1970 CENSUS OF POPULATION

SUPPLEMENTARY REPORT

Population of Standard Metropolitan Statistical Areas Established Since the 1970 Census, for the United States: 1970 and 1960

(The tables presented here are compiled from data presented in the Final State reports PC(1)-B, General Population Characteristics)

This report presents population data for 21 standard metropolitan statistical areas (SMSA's) established between November 1971 and January 1972 by the Office of Management and Budget (OMB), the Federal agency responsible for defining SMSA's. In November 1971, the OMB issued a revised set of criteria for determining metropolitan status and, as a result, 21 new SMSA's were designated on the basis of data from the 1970 Census. The total number of SMSA's currently recognized in the United States is 264. In the tabulations of the 1970 Census, 243 SMSA's were recognized in the United States.

The 21 new SMSA's contain 30 central cities. In addition, 9 other cities within previously designated metropolitan areas have also been given central city status. The total number of central cities in the United States is now 346.¹

Table 1 in this report presents population by race for the 21 new SMSA's. The total population living in these areas in 1970 was 3.8 million. A very high proportion of the population of the new metropolitan areas lived outside the central cities. In 1970, nearly three-fourths of their population, or 2.8 million persons, lived in this suburban area. The suburban rate of increase over the decade was 35 percent, more than 3 times the rate of increase in the central cities of these areas (11 percent).

¹The population counts for the relatively few central cities that are "extended" are restricted to their urban part. An extended city is one which has within its legal limits large segments of sparsely settled territory classified as rural.

The largest of the newly designated SMSA's are in New Jersey: New Brunswick-Perth Amboy-Sayreville (Middlesex County), which in 1970 had a population of 584,000, and Long Beach-Asbury Park (Monmouth County), with a 1970 population of 459,000. The smallest of the new SMSA's is Richland-Kennewick, Washington, with a population of 93,000.

Table 2 shows the population of the nine additional central cities designated in previously existing SMSA's. The data are shown for the entire SMSA and its component parts, by race. The largest of the newly added central cities is Virginia Beach, Va. in the Norfolk-Virginia Beach-Portsmouth, Va. SMSA. In 1970, Virginia Beach city had a population of 167,000. The smallest of this group of new cities is Hopewell, Va. in the Petersburg-Colonial Heights-Hopewell, Va. SMSA with a 1970 population of 23,000. Rates of population growth for these cities over the last decade have been very rapid, exceeding 30 percent in each case. In combination they more than doubled between 1960 and 1970, growing from 221,000 to 465,000 population.

Metropolitan and nonmetropolitan residence by race for the United States and regions is shown in table 3. Data are shown separately for metropolitan residence as defined in the 1970 Census (for 243 SMSA's) and as currently defined (for 264 SMSA's). The addition of the new metropolitan population raises the total in the United States from 139.4 to 143.2 million. By the current definition, 71 percent of the Nation's population is metropolitan, compared to 69 percent under the previous definition.

The largest number of new SMSA's and the most substantial new metropolitan populations were added to the South: ten entire SMSA's and the larger part of one which crosses regional lines (Parkersburg-Marietta, West Virginia-Ohio) are located in the South. Five of the new areas are in Florida alone. In combination, the South's additional SMSA's had a 1970 population of 1,657,000, and Florida's a 1970 population of 852,000.

Of the remaining new metropolitan areas, five are located in the Northeastern States (with a 1970 population of 1,481,000), four in the West (487,000 population), and only one in the North Central States in addition to the smaller part of the Parkersburg-

Marietta, West Virginia-Ohio SMSA (a total population of 199,000).

The State most affected by the change in metropolitan definition is Florida: by the 1970 definition 69 percent of the State's total population was classified as metropolitan, while under the new definition, 81 percent is so classified.

STANDARD METROPOLITAN STATISTICAL AREAS

In the 1970 Census tabulations and publications, the Bureau of the Census recognized 243 SMSA's in the United States. These SMSA's were defined on the basis of the criteria listed in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402.

In November 1971, a revised set of criteria were released by the Office of Management and Budget (formerly Bureau of the Budget) and on the basis of data from the 1970 Census, 21 new SMSA's were established by the OMB. Currently, there are 264 SMSA's officially recognized in the United States.

A standard metropolitan statistical area always includes a city (cities) of specified population which constitutes the central city and the county (counties) in which it is located. An SMSA also includes contiguous counties when the economic and social relationships between the central and contiguous counties meet specified criteria of metropolitan character and integration. An SMSA may cross state lines. In New England, SMSA's are composed of cities and towns instead of counties.

Each standard metropolitan statistical area must include at least:

- (a) One city with 50,000 or more inhabitants, or
- (b) A city having a population of at least 25,000 which with the addition of the population of contiguous places, incorporated or unincorporated, have a population density of at least 1,000 persons per square mile and together constitute, for general economic and social purposes, a single community with a combined population of at least 50,000, provided that the county or counties in which the city

and contiguous places are located has a total population of at least 75,000. (This criterion replaces the previous one which referred only to "twin cities" with a combined population of at least 50,000.)

In addition to the county (or counties) containing such a city (or cities), contiguous counties are included in an SMSA if, according to certain criteria (somewhat revised since previous definition), they are socially and economically integrated with the central city.

RACE

Data are shown for three categories, white, Negro, and Negro and other races combined. The category "white" includes persons who indicated their race as white as well as persons who did not classify them-

selves in one of the specific race categories on the questionnaire, but entered Mexican, Puerto Rican, or a response suggesting Indo-European stock. The category "Negro" includes persons who indicated their race as Negro or Black, as well as persons who did not classify themselves in one of the specific race categories on the questionnaire but had such entries as Jamaican, Trinidadian, West Indian, Haitian, and Ethiopian. The category "Negro and other races" includes all racial designations other than white such as Negro, American Indian, Chinese, Japanese and the like.

PERCENTS AND SYMBOLS

Percents which round to less than 0.1 are not shown, but indicated as zero. A dash "-" signifies zero. Three dots "... " mean not applicable. A minus sign preceding a figure denotes decrease.

1970 CENSUS OF POPULATION

PC(S1)-18
June 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Country of Origin of the Foreign Stock, for the United States: 1970 and 1960

(The data presented here are abstracted from table 70 of Final Report PC(1)-C1, *General Social and Economic Characteristics, United States Summary*, which contains additional summary information on ethnic origins and other characteristics as well as more detailed technical explanations)

Between 1960 and 1970 the population of foreign stock—the foreign born and their children—dropped from 34.1 million to 33.6 million, a decrease of 1.4 percent. The decline, however, was not uniform among countries of origin. Generally speaking, there were decreases for most European countries of origin and for Canada, but there were increases—some of them substantial—for China, Japan, and other Asiatic countries, as well as for Mexico, Cuba, and Central and South American countries. The foreign stock of Mexican origin increased from 1.7 million to 2.3 million (34.7 percent) during the decade and the movement of Cuban refugees during the 1960's was reflected in an increase from 124 to 561 thousand (352 percent) for that country.

Although the gains in foreign stock during the decade occurred for the most part in countries outside of Europe, the major part (70.1 percent) of the population of foreign stock is still of European origin. Six countries—United Kingdom, Ireland, Germany, Poland, USSR, and Italy—each represented in the foreign stock by populations of 1.5 million or more, accounted in 1970 for about half of the entire foreign-stock population of the United States.

FOREIGN STOCK

The category "foreign stock" includes the foreign-born population and the native population of foreign or mixed parentage. Persons of foreign stock are classified according to their country of origin. Natives of foreign parentage whose parents were born in different countries are classified according to the country of birth of the father. Natives of mixed parentage are classified according to the country of birth of the foreign-born parent.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

SAMPLE SIZE, DERIVED FIGURES, AND SYMBOLS

Data on the foreign stock are based on the 15-percent sample.

Derived figures such as percents, medians, means as well as certain rates or ratios are not presented (but indicate by three dots "...") if the base is smaller than the minimum number prescribed for the sample on which the figures are based. The minimum bases are 100 (persons, families, or households) for the 20-percent sample, 132 for the 15-percent, and 400 for the 5-percent.

Percents which round to less than 0.1 are not shown but indicated as zero (i.e. "."). The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half of the cases fall below the median and one-half of the cases exceed the median.

A dash "-" signifies zero. Three dots "..." mean not applicable, or that the base of a derived figure is too small for it to be shown, or that the data are being withheld to avoid the disclosure of information for individuals. The symbol "NA" means not available.

Country of Origin of the Foreign Stock: 1970 and 1960

(Data based on sample, see text. For minimum base for derived figures (percent, median, etc.) and meaning of symbols, see text)

1970 CENSUS OF POPULATION

U.S. DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS
AUG 8 1 34 PM '72

PC(S1)-19
June 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Mobility, Commuting, and Veteran Status for the United States: 1970

(The data presented here are extracted from table 98 of Final Report PC(1)-C1, **General Social and Economic Characteristics, United States Summary**, which contains additional summary information on migration and other characteristics as well as more detailed technical explanations)

In 1970, 50.9 million, or 26 percent of the native population of the United States were living outside their State of birth. This figure is an indicator of the lifetime migration of individuals and represents a continuation of the high level of geographic mobility of the population that has long characterized the United States. In the short term, nearly one-half of the total population five years old and over had moved at least once between 1965 and 1970, and, of the total 1970 population, nearly one-quarter had moved into their current residence since January 1969.

In 1970, 75 percent of all workers in the United States worked in the same county in which they resided. More than three-quarters of all workers commuted to work as a driver or passenger in a private automobile. Even in central cities of urbanized areas where public transportation is most likely to be available, 69 percent of the workers reported a private automobile as their means of transportation.

In 1970, 28.1 million, or 43 percent, of the total civilian male population 16 years old and over were veterans. Of these veterans, nearly one-half had served during World War II. Those men who had served since World War II account for about one-third of all veterans.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe."

NATIVE POPULATION

The category "native" comprises persons born in the United States, the Commonwealth of Puerto Rico or an outlying area of the United States, or at sea. Also included in this category is the small number of persons who, although they were born in a foreign county, have at least one native American parent.

PLACE OF WORK

Place of work refers to the geographic location at which civilians and Armed Forces personnel not on leave carried out their occupational or job activities during the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. These locations were defined for the purposes of this report by county boundaries or those of county equivalents.

MEANS OF TRANSPORTATION TO WORK

Means of transportation to work refers to the chief means (i.e., covering the greatest distance) of travel or type of conveyance used in traveling to and from work on the last day the respondent worked at the address given as his or her place of work.

VETERAN STATUS

As defined in this report, a "veteran" is a male 16 years old or over who has served but is not now serving in the Armed Forces of the United States. The veteran population is classified according to period of service. All veterans with more than one period of service reported are shown according to the most recent wartime period of service with the exception of veterans with both Korean and World War II service, who are recognized in a separate category.

SAMPLE SIZE, DERIVED FIGURES, AND SYMBOLS

Data on State of birth are based on the 20-percent sample. Those for other subjects are based on the 15-percent sample.

Derived figures such as percents, medians, means as well as certain rates or ratios are not presented (but indicated by three dots "...") if the base is smaller than the minimum number prescribed for the sample on which the figures are based. The minimum bases are 100 (persons, families, or households) for the 20-percent sample, 132 for the 15-percent, and 400 for the 5-percent.

Percents which round to less than 0.1 are not shown but indicated as zero (i.e., "--"). The median which is a type of average, is the middle value in a distribution, i.e., the median divides the distribution into two equal parts—one-half of the cases fall below the median and one-half of the cases exceed the median.

A dash "--" signifies zero. Three dots'..." means not applicable or that the base of a derived figure is too small for it to be shown or that the data are being withheld to avoid disclosure of information for individuals. The symbol "NA" means not available.

Table 98. Mobility, Commuting, and Veteran Status by Size of Place: 1970

1970 CENSUS OF POPULATION

PC(S1)-20
June 1972

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Educational Characteristics of the Population of the United States: 1970

(The data presented here are extracted from table 99 of Final Report PC(1)-C1, **General Social and Economic Characteristics, United States Summary**, which contains additional summary information on education and other characteristics as well as more detailed technical explanations)

In the United States in the spring of 1970, there were 58.6 million persons 3 to 34 years old who were enrolled in school. There were nearly 1 million in nursery school, 3.0 million in kindergarten, 33.2 million in elementary school (grades 1 to 8), 14.5 million in high school (grades 9 to 12), and 7.0 million in college. In addition, there were 823,000 persons enrolled in school who were 35 years old or over. Almost all of the children of the compulsory school attendance ages were enrolled in school, and so were 57 percent of the 18 and 19 year olds and 31 percent of the 20 and 21 year olds.

Among the 109.9 million persons 25 years old and over, 57.5 million, or 52 percent, had completed 4 years of high school or more, and 11.7 million, or 11 percent had completed 4 years of college or more. Only 5 percent of these adults had completed less than 5 years of school. Among the young adults 18 to 24 years old, 73 percent had completed 4 years of high school or more.

Of the 105.8 million persons 16 to 64 years old who had completed less than 3 years of college, 29 percent of the men and 22 percent of the women had completed a vocational training program.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes the rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe."

SCHOOL ENROLLMENT

Persons were included as enrolled in school if they reported attending a "regular" school or college at any time between February 1, 1970, and the time of enumeration. Regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional degree. Schooling that was obtained in a regular school and schooling from a tutor or through correspondence courses were counted only if the credits obtained were regarded as transferrable to a school in the regular school system. Elementary school, as defined here, includes grades 1 to 8, and high school includes grades 9 to 12. If a person was attending a junior high school, the equivalent in terms of 8 years of elementary school and 4 years of high school was recorded. In general, a "public" school is defined as any school which is controlled and supported primarily by a local, State, or Federal government agency.

YEARS OF SCHOOL COMPLETED

A person was reported as not having completed a given grade if he dropped out or failed to pass the last grade attended.

VOCATIONAL TRAINING

Persons were included as having had a vocational training program only if they had completed the program. Included as "vocational training" were formal vocational training programs completed in high school, through an apprenticeship program, in a school of business, in a nursing school or trade school, in a technical institute, in the Armed Forces, or in Job Corps Training.

SAMPLE SIZE, DERIVED FIGURES, AND SYMBOLS

Data on years of school completed are based on the 20-percent sample, and those on vocational training on the 5-percent sample. Those for the other subjects are based on the 15-percent sample.

Derived figures such as percents, medians, means as well as certain rates or ratios are not presented (but indicated by three dots "...") if the base is smaller than the minimum number prescribed for the sample on which the figures are based. The minimum bases are 100 (persons, families, or households) for the 20-percent sample, 132 for the 15-percent, and 400 for the 5-percent.

Percents which round to less than 0.1 are not shown but indicated as zero (i.e., "--"). The median, which is a type of average, is the middle value in a distribution, i.e., the median divides the distribution into two equal parts—one-half of the cases fall below the median and one-half of the cases exceed the median. The median school years completed was computed after the statistics on years of school completed had been converted to a continuous series of numbers (e.g., completion of the 1st year of high school was treated as completion of the 9th year and completion of the 1st year of college as completion of the 13th year). Persons completing a given school year were assumed to be distributed evenly within the interval from .0 to .9 of the year.

A dash "--" signifies zero. Three dots "... " means not applicable or that the base of a derived figure is too small for it to be shown or that the data are being withheld to avoid disclosure of information for individuals. The symbol "NA" means not available.

Table 99. Educational Characteristics by Size of Place: 1970

(Data based on sample, see text. For minimum base for derived figures (percent, median, etc.) and meaning of symbols, see text)

1970 CENSUS OF POPULATION

OFFICE OF THE ASSISTANT SECRETARY
FOR STATISTICAL ADMINISTRATION
JUL 24 1 13 PM '72

PC(S1)-21
July 1972

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Fertility and Family Composition for the United States: 1970

(The data presented here are extracted from table 100 of Final Report PC(1)-C1, **General Social and Economic Characteristics, United States Summary**, which contains additional summary information on fertility, family composition, and other characteristics, as well as more detailed technical explanations)

Most families are completed long before the end of the childbearing ages. In 1970 only 15 percent of the own children under 5 years old had mothers over age 34. It is estimated that women 35 to 44 have completed about 97 percent of their eventual lifetime fertility. As of 1970, they averaged 2,956 children ever born per 1,000 women (including childless single women) and 3,132 children per 1,000 women ever married. They had a "replacement index" of 143, meaning that their childbearing implied a population increase of 43 percent per generation. These women, of course, bore many of their children a decade or more before 1970, when birth rates were higher than they are today. Although they set new records for modern times, they are being followed through the childbearing ages by younger cohorts of women who have averaged fewer children than women of comparable ages in 1960.

In 1970 there were 51.2 million families, of whom 28.3 million had own children under 18 years old. There were 1.3 million subfamilies (living in with relatives); of these, 582,000 were husband-wife subfamilies and 617,000 were parent-child subfamilies in which the head was a woman. Most married couples maintained their own household; only 1.3 percent lived in subfamilies.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 10 cents.

For the 69.9 million persons under 18 years old, 57.8 million were living with both parents, representing about 83 percent of the total number of persons under 18 years old. There were 9.3 million who lived with one parent and 2.8 million who lived with neither parent.

The table in this report also presents data on years of school completed, type of group quarters, marital history, and disability, as well as additional data on the subjects discussed above.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe."

CHILDREN EVER BORN

The number of children ever born is shown for women who have ever been married, with single women treated as childless for the purpose of computing the rates of children ever born per 1,000 women. Respondents were instructed to include all children ever born alive to the woman.

REPLACEMENT INDEX

The replacement index was computed by dividing the number of children ever born per 1,000 women 35 to 44 years old by a national quota of 2,070 and by

expressing the result on a per 100 basis. A description of how the national quota of 2,070 was obtained appears in the PC(1)-C reports of the 1970 census.

FAMILY AND SUBFAMILY

A family consists of a household head and one or more other persons living in the same household who are related to the head by blood, marriage, or adoption; all persons in a household who are related to the head are regarded as members of his (her) family.

A subfamily is a married couple with or without children, or one parent with one or more single children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents. Members of a subfamily are also included among the members of a family. The number of subfamilies, therefore, is not included in the number of families.

In the 1970 census, a married couple is defined as a husband and his wife enumerated as members of the same household.

OWN CHILDREN AND RELATED CHILDREN

A child under 18 years old is defined as an "own child" if he or she is a single (never married) son, daughter, stepchild, or adopted child. The number of children "living with both parents" includes stepchildren and adopted children as well as sons and daughters born to the couple.

MARITAL HISTORY

For each person who had been married more than once, information was obtained on the reason for termination of the first marriage. Persons shown as "known to have been widowed" include widowed persons and those currently married or divorced persons whose first marriage ended in widowhood. Persons shown as "known to have been divorced" include divorced persons and those currently married or widowed persons whose first marriage did not end in widowhood.

GROUP QUARTERS

Persons in living arrangements other than households are classified by the Bureau of the Census as living in group quarters. Group quarters are located most frequently in institutions, rooming houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or, if there is no person in charge, by six or more unrelated persons.

Inmates of institutions are persons under care or custody at the time of enumeration in homes, schools, hospitals or wards for juveniles, the physically handicapped, or the mentally handicapped; homes or hospitals for mental, tuberculosis, or other chronic disease patients; homes for unwed mothers; nursing, convalescent, and rest homes; homes for the aged and dependent; and correctional institutions.

DISABILITY

The item refers to a serious illness that has lasted (or is likely to last) for a relatively long time, or a serious

physical or mental impairment, defect, or handicap. Also determined was whether such persons were able to work at all and how long each person had been limited in his working ability.

SAMPLE SIZE, DERIVED FIGURES, AND SYMBOLS

Data on disability and on marital history are based on the 5-percent sample. Those for the other subjects are based on the 20-percent sample.

Derived figures such as percents, medians, means as well as certain rates or ratios are not presented (but indicated by three dots "...") if the base is smaller than the minimum number prescribed for the sample on which the figures are based. The minimum bases are 100 (persons, families, or households) for the 20-percent sample, 132 for the 15-percent, and 400 for the 5-percent. Percents which round to less than 0.1 are not shown but indicated as zero (i.e., "-").

A dash "-" signifies zero. Three dots "..." means not applicable or that the base of a derived figure is too small for it to be shown or that the data are being withheld to avoid disclosure of information for individuals. The symbol "NA" means not available.

Table 100. Education, Fertility, and Family Composition by Size of Place: 1970

[Data based on sample, see text. For minimum base for derived figures (percent, median, etc.) and meaning of symbols, see text.]

CENSUS OF
POPULATION**

PC(S1)-22
July 1972

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

**Employment Status of the Population
for the United States: 1970**

(The data presented here are extracted from table 101 of Final Report PC(1)-C1, *General Social and Economic Characteristics, United States Summary*, which contains additional summary information on employment and other characteristics as well as more detailed technical explanations)

Among women 16 years old and over, 30.5 million, or 41 percent, were in the civilian labor force. Labor force participation (or nonparticipation) of women is strongly associated with such factors as marital status, the presence and age of her children, and size of place of residence. For all married women with husband present, the total labor force rate was slightly under 40 percent. However, for such women with own children under 6 years of age the rate was only 28 percent. The highest rates of labor force participation for these women were in places of 2,500 to 10,000 (32 percent) and in places of 10,000 or more (33 percent). On the other hand, the overall labor force rate for married women, husband present, with children of school age (6 to 17 years old) but with no preschool children (under 6 years old) was 47 percent. The lowest rate (46 percent) for such women occurred in rural areas and the highest rate (52 percent) in places of 2,500 to 10,000.

Among women with a marital status other than "married, husband present," nearly 45 percent were in the labor force. The presence and age of children for these women also played a strong role in determining labor force participation. Approximately 68 percent of the women with children 6 to 17 years old and no children under 6 years old were in the labor force. For women with children under 6 the labor force rate dropped to 51 percent. These relationships held regardless of the area of residence for these women.

Among men 16 years old and over, 15.7 million were neither in the civilian labor force nor in the Armed Forces. Of these nonworkers, 1.0 million were inmates of institutions and 4.7 million were enrolled in school. Of the remaining 10 million men, 6.0 million were 65 years old or over, 4 million were under 65 years of age, and over half of the latter were disabled.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe."

REFERENCE WEEK

The data on employment status relate to the calendar week preceding the date on which the respondents completed their questionnaires or were interviewed by enumerators. This week is not the same for all respondents because not all persons were enumerated during the same week.

EMPLOYMENT STATUS

Employed persons comprise all civilians 16 years old and over who were either (a) "at work"-those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) were "with

a job but not at work"-those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

Persons are classified as unemployed if they were civilians 16 years old and over and (a) were neither "at work" nor "with a job, but not at work" during the reference week, (b) were looking for work during the past 4 weeks, and (c) were available to accept a job. Persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off are also included as unemployed.

The "civilian labor force" consists of persons classified as employed or unemployed in accordance with the criteria described above. The "labor force" includes all persons in the civilian labor force plus members of the Armed Forces (persons on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard). All persons 16 years old and over who are not classified as members of the labor force are defined as "not in labor force." This category consists mainly of students, housewives, retired workers, seasonal workers enumerated in an "off" season who were not looking for work, inmates of institutions, disabled persons, and persons doing only incidental unpaid family work (less than 15 hours during the reference week).

MARITAL STATUS

The marital status classification refers to the status at the time of enumeration. Women classified as "married, husband present" consist of those women with a husband present in the household. Included are women who have been married only once and those who remarried after having been widowed or divorced. Persons in common-law marriages are classified as married. Persons whose only marriage had been annulled are classified as never married. The category "other women" shown in the table includes all women 16 years old and over other than married, spouse present.

OWN CHILD

A child under 18 years old is defined as an "own" child if he or she is a single (never married) son, daughter, stepchild, or adopted child of the specified person(s).

SAMPLE SIZE, DERIVED FIGURES, AND SYMBOLS

Data on disability are based on the 5-percent sample. Those for the other subjects are based on the 20-percent sample.

Derived figures such as percents, medians, means as well as certain rates or ratios are not presented (but indicated by three dots "...") if the base is smaller than the minimum number prescribed for the sample on which the figures are based). The minimum bases are 100 (persons, families, or households) for the 20-percent sample, 132 for the 15-percent, and 400 for the 5-percent. Percents which round to less than 0.1 are not shown but indicated as zero (i.e., "-").

A dash "-" signifies zero. Three dots "..." mean not applicable or that the base of a derived figure is too small for it to be shown or that the data are being withheld to avoid disclosure of information for individuals. The symbol "NA" means not available.

Table 101. Employment Status by Sex and Size of Place: 1970

[Data based on sample, see text. For minimum base for derived figures (percent, median, etc.) and meaning of symbols, see text.]

1970 CENSUS OF POPULATION

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Occupation of Employed Persons for the United States: 1970

(The data presented here are extracted from table 102 of Final Report PC(1)-C1, *General Social and Economic Characteristics, United States Summary*, which contains additional summary information on employment and other characteristics as well as more detailed technical explanations)

Of the 76.6 million employed persons 16 years old and over reported in the 1970 census, nearly half worked in white-collar jobs. Clerical workers were the largest component group with 18 percent of the employed population; professional workers totaled 15 percent.

Blue collar workers accounted for over one-third of employment. In this area, employment was concentrated in two groups--craftsmen and operatives, except transport; each group had 14 percent of the total.

Persons working in service occupations accounted for 13 percent of employment. Persons doing farm work as their primary job accounted for the remaining 3 percent.

The concentration of the population in white-collar jobs was greater in central cities and the urban fringe, with the highest concentration (57 percent) occurring in the urban fringe. Accordingly, the percentage of blue-collar workers in these areas was smaller than in the total employed population.

In places of 10,000 or more, other than urbanized areas, the occupational distribution by white-collar, blue collar, and service and farm workers was very similar to that for the total employed. In places of 2,500 to 10,000, the proportion of the white-collar occupations decreased relative to the total population and in the rural areas the blue-collar jobs, comprising 43 percent of the employed rural population, accounted for a larger percentage of employment than white-collar occupations (35 percent). In the rural areas, 11 percent of the employed persons considered farm work their primary job. This proportion was equalled by professional workers (11 percent) and exceeded by clerical workers (12 percent), craftsmen (16 percent), and operatives, except transport (17 percent).

Women accounted for 30 million or 38 percent of the employed labor force in April 1970. The participation of women in the nation's employment was highest in the central cities (41 percent). Rural areas with women comprising 33 percent of the employed showed the lowest rate.

For women, white-collar occupations were the largest source of employment. This was true regardless of residence. For the Nation, 61 percent of employed women were white-collar workers. In the urban fringe, 70 percent of employed women worked in white-collar jobs in contrast to the 50 percent so employed in rural areas. Service workers accounted for 21 percent of total female employment and blue-collar for 17 percent.

Among women workers the greatest number (10 million), representing 35 percent of the total employed, were in clerical occupations. On the other hand, 4.5 million or nearly 16 percent of the employed women held professional jobs. This proportion is greater than that for the total employed (14.8 percent).

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities,

villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe."

REFERENCE WEEK

Data on employment status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for employment data is not entirely uniform.

EMPLOYED

Employed persons comprise all civilians 16 years old and over (occasionally, also persons 14 and 15 years old) who were either (a) "at work"--those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) were "with a job, but not at work"--those who did not work during the reference week, but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

OCCUPATION

For employed persons the data on occupation refer to the job held during the reference week. For persons employed at two or more jobs, the data refer

to the job at which the person worked the greatest number of hours. The occupation statistics presented here are based on the detailed systems developed for the 1970 census; see 1970 Census of Population, **Classified Index of Industries and Occupations**, U.S. Government Printing Office, Washington, D.C. 1971.

The category white-collar workers comprises the major groups professional, technical, and kindred workers; managers and administrators, except farm; sales workers; and clerical and kindred workers.

Blue-collar workers comprise craftsmen, foremen, and kindred workers; operatives, except transport; transport equipment operatives; and laborers, except farm. Farm workers combine the major groups farmers and farm managers and farm laborers and farm foremen. Service workers comprise service workers, except private household and private household workers.

Data on occupation are based on the 20-percent sample.

1970 CENSUS OF POPULATION

AUG 21 12 17 PM '72

PC(S1)-24
July 1972

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Industry of Employed Persons for the United States: 1970

(The data presented here are extracted from table 103 of Final Report PC(1)-C1, *General Social and Economic Characteristics, United States Summary*, which contains additional summary information on employment and other characteristics as well as more detailed technical explanations)

The 1970 census shows that over one-fourth of the employed population 16 years old and over in this country worked for manufacturing concerns. Of the 12 major industrial groups, manufacturing with 19.8 million accounted for the greatest employment, outstripping by 4.5 million the next highest group, wholesale and retail trade, which accounted for 15.3 million or 20 percent.

The third significant industrial source of employment was professional and related services, which employed 18 percent of the total employed population. Within this group, employment in elementary and secondary schools was nearly 6 million and in hospitals, employment totaled 2.7 million. Each of these two categories exceeded the employment in one of the largest components of the manufacturing industry, the motor vehicles and transportation equipment industry, with an employment of 2.1 million.

A number of smaller industries comprised the remaining 36 percent, none of which employed more than 7 percent of the total. Among these were transportation, communications, and other public utilities with 7 percent; construction, 6 percent; and agriculture, forestry, and fisheries, 4 percent. Mining, and entertainment and recreation services formed the least significant areas with less than 1 percent each.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 10 cents.

Manufacturing was the most important industry in terms of employment in all residential areas. Among areas, the rural area represented the highest proportion (28 percent) of the working population employed in manufacturing. The lowest percentage (24 percent) was found in central cities.

In rural areas, persons working in agriculture, forestry, and fisheries accounted for 12 percent of employment. This was only the fourth most significant source of employment with manufacturing (28 percent), wholesale and retail trade (17 percent), and professional and related services (14 percent) each employing a higher proportion.

Manufacturing was more important as a source of employment for males (30 percent) than for females. However, females were more dominant in wholesale and retail trade (22 percent) and professional and related services (30 percent). Higher proportions of males than females were found in construction (9 percent), transportation, communications, and other public utilities (9 percent), and agriculture, forestry, and fisheries (5 percent).

In rural areas, manufacturing provided work for 29 percent of the males. Agriculture, forestry, and fisheries was the second largest area of employment with 16 percent. Wholesale and retail trade (15 percent) and construction (11 percent) were the two other important sources of employment.

The above data on industry are based on the 20-percent sample.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe."

REFERENCE WEEK

Data on employment status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for employment data is not entirely uniform.

EMPLOYED

Employed persons comprise all civilians 16 years old and over (occasionally also persons 14 and 15 years old) who were either (a) "at work"—those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) were "with a job but not at work"—those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

INDUSTRY

For employed persons the data on industry refer to the job held during the reference week. For persons employed at two or more jobs, the data refer to the job at which the person worked the greatest number of hours. The industry statistics presented here are based on the detailed systems developed for the 1970 census; see 1970 Census of Population, **Classified Index of Industries and Occupations**, U.S. Government Printing Office, Washington, D.C. 1971.

The 12 major industry groups are listed below with their component categories:

- Agriculture, forestry, and fisheries
- Mining
- Construction
- Manufacturing¹
- Transportation, communications, and other public utilities
 - Railroads and railway express service
 - Trucking service and warehousing
 - Other transportation
 - Communications
 - Utilities and sanitary services
- Wholesale and retail trade
 - Wholesale trade
 - Food, bakery, and dairy stores
 - Eating and drinking places
 - General merchandise retailing

¹Components are shown in table.

- Motor vehicles retailing and service stations
- Other retail trade
- Finance, insurance, and real estate
 - Banking and credit agencies
 - Insurance, real estate, and other finance
- Business and repair services
 - Business services
 - Repair services
- Personal services
 - Private households
 - Other personal services
- Entertainment and recreation services
- Professional and related services
 - Hospitals
 - Health services, except hospitals
 - Elementary and secondary schools and colleges
 - Other education and kindred services
 - Welfare, religious, and nonprofit membership organizations
 - Legal, engineering, and miscellaneous professional services
- Public administration

1970 CENSUS OF POPULATION

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Weeks Worked, Class of Worker, Last Occupation of the Experienced Unemployed, and Labor Mobility for the United States, 1970

(The data presented here are extracted from table 104 of Final Report PC(1)-C1, **General Social and Economic Characteristics, United States Summary**, which contains additional summary information on employment and other characteristics as well as more detailed technical explanations)

Approximately two-thirds of the men who were 16 years old and over in April 1970 and who worked during 1969 were year-round workers (50 to 52 weeks). For men in the age group 25 to 64 years old, over three-quarters (78 percent) worked 50 to 52 weeks.

Among working women 16 years old and over, 44 percent worked 50 to 52 weeks in 1969. The work experience of women is considerably influenced by their household duties and the presence of children. For women 16 to 39 years old, that is, those more involved in childrearing, only 36 percent worked 50 to 52 weeks in 1969. An approximately equal proportion of these women worked 26 weeks or less during 1969. However, among working women 40 to 59 years old, about 56 percent worked year round and only 17 percent worked one-half year or less.

The influence of children on the work patterns of women is further evidenced by the following changes in labor force participation over a 5-year period. There were approximately 5.3 million women 16 to 44 years old in 1965, who had no children under 5 years old at that time, but who did have children of preschool age in 1970. Of these women, 2.4 million had been working in 1965, but by 1970 1.6 million or nearly two-thirds were not working. Among women in the same age group who were working in 1965 and who did not have preschool children in either 1965 or 1970, over 80 percent were also working in 1970. Another interesting effect can be seen for women in this age

group who did have preschool children in 1965 and who were not working at that time. Specifically, among the women who had no further children between 1965 and 1970, over 30 percent had begun working by 1970.

Of the 76.6 million employed persons, 76 percent were private wage and salary workers. Self-employed workers accounted for about 8 percent of the employed. Less than one percent were involved in unpaid family work in a family farm or business. The remaining 16 percent or a total of 12.3 million workers were in government service. These government workers consisted of 3.3 million Federal, 3.0 million State, and 6.0 million local government employees. Local government employment, which is nearly twice that of either Federal or State, has a large number of persons employed as teachers, policemen, and firemen.

For all geographic areas, the distribution of men and women by class of worker was similar to that of the total employed, with the exception of self-employed men who were concentrated in rural areas. Although 7.5 percent of men employed in urban areas were self-employed, 18 percent of the employed men in rural areas were self-employed. This is heavily influenced by the fact that of all self-employed men 28 percent are agricultural workers and 90 percent of these reside in rural areas.

The 1.8 million experienced unemployed men were distributed by their last occupation as follows: 10 percent were professional and managerial workers, 24 percent were craftsmen, 26 percent were operatives, and 16 percent were laborers, except farm. The remaining 23 percent were sales, clerical, farm, and service workers.

Experienced unemployed women were concentrated among the following: 8 percent professional and managerial workers, 7 percent sales workers, 25 percent clerical workers, 28 percent operatives, and 17 percent service workers, except private household.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or

more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

URBANIZED AREAS

An urbanized area generally contains at least one city of 50,000 inhabitants or more and includes that portion of the surrounding territory, whether incorporated or unincorporated, which meets specified criteria relating to population density. This surrounding territory is designated as the "urban fringe."

REFERENCE WEEK

Data on employment status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for employment data is not entirely uniform.

EMPLOYED

Employed persons comprise all civilians 16 years old and over (occasionally also persons 14 and 15 years old) who were either (a) "at work"—those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) were "with a job, but not at work"—those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations.

UNEMPLOYED

Persons are classified as unemployed if they were civilians 16 years old and over and: (a) were neither

"at work" nor "with a job, but not at work" during the reference week, (b) were looking for work during the past 4 weeks, and (c) were available to accept a job.

Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

EXPERIENCED UNEMPLOYED

Unemployed persons who have worked at any time in the past are classified as the "experienced unemployed."

WEEKS WORKED IN 1969

Data on weeks worked pertain to the number of weeks during 1969 in which a person did any work for pay or profit (including paid vacation and sick leave) or worked without pay on a family farm or in a family business. Weeks of active service in the Armed Forces are also included.

OCCUPATION

For the unemployed with work experience these data refer to the last job the person held. The occupation statistics presented here are based on the detailed systems developed for the 1970 census: see 1970 Census of Population, **Classified Index of Industries and Occupations**, U.S. Government Printing Office, Washington, D.C. 1971.

CLASS OF WORKER

The information on class of worker refers to the same job as the information on occupation and industry. These are the class-of-worker categories:

1. Wage and salary workers are persons who work for an employer for wages, salary, commission, tips, pay-in-kind, or pay at piece rates. This category

may be subdivided into government or private. Government workers include employees of any Federal, State, or local governmental unit, regardless of the activity of the particular agency.

2. Self-employed workers are those who work for profit or fees in their own unincorporated business, profession, or trade, or who operate a farm.
3. Unpaid family workers are persons working without pay in a business operated by a person to whom they are related by blood, marriage, or adoption.

ACTIVITY FIVE YEARS AGO

A person is classified as a "worker in 1965" if he answered "yes" to either (a) working or (b) in the Armed Forces. All other persons are classified as nonworkers in 1965. The number of workers in 1965 may be understated, since there is a tendency for respondents to forget intermittent or short periods of employment.

MEDIAN, SAMPLE SIZE, AND DERIVED FIGURES

The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts--one-half of the cases fall below the median and one-half of the cases exceed the median.

The data on activity 5 years ago are based on the 15-percent sample. Those for other subjects are based on the 20-percent sample. Derived figures such as percents, medians, means as well as certain rates or ratios are not presented (but indicated by three dots "...") if the base is smaller than the minimum number prescribed for the sample on which the figures are based. The minimum bases are 100 (persons, families, or households) for the 20-percent sample, 132 for the 15-percent, and 400 for the 5-percent.

c. 2

1970 CENSUS OF POPULATION

U S DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

POPULATION OF PLACES OF 2,500 OR MORE: 1970 AND 1960

(The table presented here is a reprint of table 31 from Final Report PC(1)-A1, **Number of Inhabitants, United States Summary**, which contains additional summary information on the geographic distribution of the population as well as more detailed technical explanations and corrections in the counts for certain areas)

The table presented here shows, for each place of 2,500 inhabitants or more, the population in 1970 and 1960, percent change between the two years, land area, and persons per square mile in 1970. Listed in the table are 5,284 cities or other incorporated places and 1,151 unincorporated places in the United States. Similar information is also shown for towns of 2,500 inhabitants or more in the New England States and for places of 2,500 or more in Puerto Rico.

In 1970, approximately 133.5 million persons, or two-thirds of the total population, were living in the 6,435 places of 2,500 or more in the United States. About 122.2 million were in the incorporated places and 11.3 million in the unincorporated places.

PLACES

Two types of places are recognized in the census reports—incorporated places and unincorporated places, as defined below.

Incorporated places.—These are political units incorporated as cities, boroughs, towns, and villages with the following exceptions (a) boroughs in Alaska and (b) towns in the

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 50 cents.

New England States, New York, and Wisconsin. Boroughs in Alaska are treated as county subdivisions and may include one or more incorporated places. The towns in the New England States, New York, and Wisconsin are minor civil divisions similar to the townships found in other States and not necessarily thickly settled centers of population such as the cities, boroughs, towns, and villages in other States. Similarly, in New Jersey and Pennsylvania, where some townships possess powers and functions similar to those of incorporated places, the townships are not classified as "incorporated places." Thus, some minor civil divisions which are "incorporated" in one legal sense of the word are not regarded by the Census Bureau as "incorporated places." Without this restriction all of the towns in the New England States, New York, and Wisconsin and the townships in New Jersey and Pennsylvania would have to be counted as incorporated places without any consideration of the nature of population settlement. The densely settled portions of some are recognized as unincorporated places or as part of an urbanized area.

In Hawaii, there are no incorporated places in the sense of a functioning local governmental unit. The State, however, has recognized places and established boundaries for them. Such places are treated as incorporated in the 1970 census.

Unincorporated places.—As in the 1950 and 1960 censuses, the Census Bureau has delineated boundaries for closely settled population centers without corporate limits. Each place so delineated possesses a definite nucleus of residences and has its boundaries drawn to include, if feasible, all the surrounding closely settled area. Within urbanized areas, unincorporated places are shown only if they have 5,000 inhabitants or more and there was an expression of local interest in their recognition.

New England towns.—Towns in the New England States are similar to the townships and other minor civil divisions in other States. Because of the importance of towns in the governmental structure in New England, however, the data on those having 2,500 inhabitants or more are also included with those for the incorporated and unincorporated places of this size for the New England States.

SYMBOLS

In the table, a dash "—" signifies zero. Three dots "... " mean not applicable. A minus sign preceding a figure denotes decrease. "U" means that the place is unincorporated.

Table 31. Land Area and Population of Places of 2,500 or More for the United States and Puerto Rico, and of Towns of 2,500 or More for the New England States: 1970 and 1960

[For meaning of symbols, see text]

States	Population			Land area in square miles	Population per square mile of land area	States	Population			Land area in square miles	Population per square mile of land area
	1970	1960	Percent change, 1960 to 1970				1970	1960	Percent change, 1960 to 1970

1970 CENSUS OF POPULATION

PC(S1)-27
August 1972

U. S. DEPARTMENT OF COMMERCE • Social and Economic Statistics Administration • BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

Rural Population by Farm-Nonfarm Residence for Counties in the United States: 1970

This report presents revised figures on the rural-farm and rural-nonfarm populations which replace the comparable figures shown in the State reports of 1970 Population Census series PC(1)-C, "General Social and Economic Characteristics." The data in the PC(1)-C reports contain a misclassification between the farm and nonfarm components of the rural population. This misclassification, which is compensating between the two components, does not affect the statistics for the rural area as a whole; also not affected are data for urban areas and for the State as a whole.

The farm-nonfarm data published in the State reports of the 1970 Housing Census series HC(1)-B, "Detailed Housing Characteristics," are subject to the same error in classification. Revised farm-nonfarm figures for occupied rural housing units are presented in Supplementary Report HC(S1)-7.

Data on a number of characteristics of the rural-farm and rural-nonfarm populations for States and large areas (based on the corrected farm-nonfarm classification) appear in the 1970 Population Census PC(1)-D series of State reports which are being issued during the second half of 1972. Plans are now in process for obtaining corrected data on both population and housing characteristics by county; further information can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, and U.S. Department of Commerce Field Offices, 35 cents.

URBAN AND RURAL RESIDENCE

The urban population comprises all persons living in urbanized areas and in places of 2,500 inhabitants or more outside urbanized areas. More specifically, the urban population consists of all persons in (a) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs, and towns with certain exceptions; (b) unincorporated places of 2,500 inhabitants or more; and (c) other territory, incorporated or unincorporated, included in urbanized areas. The population not classified as urban constitutes rural population.

FARM AND NONFARM RESIDENCE

The rural population is subdivided into the rural-farm population, which comprises all rural residents living

on farms, and the rural-nonfarm population, which comprises the remaining rural population. As in the 1960 census, the farm population consists of persons living on places of 10 or more acres from which sales of farm products amounted to \$50 or more in the preceding calendar year or on places of less than 10 acres from which sales of farm products amounted to \$250 or more in the preceding year.

Persons in rural territory who, according to the definition, were not living on farms were classified as nonfarm residents. All persons living in group quarters except those in agricultural workers' camps on farms are classified as nonfarm.

Rural Population, by Farm-Nonfarm Residence for States by County: 1970

SUPPLEMENTARY REPORT

1970 Population of Congressional Districts for the 93d Congress

This report presents 1970 census population counts for congressional districts of the 93d Congress, which will begin its first session in January, 1973. Figures are shown for 429 districts plus the six States where a Representative is elected at large (Alaska, Delaware, Nevada, North Dakota, Vermont, and Wyoming). The House of Representatives has a total of 435 members.

The table includes total population and population of voting age (18 years and over) for 1970, together with 1960 total population, number and percent change between 1960 and 1970, and percent deviation of the district's population from the State average congressional district population in 1970. Populations shown for each congressional district for 1970 are consistent with the official resident State population totals.

This is the first Congress in which reapportionment based on the 1970 census takes effect. Five States gained Representatives as a result of the reapportionment (Arizona, 1; California, 5; Colorado, 1; Florida, 3; and Texas, 1), and nine States lost Representatives (Alabama, 1; Iowa, 1; New York, 2; North Dakota, 1; Ohio, 1; Pennsylvania, 2; Tennessee, 1; West Virginia, 1; and Wisconsin, 1).

As a result of legislative or judicial action 40 States were redistricted for the 93d Congress. New congressional district boundaries based on the 1970 census counts have been laid out in all multi-district States except Hawaii, Maine, Nebraska, and New Mexico.

In 32 States every district varies by less than 1 percent from the State average congressional district population, and in eight additional States the largest difference is

between 1 and 3 percent. Of the remaining four States, in Tennessee and South Carolina the largest difference is 4.6 and 4.8 percent respectively, in Hawaii it is 5.6 percent, and in Washington it is 7.3 percent. Of the 429 congressional districts, 44 vary from the State average district population by more than 1 percent and 8 of these differ more than 3 percent.

The close population conformity mentioned above reflects the effect of one-man one-vote reform instituted by the courts beginning in the middle 1960's. The following table summarizes the distribution of districts by their variations from the State average district populations for the 93d Congress and compares it with the 88th Congress ten years earlier:

Percent deviation from State average congressional district population	93d Congress	88th Congress
Total number of congressional districts* . . .	429	413
Less than 1 percent	385	9
1 to 5 percent	41	81
5 to 10 percent	3	87
10 percent and over	-	236
Average percent deviation . .	0.4	17.0

**In addition, in the 88th Congress there were 22 members elected at large, compared with 6 in the 93d Congress.*

The average 1970 population count for the congressional district in the 93d Congress is 465,000. The largest congressional district in population is the First of Utah, with 530,000 population, and the smallest is the First of South Dakota, with 333,000. There is a larger spread between the populations of the States which have only one representative; North Dakota has a population of 618,000, but Alaska has only 302,000. In the States of Connecticut, New Mexico, Oregon, and Utah the population for all districts exceeded 500,000. In Idaho, Montana, New Hampshire, and South Dakota all districts had less than 400,000 population. All but 58 of the 429 districts fell between 450,000 and 500,000 population, however.

In the 92d Congress (before reapportionment and redistricting based on the 1970 census could take place) the 1970 population of the districts ranged from a high of 872,000 for the 35th District of

California to a low of 288,000 for the Second District of North Dakota. The distribution of the districts for the 92d and 93d Congress by their population in 1970 is as follows:

Number of inhabitants in 1970	93 d Congress	92 d Congress
Total number of congressional districts	429	430
500,000 or more	16	114
450,000 to 500,000	371	113
400,000 to 450,000	33	132
350,000 to 400,000	5	55
Less than 350,000	4	16

RELATED REPORTS

The population in 1970 of the districts for the 91st and 92d Congresses is shown in **1970 Census of Population, Vol. 1, Characteristics of the Population, Part A, Number of Inhabitants, table 13.**

Statistical summaries for congressional districts in the 93d Congress have been published by the Bureau of the Census in Congressional District Data Book reports, Series CDDB-93. A report has been issued for each multi-district State and a combined report for the six single-member States, containing selected data on elections and population and housing characteristics for each district as well as maps showing the boundaries of the districts. Abbreviated detail was released earlier in Series CDD-93X for most States redistricted for the 93d Congress, and Series CDD-92 covered the full 92d Congress in the same detail as the CDD-93X Series.

Soon to be available is the map, **Congressional Districts for the 93d Congress, Series GE-50, No. 46, 30 x 42 inches in dimension, which is sold by the Superintendent of Documents.** Also in preparation is the **Congressional District Atlas (Districts of the 93d Congress)**, which will show detailed maps of all cities and counties that are divided into two or more congressional districts together with lists identifying the congressional districts in which all counties and all incorporated places are located.

SYMBOLS

Percents which round to less than 0.1 are not shown but indicated as zero; a dash signifies zero. Three dots "... " mean not applicable.
