David L. Kaplan, 1970 Census Coordinator

## DEMOGRAPHIC SURVEYS DIVISION

Daniel B. Levine, Chief

**ACKNOWLEDGMENTS**—Many persons participated in the various activities of the 1970 census. Primary direction of the program was performed by Conrad Taeuber, Associate Director for Demographic Fields, assisted by David L. Kaplan, 1970 Census Coordinator, and in conjunction with Joseph F. Daly, then Associate Director for Research and Methodology, William I. Merkin, Associate Director for Administration, and Paul R. Squires, Associate Director for Data Collection and Statistical Processing.

The Census Employment Survey was planned and directed in the Demographic Surveys Division under the supervision of Daniel B. Levine, by Earle J. Gerson, Assistant Division Chief. This report was developed and written by George Gray, Kenneth R. Brimmer, and Gloria F. Tobor. The procedures for processing the data shown in this report were prepared under the direction of Jarvis Braunstein, Assistant Division Chief; Orville Fisher and Leonard Goldberg were responsible for the manual procedures and Alfonso Episcopo and Merritte Woodward for the computer procedures.

The Statistical Methods Division was responsible for sample design, quality control, estimation procedures and the estimates of reliability. This work was performed under the supervision of Joseph Waksberg, Chief, Robert H. Hanson and Morton Boisen, Assistant Division Chiefs, assisted by Barbara Ann Boyes and Peter A. Bounpane. Listing procedures were prepared by Irene C. Montie.

Data collection activities were administered in the Field Division under the supervision of Paul R. Squires, then Chief, and Richard C. Burt, then Assistant Division Chief, by James L. Johnson, Alvin L. Etzler, and Alfred J. Giglito, and with the assistance of the directors of the Bureau's Data Collection Centers.

Manual processing, microfilming, and data punching of the questionnaires were performed by the Jeffersonville Census Operations Division under the supervision of Joseph F. Arbena, then Chief, and Reese P. Helmer, Assistant Division Chief. The clerical operations carried out at the Bureau's facility in Pittsburg, Kans., were supervised by Francis Allai and Robert Allen.

Computer processing was performed in the Computer Facilities Division under the supervision of James R. Pepal, Chief, and E. Richard Bourdon and James W. Shores, Assistant Division Chiefs.

Delineation of urban areas was done under the direction of Arno I. Winard, by Donald Fowles, Frederick J. Cavanaugh, Mark Littman, and Antoinette Weir, of the Population Division, Herman P. Miller, Chief.

The maps used for this survey were developed in the Geography Division, under the supervision of William T. Fay, then Chief, Robert C. Klove, Assistant Division Chief, and Ross E. Vaughn.

Publication planning, editing, and printing were performed in the Administrative and Publications Services Division, Cecil B. Matthews, Chief, under the direction of Raymond J. Koski, Assistant Chief, by Gerald A. Mann and Julia H. Moring.

Important contributions were made by Robert L. Stein and Stuart Garfinkle of the U.S. Department of Labor in the designation of the metropolitan areas covered in this Survey, and by Stanley Knobel of that Department and Gene Rowe of the U.S. Department of Agriculture in the designation of the rural areas. Mr. Stein and Mr. Rowe also developed the table specifications for the metropolitan and rural area reports, respectively.

### SELECTED CHARACTERISTICS OF THE SURVEY IN THIS AREA .....

X

### GENERAL

This report presents statistics from the *Census Employment Survey (CES)*, conducted as part of the overall program of the 1970 Census of Population and Housing. Detailed socioeconomic information on employment related problems was collected in each of 60 urban and seven rural areas, identified first by reference to 1960 Census data and subsequently corroborated by a variety of local sources as likely to contain relatively high proportions of persons with low income. This method of selecting the areas to be studied was used because the timing of the study precluded the use of up-to-date data from the 1970 Census and the needs of the study dictated current area appraisals. The designated areas used in the CES, therefore, differ from and are not to be confused with other low income or poverty areas that have been defined in the past for other purposes or that may be defined

subsequently using information from the 1970 Decennial Census.

The need for this program developed during the final Cabinet level review of the subject content of the 1970 Census when it became clear that the Census questionnaire could not be expanded to fulfill all of the needs for data to assist in guiding Government programs in the fields of labor, housing, education, and welfare for certain critical target groups—people residing in areas having substantial numbers of families with low incomes. More extensive information was needed on such subjects as employment, unemployment, training for work, job-seeking methods, job tenure, sources and level of income, residential mobility, transportation to work, and on all factors considered deterrents to employment. Therefore, the Census Employment Survey was developed to obtain this information from persons living in 60 selected areas<sup>1</sup> in 51 of the Nation's largest cities and in seven rural areas.

The questionnaire and tabulation requirements of the CES in general followed the pattern established earlier by the Urban Employment Survey (UES). The areas included in the UES were in all cases smaller than the areas covered by the CES.

The UES was set up in 1968 through the joint efforts of the Manpower Administration, the Bureau of Labor Statistics, and the Bureau of the Census to examine similar kinds of problems for persons living in areas covered by the Concentrated Employment Program (CEP) of the Department

<sup>1</sup>The CES areas were defined as sets of contiguous tracts that were identified as having a high proportion of families with "low income." For the most part there was only one set but in several instances more than one set of tracts were designated as the CES area. For a more detailed description of the selection process see page VII - "Selection of Low-Income Area."

of Labor. All of the manpower and job development programs in these areas had been combined under one administrative structure in order to concentrate their impact. The UES was conducted in six cities from July 1968 to July 1970. Results of the Urban Employment Survey have been published by the Bureau of Labor Statistics and may be obtained by writing to the Commissioner of the Bureau of Labor Statistics or any of the BLS Regional Offices (New York, Chicago, Atlanta, Dallas, and San Francisco).

This series on the Census Employment Survey consists of 76 separate reports covering each individual area and nine combined reports including a U.S. Summary for the urban areas. A list of the areas and the reports appears on page II.

**Content of the tables.**—Tables A to N present general demographic characteristics of the population by the most important labor force and socioeconomic factors. These tables include data for each race and Spanish origin group comprising 5 percent or more of the area's population, as measured by the 1970 Census of Population and Housing. In general, each table will be presented for the total population of the area, for the Negro population of the area, and the white population of the area. Whenever the proportion of persons of Spanish origin is 5 percent or more, the white group will be subdivided into white Spanish and other white. In most instances figures for other races (American Indian, Chinese, Japanese, etc.) can only be obtained by subtraction from the total. However, in the few instances where they comprise 5 percent or more of the population, they will be shown separately as "Other."

Tables 1 to 18 of the detailed characteristics tables present current labor force and employment status statistics by detailed demographic

categories. Since these and the following detailed characteristic tables provide significantly greater detail in the form of cross classifications than tables A to N, they are restricted to those race and Spanish origin groups representing 20 percent or more of the area's population. Their presentation for a group of less than 20 percent of the total population would result in many categories with no information.

Tables 19 to 31 present the same detailed demographic characteristics as tables 1 to 18 by the work experience of the population in the last 12 months. Information on job training and work history of the population is presented in tables 32 to 39. Detailed statistics on family income and the migration pattern of the residents of this area are presented in tables 40 to 54.

All tables are for persons 16 years of age or older unless specifically indicated otherwise.

The subcategories do not always add to the totals because of rounding the weighted figures to whole integers.

**Derived figures.**—This report presents data for medians as well as percents and rates. The median is the middle value in a distribution of values; i.e., the median divides the distribution into two equal parts—one-half of the cases fall below the median and one-half the cases fall above the median value. When the median falls in the last category of a distribution, the method of presentation is to show the lower limit of the category followed by a plus sign. For example, if the median falls in the category "65 years and over," it is shown as "65+."

**Symbols.**—The symbols used in these reports are "—", "NA", and in a few cases "Z". A dash (—) signifies zero or no data for that cell. "NA" means not applicable and is used, for example, when a median line is shown but the

information to be presented is a percent. "Z" is used in those few reports where figures are shown in "thousands." Whenever the total in a cell represents so small a number that it is rounded to zero, the "Z" is used. Thus, the "Z" means there is data and the "—" means there is no data in a specific category of a table.

#### DATA COLLECTION PROCEDURES

On the average, in each designated area interviews were obtained from about 5,400 persons 16 years of age or older residing in about 2,750 households. However, the areas ranged from a low of 2,300 households and 4,400 persons to a high of 3,700 interviewed households with over 7,000 sample persons. The interviewing operations lasted an average of 14 weeks, but the span of data collection activities ranged from 9 weeks to 20 weeks. Some areas began enumeration in early August, while others did not begin until mid-November. All, however, were completed by early March 1971. Overall, interviews were obtained from all but 3.7 percent of the designated occupied households.

For the area covered in this report, specific data for sample size, the interviewing period, and the proportion of contacted households not participating in the survey are presented in the section "Selected Characteristics of the Survey in This Area."

**Selection of low-income area.**—Because of the timing of this project, 1970 census data could not be utilized in selecting urban areas for the Census Employment Survey. Fortunately the Bureau had an ongoing program of research to delineate areas with substantial numbers of persons with low incomes. This work was an extension of the Bureau's previous selection of such areas which used 1960 census data for the 101 Standard Metropolitan Statistical Areas (SMSA's) with a

1960 population of 250,000 or more. The areas were defined in terms of census tracts. Changes were made to these previously delineated areas based on more recent information acquired by the Bureau's staff from a wide variety of sources (e.g., area boundaries, and data pertaining to welfare programs, juvenile delinquency, illegitimate births, and housing conditions). Using this information, the Bureau made preliminary designations of the current areas and sent them to local experts for review. Efforts were made to solicit comments from the local person responsible for census tracts, the city planning commission, and any other agency or person recommended as knowledgeable in this area. A letter was sent to each of these persons or agencies explaining the purpose of the project and requesting suggestions for additions or deletions to the area. The recommendations received were subjected to further scrutiny by the Bureau's staff under a set of guidelines designed to assure some uniformity across the country. Thus, the final designations of the areas selected for the Census Employment Survey represent a synthesis of previous area designations, 1960 Census and other more recent socio-economic data, and the views of local knowledgeable agencies.

For 47 of the cities in this survey, a single CES survey area was selected consisting of all the census tracts meeting the criterion described above. (See pages XIII and XIV for a map and a list of the census tracts in this area.) In Chicago, Los Angeles, and Philadelphia, however, the tracts were subdivided into two separate CES survey areas per city. In New York City the tracts were subdivided into seven CES survey areas—three in Brooklyn Borough, two in Manhattan Borough, and one each in Queens Borough and Bronx Borough. Thus a total of 60 surveys were conducted in the 51 cities.

**Selection and training of personnel.**—The Census Employment Survey was conducted in each area as soon as practicable after the completion of the decennial census operations. The great majority of the members of the CES data collection staff (area supervisors, crew leaders, and interviewers) were selected because they had held similar positions with the census and thus had some data-gathering experience.

The typical area office staff consisted of (a) an area supervisor, (b) a supervisory clerk, (c) three or four office clerks, (d) a crew leader for each five or six interviewers, (e) an interviewer for each one hundred assigned households. Most offices had six or seven crew leaders and from 30 to 35 interviewers. Each office had at least one person specially trained in selected quality control procedures. Overall supervision of the project was provided by personnel from the Census Bureau's permanent Data Collection Centers.

The actual data collection was preceded by an extensive training program, involving both home study and classroom work. Training for area supervisors lasted 1 week. Crew leaders received 7 days of training, including 1 day of actual interviewing experience. Interviewers were given 5 days of classroom lectures and one-half day of on-the-job training. The person selected for quality control attended the interviewer training and then received a 2-day special training session on quality control procedures. The area office staff attended either the crew leader's or the interviewer's training session and received additional specific instruction on the operations they were to perform.

**Quality control of data collection.**—The quality of the results of the interviewing was controlled at two levels in the field. First, the crew

leader observed each interviewer at least twice and more often if needed. The first few completed forms returned by an interviewer also were reviewed carefully and thereafter all forms were scanned for completeness. Most importantly, the crew leader conducted a recheck by personal visit or telephone of one in every eight addresses assigned to the interviewer. These addresses were randomly selected and included units reported as "noninterview" as well as interviewed households. The purpose of the recheck was to make sure that interviewers were dealing properly with persons who did not wish to respond and that they had interviewed all members of the household who were 16 years of age or older. In addition, the crew leader revisited and obtained, if possible, an interview for all occupied households that were reported as "noninterview" by the interviewer. This served the dual purpose of reducing such non-interviews and acquainting the crew leader with ways to help the interviewers to obtain a high rate of completion.

The second level of control of quality was carried out in the area office. First, a complete edit of a portion of each interviewer's work was performed for each week he worked. In addition, the area office reviewed all of the interviewer's work for completeness.

Finally, a random group of addresses was selected from the entire area assignment and a specially trained interviewer (designated as a reinterviewer) returned to the household and conducted a complete reinterview with one of the persons contacted by the original interviewer. The reinterviewer was provided with the information that was originally collected. He conducted his interview and then checked his results against the information obtained by the original interviewer. If discrepancies were noted between the

two interviews, the reinterviewer attempted to reconcile the differences. Discrepancies were then corrected and the reasons reported. The addresses to be included in the reinterview were selected not only to provide a check on the work of the interviewer and crew leader, but also to obtain a measure of the overall quality of the data collected.

**Interviewing.**—Each area office was provided with a list of addresses of housing units and special places designated to be interviewed (see Appendix B, Sample Design, Estimation, and Reliability of Estimates). The office prepared a Control Card (CES-1) for each housing unit and each designated person in special places. (See appendix C for copies of the forms used in CES.) These were grouped geographically by crew leader district. The crew leader then assigned a set of Control Cards to each interviewer in his district. The survey was conducted by personal visit to each address. The interviewer completed the Control Card by obtaining a complete list of all household members, as defined below, and some personal characteristics, such as birth date, sex, marital status, and educational attainment for all persons who were members of that household. In addition, information was gathered on selected housing characteristics—the number of rooms in the unit, whether it was owned or rented, the amounts of mortgage or rent payments, the amounts paid for monthly utilities, installment debt, and the number of cars the household had for its use. Next, a labor force questionnaire (CES-2) was completed for all civilian noninstitutional household members 16 years of age or older.

Any person, whether present or temporarily absent, whose usual place of residence was the sample address or who was staying at the address and had no usual place of residence else-

where, was considered a household member. This included all persons related to the head and any unrelated individuals living or staying there, but excluded Armed Forces members and inmates of penal or mental institutions or hospitals and homes providing long term care.

The Labor Force Questionnaire covers current employment or unemployment, current occupation, whether or not the person was employed during the past 12 months and, if so, at what occupation.

Both the Control Card and the Labor Force Questionnaire were completed by interviewing a responsible adult member 16 years of age or older. Each eligible person, however, was interviewed for himself for the Work History Booklet (CES-3). The subjects covered by this booklet were methods of seeking employment, job training, wages and salary and other income for the past 12 months, migration, earnings last week, transportation to work, and barriers to employment or advancement.

An average interview lasted about 60 minutes and covered two persons per household.

#### PROCESSING PROCEDURES

**Clerical editing and coding.**—The questionnaires were first edited for consistency and corrections made wherever possible in the Census Bureau facility at Pittsburg, Kans. In addition, certain information was transferred from the Control Card (CES-1) to the Labor Force Questionnaire (CES-2) for ease in subsequent processing.

The next step was to assign code categories to the various write-in entries. For example, individuals in sample units were grouped into families or other living arrangements; the sample person's birthplace was

converted into the State or country of birth; and the critical determination of the appropriate codes to represent the occupation and industry of the person's current job, longest job held during the last 12 months, first job and the longest job ever held were placed on the record. The industry and occupation codes were subject to a system of independent verification in which a randomly selected 5 percent of each production coder's work was precoded independently by two coders. Coders failing to meet and maintain standards were reassigned. Work units that were below standard were recoded. Because of the detailed training, close supervision, and stringent quality control procedures, the final overall error rate was estimated at 2 percent for the occupation and industry coding operation.

**Creation of computer record file.**—The Census Employment Survey was collected using two primary forms—the Labor Force Questionnaire (CES-2) and the Work History Booklet (CES-3). Because of their different natures, two separate processes were used to place the data on tape. These two sources were subsequently merged by matching separate data for each individual respondent into one continuous record. Finally, the merged record was subject to a further edit for consistency and completeness and adjusted to independent estimates of the population. (For a discussion of these procedures see "Estimation" in appendix B.)

The Labor Force Questionnaire (CES-2) was specially designed to be processed by FOSDIC (Film Optical Sensing Device for Input to Computers). Interviewers and coding clerks marked the answers in predesignated positions which could be "read" by FOSDIC, from a microfilm copy of the questionnaire, onto computer magnetic tape.

The Work History Booklet (CES-3) data on the other hand was punched directly on a magnetic tape using a data keying device to create a continuous record. Each data field to be punched was associated with a numerical key, for example, item 2 had the key 011. After the data was punched on tapes, the data was reformatted into a more conventional record layout deleting the data keys. The verification of this data keying showed that approximately 90 percent of all Work History Booklets keyed were entirely error free. The overall error rate for all information keyed was approximately 0.32 percent.

**Editing of unacceptable data.**—Although every attempt is made to avoid human and mechanical errors, they will occur in any survey operation, especially in one as large and complex as the Census Employment Survey. Such errors include failure to obtain required information from respondents, obtaining inconsistent or incorrect information, and recording information incorrectly. Sampling biases occur because some of the enumerators fail to follow sampling instructions properly. Errors can occur in the field review of the interviewer's work, in the clerical editing and coding of the questionnaires, in the electronic processing and, indeed, even in the final review and publication of the materials. Careful and extensive efforts have been made in this survey to keep the errors in each step at an acceptably low level. Review of the interviewer's work, verification of the manual coding and editing, checking the tabulated figures, and ratio estimation of sample data to control totals (as discussed in appendix B) reduced the effects of the errors. Clerical editing and coding operations provided an opportunity to correct obvious errors and to assign numerical codes to those items where editing and coding required the reading of written entries.

Wherever possible, edits for consistency within each questionnaire and between questionnaires were done in the computer. Allocations or assignments of acceptable codes were made where needed. This occurred most often when information for a given item was lacking, though it was also done when the information was inconsistent with that from other acceptable entries for a person. The general procedures for handling blanks or for correcting unacceptable entries was to assign an entry for the person that was consistent with the entries for other persons with similar social and economic characteristics.

An example of this procedure is the method used in this survey of assigning or allocating wage and salary income information. The process was carried out in the following steps:

1. The computer stored a person's reported wage and salary income information (an amount or none) by age (16-24, 25-55, 55+ yrs.), sex (male, female), and the number of weeks worked in the 12 months prior to the survey (1-26 wks., 27-52 wks.), and occupational classification (white collar, skilled and semiskilled, unskilled).
2. Each person's stored wage or salary income information was retained in the computer only until a succeeding person having the same characteristics and having wage and salary income information reported was processed through the computer. Then, the reported wage or salary income of the succeeding person was substituted for the wage and salary income information previously stored.
3. When a record being processed had no wage and salary income information reported or the entry was unacceptable, the wage and salary income information retained for

the last person who had the same set of characteristics on the variables shown in (1) above was inserted to replace the missing entry.

This process ensured that the distribution of the wage and salary income information assigned for persons for a given set of characteristics would correspond closely to the distribution of the wage and salary income information as actually reported in the survey for persons with the same set of characteristics living in the same area.

Similar procedures were used to allocate race, State or country of person's and parent's birth, and other sources of income.

Another type of allocation or assignment was also necessary; namely the assignment of a full set of work history characteristics for a person. This occurred if the interviewer was able to obtain the information needed to complete a Labor Force Questionnaire (CES-2) for a person but was not able to complete the Work History Booklet (CES-3) with the designated individual. A full set of entries from a Work History Booklet for a previously processed person with the same set of characteristics (age, sex, race, labor force status) was then assigned by the same process as used for the allocation of wage and salary information described above. The number of such allocations differed by geographic area, ranging from approximately 0.8 percent to 6.5 percent of sample persons. The overall rate of such substitution was 3.3 percent.

#### SELECTED CHARACTERISTICS OF THE SURVEY IN THIS AREA

The Census Employment Survey was conducted in 60 selected areas of 51 cities and in seven selected rural areas.

The period of interviewing differed considerably and some areas were completed even before others began. The primary consideration in the timing was the availability of the Census enumerators. The population sizes of the urban CES areas varied, ranging from a low of approximately 30,000 persons in the CES area of Youngstown, Ohio, who were 16 years of age or older to a high of 370,000 persons 16 or older in the Detroit, Mich., CES area. The racial and Spanish origin characteristics of the population were also very different from area to area. To enable the analyst to better interpret the data presented in the report, specific information is given below for this area on the above items together with selected noninterview and error rates.

Interviewing began in Newark, N.J., on October 5, 1970, and was completed by March 3, 1971. A total of 3,628 addresses was assigned of which 2,869 were occupied at the time of interview. The remainder were either vacant or proved not to be addresses having housing units. Interviews were obtained from all but 6.9 percent of the occupied households. Comparison of data for the area with the 1970 census indicates coverage of persons within households in this survey was not as complete as in the census. An estimated 90 percent of the males and 95 percent of the females enumerated in the census were included in this survey.<sup>1</sup> A total of 5,021 household members 16 years of age or older lived in the interviewed households. Work

<sup>1</sup>The unadjusted estimate from the survey for Negro males aged 25 to 44 represented only 83 percent of the count from the census. Although the preliminary sample estimates were subsequently adjusted to the census counts, this relatively low ratio suggests special caution (beyond that suggested by the sampling error alone) may be appropriate in analyzing results for categories having substantial contributions from this group.

History Booklets were completed for all but 3.3 percent of these persons.

The CES estimates for the total population 16 years of age or older in

the tracts selected in Newark, N.J., is 136,954. Although not shown separately in the tables, an estimate of all race and Spanish origin groups in the area shows the following:

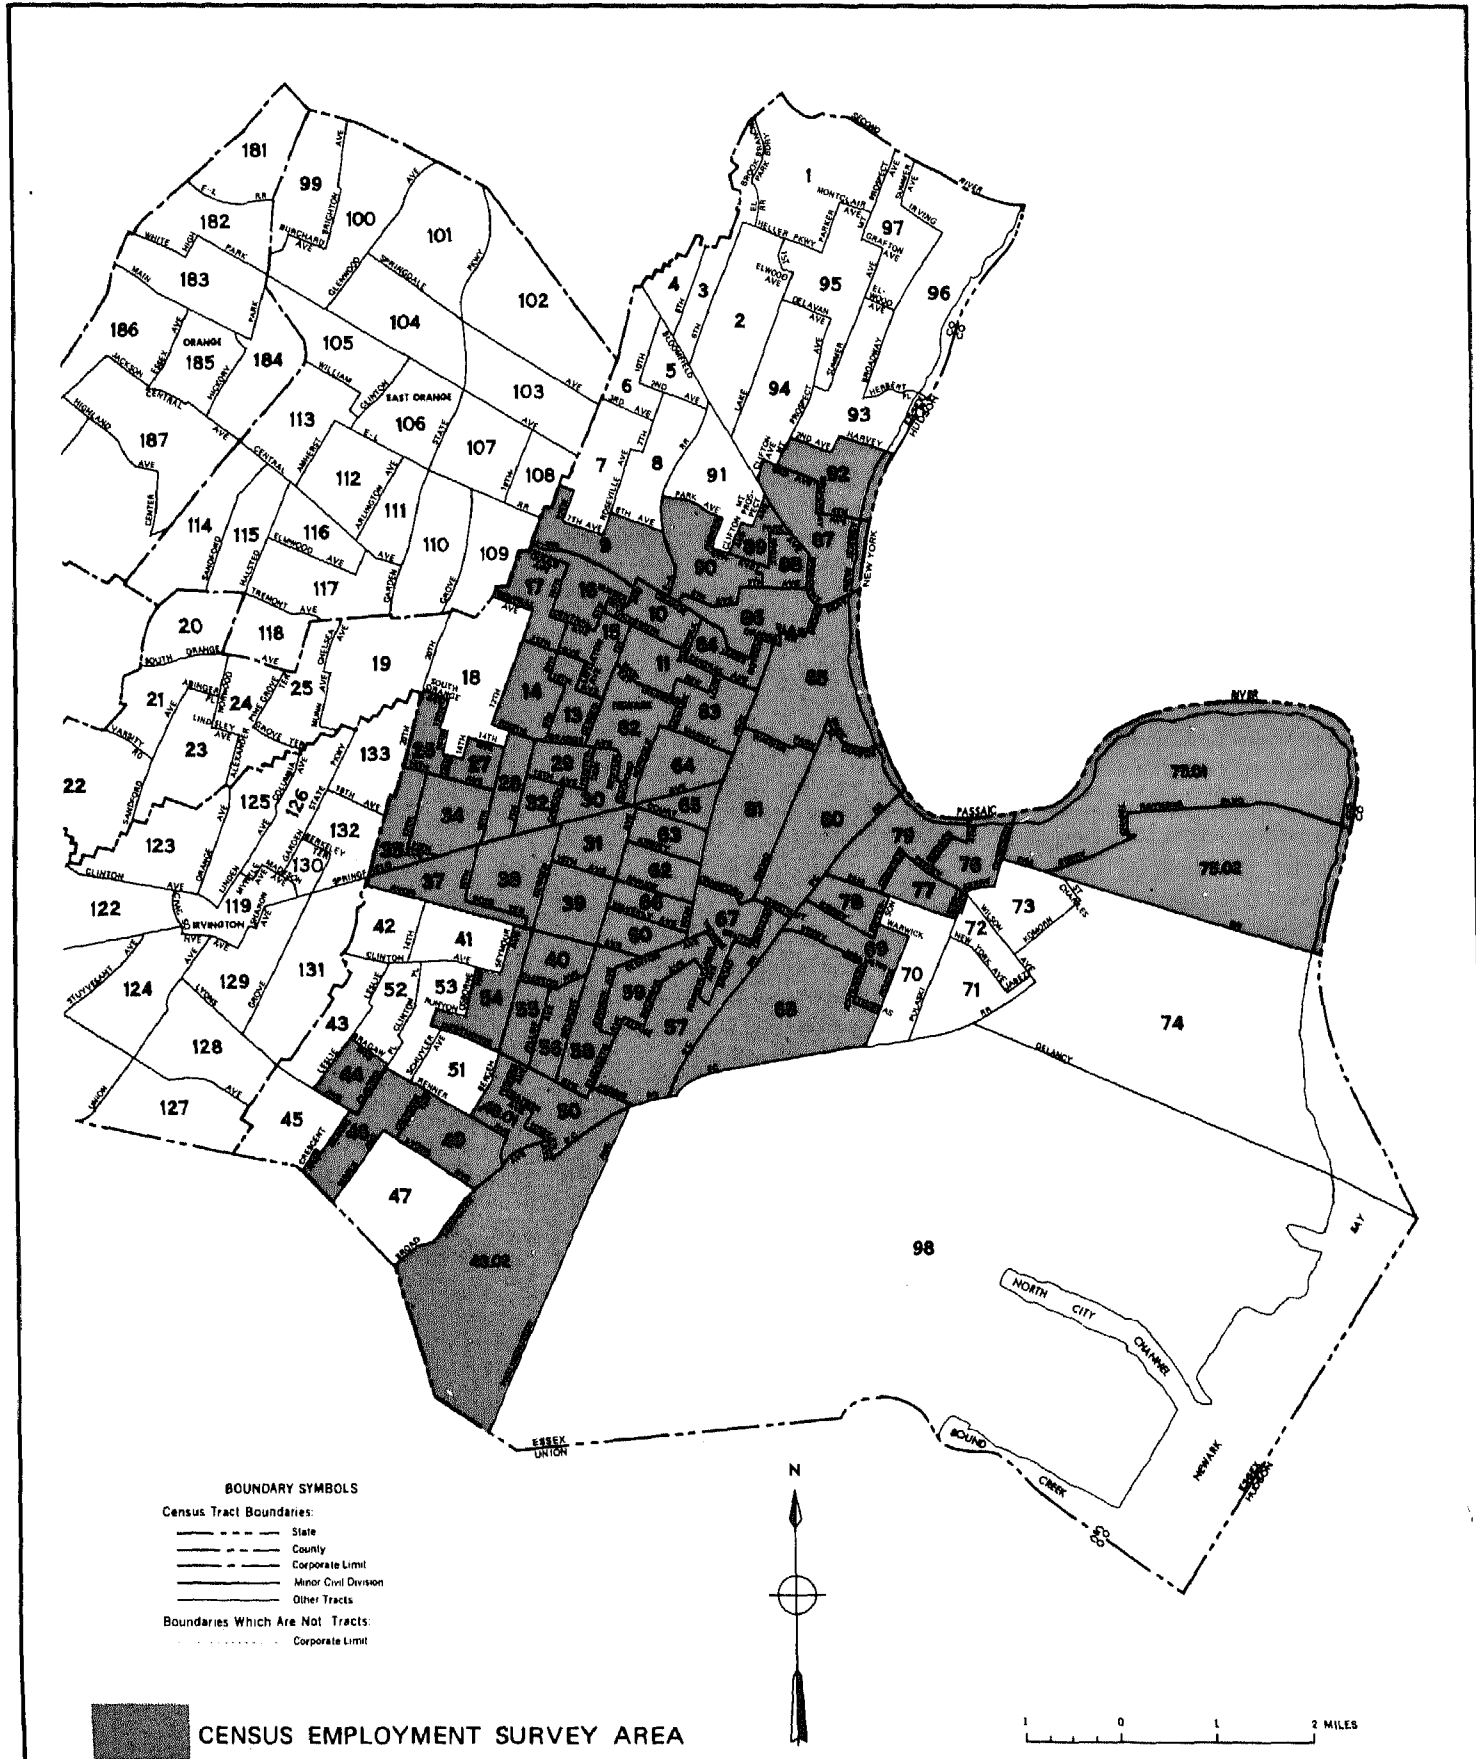

**Race/Origin Characteristics of CES Area: Newark, N.J.**

Race	Number	Percent of CES Area <sup>1</sup>
Total persons .....	136,954	100.0
Total Negro .....	90,845	66.3
Total white .....	41,574	30.4
Spanish .....	14,719	10.7
Puerto Rican origin .....	8,766	6.4
Cuban and other Spanish origin .....	5,953	4.3
Other white .....	26,855	19.6
Total other .....	4,535	3.3

<sup>1</sup>Subtotals may not add to 100.0 because of rounding of weights.
