

U.S. Department of Commerce
BUREAU OF THE CENSUS

SUPPLEMENTARY REPORT

1970 CENSUS OF POPULATION

PC(S1)-106

Issued October 1976

Population of Urbanized Areas Established Since the 1970 Census, For the United States: 1970

This report presents population and land area data for 27 urbanized areas (UA's) designated by the Bureau of the Census in 1974. These new UA's represent additions to the 248 urbanized areas listed in the 1970 census publications. They result from a revision in the criteria for determining the cities for which UA's are defined. However, there has been no revision in the criteria for determining the boundaries of UA's; the same criteria used to delimit the boundaries of the 248 previously defined UA's have been used to determine the boundaries of the 27 new areas. It should also be noted that the delineation of the additional UA's has not affected the boundaries of any of the already existing UA's.¹

The purpose of the change in criteria for determining UA central cities was to make the lists of UA's and standard metropolitan statistical areas (SMSA's) as similar as possible. In November 1971 the Office of Management and Budget, which establishes the official definitions of SMSA's, modified the criteria for designating SMSA central cities. Essentially this modification extended SMSA recognition to cities having less than 50,000 population within their corporate limits, but at least 25,000 and, when densely settled communities adjacent to the city limits are included, a total of at least 50,000. In 1974 the Bureau of the Census modified the criteria for urbanized area central cities to make them practically identical with the revised SMSA criteria.

One important difference remains between the two sets of criteria. The SMSA criteria permit the recognition of an SMSA central city not only from the results of a decennial census but

also on the basis of special censuses or certain official intercensal estimates published by the Bureau of the Census. As a result, several cities have qualified for recognition as SMSA's on the basis of data other than from the 1970 census. An urbanized area, on the other hand, is defined only when a city qualifies for recognition as a central city on the basis of 1970 census data. This requirement has been adopted because the determination of UA boundaries cannot be made nationwide except on the basis of detailed population and land area data, such as are available only from a decennial census. Two UA's (Clarksville, Tenn. and St. Cloud, Minn.) have been defined for SMSA's that were established on the basis of post-1970 annexations that resulted in 1970 census populations sufficient to meet the minimum total population required under the revised SMSA criteria.² No UA's have been defined for those cities whose qualifications as SMSA's was based on post-1970 data.

As a result of the revision of the criteria and the designation of the 27 new UA's, the lists of urbanized areas and standard metropolitan statistical areas now closely resemble one another. Each SMSA, with the exception of eight defined on the basis of post-1970 census data, has at least one UA wholly or partly within it. In 18 SMSA's, there are 2 or more UA's because there exists another city that qualifies under the criteria whose urban fringe area is separated from the urban fringe of the larger central city or cities. (For example, the Chicago SMSA has three separate UA's entirely or partially within it.) In a few cases, a single UA includes central cities of two or more SMSA's.

¹The tables in this report do, however, reflect a correction to the 1970 population and land area of the Sacramento, Calif. UA. Appendix A presents additional information on certain other corrections.

²It is possible that before 1980 additional cities may qualify for SMSA recognition on the basis of 1970 census data and may therefore have a UA defined.

Table 1 in this report shows the 1970 populations and land areas of the 27 new UA's. Maps of the new areas are included at the end of the report. The four largest of the newly designated UA's, in terms of both population and land area, are Melbourne-Cocoa, Fla.; Sarasota-Bradenton, Fla.; New London-Norwich, Conn.; and Daytona Beach, Fla. Each of these four had a 1970 population greater than 115,000 and a land area totaling more than 75 square miles. The majority of the 27 new UA's had populations ranging between 50,000 and 75,000 and land areas comprising fewer than 40 square miles.

New UA's have been defined in 20 States. The State of Florida has been most affected by the revision in UA criteria, having five new UA's with an aggregate 1970 population of 597,290 and land areas totaling 354.1 square miles. Other States in which more than one new UA has been established include Alabama, California, New York, North Carolina, Tennessee, and Washington.

In table 2 are listed the populations, land areas, and population densities in 1970 of the 275 UA's now recognized. This table updates the information provided for 248 UA's in table 20 of 1970 Census of Population, Vol. 1, *Characteristics of the Population*, "United States Summary." The 27 new UA's are denoted in table 2 by asterisks.

In table 3 the 275 UA's are arranged in descending rank order according to 1970 population. The rankings of each UA in terms of land area and population density are shown as well. As can be seen from this table, most of the 27 new UA's fall in the 4th and 5th quintiles (the lower 40 percent) of the distributions for the three characteristics.

The 1970 population of the United States by size of place, prior to and following the revision of UA criteria, is shown in table 4. The earlier information was presented in table 4 of 1970 Census of Population, Vol. 1, *Characteristics of the Population*, "United States Summary." As can be seen from the table, the share of the total population classified as urban has been increased by only 0.1 percentage point as a result of the revision. This was accompanied by a corresponding decrease in the percent classified as rural. The small magnitude of the shift reflects the fact that most of the population of the new UA's are in places of 2,500 or more that were already defined as urban in 1970. Of the population treated as rural in 1970, only 318,363 (0.6 percent) are within the new UA's.

The recomposition of the urban population effected by the application of the revised UA criteria is also shown in table 4. The total urban population residing inside urbanized areas has been increased from 118,453,593 to 120,731,573, an addition of nearly 2.3 million persons. Approximately half of this increase is accounted for by the population of the 32 central cities of the new UA's. The other half includes the population of the new UA's residing outside the central cities in places of 2,500 or more (previously designated urban but outside urbanized areas) as well as in places of less than 2,500 and in areas not recognized as places (previously designated rural). The reclassification of the population of the new UA's living in central cities and in places of 2,500 or more was accompanied, of course, by a corresponding decrease in the total urban population living outside urbanized areas.

Table 5 shows the composition of the 1970 urban population of the United States by region, division, and State. The region that has been most affected by the application of the new UA criteria is the South. The increase in the 1970 population residing inside UA's in the South was 1,285,023, which accounts for more than 56 percent of the total additional population inside UA's. The Northeast, North Central, and West regions received 16.7; 10.2, and 16.7 percent, respectively, of the total additional UA population. As can be seen from the table, however, the Northeast contains the greatest proportion of the total population inside urbanized areas—35.2 million or 29 percent—followed by the North Central (31.7 million or 26 percent), the South (29.9 million or 25 percent), and the West (24 million or 20 percent).

URBANIZED AREA CRITERIA

The major objective of the Bureau of the Census in delineating urbanized areas is to provide a better separation of urban and rural populations in the vicinity of the larger cities. An urbanized area includes a central city or cities that qualify under one of the criteria listed below. All population criteria refer to 1970 census population counts (except as specified in criterion 1a).

1a. A city of 50,000 inhabitants or more according to the 1970 census, a special census taken between 1960 and 1970, or the 1960 census, provided that the city is located in an SMSA and is not included in an existing urbanized area, or

b. A city with at least 25,000 inhabitants which, together with those contiguous places (incorporated or unincorporated³) having population densities of at least 1,000 persons per square mile, has a combined population of 50,000 and constitutes for general economic and social purposes a single community, provided that the city is located within an SMSA and is not included in an existing urbanized area.

2. In addition to a central city or cities, a UA includes contiguous territory meeting the following criteria:

a. Incorporated places of 2,500 inhabitants or more but excluding the rural portions of extended cities.

b. Incorporated places with fewer than 2,500 inhabitants, provided that each has a closely settled area of 100 housing units or more; and all unincorporated places recognized in the 1970 census.

c. Contiguous small parcels of unincorporated land determined to have a 1970 census population density of 1,000 inhabitants or more per square mile. The areas of large nonresidential tracts devoted to such urban land uses as railroad yards, airports, factories, parks, golf courses, and cemeteries are excluded in computing the population density.

³ Unincorporated places as identified and defined for the 1970 census by the Bureau of the Census.

d. Other similar small areas in unincorporated territory without regard to population density provided that they serve:

To eliminate enclaves, or

To close indentations of one mile or less in width across the open end of the urbanized areas in order to eliminate narrow fingers of "rural" areas, or

To link outlying areas of qualifying density provided that these are not more than one and a half miles from the main body of the urbanized area.

Urbanized Area Title. The title is limited to three names and normally lists the largest cities in descending order of size. For other cities to be listed in the title of an urbanized area with a

central city of 50,000 or more, such cities (a) must have at least one-third the population of the largest city and a population of 25,000 or (b) must have 250,000 inhabitants or more.

For those areas in which the largest city has a population of at least 25,000 but less than 50,000 (criterion 1b.), any named city or cities must have a population equal to one-third or more of that of the largest city and a minimum population of 15,000.

Area titles which include the names of more than one city start with the largest city and list other cities in descending order of size according to the most recent census, except that cities which qualify the area under criterion 1b are listed prior to the names of any other qualifying city.

¹For the "current criteria" section of the table, St. Cloud, Minn. and Clarksville, Tenn. have been assigned to a central city size category on the basis of their 1970 populations of 42,223 and 41,802, respectively. Included in these figures are the 1970 populations within areas annexed subsequent to the census, because it was on this basis that the two areas qualified as UA's. The 1970 populations of St. Cloud and Clarksville within their boundaries as of January 1, 1970 (39,691 and 31,719) were used to assign these places to a size category according to the previous criteria.

²The "previous criteria" section of the table has been revised since publication of the 1970 census reports to reflect corrections to the Sacramento, Calif. Urbanized Area and the New London-Norwich, Conn. Urbanized Area. Mather (U), having a 1970 population of 7,027, was erroneously excluded from the Sacramento UA in the 1970 census. Noank (U), having a 1970 population of 1,371, was not shown as a separate place in the 1970 census.

Table 5. COMPOSITION OF THE URBAN POPULATION: 1970

(This table represents a revision of Volume I, U.S. Summary, table 16, to reflect the effects of the change in the UA criteria)

- Represents zero.

Note: In addition to changes resulting from the revision in UA criteria, this table includes the following: A correction to the Sacramento, Calif. Urbanized Area to include Mather (U), 1970 population of 7,027, which was erroneously excluded from that area in the 1970 census.

St. Cloud, Minn. and Clarksville, Tenn. have been included with 1970 populations of 42,223 and 41,802, respectively. These figures include the 1970 population of areas annexed subsequent to the census, because it was on this basis that the two areas qualified as UA's.

MAPS OF URBANIZED AREAS

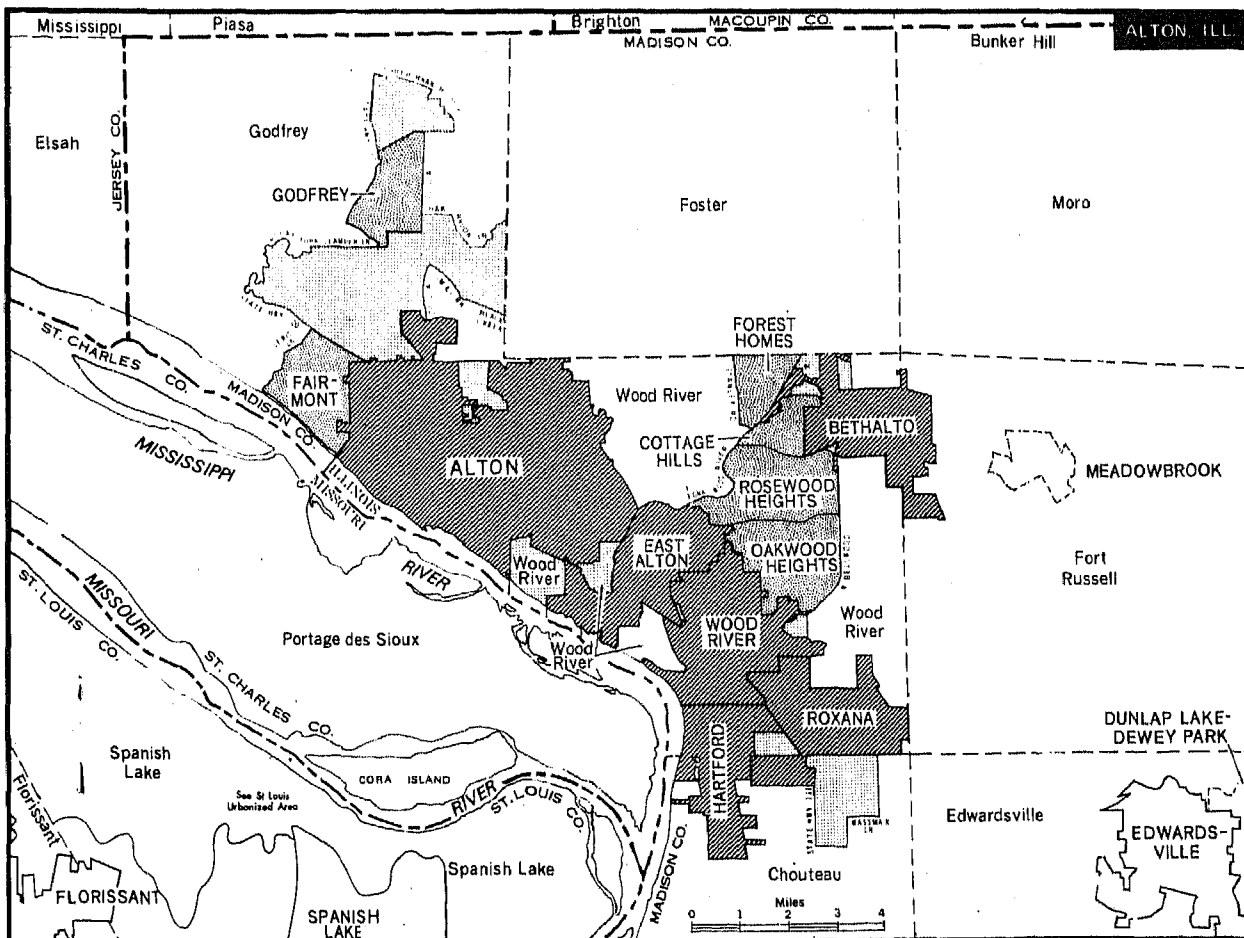

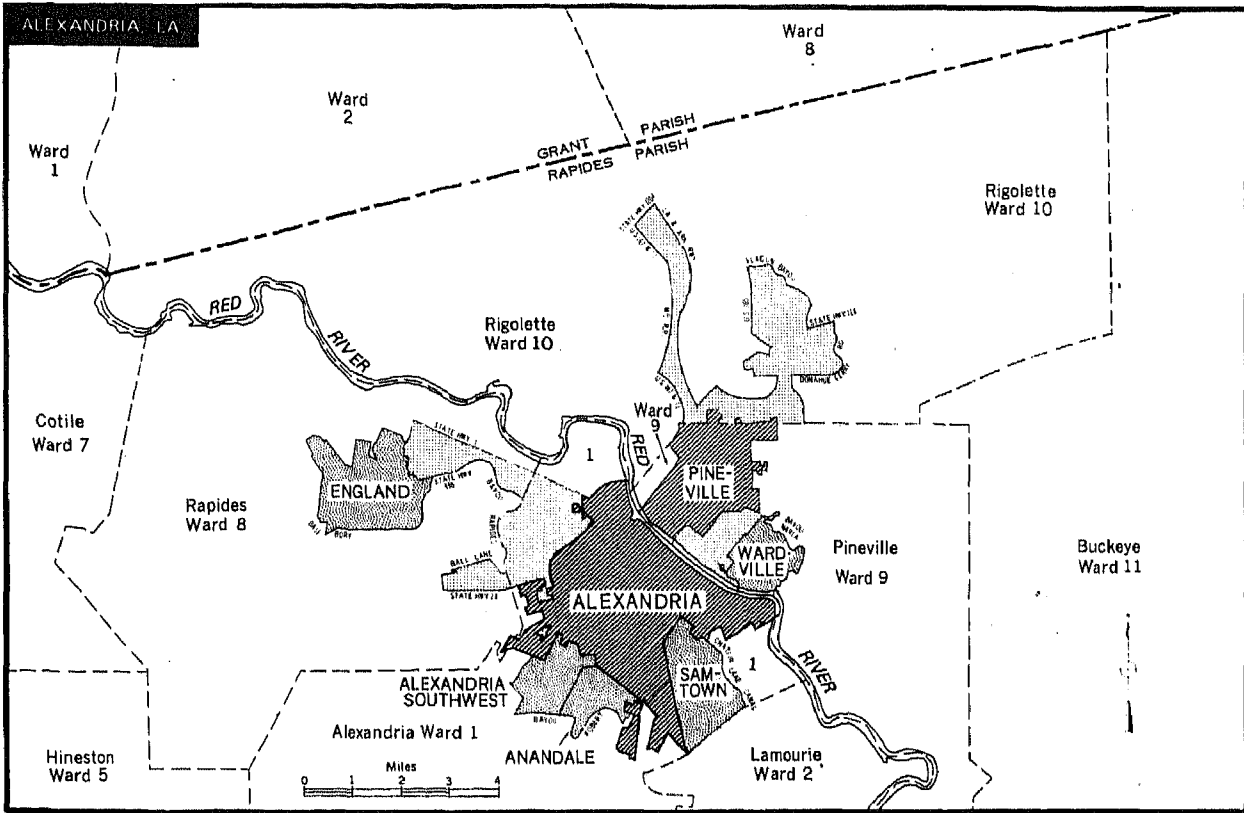

This key applies to all the maps that follow.

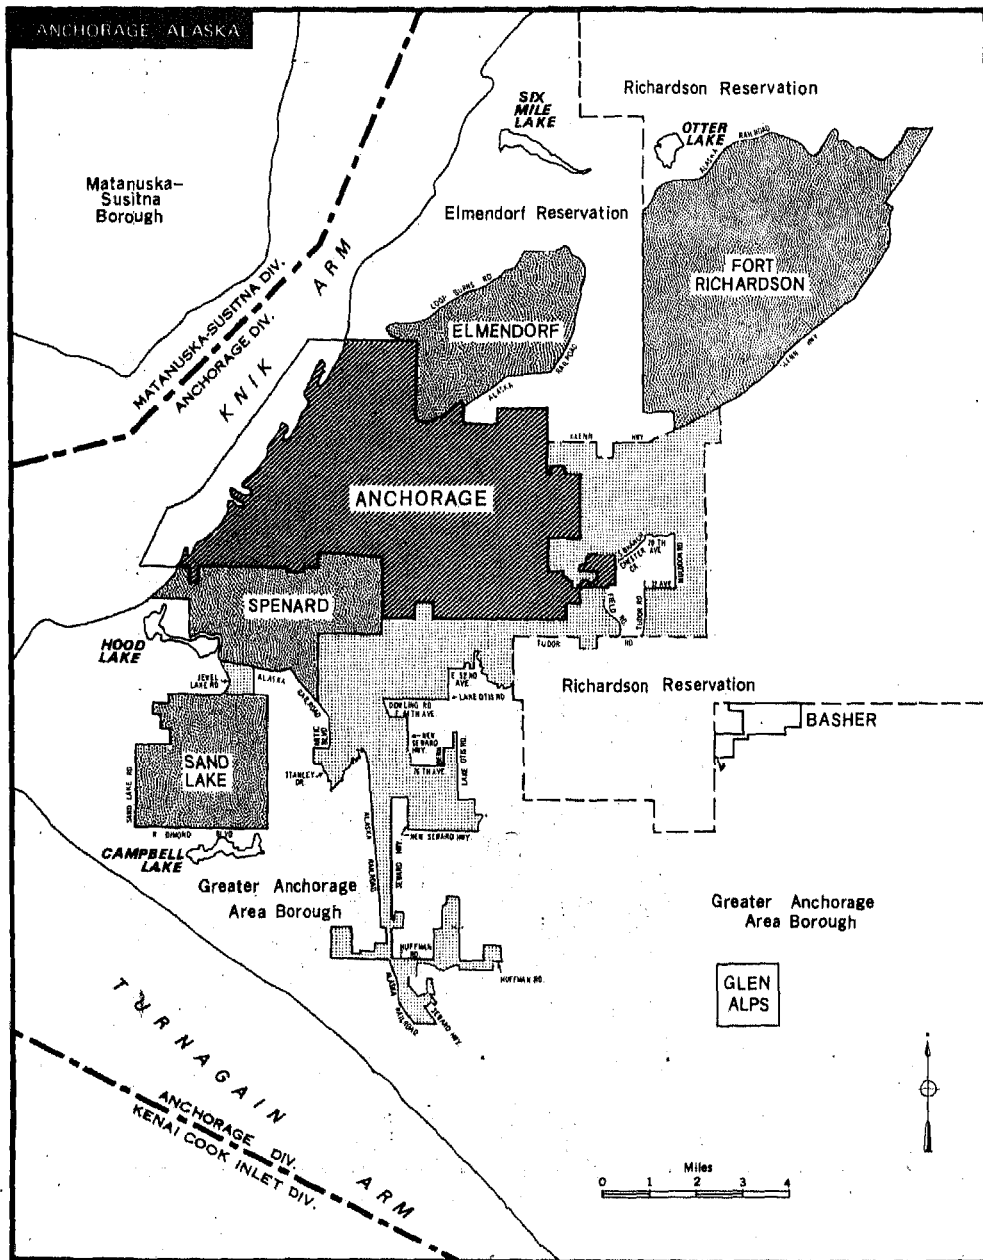

COMPONENTS OF URBANIZED AREA

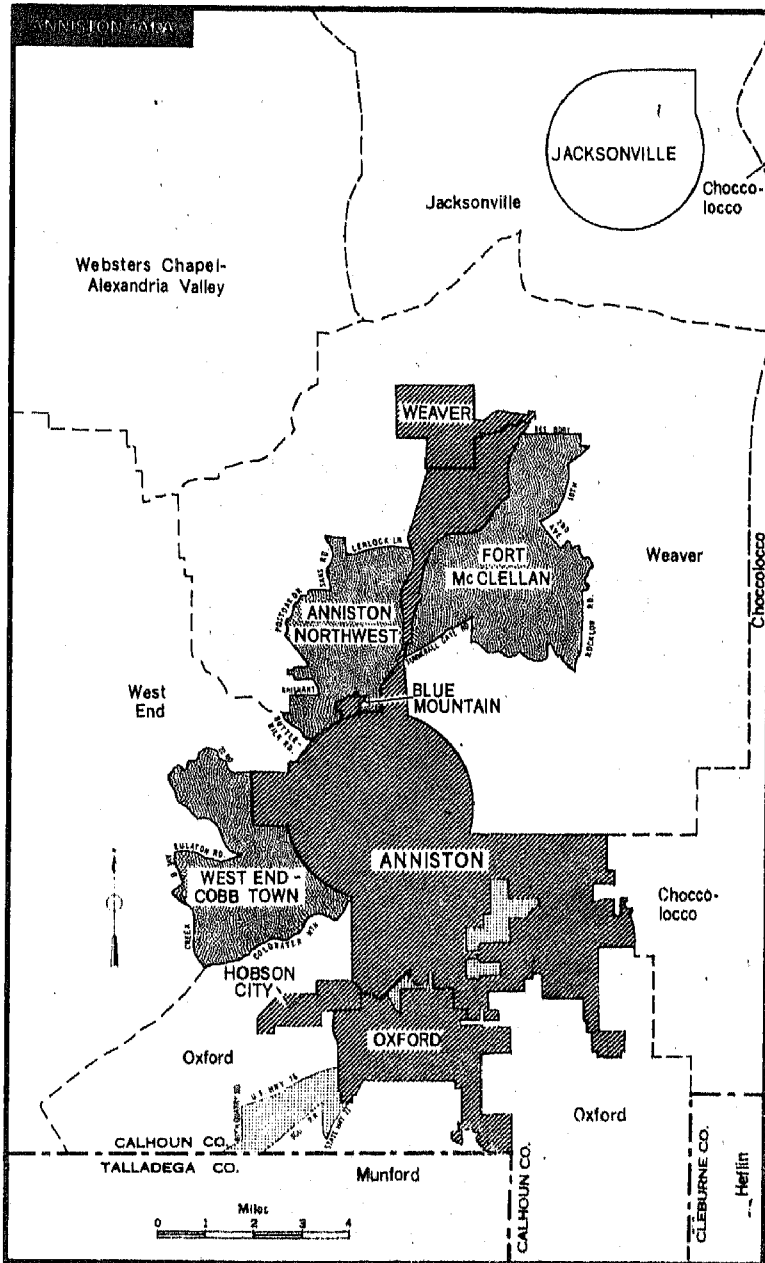

-  Incorporated Places
-  Unincorporated Places
-  Unincorporated Area

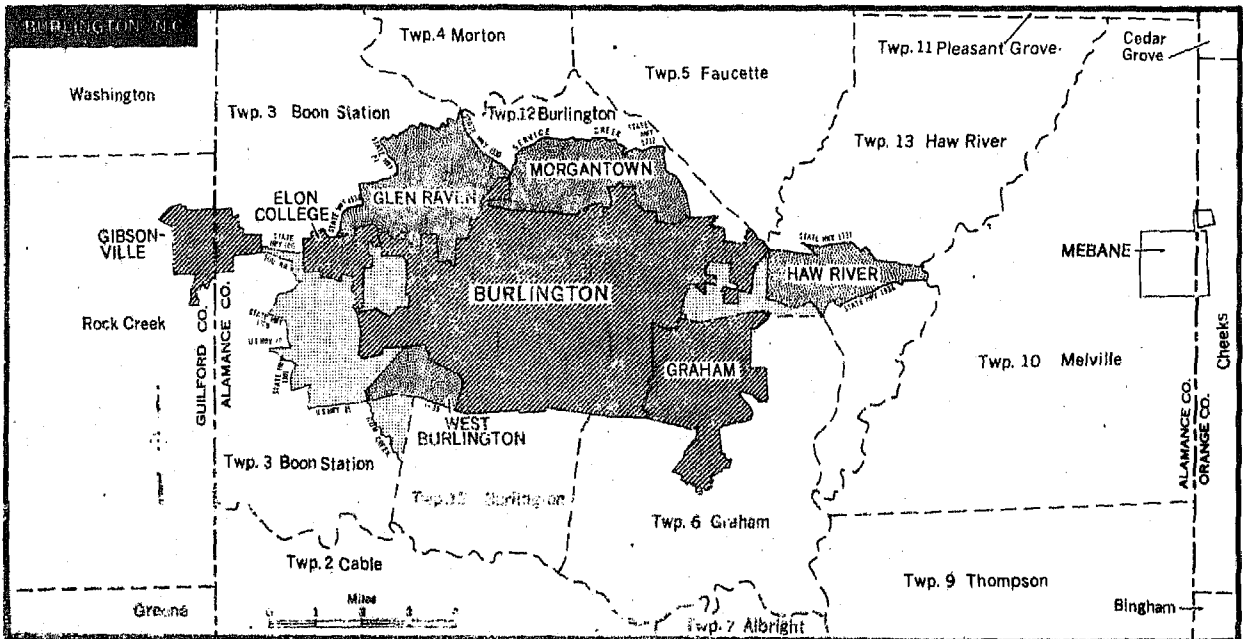

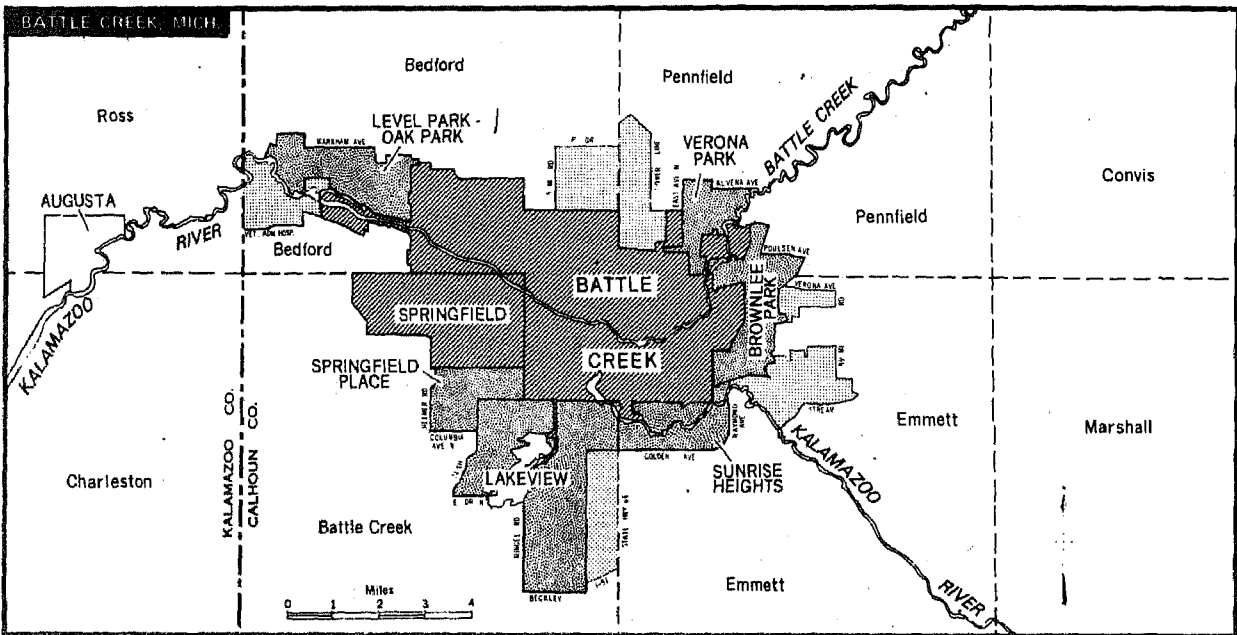

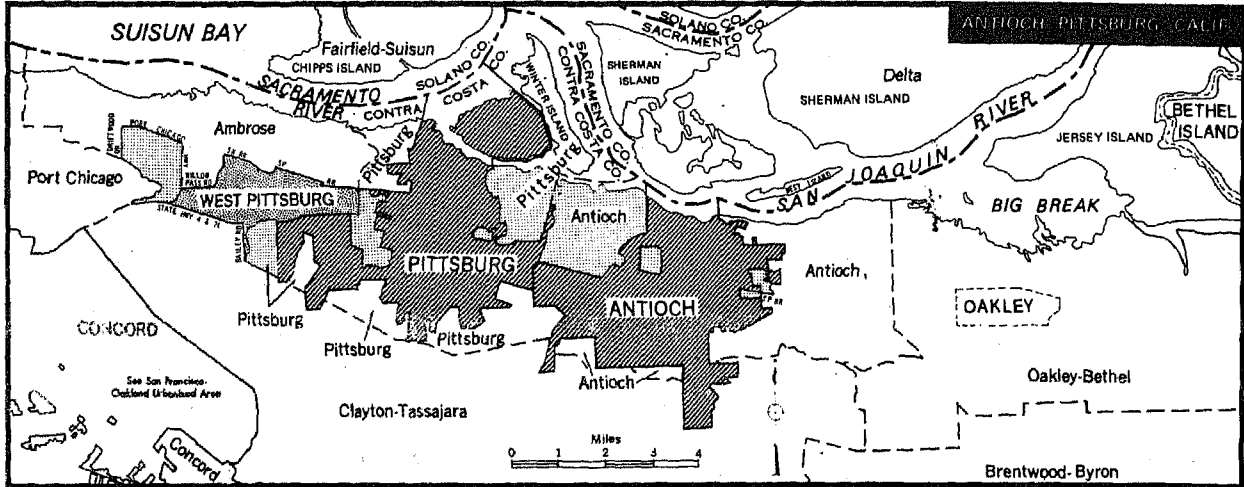

BOUNDARY SYMBOLS

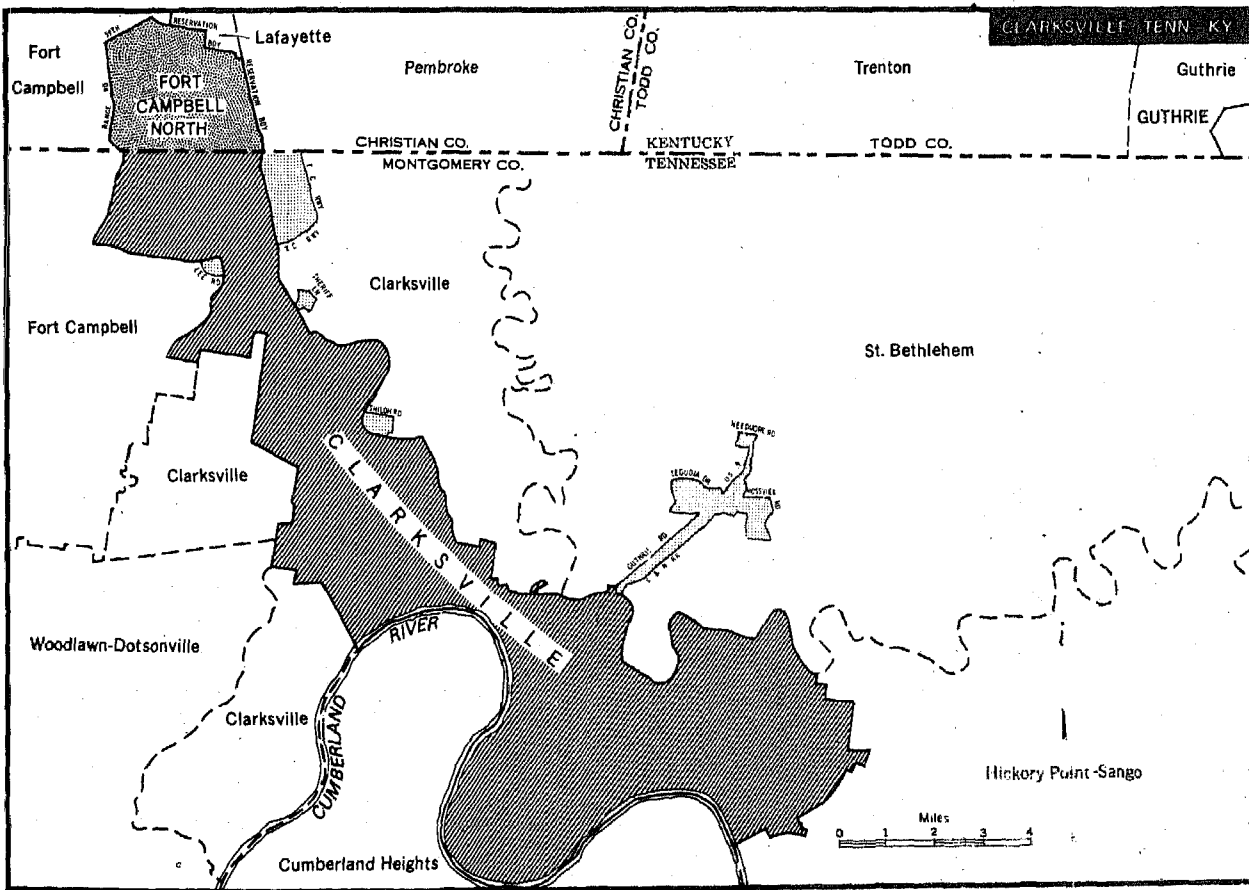

-  State
-  County
-  Census County Division
-  Incorporated Place
-  Unincorporated Place Outside Urbanized Area

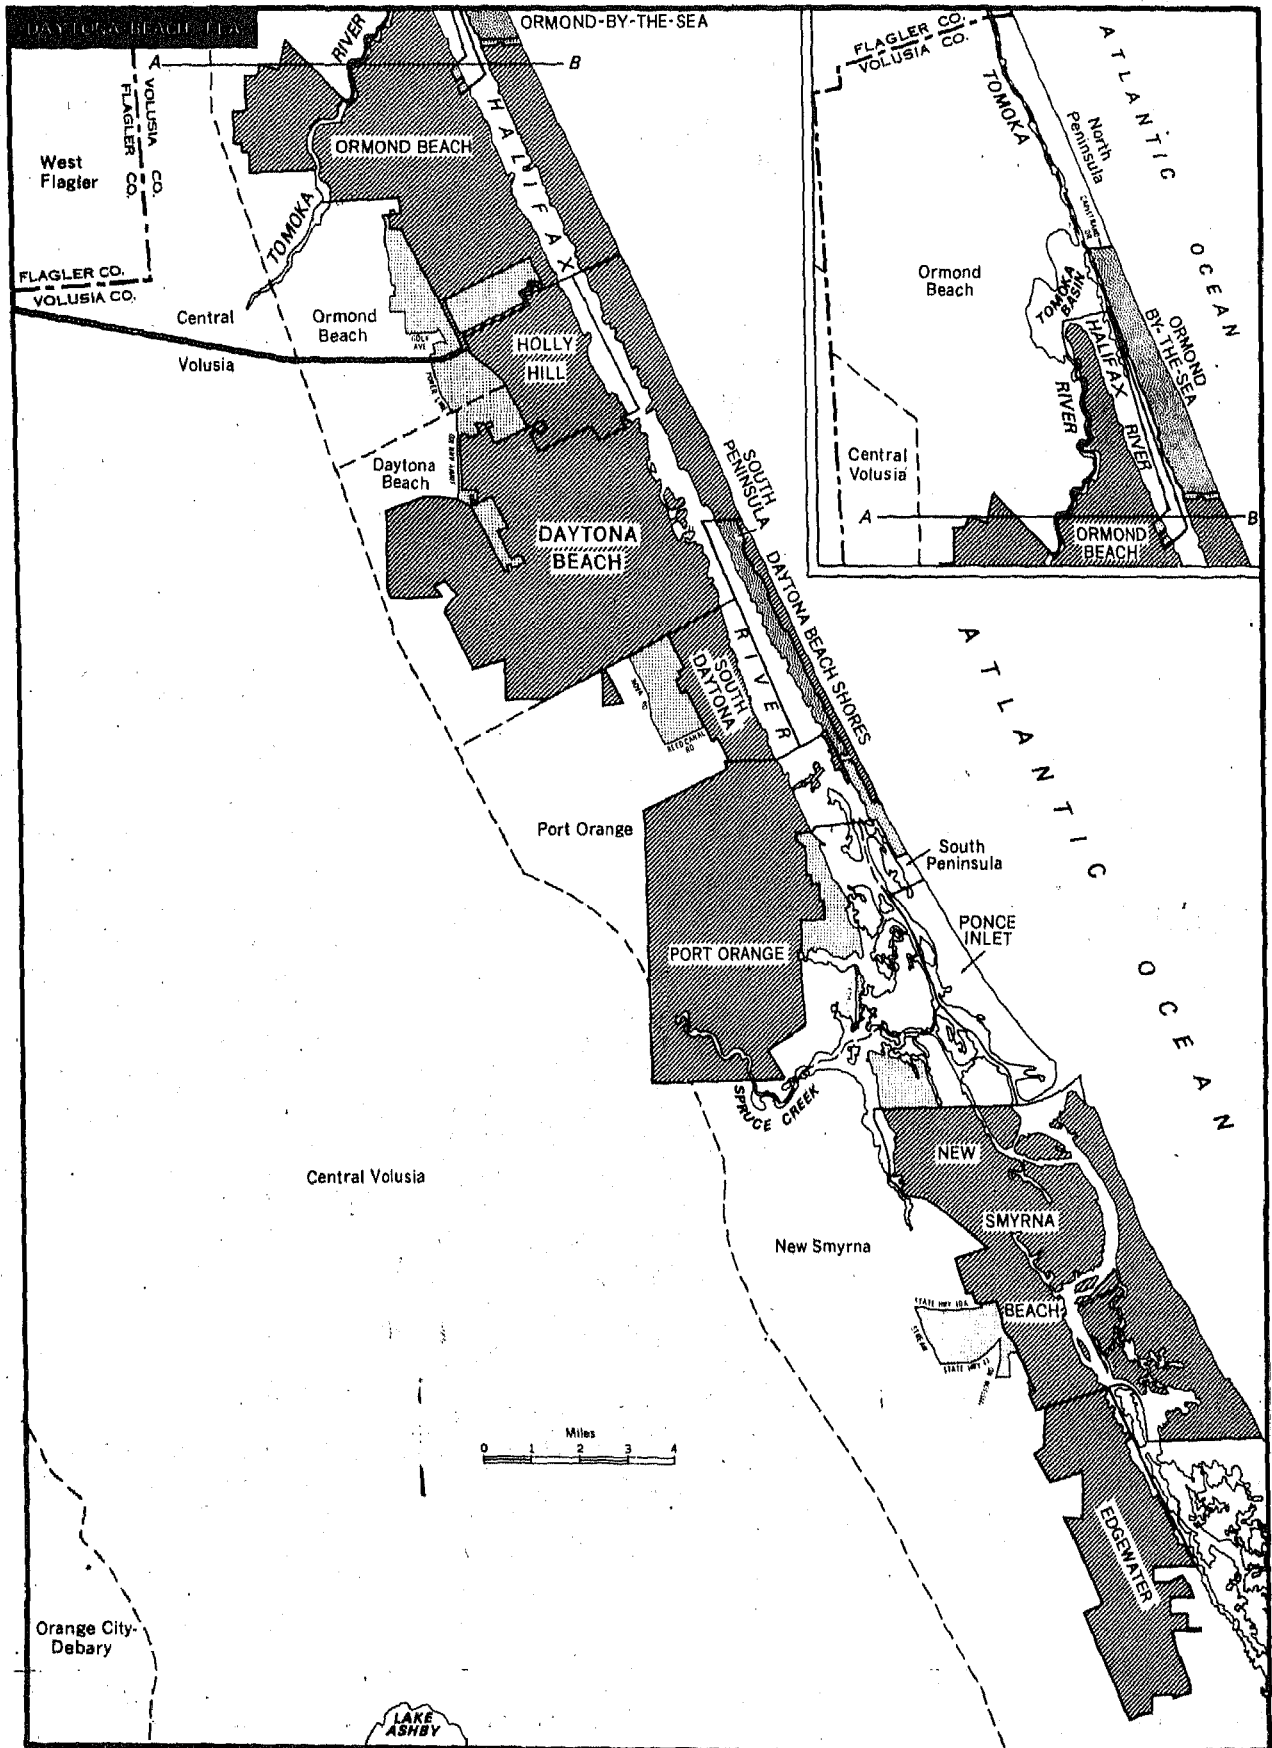

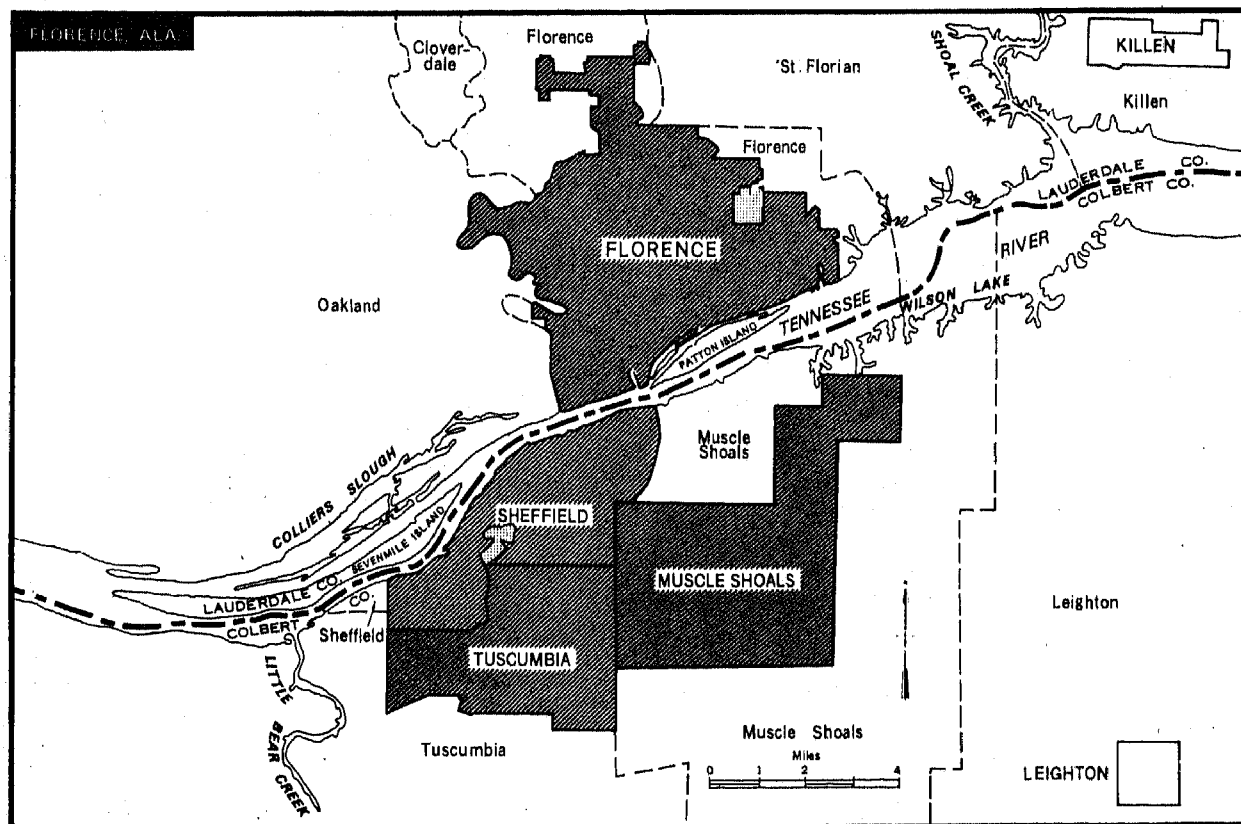

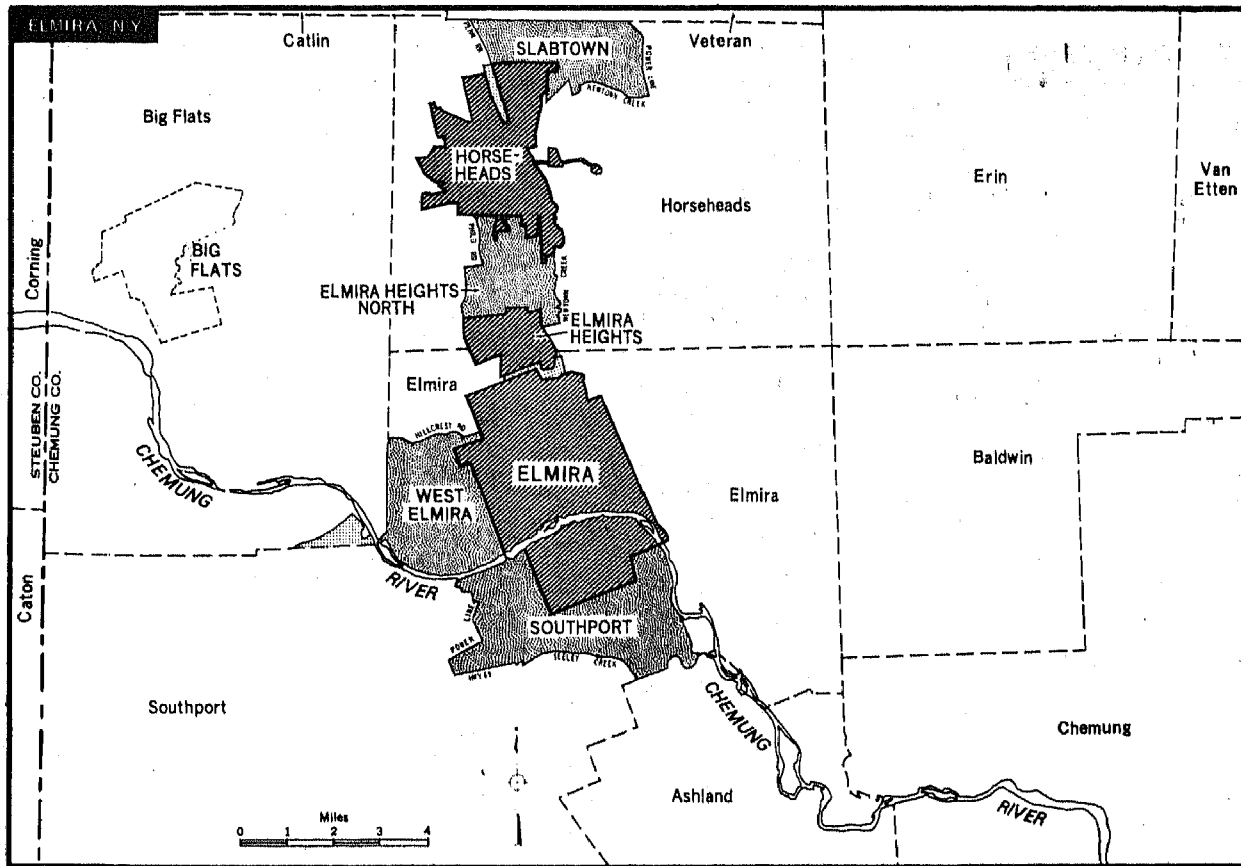

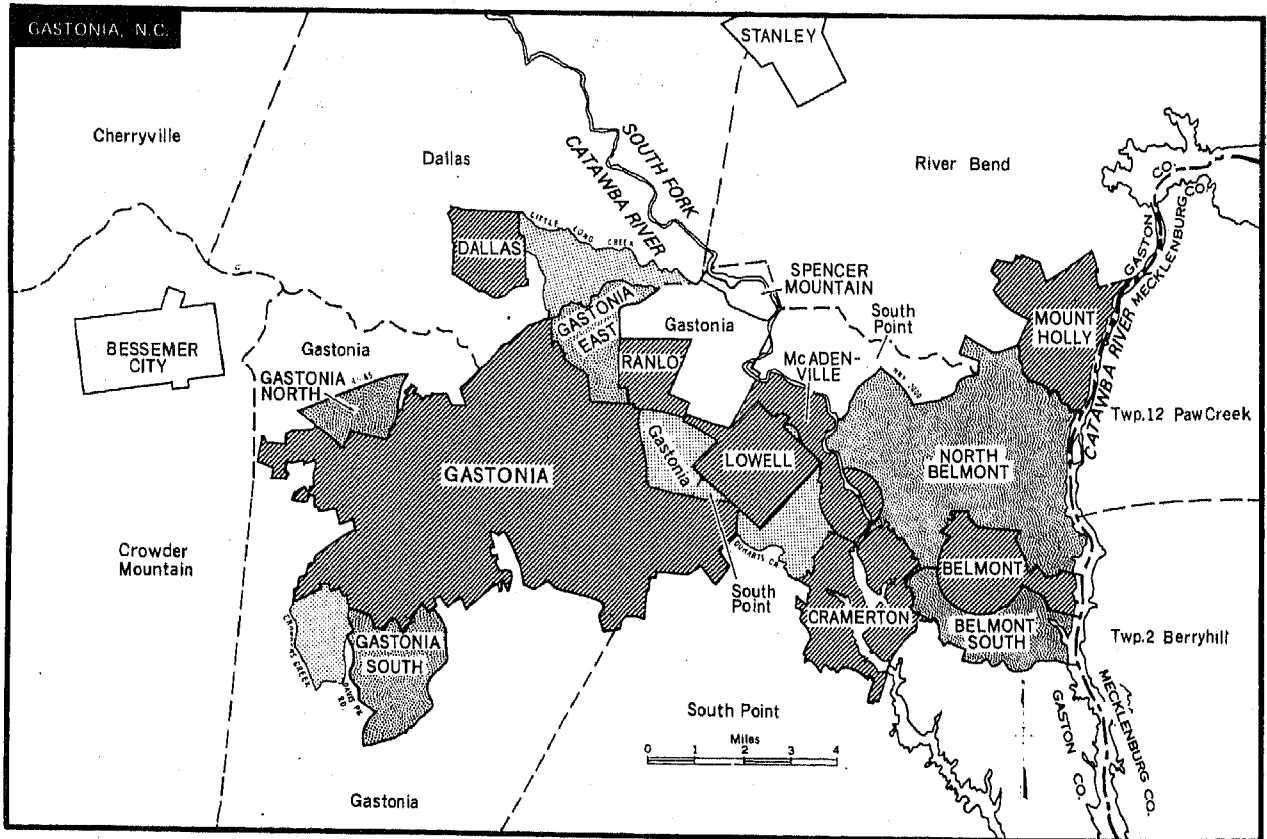

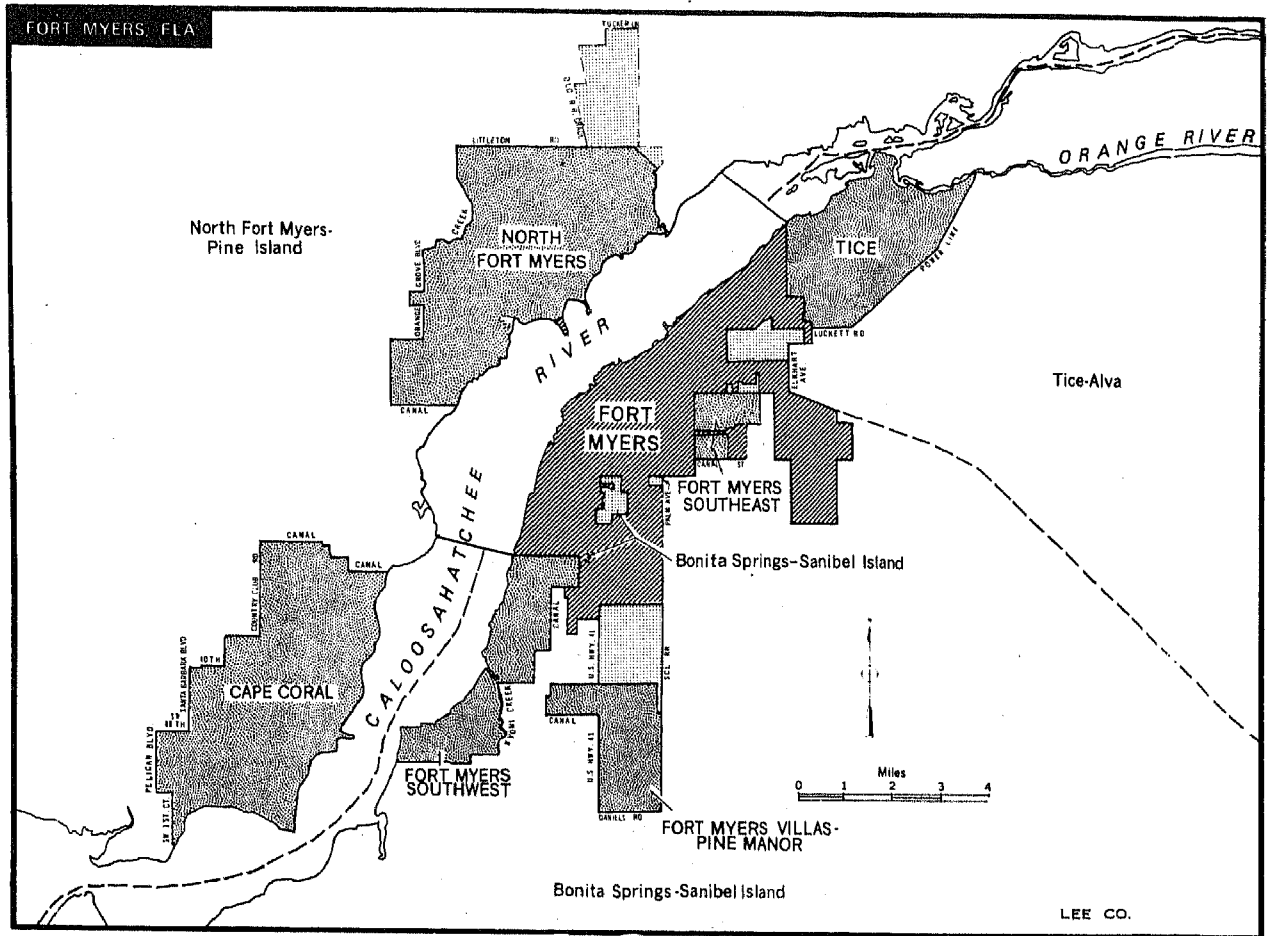

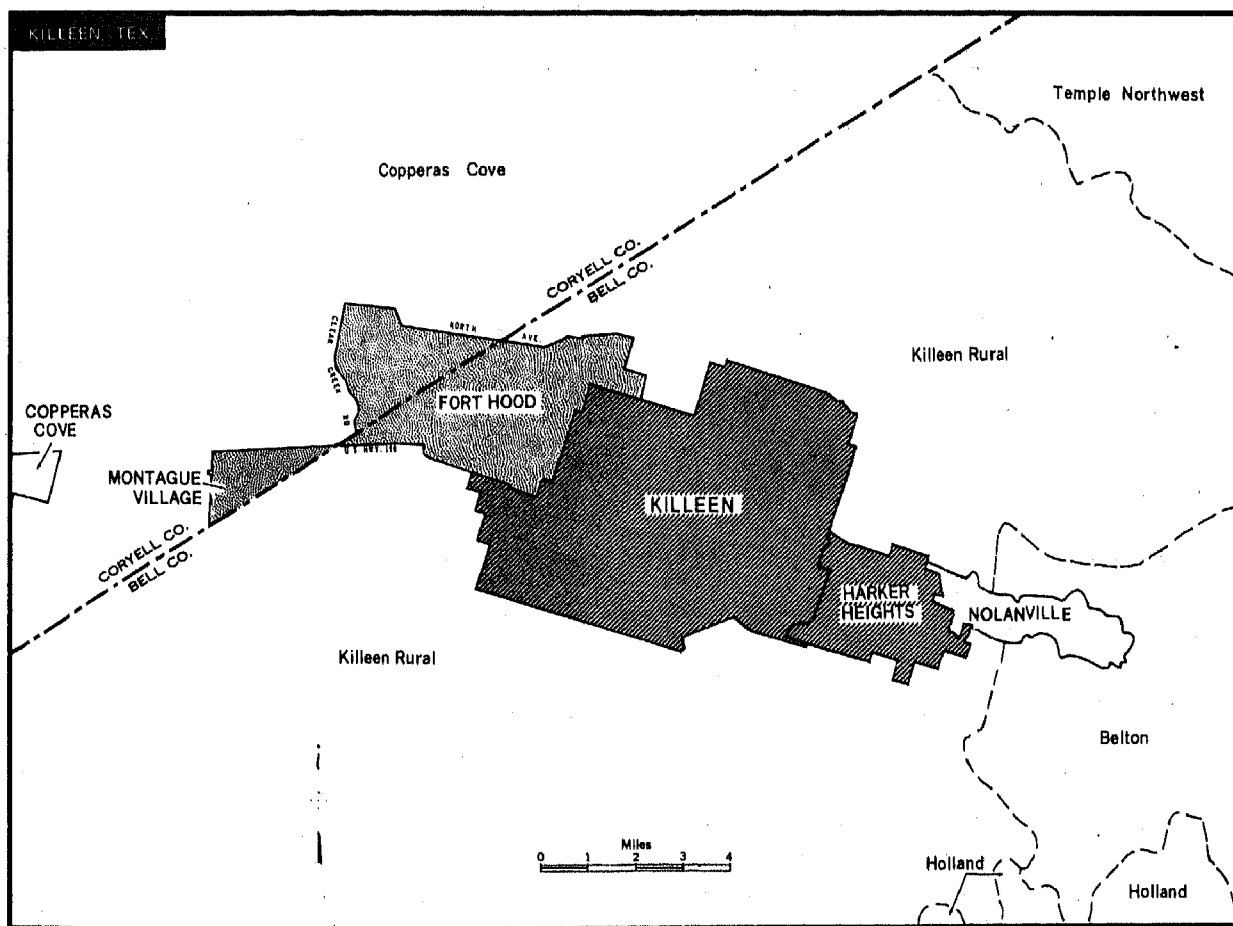

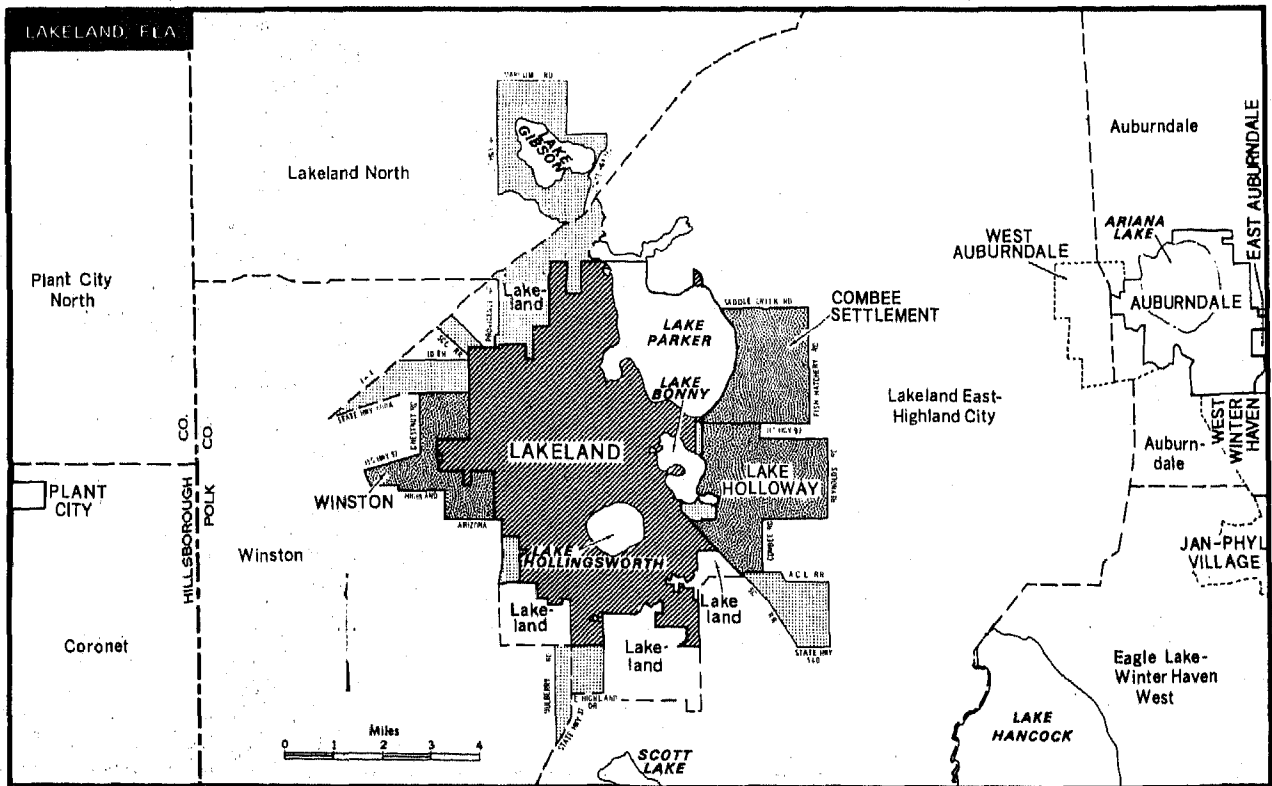

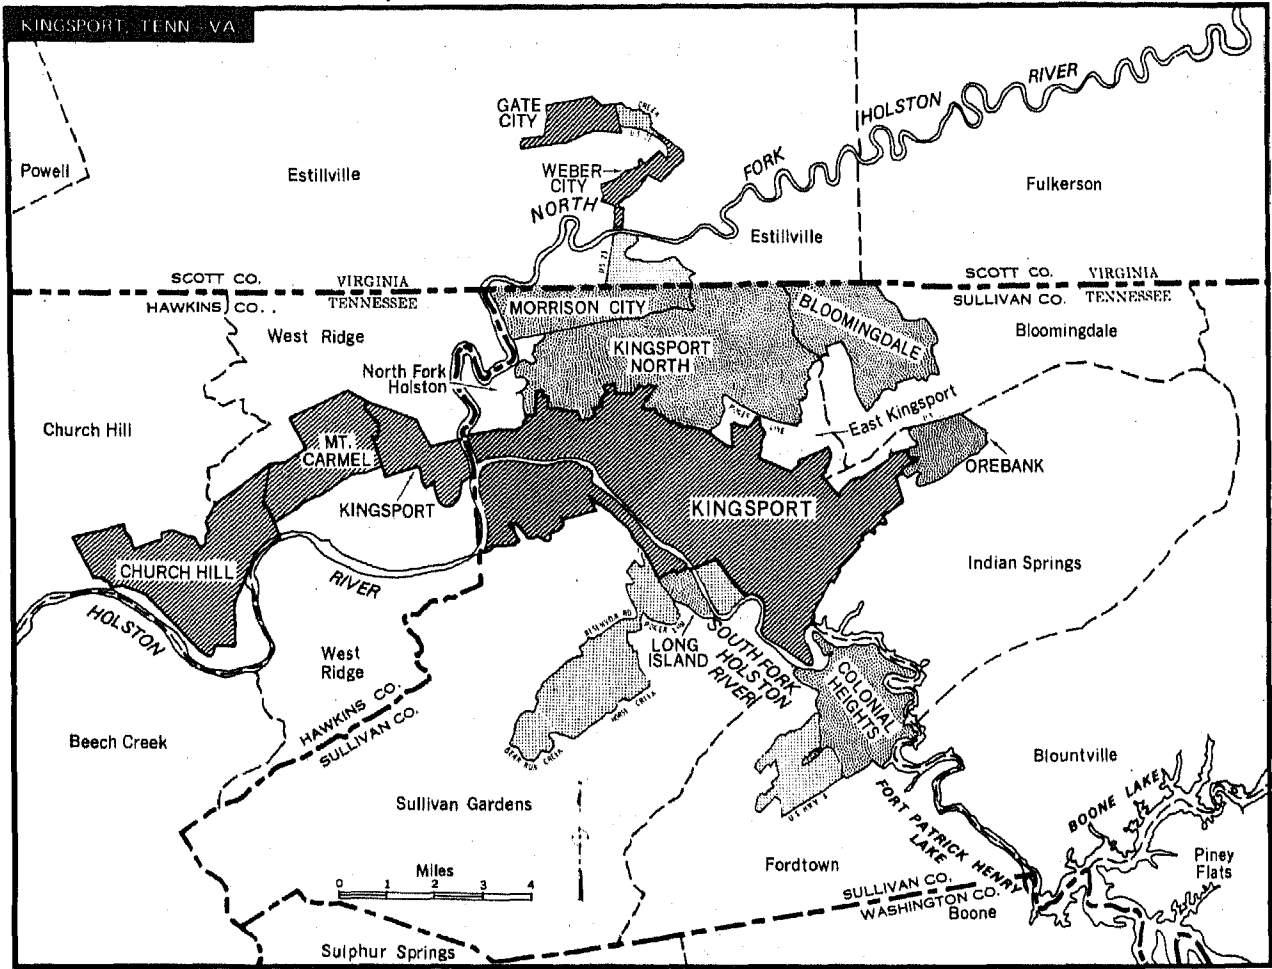

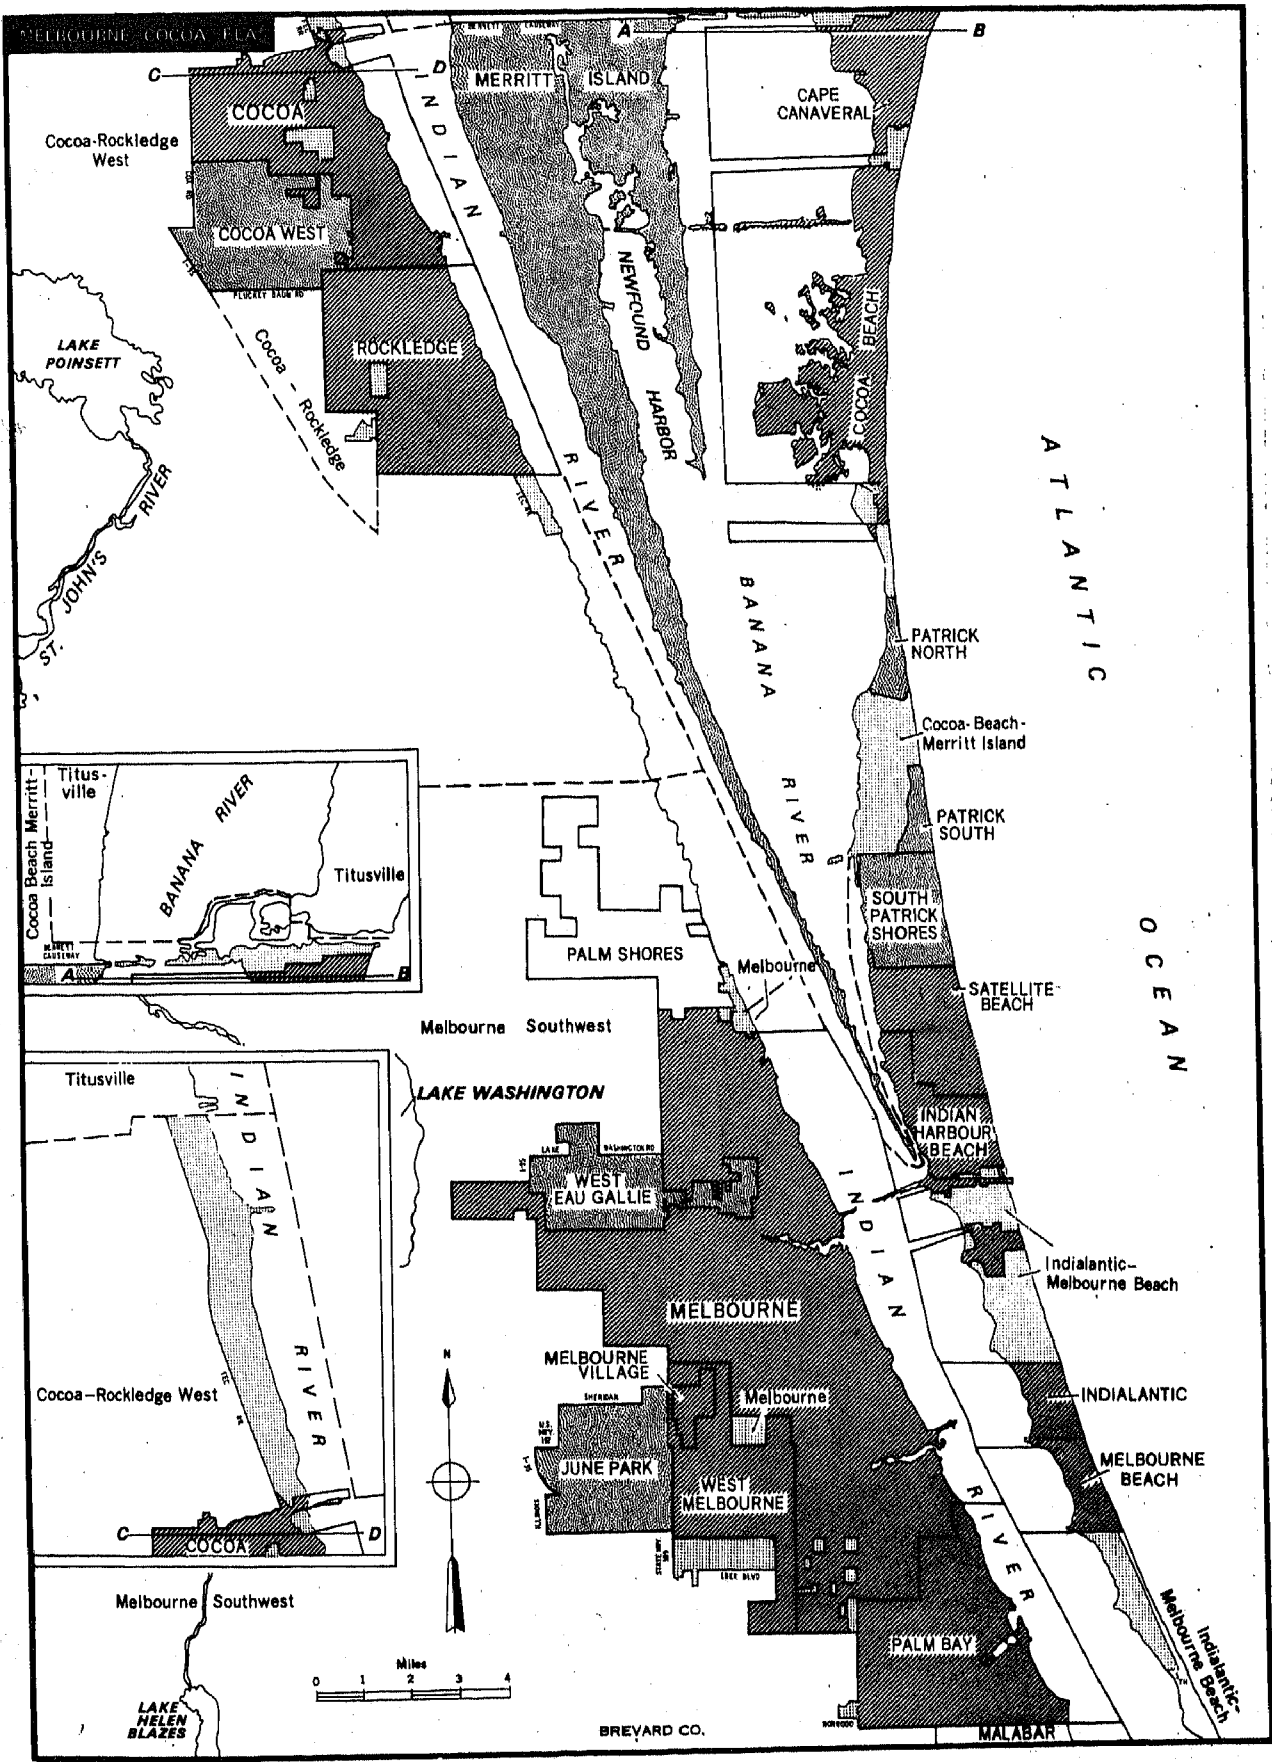

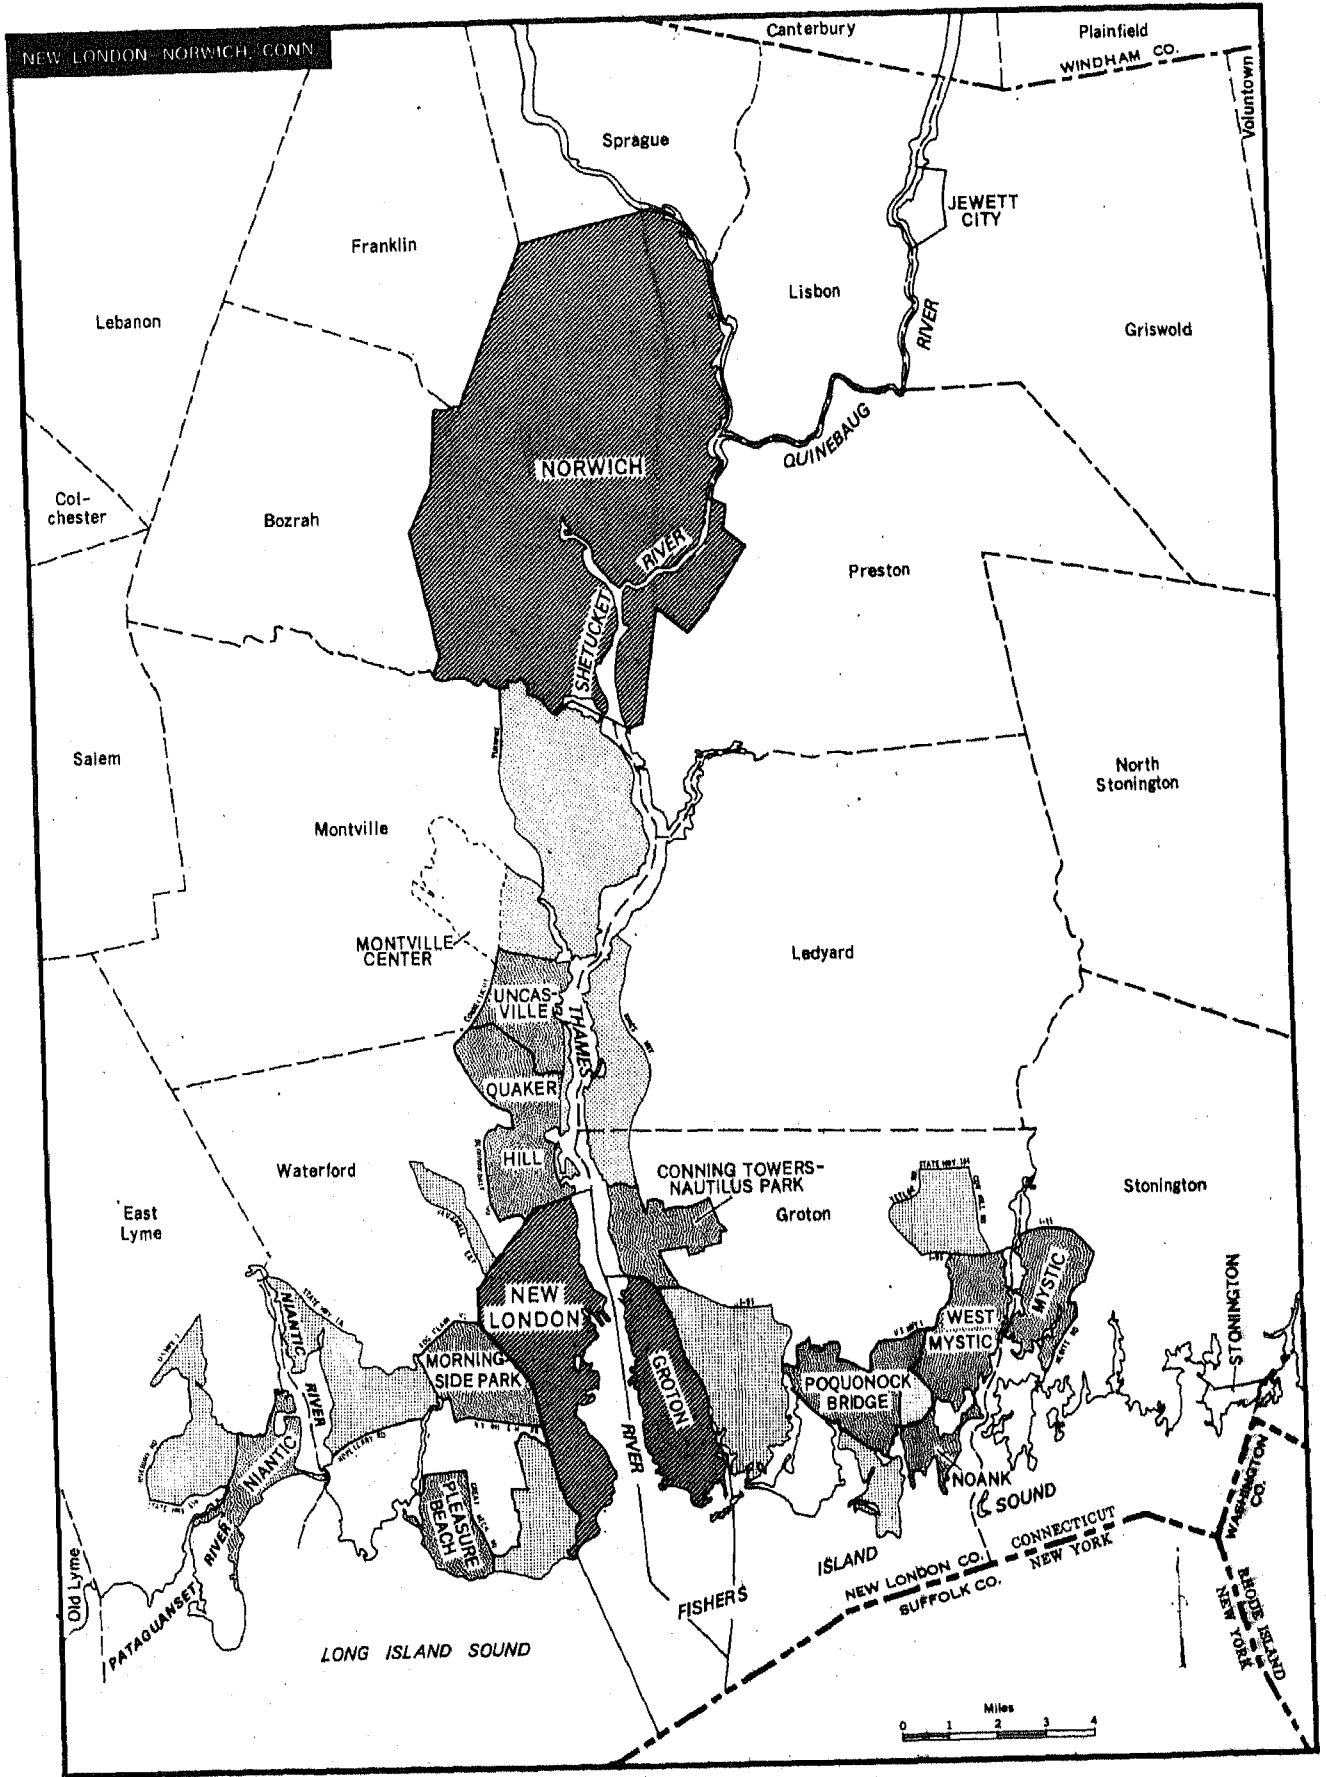

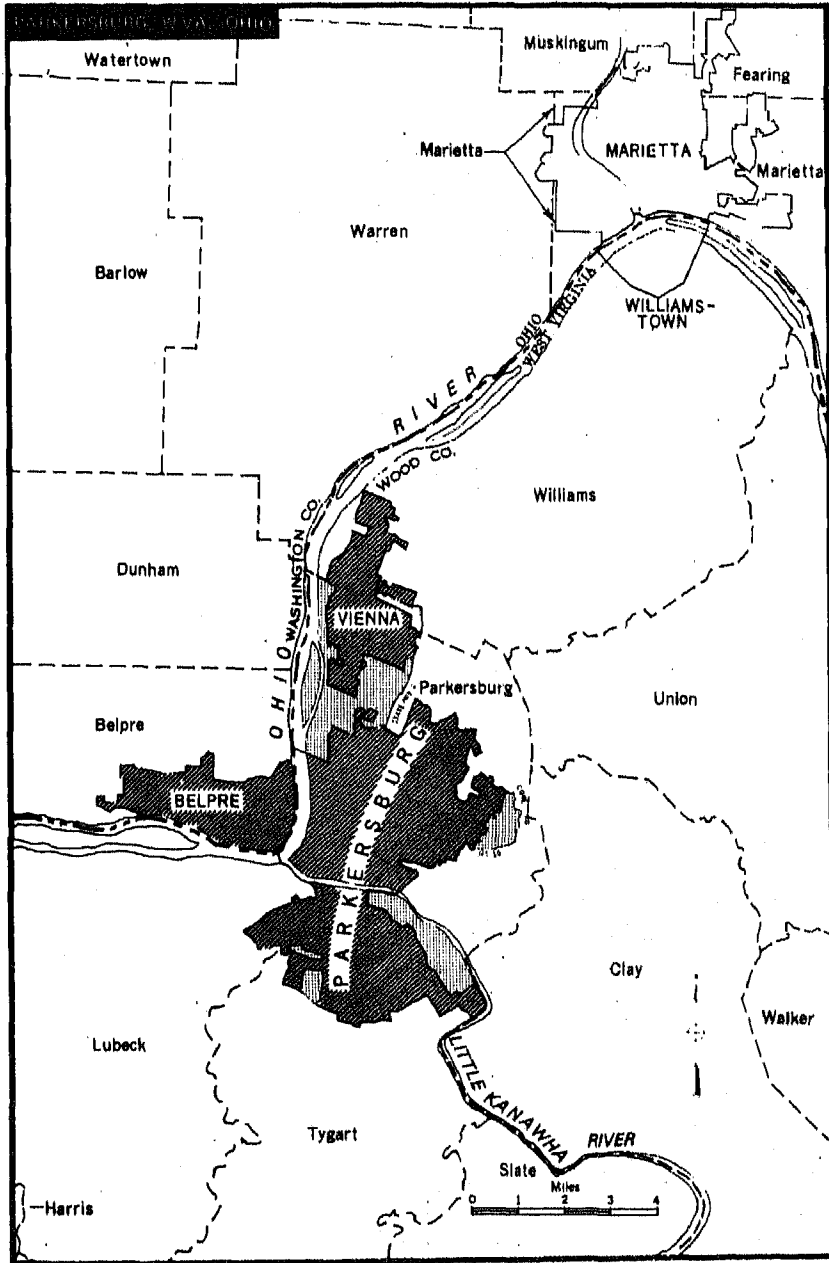

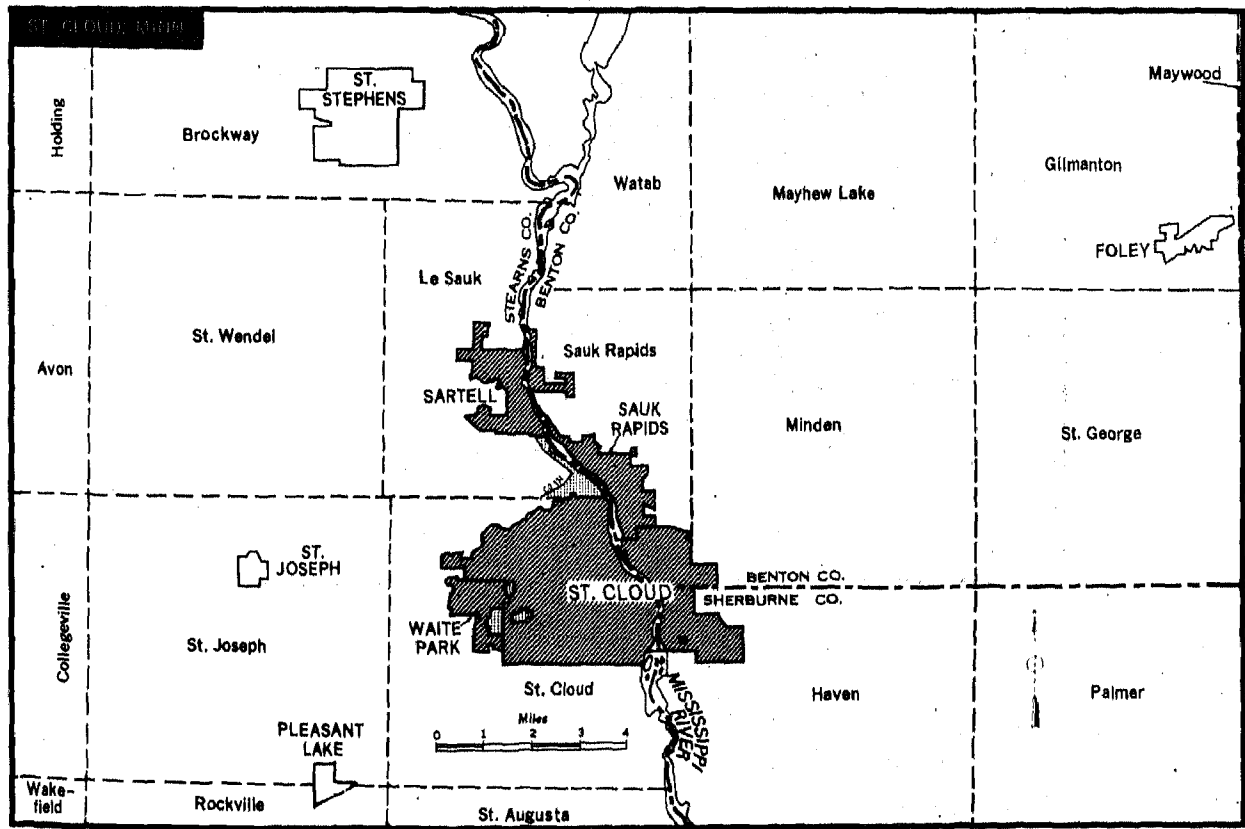

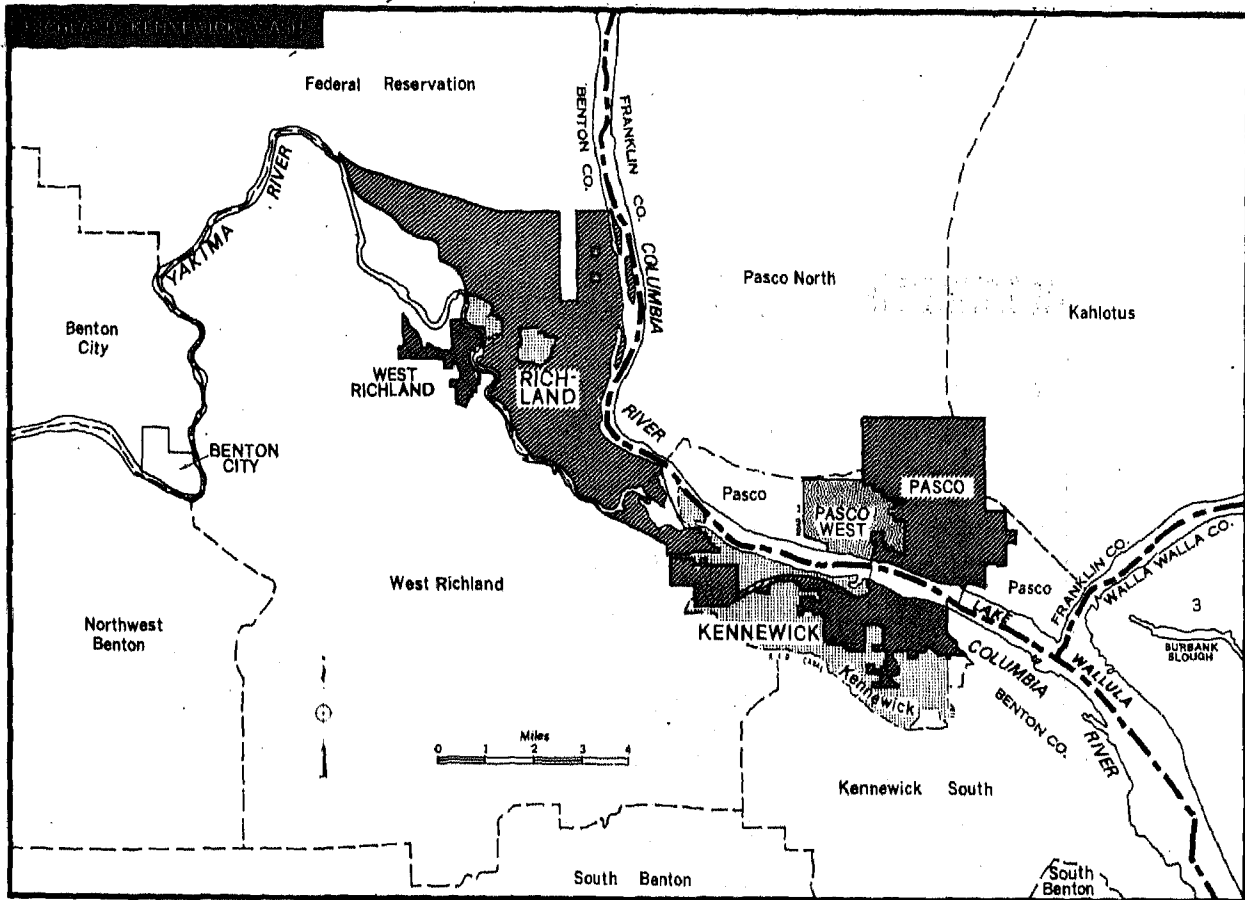

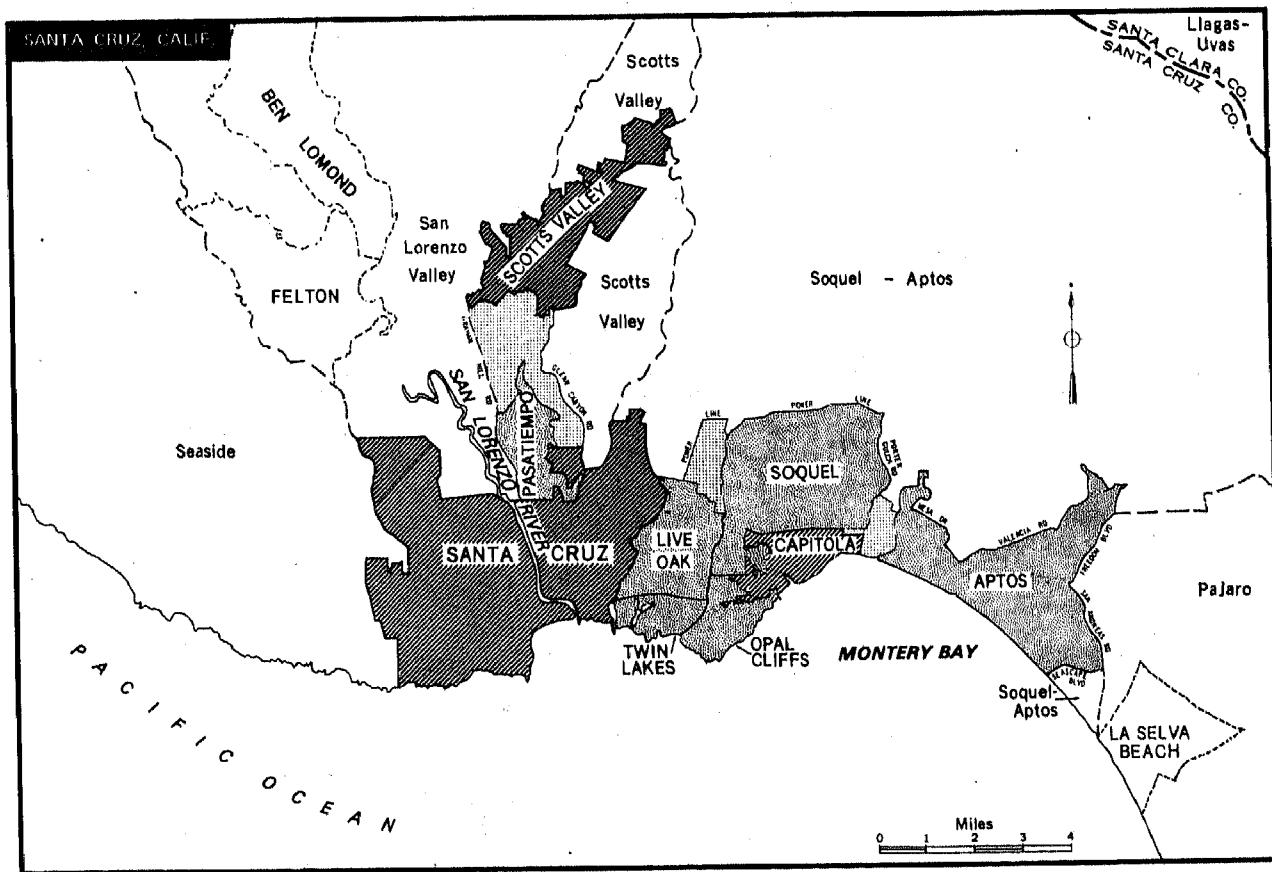

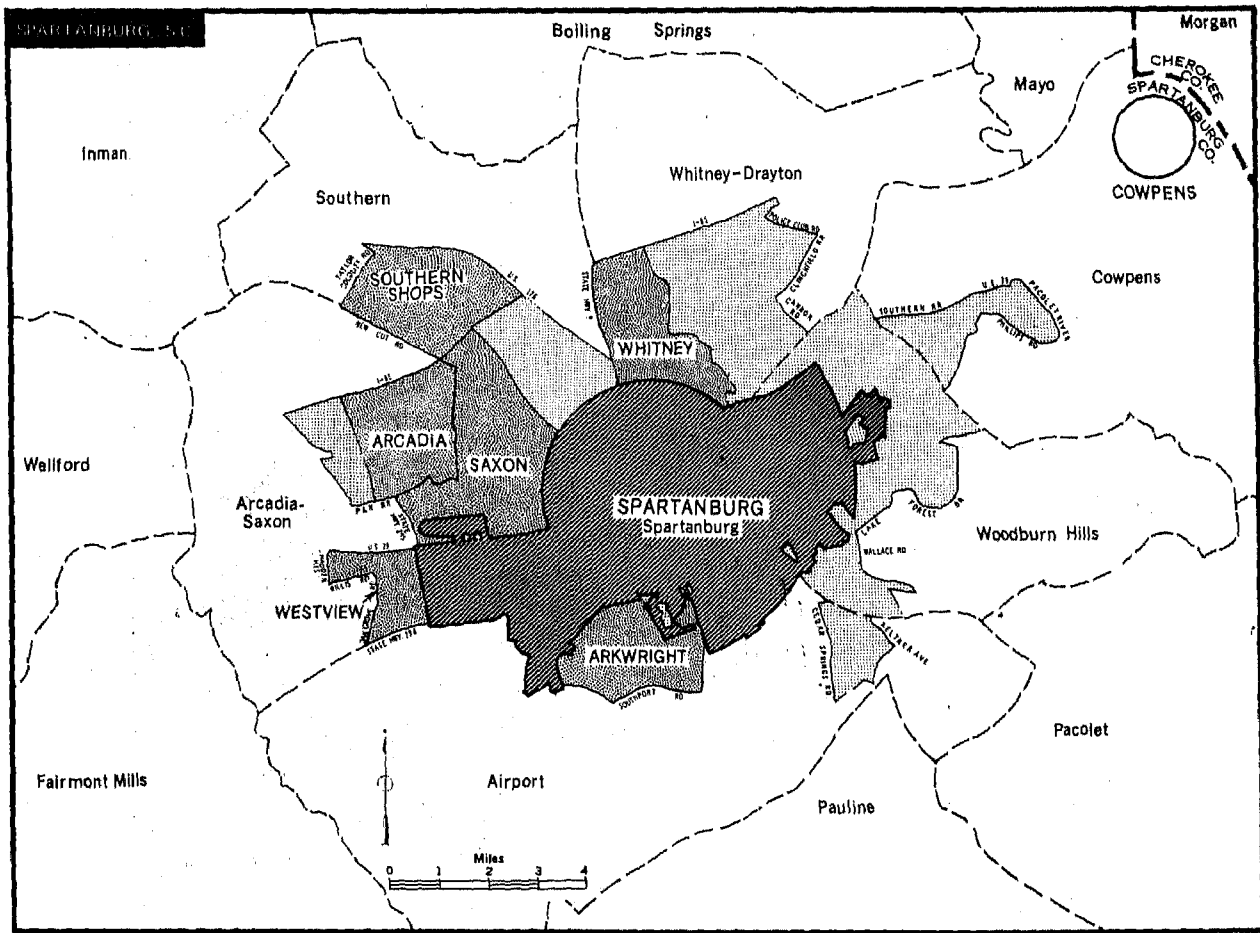

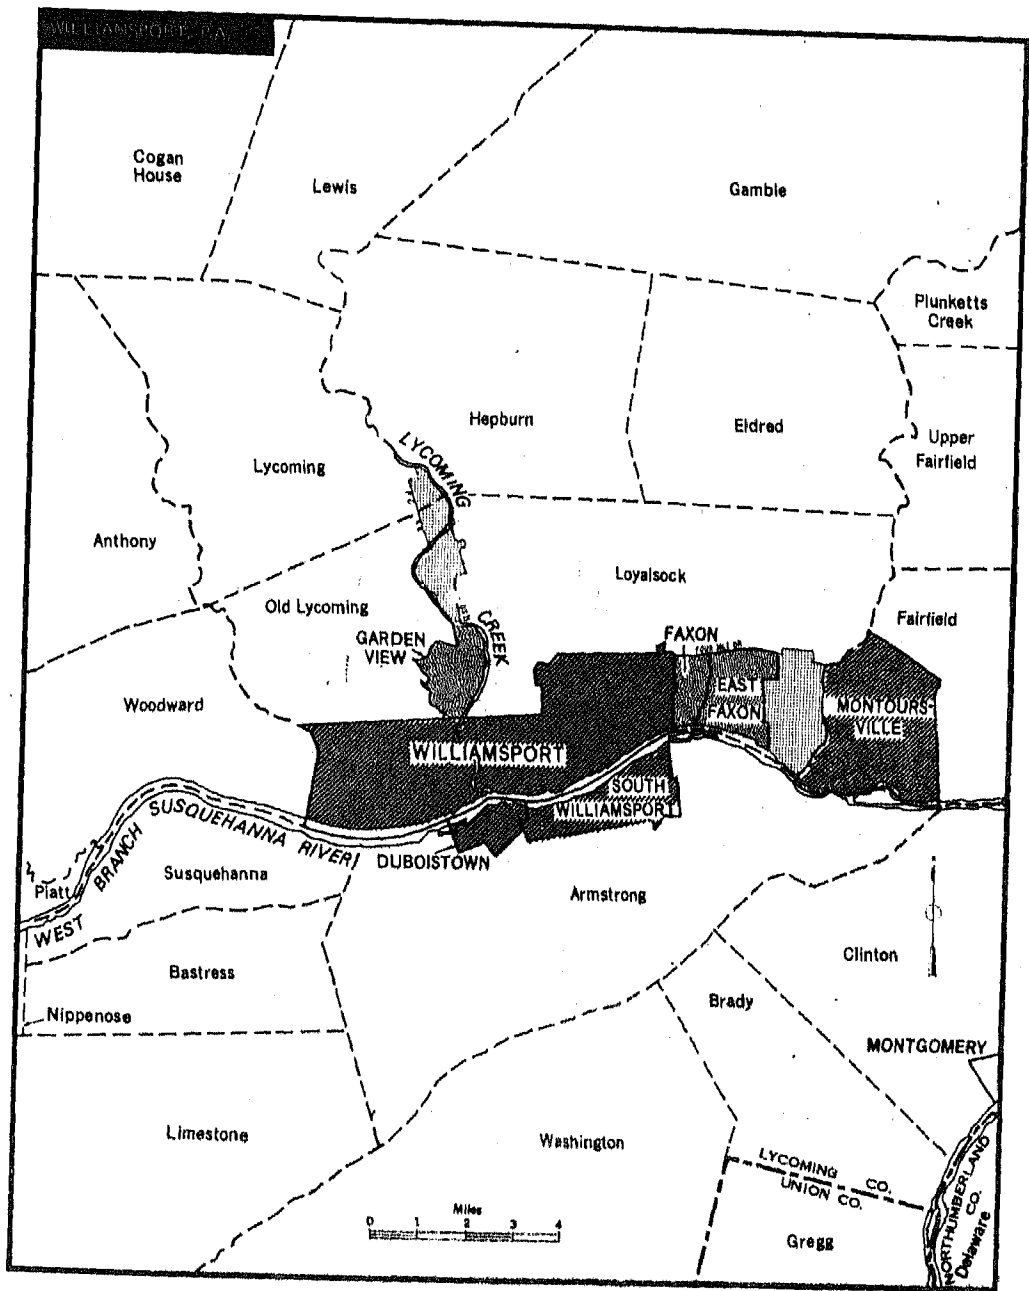

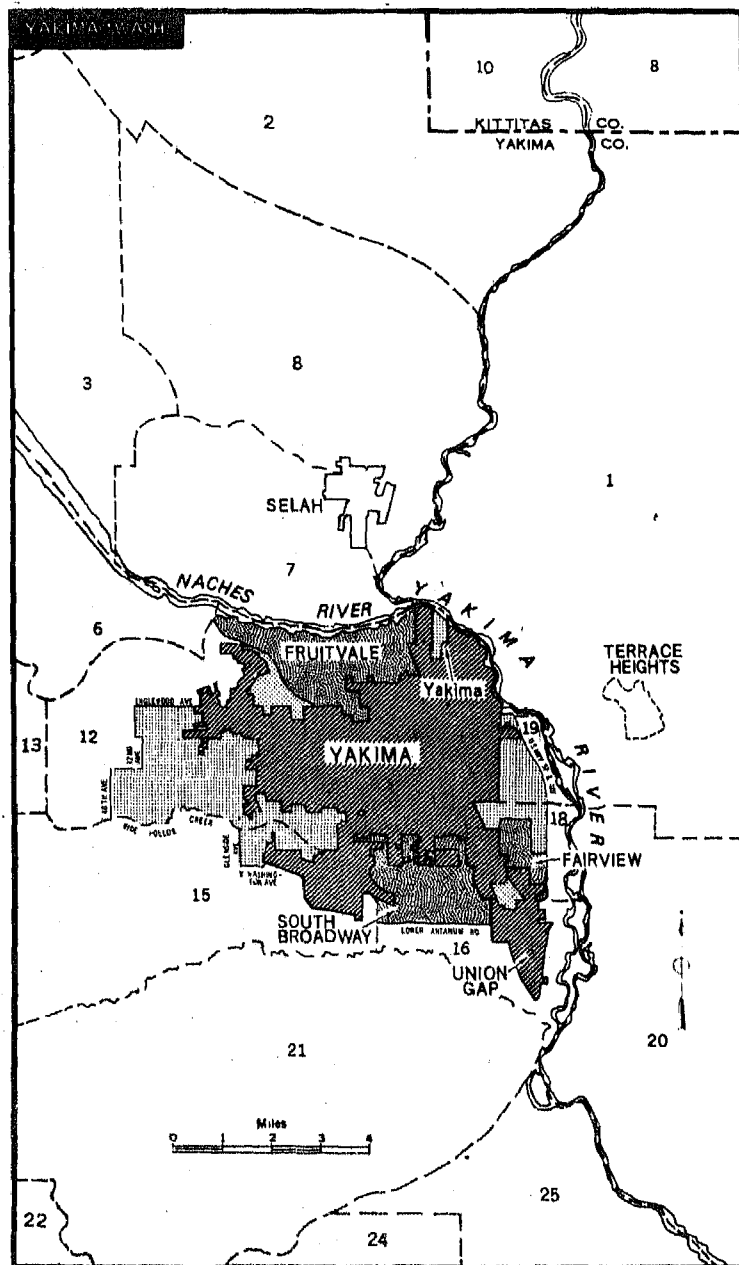

APPENDIX

CORRECTIONS TO 1970 CENSUS PUBLICATIONS RELEVANT TO THIS REPORT

Land area. Aside from the correction to the Sacramento, Calif. UA, as footnoted in the tables of this report, there are no corrections to the land area figures as published in Volume I, Part 1, table 20.

Population. All population data shown in the tables of this report are consistent with the tabulated 1970 population counts published in Volume I. That is, corrections to the population of counties, county subdivisions, and places published in correction notes in Volume I, or made subsequently, are not reflected. How-

ever, a correction has been made to the population of the Sacramento, Calif. UA, as footnoted in the tables.

Component parts. For 26 UA's, errors occurred in the listings of component parts shown in Volume I, Parts 2-52, table 11. Corrections for these UA's were published in the correction notes, Volume I, Parts 2-52. These corrections are not reflected in the tables of this report but are summarized below. The effect of the corrections is to add or delete population from the published totals for each of the affected UA's. The maps and land area figures for the UA's are correct as published in Volume I, except for the Sacramento, Calif. UA, as discussed above.

Urbanized area	Correction	1970 population of deleted/ added component
Baltimore, Md.....	Baltimore County (part): Delete District 4 (part) erroneously included in the area.	199
