#### DEMOGRAPHIC SURVEYS DIVISION

Earle J. Gerson, Acting Chief

**ACKNOWLEDGMENTS**—Many persons participated in the various activities of the 1970 census. Primary direction of the program was performed by Conrad Taeuber, Associate Director for Demographic Fields, assisted by David L. Kaplan, 1970 Census Coordinator, and in conjunction with Joseph F. Daly, then Associate Director for Research and Methodology, William I. Merkin, Associate Director for Administration, and Paul R. Squires, Associate Director for Data Collection and Statistical Processing.

The Census Employment Survey was planned and directed in the Demographic Surveys Division under the supervision of Daniel B. Levine, by Earle J. Gerson, Assistant Division Chief. This report was developed and written by George Gray, Kenneth R. Brimmer, and Gloria F. Tobor. The procedures for processing the data shown in this report were prepared under the direction of Jervis Braunstein, Assistant Division Chief; Orville Fisher and Leonard Goldberg were responsible for the manual procedures and Alfonso Episcopo and Merritte Woodward for the computer procedures.

The Statistical Methods Division was responsible for sample design, quality control, estimation procedures and the estimates of reliability. This work was performed under the supervision of Joseph Waksberg, Chief, Robert H. Hanson and Morton Boisen, Assistant Division Chiefs, assisted by Barbara Ann Boyes and Peter A. Bounpane. Listing procedures were prepared by Irene C. Montie.

Data collection activities were administered in the Field Division under the Supervision of Paul R. Squires, then Chief, and Richard C. Burt, then Assistant Division Chief, by James L. Johnson, Alvin L. Etzler, and Alfred J. Giglitto, and with the assistance of the directors of the Bureau's Data Collection Centers.

Manual processing, microfilming, and data punching of the questionnaires were performed by the Jeffersonville Census Operations Division under the supervision of Joseph F. Arbena, then Chief, and Reese P. Helmer, Assistant Division Chief. The clerical operations carried out at the Bureau's facility in Pittsburg, Kans., were supervised by Francis Allai and Robert Allen.

Computer processing was performed in the Computer Facilities Division under the supervision of James R. Pepal, Chief, and E. Richard Bourdon and James W. Shores, Assistant Division Chiefs.

Delineation of urban areas was done under the direction of Arno I. Winard, by Donald Fowles, Frederick J. Cavanaugh, Mark Littman, and Antoinette Weir, of the Population Division, Herman P. Miller, Chief.

The maps used for this survey were developed in the Geography Division, under the supervision of William T. Fay, then Chief, Robert C. Klove, Assistant Division Chief, and Ross E. Vaughn.

Publication planning, editing, and printing were performed in the Administrative and Publications Services Division, Cecil B. Matthews, Chief, under the direction of Raymond J. Koski, Assistant Chief, by Gerald A. Mann and Julia H. Moring.

Important contributions were made by Robert L. Stein and Stuart Garfinkle of the U.S. Department of Labor in the designation of the metropolitan areas covered in this Survey, and by Stanley Knebel of that Department and Gene Rowe of the U.S. Department of Agriculture in the designation of the rural areas. Mr. Stein and Mr. Rowe also developed the table specifications for the metropolitan and rural area reports, respectively.

### GENERAL

This report presents statistics from the Census Employment Survey (CES) conducted as part of the overall program of the 1970 Census of Population and Housing. Detailed socioeconomic information on employment-related problems was collected in each of seven sets of rural counties and in 51 cities.

The need for a special program became evident during the final Cabinet-level review of the subject content of the 1970 census. It was clear that the census questionnaire could not be expanded to fulfill all of the needs for data to assist in guiding Government programs in the fields of labor, housing, education, and welfare for certain critical target groups—people residing in areas having substantial numbers of persons and families

with low incomes. More extensive information was needed on such subjects as employment, unemployment, job-seeking methods, job tenure, sources and level of income, residential mobility and transportation to work. Therefore, the Census Employment Survey was developed to obtain this information from persons living in 60 selected areas in 51 of the Nation's largest cities, and seven predominantly rural areas. These seven sets of counties were selected as representative of differing factors that affect job opportunities in the Nation's rural areas.

This series on the CES consists of a total of 76 separate reports. Eight of the reports present results for the rural areas. There are 60 reports which cover the individual urban areas and 8 combined reports, including a U.S. Summary of the urban areas. The other combined reports are summaries of metropolitan areas with more than one low-income area. A list of the reports of the areas appears on page ii.

**Content of the tables.**—Tables A to N present general demographic characteristics of the population by the most important labor force and socioeconomic factors. These tables include data for each race and Spanish-origin group comprising 5 percent or more of the area's population, as measured by the 1970 Census of Population and Housing. In Appalachia, however, the tables are presented by State rather than by race or ethnic origin. In all other reports, each table will be presented for the total population of the area, for the white population of the area, and for the Negro population of the area. Whenever the proportion of persons of Spanish origin is 5 percent or more the white group will be subdivided into white Spanish and other white. In most instances figures for other races (American Indian, Chinese, Japanese, etc.) can be obtained only by sub-

traction from the total. However, where they comprise 5 percent or more of the population they will be shown separately as "Other," as occurs in the report on the rural counties of New Mexico.

Tables 1 to 15 of the detailed characteristics tables present current labor force and employment status statistics by detailed demographic categories. Since these and the following detailed characteristics tables provide significantly greater detail in the form of cross classifications than tables A to N, they are restricted to those race and Spanish-origin groups representing 20 percent or more of the area's population. Their presentation for a group of less than 20 percent of the total population would result in many categories with no information.

Tables 16 to 26 present the same detailed demographic characteristics as tables 1 to 15 by the work experience of the population in the last 12 months. Information on work history of the population is presented in tables 27 to 31. Detailed statistics on family income and the migration pattern of the residents of this area are presented in tables 32 to 46. Tables 47 to 55 present characteristics of the labor force and family income for persons reported as having engaged in some farmwork for wage or salary in the last 12 months.

All tables are for persons 16 years of age or older unless specifically indicated otherwise.

The subcategories do not always add to the totals because of rounding the weighted figures to whole numbers.

**Derived figures.**—This report presents data for medians as well as percents and rates. The median is the middle value in a distribution of values; i.e., the median divides the distribution into two equal parts—one-half of the cases fall below the median and one-

half the cases fall above the median value. When the median falls in the last category of a distribution, the method of presentation is to show the lower limit of the category followed by a plus sign. For example, if the median falls in the category "65 years and over," it is shown as "65+."

**Symbols.**—The symbols used in these reports are "—" and "NA". A dash (—) signifies zero or no data for that cell. "NA" means not applicable and is used, for example, when a median line is shown but the information to be presented is a percent.

#### DATA COLLECTION PROCEDURES

On the average, in each designated rural area interviews were obtained from about 8,700 persons 16 years of age or older who were members of about 3,990 households. However, the areas ranged from a low of 3,600 households and 7,200 persons to a high of 4,400 interviewed households with over 10,800 sample persons. The interviewing operations lasted an average of 11 weeks, but the span of data collection activities ranged from 8 weeks to 14 weeks. Some areas began enumeration in mid-October 1970, while others did not begin until mid-November. All, however, were completed by mid-February 1971. Overall, interviews were obtained from all but 1.4 percent of the eligible occupied addresses.

For the area covered in this report, specific data for sample size, the interviewing period, and the proportion of contacted households not participating in the survey are presented in the section "Selected Characteristics of the Survey in This Area."

**Selection of sample areas.**—Since the inhabitants of rural low-income areas do not have the same characteristics in all parts of the country, each of the rural survey areas was chosen to represent a particular type of employment problem confronting the resi-

dents of the area. The area in North Carolina is a major tobacco growing area and present indications are that considerable displacement of small farmers and farm workers may take place because of impending harvest mechanization. The Appalachian counties represent an area of mining and subsistence farming. The Arkansas area represents an area with a largely Negro population displaced by mechanization in cotton growing. The area in Alabama illustrates problems confronting those residents in a deep south area. The Missouri area is a mid-continent area with a mixed economy of small farming, lumber industry, and recreational services. New Mexico was selected because of the concentration of two low-income minority groups—American Indians and Americans of Spanish origin. Finally, a two-county area of California, where the unemployment rate is about twice as high as the State-wide rate, was selected to illustrate the situation of a low-income pocket in the midst of a generally prosperous region. Major cities were not included in the sample so as not to obscure the characteristics of the rural and small town populations. These cities not included in the sample are listed in the section "Selected Characteristics of the Survey in This Area."

**Selection and training of personnel.**—The Census Employment Survey was conducted in each area as soon as practicable after the completion of the decennial census operations. The great majority of the members of the CES data collection staff (area supervisors, crew leaders, and interviewers) were selected because they had held similar positions with the census and thus had some data-gathering experience.

The typical area office staff consisted of (1) an area supervisor, (2) a supervisory clerk, (3) three or four office clerks, (4) a crew leader for each five or six interviewers, and (5) an

interviewer for each one hundred assigned households. Most offices had six or seven crew leaders and from 30 to 35 interviewers. Each office had at least one person specially trained in selected quality control procedures. Overall supervision of the project was provided by personnel from the Census Bureau's permanent Data Collection Centers.

The actual data collection was preceded by an extensive training program involving both home study and classroom work. Training for area supervisors lasted 1 week. Crew leaders received 7 days of training, including 1 day of actual interviewing experience. Interviewers were given 5 days of classroom lectures and one-half day of on-the-job training. The person selected for quality control attended the interviewer training and then received a 2-day special training session on quality control procedures. The area office staff attended either the crew leader's or the interviewer's training session and received additional specific instruction on the operations they were to perform.

**Quality control of data collection.**—The quality of the results of the interviewing was controlled at two levels in the field. First, the crew leader observed each interviewer twice and more often if needed. The first few completed forms returned by an interviewer also were reviewed carefully and thereafter all forms were scanned for completeness. Most importantly, the crew leader conducted a recheck by personal visit or telephone of one in every eight addresses assigned to the interviewer. These addresses were randomly selected and included units reported as "noninterview" as well as interviewed households. The purpose of the recheck was to make sure that interviewers were dealing properly with persons who did not wish to respond and that they had obtained informa-

tion concerning all members of the household who were 16 years of age or older. In addition, the crew leader revisited and obtained, if possible, an interview for all occupied households that were reported as "noninterview" by the interviewer. This served the dual purpose of reducing such noninterviews and acquainting the crew leader with ways to help the interviewers obtain a high rate of completion.

The second level of control of quality was carried out in the area office. First, a complete edit of a portion of each interviewer's work was performed for each week he worked. In addition, the area office reviewed all of the interviewer's work for completeness.

Finally, a random group of addresses was selected from the entire area assignment and a specially trained interviewer (designated as a reinterviewer) returned to the household and conducted a complete reinterview with one of the persons contacted by the original interviewer. The reinterviewer was provided with the information that was originally collected. After he conducted his interview he checked his results against the information obtained by the original interviewer. If discrepancies were noted between the two interviews the reinterviewer attempted to reconcile the differences. Discrepancies were then corrected and the reasons reported. The addresses included in the reinterview were selected not only to provide a check on the work of the interviewer and crew leader, but also to obtain a measure of the overall quality of the data collected.

For the more urban areas in the selected counties the area office was provided with lists of addresses and special places designated to be interviewed. For the less built-up areas the office was provided with maps showing small areas. The interviewers listed all housing units within these small areas and some or all of them were

designated for interviewing. (See Appendix B, Sample Design, Estimation, and Reliability of Estimates.)

**Interviewing.**—The office prepared a Control Card (CES-1R) for each housing unit and each designated person in special places. (See appendix C for copies of the forms used in CES.) The survey was conducted by a personal visit to each designated unit. The interviewer completed the Control Card by obtaining a complete list of all household members, as defined below, and some personal characteristics, such as birth date, sex, marital status, and educational attainment, for these household members. In addition, information was gathered on selected housing characteristics—the number of rooms in the unit, whether it was owned or rented, the amount of rent payments, the amounts paid for monthly utilities, installment debt, and the number of cars the household had for its use.

Any person, whether present or temporarily absent, whose usual place of residence was the sample address, or who was staying at the address and had no usual place of residence elsewhere, was considered a household member. This included all persons related to the head and any unrelated individuals living or staying there, but excluded Armed Forces members, inmates of penal or mental institutions or hospitals, and homes providing long-term care.

Next, a labor force questionnaire (CES-2R) was completed for all civilian noninstitutional household members 16 years of age or older. The Labor Force Questionnaire covers current employment or unemployment, current occupation, whether or not the person was employed during the last 12 months and, if so, at what occupation.

Information was then obtained for each eligible adult member 16 years of

age or older by asking the household respondent the questions that are contained in the Work History Booklet (CES-3R). This was unlike the procedure in the urban areas where each person was interviewed for himself. The subjects covered by this booklet were methods of seeking employment, wage or salary and other income for the last 12 months, migration, earnings last week, and transportation to work.

An average interview lasted about 30 minutes and covered information about two persons per household.

#### PROCESSING PROCEDURES

**Clerical editing and coding.**—The questionnaires were first edited for consistency, and corrections were made wherever possible in the Census Bureau facility at Pittsburg, Kans. In addition, certain information was transferred from the Control Card (CES-1R) to the Labor Force Questionnaire (CES-2R) for ease in subsequent processing.

The next step was to assign code categories to the various write-in entries. For example, individuals in sample units were grouped into families or other living arrangements; the sample person's birthplace was converted into the State or country of birth; and the critical determination of the appropriate codes to represent the occupation and industry of the person's current job, longest job held during the last 12 months, first job, and longest job ever held were placed on the record. The industry and occupation codes were subject to a system of independent verification in which a randomly selected 5 percent of each production coder's work was precoded independently by two coders. Coders failing to meet and maintain standards were reassigned. Work units that were below standard were recoded. Because of the detailed training, close super-

vision, and stringent quality control procedures, the final overall error rate was estimated at 2 percent for the occupation and industry coding operation.

**Creation of computer record file.**—The Census Employment Survey was collected using two primary forms—the Labor Force Questionnaire (CES-2R) and the Work History Booklet (CES-3R). Because of their different natures, two separate processes were used to place the data on tape. These two sources were subsequently merged by matching separate data for each individual respondent into one continuous record. Finally, the merged record was subject to a further edit for consistency and completeness and adjusted to independent estimates of the population. (For a discussion of these procedures see "Estimation" in appendix B.)

The Labor Force Questionnaire (CES-2R) was specially designed to be processed by FOSDIC (Film Optical Sensing Device for Input to Computers). Interviewers and coding clerks marked the answers in predesignated positions which could be "read" by FOSDIC, from a microfilm copy of the questionnaire, onto computer magnetic tape.

The Work History Booklet (CES-3R) data, on the other hand, were punched directly on a magnetic tape using a data keying device to create a continuous record. Each data field to be punched was associated with a numerical key, for example item 2 had the key 011. After the data were punched on tapes, the data were reformatted into a more conventional record layout deleting the data keys. The verification of this data keying showed that approximately 90 percent of all Work History Booklets keyed were entirely error free. The overall error rate for all information keyed was approximately 0.32 percent.

**Editing of unacceptable data.**—

Although every attempt is made to avoid human and mechanical errors, they still occur in any survey operation, especially in one as large and complex as the Census Employment Survey. Such errors include failure to obtain required information from respondents, obtaining inconsistent or incorrect information, and recording information incorrectly. Sampling biases occur because some of the enumerators fail to follow sampling instructions properly. Errors can occur in the field review of the interviewer's work, in the clerical editing and coding of the questionnaires, in the electronic processing and, indeed, even in the final review and publication of the materials.

Careful and extensive efforts have been made in this survey to keep the errors in each step at an acceptably low level. Review of the interviewer's work, verification of the manual coding and editing, checking the tabulated figures, and ratio estimation of sample data to control totals (as discussed in appendix B) reduced the effects of the errors. Clerical editing and coding operations provided an opportunity to correct obvious errors and to assign numerical codes to those items where editing and coding required the reading of written entries. Wherever possible, edits for consistency within each questionnaire and between questionnaires were done in the computer. Allocations or assignments of acceptable codes were made where needed. This occurred most often when information for a given item was lacking, though it was also done when the information was inconsistent with that from other acceptable entries for a person. The general procedures for handling blanks or for correcting unacceptable entries were to assign an entry for the person that was consistent with the entries for other persons with similar social and economic characteristics.

An example of this procedure is the method used in this survey of assigning or allocating wage or salary income information. The process was carried out in the following steps:

1. The computer stored a person's reported wage or salary income information (an amount or none) by age (16-24, 25-55, 55+ yrs.), sex (male, female), and the number of weeks worked in the 12 months prior to the survey (1-26 wks., 27-52 wks.), and occupational classification (white collar, skilled and semiskilled, unskilled).
2. Each person's stored wage or salary income information was retained in the computer only until a succeeding person having the same characteristics and having wage or salary income information reported was processed through the computer. Then the reported wage or salary income of the succeeding person was substituted for the wage or salary income information previously stored.
3. When a record being processed had no wage or salary income information reported or the entry was unacceptable, the wage or salary income information retained for the last person who had the same set of characteristics on the variables shown in (1) above was inserted to replace the missing entry.

This process insured that the distribution of the wage or salary income information assigned for persons for a given set of characteristics would correspond closely to the distribution of the wage or salary income information as actually reported in the survey for persons with the same set of characteristics living in the same area.

Similar procedures were used to allocate race, State or country of person's and parent's birth, and sources of income.

**COUNTY COMPOSITION OF THE CENSUS EMPLOYMENT SURVEY AREA IN ARKANSAS**

The Census Employment Survey Area in Arkansas is composed of the following counties:

- |               |                 |
|---------------|-----------------|
| 1. Arkansas   | 8. Drew         |
| 2. Ashley     | 9. Lee          |
| 3. Bradley    | 10. Lonoke      |
| 4. Chicot     | 11. Monroe      |
| 5. Crittenden | 12. Phillips    |
| 6. Cross      | 13. Prairie     |
| 7. Desha      | 14. St. Francis |

**SELECTED CHARACTERISTICS OF THE SURVEY IN THIS AREA**

The Census Employment Survey was conducted in seven selected rural areas where the period of interviewing for each area differed considerably. The primary consideration in the timing was the availability of the census enumerators. The population sizes of the rural CES areas varied, ranging from a low of approximately 89,000 persons 16 years of age or older in the CES area of Missouri, to a high of 433,000 persons 16 years or

older in the North Carolina CES area. To enable the analyst to interpret the data presented in this report, specific information is given below for this area together with selected noninterview and error rates.

Interviewing began in the selected rural counties in Arkansas on November 2, 1970, and was completed by January 22, 1971. A total of 4,735 addresses was assigned of which 4,000 were occupied at the time of interview. The remainder were either vacant or proved not to be addresses having housing units. Interviews were obtained from all but 1.3 percent of

the occupied households. Comparison with the 1970 census for the area indicates coverage of persons within households in this survey was not as complete as in the census. A total of 8,518 household members 16 years of age and over lived in the interviewed households.

The CES estimate for the total population 16 years of age and over in the selected rural counties in Arkansas is 205,635. Although not shown separately in the tables, an estimate of all race groups in the area shows the following:

**Racial Characteristics of CES Area: Selected Rural Counties in Arkansas**

Race	Number	Percent of CES Area <sup>1</sup>
Total persons .....	205,635	100.0
Total Negro .....	72,333	35.2
Total white .....	132,490	64.4
Total, other .....	812	0.4

<sup>1</sup>Subtotals may not add to 100.0 because of rounding of weights.
