¹ Percentage increases are computed on basis of change in population since preceding census date, and period covered therefore is not always exactly 10 years. Adjustments for differences in census dates must be made if strictly comparable figures are desired for each decade.

² Figures given for various census years represent the area of all land within the present boundaries of the United States and conterminous United States which was under the jurisdiction of the United States on the date in question, including in some cases considerable areas of land not then organized or settled and not covered by the census. In 1870, for example, Alaska was not covered by the census. Area figures for conterminous United States for the years 1790 through 1920 have been revised since publication of 1950 reports to bring them in agreement with remeasurements made in 1940.

³ Revised figure of 39,818,449 for the 1870 population includes adjustments for underenumeration in the Southern States. Unadjusted data are used in this and subsequent tables because revised figures for States, urban-rural residence, etc., are not available. On the basis of the revised figure, the population increased by 8,375,128, or 26.6 percent, between 1860 and 1870, and by 10,370,760, or 26.1 percent, between 1870 and 1880.

⁴ On the basis of the revised figure for the Southern States, the population increased by 8,375,128, or 26.6 percent, between 1860 and 1870, and by 10,337,334, or 26.0 percent, between 1870 and 1880.

¹ Some persons in areas classified as urban under special rules according to the previous urban definition are classified as rural according to the current definition (see table 4). Gross difference in urban or rural population resulting from the change in definition, therefore, exceeds the difference shown.

² Base of percent in population according to previous definition.

Table 20.—URBAN AND RURAL POPULATION OF THE UNITED STATES, BY REGIONS, DIVISIONS, AND STATES, AND OF THE COMMONWEALTH OF PUERTO RICO: 1790 TO 1960

[For description of current and previous definitions, see text. Insofar as possible, population is that of present area of State; see table 9. Minus sign (-) denotes decrease. Percent not shown where less than 0.1]

¹ The cities of Hilo and Honolulu have legally established limits and therefore are treated as incorporated places.
² The revised population total for Nampa is 18,897. The figure in the table excludes population for an area misclassified as outside, rather than inside, the city limits. This error was discovered too late for correction in the detailed distributions.

¹ Revised since publication of 1950 reports.

² The revised population total for North Chicago is 22,938. The figure in the table excludes population for an area misclassified as outside, rather than inside, the city limits. This error was discovered too late for correction in the detailed distributions.
