were not at those ages. In the 1960 Census, nonresponses on both highest grade attended and completion of grade were eliminated by the procedure described in the section on "Collection and processing of data."

Current Population Survey.---A comparison of data from the 1960 Census and the March 1959 Current Population Survey on years of school completed for persons 25 years old and over shows that the educational level as given in the CPS is higher than it is in the census. For example, the median number of school years completed for the population 25 years old and over is 11.0 in the CPS and 10.6 in the census. Evidence

available at the time this text was prepared suggests that the difference between the two sources in the educational attainment of persons 25 and over did not result from differences in reporting years of school completed but, rather, from differences between the population statistics by age obtained from the 1960 Census and the corresponding estimates used in the CPS for March 1959. The population estimates by age in the CPS were obtained by updating 1950 Census figures; they excluded members of the Armed Forces living off post and were different in certain other respects from census figures. The CPS figures included relatively more young persons, who are generally better educated, on the average, and comparatively fewer older persons than the census.

Quality of the Data

Information on the quality of data on educational attainment for 1960 is available from two sources: (a) Reports of nonresponse rates, and (b) findings from the Content Evaluation Study of the 1960 Census, a postcensal study in which an intensive reinterview approach was used for a sample of census respondents. In this study, measures of response error were developed with respect to selected items of information by comparing and reconciling the responses obtained in the reinterview with the corresponding census entries. (See also the paragraph on "Current Population Survey" in the section on "Comparability.")

About 5 percent of the population 25 years old and over in 1960 did not report on highest grade of school completed (including those who did not report on either the highest grade attended or whether or not it was completed, and those not reporting on one of the items). The level of nonresponse on this subject in 1950 was about the same, when computed on the same basis. (The published nonresponse rate on years of school completed for persons 25 years and over in 1950 of 2.7 percent was based only on persons not reporting on highest grade attended. An additional 2 percent did not report on whether or not the grade was completed but did report on highest grade attended.) In 1960, there was another 1.5 percent of the population of all ages for whom no sample information was obtained. There is little information about the characteristics of persons for whom replies on years of schooling were not obtained in 1960. Nonresponse rates were higher for nonwhite than for white persons, higher for older than younger persons, and higher for urban than for rural-nonfarm or rural-farm residents. Since nonresponses on educational attainment were allocated in the census operation, and because information is not likely to become available on the accuracy of the allocation operation, the quantitative effect of nonresponse on the accuracy of the published education data is not known but is probably small.

According to the Content Evaluation Study of the 1960 Census (CES), there were both considerable gross overstatement and gross understatement of years of schooling. About 16 percent of the population 25 and over in the CES sample reported having completed at least one grade more in the census than in the CES, whereas about 10 percent reported having completed at least one grade lower in the census than in the CES.

Because there was somewhat more overstatement than understatement (viewing the CES as the criterion), there was net overreporting of years of school completed for 6 percent of the population 25 years old and over. Corresponding analysis of the 1950 Post-Enumeration Survey shows that the percentages of gross underreporting and gross overreporting were less in 1960 than in 1950 but the percent of net overreporting was about the same in the two censuses.

The results of the 1960 Content Evaluation Study are not entirely comparable with those of the 1950 Post-Enumeration Survey. In considering comparative results, it should be noted that reported differences in quality may, in part, arise from improvement in procedures in the 1960 evaluation study, changes in accuracy between the 1960 and the 1950 Censuses, or both. For a more comprehensive report of the results of the evaluation studies, the reader is referred to 1960 Census reports in the "Evaluation and Research Series" and to Bureau of the Census Technical Paper No. 4, The Post-Enumeration Survey: 1950.

Table A.--SELECTED MEASURES OF REPORTING ON YEARS OF SCHOOL COMPLETED, BASED ON THE 1950 CENSUS AND POST-ENUMERATION SURVEY AND THE 1960 CENSUS AND CONTENT EVALUATION STUDY, FOR THE POPULATION 25 YEARS OLD AND OVER

Category	Percent of population	
	1960	1950
Reporting same grade in census and later survey.....	73.3	62.4
Reporting different grade in census and later survey.....	26.7	37.6
Reporting higher grade in census....	16.4	21.9
Reporting lower grade in census.....	10.4	15.8
Net reporting higher grade in census.....	6.0	6.1

MEDIAN

The median is presented in connection with the data on years of school completed and income. It is the value which divides the distribution into two equal parts, one-half the cases falling below this value and one-half the cases exceeding this value.

The median number of school years completed was computed after the statistics on years of school completed had been converted to a continuous series of numbers (e.g., completion of the 1st year of high school was treated as completion of the 9th year and completion of the 1st year of college as completion of the 13th year). The persons completing a given school year were assumed to be distributed evenly within the interval from .0 to .9 of the year. In fact, at the time of census enumeration (generally April or May) most of the enrolled persons had completed at least three-fourths of a school year beyond the highest grade completed, whereas a large majority of persons who were not enrolled had not attended any part of a grade beyond the highest one completed. The effect of the assumption is to place the median for younger persons slightly below, and for older persons slightly above, the true median.

The same procedure for computing this median has been used in the 1940, 1950, and 1960 Censuses.

Because of the inexact assumption as to the distribution within an interval, this median is more appropriately used for comparing different groups and the same group at different dates than as an absolute measure of educational attainment.

URBAN-RURAL RESIDENCE

In general, the urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, according to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

URBANIZED AREA

An urbanized area contains at least one city of 50,000 inhabitants or more in 1960 and the surrounding closely settled incorporated places and unincorporated areas that meet certain criteria relating to population density or land use. An urbanized area may be thought of as divided into the central city, or cities, and the remainder of the area, or the urban fringe. All persons residing in an urbanized area are included in the urban population.

FARM-NONFARM RESIDENCE

The rural population is subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population. In the 1960 Census, the farm population consists of persons living in rural territory on places of 10 or more acres from which sales of farm products amounted to \$50 or more in 1959 or on places of less than 10 acres from which sales of farm products amounted to \$250 or more in 1959. All persons living in group quarters are classified as nonfarm except the relatively few living in workers' quarters (including quarters for migratory agricultural workers) that are located on a farm or ranch.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1960, as determined from the reply to a question on month and year of birth.

COLOR

The term "color" refers to the division of population into two groups, white and nonwhite. The color group designated as "nonwhite" includes Negroes, American Indians, Japanese, Chinese, Filipinos, Koreans, Hawaiians, Asian Indians, Malaysians, Eskimos, Aleuts, etc. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

NATIVITY AND PARENTAGE

Native.--This category comprises persons born in the United States, the Commonwealth of Puerto Rico, or a possession of the United States; persons born in a foreign country or at sea who have at least one native American parent; and persons whose place of birth was not reported and whose census report contained no contradictory information, such as an entry of a language spoken prior to coming to the United States.

Foreign born.--This category includes all persons not classified as native.

Native of native parentage.--This category consists of native persons both of whose parents are also natives of the United States.

Native of foreign or mixed parentage.--This category includes native persons one or both of whose parents are foreign born.

Foreign stock.--This category includes foreign-born persons and native persons of foreign or mixed parentage.

REGION OF BIRTH OF THE NATIVE POPULATION

In this report the native population is classified according to region of birth. This information coupled with region of residence provides data on the geographic origin of the population currently living in each region and on the lifetime movements of the native population from one region to another within the United States from the time of birth to the date of the census.

REGION OF ORIGIN OF THE FOREIGN STOCK

Persons of foreign stock are classified according to their country of origin--country of birth for the foreign born and parents' country of birth for the native of foreign or mixed parentage. Natives of foreign parentage whose parents were born in different countries are classified according to the country of birth of the father. Natives of mixed parentage are classified according to the country of birth of the foreign-born parent. The classification by country of origin is based on international boundaries as recognized by the United States Government on April 1, 1960, although there may have been some deviation from the rules where respondents were unaware of changes in boundaries or jurisdiction.

The classification embraces six groups of countries, representing three groups of European stock, one of Latin American stock, one of combined Canadian, Australian, and New Zealand stock, and a sixth group for stock from the remaining areas of the world. A list of the countries included in each grouping is given below:

<u>Northern or Western Europe</u>	<u>Mexico, Central or South America--Con.</u>
England	Central America--Con.
Scotland	El Salvador
Wales	Costa Rico
Northern Ireland	Panama
Ireland	Cuba
Norway	Jamaica
Sweden	The West Indies (Federation)
Denmark	Dominican Republic
Netherlands	Haiti
Belgium	Other West Indies
Switzerland	
France	<u>South America</u>
Germany	Colombia
Austria	Venezuela
Iceland	Ecuador
Luxembourg	Peru
	Bolivia
<u>Central or Eastern Europe</u>	Brazil
Poland	Chile
Czechoslovakia	Paraguay
Hungary	Uruguay
Yugoslavia	Argentina
Latvia	The Guianas
Estonia	
Lithuania	<u>Canada, Australia, and New Zealand</u>
Finland	Canada
Rumania	Australia
Bulgaria	New Zealand
Albania	
U.S.S.R.	<u>Other</u>
<u>Southern Europe</u>	Southwest Asia
Greece	Turkey
Dodecanese Islands	Syria
Italy	Lebanon
Spain	Israel
Portugal	United Arab Republic
Trieste	Other Southwest Asia
Malta and Gozo	
Monaco	Asia
Liechtenstein	Pakistan
Andorra	India
Gibraltar	China
San Marino	Japan
Vatican City	Korea
Azores	Philippine Islands
Europe (Country not specified)	Other Asia
<u>Mexico, Central or South America</u>	Africa
Mexico	Northern Africa
Central America	Union of South Africa
Guatemala	Other Africa
British Honduras	
Honduras	Other Atlantic Islands
Nicaragua	Trust Territories (U.S. Administration)
	Other Pacific Islands
	Country not specified

MARITAL STATUS

This classification refers to the marital status of the person at the time of enumeration. Persons classified as "married" comprise, therefore, both those who have been married only once and those who remarried after having been widowed or divorced. Persons reported as separated (either legally separated or otherwise absent from the spouse because of marital discord) are classified as a subcategory of married

persons. The enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single.

The number of married men may be different from the number of married women for an area because of the absence of husbands or wives from the country, because the husband and wife have different places of residence, because of the methods used to inflate the sample data, or for other reasons.

A married person with "spouse present" is a man or woman whose spouse was enumerated as a member of the same household even though he or she may have been temporarily absent on business or vacation, visiting, in a hospital, etc., at the time of enumeration.

OWN CHILDREN

An own child is defined here as a single (never married) son, daughter, stepchild, or adopted child of the person in question. This report presents data on women by presence of own children.

EMPLOYMENT STATUS

The data on employment status relate to the calendar week prior to the date on which the respondents filled their Household Questionnaires or were interviewed by enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week.

Employed persons comprise all civilians 14 years old and over who were either (a) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or in a family business; or (b) were "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of bad weather, industrial dispute, vacation, illness, or other personal reasons.

Persons are classified as unemployed if they were 14 years old and over and not "at work" but looking for work. A person is considered as looking for work not only if he actually tried to find work but also if he had made such efforts recently (i.e., within the past 60 days) and was awaiting the results of these efforts. Persons waiting to be called back to a job from which they had been laid off or furloughed are also counted as unemployed. Unemployed persons who have worked at any time in the past are classified as the "experienced unemployed."

The "civilian labor force" includes all persons classified as employed or unemployed, as described above. The "labor force" also includes members of the

Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard). The "experienced civilian labor force" comprises the employed and the experienced unemployed.

Persons "not in the labor force" comprise all those 14 years old and over who are not classified as members of the labor force, including persons doing only incidental unpaid family work (less than 15 hours during the week).

OCCUPATION

The data on occupation in this report are for the experienced civilian labor force and refer to the job held by the employed during the week for which employment status was reported or the last job held by the experienced unemployed. For persons employed at two or more jobs, the data refer to the job at which the person worked the greatest number of hours. The occupation statistics presented here are based on the detailed systems developed for the 1960 Census; see 1960 Census of Population, Classified Index of Occupations and Industries, U.S. Government Printing Office, Washington, D.C., 1960.

INCOME IN 1959

Information on income for the calendar year 1959 was requested from all persons 14 years old and over in the sample. "Total income" is the sum of amounts reported separately for wage or salary income, self-employment income, and other income. Wage or salary income is defined as the total money earnings received for work performed as an employee. It represents the amount received before deductions for personal income taxes, Social Security, bond purchases, union dues, etc. Self-employment income is defined as net money income (gross receipts minus operating expenses) from a business, farm, or professional enterprise in which the person was engaged on his own account. Earnings are obtained by summing wage or salary income and self-employment income. Other income includes money income received from such sources as net rents, interest, dividends, Social Security benefits, pensions, veterans' payments, unemployment insurance, and public assistance or other governmental payments, and periodic receipts from insurance policies or annuities. Not included as income are money received from the sale of property (unless the recipient was engaged in the business of selling such property), the value of income "in kind," withdrawals of bank deposits, money borrowed, tax refunds, and gifts and lump-sum inheritances or insurance payments.

COLLECTION AND PROCESSING OF DATA

COLLECTION OF DATA

Several enumeration forms were used to collect the information for the 1960 Census of Population. A few days before the census date, the Post Office Department delivered an Advance Census Report (ACR) to households on postal delivery routes. This form contained questions which were to be answered for every person and

every housing unit. Household members were requested to fill the ACR and have it ready for the enumerator. The census enumerator recorded this information on a form specially designed for electronic data processing by FOSDIC (Film Optical Sensing Device for Input to Computer). The information was either transcribed from the ACR to the complete-count FOSDIC schedule or entered on this schedule during direct interview.

In the densely populated areas, the enumerator left a Household Questionnaire to be completed by each household (or person) in the sample and mailed to the local census office. The population and housing information was transcribed from the Household Questionnaire to a sample FOSDIC schedule. When the Household Questionnaire was not returned or was returned without having been completed, the enumerator collected the missing information by personal visit or by telephone and entered it directly on the sample FOSDIC schedule. In the remaining areas, when the enumerator picked up the ACR, he obtained all the information by direct interview and recorded it directly on the sample FOSDIC schedule.

Soon after the enumerator started work, his schedules were examined in a formal field review. This operation was designed to assure at an early stage of the work that the enumerator was performing his duties properly and had corrected any errors he had made.

More detailed descriptions of the 1960 Census procedures in the collection and processing of the data are given in reports entitled United States Censuses of Population and Housing, 1960: Principal Data Collection Forms and Procedures, 1961; and Processing the Data, 1962, U.S. Government Printing Office, Washington, D.C., 20402.

MANUAL EDITING AND CODING

After the FOSDIC forms had been checked for completeness in the field, they were sent to a central processing office for manual editing and coding and for microfilming. Except where some special problems arose, there was no manual coding of the FOSDIC forms for complete-count data. On the sample forms, the manual operation was limited to those items where coding required the reading of written entries and therefore could not be done effectively by machine. The coding clerks converted the written entries to codes by marking the appropriate circles on the FOSDIC schedules and at the same time were able to correct obviously wrong entries and sometimes supply missing information.

ELECTRONIC PROCESSING

After the enumerators and coders recorded the information by marking the appropriate circles, the schedules were microfilmed. The information on the microfilm was then read by FOSDIC, which converted the markings to signals on magnetic tape. The tape, in turn, was processed in an electronic computer, which was used extensively to edit and tabulate the data and to produce the publication tables.

EDITING

For a majority of items, nonresponses and inconsistencies were eliminated by using the computer to assign entries and correct inconsistencies. In general, few assignments or corrections were required, although the amount varied by subject and by enumerator.

The assignment of an acceptable entry by machine was based on related information reported for the person or on information reported for a similar person in the immediate neighborhood. For example, in the assignment of age in the complete-count tabulations, the computer stored reported ages of persons by sex, color or race, household relationship, and marital status; each stored age was retained in the computer only until a succeeding person having the same characteristics and having age reported was processed through the computer; this stored age was assigned to the next person whose age was unknown and who otherwise had the same characteristics. This procedure insured that the distribution of ages assigned by the computer for persons of a given set of characteristics would correspond closely to the reported age distribution of such persons as obtained in the current census.

For about 1,150 members of the Armed Forces in Maine, most of whom were under 30 years of age and single, the complete-count items were not transcribed to the Stage II schedules. In the editing of the data for the reports based on the 25-percent sample, the age and marital status of these persons were obtained by allocation. The age assigned by the computer program was 80, and the marital status assigned was widowed. This error was found too late for a correction to be made. As a result, there is an overstatement of the number of widowed males 80 years of age and an understatement of single males 15 to 29 years of age in the rural-nonfarm white population for the State of Maine, the Northeast, and the United States as a whole. The effect of this error is slight but is present in all tables showing age or marital status except those which are limited to the civilian population.

The extent of the allocations for nonresponse or for inconsistency is shown for the United States and for States, places of 10,000 inhabitants or more, and other areas in appendix tables in chapters B, C, and D of 1960 Census of Population, Volume I, Characteristics of the Population.

Specific tolerances were established for the number of computer allocations acceptable for a given area. If the number was beyond tolerance, the data were rejected and the original schedules were re-examined to determine the source of the error. Correction and reprocessing were undertaken as necessary and feasible.

ACCURACY OF THE DATA

Human and mechanical errors occur in any mass statistical operation such as a decennial census. Such errors include failure to obtain required information from respondents, obtaining inconsistent information, recording information in the wrong place or incorrectly, or otherwise producing inconsistencies between entries on interrelated items on the field documents. Sampling biases occur because some of the enumerators fail to follow the sampling instructions. Clerical coding and editing errors occur, as well as errors in the electronic processing operation.

Careful efforts are made in every census to keep the errors in each step at an acceptably low level. Review of the enumerator's work, verification of manual

coding and editing, checking of tabulated figures, and ratio estimation of sample data to control totals from the complete count reduce the effects of the errors in the census data.

Very minor differences between tables in this report or between corresponding data in this report and chapters C and D of Volume I, Characteristics of the Population, result from imperfections in the electronic equipment. No attempt has been made to reconcile these minor discrepancies.

Some innovations in the 1960 Censuses reduced errors in processing and others produced a more consistent quality of editing. The elimination of the card-punching operation removed one important source of error. The extensive use of electronic equipment

insured a more uniform and more flexible edit than could have been accomplished manually or by less intricate mechanical equipment. It is believed that the use of electronic equipment in the 1960 Censuses has improved the quality of the editing compared with that of earlier censuses but, at the same time, it has introduced an element of difference in the statistics.

A group of reports designated "Evaluation and Research Series" will deal with the methods, results, and interpretation of a group of evaluation and research studies of the 1960 Censuses of Population and Housing. A report entitled The Post-Enumeration Survey: 1950, Technical Paper No. 4, presents evaluative material on the 1950 Census.

SAMPLE DESIGN AND SAMPLING VARIABILITY

SAMPLE DESIGN

For persons in housing units at the time of the 1960 Census, the sampling unit was the housing unit and all its occupants; for persons in group quarters, it was the person. On the first visit to an address, the enumerator assigned a sample key letter (A, B, C, or D) to each housing unit sequentially in the order in which he first visited the units, whether or not he completed an interview. Each enumerator was given a random key letter to start his assignment, and the order of canvassing was indicated in advance, although these instructions allowed some latitude in the order of visiting addresses. Each housing unit to which the

key letter "A" was assigned was designated as a sample unit, and all persons enumerated in the unit were included in the sample. In every group quarters, the sample consisted of every fourth person in the order listed. The 1960 statistics in this report are based on a subsample of one-fifth of the original 25-percent sample schedules. The subsample was selected on the computer, using a stratified systematic sample design. The strata were made up as follows: For persons in regular housing units there were 36 strata, i.e., 9 household size groups by 2 tenure groups by 2 color groups; for persons in group quarters, there were 2 strata, i.e., the 2 color groups.

Table B.--EDUCATION ATTAINMENT--COMPARISON OF 25-PERCENT AND 5-PERCENT SAMPLE DATA ON YEARS OF SCHOOL COMPLETED, BY SEX, FOR THE UNITED STATES: 1960

Years of school completed and sex	25-percent sample	5-percent sample	Percent distribution		Ratio of 25-percent sample number to 5-percent sample number
			25-percent sample	5-percent sample	
Male, 14 years and over.....	61,315,362	61,353,999	0.999
14 to 24 years.....	13,384,793	13,356,556	1.002
25 years and over.....	47,930,569	47,997,443	100.0	100.0	0.999
No school years completed.....	1,165,079	1,169,622	2.4	2.4	0.996
Elementary: 1 to 4 years.....	3,341,100	3,351,952	7.0	7.0	0.997
5 to 7 years.....	7,019,028	7,021,898	14.6	14.6	1.000
8 years.....	8,516,328	8,539,972	17.8	17.8	0.997
High school: 1 to 3 years.....	8,973,044	8,988,357	18.7	18.7	0.998
4 years.....	10,154,337	10,172,558	21.2	21.2	0.998
College: 1 to 3 years.....	4,122,693	4,126,718	8.6	8.6	0.999
4 years.....	2,510,097	2,508,821	5.2	5.2	1.001
5 years or more.....	2,128,863	2,117,545	4.4	4.4	1.005
Median school years completed.....	10.3	10.3	1.000
Female, 14 years and over.....	64,961,189	64,912,621	1.001
14 to 24 years.....	13,453,670	13,445,023	1.001
25 years and over.....	51,507,519	51,467,598	100.0	100.0	1.001
No school years completed.....	1,109,734	1,106,511	2.2	2.1	1.003
Elementary: 1 to 4 years.....	2,686,669	2,674,795	5.2	5.2	1.004
5 to 7 years.....	6,734,799	6,731,927	13.1	13.1	1.000
8 years.....	8,926,605	8,924,389	17.3	17.3	1.000
High school: 1 to 3 years.....	10,142,871	10,151,326	19.7	19.7	0.999
4 years.....	14,301,151	14,267,161	27.8	27.7	1.002
College: 1 to 3 years.....	4,619,377	4,620,425	9.0	9.0	1.000
4 years.....	2,103,270	2,108,762	4.1	4.1	0.997
5 years or more.....	883,043	882,302	1.7	1.7	1.001
Median school years completed.....	10.9	10.9	1.000

Although the sampling procedure did not automatically insure an exact 5-percent sample of persons, the sample design was unbiased if carried through according to instructions. Generally, for large areas, the deviation from the estimated sample size was found to be quite small. Biases may have arisen, however, when the enumerator failed to follow his listing and sampling instructions exactly.

Table B compares the distribution by years of school completed of the population 25 years old and over, as presented in this report, based on the 5-percent sample with corresponding statistics based on the 25-percent sample presented in Volume I of the 1960 Census of Population. Differences in this table reflect primarily sampling error. This is relatively small and should have little influence on the interpretation of the data.

RATIO ESTIMATION

The statistics based on the 5-percent sample of the 1960 Census returns are estimates that have been developed through the use of a ratio estimation procedure. This procedure was carried out for each of the following 44 groups of persons in each of the sample weighting areas:¹

Group	Sex, color, and age	Relationship and tenure
Male white:		
1	Under 5	
2	5 to 13	
3	14 to 24	Head of owner household
4	14 to 24	Head of renter household
5	14 to 24	Not head of household
6-8	25 to 44	Same groups as age group 14 to 24
9-11	45 and over	Same groups as age group 14 to 24
Male nonwhite:		
12-22	Same groups as male white	
Female white:		
23-33	Same groups as male white	
Female nonwhite:		
34-44	Same groups as male white	

The sample weighting areas were defined as those areas within a State consisting of central cities of urbanized areas, the remaining portion of urbanized areas not in central cities, urban places not in urbanized areas, or rural areas.²

¹ Estimates of characteristics from the sample for a given area are produced using the formula:

$$x' = \sum_{i=1}^{44} \frac{x_i Y_i}{Y_i}$$

where x' is the estimate of the characteristic for the area obtained through the use of the ratio estimation procedure, x_i is the count of sample persons with the characteristic for the area in one (i) of the 44 groups, Y_i is the count of all sample persons for the area in the same one of the 44 groups, and Y_i is the count of persons in the complete count for the area in the same one of the 44 groups.

² For the definitions of urbanized area and urban place, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

For each of the 44 groups, the ratio of the complete count to the sample count of the population in the group was determined. Each specific sample person in the group was assigned an integral weight so that the sum of the weights would equal the complete count for the group. For example, if the ratio for a group was 20.1, one-tenth of the persons (selected at random) within the group were assigned a weight of 21, and the remaining nine-tenths a weight of 20. The use of such a combination of integral weights rather than a single fractional weight was adopted to avoid the complications involved in rounding in the final tables. In order to increase the reliability, where there were fewer than 275 persons in the complete count in a group, or where the resulting weight was over 80, groups were combined in a specific order to satisfy both of these two conditions.

These ratio estimates reduce the component of sampling error arising from the variation in the size of household and achieve some of the gains of stratification in the selection of the sample, with the strata being the groups for which separate ratio estimates are computed. The net effect is a reduction in the sampling error and bias of most statistics below what would be obtained by weighting the results of the 5-percent sample by a uniform factor of 20. The reduction in sampling error will be trivial for some items and substantial for others. A byproduct of this estimation procedure, in general, is that estimates for this sample are generally consistent with the complete count with respect to the total population and for the subdivisions used as groups in the estimation procedure. A more complete discussion of the technical aspects of these ratio estimates will be presented in another report.

SAMPLING VARIABILITY

The figures from the 5-percent sample tabulations are subject to sampling variability, which can be estimated roughly from the standard errors shown in tables C and D below.

These tables³ do not reflect the effect of response variance, processing variance, or bias arising in the collection, processing, and estimation steps. Estimates of the magnitude of some of these factors in the total error are being evaluated and will be published at a later date. The chances are about 2 out of 3 that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than 2½ times the standard error. The amount by which the estimated standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks.

Table C shows rough standard errors of estimated numbers up to 50,000. The relative sampling errors of

³ The estimates of sampling variability are based on calculations from a preliminary sample of the 1960 Census results. Further estimates are being calculated and will be available at a later date.

larger estimated numbers are somewhat smaller than for 50,000. For estimated numbers above 50,000, however, the nonsampling errors, e.g., response errors and processing errors, may have an increasingly important effect on the total error. Table D shows rough standard errors of data in the form of percentages. Linear interpolation in tables C and D will provide approximate results that are satisfactory for most purposes.

For a discussion of the sampling variability of medians and means and of the method for obtaining standard errors of differences between two estimates, see 1960 Census of Population, Volume I, Characteristics of the Population, Part 1, United States Summary.

Illustration: Table 5 shows that in the United States there are 22,605 females in the labor force aged 22 to 24 years who completed 5 or more years of college. Table C shows that for an estimate of 22,605 the approximate standard error is 586, which means that the chances are approximately 2 out of 3 that the results of a complete census would not differ by more than 586 from this estimated 22,605. It also follows that there is only about 1 chance in 100 that a complete census result would differ by as much as 1,465, that is, by about 2½ times the number estimated from table C.

Table C.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED NUMBER

(Range of 2 chances out of 3)

Estimated number	Standard error	Estimated number	Standard error
50.....	30	5,000.....	280
100.....	40	10,000.....	390
250.....	60	15,000.....	480
500.....	90	25,000.....	620
1,000.....	120	50,000.....	880
2,500.....	200		

Table D.--ROUGH APPROXIMATION TO STANDARD ERROR OF ESTIMATED PERCENTAGE

(Range of 2 chances out of 3)

Estimated percentage	Base of percentage					
	500	1,000	2,500	10,000	25,000	100,000
2 or 98.....	3.3	2.3	1.3	0.8	0.3	0.3
5 or 95.....	5.0	4.0	2.3	1.0	0.5	0.3
10 or 90.....	7.0	5.0	3.0	1.5	0.8	0.5
25 or 75.....	10.0	6.8	3.8	1.8	1.0	0.5
50.....	11.0	7.8	4.0	2.0	1.3	0.8

Table 1.--ETHNIC ORIGIN--PERSONS 14 YEARS OLD AND OVER, BY YEARS OF SCHOOL COMPLETED, AGE, AND SEX, FOR THE UNITED STATES, BY TYPE OF RESIDENCE: 1960

(Based on 5-percent sample. Percent not shown where less than 0.1; median not shown where less than 1.0; percent and median not shown where base is less than 1,000)

AREA, AGE, SEX, AND YEARS OF SCHOOL COMPLETED	TOTAL	NATIVE OF NATIVE PARENTAGE		FOREIGN STOCK BY AREA OF ORIGIN									
		TOTAL	WHITE	TOTAL		NORTHERN OR WESTERN EUROPE	CENTRAL OR EASTERN EUROPE	SOUTHERN EUROPE	MEXICO, CENTRAL OR SOUTH AMERICA	CANADA, AUSTRALIA, OR NEW ZEALAND	OTHER
