SUPPLEMENTARY REPORT

Distribution of the Negro Population, by County

The two maps presented in this report show the geographic distribution of the Negro population of the United States in 1970. Map 1 shows the number of Negro persons in each county throughout the country, and map 2 shows the corresponding percent Negro for the population of each county. The first map indicates that for the overwhelming majority of counties across the country, the Negro population is less than 2,500. The second map shows that counties with a large proportion of Negro population are still largely concentrated in the Southern States.

Table A presents statistics identifying the number of counties with a Negro population of 50,000 or more in each region, by State. There are 75 counties, including 4 independent cities, in 25 States which have at least 50,000 Negroes. These counties are distributed from California to Massachusetts; however, 35, or about half of them, are found in the Southern States. The five counties in the Nation with the largest Negro population are as follows:

County and State	Negro population
Cook County, Ill.	1,183,475
Los Angeles County, Calif.	762,844
Wayne County, Mich.	721,072
Kings County, N.Y.	654,980
Philadelphia County, Pa.	653,971

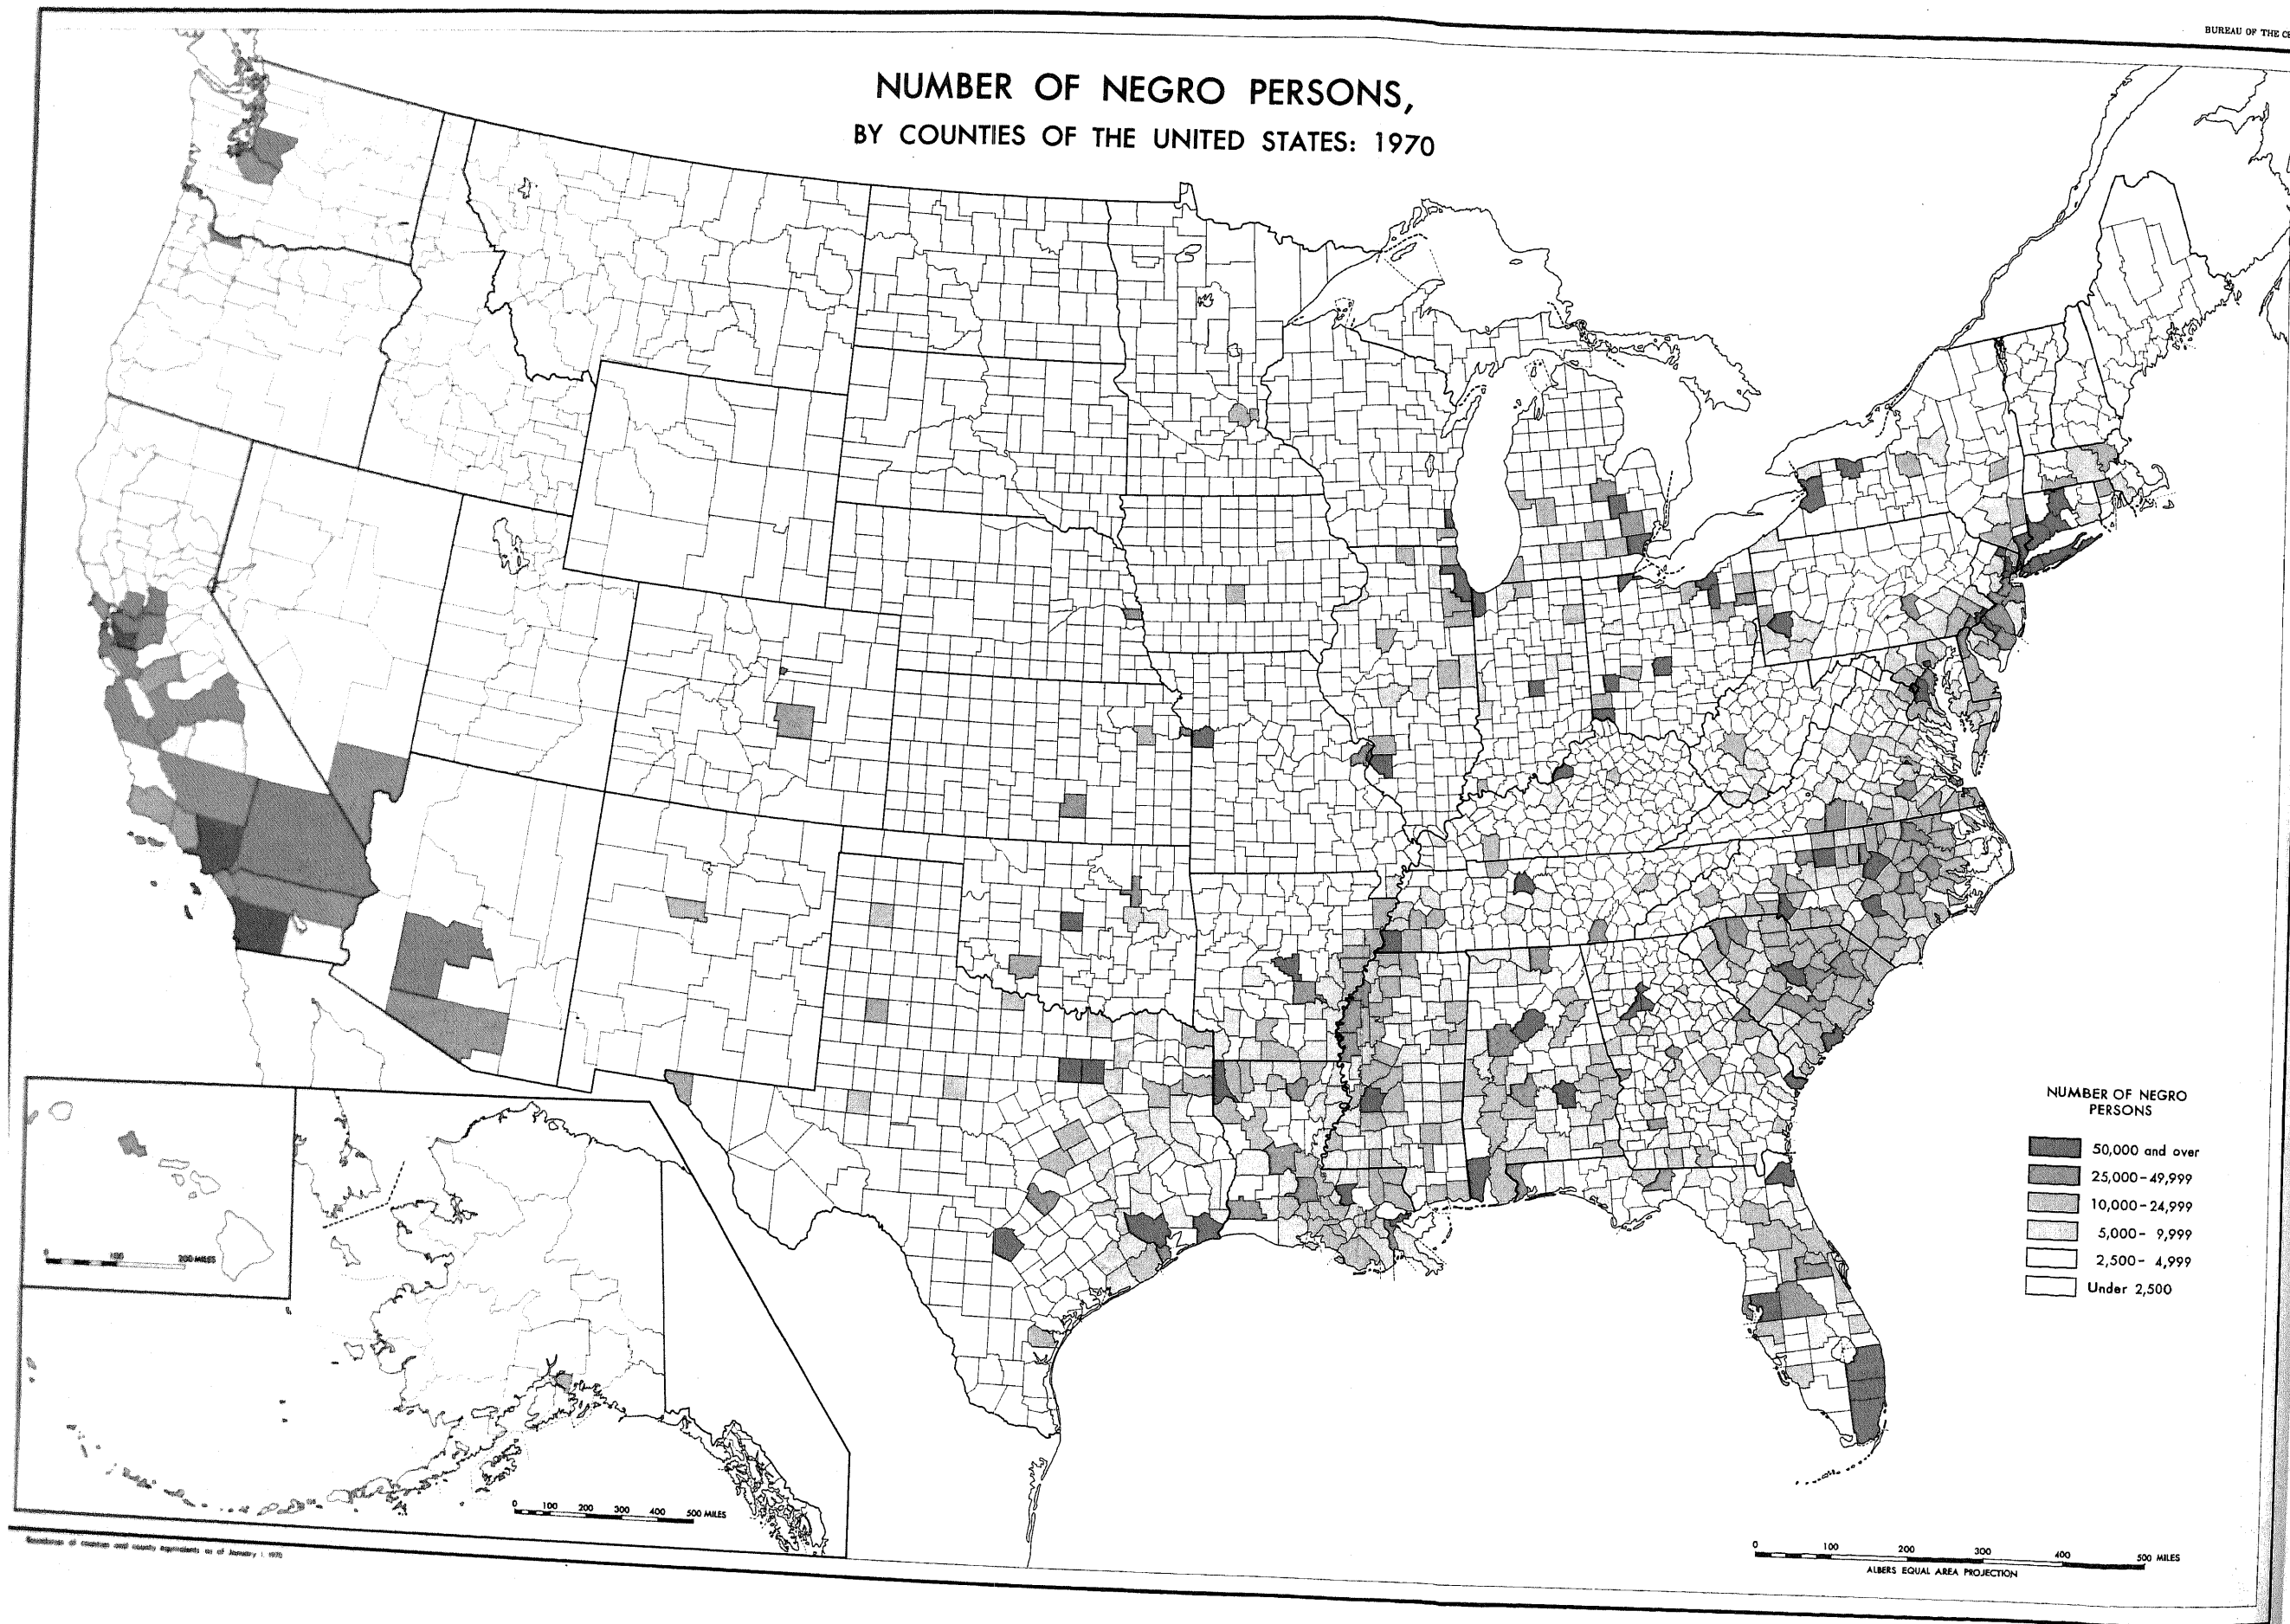

Thirty-two counties, including three independent cities, have at least 100,000 Negroes. Most of these counties have large cities with concentrations of Negro population.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 20 cents.

*Includes independent cities shown separately on map. - Represents zero.

¹Nine independent cities are considered separately; 29 independent cities are combined with surrounding counties.

In 1970, Negroes comprised 11.1 percent of the total population. The corresponding proportion was larger than the national average in less than one-fourth of the approximately 3,100 counties. Table B presents the number of counties in which Negroes comprise at least half of the total population. All of the 103 counties with a Negro population of at least 50 percent are in the South, with Macon County, Alabama, having

the highest percentage (81.1). The five counties with the largest proportion of Negroes are as follows:

- Macon County, Ala. 81.1 percent
- Lowndes County, Ala. 76.9 percent
- Greene County, Ala. 75.4 percent
- Jefferson County, Miss. 75.3 percent
- Claiborne County, Miss. 74.6 percent

A summary listing of the county data on which the two maps are based will be presented in a forthcoming report in this series. Another report in the series, PC(S1)-2, will contain data on the Negro population in selected places. Information on certain demographic characteristics of Negroes are now being issued in the 1970 Population Census PC(1)-B series of State Reports.

National data on the social and economic characteristics of Negroes will appear in a report in the Current Population Reports, Series P-23, which is to be published in July.

Each of the two maps included in this report are also available in a larger size (22 X 34 inches) from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402 for 20 cents.

The figures used in this report for counties in New York State do not reflect the recent revisions in the 1970 Census tabulations for the State; these revisions will be shown in the Series PC(1)-A and B Final Reports to be issued during the next several months.

c. 2

1970 CENSUS OF POPULATION

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

SUPPLEMENTARY REPORT

Negro Population in Selected Places and Selected Counties

This report presents a compilation of statistics from the 1970 census on the distribution of the Negro population in selected places and selected counties across the Nation. Data are shown only for those places with a total population of at least 25,000 and a Negro population of 10,000 or more. Tables 1 and 2 contain statistics on the distribution of Negroes in those cities with a Negro population of 50,000 or more in 1970. The cities are listed according to the size of the Negro population in 1970. In table 3, 50 places with the highest proportion of Negroes in 1970 are presented in rank order. The 50 places were selected from table 4, which contains 1970 and 1960 statistics for 200 places that had at least 10,000 Negroes and a total population of 25,000 or more in 1970. In table 4, the places are ranked nationally and within each State by size of the 1970 Negro population. Data for counties are presented in tables 5 and 6, corresponding to that shown for cities in tables 1 and 3.

Statistics from the 1970 census show that, among the 50 selected places with the highest proportion of Negroes, there has been a dramatic increase in the number that have at least as many Negroes as whites. The count is now 16. Five places, in rank order, which now have Negro population proportions of 60 percent or more are as follows:

Willowbrook, Calif. (U)	82.3 percent
Westmont, Calif. (U)	80.6 percent
Washington, D.C.	71.1 percent
Compton, Calif.	71.0 percent
East St. Louis, Ill.	69.1 percent

Six of the 16 cities with 50 percent or more Negroes are in the South. Most of the top 16 cities have experienced sharp increases since 1960 in the proportion of the population which is Negro. In all of the 50 selected places, Negroes comprised over one-third of the city population and the Negro population ranged in numbers from 10,196 to 660,428 (table 3).

Over half of the 50 places with the highest percentage of Negroes are relatively small. Thirty-two of the places have a total population of less than 100,000; for 19 places, the total population is less than 50,000. Even among the 16 places which are more than 50 percent Negro, those of the smaller size predominate; 12 have a total population of less than 100,000.

The 50 places with the highest percentage of Negroes by size of place is as follows:

Size of place	Number	Negro population 50 percent or more
Total	50	16
500,000 and over. . .	7	1
250,000 to 499,999.	3	2
100,000 to 249,999.	8	1
50,000 to 99,999. . .	13	3
25,000 to 49,999. . .	19	9

Of the 50 selected places, only three—Washington, D.C.; Bessemer, Ala.; and Charleston, S.C.—had more Negroes than whites in 1960. During the decade, the proportion of Negroes declined for both Bessemer and Charleston, with the percent for Charleston decreasing below the 50 percent mark. In 1950, only four of the 50 places had a Negro population which comprised 50 percent or more of the total population.

Over the last three decades, New York City, Chicago, and Washington, D.C. have maintained their first, second, and fifth ranks, respectively, among the cities with the largest Negro population. Detroit has displaced Philadelphia as the third ranking place. In over one-half (26) of the 48 places with a Negro population of at least 50,000 in 1970, the Negro population has more than doubled since 1950. At each census since 1950, all of the other cities except three have shown a substantial increase in the number of Negroes. The exceptions were three cities in the South whose Negro gains during the 1950-60 decade did not continue during the 1960-70 decade. In Birmingham, Ala., a decrease occurred between 1960 and 1970; Savannah, Ga., had only a negligible increase; and Mobile, Ala., had very modest gains in the Negro population (table 1).

Migration was a major factor contributing to the growth of Negro population in those cities which experienced the largest numerical increase in Negroes during the last 10 years. Net migration gains of over 100,000 persons contributed to the very large Negro population increases in New York City, Chicago, and Los Angeles. Eleven additional cities showed sizable Negro population gains through net immigration of 25,000 or more persons. Of the 13 cities which had a net outmigration, only one, Birmingham, Ala., actually had a decline in the Negro population due to outmigration (table 2).

There are 200 places (including Washington, D.C.) in 37 States which have a population of at least 25,000, and 10,000 or more Negroes. The Negro population in these places ranges from 10,008 to 1,666,636. About half of the places are located in the South; however, California has the greatest number (21 such places). North Carolina and Virginia each has 13; Texas and Florida each has 12 (table 4).

According to statistics from the 1970 census, there are 75 counties, or their equivalents, with a Negro population of at least 50,000. Over half of the counties are found in the Southern States. Thirty-two counties (including three independent cities) have at least 100,000 Negroes who are generally concentrated in the central cities. Only five of the 75 counties experienced a loss in Negro population from 1960 to 1970 and four of them are in the South (table 5).

All of the 103 counties with at least 50 percent Negro population in 1970 are in the South, with Macon County, Ala., having the highest percentage (81.1). The five highest ranking counties are as follows:

Macon County, Ala.	81.1 percent
Lowndes County, Ala.	76.9 percent
Greene County, Ala.	75.4 percent
Jefferson County, Miss.	75.3 percent
Claiborne County, Miss.	74.6 percent

The 103 counties also had more Negroes than whites in 1960 (table 6).

In this report "Negro and other races" is used to describe persons of all races other than white.

A summary of data for all counties will be presented in a forthcoming report in this series. Another report in this series, PC(S1)-1, contains two maps that show the geographic distribution of the Negro population by counties of the United States in 1970. Information on certain demographic characteristics of Negroes are now

being issued in the 1970 Population Census PC(1)-B series of State reports. National data on the social and economic characteristics of Negroes in the United States will appear in a report in the Current Population Reports, Series P-23, which is to be published in July.

The figures shown in this report for counties and places in New York State do not reflect the recent revisions in the 1970 census tabulations for the State; these revisions will be shown in the Series PC(1)-A and B Final Reports to be issued during the next several months.

1970 Census Users' Guide Part 1 and Part 2

The 1970 Census Users' Guide is a two-part publication designed to furnish most of the information data users will need for effective access and use of 1970 census data products.

ORDER FORM

Please indicate number of copies

PARTS 1 and 2 of the 1970 Census Users' Guide @ \$4.00 for both

PART 1 only of the 1970 Census Users' Guide @ \$1.25 per copy
C3.6/2:C33/4/970/PT.1

PART 2 only of the 1970 Census Users' Guide @ \$2.75 per copy
C3.6/2:C33/4/970/PT.2

■ Part 1 of the Guide (standard, paper-bound publication) includes the text and three appendixes. The text covers such subjects as the collection and processing of 1970 data, data delivery media (computer tapes, microfilm, and printed materials), maps and information on how to obtain census materials. The appendixes are:

1970 Census Users' Dictionary - defines concepts associated with population and housing tabulations and geographic areas relevant to the collection and publication of data.

Comparison of Printed Reports and Summary Tapes summarizes and compares the contents of the reports and tapes.

Glossary - defines many terms used in connection with collecting, processing, and publishing census data, and lists many abbreviations relevant to the census.

■ Part 2 of the Guide (prepunched for 3-ring binder) contains appendixes specifically related to the use of census summary tapes and the Address Coding Guide.

Technical Conventions and Character Set - present information on the physical characteristics, format, and languages associated with tapes released by the Bureau.

1st-4th Count Technical Documentation - describes the arrangement of geographic codes and census data on the first four series of summary tapes.

Address Coding Guide Technical Documentation - furnishes information on the format and content of ACG's.

Many data users will find both Parts 1 and 2 of great value. Part 1, with its comprehensive coverage of the decennial census program, data products, and related services, is an important instructional and reference tool. Part 2, concerned exclusively with computer tape products, is designed particularly for those who plan to obtain tapes or who want complete information on the data content of the summary tapes.

1970 CENSUS OF POPULATION

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

SUPPLEMENTARY REPORT

1970 Population of Voting Age for States

This report presents a compilation of data from the 1970 census on the number of persons of voting age by States. These figures are also published separately in the individual State reports of the PC(1)-B series. Table 1 shows a summary of selected characteristics of the population of voting age. Detailed data by age, sex, and race are shown in table 2.

As a result of the ratification of the 26th amendment to the United States Constitution, the voting-age population relates to those persons 18 years old and over in all States and the District of Columbia, including members of the Armed Forces of voting age stationed in each State. Persons between the ages of 18 and 24 on November 1, 1972, will be potential first-time voters for President in November 1972.

The figures here relate to age as of April 1, 1970, but they provide reasonable approximations of the size of each age group in November 1972. Estimates of the total population of voting age for States and of the population in ages 18 to 20 as of November 1972 are published in the *Statistical Abstract of the United States: 1971*, and estimates by race and broad age groups will be shown in a forthcoming voting age report in *Current Population Reports, Series P-25*.

In the 1970 general election, the voting age population included persons 21 years old and over in all States except as follows: 18 years old and over for Georgia and Kentucky; 19 years old and over for Alaska; and 20 years old and over for Hawaii.

Table 1. Summary of Selected Characteristics of the Voting Age Population: 1970

[Includes persons 18 years old and over in each State]

C. 2

1970 CENSUS OF POPULATION

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Population of the United States, Puerto Rico, and Outlying Areas: 1950 to 1970

(The data presented here are extracted from Final Report PC(1)-A1, *Number of Inhabitants, United States Summary*, which contains additional summary information on the geographic distribution of the population as well as more detailed technical explanations and corrections in the counts for certain areas)

In April 1970, the resident population of the United States—the 50 States and the District of Columbia—was 203.2 million. The population count for the Commonwealth of Puerto Rico was 2.7 million. For Guam, the Virgin Islands of the United States, American Samoa, the Canal Zone, and other areas of U.S. sovereignty or jurisdiction, the total was about 315,000. In addition, 1.7 million persons were counted in the "U.S. population abroad."

In the U.S. population abroad, Federal employees—principally members of the Armed Forces—and their dependents living abroad numbered 1.5 million. The remainder consisted of about 16,000 members of crews of U.S. merchant vessels at sea or in transit to and from foreign ports at the time of the 1970 census and 236,000 other U.S. citizens who were living abroad for a relatively extended period. Reporting for the last group, however, was made on a voluntary basis, and it is probable that this group was not so well reported as other groups covered by the census.

In the table, a dash signifies zero, three dots "... " mean not applicable, and "NA" means not available.

Population of the United States, Puerto Rico, and Outlying Areas: 1950 to 1970

(For meaning of symbols, see text)

Areas	Gross land and water area (in square miles), 1970	Population

¹Official 1970 resident population count for the United States as shown on page 37 of the PC(1)-A1 report.

²Puerto Rico was ceded to the United States by Spain in 1898. On July 25, 1952, pursuant to acts of Congress, it achieved the political status of the Commonwealth of Puerto Rico.

³Includes population of the Corn Islands (1960, 1,872; 1950, 1,304) not shown separately. Lease (1914) of the Corn Islands from the Republic of Nicaragua has been terminated. Area of these islands (4 square miles) not included in area total.

⁴Uninhabited in 1970; Enderbury Island uninhabited in 1960 and 1950.

⁵Less than 0.5 square mile.

⁶Sand Island uninhabited at time of enumeration.

⁷Area is for Navassa (2 square miles), Baker, Howland, and Jarvis (3 square miles), and Palmyra (4 square miles); uninhabited at time of enumeration.

⁸Under jurisdiction of the United States in accordance with the treaty of November 18, 1903, with the Republic of Panama.

⁹Administered by the United States since July 18, 1941, under the United Nations Trusteeship system.

¹⁰Comprised of land area of 717 square miles and water area of 7,772 square miles.

¹¹From Census of 1958 conducted by the Office of the High Commissioner, Trust Territory of the Pacific Islands.

¹²Estimated civilian population as of June 30, 1950.

¹³Excludes U.S. citizens temporarily abroad on private business, travel, etc. Such persons were enumerated at their usual place of residence in the United States as absent members of their own households.

¹⁴Based on 20-percent sample of reports received.

¹⁵Based partially on tabulations provided by Department of Defense.

¹⁶Represents U.S. citizens abroad for extended periods. Since this population was enumerated on a voluntary basis, its coverage is probably less complete than that of other categories of Americans abroad.

C 2

1970 CENSUS OF POPULATION

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Composition of the Urban Population: 1970

(The table presented here is a reprint of table 16 from Final Report PC(1)-A1, *Number of Inhabitants, United States Summary*, which contains additional summary information on the geographic distribution of the population as well as more detailed technical explanations and corrections in the counts for certain areas)

More than seven of every 10 of the 203.2 million inhabitants of the United States were living in urban territory at the time of the 1970 Census of Population. Of the 149.3 million persons living in urban territory, 118.4 million lived inside urbanized areas and 30.9 million lived in places of 2,500 or more outside urbanized areas. Close to 123 million persons in urban territory lived in incorporated places and 11.3 million in unincorporated places; the remaining 15.2 million lived in unincorporated territory inside urbanized areas.

URBAN RESIDENCE

Definition.—The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs (except Alaska), and towns (except in the New England States, New York, and Wisconsin), but excluding those persons living in rural portions of extended cities; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. (The population not classified as urban constitutes the rural population.)

URBANIZED AREAS

The major objective of the Census Bureau in delineating urbanized areas is to provide a better separation of urban and rural population in the vicinity of the larger cities. An urbanized area consists of a central city, or cities, and surrounding closely settled

territory. The specific criteria for the delineation of an urbanized area are as follows:

- 1a. A central city of 50,000 inhabitants or more in 1960, in a special census conducted by the Census Bureau since 1960, or in the 1970 census; or
- b. Twin cities, i.e., cities with contiguous boundaries and constituting, for general social and economic purposes, a single community with a combined population of at least 50,000, and with the smaller of the twin cities having a population of at least 15,000.
2. Surrounding closely settled territory, including the following (but excluding the rural portions of extended cities, see "urban and rural residence," above):
 - a. Incorporated places of 2,500 inhabitants or more.
 - b. Incorporated places with fewer than 2,500 inhabitants, provided that each has a closely settled area of 100 housing units or more.
 - c. Small parcels of land normally less than one square mile in area having a population density of 1,000 inhabitants or more per square mile. The areas of large nonresidential tracts devoted to such urban land uses as railroad yards, airports, factories, parks, golf courses, and cemeteries are excluded in computing the population density.
 - d. Other similar small areas in unincorporated territory with lower population density provided that they serve
 - to eliminate enclaves, or
 - to close indentations in the urbanized areas of one mile or less across the open end, or
 - to link outlying enumeration districts of qualifying density that are not more than 1½ miles from the main body of the urbanized area.

PLACES

Two types of places are recognized in the census reports—incorporated places and unincorporated places, as defined below.

Incorporated places.—These are political units incorporated as cities, boroughs, towns, and villages with the following exceptions (a) boroughs, in Alaska and (b) towns in the New England States, New York, and Wisconsin. Boroughs in Alaska are treated as county subdivisions and may include one or more incorporated places. The towns in the New England States, New York, and Wisconsin are minor civil divisions similar to the townships found in other States and not necessarily thickly settled centers of population such as the cities, boroughs, towns, and villages in other States. Similarly, in New Jersey and Pennsylvania, where some townships possess powers and functions similar to those of incorporated places, the townships are not classified as "incorporated places." Thus, some minor civil divisions which are "incorporated" in one legal sense of the word are not regarded by the Census Bureau as "incorporated places." Without this restriction all of the towns in the New England States, New York, and Wisconsin and the townships in New Jersey and Pennsylvania would have to be counted as incorporated places without any consideration of the nature of population settlement. The densely settled portions of some are recognized as unincorporated places or as part of an urbanized area.

In Hawaii, there are no incorporated places in the sense of a functioning local governmental unit. The State, however, has recognized places and established boundaries for them. Such places are treated as incorporated in the 1970 census.

Unincorporated places.—As in the 1950 and 1960 censuses, the Census Bureau has delineated boundaries for closely settled population centers without corporate limits. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Within urbanized areas, unincorporated places are shown only if they have 5,000 inhabitants or more and there was an expression of local interest in their recognition.

SYMBOLS

In the table, a dash "—" signifies zero.

SUPPLEMENTARY REPORT

Population and Land Area of Urbanized Areas: 1970 and 1960

(The table presented here is a reprint of table 20 from Final Report PC(1)-A1, *Number of Inhabitants, United States Summary*, which contains additional summary information on the geographic distribution of the population as well as more detailed technical explanations and corrections in the counts for certain areas)

About 58 percent of the population of the United States was living in the 248 urbanized areas delineated for the 1970 Census of Population. These areas, however, accounted for less than 1 percent of the total land area of the United States—3.6 million square miles.

Of the 118.4 million persons in the urbanized areas, 63.9 million were in the 308 central cities and 54.5 million were living in the urban fringe. Over half of all persons living in urbanized areas were residents of the central cities. There were, however, large variations among the different areas, ranging from a low of 19.9 percent in the central city of the West Palm Beach, Fla., Urbanized Area to all the persons in five areas in Texas—Amarillo, Bryan-College Station, Galveston, San Angelo, and Wichita Falls.

The urbanized areas had a population density of 3,376 persons per square mile in contrast to a density of 24 persons per square mile outside the areas and 57 for the United States as a whole. For the 248 areas, the population density in the central cities was 70 percent higher than that for the urban fringe—4,463 vs. 2,627 persons per square mile. In 21 areas, however, the density in the urban fringe exceeded that in the central city.

The four urbanized areas in Puerto Rico had 1.1 million inhabitants, or two-fifths of the population of the Commonwealth. Of the total population of the areas, two out of every three resided in the central cities.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 15 cents.

URBANIZED AREAS

The major objective of the Census Bureau in delineating urbanized areas is to provide a better separation of urban and rural population in the vicinity of the larger cities. An urbanized area consists of a central city, or cities, and surrounding closely settled territory. The specific criteria for the delineation of an urbanized area are as follows:

- 1a. A central city of 50,000 inhabitants or more in 1960, in a special census conducted by the Census Bureau since 1960, or in the 1970 census; or
- b. Twin cities, i.e., cities with contiguous boundaries and constituting, for general social and economic purposes, a single community with a combined population of at least 50,000, and with the smaller of the twin cities having a population of at least 15,000.
2. Surrounding closely settled territory, including the following (but excluding the rural portions of extended cities).
 - a. Incorporated places of 2,500 inhabitants or more.
 - b. Incorporated places with fewer than 2,500 inhabitants, provided that each has a closely settled area of 100 housing units or more.
 - c. Small parcels of land normally less than one square mile in area having a population density of 1,000 inhabitants or more per square mile. The areas of large nonresidential tracts devoted to such urban land uses as railroad yards, airports, factories, parks, golf courses, and cemeteries are excluded in computing the population density.
 - d. Other similar small areas in unincorporated territory with lower population density provided that they serve
 - to eliminate enclaves, or
 - to close indentations in the urbanized areas of one mile or less across the open end, or
 - to link outlying enumeration districts of qualifying density that are not more than 1½ miles from the main body of the urbanized area.

The 1970 criteria are essentially the same as those used in 1960 with two exceptions. The extended city concept is new for 1970. Secondly, in 1960, towns in the New England States, townships in New Jersey and Pennsylvania, and counties elsewhere, which were classified as urban in accordance with specific criteria, were included in the contiguous urbanized areas. In 1970, only those portions of towns and townships in these States that met the rules followed in defining

urbanized areas elsewhere in the United States are included.

All persons residing in an urbanized area are classified as urban. The urbanized area population is sometimes divided into those in the "central city (or cities)" and those in the remainder of the area or the "urban fringe." The "central city" category consists of the population of the cities named in the title of the urbanized area.¹ The title is limited to three names and normally lists the largest city first and the other qualifying cities in size order; this order is, in many cases, based on 1960 population because most names were fixed before the 1970 counts were available. For the other cities to be listed in the title, they must have (a) 250,000 inhabitants or more or (b) at least one-third the population of the largest city and a population of 25,000 or more (except in the case of the small twin cities).

EXTENDED CITIES

Over the 1960-70 decade there has been an increasing trend toward the extension of city boundaries (for example, city-county consolidations) to include territory essentially rural in character. The Bureau of the Census has identified such cities as those that contain one or more areas, each of at least 5 square miles in extent and with a population density of less than 100 persons per square mile according to the 1970 census. The area or areas constitute at least 25 percent of the land area of the legal city or total 25 square miles or more.

These cities—designated as extended cities—thus consist of an urban part and a rural part. When an extended city is a central city of an urbanized area or a standard metropolitan statistical area, only the urban part is considered as the central city.

SYMBOLS

In the table, a dash "—" signifies zero, three dots "... " mean not applicable, a minus sign preceding a figure denotes decrease, and the symbol "NA" means not available. For urbanized areas established since 1960, the symbol "... " is shown in place of the 1960 population figures and the 1960-70 percent change.

¹The four exceptions are:

New York, N.Y.-Northeastern New Jersey, which includes New York, Newark, Jersey City, Paterson, Clifton, and Passaic
Chicago, Ill.-Northwestern Indiana, which includes Chicago, Gary, Hammond, and East Chicago
Los Angeles-Long Beach, which includes Los Angeles, Long Beach, Anaheim, Santa Ana and Garden Grove
San Francisco-Oakland, which includes San Francisco, Oakland, and Vallejo.

¹ Revised since publication of 1960 reports. ² Numerous revisions in land areas since 1960 reports principally caused by use of city land areas from Series GE-20 reports or corrections of 1960 figures by city officials. ³ Land area for 1970 central cities furnished by city officials. ⁴ There was no urbanized area delineated for the 1960 census. ⁵ Part of Galveston Urbanized Area detached to form part of Texas City-La Marque Urbanized Area. ⁶ Figures for 1960 allocated to each area as defined in 1970. ⁷ There were separate urbanized areas delineated for Los Angeles-Long Beach and One-Ontario for the 1960 census. Figures for 1960 relate to the combined areas. ⁸ Not a central city in 1960. ⁹ Not a central city in 1970. Figures for 1960 are for Nashville city only.

Population of Standard Metropolitan Statistical Areas: 1950 to 1970

(The table presented here is a reprint of table 32 from Final Report PC(1)-A1, *Number of Inhabitants, United States Summary*, which contains additional summary information on the geographic distribution of the population as well as more detailed technical explanations and corrections in the counts for certain areas)

Over two-thirds of the population of the United States was living in the 243 standard metropolitan statistical areas (SMSA's) defined for the 1970 Census of Population. The 139.4 million inhabitants of metropolitan areas in 1970 represents an increase of 19.8 million, or 16.6 percent, over the 119.6 million inhabitants of the areas in 1960, and 44.8 million, or 47.4 percent, over those areas in 1950.

The SMSA's ranged in size from Meriden, Conn. (55,959), to New York, N.Y. (11,571,899). The 33 SMSA's of 1,000,000 inhabitants or more had a combined population of 80.7 million, or 58 percent of the population of the 243 areas. The 2.1 million persons living in the 26 SMSA's with fewer than 100,000 inhabitants represent only 1.5 percent of the total population in metropolitan areas.

While the population of all SMSA's increased by 16.6 percent since 1960, the Las Vegas, Nev., SMSA experienced the largest relative growth, 115.2 percent, and 23 SMSA's decreased in size.

The Bureau of the Census recognizes 243 SMSA's in the United States and four in Puerto Rico, making a total of 247 in the 1970 census. These include the 231 SMSA's as defined

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 15 cents.

and named in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402. Since 1967, 16 SMSA's have been added, of which two were defined in January 1968 and an additional 14 were defined in February 1971 on the basis of the results of the 1970 census. Changes in SMSA boundaries or titles made after February 1971 are not recognized in this series of reports. SMSA's are defined by the Office of Management and Budget (formerly Bureau of the Budget).

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and

economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

The population living in SMSA's is designated as the metropolitan population. The population is subdivided as "inside central city or cities" and "outside central city or cities." The population living outside SMSA's constitutes the nonmetropolitan population.

In the table, three dots "... " mean not applicable and a minus sign preceding a figure denotes decrease.

1970 CENSUS OF POPULATION

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Population Annexed to Central Cities of Standard Metropolitan Statistical Areas in the United States Between 1960 and 1970

(The table presented here is a reprint of table 40 from Final Report PC(1)-A1, *Number of Inhabitants, United States Summary*, which contains additional summary information on the geographic distribution of the population as well as more detailed technical explanations and corrections in the counts for certain areas)

In the decade 1960 to 1970, annexations had a considerable impact on the distribution of population within standard metropolitan statistical areas (SMSA's). Of the 139.4 million persons living in SMSA's in 1970, approximately 63.9 million lived inside the legal limits of central cities and 75.6 million lived outside central cities. Of the 63.9 million in central cities, however, about 3.9 million, or 6.0 percent, lived in territories which had been annexed to the central cities during the decade. Thus, if there had been no annexations to central cities during the decade, the corresponding figures would have been 60.0 million in central cities and 79.4 in the area outside central cities.

Although the 1970 population of areas annexed to central cities during the decade was a relatively small part of the 1970 central city total, it constituted the major part of the 1960-1970 increase in these cities. The population of these cities increased by 6.5 percent during the decade, but the rate of growth within their 1960 corporate limits was only 0.1 percent. Similarly, although the area outside central cities showed an increase of about 27 percent during the decade, it would have risen to 33 percent if there had been no annexations.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 15 cents.

The Bureau of the Census recognizes 243 SMSA's in the United States and four in Puerto Rico, making a total of 247 in the 1970 census. These include the 231 SMSA's as defined and named in the Bureau of the Budget publication, Standard Metropolitan Statistical Areas: 1967, U.S. Government Printing Office, Washington, D.C. 20402. Also included are 16 SMSA's as defined by the Office of Management and Budget, of which two were defined in January 1968 and an additional 14 were defined on the basis of the results of the 1970 census.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and

economically integrated with central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

The population living in SMSA's is designated as the metropolitan population. The population is subdivided as "inside central city or cities" and "outside central city or cities." The population living outside SMSA's constitutes the nonmetropolitan population.

In the table, a dash "--" signifies zero and a minus sign preceding a figure denotes decrease.

Table 40. Population Annexed to Central Cities of Standard Metropolitan Statistical Areas Between 1960 and 1970, by SMSA

[Data relate to legal limits of central cities and standard metropolitan statistical areas as defined for 1970. For meaning of symbols, see text]

¹Base is 1970 population. ²In this table, governmental consolidations involving Indianapolis, Jacksonville, and Nashville-Davidson cities are treated as annexations. ³Population of that part of city located inside the Standard Metropolitan Statistical Area.

c.2

1970 CENSUS OF POPULATION

Series PC(S1)-9
February 1972

U S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Population of Places of 10,000 or More by Wards: 1970

This report presents the population of places of 10,000 inhabitants or more by wards. The data are from the 1970 Census of Population and refer to the population as of April 1, 1970. The boundaries of the places and wards, however, relate to the boundaries as defined on January 1, 1970.

Except for two places, the data relate to wards. In New York City, the figures are given for assembly districts, that is, districts from which members of the lower house of the State legislature are elected. In Nashville-Davidson, the figures relate to councilmanic districts.

Places of 10,000 inhabitants or more not included in this report either do not have wards or did not furnish ward boundaries to the Bureau.

Explanatory information on the concepts and procedures used in the 1970 census appears in the PC(1)-A series of reports. The figures presented here reflect the corrected population counts shown in those reports and in the HC(3) series of reports.

Age of the Population of the United States: 1970

(The table presented here is a reprint of table 52 from Final Report PC(1)-B1, *General Population Characteristics, United States Summary*, which contains additional summary information on general characteristics of the population as well as more detailed technical explanations)

The population of the United States was, on the average, nearly 1½ years younger in 1970 than it had been in 1960. The median age of the population in 1960 was 29.5 years but by 1970 had dropped to 28.1 years. This decrease in average age occurred despite the downward trend in fertility in the past decade which reduced the population under 10 years old from 22 to 18 percent of the total population. There were sufficiently large compensatory gains at the next youngest age intervals to lower the median age. An examination of the change in age structure during the decade, however, suggests that the median has remained relatively constant since 1967.

The number of persons in their thirties in 1970 was nearly 2 million less than the number in the same age group in 1960. Since persons in this age group in 1970 are the survivors of births in the decade 1930-40, and those in 1960 were the survivors of births in the decade 1920-30, this change reflects the extremely low level of fertility in the depression decade. In both 1970 and 1960, the population 40 years old and over constituted about 36 percent of the total population. However, the percentage of persons 65 years old and over increased from 9.2 in 1960 to 9.9 in 1970.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 15 cents.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe." There are a few urbanized areas which are based on "twin central cities" that have a combined population of at least 50,000.

PLACES

Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries.

RACE

Data are shown for three categories, white, Negro, and Negro and other races combined. The category

"white" includes persons who indicated their race as white as well as persons who did not classify themselves in one of the specific race categories on the questionnaire, but entered Mexican, Puerto Rican, or a response suggesting Indo-European stock. The category "Negro" includes persons who indicated their race as Negro or Black, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire, but who had such entries as Jamaican, Trinidadian, West Indian, Haitian, and Ethiopian. The category "Negro and other races" includes all racial designations other than white, such as Negro, American Indian, Chinese, Japanese, and the like.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1970, and was determined from the reply to questions on age and on month and year of birth.

MEDIAN

The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half of the cases fall below and one-half exceed the median. The median ages presented here are computed from data for 5-year age groups.

SYMBOLS

A dash "--" signifies zero. Three dots "..." mean not applicable or that the base for a derived figure is too small for it to be shown. The symbol "NA" means not available.

Table 52. Age by Race and Sex, for Urban and Rural Residence: 1970 and 1960

[For minimum base for derived figures (percent, median, etc.) and meaning of symbols, see text]

1970 CENSUS OF POPULATION

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Race of the Population of the United States, by States: 1970

(The table presented here is a reprint of table 60 from Final Report PC(1)-B1, *General Population Characteristics, United States Summary*, which contains additional summary information on the general characteristics of the population as well as more detailed technical explanations)

Racial groups differ substantially in their geographic distribution within the United States. Historically, the major part of the Negro population has lived in the South but in recent decades there has been a considerable outmigration from the South to all parts of the country. In 1970, with the exception of Vermont, there was no State with a Negro population of less than 1,000, and there were four States outside the South—New York, Pennsylvania, Illinois, and California—with a Negro population of a million or more; nevertheless, slightly more than one-half of the Negro population was still living in the South.

The American Indian population in the United States was nearly 800,000 in 1970. Almost one-half of this population lived in the West, but there were concentrations of 20,000 or more in five States outside the West—New York, Minnesota, South Dakota, North Carolina, and Oklahoma.

A majority of each of the oriental groups—Japanese, Chinese, and Filipino—were found in the West, notably in California and Hawaii. Totals of 10,000 or more in New York and Illinois for each of the three groups reflect appreciable settlements in the New York and Chicago metropolitan areas.

The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. Rather, it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves.

For persons of mixed parentage who were in doubt as to their classification, the race of the person's father was used. In 1960, persons who reported mixed parentage of white and any other race were classified according to the other race; mixtures of races other than white were classified according to the race of the father.

The category "white" includes persons who indicated their race as white, as well as some persons who did not classify themselves in one of the specific race categories on the questionnaire but entered Mexican, Puerto Rican, or a response suggesting Indo-European stock. In the 1930 census reports, Mexicans were classified as in the "other" race category; however, the 1930 data in this report have been revised to include Mexicans in the white population, as is the case for all other census years shown in this report.

The category "Negro" includes persons who indicated their race as Negro or Black, as well as some persons who did not classify themselves in one of the specific race categories on the questionnaire but who had such entries as Jamaican, Trinidadian, West Indian, and Ethiopian.

The category "Indian" includes persons who indicated their race as American Indian or who reported

for this item only the name of an Indian tribe.

The residual category "all other" in the tables consists of persons who marked Hawaiian, Korean, Aleut, or Eskimo on the questionnaire as well as persons in the "other" race category. This last group is defined to include Malaysians, Polynesians, Thais, and others not covered by the specific categories on the questionnaire. A number of persons who marked the "other" race category on the questionnaire supplied a write-in entry (such as Mexican, Puerto Rican, or Jamaican) which indicated that they belonged in one of the specific race categories. Edit and review operations were performed to correct the questionnaire markings for such persons. However, not all were identified and corrected before the 100-percent processing. As a result, the residual category is overstated. This may affect comparability with the 1960 data for some areas. Also, as explained in the 1970 census reports showing data based on sample tabulations, differences between the 100-percent data shown here and the sample data shown in those reports are partly due to editing operations performed after tabulation of the 100-percent data.

In several tables, data are shown for the category "Negro and other races;" this category consists of persons of all races other than white.

If the race entry was missing on the questionnaire for a member of a household, an answer was assigned in the computer according to the race of other household members, using specific rules of precedence of relationship. If race was not entered for anyone in the household, the race of the head of the preceding household processed was assigned.

LIBRARY

Race and Urban and Rural Residence of the Population of the United States, by States: 1970

(The table presented here is a reprint of table 61 from Final Report PC(1)-B1, *General Population Characteristics, United States Summary*, which contains additional summary information on general characteristics of the population as well as more detailed technical explanations)

In 1970, only about one-quarter of the population of the United States lived in rural areas. On a regional basis, the rural proportion was highest in the South (over one-third) and lowest in the West (one-sixth). In only nine States did rural residents outnumber urban residents. The percentages rural were greatest in Vermont (68 percent) and West Virginia (61 percent); in the seven other states—North and South Dakota, North and South Carolina, Mississippi, Arkansas, and Alaska—the percentages ranged between 50 and 56. The two States with the lowest rural proportions were New Jersey (11 percent) and Rhode Island (13 percent).

Slightly less than one-fifth of the Negro population lived in rural territory in 1970 and more than nine-tenths of this population lived in the South. In the South, however, only one-third of the Negro population was rural and in only three States in that region—North Carolina, South Carolina, and Mississippi—did Negroes in rural areas outnumber those in urban territory.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population con-

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices. Price 10 cents.

sists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

RACE

Data are shown for three categories, white, Negro, and Negro and other races combined. The category "white" includes persons who indicated their race as white as well as persons who did not classify themselves in one of the specific race categories on the questionnaire, but entered Mexican, Puerto Rican, or a re-

sponse suggesting Indo-European stock. The category "Negro" includes persons who indicated their race as Negro or Black, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but had such entries as Jamacian, Trinidadian, West Indian, Haitian, and Ethiopian. The category "Negro and other races" includes all racial designations other than white such as Negro, American Indian, Chinese, Japanese and the like.

SYMBOLS

A dash "--" signifies zero. Three dots "..." mean not applicable or that the base for a derived figure is too small for it to be shown. The symbol "NA" means not available.

Table 61. Race by Sex and Urban and Rural Residence: 1970—Continued

1970 CENSUS OF POPULATION

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Age and Race of the Population of the United States, by States: 1970

(The table presented here is a reprint of table 62 from Final Report PC(1)-B1, **General Population Characteristics, United States Summary**, which contains additional summary information on general characteristics of the population, as well as more detailed technical explanations)

In Florida in 1970, the median age of the population was 32.3 years, and persons 65 years old and over constituted 14.6 percent of the total. In these terms, the population of Florida was older than that of any other State. This situation reflects the substantial in-migration of elderly persons to the State.

In Alaska, at the opposite extreme, the median age of the population was 22.9 years and only 2.3 percent of the population was 65 years old and over. The relative youth of the population of Alaska is characteristic of a rapidly growing frontier area with a heavy in-migration of young adults. The relatively large number of Armed Forces stationed in Alaska and their dependents also contributes to the low median age of the population. The median age of the population of other than white races, which accounts for about 20 percent of the total population, and which is composed in large part of Indians, Eskimo, and Aleuts, was 18.7 years.

In addition to Florida, there were four States in which the median age was relatively high--Pennsylvania, New York, New Jersey, and West Virginia. The medians for these States ranged between 30 and 31 years. At the other end of the distribution, four States--South Carolina, Louisiana, New Mexico, and Utah--had median ages greater than that for Alaska but still under 25 years.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices. Price 15 cents.

SOCIAL AND ECONOMIC STATISTICS ADMINISTRATION LIBRARY

AGE

The age classification is based on the age of the person in completed years as of April 1, 1970, and was determined from the reply to questions on age and on month and year of birth.

MEDIAN

The median age, which is a type of average, is the middle value in a distribution; i.e., the median age divides the distribution into two equal parts—one-half of the cases fall below the median age and one-half the cases exceed the median age. The median ages presented here are computed from data for 5-year age groups.

RACE

Data are shown for three categories, white, Negro, and Negro and other races combined. The category "white" includes persons who indicated their race as white as well as persons who did not classify themselves in one of the specific race categories on the questionnaire, but entered Mexican, Puerto Rican, or a response suggesting Indo-European stock. The category "Negro" includes persons who indicated their race as Negro or Black, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but who had such entries as Jamaican, Trinidadian, West Indian, Haitian, and Ethiopian. The category "Negro and other races" includes all racial designations other than white such as Negro, American Indian, Chinese, Japanese and the like.

SUPPLEMENTARY REPORT

Household Relationship for Regions, Divisions, and States: 1970

(The table presented here is a reprint of table 65 from Final Report PC(1)-B1, *General Population Characteristics, United States Summary*, which contains additional summary information on general characteristics of the population, as well as more detailed technical explanations)

In 1970 there were 63.4 million households in the United States. California led all the States in total number of households with 6.6 million, and Alaska had the smallest number with 79 thousand. Of the total 63.4 million household heads, 45.4 million were male family heads and 5.5 million were female family heads. The average number of persons per family in 1970 was 3.57. There were also 4.6 million male primary individuals and 7.9 million female primary individuals.

The largest single population group in households was child of head (77.7 million), followed by all household heads (63.4 million), wife of head (44.1 million), other relative of head (9.0 million), and those persons not related to the head (3.2 million). In 1970 there were 2.1 million inmates of institutions and 3.7 million residents of other types of group quarters.

(For definitions of subjects covered in this report, see page 4)

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices. Price 10 cents.

Household.—A household includes all the persons who occupy a group of rooms or a single room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied as separate living quarters, that is, when the occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside of the building or through a common hall or (2) complete kitchen facilities for the exclusive use of the occupants of the household.

Relationship to head of household.—

1. **Head of household.**—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. However, if a married woman living with her husband was reported as the head, her husband was considered the head for the purpose of simplifying the tabulations. Two types of household heads are distinguished, the head of a family and a primary individual. A family head is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.
2. **Wife of head.**—A woman married to and living with a household head, including women in common-law marriages.
3. **Child of head.**—A son, daughter, stepchild, or adopted child of the head of the household of which he is a member, regardless of the child's age or marital status. The category excludes sons-in-law and daughters-in-law.
4. **Other relative of head.**—All persons related to the head of the household by blood, marriage, or adoption except "wife of head" or "child of head."
5. **Not related to head.**—All persons in the household not related to the head by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

Family.—According to 1970 census definitions, a family consists of a household head and one or more other persons living in the same household who are related to the head by blood, marriage, or adoption; all persons in a household who are related to the head are regarded as members of his (her) family. A "husband-wife family" is a family in which the head and his wife are enumerated as members of the same household. Not all households contain families, because a household may be composed of a group of unrelated persons or one person living alone. The mean size of family is derived by dividing the number of persons in families by the total number of families.

Group quarters.—Persons in living arrangements other than households are classified by the Bureau of the Census as living in group quarters. Group quarters are located most frequently in institutions, rooming houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or, if there is no person in charge, by six or more unrelated persons.

Inmate of institution.—Inmates of institutions are persons under care or custody at the time of enumeration in homes, schools, hospitals, or wards for juveniles, the physically handicapped, or the mentally handicapped; homes or hospitals for mental, tuberculosis, or other chronic disease patients; homes for unwed mothers; nursing convalescent and rest homes; homes for the aged and dependent; and correctional institutions.

Negro.—The category "Negro" includes persons who indicated their race as Negro or Black, as well as some persons who did not classify themselves in one of the specific race categories on the questionnaire but who had such entries as Jamaican, Trinidadian, West Indian, and Ethiopian.

GENERAL POPULATION CHARACTERISTICS

UNITED STATES SUMMARY 1-313

1970 CENSUS OF POPULATION

PC(S1)-15
April 1972

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Race of the Population for Standard Metropolitan Statistical Areas, Urbanized Areas, and Places of 50,000 or More: 1970

(The table presented here is a reprint of table 67 of the Final Report PC(1)-B1, **General Population Characteristics, United States Summary**, which contains additional summary information on the general characteristics of the population as well as more detailed technical explanations)

In 1970, persons of Negro and other races constituted 13.5 percent of the total population in standard metropolitan statistical areas (SMSA's). In urbanized areas, which for the most part represent the urban part of this metropolitan population, the percentage increased to 14.8. The percentage was highest, however, (20.3 percent) in places of 50,000 or more. In short, the proportion of Negro and other races was higher in the relatively large cities than elsewhere in metropolitan areas. In New York City and Chicago, the Negro population ranged between 1 and 2 million. The Japanese population of Honolulu was more than 100,000 and, although only about 55,000 were in the city of Los Angeles, there were 114,000 in the Los Angeles-Long Beach Urbanized Area. Between 50,000 and 100,000 Chinese were enumerated in both New York City and San Francisco. There were 29,500 Filipinos in Honolulu and 24,700 in San Francisco. There were nearly 10,000 Indians in New York City.

STANDARD METROPOLITAN STATISTICAL AREAS

The Bureau of the Census recognizes 243 SMSA's in the United States and four in Puerto Rico, making a total of 247 in the 1970 census. These include the 231 SMSA's as defined and named in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402. Since 1967, 16 SMSA's have been added, of which two were defined in January 1968 and an additional 14 were defined in February 1971 on the basis of the results of the 1970 census. Changes in SMSA boundaries or titles made after February 1971 are not recognized in this series of reports. SMSA's are defined by the Office of Management and Budget (formerly Bureau of the Budget).

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 15 cents.

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the SMSA. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe." There are a few urbanized areas which are based on "twin central cities" that have a combined population of at least 50,000.

PLACES

Two types of places are recognized in the census reports, incorporated places and unincorporated places. Incorporated places are political units incorporated as cities, boroughs, towns, and villages except for (a) boroughs in Alaska and (b) towns in the New England States, New York, and Wisconsin. Unincorporated places are closely settled population centers without corporate limits for which the Census Bureau has delineated boundaries.

RACE

The concept of race as used by the Census Bureau does not denote clearcut scientific definitions of biological stock. Rather, it reflects self-identification by respondents. Since the 1970 census obtained the information on race principally through self-enumeration, the data represent essentially self-classification by people according to the race with which they identify themselves.

For persons of mixed parentage who were in doubt as to their classification, the race of the person's father was used. In 1960, persons who reported mixed parentage of white and any other race were classified according to the other race; mixtures of races other than white were classified according to the race of the father.

The category "white" includes persons who indicated their race as white, as well as some persons who did not classify themselves in one of the specific race categories on the questionnaire but entered Mexican, Puerto Rican, or a response suggesting Indo-European stock.

The category "Negro" includes persons who indicated their race as Negro or Black, as well as some persons who did not classify themselves in one of the specific race categories on the questionnaire but who had such entries as Jamaican, Trinidadian, West Indian, and Ethiopian. The category "Negro and other races" consists of persons of all races other than white.

The category "Indian" includes persons who indicated their race as American Indian or who reported for this item only the name of an Indian tribe. The residual category "all other" in the tables consists of persons who marked Hawaiian, Korean, Aleut, or Eskimo on the questionnaire as well as persons in the "other" race category. This last group is defined to include Malaysians, Polynesians, Thais, and others not covered by the specific categories on the questionnaire. A number of persons who marked the "other" race category on the questionnaire supplied a write-in entry (such as Mexican, Puerto Rican, or Jamaican) which indicated that they belonged in one of the specific race categories. Edit and review operations were performed to correct the questionnaire markings for such persons. However, not all were identified and corrected before the 100-percent processing. As a result, the residual category is overstated. This may affect comparability with the 1960 data for some areas. Also, as explained in the 1970 census reports showing data based on sample tabulations, differences between the 100-percent data shown here and the sample data shown in those reports are partly due to editing operations performed after tabulation of the 100-percent data.

SYMBOLS

A dash "--" signifies zero and "U" means that the place is unincorporated.

Table 67. Race of the Population for Areas and Places: 1970

1970 CENSUS OF POPULATION

BUREAU OF THE CENSUS

MAY 9 1 13 PM '72

LIBRARY

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Metropolitan and Nonmetropolitan Residence of the Population 65 Years Old and Over: 1970

(The table presented here was compiled from tables 20 and 24 of the final State reports PC(1)-B, **General Population Characteristics**, which contains additional information on the age of the population as well as more detailed technical explanations and corrections in the counts for certain areas)

In 1970, 20.1 million persons, or 9.9 percent of the total population of the United States, were 65 years old and over. The concentration of older population was somewhat higher than the national average in the nonmetropolitan areas of the country (11.1 percent of whose population was 65 and over) and in the central cities of SMSA's (10.7 percent). In the rapidly growing, predominantly suburban areas surrounding central cities of SMSA's, the proportion of persons 65 and over (8.0 percent) was below the national average.

Although most migrant populations show a heavy concentration in the young adult ages, there are migration streams with a clearly different age distribution. Among these is the movement of older persons to retirement areas. At the State level the effects of this type of migration are most clearly apparent in the State of Florida. Although Florida was among the most rapidly growing States in the decade 1960-70, it nevertheless led all the other States in the proportion of its population which was 65 years old and over—14.6 percent. The location of retirement developments and communities within the State was such that the concentration of older persons was greater in suburban areas than in central cities but was highest in the nonmetropolitan areas of the State.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 10 cents.

STANDARD METROPOLITAN STATISTICAL AREAS

The Bureau of the Census recognizes 243 SMSA's in the United States and four in Puerto Rico, making a total of 247 in the 1970 census. These include the 231 SMSA's as defined and named in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402. Since 1967, 16 SMSA's have been added, of which two were defined in January 1968 and an additional 14 were defined in February 1971 on the basis of the results of the 1970 census. Changes in SMSA boundaries or titles made after February 1971 are not recognized in this series of reports. SMSA's are defined by the Office of Management and Budget (formerly Bureau of the Budget).

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and

economically integrated with the central city. In a few cities where portions of counties outside the SMSA as defined in 1967 were annexed to the central city, the population living in those counties is not considered part of the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

The population living in SMSA's is designated as the metropolitan population. The population is subdivided as "inside central city or cities" and "outside central city or cities." The population living outside SMSA's constitutes the nonmetropolitan population.

AGE

The age classification is based on the age of the person in completed years as of April 1, 1970, and was determined from the reply to questions on age and on month and year of birth.

SYMBOLS

In the table, a dash"—" signifies zero.
